END OF SECTION 11 30 13 13a
SECTION 11 30 13 13b - GAS RANGES

GENERAL

Summary
1. Section Includes:
   a. Remove existing ranges.
   b. Gas ranges, supply and deliver only or supply and install as scheduled.
2. Related Requirements: Comply with requirements of following sections:
   a. Contractor Use of Premises and Work Sequence; “Summary of Work”
   b. Section “Alteration Project Procedures.”
3. Related Sections:
   a. Kitchen Renovation Requirements: Section “Summary of Work”
   b. Reference Standards: Section “References.”
   c. Electric Ranges: Section “Electric Ranges.”
   d. Gas Line Relocation: Section “Plumbing.”

References
4. Reference Standards: See Section “References.” Comply with following:
   b. Certification:
      2) ANSI Z34.2 - Certification, Self-Certification by Producer or Supplier, 1987.

Definitions
5. Types:
   a. Type A: Economy or Builder's Model
   b. Type C: Quality Model with hinged top.
6. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by PHA/IHA.

Submittals
7. Product Data: Submit to the Owner.
8. Samples:
   a. Production Sample: When requested, provide sample gas range to the Owner for examination as to compliance with specifications.
   b. Color Samples: Submit samples of manufacturer's standard colors to the Owner for selection.
9. Quality Assurance/Control Submittals: Submit following to the Owner:
   a. Certificates: Manufacturer's written certification that ranges have been tested and comply with ANSI Z21.1 for operation with natural or LP gas.
      1) Certification by American Gas Association (AGA) Laboratories, or Third Party Certifier in accordance with ANSI Z34.1.
   b. Manufacturer's installation instructions.
10. Closeout Submittals: Submit following to the Owner:
    a. Operation and Maintenance: Provide use and care information with each gas range. Include parts manual with diagrams and part numbers.
b. Special warranty.

Quality Assurance
11. Qualifications: Manufacturer: Stock and sell parts for ranges supplied for five years from time of delivery.
12. Regulatory Requirements: Comply with and following:
   a. Gas Connections: Comply with applicable codes and regulations.
   b. Accessibility:
      a) Uniform Federal Accessibility Standards (UFAS).
      2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
      3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).
13. Appliances shall meet or exceed requirements established by the Energy Star program and bear the Energy Star logo. Visit www.energystar.gov for a listing of products that qualify. Energy Star® is a voluntary partnership that includes the U.S. Department of Energy, the U.S. Environmental Protection Agency, product manufacturers, local utilities, and retailers, helps promote efficient products by labeling them with the Energy Star logo and educating consumers about the benefits of energy efficiency.

Delivery, Storage, And Handling
14. Packing, Shipping, Handling, and Unloading: In accordance with standard commercial practices.
15. Acceptance at Site: Inspect gas ranges upon delivery. Replace damaged or defective appliances before installation.

Scheduling
16. Scheduling and Completion: Comply with requirements of Division 1.

Warranty
17. Special Warranties: Provide following written special warranties:
   a. Entire gas range for one year.
18. Special Warranties: Include labor, material and equipment to provide replacements and make repairs to gas ranges at no additional cost to PHA/IHA.
   a. Defective Units and/or Parts: Become property of Contractor.
   b. Submit name and address of local agent who will furnish service and replacement parts in connection with warranties to PHA/IHA.
      1) Charges by local service agent to PHA/IHA for services covered under special warranties not allowed.

PRODUCTS
Gas Ranges - General Requirements
   a. Ranges: Floor mounted, free standing flush-to-wall, domestic gas ranges with open cooking top, oven and broiler below.
   b. Ranges of Same Size: Identical, including parts and assemblies.
20. Gas Valves: Provide with either:
   a. Convertible orifice set for gas specified on purchase order.
   b. Fixed orifice hood for use with gas specified on order.

Type A Ranges (Economy Or Builder S Model)
22. Burners: Provide cooking top with four burners.
   a. Each Burner: Rated at no less than 2 650 W (9000 BTU/H) for natural gas and 2 350 W (8000 BTU/H) for LP.
24. Grates: Provide each top burner with porcelain enameled cast iron or steel grate.
25. Ignition: One of following:
   b. Intermittent Ignition: Equip burners with means for automatic electric ignition of gas complying with applicable requirements of ANSI Z21.20. Electric Ignition System: May be either spark, coil, glow bar, or combination of these.
26. Oven Thermostat Control: Provide oven thermostat control for controlling oven temperatures down to "hold warm temperature", approximately 77 degrees C (170 degrees F).
27. F. Insulation: Glass fiber blanket type, installed in manner to prevent sagging, and of sufficient thermal efficiency to meet surface and handle temperature tests specified in ANSI Z21.1.
28. Oven and Broiler Sections: Porcelain enamel-coated steel.
   a. Broiling Section: Either drop door type, pull-out-type, or swing-door type with 3-position smokeless broiler pan and grill sliding on stationary runners.
   b. Provide stops so that oven racks cannot be completely pulled out by accident.
29. Oven Vents: Provide ovens with vent designed to deflect moisture and fumes away from wall behind range.
30. Oven Doors: Drop-shelf type, counter-balanced and provided with device to hold door fully closed.
   a. Hinges: Permit ready removal and replacement of hinge brackets and parts subject to wear.
   b. Provide oven doors with means for adjusting misaligned door.
   a. Bowls: May be separate bowls or integral part of top.
32. Exterior Surfaces: Porcelain enamel, except body sides and front panels (including oven door) may be finished in synthetic baked-on enamel capable of withstanding 121 degrees C (250 degrees F).
   a. Trim: In accordance with manufacturer's standard practice.
   b. Backguard, Manifold Shield, Aeration Bowls, and Burners: May be porcelain enamel.
   c. Range Body Back Panel, Legs, and/or Base: Porcelain enamel, baked-on enamel, galvanized, or aluminized steel.
   d. Colors: As scheduled from manufacturer's standard colors.
33. Backguards: Equip each range with back guards not less than 100 mm (4 inches) higher than top cooking surface and extending full width of range top.
34. Equipment and Accessories: Provide accessories such as oven and broiler racks normally supplied with manufacturer's standard production for type range scheduled.
35. Name Plate: Permanent record of manufacturer's name and address, range model and serial number, and manufacturer's normal hourly W (BTU/H) input rating for oven, broiler and top burners.
   a. Securely fasten nameplate to main part of each range in accessible place.

Type C Ranges (Quality Model)
36. General Requirements: Comply with requirements for Type A Ranges except as modified by following requirements.
37. B. Range Top: Hinged at back or lift off for easy cleaning and access to burners, valves, and pilots.
   a. Hinge Top: May have supporting rod to hold top in raised position or be removable. Design supporting rod, when in raised position, to prevent accidental closing of range top. Counterbalanced top is also acceptable.
38. Cooking Top Burners/Low Setting: Equip each range with burners with low settings not in excess of 400 W (1400 BTU/H).
39. Leg levelers: Equip each range with at least two leg levelers.
40. Manifold Shield: Provide recessed or slanted manifold shield to minimize burning of burner knobs from heat from open oven doors.
41. Oven Door: Provide 610 mm (24 inch), 760 mm (30 inch) and 910 mm (36 inch) ranges with removable oven door.

EXECUTION

Examination
42. Site Verification of Conditions:
   a. Utilities: Verify that required utilities are available, in proper locations, and ready for use.

Preparation
43. Existing Ranges: Remove existing ranges and debris from site.

Installation
44. General: Install gas ranges in accordance with manufacturer's recommendations.
   a. Make connection to gas line in accordance with applicable codes.
   b. Make adjustments to feet of ranges for a level installation.

Cleaning
45. Cleaning: Comply with requirements of Division 1.

Schedules
46. Provide gas ranges as selected in following schedule:

   _____ Remove existing ranges.
   _____ Supply and Deliver Only to ______________________________________.
   _____ Unloading and handling included.
   _____ Supply and Install.

END OF SECTION 11 30 13 13b
SECTION 11 30 13 13c - ELECTRIC RANGES

GENERAL

Summary
1. Section Includes:
   a. Remove existing ranges.
   b. Electric ranges, supply and deliver only or supply and install as scheduled.
2. Related Requirements: Comply with requirements of following sections:
   a. Contractor Use of Premises and Work Sequence: Section “Summary of Work.”
   b. Section “Alteration Project Procedures.”
3. Related Sections:
   a. Kitchen Renovation Requirements: Section “Summary of Work.”
   b. Reference Standards: Section “References.”
   c. Gas Ranges: Section “Gas Ranges.”
   d. Electrical Renovation: Section “Electrical Renovation.”

References
4. Reference Standards: See Section “References.” Comply with following:
   a. Association of Home Appliance Manufacturers (AHAM) ER-1 - American National Standard
   d. Certification:
      2) ANSI Z34.2 - Certification, Self-Certification by Producer or Supplier, 1987.

Definitions
5. Standard Ranges: Four Surface Cooking Units: Three - 150 mm (6 inch) and one - 200 mm (8 inch) with oven and broiler below.
   a. Type, Style, and Sizes as defined in FS W-R-101F:
      1) Type I: Freestanding range.
      2) Type II: Build-in (slide-in) range.
      3) Style 1: Single oven.
      4) Style 2: Double oven 1 020 mm (40 inches) wide.
      5) Size 1: 1 020 mm (40 inches) wide.
      6) Size 2: 910 mm (36 inches) wide.
      7) Size 3: 760 mm (30 inches) wide.
      8) Size 4: 610 mm (24 inches) wide.
      9) Size 5: 510 mm (20 inches) wide.
6. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by PHA/IHA.

Submittals
7. Product Data: Submit to the Owner.
8. Samples:
   a. Production Sample: When requested, provide sample electric range to the Owner for examination as to compliance with specifications.
   b. Color Samples: Submit samples of manufacturer’s standard colors to the Owner for selection.
9. Quality Assurance/Control Submittals: Submit following to the Owner:
   a. Certificates: Manufacturer's written certification that electric ranges meet or exceed specified requirements including UL requirements and requirements of FS WR-101F.
   b. Manufacturer’s installation instructions.
10. Closeout Submittals: Submit following to the Owner:
11. Qualifications: Manufacturer: Stock and sell parts for ranges supplied for five years from time of delivery.

12. Regulatory Requirements: Comply with following:
   a. Accessibility:
         a) Uniform Federal Accessibility Standards (UFAS).
      2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
      3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).

13. Appliances shall meet or exceed requirements established by the Energy Star program and bear the Energy Star logo. Visit www.energystar.gov for a listing of products that qualify. Energy Star® is a voluntary partnership that includes the U.S. Department of Energy, the U.S. Environmental Protection Agency, product manufacturers, local utilities, and retailers, helps promote efficient products by labeling them with the Energy Star logo and educating consumers about the benefits of energy efficiency.

Delivery, Storage, And Handling
14. Packing, Shipping, Handling, and Unloading: In accordance with standard commercial practices.

15. Acceptance at Site: Inspect electric ranges upon delivery. Replace damaged or defective appliances before installation.

Scheduling
16. Scheduling and Completion: Comply with requirements of Division 1.

Warranty
17. Special Warranties: Provide following written special warranties:
   a. Entire electric range for one year.

18. Special Warranties: Include labor, material and equipment to provide replacements and make repairs to electric ranges at no additional cost to PHA/IHA.
   a. Defective Units and/or Parts: Become property of Contractor.
   b. Submit name and address of local agent who will furnish service and replacement parts in connection with warranties to PHA/IHA.
      1) Charges by local service agent to PHA/IHA for services covered under special warranties not allowed.

PRODUCTS

Electric Ranges
   a. Ranges: Floor mounted, free standing flush-to-wall, domestic electric ranges with open cooking top, oven and broiler below.
   b. Ranges of Same Classification: Identical, including parts and assemblies.
   c. Ranges: UL listed and bear UL label.

20. Operating Service: 115/230 volts or 120/208 volts, 3-wire, single-phase, 60-HZ.
   a. Type of Service: As scheduled.

21. Ranges:
11 - Equipment

August 2021

Electric Ranges

DASNY, Downstate

11301313c - 3

a. Each Range: Equipped with at least two leg levelers.
b. Oven Door: Equip 610 mm (24 inch), 760 mm (30 inch), and 910 mm (36 inch) ranges with removable oven door.
c. Ranges without Storage Drawer: May be equipped with only one oven rack.

Ranges For Elderly Housing

22. Ranges for Elderly Housing: Same as above, Type I or II, Style 1, Sizes 4 and 5, standard electric ranges but, as minimum, include following additional items:
   a. Location of Controls for Ranges and Cook-Tops: Not require reaching across burners.
   b. Burner Indicator Lights: Provide light for each top burner and oven unit that will clearly indicate when burner is on.
      1) Indicator Light: Integral part of, or adjacent to, each control switch or adjacent to each top burner unit.
   c. Oven Interior Light: Provide light in each oven that will clearly illuminate interior when oven door is open.

EXECUTION

Examination

23. Site Verification of Conditions:
   a. Utilities: Verify that required utilities are available, in proper locations, and ready for use.

Preparation

24. Existing Ranges: Remove existing ranges and debris from site.

Installation

25. General: Install electric ranges in accordance with manufacturer’s recommendations.
   a. Make adjustments to feet of ranges for a level installation.
   b. Electrical Renovation: See Section 16095.

Cleaning

Schedules

27. Provide electric ranges as selected in following schedule:
   _____Remove existing ranges.
   _____Supply and Deliver Only to_______________________________________.
   _____Unloading and handling included.
   _____Supply and Install.

SECTION 11 30 13 13d - RANGE HOODS

GENERAL

Summary
1. Section Includes:
   a. Remove existing range hoods.
   b. Range hoods, supply and deliver only or supply and install as scheduled.
2. Related Requirements: Comply with requirements of following sections:
   a. Contractor Use of Premises and Work Sequence: Section “Summary of Work.”
   b. Section “Alteration Project Procedures.”
3. Related Sections:
   a. Kitchen Renovation Requirements: Section “Summary of Work.”
   b. Reference Standards: Section “References.”
   c. Gas Ranges: Section “Gas Ranges.”
   d. Electric Ranges: Section “Electric Ranges.”
   e. Residential Cabinets: Section “Residential Cabinets.”
   f. Electrical Hook-up: Section “Electrical Renovation.”

References
4. Reference Standards: See Section “References.” Comply with following:
   b. Certification:
      2) ANSI Z34.2 - Certification, Self-Certification by Producer or Supplier, 1987.

Definitions
5. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by PHA/IHA.

Submittals
6. Product Data: Submit to the Owner.
7. Samples: Submit to the Owner.
   Production Sample: When requested, provide sample range hood to the Owner for examination as to compliance with specifications.
   a. Color Samples: Samples of manufacturer's standard colors for selection.
8. Quality Assurance/Control Submittals: Submit following to the Owner:
   a. Certificates: Manufacturer's written certification that range hoods meet or exceed specified requirements including UL requirements.
   b. Manufacturer's installation instructions.
   c. Appliances shall meet or exceed requirements established by the Energy Star program and bear the Energy Star logo. Visit www.energystar.gov for a listing of products that qualify. Energy Star® is a voluntary partnership that includes the U.S. Department of Energy, the U.S. Environmental Protection Agency, product manufacturers, local utilities, and retailers, helps promote efficient products by labeling them with the Energy Star logo and educating consumers about the benefits of energy efficiency.
   d. Closeout Submittals: Submit following to the Owner:
      1) Operation and Maintenance Instructions: Provide use and care information with each range hood. Include parts manual with diagrams and part numbers.
      e. Special warranty.

Quality Assurance
9. Qualifications: Manufacturer: Stock and sell parts for range hoods supplied for five years from time of delivery.
10. Regulatory Requirements: Comply with following:
    a. Accessibility:
   a) Uniform Federal Accessibility Standards (UFAS).
2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).

Delivery, Storage, And Handling
11. Packing, Shipping, Handling, and Unloading: In accordance with standard commercial practices.
12. Acceptance at Site: Inspect range hoods upon delivery. Replace damaged or defective appliances before installation.

Scheduling
13. Scheduling and Completion: Comply with requirements of Division 1.

Warranty
14. Special Warranties: Provide following written special warranties:
   a. Entire range hood for one year.
15. Special Warranties: Include labor, material and equipment to provide replacements and make repairs to range hoods at no additional cost to PHA/IHA.

