

Questions received on SUNY New Paltz - Deyo Hall Rehabilitation and Upper Floor Addition and DASNY's responses:

1. Please advise if there is a hazardous materials drawing for the roof similar to the HM drawings provided for the lower floors.

Response:

No. There is not a roof abatement drawing.

2. Please advise if there is a BIM model of this project developed by the Design Team and if it would be made accessible to the General Contractor for MEP coordination.

Response:

The REVIT model can be provided after a release is signed by the contractor. This is generally done during construction.

3. Please provide the target milestone for submittal completion.

Response:

Target milestone for submittal completion is August 15, 2019. Due to the critical nature of the early bid-packages (i.e. - Abatement/Demo, Steel, and any other critical early bid packages identified by the CM), these submittals are to be completed immediately upon GMP approval.