PRODUCTS

Range Hoods
   a. Size: 610 mm (24 inches) or 760 mm (30 inches) wide as scheduled, by 150 mm (6 inches) high by 445 mm (17.5 inches) deep.
   b. Hoods: UL listed and bear UL label.
   c. Fan: 120 V, 60 HZ, two speed, 2.0 A fan.
   d. Light: Enclosed 75 watt.
   e. Filter: Washable filter.
   f. Color: As selected from manufacturer's standard colors.
17. Range Hood Shell: Same as range hoods above without fan and without light.
   a. Size: 610 mm (24 inches) or 760 mm (30 inches) wide as scheduled, by 150 mm (6 inches) high by 445 mm (17.5 inches) deep.
   b. Color: As selected from manufacturer standard colors.

EXECUTION

Examination
18. Site Verification of Conditions:
   a. Utilities: Verify that required utilities are available, in proper locations, and ready for use.
   b. Cabinets: Verify that adjacent residential cabinets and range hood are coordinated.

Preparation
19. Existing Range Hoods: Remove existing range hoods and debris from site.

Installation
20. General: Install range hoods in accordance with manufacturer's recommendations.
   a. Electrical Hook-up: See electrical specifications.

Cleaning
21. Cleaning: Comply with requirements of Division 1.
Schedules

22. Provide range hoods as selected in following schedule:

_____ Remove existing range hoods.

_____ Supply and Deliver Only to ________________________________________

_____ Unloading and handling included.

_____ Supply and Install.

_____ Range Hood (with fan, filter, and light).

______ 760 mm (30 inches) wide.

______ 610 mm (24 inches) wide.

_____ Range Hood Shell.

______ 760 mm (30 inches) wide.

______ 610 mm (24 inches) wide.

SECTION 11 52 13 13 - PROJECTION SCREENS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for projection screens. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Manually operated projection screens.
   b. Electrically operated projection screens and controls.
   c. Rigid rear-projection screens.

C. Definitions
1. Gain of Front-Projection Screens: Ratio of light reflected from screen material to that reflected perpendicularly from a magnesium carbonate surface as determined per SMPTE RP 94.
2. Gain of Rear-Projection Screens: Ratio of light refracted by screen material to that reflected perpendicularly from a magnesium carbonate surface as determined per SMPTE RP 94, except that for measuring luminance of test screen, projection lamp shall be placed behind screen same distance as it was placed in front of magnesium carbonate surface for measuring luminance of reference standard.
3. Half-Gain Angle: The angle, measured from the axis of the screen surface to the most central position on a perpendicular plane through the horizontal centerline of the screen where the gain is half of the peak gain.

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For projection screens. Show layouts and types of projection screens. Include the following:
   a. For manually operated projection screens:
      1) Drop lengths.
      2) Anchorage details.
      3) Accessories.
   b. For electrically operated projection screens and controls:
      1) Location of screen centerline relative to ends of screen case.
      2) Location of wiring connections for electrically operated units.
      3) Location of seams in viewing surfaces.
      4) Drop lengths.
      5) Anchorage details, including connection to supporting structure for suspended units.
      6) Details of juncture of exposed surfaces with adjacent finishes.
      7) Accessories.
      8) Wiring diagrams.
   c. For rigid rear-projection screens:
      1) Frame details.
      2) Anchorage details.
      3) Details of juncture of exposed surfaces with adjacent finishes.
      4) Accessories.
3. Maintenance Data: For projection screens to include in maintenance manuals.

E. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
F. Delivery, Storage, And Handling
   1. Environmental Limitations: Do not deliver or install projection screens until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Store rear-projection screens in manufacturer's protective packaging and according to manufacturer's written instructions.

1.2 PRODUCTS

A. Manually Operated Projection Screens
   1. General: Manufacturer's standard spring-roller-operated units, consisting of case, screen, mounting accessories, and other components necessary for a complete installation.
      a. Screen Mounting: Top edge securely anchored to a 3-inch- (75-mm-) diameter, rigid steel roller; bottom edge formed into a pocket holding a tubular metal slat, with ends of slat protected by plastic caps, and with a saddle and pull attached to slat by screws.
      b. Tab Tensioning: Provide units that have a durable low-stretch cord, such as braided polyester, on each side of screen connected to edge of screen by tabs to pull screen flat horizontally. In lieu of tab tensioning, screens may be constructed from vinyl-coated screen cloth that contains horizontal stiffening monofilaments to resist edge curling, as directed.
   2. Bracket-Mounted or Ceiling-Suspended, Metal-Encased, Manually Operated Screens: Units designed and fabricated for suspending from wall brackets or ceiling, fabricated from formed-steel sheet not less than 0.027 inch (0.7 mm) thick or from aluminum extrusions; with vinyl covering or baked-enamel finish and matching end caps. Provide mounting brackets unless otherwise indicated.
   3. Surface-Mounted, Metal-Encased, Manually Operated Screens: Units designed and fabricated for surface mounting on wall or ceiling, fabricated from formed-steel sheet not less than 0.027 inch (0.7 mm) thick or from aluminum extrusions; with flat back design and vinyl covering or baked-enamel finish. Provide units with matching end caps and concealed mounting.
   4. Surface-Mounted, Wood-Finished, Manually Operated Screens: Units designed and fabricated for surface mounting on wall or ceiling; with flat back design, hardwood finish, and concealed mounting brackets.
      a. Hardwood: Oak OR Walnut OR Cherry OR As selected from manufacturer's full range of species, as directed.
      b. Finish: As selected from manufacturer's full range.

B. Electrically Operated Projection Screens
   1. General: Manufacturer's standard units consisting of case, screen, motor, controls, mounting accessories, and other components necessary for a complete installation. Provide units that are listed and labeled as an assembly by UL or another testing and inspecting agency acceptable to authorities having jurisdiction, as directed.
      a. Controls: Remote, key-operated, as directed, three-position control switch installed in recessed device box with flush cover plate matching other electrical device cover plates in room where switch is installed.
         1) Provide two OR three, as directed, control switches for each screen.
         2) Provide number of control switches indicated for each screen.
         3) Provide power supply for low-voltage systems if required.
         4) Provide locking cover plates for switches.
         5) Provide key-operated, power-supply switch.
         6) Provide infrared OR radio-frequency, as directed, remote control consisting of battery-powered transmitter and receiver.
         7) Provide video interface control for connecting to projector. Projector provides signal to raise or lower screen.
      b. Motor in Roller: Instant-reversing motor of size and capacity recommended by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload
protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Mount motor inside roller with vibration isolators to reduce noise transmission.

c. End-Mounted Motor: Instant-reversing, gear-drive motor of size and capacity recommended by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Locate motor in its own compartment on right end of screen unless otherwise indicated OR on left end of screen unless otherwise indicated OR on end of screen indicated, as directed.

d. Screen Mounting: Top edge securely anchored to rigid metal roller and bottom edge formed into a pocket holding a 3/8-inch- (9.5-mm-) diameter metal rod with ends of rod protected by plastic caps.
1) Roller for end-mounted motor supported by self-aligning bearings in brackets.
2) Roller for motor in roller supported by vibration- and noise-absorbing supports.

e. Tab Tensioning: Provide units that have a durable low-stretch cord, such as braided polyester, on each side of screen connected to edge of screen by tabs to pull screen flat horizontally. In lieu of tab tensioning, screens may be constructed from vinyl-coated screen cloth that contains horizontal stiffening monofilaments to resist edge curling.

2. Surface-Mounted, Metal-Encased, Electrically Operated Screens: Motor-in-roller OR End-mounted motor, as directed, units designed and fabricated for surface mounting on wall or ceiling, fabricated from formed-steel sheet not less than 0.027 inch (0.7 mm) thick or from aluminum extrusions; with flat back design and vinyl covering or baked-enamel finish. Provide with matching end caps and concealed mounting.

3. Surface-Mounted, Wood-Finished, Electrically Operated Screens: Motor in roller units designed and fabricated for surface mounting on wall or ceiling; with flat back design, hardwood finish, and concealed mounting brackets.
   a. Hardwood: Oak OR Walnut OR Cherry OR As selected from manufacturer's full range of species, as directed.
   b. Finish: As selected from manufacturer's full range.

4. Suspended, Electrically Operated Screens without Ceiling Closure: Motor-in-roller OR End-mounted motor, as directed, units designed and fabricated for suspended mounting, with bottom of case entirely or partially open under screen compartment.
   a. Provide metal or metal-lined motor enclosure on units with end-mounted motor.
   b. Provide metal or metal-lined wiring compartment on units with motor in roller.
   c. Screen Case: Made from metal OR metal and fire-retardant materials OR metal, wood, wood products, and fire-retardant materials, as directed.
   d. Provide screen case with trim flange to receive ceiling finish OR constructed to be installed with underside flush with ceiling OR constructed to be installed with ceiling finish applied to underside, as directed.
   e. Finish on Exposed Surfaces: Prime painted OR Vinyl covering or baked enamel, as directed.

5. Suspended, Electrically Operated Screens with Automatic Ceiling Closure: Motor-in-roller OR End-mounted motor, as directed, units designed and fabricated for suspended mounting; with bottom of case composed of two panels, fully enclosing screen, motor, and wiring; one panel hinged and designed to open and close automatically when screen is lowered and fully raised, the other removable or openable for access to interior of case.
   a. Provide metal or metal-lined motor enclosure on units with end-mounted motor.
   b. Provide metal or metal-lined wiring compartment on units with motor in roller.
   c. Screen Case: Made from metal OR metal and fire-retardant materials OR metal, wood, wood products, and fire-retardant materials, as directed.
   d. Provide screen case with trim flange to receive ceiling finish OR constructed to be installed with underside flush with ceiling OR constructed to be installed with ceiling finish applied to underside, as directed.
   e. Finish on Exposed Surfaces: Prime painted OR Vinyl covering or baked enamel, as directed.

C. Front-Projection Screen Material
1. Matte-White Viewing Surface: Peak gain not less than 0.9, and gain not less than 0.8 at an angle of 50 degrees from the axis of the screen surface.
2. Matte-Gray Viewing Surface: Peak gain not less than 0.8, and half-gain angle of not less than 50 degrees from the axis of the screen surface.
3. Glass-Beaded Viewing Surface: Peak gain not less than 2.0, and half-gain angle of at least 15 degrees from the axis of the screen surface.
4. Matte Reflective Viewing Surface: Peak gain not less than 1.3, and half-gain angle of at least 40 degrees from the axis of the screen surface.
5. Wide-Angle Reflective Viewing Surface: Peak gain not less than 1.5, and half-gain angle of at least 35 degrees from the axis of the screen surface.
6. Multipurpose Reflective Viewing Surface: Peak gain not less than 1.8, and half-gain angle of at least 25 degrees from the axis of the screen surface.
7. High-Gain Reflective Viewing Surface: Peak gain not less than 2.5, and half-gain angle of at least 20 degrees from the axis of the screen surface.
9. Mildew-Resistance Rating: 0 or 1 when tested according to ASTM G 21.
11. Flame-Spread Index: Not greater than 75 when tested according to ASTM E 84.
12. Seams: Where length of screen indicated exceeds maximum length produced without seams in material specified, provide screen with horizontal seam placed as follows:
   a. At top OR bottom, as directed, of screen at juncture between extra drop length and viewing surface.
   b. In location indicated.
14. Edge Treatment: Black OR Without black, as directed, masking borders.
15. Size of Viewing Surface: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by 1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm) OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR 58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
16. Provide extra drop length of dimensions and at locations indicated.
   a. Color: Same as viewing surface OR Black, as directed.

D. Flexible Rear-Projection Screen Material
1. Wide-Angle Screens: Peak gain not less than 1.0, and half-gain angle of at least 35 degrees from the axis of the screen surface.
2. Moderate-Gain Screens: Peak gain not less than 1.3, and half-gain angle of at least 30 degrees from the axis of the screen surface.
3. High-Gain Screens: Peak gain not less than 1.8, and half-gain angle of at least 15 degrees from the axis of the screen surface.
5. Mildew-Resistance Rating: 0 or 1 when tested according to ASTM G 21.
7. Flame-Spread Index: Not greater than 75 when tested according to ASTM E 84.
8. Seamless Construction: Provide screens, in sizes indicated, without seams.
9. Size of Viewing Surface: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by 1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm) OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR 58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
10. Provide extra drop length of dimensions and at locations indicated.
   a. Color: Same as viewing surface OR Black, as directed.

E. Optically Coated Rigid Rear-Projection Screens
1. Screen Substrate: Optically clear substrate complying with the following requirements:
   a. Clear float glass complying with ASTM C 1036 for Type I (transparent glass, flat), Class 1 (clear), and Quality q3 (glazing select), 6.0 mm thick OR 10.0 mm thick OR 12.0 mm thick OR thickness as indicated, as directed.
b. Colorless, transparent, cast-acrylic sheet with a luminous transmittance of 92 percent per ASTM D 1003 and complying with ASTM D 4802, Category A-1 (cell cast), Finish 1 (smooth or polished), 1/4 inch (6.4 mm) thick OR 3/8 inch (9.5 mm) thick OR 1/2 inch (12.7 mm) thick OR thickness as indicated, as directed.

c. Fresnel lens cast from colorless, transparent, acrylic with a luminous transmittance of 92 percent per ASTM D 1003 and complying with ASTM D 4802, Category A-1 (cell cast), Finish 1 (smooth or polished) on one side and Finish 2 (patterned) on other side, 1/4 inch (6.4 mm) thick OR 3/8 inch (9.5 mm) thick OR 1/2 inch (12.7 mm) thick OR thickness as indicated, as directed.

2. Optical Coating: Durable, washable coating bonded to one side of substrate.

3. Wide-Angle Screens: Peak gain not less than 1.0, and half-gain angle of at least 35 degrees from the axis of the screen surface.

4. Moderate-Gain Screens: Peak gain not less than 1.3, and half-gain angle of at least 30 degrees from the axis of the screen surface.

5. General-Purpose Screens: Peak gain of not less than 1.8, and half-gain angle of at least 28 degrees from the axis of the screen surface.

6. High-Gain Screens: Peak gain not less than 2.0, and half-gain angle of at least 20 degrees from the axis of the screen surface.

7. Optical Tint: High-contrast dark gray OR Medium neutral gray OR Neutral white OR Manufacturer's standard, as directed.

8. Protective Coating: Provide formulation designed by screen manufacturer as a permanent topcoat over optical coatings to protect against normal abrasion before, during, and after installation.

9. Writing-Surface Coating: Provide screen manufacturer's protective coating, designed as a writing surface for dry-erase markers, on front of screen.

10. Size of Viewing Surface: 40 by 54 inches (1016 by 1371 mm) OR 43 by 57 inches (1092 by 1447 mm) OR 50 by 67 inches (1270 by 1701 mm) OR 54 by 72 inches (1371 by 1828 mm) OR 60 by 80 inches (1524 by 2032 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.

F. High-Performance Rigid Rear-Projection Screens

1. High-Performance Screens, General: Acrylic screen with Fresnel lens on rear surface and linear lenses on front surface.
   a. Screen Substrate: Optically clear acrylic with a luminous transmittance of 92 percent per ASTM D 1003 and complying with ASTM D 4802, Category A-1 (cell cast), Finish 2 (patterned), 1/4 inch (6.4 mm) thick OR 3/8 inch (9.5 mm) thick OR 1/2 inch (12.7 mm) thick OR thickness as indicated, as directed.
   b. Performance: Peak gain not less than 3.0 OR 4.0, as directed, and horizontal half-gain angle of at least 50 degrees from the axis of the screen surface.
   c. Performance: Peak gain of 3.5 OR 4.0, as directed, and horizontal half-gain angle of at least 30 degrees from the axis of the screen surface.
   d. Performance: Peak gain of 5.0, and horizontal half-gain angle of at least 25 degrees from the axis of the screen surface.
   e. Performance: Peak gain not less than 1.5 OR 3.0, as directed, and horizontal half-gain angle of at least 20 degrees from the axis of the screen surface.

3. Size of Viewing Surface: 40 by 54 inches (1016 by 1371 mm) OR 43 by 57 inches (1092 by 1447 mm) OR 50 by 67 inches (1270 by 1701 mm) OR 54 by 72 inches (1371 by 1828 mm) OR 60 by 80 inches (1524 by 2032 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.

G. Rigid Rear-Projection Screen Accessories

1. Factory Frames: Screen manufacturer's standard frames of profile indicated, fabricated to sizes required to fit screens from aluminum extrusions complying with ASTM B 221 (ASTM B 221M) for 6063-T5 alloy and temper.
   a. Class II, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
   b. Class II, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural
Class II, integrally colored or electrolytically deposited color coating 0.010 mm or thicker) complying with AAMA 611.

1) Color: Black OR Dark bronze OR Either black or dark bronze, as standard with manufacturer, as directed.

2. Glazing Accessories for Factory Frames: Provide gaskets and setting blocks with proven record of compatibility with screen and frame surfaces, of sizes and shapes to accommodate thickness of screen indicated and to fit glazing channel provided.

3. Glazing Accessories for Field-Framed Screens: Provide materials compatible with screen and frame surfaces while complying with applicable requirements in Division 08 Section “Glazing”.

1.3 EXECUTION

A. Front-Projection Screen Installation

1. Install front-projection screens at locations indicated to comply with screen manufacturer's written instructions.

2. Install front-projection screens with screen cases in position and in relation to adjoining construction indicated. Securely anchor to supporting substrate in a manner that produces a smoothly operating screen with vertical edges plumb and viewing surface flat when screen is lowered.

   a. Install low-voltage controls according to NFPA 70 and complying with manufacturer's written instructions.

   1) Wiring Method: Install wiring in raceway except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use UL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.

   b. Test electrically operated units to verify that screen controls, limit switches, closures, and other operating components are in optimum functioning condition.

   c. Test manually operated units to verify that screen-operating components are in optimum functioning condition.

B. Rigid Rear-Projection Screen Installation

1. Install rear-projection screens at locations indicated to comply with screen manufacturer's written instructions. Handle screens carefully during installation using procedures and tools recommended by screen manufacturer; do not abrade screen surfaces.

2. Install optically coated rear-projection screens with optical coating toward projector OR audience, as directed.

3. Install high-performance, rear-projection screens with orientation as indicated in manufacturer's written instructions.

4. Install factory-framed, rear-projection screens in prepared wall openings. Securely anchor frames to surrounding construction so frames are plumb and level and screen surfaces are flat.

5. Install rear-projection screens with glass substrates, in frames specified in other Sections, to comply with applicable requirements in Division 08 Section "Glazing" and with screen manufacturer's written instructions. Set projection screen with surfaces flat and edges plumb and level.

6. Install rear-projection screens with plastic substrates, in frames specified in other Sections, to comply with screen manufacturer's written instructions. Clamp units only at top edge and allow for expansion and contraction of plastic glazing material by providing frame with adequate bite and edge clearances.

C. Protecting And Cleaning Rigid Rear-Projection Screens

1. Provide temporary covering of rear-projection screens until time of Final Completion. Use type of covering approved by screen manufacturer that will effectively protect screen from abrasion, breakage, or other damage.

2. Clean rear-projection screens on both faces immediately before date scheduled for inspection intended to establish date of Final Completion. Use methods and cleaning materials
recommended by screen manufacturer, taking care not to scratch or damage optical coatings or screen substrates.

D. Projection Screen Schedule
1. Manually Operated, Front-Projection Screen Type: Surface mounted, metal encased
   a. Screen Surface: Matte white OR Matte gray OR Glass beaded OR Matte reflective OR
      Wide-angle reflective OR Multipurpose reflective OR High-gain reflective, as directed.
   b. Viewing Surface Size: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by
      1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm)
      OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR
      58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
   c. Extra Drop Length: As needed at top of screen for bottom of screen to be 36 inches (900
      mm) above floor and 36 inches (900 mm) at bottom of screen, as directed.

2. Electrically Operated, Front-Projection Screen Type: Surface mounted, metal encased
   a. Motor Configuration: Motor in roller OR End-mounted motor on right end of screen OR
      End-mounted motor on left end of screen OR End-mounted motor on end of screen indicated,
      as directed.
   b. Screen Surface: Matte white OR Matte gray OR Glass beaded OR Matte reflective OR
      Wide-angle reflective OR Multipurpose reflective OR High-gain reflective, as directed.
   c. Viewing Surface Size: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by
      1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm)
      OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR
      58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
   d. Extra Drop Length: As needed at top of screen for bottom of screen to be 36 inches (900
      mm) above floor and 36 inches (900 mm) at bottom of screen, as directed.

3. Manually Operated, Rear-Projection Screen Type: Surface mounted, metal encased
   a. Screen Type: Wide angle OR Moderate gain OR High gain, as directed.
   b. Viewing Surface Size: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by
      1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm)
      OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR
      58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
   c. Extra Drop Length: As needed at top of screen for bottom of screen to be 36 inches (900
      mm) above floor and 36 inches (900 mm) at bottom of screen, as directed.

4. Electrically Operated, Rear-Projection Screen Type: Surface mounted, metal encased
   a. Motor Configuration: Motor in roller OR End-mounted motor on right end of screen OR
      End-mounted motor on left end of screen OR End-mounted motor on end of screen indicated,
      as directed.
   b. Screen Type: Wide angle OR Moderate gain OR High gain, as directed.
   c. Viewing Surface Size: 50 by 50 inches (1270 by 1270 mm) OR 60 by 60 inches (1524 by
      1524 mm) OR 70 by 70 inches (1778 by 1778 mm) OR 84 by 84 inches (2133 by 2133 mm)
      OR 48 by 65 inches (1219 by 1651 mm) OR 54 by 72 inches (1371 by 1828 mm) OR
      58 by 79 inches (1473 by 2006 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
   d. Extra Drop Length: As needed at top of screen for bottom of screen to be 36 inches (900
      mm) above floor and 36 inches (900 mm) at bottom of screen, as directed.

5. Rigid Rear-Projection Screen Type: Optically coated screen.
   a. Screen Substrate: Glass OR Acrylic, as directed.
   b. Screen Type: Wide angle OR Moderate gain OR General purpose OR High gain, as
      directed.
   c. Optical Tint: High-contrast dark gray OR Medium neutral gray OR Neutral white, as
      directed.
   d. Size of Viewing Surface: 40 by 54 inches (1016 by 1371 mm) OR 43 by 57 inches (1092
      by 1447 mm) OR 50 by 67 inches (1270 by 1701 mm) OR 54 by 72 inches (1371 by 1828
      mm)
mm) OR 60 by 80 inches (1524 by 2032 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.

e. Additional Features: Protective coating OR Writing surface coating OR Factory frame, as directed.

   a. Gain: Not less than 1.5 OR 3 OR 3.5 OR 4 OR 5, as directed.
   b. Horizontal Half-Gain Angle: At least 20 OR 25 OR 30 OR 50, as directed, degrees from screen axis.
   c. Size of Viewing Surface: 40 by 54 inches (1016 by 1371 mm) OR 43 by 57 inches (1092 by 1447 mm) OR 50 by 67 inches (1270 by 1701 mm) OR 54 by 72 inches (1371 by 1828 mm) OR 60 by 80 inches (1524 by 2032 mm) OR 72 by 96 inches (1828 by 2438 mm), as directed.
   d. Additional Features: Factory frame.

SECTION 11 66 23 53 - GYMNASIUM EQUIPMENT

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for gymnasium equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following gymnasium equipment:
   a. Basketball equipment.
   b. Volleyball equipment.
   c. Badminton equipment.
   d. Exercise equipment.
   e. Safety pads.

C. Definitions
1. FIBA: International Basketball Federation (Federation Internationale de Basketball Amateur).
2. FIVB: International Volleyball Federation (Federation Internationale de Volleyball).
3. IBF: International Badminton Federation.
6. NFHS: The National Federation of State High School Associations.
7. USAV: USA Volleyball.

D. Performance Requirements

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.4: For particleboard, documentation indicating that product contains no urea formaldehyde.
3. Shop Drawings: For gymnasium equipment. Include plans, elevations, sections, details, attachments to other work.
4. Structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation including loads, point reactions, and locations for attachment of gymnasium equipment to structure.
5. Coordination Drawings: Court layout plans, drawn to scale, and coordinating floor inserts, game lines, and markers applied to finished flooring.
6. Samples: For each type of gymnasium equipment indicated.
7. Operation and maintenance data.
8. Warranty: Special warranty specified in this Section.

F. Quality Assurance
1. Installer Qualifications: Fabricator of products OR An employer of workers trained and approved by manufacturer, as directed.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
G. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of gymnasium equipment that fail in materials or workmanship within five OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Materials

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

2. Steel: Comply with the following:
   a. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
   b. Steel Tubing: ASTM A 500 or ASTM A 513, cold formed.
   c. Steel Sheet: ASTM A 1011/A 1011M.

3. Support Cable: 1/4-inch- (6-mm-) diameter, 7x19 OR Manufacturer's standard, as directed, galvanized steel aircraft cable with a breaking strength of 7000 lb (3175 kg). Provide fittings complying with cable manufacturer's written instructions for size, number, and method of installation.

4. Support Chain and Fittings: Grade 80 hardened alloy steel chain rated for overhead lifting, ASTM A 391/A 391M, with commercial-quality, hot-dip galvanized OR zinc-plated, as directed, steel connectors and hangars.

7. Particleboard: ANSI A208.1, made with adhesive containing no urea formaldehyde.

8. Equipment Wall-Mounting Board: Wood, transparent OR neutral-color painted, as directed, finish, size, and quantity as required to mount gymnasium equipment according to manufacturer's written instructions.

9. Anchors, Fasteners, Fittings and Hardware: Manufacturer's standard corrosion-resistant or noncorrodible units; concealed; tamperproof, vandal- and theft-resistant design.

10. Grout: Nonshrink, nonmetallic, premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107 with minimum strength recommended in writing by gymnasium equipment manufacturer.

B. Basketball Equipment

2. Protruding fasteners or exposed bolt heads on front face of backboards are not permitted.

3. Overhead-Supported, Wall-Braced, as directed, Backboard:
   a. Stationary Type: Manufacturer's standard assembly.
   b. Folding Type: Provide manufacturer's standard assembly for forward-folding, front-braced OR forward-folding, rear-braced OR backward-folding OR side-folding, as directed, backboard, with hardware and fittings to permit folding.
   c. Framing: Steel pipe, tubing, and shapes. Design framing to minimize vibration during play.
      1) Center-Mast Frame: Welded OR Welded and bolted or clamped, as directed, with side sway bracing.
      2) Dual-Mast Frame: Welded OR Welded and bolted or clamped, as directed, with cross bracing.
      3) Finish: Manufacturer's standard primer for field finishing OR powder-coat finish, as directed.
   d. Goal Height Adjuster: Adjustable from 8 to 10 feet (2.4 to 3 m) with gear-drive mechanism, locking in any position within adjustment range, with visible height scale attached to side of framing.
   OR
   Operation: Electric with integral gear-drive motor, with limit switches preset to goal heights, and one detachable electric control device(s).

4. Wall-Mounted Backboards: Complete assembly extending from wall, including support framing to building structure, bracing, cables, chains, pulleys, fittings, hardware, pipe anchors, equipment pads, and fasteners.
   a. Stationary Type: Provide manufacturer's standard assembly for stationary backboard.
   b. Folding Type: Provide manufacturer's standard assembly for upward-folding OR side-folding, as directed, backboard, with hardware and fittings to permit folding.
   c. Framing: Steel pipe, tubing, and shapes. Design framing to minimize vibration during play.
      1) Finish: Manufacturer's standard primer for field finishing OR powder-coat finish, as directed.
   d. Extension: 6 inches (152 mm) OR 12 inches (305 mm) OR 18 inches (457 mm) OR 24 to 48 inches (610 to 1220 mm) OR 48 to 120 inches (1220 to 3050 mm) OR As indicated, as directed.
   e. Goal Height Adjuster: Adjustable from 8 to 10 feet (2.4 to 3 m) with gear-drive mechanism, locking in any position within adjustment range, with visible height scale attached to side of framing.
      1) Operation: Manual with detachable crank handle.
      OR
      Operation: Electric with integral gear-drive motor, with limit switches preset to goal heights, and one detachable electric control device(s).

5. Backboard Safety Device: Designed to limit free fall if support cable, support chain, pulleys, fittings, winch, or related components fail; with mechanical automatic reset; 6000-lb (2722-kg) load capacity; one per folding backboard OR where indicated, as directed.
   a. Retractor Device: Pulley-type OR Spring-activated, reel-type OR Manufacturer's standard, as directed, device designed to retract both support and safety cables, chains, and straps away from play of the basketball when backboard is in playing position; one per folding backboard OR where indicated, as directed.

6. Winch: Hoist, consisting of heavy-duty, fully enclosed worm-gear, brake, cable drum, cable, and fittings, for mounting on wall with equipment mounting board; designed to move and hold backboard in any raised or lowered position.
   b. Portable Winch Operator: One portable electric motor-drive device(s), including adaptor to fit crank mechanism.

7. Backboard Electric Operator: Provide operating machine of size and capacity recommended by manufacturer for equipment specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, and remote controls. Coordinate wiring requirements and electrical characteristics with building electrical system.
   a. Operator Type: Cable drum with grooved drum and cable tension device to automatically take up cable slack and retain cable in grooves.
   c. Motor Characteristics: Sufficient to start, accelerate, reverse, and operate connected loads at designated speeds within installed environment and with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1, and the following:
   d. Voltage: 120 V OR 208-220 V OR NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected, as directed.
   e. Horsepower: 1/2 OR 3/4 OR 1, as directed, hp.
   f. Enclosure: Open dripproof OR Totally enclosed OR Manufacturer's standard, as directed.
   g. Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.
   h. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
   i. Phase: One.
j. Remote-Control Station(s): NEMA ICS 6, Type 1 enclosure for surface OR recessed or flush, as directed, mounting, momentary-contact, three-position switch-operated control with up, down, and off functions.
   1) Group Key Switch Control Stations: One switch per each backboard OR two backboards, as directed.
   2) Keys: Provide one key OR two keys OR one set of dual keys OR two sets of dual keys OR dual keys, one key for up and one for down, as directed, per station.
   3) Switches, Ganged: Single faceplate with multiple switch cut-outs for two switches operating four backboards OR for three switches operating six backboards OR for four switches operating eight backboards OR for 5 switches operating 10 backboards OR for 6 switches operating 12 backboards OR as indicated, as directed.
   4) Control Station Enclosure: Provide prime-painted metal enclosure with integrally formed padlock hasps OR key access with two sets of keys per enclosure, as directed.
   5) Radio Controls: Digital system consisting of code-compatible universal coaxial receiver, one per backboard winch, and two portable multiple-channel transmitters for operating two OR four OR up to nine, as directed, backboards individually with up and down functions.

k. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop basketball equipment at fully retracted and fully lowered positions.

8. Basketball Backboard:
a. Shape and Size:
   1) Rectangular, 72 by 42 inches (1800 by 1050 mm) OR 72 by 48 inches (1800 by 1200 mm), as directed, width by height, with rounded corners, as directed.
   2) Fan shaped, 54-inch (1370-mm) maximum width by 35-inch (890-mm) OR 39-inch (990-mm), as directed, maximum height.

b. Backboard Material: With predrilled holes or preset inserts for mounting goals, and as follows:
   1) Fiberglass: Not less than 1-1/2-inch- (38-mm-) thick composite backboard consisting of not less than two 3/16-inch- (5-mm-) thick, molded fiberglass panels laminated together over faces and edges encapsulating a 3/4-inch (19-mm) honeycomb core, reinforced at goal and backboard mountings, or wood panel product core; with threaded inserts or embedded anchors for mounting backboard corners to support framing at standard mounting centers.
   2) Glass: Not less than 1/2-inch- (13-mm-) thick, transparent tempered glass. Provide glass with impact-absorbing resilient rubber or PVC gasket around perimeter in a fully welded, painted steel OR brushed-natural-finish, extruded-aluminum, as directed, frame, with steel subframe, reinforcement, and bracing, including center-strut frame reinforcement, as directed, and with mounting slots for mounting backboard frame to backboard support framing.
      a) Standard Mount: Provide steel corner reinforcement with mounting slots for mounting backboard frame to backboard support framing at standard mounting centers.
      b) Direct Mount: Designed for mounting backboard frame to center mast of backboard framing to maximize relief of stresses on backboard frame and glass.
      c) Rim-Restraining Device: Complying with NCAA and NFHS rules and designed to ensure that basket remains attached if glass backboard breaks.
   3) Steel: Single-piece, steel face sheet, not less than 0.1046-inch (2.7-mm) nominal thickness, with 1-1/2-inch- (38-mm-) deep, roll-edged perimeter flange and with steel-reinforced, welded frame welded to back side of backboard; with mounting slots for mounting backboard frame to backboard support framing at standard mounting centers.
   4) Hardwood or Particleboard: Not less than 1-1/2-inch- (38-mm-) thick backboard consisting of not less than 1/32-inch- (0.8-mm-) thick, melamine- or phenolic-resin-impregnated cellulose and paper laminate over front and back sides of 1-1/2-inch
(38-mm) hardwood or particleboard core; with painted edges and corners and with threaded inserts or slotted brackets for mounting backboard corners to backboard support framing at standard mounting centers.

c. Target Area and Border Markings: Permanently etched in white color, marked in pattern and stripe width according to referenced rules OR manufacturer's standard pattern and stripe width, as directed.

d. Target Area and Border Markings: Marked in pattern, stripe width, and color according to referenced rules OR orange, with manufacturer's standard pattern and stripe width OR black, with manufacturer's standard pattern and stripe width, as directed.

e. Finish: Manufacturer's standard factory-applied, white background.

9. Goal Mounting Assembly: Compatible with goal, backboard, and support framing; with hole pattern 5 inches (127 mm) o.c. horizontally and vertically OR 5 inches (127 mm) o.c. horizontally and 4 inches (102 mm) o.c. vertically OR 5 inches (127 mm) o.c. horizontally and 4-1/2 inches (114 mm) o.c. vertically OR that is manufacturer's standard, as directed, for goal attachment.
   a. Glass Backboard Goal Mounting Assembly: Goal support framing and reinforcement designed to transmit load from goal to backboard frame and to minimize stresses on glass backboard.
   b. Direct Mount: Designed for mounting goal directly and independently to center mast of backboard support framing so no force, transmitted by ring, is directly applied to backboard and rigidity and stability of goal are maximized.

10. Basketball Goals: Complete with flanges, braces, attachment plate, and evenly spaced loops welded around underside of ring.
   a. Single-Rim Basket Ring Competition Goal: Materials, dimensions, and fabrication complying with referenced rules OR per manufacturer's standard design, as directed.
   b. Double-Rim Basket Ring: Fabricated with 2 rims, each consisting of 5/8-inch-(16-mm-) diameter OR consisting of one 1/2-inch-(13-mm-) diameter and one 5/8-inch-(16-mm-) diameter OR manufacturer's standard-diameter, as directed, steel rod welded into 18-inch (450-mm) ID rings.
   c. Type: Fixed, nonmovable.

   OR

   Type: Movable, breakaway design with manufacturer's standard breakaway mechanism and rebound characteristics identical to those of fixed, nonmovable ring.

   OR

   Type: Movable, breakaway design with manufacturer's standard breakaway mechanism including positive-lock, preset pressure release, set to release at 230-lb (105-kg) OR 180- and 230-lb (82- and 105-kg), as directed, load, and automatic reset. Provide movable ring with rebound characteristics identical to those of fixed, nonmovable ring.

d. Mount: Front OR Rear, as directed.

e. Net Attachment: Loops for tying net to rim OR No-tie loops for attaching net to rim without tying OR Tube-tie for attaching net to rim, as directed.

f. Finish: Manufacturer's standard OR Powder-coat, as directed, finish.

11. Basketball Nets: 12-loop-mesh net, between 15 and 18 inches (400 to 450 mm) long, sized to fit rim diameter, and as follows:
   a. Cord: Made from white cotton OR nylon OR plastic, as directed.
   b. Competition Cord: Antiwhip, made from white nylon cord not less than 120- or more than 144-gm thread.
   c. Chain: Nontangle, nonstretch design that will not scratch or impede the ball, made from zinc-coated steel chain.

12. Backboard Safety Pads: Designed for backboard thickness indicated and extending continuously along bottom and up sides of backboard and over goal mounting and backboard supports as required by referenced rules OR per manufacturer's standard design OR indicated, as directed.
   a. Attachment: Peel-and-stick tape OR Adhesive OR Bolt-on OR Manufacturer's standard, as directed.
   b. Color: Black OR Gray OR Manufacturer's standard color OR As selected from manufacturer's full range, as directed.
1. General: Provide equipment complying with requirements in FIVB's "Official Volleyball Rules OR NAGWS's "NAGWS Volleyball Rulebook OR NFHS's "NFHS Volleyball Rule Book OR USAV's "USA Volleyball Rule Book," as directed.

2. Floor Insert: Solid-brass OR Chrome-finished steel OR Aluminum, as directed, floor plate; and steel pipe sleeve, concealed by floor plate, with capped bottom end, sized with ID to fit post standards, not less than 9 inches (230 mm) long OR 12 inches (300 mm) long OR length required, as directed, to securely anchor pipe sleeve in structural floor OR below finished floor in concrete footing OR as indicated, as directed; with anchors designed for securing floor insert to floor substrate indicated; one per post standard OR quantity as indicated, as directed.
   a. Floor Plate: Self-locking, OR Lockable, OR Manufacturer's standard, as directed, hinged access cover, designed to be flush with adjacent flooring. Provide one OR two, as directed, tool(s) for unlocking access covers.
   
   OR

   Floor Plate: Self-locking, OR Lockable, OR Manufacturer's standard, as directed, hinged access cover, recessed to accept finish flooring matching and designed to be level with adjacent flooring. Provide one OR two, as directed, tool(s) for unlocking access covers.

   OR

   Floor Plate: Lockable swivel access cover, designed for use with floating wood floors and to be flush with adjacent flooring. Provide one OR two, as directed, tool(s) for unlocking access covers.

   OR

3. Post Standards: Removable, paired volleyball post standards and center post standard for multicourt play as indicated. Fixed OR Adjustable, telescoping, as directed, height. Designed for easy removal from permanently placed floor insert supports. Fabricated from steel OR extruded-aluminum OR combined steel and extruded-aluminum OR manufacturer's standard metal, as directed, pipe or tubing, with nonmarking plastic or rubber end cap or floor bumper to protect permanent flooring. Finished with manufacturer's standard factory-applied, baked powder-coating finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness or plated metal finish.
   a. Nominal Pipe or Tubing Diameter: 3-inch (75-mm) OR 3-1/2-inch (89-mm) OR 4-inch (102-mm), as directed, OD at base.
   b. Net Height Adjuster: Track or rail system and lock mechanism designed for infinite OR Sliding collar and lock mechanism designed for infinite OR Preset net hooks designed for incremental OR Manufacturer's standard mechanism for, as directed, height adjustment, complete with fittings; designed for positioning net at heights indicated.
   c. Telescopic and Net Height Adjuster System: Provide infinitely adjustable system consisting of screw rod, gear, and crank or constant-tension spring and pulley assist and OR incrementally adjustable system with predrilled holes and pin OR Manufacturer's standard telescoping system with, as directed, locking device, telescopic post, and fittings for holding net at selected height; designed for height adjustment of post standard to position net at heights indicated.
      1) Net Heights: Between sitting volleyball net height and boys'/men's volleyball net height, 36 and 95-5/8 inches (910 and 2430 mm) OR tennis net height and boys'/men's volleyball net height, 42 and 95-5/8 inches (1066 and 2430 mm) OR for age 12 and under net height and boys'/men's volleyball net height, 84 and 95-5/8 inches (2130 and 2430 mm), as directed, or more.
      d. Height Markers: Clearly marked at regulation play heights for elementary school OR girls/women OR boys/men OR sitting volleyball OR tennis, as directed.
   4. Net: 32 feet (9.75 m) long and as follows; 1 per pair of paired post standards OR 2 per every center post standard, as directed:
      a. Width and Mesh: 36 inches (910 mm) with 4-1/2-inch- (114-mm-) square mesh made of black polyester string.
         1) Hem Band Edges: White, 2-inch- (50-mm-) wide top binding; black, 3-4/8-inch- (19-mm-) OR 1-inch- (25-mm-), as directed, wide bottom and side bindings; tie offs at top and bottom of each side end of net; and 1/4-inch- (6-mm-) diameter rope, at least 42 feet (12.8 m) long, threaded through top hem of binding.
b. **Width and Mesh:** Competition volleyball net, 36 inches (910 mm) OR 39 inches (990 mm), as directed, with 4-inch- (102-mm-) square knotless, as directed, mesh made of black nylon string.

1) **Hem Band Edges:** White, not less than 2-inch- (50-mm-) wide top, bottom, and side bindings; tie offs at top, bottom and midpoint of each side end of net OR not less than 1-inch- (25-mm-) wide tension straps at top, bottom and midpoint of each side end of net, as directed; end sleeves for dowels; and lines with linkage fittings threaded through top and bottom hems of binding. Provide lengths of lines and linkage fittings as required to properly connect to and set up net for post standard spacing indicated on Drawings.

   a) **Top Line:** Not less than 1/4-inch- (6-mm-) diameter rope OR 1/8-inch- (3-mm-) diameter, galvanized or coated steel cable, as directed.

   b) **Bottom Line:** Not less than 1/4-inch- (6-mm-) diameter rope OR 1/8-inch- (3-mm-) diameter, galvanized or coated steel cable, as directed.

c. **Dowels:** Not less than 1/2-inch- (13-mm-) diameter fiberglass or 1-inch- (25-mm-) diameter wood. Provide two dowels per net threaded through each side hem sleeve for straightening net side edges.

d. **Net Antennas:** 3/8-inch- (9.5-mm-) diameter, high-tensile-strength, extruded fiberglass or plastic rods, 72 inches (1800 mm) long, extending above top hem band of net, with alternating white and red bands according to competition rules. Provide two antennas per net.

1) **Clamps:** Designed to secure antenna to top and bottom of net.

e. **Boundary Tape Markers:** 2-inch- (50-mm-) wide white strip with sleeve for securing net antenna, as directed, secured to net top and bottom with hook-and-loop attachment. Provide two tape markers per net for marking court boundaries.

5. **Net Tensioning System:** Designed to adjust and hold tension of net. Fully enclosed, nonslip worm-gear-type OR rack-and-pinion-type OR ratchet-type OR manufacturer's standard-type, as directed, winch with cable length and fittings for connecting to net lines, positive-release mechanism, and permanently fixed OR removable OR manufacturer's standard, as directed, handle. Mount net tensioner on post standard at side away from court. Provide end post with post top pulley. Provide opposing post with welded steel loops, hooks, pins, or other devices for net attachment and post top grooved line guide.

6. **Bottom Net Lock Tightener:** Provide manufacturer's standard quick-release-type tension strap, spring-loaded self-locking tensioner, turnbuckle, pulley, or other device and linkage fittings designed to quickly and easily tighten bottom line or net.

7. **Judges’ Stands:** Provide manufacturer's standard OR standard adjustable-height, as directed, units designed to be freestanding, folding for storage OR freestanding, folding for storage with wheels for transporting OR attached to and supported by post standard, as directed. Fabricate units of welded steel tubing with finish and color to match post standards.

8. **Safety Pads:** Comply with NCAA and NFHS requirements, as directed. Provide pads consisting of not less than 1-inch- (25-mm-) OR 1 1/4-inch- (32-mm-) OR 1-inch- (25-mm-) OR 1 1/4-inch- (32-mm-) OR manufacturer's standard, as directed, thick, multiple-impact-resistant polyurethane OR crosslinked or closed-cell polyethylene OR manufacturer's standard, as directed, foam filler covered by puncture- and tear-resistant, not less than 14-oz./sq. yd. (475-g/sq. m) PVC-coated polyester, treated with fungicide for mildew resistance, OR not less than 14-oz./sq. yd. (475-g/sq. m) nylon-reinforced PVC, OR molded PVC, OR manufacturer's standard, as directed, fabric cover; with fire-test-response characteristics indicated, and lined with fire-retardant liner, as directed. Provide pads with hook-and-loop closure or attachments for the following components:

   a. **Post Standards:** Wraparound OR 3- or 4-sided, as directed, style, designed to totally enclose each standard to a height of not less than 66 inches (1680 mm) OR 72 inches (1830 mm), as directed; 1 per post.

   b. **Net Lines:** Four per net.

   c. **Judges’ Stands:** Designed to totally enclose each unit.

   d. **Fabric Cover Flame-Resistance Ratings:** Passes NFPA 701.

   e. **Fabric Color:** Match school colors OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

   f. **Graphics:** Custom graphics as indicated.

10. Wall Storage Rack: Manufacturer's standard unit designed for mounting on walls and for storing post standards in vertical position with retaining arms, fittings for padlock, and mounting hardware; number of units as required to provide storage for specified equipment.

11. Storage Cart: Manufacturer's standard wheeled unit designed for transporting and storing volleyball equipment and passing through 36-inch- (910-mm-) wide or wider door openings. Fabricate units of welded steel tubing with heavy-duty casters, including not less than two swivel casters. Fabricate wheels from materials that will not damage or mark floors; number of units as required to provide transport and storage for specified equipment.

D. Badminton Equipment

1. General: Provide equipment complying with requirements in IBF's “The Laws of Badminton.”

2. Floor Insert: Solid-brass floor plate with hinged, as directed, access cover and steel pipe sleeve with capped bottom end; sized with ID to fit post standards, not less than 5-1/4 inches (133 mm) long OR length required, as directed, to securely anchor pipe in structural floor OR below finished floor in concrete footing OR as indicated, as directed; one per post standard OR quantity as indicated, as directed.

3. Floor Insert Adaptor: Pipe sleeve adaptor to convert volleyball floor insert sleeve to fit badminton post standard; one per badminton post standard OR quantity as indicated, as directed.

4. Post Standards: Paired badminton post standards and center post standard for multicourt play. Designed for easy removal from permanently placed floor insert supports. Fabricated from steel pipe or tubing, with plastic or rubber end cap or nonmarking floor bumper to protect permanent flooring. Finished with manufacturer's standard factory-applied, baked powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.
   a. Nominal Pipe or Tubing Diameter: 1-1/2-inch (38-mm) OR 2-3/8-inch (60-mm), as directed, OD at base.
   b. Net Height Setting: By preset net hooks.
   OR
   Net Height Setting: By groove in post standard top and cleat OR mechanism to adjust net tension, as directed.

5. Net: Competition badminton net, 20 feet (6.1 m) long and as follows; 1 per pair of paired post standards OR 2 per every center post standard, as directed:
   a. Width and Mesh: 30 inches (760 mm) with 3/4-inch- (19-mm-) square mesh made of purple, dark brown, or black nylon string.
      1) Hem Band Edges: White, 3-inch- (75-mm-) wide top binding; purple, dark brown, or black 3/4-inch- (19-mm-) wide bottom and side bindings; tie offs at top, bottom, and midpoints OR sleeve with dowel, as directed, eliminating gap at each side end of net; and not less than 1/8-inch- (3-mm-) diameter rope, at least 42 feet (12.8 m) long, threaded through top hem of binding. Provide lengths of lines and linkage fittings as required to properly connect to and set up net for post standard spacing indicated on Drawings.

E. Exercise Equipment

1. General: Manufacturer's standard equipment wall-mounting board(s).

2. Pull-up Bar: Wall mounted.
   a. Fixed height.
   b. Adjustable Height: In 6-inch (150-mm) increments within a range of 18 inches (460 mm) OR 30 inches (760 mm), as directed.
   c. Bar Length: Not less than 36 inches (910 mm) OR 40 inches (1000 mm) OR As indicated, as directed.
   d. Bar: Not less than 1-1/16-inch- (27-mm-) diameter, round, plated solid-steel bar.
   e. Support Frame: Steel-angle end brackets attached to wood stringers or steel channels or bars.
   f. Bar Installation Height and Wall Clearance: As indicated at not less than 12 inches (300 mm) from wall.
3. Stall Bar: Wall mounted in a continuous row; each section with not less than 16 rungs.
   a. Size: Each section 96 inches (2400 mm) high by 36 inches (910 mm) wide OR As indicated, as directed.
   b. Side Rails: Formed-steel tube uprights not less than 1-1/2 by 5 inches (38 by 125 mm) with capped ends; nominal sheet thickness not less than 0.0598 inch (1.52 mm).
   c. Rungs: Not less than 1-3/8-inch- (35-mm-) diameter, round rungs made from hardwood OR maple, as directed, firmly fixed to side rails to prevent rotating or other movement. Provide equipment with top rung extended 6 inches (150 mm) beyond other rungs.
   d. Extension Arm: Provide equipment with an extension arm and an additional rung extended 20 inches (500 mm) beyond bottom and intermediate rungs.
   e. Number of Sections: As indicated on Drawings OR as directed, modular sections, complete with intermediate uprights and terminal uprights without rung holes at finished ends.

4. Horizontal Ladder: Wall mounted; with 12 rungs.
   a. Size: 12 feet (3.7 m) long by not less than 16 inches (400 mm) wide OR As indicated, as directed.
   b. Side Rails: Steel tubing not less than 1-1/2 by 4 inches (38 by 102 mm) with capped ends; tubing wall thickness not less than 0.083 inch (2.1 mm).
   c. Rungs: Not less than 1-5/16-inch- (33-mm-) diameter, round rungs made from hardwood OR maple, as directed, firmly fixed to side rails to prevent rotating or other movement.
   d. Support Frame: Not less than 1-5/16-inch- (33-mm-) OD, steel pipe or tubing; with bracing.
   e. Ladder Installation Height and Wall Clearance: As indicated on Drawings OR as directed, at 30 inches (760 mm) from wall.

5. Vertical Ladder: Wall mounted; with five to seven horizontal rungs for hand and foot holds.
   a. Size: 60 inches (1500 mm) long by not less than 22 inches (560 mm) wide OR As indicated, as directed.
   b. Side Rails: Not less than 1-5/16-inch- (33-mm-) OD, round pipe or tubing with rails sloped 10 degrees from wall for climbing.
   c. Rungs: Not less than 1-1/16-inch- (27-mm-) OD, round pipe or tubing rungs firmly welded to side rails.
   d. Ladder Installation Height: As indicated on Drawings OR as directed.
   e. Ladder Installation Method: Fixed to wall OR Removable, as directed.

6. Pegged Board Vertical Climber: Wall-mounted board; size as indicated; with two peg hand holds per board.

7. Climbing Rope: 1-1/2-inch- (38-mm-) diameter rope; with top end securely clamped in fitting designed for attaching to supporting structure indicated.
   a. Description: Three-strand hemp OR Synthetic polyfiber OR Manufacturer's standard material, as directed.
   b. Length: 12 feet (3.7 m) OR 16 feet (4.9 m) OR 20 feet (6 m) OR 24 feet (7.3 m) OR Length as required to allow 42 inches (1067 mm) of rope to lie on floor OR As indicated, as directed.
   c. Rope Bottom End: Tied in a turk knot OR Tied in a turk knot and fitted with leather sheath OR Fitted with heat-shrink-type PVC tube and coated with PVC coating after fitting OR Manufacturer's standard, as directed.
   d. Rubber Balls: Securely fastened every 12 inches (300 mm) OR 18 inches (460 mm), as directed, along length of rope.
   e. Tambourine: 24-inch (600-mm) diameter; not less than 1/2-inch- (13-mm-) thick, painted plywood disk for restricting climbing and for exercise competition.
   f. Safety Guard: 3/16-inch (5-mm-) support chain or 1/8-inch- (3-mm-) diameter cable, clamp, and fittings designed for attaching guard to supporting structure indicated.
   g. Pipe Beam: Ceiling OR Wall and ceiling, as directed, mounted; not less than 3-1/2-inch- (89-mm-) OD steel pipe or tubing beam with not less than 2-3/8-inch- (60-mm-) OD drop pipes, bracing, and connectors designed for transferring load and securely attaching to supporting structure indicated.

8. Rope Hoist: Wall attached; consisting of #10 bell cord or 1/4-inch- (6-mm-) diameter, synthetic polyfiber rope, snap swivel fitting, rope adjuster, rope weight, weight bag, pulley, rope cleat, clear-finished wood wall equipment pads for pulley and cleat attachment, clamps, and fasteners.

9. Metal Finish: Manufacturer's standard factory-applied, baked powder-coat finish.
10. Wood Finish: Manufacturer's standard transparent or opaque-painted finish.

F. Safety Pads

1. Safety Pad Surface-Burning Characteristics: ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
   a. Flame-Spread Index: 25 or less OR 26 to 75 OR 76 to 200, as directed.
   b. Smoke-Developed Index: 450 or less.

2. Pad Coverings: Provide safety pad fabric covering fabricated from puncture- and tear-resistant, not less than 14-oz./sq. yd (475-g/sq. m) PVC-coated polyester or nylon-reinforced PVC fabric treated with fungicide for mildew resistance; with surface-burning characteristics indicated, and lined with fire-retardant liner, as directed.

3. Wall Safety Pads: Padded wall wainscot panels designed to be attached in a continuous row; each panel section consisting of fill laminated to backer board with visible surfaces fully covered by seamless fabric covering, free of sag and wrinkles and firmly attached to back of backer board.
   a. Backer Board: Not less than 3/8-inch- (9.5-mm-) thick plywood, mat formed, or composite panel OR fire-retardant-treated plywood per AWPA C27, Interior Type A, as directed.
   b. Fill: Multiple-impact-resistant foam not less than 1-1/2-inch- (38-mm-) thick polyurethane, 3.5-lb/cu. ft. (56-kg/cu. m) density OR 2-inch- (50-mm-) thick polyurethane, 3.5-lb/cu. ft. (56-kg/cu. m) density OR 1-1/2-inch- (38-mm-) thick bonded polyurethane, 6.0-lb/cu. ft. (96-kg/cu. m) density OR 2-inch- (50-mm-) thick bonded polyurethane, 6.0-lb/cu. ft. (96-lb/cu. ft. (96-kg/cu. m) density OR 1-1/4-inch- (32-mm-) thick, closed-cell polyethylene, as directed.
   c. Fire-Resistive Fill: Multiple-impact-resistant foam not less than 1-1/2-inch- (38-mm-) thick fire-resistant neoprene, 6.0-lb/cu. ft. (96-kg/cu. m) density OR 2-inch- (50-mm-) thick fire-resistant neoprene, 6.0-lb/cu. ft. (96-kg/cu. m) density, as directed.
   d. Size: Each panel section, 24 inches (600 mm) wide by not less than 60 inches (1520 mm) long OR 24 inches (600 mm) wide by not less than 72 inches (1800 mm) long OR manufacturer's standard dimensions OR as indicated, as directed.
   e. Number of Panel Sections: As indicated on Drawings OR as directed, modular panel sections.
   f. Installation Method: Concealed mounting Z-clips OR Concealed mounting Z-clips and 1-inch (25-mm) bottom fabric attachment flange with exposed fasteners OR 1-inch (25-mm) top and bottom fabric attachment flange with exposed fasteners OR Manufacturer's standard, as directed.
   g. Fabric Covering Color(s): Match school colors OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed, for one OR two, as directed, color(s).
   h. Graphics: Custom graphics as indicated.

4. Corner Wall Safety Pads: Wall corner pad consisting of not less than 1-1/4-inch- (32-mm-) thick, multiple-impact-resistant, closed-cell polyethylene-foam filler, covered on both sides and all edges by fabric covering with backer board and manufacturer's standard anchorage to wall OR self-adhesive, hook-and-loop attachment to exposed face of wall, as directed.
   a. Length: Each pad not less than 72 inches (1800 mm) OR in manufacturer's standard length OR matching length of wall safety pads OR as indicated, as directed.
   b. Fabric Covering Color(s): Match color of wall safety pads OR Match school colors OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed, for one OR two, as directed, color(s).

5. Column Safety Pads: Pads covering exposed flange of columns to height indicated, consisting of not less than 1-1/4-inch- (32-mm-) thick, multiple-impact-resistant, closed-cell polyethylene-foam filler, covered on both sides and all edges by fabric covering with backer board and manufacturer's standard anchorage to column OR self-adhesive, hook-and-loop attachment to exposed face of column, as directed.
   a. Length: Each pad not less than 72 inches (1800 mm) OR in manufacturer's standard length OR matching length of wall safety pads OR as indicated, as directed.
   b. Fabric Covering Color(s): Match color of wall safety pads OR Match school colors OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed, for one OR two, as directed, color(s).
6. Round Column Safety Pads: Wraparound pads fully OR partially, as directed, covering exposed round column to height indicated, consisting of not less than 2-inch- (50-mm-) thick, multiple-impact-resistant, bonded polyurethane-foam filler, 6.0-lb/cu. ft (96-kg/cu. m) density, covered on both sides and all edges by fabric covering with hook-and-loop OR cord lace and grommet, as directed, attachment to column.
   a. Length: Each pad not less than 72 inches (1800 mm) OR in manufacturer's standard length OR as indicated, as directed.
   b. Fabric Covering Color(s): Match color of wall safety pads OR Match school colors OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed, for one OR two, as directed, color(s).

1.3 EXECUTION

A. Installation, General
   1. General: Comply with manufacturer's written installation instructions and competition rules indicated for each type of gymnasium equipment, as directed. Complete equipment field assembly, where required.
   2. Unless otherwise indicated, install gymnasium equipment after other finishing operations, including painting, have been completed.
   3. Permanently Placed Gymnasium Equipment and Components: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings; in proper relation to adjacent construction; and aligned with court layout.
      a. Floor Insert Location: Coordinate location with application of game lines and markers, and core drill floor for inserts after game lines have been applied, as directed.
      b. Floor Insert Elevation: Coordinate installed heights of floor insert with installation and field finishing, as directed, of finish flooring and type of floor plate.
      c. Operating Gymnasium Equipment: Verify clearances for movable components of gymnasium equipment throughout entire range of operation and for access to operating components.
   4. Floor Insert Setting: Position sleeve in oversized, recessed voids in concrete slabs and footings. Clean voids of debris. Fill void around sleeves with grout, mixed and placed to comply with grout manufacturer's written instructions. Protect portion of sleeve above subfloor and footing, as directed, from splatter. Verify that sleeves are set plumb, aligned, and at correct height and spacing; hold in position during placement and finishing operations until grout is sufficiently cured. Set insert so top surface of completed unit is flush with finished flooring surface.
   5. Wall OR Corner OR Column, as directed, Safety Pads: Mount with bottom edge at 4 inches (102 mm) OR dimension indicated on Drawings, as directed, above finished floor.
   6. Anchoring to In-Place Construction: Use anchors and fasteners where necessary for securing built-in and permanently placed gymnasium equipment to structural support and for properly transferring load to in-place construction.
   7. Connections: Connect automatic operators to building electrical system.
   8. Removable Gymnasium Equipment and Components: Assemble in place to verify that equipment and components are complete and in proper working order. Instruct the Owner's designated personnel in properly handling, assembling, adjusting, disassembling, transporting, storing, and maintaining units. Disassemble removable gymnasium equipment after assembled configuration has been approved by the Owner and store units in location indicated on Drawings.

B. Adjusting
   1. Adjust movable components of gymnasium equipment to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

C. Cleaning
   1. After completing gymnasium equipment installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.
2. Replace gymnasium equipment and finishes that cannot be cleaned and repaired, in a manner approved by the Owner, before time of Final Completion.

END OF SECTION 11 66 23 53
SECTION 11 66 53 11 - GYMNASIUM DIVIDERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for gymnasium dividers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes gymnasium divider curtains.

C. Submittals
1. Product Data: For each type of product indicated.
   a. If applicable, include assembly, disassembly, and storage instructions for removable equipment.
   b. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.
2. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
3. Structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation including loads, point reactions, and locations for attachment of gymnasium dividers to structure.
4. Samples: For each type of gymnasium divider curtain fabric indicated.
5. Operation and maintenance data.
6. Warranty.

D. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty
1. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of gymnasium dividers that fail in materials or workmanship within five OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Materials
1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
2. Steel: Comply with the following:
   a. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
   b. Steel Tubing: ASTM A 500 or ASTM A 513, cold formed.
   c. Steel Sheet: ASTM A 1011/A 1011M.
3. Support Cable: 1/4-inch- (6-mm-) diameter, 7x19 OR Manufacturer’s standard, as directed, galvanized steel aircraft cable with a breaking strength of 7000 lb (3175 kg), as directed. Provide fittings complying with cable manufacturer's written instructions for size, number, and method of installation.
4. Support Chain and Fittings: Grade 80 hardened alloy steel chain rated for overhead lifting, ASTM A 391/A 391M, with commercial-quality, hot-dip galvanized OR zinc-plated, as directed, steel connectors and hangars.
6. Anchors, Fasteners, Fittings and Hardware: Manufacturer's standard corrosion-resistant or noncorrodible units; concealed; tamperproof, vandal- and theft-resistant design, as directed.

B. Divider Curtains
1. Divider Curtains: Electrically OR Manually, as directed, operated, fold up OR roll up OR walk draw, as directed, and as follows:
   a. Upper, as directed, Curtain, Mesh: Woven fabric of 100 percent polyester yarn coated with PVC weighing not less than 6.5 oz./sq. yd (220 g/sq. m).
      1) Mesh Color: White OR Yellow, as directed.
   b. Lower, as directed, Curtain, Solid: Woven polyester coated with PVC, 18 oz./sq. yd (610 g/sq. m), embossed, 8-foot (2.4-m) OR 10-foot (3.0-m), as directed, height above floor.
      1) Fabric Color(s): Match school colors OR As selected from manufacturer’s full range, as directed, for one OR two, as directed, color(s).
      1) Permanently attach label to each fabric of curtain assembly indicating whether fabric is inherently and permanently flame resistant or treated with flame-retardant chemicals, and whether it will require retreatment after designated time period or cleaning.

2. Curtain Fabrication: Fused seams and the following:
   a. Top Hem: Reinforce with double thickness mesh for grommets OR continuous pipe batten, as directed.
   b. Bottom Hem for Fold-up Curtains: Floor-length curtains with hems 2 inches (50 mm) above finished floor and with manufacturer's standard pipe batten with felt padding in pocket.
   c. Bottom Hem for Roll-up Curtains: Floor-length curtains with hems 2 inches (50 mm) above finished floor and with manufacturer's standard 3-1/2- to 4-inch- (89- to 102-mm) roll-up tube and lifting tape.
   d. Bottom Hem for Draw Curtains: Floor-length curtains with hems 2 inches (50 mm) above finished floor with proof coil chain in pocket.

3. Accessories:
   a. Grommets: Manufacturer's standard size and spacing, for snaps or S-hooks.
   b. Proof Coil Chain: Grade 30, No. 8, zinc plated, 3/16 inch (4.7 mm), ASTM A 413/A 413M.
   c. Curtain Battens: Fabricate battens from steel pipe with a minimum number of joints. As necessary for required lengths, connect pipe with drive-fit pipe sleeve not less than 18 inches (450 mm) long, and secure with 4 flush rivets, plug welds, threaded couplings, or another equally secure method. Shop-paint completed pipe battens with black paint.
      1) Steel Pipe: ASTM A 53/ A 53M, Grade A, standard weight (Schedule 40), black, 1-1/2-inch (40-mm) nominal diameter, unless otherwise indicated.

4. Divider Curtain Operator: Roll-up drive tube OR Upward folding, cable suspended OR Walk-draw cable with pulleys OR Walk-draw track, as directed.

5. Divider Curtain Electric Operator: Provide operating machine of size and capacity recommended by manufacturer for equipment specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, and remote controls. Coordinate wiring requirements and electrical characteristics with building electrical system.
   a. Operator Type: Electric motor, belt-reduction OR enclosed gear-head-reduction OR worm-gear running-in-oil, as directed, drive, with chain and sprocket secondary drive.
   b. Motor Characteristics: Sufficient to start, accelerate, reverse, and operate connected loads at designated speeds within installed environment and with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1, and the following:
      1) Voltage: 120 V OR 208-220 V OR NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected, as directed.
      2) Horsepower: 3/4 OR 1, as directed, hp.
      3) Enclosure: Open dripproof OR Totally enclosed OR Manufacturer's standard, as directed.
4) Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.

5) Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.

6) Phase: One.

c) Remote-Control Station(s): NEMA ICS 6, Type 1 enclosure for surface OR recessed or flush, as directed, mounting, momentary-contact, three-position switch-operated control.

1) Keys: Provide one OR two, as directed, key(s) per station.

1.3 EXECUTION

A. Installation, General

1. General: Comply with manufacturer's written installation instructions. Complete field assembly, where required.

2. Unless otherwise indicated, install gymnasium dividers after other finishing operations, including painting, have been completed.

3. Gymnasium Dividers and Components: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings; in proper relation to adjacent construction; and aligned with court layout.
   a. Verify clearances for movable components of gymnasium dividers throughout entire range of operation and for access to operating components.

4. Anchoring to In-Place Construction: Use anchors and fasteners where necessary for securing gymnasium dividers to structural support and for properly transferring load to in-place construction.

5. Connections: Connect automatic operators to building electrical system.

B. Adjusting

1. Adjust movable components of gymnasium dividers to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

C. Cleaning

1. After completing gymnasium divider installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.

2. Replace gymnasium divider components and finishes that cannot be cleaned and repaired, in a manner approved, before time of Final Completion.
SECTION 11 68 13 00 - PLAYGROUND EQUIPMENT AND STRUCTURES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for playground equipment and structures. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Freestanding playground equipment and structures.
   b. Composite playground equipment and structures.

C. Definitions
1. Fall Height: According to ASTM F 1487, "the vertical distance between a designated play surface and the protective surfacing beneath it."
2. HDPE: High-density polyethylene.
4. LLDPE: Linear low-density polyethylene.
5. MDPE: Medium-density polyethylene.
6. Use Zone: According to ASTM F 1487, "the area beneath and immediately adjacent to a play structure that is designated for unrestricted circulation around the equipment and on whose surface it is predicted that a user would land when falling from or exiting the equipment."

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show fabrication and installation details for playground equipment and structures.
3. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   a. Extent of surface systems and use zones for equipment.
   b. Critical heights for playground surface, or fall heights for equipment.
4. Samples: For each type of exposed finish.
5. LEED Submittals:
   a. Product Data for Credit MR 4.1 and MR 4.2, as directed: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
      1) Include statement indicating costs for each product having recycled content.
   b. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for each certified wood product.
6. Product Certificates: For each type of playground equipment, signed by product manufacturer.
7. Material Certificates: For the following items, signed by manufacturers:
   a. Shop finishes.
   b. Wood Preservative Treatment: Include certification by treating plant that states type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.
   c. Recycled plastic.
8. Field quality-control test reports.
9. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for playground equipment.
10. Maintenance Data: For playground equipment and finishes to include in maintenance manuals.
11. Warranty: Special warranty specified in this Section.

E. Quality Assurance
1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
2. Manufacturer Qualifications: A firm whose playground equipment components have been certified by IPEMA's third-party product certification service.
3. Forest Certification: Fabricate designated playground equipment with wood components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
4. Safety Standards: Provide playground equipment complying with or exceeding requirements in the following:
   a. ASTM F 1487.
   b. CPSC No. 325.
5. Preinstallation Conference: Conduct conference at Project site.

F. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of playground equipment that fail in materials or workmanship within specified warranty period.
   a. Failures include, but are not limited to, the following:
      1) Structural failures.
      2) Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   b. Warranty Period: Two OR Five, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Materials
1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
2. Steel: Comply with the following:
   c. Steel Tubing: ASTM A 513, cold formed, hot-dip galvanized.
   d. Steel Sheet: ASTM A 1011/A 1011M, hot-dip galvanized not less than G60 (Z180) coating designation.
   e. Perforated Metal: Steel sheet not less than 0.075-inch (1.9-mm) OR 0.090-inch (2.3-mm) OR 0.120-inch (3.0-mm) uncoated thickness; hot-dip galvanized; manufacturer's standard perforation pattern.
   f. Expanded Metal: Manufacturer's standard carbon-steel sheets complying with ASTM F 1267, Type II (expanded and flattened); deburred after expansion.
   g. Woven Wire Mesh: Manufacturer's standard, with wire complying with ASTM A 510 (ASTM A 510M).
3. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666; Type 304, finished on exposed faces with No. 2B finish.
4. Wood: Surfaced smooth on all sides and all edges rounded, Douglas fir, preservative treated after fabrication OR Pine, preservative treated after fabrication OR [Western red cedar, as directed.
5. Softwood Plywood: DOC PS 1, Exterior; smooth surfaced with rounded edges; preservative treated after fabrication.
a. Polyethylene: Fabricated from virgin OR 96 percent recycled, purified, fractional-melt plastic resin; rotationally molded HDPE, LLDPE, or MDPE with not less than 1/4-inch (6-mm) wall thickness.

7. Transparent Plastic: Abrasion-resistant, UV-stabilized monolithic polycarbonate sheet; clear, colorless; not less than 3/16 inch (5 mm) thick.

8. Chain and Fittings: ASTM A 467/A 467M, Class CS, 4/0 or 5/0, welded-straight-link coil chain; hot-dip galvanized OR zinc plated OR PVC coated, as directed. With commercial-quality, hot-dip galvanized OR zinc-plated, as directed, steel connectors and swing or ring hangars.

10. Post Caps: Cast aluminum OR color-impregnated, UV-stabilized, mold-resistant polyethylene or polypropylene, as directed; color to match posts.

11. Platform Clamps and Hangers: Cast aluminum OR zinc-plated steel, not less than 0.105-inch-(2.7-mm-) nominal thickness, as directed.

12. Hardware: Manufacturer's standard; commercial-quality; corrosion-resistant; hot-dip galvanized steel and iron, stainless steel, or aluminum; of a secure and vandal-resistant design.

13. Fasteners: Manufacturer's standard; corrosion-resistant; hot-dip galvanized or plated steel and iron, or stainless steel; permanently capped, and theft resistant.

B. Wood-Preservative-Treated Materials

1. Preservative Treatment: Pressure-treat wood according to AWPA C2 (lumber) and AWPA C9 (plywood).
   a. Use preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
   b. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.

C. Playground Equipment Fabrication

1. General: Provide sizes, strengths, thicknesses, wall thickness, and weights of components as indicated but not less than required to comply with structural performance and other requirements in ASTM F 1487. Factory drill components for field assembly. Unnecessary holes in components, not required for field assembly, are not permitted. Provide complete play structure, including supporting members and connections, means of access and egress, designated play surfaces, barriers, guardrails, handrails, handholds, and other components indicated or required to comply with referenced standards for equipment indicated.
   a. Composite Play Structure: Provide complete play structure, designed to be modular, linked, and expandable, forming one integral unit for more than one play activity.
   b. Metal Frame: Fabricate main-frame upright support posts from metal pipe or tubing with cross-section profile and dimensions as indicated. Unless otherwise indicated, provide each pipe or tubing main-frame member with manufacturer's standard drainable bottom plate or support flange. Fabricate secondary frame members, bracing, and connections from either steel or aluminum.
   c. Wood Frame: Fabricate main-frame upright support posts from wood species and with profile and dimensions as indicated. Fabricate secondary frame members, bracing, and connections from wood, steel, or aluminum.
   d. Composite Frame: Fabricate main-frame upright support posts from metal and plastic with profile and dimensions as indicated. Fabricate secondary frame members, bracing, and connections from either steel or aluminum.
   e. Play Surfaces: Provide manufacturer's standard elevated drainable decks, platforms, landings, walkways, ramps, and similar transitional play surfaces, designed to withstand loads; fabricated from perforated or expanded metal OR molded plastic OR plastic panel or plank OR recycled polyethylene panel or plank OR wood plank, as directed, made into floor units with slip-slip-resistant foot surfaces. Fabricate units in manufacturer's standard modular sizes and shapes to form assembled play surfaces indicated.
11 - Equipment

Playground Equipment And Structures

August 2021

DASNY, Downstate

a. Elevated Play Surfaces: Provide protective devices, completely surrounding play surface except for access openings, if play-surface heights above protective surfacing exceed requirements in ASTM F 1487 OR CPSC No. 325, as directed.

b. Stepped Play Surfaces: Provide protective infill between stepped platforms.

6. Protective Barriers: Fabricated such that openings within the barrier and between the barrier and the play surface preclude passage of the torso probe according to ASTM F 1487 OR CPSC No. 325, as directed. Provide barriers designed to minimize the possibility of climbing, free of hand- and footholds, and configured to completely surround the protected area except for access openings. Extend barriers above the protected elevated surface for use by age group indicated. Fabricate from the following:
   a. Welded metal pipe or tubing with vertical bars.
   b. Steel sheet with openings for vision and ventilation.
   c. Metal-pipe or -tubing frame with wire mesh infill panels.
   d. Opaque OR Transparent as directed, solid plastic panels with openings.
   e. Vertical wood balusters with metal pipe or tubing or wood frame.
   f. Wood panels with openings for vision and ventilation.

7. Guardrails: Provide guardrails configured to completely surround the protected area except for access openings. Fabricate from welded metal pipe or tubing OR metal pipe or tubing, and wood, as directed. Extend guardrails to comply with requirements for use by age group indicated.

8. Handrails: Welded metal pipe or tubing, OD between 0.095 to 1.55 inches (24.1 to 39.4 mm) OR 0.125 inch (3.2 mm).
   a. Provide handrails at heights to comply with requirements for use by age group indicated according to ASTM F 1487 OR CPSC No. 325.

9. Roofs and Canopies: Manufacturer's standard, designed to be positioned overhead and to discourage and minimize climbing by users.
   a. Fabricated from metal OR metal-pipe or -tubing-framed, welded wire OR opaque plastic OR clear polycarbonate plastic OR recycled polyethylene OR wood, as directed.

10. Signs: Manufacturer's standard sign panels, fabricated from opaque plastic with graphics molded in OR wood with painted graphics, as directed, attached to upright support posts.
    a. Text: As directed.
    b. Colors: As directed.

D. Freestanding Playground Equipment And Structures

1. Swings, Single OR Multiple, as directed, Axis:
   a. Frame: Galvanized steel OR Aluminum pipe or tubing connected frame sections.
      1) Leg Upright(s): Not less than 1-7/8-inch (48-mm) OR 2-3/8-inch (60-mm) OR 3-1/2-inch (89-mm) OR 4-1/2-inch (114-mm) OR 5-inch (127-mm), as directed
      2) Overhead Beam: Match leg upright OR Not less than 2-3/8-inch (60-mm) OR Not less than 3-1/2-inch (89-mm), as directed.
      3) Color: As selected from manufacturer's full range.
   b. Frame: Wood connected frame sections with leg upright(s) and overhead beam not less than 4 inches (100 mm) square OR 6 inches (152 mm) square OR 6 inches (152 mm) round, as directed, for legs.
   c. Overhead Beam Height: 96 inches (2440 mm) OR 10 feet (3 m) OR Height as indicated on Drawings, as directed, from pivot point above protective surfacing.
   d. Chain: Standard link OR Short link not permitting finger penetration OR Manufacturer's standard, as directed.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   e. Swing Connector: S-hook OR Double clevis and bolt link, as directed.
   f. Swing Hanger: Galvanized stamped steel clamp and ductile-iron pivot OR heavy-duty ductile iron OR manufacturer's standard, as directed.
   g. Swing Seats: Enclosed, full-bucket infant/tot OR Half-bucket U-shaped flexible belt OR Rigid rectangular OR Rigid disk OR Tire seat made from rubber OR plastic, as directed.
   h. Swing Seats: EPDM rubber OR Injection molded plastic, as directed, enclosed infant seat OR flexible seat OR tire, as directed.
1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   i. Age Appropriateness: Two through five years OR 5 through 12 years, as directed.

2. Slides: Fabricated from stainless steel OR opaque plastic OR aluminum, as directed.
   a. Configuration: Straight-aligned OR Quarter-turn OR Half-turn OR Three-quarter-turn OR Full-turn spiral OR S-shaped OR Squiggle-shaped descending chute(s), as directed.
   b. Access: Stair or step ladder with handrails OR Vertical ladder OR Vertical ladder with side handrails, as directed.
   c. Sit-Down Entrance: With protective barriers OR opaque plastic panel barriers OR canopy or hood enclosure, as directed and overhead handhold and side handholds.
   d. Frame: Manufacturer's standard galvanized-steel pipe or tubing OR aluminum pipe or tubing OR wood, as directed.
   e. Sliding Surface: Inclined OR Wavy OR Washboard rollers, as directed.
   f. Sliding Surface Construction: Flat, continuous stainless-steel sheet with integral, full-length side rails OR U-shaped, continuous stainless-steel sheet with integral, full-length side rails OR [One-piece plastic with integral, full-length side rails OR Plastic tube, ID not less than 24 inches (610 mm) OR [Plastic tube, ID not less than 30 inches (760 mm), as directed.
   g. Colors: As selected from manufacturer's full range.
   h. Age Appropriateness: Two through five years OR 5 through 12 years, as directed.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
      i. Tube, round, not less than 24-inch (610-mm) OR 30-inch (760-mm), as directed, diameter.

3. Merry-Go-Rounds: Rotating platform OR seating, as directed, around a vertical axis.
   a. Rotating Mechanism: Permanently sealed and lubricated ball bearings with hydraulic-speed OR mechanical-speed, as directed, limiting device.
   b. Platform: Round, dish-shaped OR flat OR flat, dimpled, as directed, steel sheet, not less than 0.1196-inch- (3.038-mm-) nominal thickness, with slip-resistant footing.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   c. Handholds and Handrails: Metal pipe or tubing.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   d. Capacity: Single user OR Two users OR Five users, as directed.

4. Tunnels (Crawl Tubes): Fabricated from stainless steel OR opaque plastic, as directed.
   a. Shape: Straight OR Curved, quarter turn, as directed.
   b. Tube, round, not less than 24-inch (610-mm) OR 30-inch (760-mm), as directed, diameter.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   c. Vertical fence.
   d. Chain or cable ladder OR walks, as directed.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

5. Climbers: Fabricated from steel with galvanized OR PVC-plastisol, as directed, finish.
   a. Metal pipe or tubing.
   b. Vertical fence.
   c. Chain or cable ladder OR walks, as directed.
      1) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

6. Spring Rocking-Rider OR Seesaw, as directed:
   a. Seat: Cast aluminum OR Molded HDPE or other plastic OR Wood, as directed; with handholds OR handholds and footrests, as directed.
      1) Seat Style: as directed by the Owner.
      2) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.
   b. Base: One OR Two, as directed, coil spring(s) with steel base plate.
   c. Capacity: Single user OR Two users, as directed.

E. Composite Playground Equipment And Structures
   1. Composite Structure: Fabricated from steel OR wood OR opaque plastic, as directed.
      a. Frame: Galvanized steel pipe or tubing frame sections connected with bolts OR clamps, as directed.
1) Pipe or Tubing: Not less than 4-inch (102-mm) OR 5-inch (127-mm), as directed, OD legs.
2) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

b. Frame: Wood frame sections connected with bolts.
1) Wood not less than 4 inches (102 mm) square OR 6 inches (152 mm) round, as directed, for legs.

1) Horizontal Ladder Beam Height: 60 inches (1524 mm) OR 84 inches (2130 mm) OR Height as indicated on Drawings, as directed, above protective surfacing.
2) Wood overhead beam, 6 inches (152 mm) square.

1) Platforms: Perforated metal OR Wood OR Manufacturer's standard, as directed.
2) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

1) Steel overhead beam, 2-3/8-inch (60-mm) OD.

1) Equipment: Include the following play event components:
1) Slide.
2) Crawl tube with spy holes, as directed.
3) Horizontal ladder.
4) Log roll.
5) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

1) Roofs: Perforated metal OR Wood OR Manufacturer's standard, as directed.
2) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

1) Equipment: Include the following play event components:
1) Slide.
2) Crawl tube with spy holes, as directed.
3) Horizontal ladder.
4) Log roll.
5) Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

i. Capacity: 10 OR 20, as directed, users.

j. Age Appropriateness: 2 through 5 years OR 5 through 12 years, as directed.

F. Cast-In-Place Concrete
1. Concrete Materials and Properties: Comply with requirements in Division 03 Section “Cast-in-place Concrete” OR ACI 301, as directed, to produce normal-weight, air-entrained, as directed, concrete with a minimum 28-day compressive strength of 3000 psi (20.7 MPa), 3-inch (75-mm) slump, and 1-inch- (25-mm-) maximum-size aggregate.
2. Concrete Materials and Properties: Dry-packaged concrete mix complying with ASTM C 387 and mixed at site with potable water, according to manufacturer's written instructions, to produce normal-weight concrete with a minimum 28-day compressive strength of 3000 psi (20.7 MPa), 3-inch (75-mm) slump, and 1-inch- (25-mm-) maximum-size aggregate.

G. Aluminum Finishes
1. Baked-Enamel Finish: Prepare, treat, and coat metal to comply with paint manufacturer's written instructions and as follows:
   a. Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness not less than 1.5 mils (0.04 mm) OR 3 to 5 mils (0.076 to 0.127 mm), as directed, medium gloss.
2. PVC Finish: Manufacturer's standard, UV-stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added, complying with coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness of 80 mils (2 mm) OR 100 mils (2.5 mm), as directed.
3. Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

H. Iron And Steel Finishes
1. Galvanizing: Hot-dip galvanize products made from rolled-, pressed-, and forged-steel shapes, castings, plates, bars, and strips indicated to be galvanized to comply with ASTM A 123/A 123M.
   a. Hot-dip galvanize steel and iron hardware indicated to be galvanized to comply with ASTM A 153/A 153M.
b. Galvanized Steel Sheet: Commercial steel sheet, hot-dip galvanized, complying with ASTM A 653/A 653M for not less than G60 (Z180) coating designation; mill phosphatized.

2. Powder-Coat Finish: Prepare, treat, and coat ferrous metal to comply with resin manufacturer's written instructions and as follows:
   a. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm).

3. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).

4. PVC Finish: Manufacturer's standard, UV-stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added, complying with coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness of 80 mils (2 mm) OR 100 mils (2.5 mm), as directed.

5. Color: As indicated by manufacturer's designations OR Match the Owner's sample OR As selected by the Owner from manufacturer's full range, as directed.

I. Stainless-Steel Finishes
   1. Remove tool and die marks and stretch lines or blend into finish.
   2. Bright, Cold-Rolled, Unpolished Finish: No. 2B finish on exposed faces.

1.3 EXECUTION

A. Installation, General
   1. General: Comply with manufacturer's written installation instructions, unless more stringent requirements are indicated. Anchor playground equipment securely, positioned at locations and elevations indicated.
      a. Maximum Equipment Height: Coordinate installed heights of equipment and components with finished elevations of protective surfacing. Set equipment so fall heights and elevation requirements for age group use and accessibility are within required limits. Verify that playground equipment elevations comply with requirements for each type and component of equipment.
   2. Post and Footing Excavation: Excavate holes for posts and footings as indicated in firm, undisturbed or compacted subgrade soil.
   3. Post Set on Subgrade: Level bearing surfaces with drainage fill to required elevation.
   4. Post Set with Concrete Footing: Comply with ACI 301 for measuring, batching, mixing, transporting, forming, and placing concrete.
      a. Set equipment posts in OR on, as directed, concrete footing. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at the correct angle, alignment, height, and spacing.
         1) Place concrete around posts and vibrate or tamp for consolidation. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.
      b. Embedded Items: Use setting drawings and manufacturer's written instructions to ensure correct installation of anchorages for equipment.
      c. Concrete Footings: Smooth top, and shape to shed water.

B. Field Quality Control
   1. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
   2. Arrange for playground equipment manufacturer's technical personnel to inspect playground and playground equipment and components during installation and, as directed, at final completion and to certify compliance with the following:
      a. ASTM F 1487.
      b. CPSC No. 325.
   3. Notify the Owner 48 hours in advance of date and time of final inspection.
END OF SECTION 11 68 13 00
SECTION 11 68 13 00a - RECREATIONAL FACILITIES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of recreational facilities. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Shop Drawings and/or Catalogue Cuts shall be submitted for approval prior to any installation.

1.2 PRODUCTS

A. Materials shall be resistant to corrosion and degradation by ultraviolet rays. Hardware and fittings shall be at least as corrosion-resistant as the materials fastened.

1. Steel Plates, Pipe, Tubing, Sheets, Wire Ropes, Chains, and Miscellaneous Shapes shall be stainless steel or galvanized steel, even if painted or coated with vinyl or other protective finish. All open pipe and tube ends shall have rain caps.

2. Wood shall be all-heart cedar, cypress, or redwood or shall be treated with a non-toxic preservative. Wood shall not be used where it will be in direct contact with the ground, unless approved by the Owner.

3. Fiberglass shall be smooth fiberglass-reinforced polyester with gelcoat coating and shall meet the following minimum physical properties: 22,000 psi (1,550 kg/sq cm) flexural strength, 15,000 psi (1,055 kg/sq cm) tensile strength, and 20,000 psi (1,410 kg sq cm) compressive strength.

4. Aluminum shall be anodized.

5. Foundations shall be 3,200 psi (225 kg/sq cm) compressive strength concrete, enforced as required. Provide embedded anchorage items as required.

B. Playground Equipment, including see-saws, slides, swings, whirlers, and monkey bars, shall be prefabricated and designed to withstand the anticipated structural loads.

1. Exposed Surfaces shall be smooth (except where required to be nonslip) seamless, and nonsplintering.

2. Steps, Platforms, and Other Flat Surfaces Subject to Foot Traffic shall be non-slip, but not abrasive and shall be formed to exclude or drain away water.

3. Fastening shall be flush, concealed, or otherwise formed or located to prevent injury to children playing on the equipment.

4. Slides shall have stainless steel sliding surfaces.

C. Bike Racks shall be mounted, and sections (if rack is sectional) shall be attached with tamper-proof fasteners.

D. Fiberglass Shelters shall be reinforced with steel, aluminum, or wood framework as required. Shelter roof shall be sloped to drain. Fiberglass edges shall be returned so that they are not exposed, Shelters shall be prefabricated and designed to withstand the anticipated live, dead, and wind loads.

1.3 EXECUTION

A. Recreational facilities shall be installed plumb, aligned, and securely anchored to the ground. Adjust equipment with moving parts until operation is smooth and easy.

SECTION 11 98 21 00 - DETENTION WINDOWS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for detention windows. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Awning detention windows.
   b. Casement detention windows.
   c. Fixed detention windows.
   d. Air-vent detention windows.

C. Performance Requirements
1. Forced-Entry-Resistance Performance: Provide detention windows that comply with ASTM F 1592, Grade 1 OR Grade 2 OR Grade 3 OR Grade 4, as directed.
   a. Glazing Forced-Entry Resistance: Security Grade 1 OR Grade 2 OR Grade 3 OR Grade 4, as directed, when tested according to ASTM F 1915.
2. Forced-Entry Resistance: Class III OR Class IV OR Class V, as directed, when tested according to ASTM F 1233.
   OR
   Forced-Entry Resistance: Level II OR Level III OR Level IV OR Level V, as directed, when tested according to HPW-TP-0500.03.
3. Delegated Design: Design detention windows, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
4. Structural Performance: Detention windows shall withstand the effects of wind loads determined as follows, with no permanent deformation or breakage of components within window assembly when tested according to ASTM E 330.
   a. Deflection: Design glass framing system to limit lateral deflections of glass edges to less than 1/175 of glass-edge length at design pressure based on structural computations.
   b. Design Wind Loads: Determine design wind loads applicable to Project from basic wind speed indicated in miles per hour (meters per second) at 33 feet (10 m) above grade, according to SEI/ASCE 7, Section 6.5, "Method 2 - Analytical Procedure," based on mean roof heights above grade indicated on Drawings.
      1) Basic Wind Speed: 85 mph (38 m/s) OR 90 mph (40 m/s), as directed.
      2) Importance Factor: <Insert factor>.
      3) Exposure Category: A OR B OR C OR D, as directed.
5. Air Infiltration for Operable Windows: Not more than 0.010 cfm/ft. (0.015 L/s per m) OR 0.050 cfm/ft. (0.077 L/s per m) OR 0.370 cfm/ft. (0.573 L/s per m) OR 0.500 cfm/ft. (0.774 L/s per m), as directed, at an inward test pressure of 1.56 lbf/sq. ft. (75 Pa) when tested according to ASTM E 283.
   a. Test pressures are equivalent to wind velocities of 1.56 lbf/sq. ft. (75 Pa) to 25 mph (40 km/h), 2.86 lbf/sq. ft. (137 Pa) to 34 mph (55 km/h), and 6.24 lbf/sq. ft. (300 Pa) to 50 mph (80 km/h).
6. Air Infiltration for Fixed Windows: Not more than 0.010 cfm/ft. (0.015 L/s per m) OR 0.050 cfm/ft. (0.077 L/s per m) OR 0.055 cfm/ft. (0.085 L/s per m) OR 0.060 cfm/ft. (0.093 L/s per m) OR 0.150 cfm/ft. (0.232 L/s per m), as directed, at an inward test pressure of 1.56 lbf/sq. ft. (75 Pa) when tested according to ASTM E 283.
7. Water Penetration: No water penetration as defined in test method at an inward test pressure of 1.56 lbf/sq. ft. (75 Pa) OR 2.86 lbf/sq. ft. (137 Pa) OR 6.24 lbf/sq. ft. (300 Pa), as directed, when tested according to ASTM E 331.
8. Thermal Transmittance: Maximum whole-window U-factor of $<\text{Insert value in Btu/sq. ft. x h x deg F (W/sq. m x K)}>$ at 15-mph (24-km/h) exterior wind velocity and winter condition temperatures when tested according to ASTM E 1423 OR calculated according to NFRC 100, as directed.

9. Windborne-Debris-Impact-Resistance Performance: Provide detention window systems that pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and ASTM E 1996, as directed.
   a. Large-Missile Impact: For detention windows located within 30 feet (9.1 m) of grade.
   b. Small-Missile Impact: For detention windows located more than 30 feet (9.1 m) above grade.

D. Submittals
1. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for detention windows.
2. Shop Drawings: For detention windows. Include plans, elevations, sections, details, and attachments to other work.
   a. Full-size section details of framing members, including detention bars, screens, reinforcement and stiffeners.
   b. Location of weep holes.
   c. Hardware, including operators.
   d. Glazing details.
3. Samples: For each type of exposed finish required, prepared on Samples of size indicated below:
   a. Main Framing Member: 12-inch- (305-mm-) long, full-size sections with factory-applied color finish.
   b. Window Corner Fabrication: 12-by-12-inch- (305-by-305-mm-) long, full-size window corner including full-size sections with factory-applied color finish, weather stripping, and glazing.
   c. Operable Window: Full-size unit with factory-applied finish.
   d. Hardware: Full-size units with factory-applied finishes.
   e. Weather Stripping: 12-inch- (305-mm-) long sections.
4. Delegated-Design Submittal: For detention windows indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
5. Qualification Data: For qualified Installer and testing agency.
7. Material Certificates: For homogeneous tool-resisting steel indicating compliance with performance requirements for complete test sequence according to applicable ASTM standard.
9. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of detention window.
10. Thermal-Performance Reports: Calculations based on referenced standard, performed by a qualified professional engineer or testing agency. Include evaluation of testing, as directed.
11. Configuration Disclosure Drawing: For each type of forced-entry-resistant detention window, complying with ASTM F 1233.
12. Warranty: Sample of special warranty.
13. Other Informational Submittals:
   a. Examination reports documenting inspections of substrates, areas, and conditions.
   b. Anchor inspection reports documenting inspections of built-in and cast-in anchors.
   c. Field quality-control reports documenting inspections of installed products.
   d. Field quality-control certification signed by Contractor and Detention Specialist, as directed.

E. Quality Assurance
1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance, as directed, of units required for this Project.
2. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing homogeneous tool-resisting steel.
3. Source Limitations: Obtain detention windows from single source from single manufacturer.
4. Product Options: Drawings indicate size, profiles, and dimensional requirements of detention windows and are based on the specific system indicated.
   a. Do not modify intended security performance or aesthetic effects, as judged solely by the Owner, except with the Owner's approval. If modifications are proposed, submit comprehensive explanatory data to the Owner for review.
5. Welding Qualifications: Qualify procedures and personnel according to the following:
   a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   b. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
   c. AWS D1.3, "Structural Welding Code - Sheet Steel."
   d. AWS D1.6, "Structural Welding Code - Stainless Steel."

F. Project Conditions
1. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

G. Coordination
1. Coordinate installation of anchorages for detention windows. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

H. Sequencing
1. Field Painting: Except where detention windows have been preglazed before installation, complete field painting of window units before glazing installation.

I. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace detention windows that fail in materials or workmanship within specified warranty period.
   a. Failures include, but are not limited to, the following:
      1) Structural failures including deflections exceeding 1/4 inch (6 mm).
      2) Failure of welds.
      3) Lateral deflection of glass lite edges in excess of 1/175.
      4) Excessive air leakage.
      5) Excessive water penetration.
      6) Faulty operation of ventilators and hardware.
      7) Deterioration of metals, metal finishes, and other materials beyond normal weathering and detention use.
   b. Warranty Period: Three years from date of Final Completion.

1.2 PRODUCTS

A. Materials
1. Aluminum Extrusions: ASTM B 221 (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength and not less than 0.125 inch (3.2 mm) thick at any location for main frame and sash members.
2. Mild Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
3. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, CS (Commercial Steel), Type B; free of scale, pitting, or surface defects; pickled and oiled.
4. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B.
5. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.

7. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 240/A 240M or ASTM A 666, austenitic stainless steel, Type 304.

8. Security Fasteners: Operable only by tools produced for use on specific type of fastener by fastener manufacturer or other licensed fabricator. Drive system type, head style, material, and protective coating as required for assembly, installation, and strength, and as follows:
   a. Drive-System Types: Pinned Torx-Plus OR Pinned Torx, as directed.
   b. Fastener Strength: 120,000 psi (827 MPa).
   c. Socket Button Head Fasteners:
      2) Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.
   d. Socket Flat Countersunk Head Fasteners:
      2) Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.
   e. Socket Head Cap Fasteners:
      1) Heat-treated alloy steel, ASTM A 574 (ASTM A 574M).
      2) Stainless steel, ASTM F 837 (ASTM F 837M), Group 1 CW.
   f. Protective Coatings for Heat-Treated Alloy Steel:
      1) Zinc and clear trivalent chromium where indicated.
      2) Zinc phosphate with oil, ASTM F 1137, Grade I, or black oxide unless otherwise indicated.

10. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing per ASTM E 488, conducted by a qualified testing agency.
   a. Threaded or wedge type; galvanized ferrous castings, either ASTM A 27/A 27M cast steel or ASTM A 47/A 47M malleable iron. Provide bolts, washers, and shims as required; hot-dip galvanized per ASTM A 153/A 153M or ASTM F 2329.

11. Embedded Plate Anchors: Fabricated from mild steel shapes and plates, minimum 3/16 inch (4.8 mm) thick; with minimum 1/2-inch- (12.7-mm-) diameter, headed studs welded to back of plate.

12. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

16. Sealants: For sealants required within fabricated window units, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating.

B. Window Components

1. Tool-Resisting-Steel Detention Bars: 1-inch- (25-mm-) OR 7/8-inch- (22-mm-), as directed, diameter, tool-resisting steel round bars at 6 inches (152 mm) o.c., orientation as indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm) OR 5/16-by-2-1/4-inch (7.9-by-57.2-mm) OR 1/4-by-2-inch (6-by-50-mm), as directed, tool-resisting steel, flat bar perimeter frame.
   a. Steel: Composite, tool-resisting steel, Grade 1 OR 2, as directed, according to ASTM A 627, Tables X1.1 and X1.2.
      OR
   Steel: Homogeneous, tool-resisting steel, Grade 3 OR 4, as directed, according to ASTM A 627, Tables X1.1 and X1.2.

2. Mild-Steel Detention Bars: 1-inch- (25-mm-) OR 7/8-inch- (22-mm-), as directed, diameter, mild steel round bars at 6 inches (152 mm) o.c., orientation as indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm) OR 5/16-by-2-1/4-inch (7.9-by-57.2-mm) OR 1/4-by-2-inch (6-by-50-mm), as directed, mild steel, flat bar perimeter frame.

3. Weather Stripping: Unless otherwise indicated, provide weather stripping such as molded EPDM or neoprene gaskets complying with ASTM D 2000, Designations 2BC415 to 3BC620, or molded
11 - Equipment

August 2021

Detention Windows

PVC gaskets complying with ASTM D 2287; or molded, expanded EPDM or neoprene gaskets complying with ASTM C 509, Grade 4.

4. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B 633; provide sufficient strength to withstand design pressures indicated.

C. Awning Detention Windows

1. Steel Framing: Fabricate perimeter framing, removable covers, and ventilator head rails from 0.105-inch (2.66-mm) nominal-thickness, cold-rolled steel sheet; ventilator jamb and sill framing from hot-rolled steel sections weighing not less than 1.93 lb/linear foot (2.87 kg/linear m); and 0.055-inch- (1.40-mm-) thick glazing stops from extruded aluminum.

2. Stainless-Steel Framing: Fabricate perimeter framing and glazing stops from 0.109-inch (2.78-mm) OR 0.078-inch (1.98-mm), as directed, nominal-thickness, stainless-steel sheet; and muntins and operable sash members from extruded aluminum.

3. Aluminum Framing: Fabricate perimeter framing, removable covers, muntins, as directed, mullions, as directed, and glazing stops from extruded aluminum.

5. Gear-Type, Rotary, Ventilator Operator: Nonremovable operable knob OR Removable crank, as directed.

D. Casement Detention Windows

1. Steel Framing: Fabricate perimeter framing and removable covers from 0.105-inch (2.66-mm) nominal-thickness, cold-rolled steel sheet; ventilator head, jamb, and sill framing from hot-rolled steel sections weighing not less than 1.93 lb/linear foot (1.3 kg/linear m); vertical muntins from 0.120-inch (3.04-mm) nominal-thickness cold-rolled steel sheet; ventilator bedding angles from 0.060-inch (1.52-mm) nominal-thickness, cold-rolled steel sheet; and 0.055-inch- (1.40-mm-) thick glazing stops from extruded aluminum.

2. Stainless-Steel Framing: Fabricate perimeter framing and glazing stops from 0.109-inch (2.78-mm) OR 0.078-inch (1.98-mm), as directed, nominal-thickness, stainless-steel sheet; and vertical muntins and ventilator framing from extruded aluminum.

4. Gear-Type, Rotary, Ventilator Operator: Nonremovable operable knob OR Removable crank, as directed.

E. Fixed Detention Windows

1. Steel Framing: Fabricate perimeter framing, removable covers, and muntins OR mullions, as directed, from 0.105-inch (2.66-mm) nominal-thickness, cold-rolled steel sheet. Provide-thermally improved construction, as directed.

2. Stainless-Steel Framing: Fabricate perimeter framing and removable covers from 0.109-inch (2.78-mm) OR 0.078-inch (1.98-mm), as directed, nominal-thickness, stainless-steel sheet; glazing stops and muntins from 0.078-inch (1.98-mm) nominal-thickness, stainless-steel sheet; and muntins from 0.078-inch (1.98-mm) nominal-thickness, stainless-steel sheet OR extruded aluminum, as directed. Provide-thermally improved construction, as directed.

3. Detention Bars: Vertical OR Horizontal, as directed, bars of tool-resisting OR mild, as directed, steel, enclosed in muntins OR mullions, as directed.

a. Flat Bar Cross Grid: 1/4-by-2-inch (6-by-50-mm) tool-resisting steel flat bars at 12 inches (305 mm) o.c. penetrated by round bars.

F. Air-Vent Detention Windows

1. Steel Framing: Fabricate perimeter framing, removable covers, integral perforated grille, ventilator frame, and muntins OR mullions, as directed, from 0.105-inch (2.66-mm) nominal-thickness, cold-rolled steel sheet; and glazing stops from 0.060-inch- (1.5-mm-) thick, extruded aluminum. Provide 10-by-10 (2.5-by-2.5-mm) stainless-steel mesh behind perforated grille, as directed.

2. Stainless-Steel Framing: Fabricate perimeter framing, removable covers, integral perforated grille, and vent damper from 0.109-inch (2.78-mm) OR 0.078-inch (1.98-mm), as directed, nominal-thickness, stainless-steel sheet; glazing stops from 0.078-inch (1.98-mm) nominal-thickness, stainless-steel sheet; and muntins from 0.078-inch (1.98-mm) nominal-thickness, stainless-steel sheet OR extruded aluminum, as directed.
3. Detention Bars: Vertical OR Horizontal, as directed, bars of tool-resisting OR mild, as directed, steel, enclosed in muntins.

4. Gear-Type, Rotary, Ventilator Operator: Nonremovable operable knob OR Removable crank, as directed.

G. Screens
1. Fixed Angle-Frame Screens: Fabricate angle frames and removable clamp strips from 0.108-inch (2.74-mm) nominal-thickness galvanized steel OR 0.078-inch (1.98-mm) thick stainless steel, as directed. Match window frame finish.
3. Wire-Fabric Screen Cloth: 12-by-12 (2.1-by-2.1-mm) mesh of 0.028-inch (0.74-mm) OR 10-by-10 (2.5-by-2.5-mm) mesh or 8-by-8 (3.2-by-3.2-mm) mesh of 0.047-inch (1.19-mm), as directed, diameter, stainless-steel wire, complying with FS RR-W-365A.

H. Hardware
1. General: Provide manufacturer's standard nonremovable hardware fabricated from steel, of sufficient strength to perform the function for which it is intended.
2. Four-Bar Friction Hinges: Provide adjustable friction shoes of bronze, brass, nylon, or other nonabrasive, nonstaining, noncorrosive, durable material.
3. Gear-Type, Rotary, Ventilator Operators: Manufacturer's security-grade ventilator control; consisting of manual operator with worm gear, self-locking, bronze bearings, and steel linkage arms on both jambs; maximum opening of 50 degrees.
   a. Operator shall turn all ventilators simultaneously, securely closing them at both jambs without using additional manually controlled locking devices.
   b. Conceal operator, which shall be removable as a unit, within subframe.
   c. Provide one removable crank for every 10 windows.

I. Fabrication
1. General: Fabricate detention windows to provide a complete system for assembly of components and anchorage of window units.
   a. Provide units that are reglazable from the exterior without dismantling ventilator framing.
   b. Prepare window ventilators for glazing unless preglazing at the factory is indicated.
   c. Fabricate detention window frames of one-piece construction, except where removable covers are indicated.
   d. Form removable covers to profiles indicated on Drawings.
2. Anchors for In-Place-Construction Installation: 3/16-inch (4.8-mm) thick steel angles or formed-steel plates, 4 inches (100 mm) long, welded to back of detention window frames as required to secure detention windows to adjacent construction.
   a. Provide two anchors per side of window plus one additional anchor for every 18 inches (457 mm) or fraction thereof more than 36 inches (914 mm) in height or width.
3. Anchors for Built-in Installation: 1/2-inch (13-mm) diameter headed studs welded to back side of frames as required to secure detention windows to adjacent construction.
   a. Provide two anchors per side of window plus one additional anchor for every 18 inches (457 mm) or fraction thereof more than 36 inches (914 mm) in height or width.
4. Provide weep holes and internal water passages to conduct infiltrating water to the exterior.
5. Provide water-shed members above side-hinged ventilators and similar lines of natural water penetration.
6. Thermally Improved Construction: Fabricate framing with an integral, concealed, low-conductance thermal barrier, located between exterior materials and members exposed on interior in a manner that eliminates direct metal-to-metal contact.
7. Window and Screen Frames: Miter or cope corners the full depth of frame; weld and dress smooth.
8. Detention Bars: Fabricate flat bar perimeter frame to allow round bars to penetrate and create a secure grid. Weld round bars to back side of flat bars, as directed. Conceal detention bars within window framing.
9. Muntins: Attach muntins to perimeter framing with concealed welds. Use security fasteners for aluminum muntins, as directed.

10. Welding: Weld components to comply with referenced AWS standard. To greatest extent possible, weld before finishing and in concealed locations to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

11. Metal Protection: Separate dissimilar metals to protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.

12. Preglazed Fabrication: Preglaze window units at factory, where required for applications indicated. Comply with requirements in Division 08 Section "Security Glazing".

13. Glazing Stops: Provide glazing stops applied with security fasteners or rivets and coordinated with glazing indicated. Finish glazing stops to match window units.

15. Security Screens: Secure screen to frame with security fasteners or stainless steel rivets.

16. Security Fasteners: Fabricate detention windows using security fasteners with head style appropriate for fabrication requirements, strength, and finish of adjacent materials, except that a maximum of two different sets of tools shall be required to operate security fasteners for Project. Provide stainless-steel security fasteners in stainless-steel materials, as directed.

J. General Finish Requirements

1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

K. Aluminum Finishes

1. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

2. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
   a. Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR As selected from full range of industry colors and color densities, as directed.

3. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
   a. Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

4. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 OR AAMA 2605, as directed, and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   a. Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

L. Steel Finishes

1. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" OR SSPC-SP 8, "Pickling", as directed. After cleaning, apply a conversion coating suited to the organic coating to be applied over it, as directed.

2. Galvanizing: After fabrication, galvanize window components by chemical cleaning complying with SSPC-SP 1, "Solvent Cleaning," and pickling treatment complying with SSPC-SP 8, "Pickling," followed by hot-dip galvanizing complying with ASTM A 123/A 123M.

4. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting
11 - Equipment

Detention Windows

M. Stainless-Steel Finishes
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
   a. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.
5. Reflective, Directional Polish: No. 7.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer and Detention Specialist, as directed, present, for compliance with requirements for installation tolerances and other conditions affecting performance of detention windows.
2. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention window connections before detention window installation.
3. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of detention windows.
4. Inspect built-in and cast-in anchor installations, before installing detention windows, to verify that anchor installations comply with requirements. Prepare inspection reports.
   a. Remove and replace anchors where inspections indicate that they do not comply with specified requirements. Reinspect after repairs or replacements are made.
   b. Perform additional inspections to determine compliance of replaced or additional work. Prepare anchor inspection reports.
5. For glazing materials whose orientation is critical for performance, verify installation orientation.
6. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Coordination: Furnish layouts for cast-in-place anchors, clips, and other detention window anchors whose installation is specified in other Sections.
   a. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.

C. Installation
1. General: Install detention windows level, plumb, rigid, properly aligned, and securely fastened in place, complying with Drawings, Coordination Drawings, and manufacturer's written instructions.
   a. Provide anchorage devices and fasteners as required to secure detention windows to wall construction. Include threaded fasteners for inserts, security fasteners, and other connectors.

Detention Windows August 2021
DASNY, Downstate
match embedded anchors. Weld detention window frame anchors to embedded anchors with minimum 1-inch- (25-mm-) long welds at 18 inches (457 mm) o.c. Reinstall removable covers.

**OR**

**Built-in Frame Installation:** Build-in or cast-in detention window frames or subframes integral with construction of walls. Fully engage detention window frame anchors with wall reinforcement.

3. **Grout:** Where indicated, fill spaces between detention windows and adjacent substrate with grout. Install grout in lifts and take other precautions, including bracing detention windows, to ensure that detention windows are not deformed or damaged by grout forces.

4. **Removable Covers, Glazing Stops, and Trim:** Fasten components with security fasteners.
   a. Install detention windows with glazing stops and removable covers, as directed, located on secure (noninmate) side of openings.

5. **Security Fasteners:** Install detention windows using security fasteners with head style appropriate for installation requirements, strength, and finish of adjacent materials, except that a maximum of two different sets of tools shall be required to operate security fasteners for Project. Provide stainless-steel security fasteners in stainless-steel materials, as directed.

6. **Sealants:** Comply with requirements in Division 07 Section "Joint Sealants" for installing sealants, fillers, and gaskets.
   a. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction unless otherwise indicated.
   b. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.

7. **Metal Protection:** Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended in writing by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

8. **Glazing:** Comply with installation requirements in Division 08 Section "Security Glazing" unless otherwise indicated.

9. **Detention Screens:** Secure screens to the interior side of window frames using security fasteners.

**D. Field Quality Control**

1. Detention Specialist shall inspect OR Inspect, as directed, installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

2. Remove and replace detention work where inspections indicate that work does not comply with specified requirements.

3. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.

4. Prepare field quality-control certification endorsed by Detention Specialist, as directed, that states installed products and their installation comply with requirements in the Contract Documents.

**E. Adjusting**

1. Adjust operating ventilators and hardware to provide a tight fit at contact points and weather stripping, for smooth operation and a weathertight enclosure.

2. Remove and replace defective work, including detention windows and screens, as directed, that are warped, bowed, or otherwise unacceptable.

**F. Cleaning And Protection**

1. Clean surfaces promptly after installation of detention windows. Take care to avoid damaging the finish. Remove excess glazing and sealant compounds, dirt, and other substances.

2. Clean glass of preglazed detention windows promptly after installation. Comply with requirements in Division 08 Section "Security Glazing" for cleaning and maintenance.

3. Provide temporary protection to ensure that detention windows are without damage at time of Final Completion.

**G. Demonstration**
1. Train Owner's maintenance personnel to adjust, operate, and maintain operable detention windows.

SECTION 12 01 60 00 - FIXED AUDIENCE SEATING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for fixed audience seating. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes fixed audience seating with the following:
   b. Upholstered chairs, Molded-plastic chairs and Molded-plastic chairs with upholstered inserts.
   c. Self-rising seat mechanism.
   d. Power and data service to individual seats.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood and wood-based materials comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for each certified wood product.
   b. Product Data for Credit EQ 4.4: For each composite wood product, documentation indicating that product contains no urea formaldehyde.
3. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   a. Seating Layout: Show seating layout, aisle widths, row-lettering and chair-numbering scheme, chair widths, and chair spacing in each row.
   b. Accessories: Show accessories, including locations of left- and right-hand tablet arms, electrical devices, accessibility provisions, and attachments to other work.
   c. Wiring Diagrams: For power, signal, and control wiring.
4. Samples: For each seating component and for each color and texture required.
5. Product Certificates: For each type of flame-retardant treatment of fabric, from manufacturer.
7. Warranty: Sample of special warranty.

D. Quality Assurance
2. Forest Certification: Fabricate products with wood components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, “FSC Principles and Criteria for Forest Stewardship.”
3. Fire-Test-Response Characteristics of Upholstered Chairs:
   a. Fabric: Class 1 according to DOC CS 191 and 16 CFR 1610.61, tested according to California Technical Bulletin 117.
   c. Full-Scale Fire Test: Comply with California Technical Bulletin 133.
4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
5. Preinstallation Conference: Conduct conference at Project site.

E. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fixed audience seating that fail in materials or workmanship within specified warranty period.
   a. Failures include, but are not limited to, the following:
      1) Structural failures including standards, beams, and pedestals.
      2) Faulty operation of self-rising seat mechanism.
      3) Faulty operation of electrical components.
      4) Wear and deterioration of fabric and stitching beyond normal use.
      5) Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
   b. Warranty Periods: As follows, from date of Final Completion.
      1) Structural: Five years OR 10 years OR Lifetime, as directed.
      2) Operating Mechanisms: Three years OR Five years OR Lifetime, as directed.
      3) Electrical Components: Three OR Five, as directed, years.
      4) Plastic, Wood, and Paint Components: Two OR Three OR Five, as directed, years.

1.2 PRODUCTS

A. Materials And Finishes
2. Cast Iron: ASTM A 48/A 48M, Class 25 (Class 175), gray iron castings free of blow holes and hot checks with parting lines ground smooth.
4. Metal Finish: Finish exposed metal parts with manufacturer's standard polyurethane OR baked-on OR minimum 1.5-mil-(0.04-mm-) thick, polyester baked-on powder OR minimum 1.5-mil-(0.04-mm-) thick, epoxy baked-on powder, as directed, coating.
   a. Color: As selected from manufacturer's full range.
5. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
6. Concealed Plywood: HPVA HP-1 hardwood plywood, made with adhesive containing no urea formaldehyde, or DOC PS 1 softwood plywood, as standard with manufacturer.
7. Exposed Plywood: HPVA HP-1, Face Grade A, hardwood veneer core with color-matched hardwood-veneer faces, made with adhesive containing no urea formaldehyde.
8. Hardwood Lumber and Veneer Faces: American black walnut OR Red oak OR Teak OR Birch OR Cherry OR Maple, as directed, selected to be free of visible defects.
   a. Stain and Finish: As selected from manufacturer's full range.
   a. Color and Pattern: As selected from manufacturer's full range.
10. Fabric: Manufacturer's standard 100 percent nylon OR 100 percent polyolefin, as directed, with flame-retardant treatment.
   a. Weight: 12 oz./linear yd. (0.37 kg/linear m) OR 16 oz./linear yd. (0.50 kg/linear m) OR 18 oz./linear yd. (0.56 kg/linear m) OR 20 oz./linear yd. (0.62 kg/linear m), as directed.
   b. Color and Pattern: As selected from manufacturer's full range.
11. Upholstery Padding: Flexible, cellular, molded or slab polyurethane foam.
12. Molded Plastic: High-density polyethylene or polypropylene, blow or injection molded, with smooth or textured surface that is mar and dent resistant.
   a. Provide with UV inhibitors to retard fading where exposed to sunlight.
   b. Color and Texture: As selected from manufacturer's full range.

B. Fixed Audience Seating
1. Chair Mounting Standards: Floor OR Riser, as directed, attached of the following material:
   a. Steel: One-piece heavy-tube or reinforced sheet with welded mounting plate and welded connections for seat pivots, backs, armrests, and end panels.
Fixed Audience Seating

12 - Furnishings

1. Chair Mounting Pedestal: Floor-attached pedestal, manufacturer's standard jury base with swivel riser-attached, and attachment anchoring points for seat pivots, backs, and armrests.

2. Chair Mounting Beam: Steel horizontal beam mounted on floor-attached pedestal, and integral cup holder, recessed 3/16 inch (5 mm), at front and rear edge.

3. Chair Mounting Pedestal: As selected from manufacturer's full range.

4. Upholstered Chair: Two-part, slip-on upholstered padding with simulated slats or formed plastic with upholstered inserts, and as follows:

5. Plastic Chairs: One-piece, solid injection-molded plastic with integral reinforcing ribs and molded plastic, as directed.

6. Plastic Chairs: One-piece, plastic upholstery, as directed, and as follows:

7. Chair Width: Vary chair widths to accommodate sightlines and row lengths.

10. Chair Back Hinges: Self-lubricating type with noiseless mechanism that raises back to vertical position when chair is unoccupied.

11. Chair Seat Hinges: Self-lubricating, compensating type with noiseless self-rising seat mechanism.

14. **Aisle Lighting Fixtures:** Manufacturer's standard round OR rectangular louvered OR concealed in armrest, as directed, fixtures.
   a. Bulb: LED OR Incandescent, as directed.
   b. Power: 24 OR 120, as directed, V.
   c. For low-voltage lighting, provide manufacturer's voltage-reduction device housed in safety enclosure equipped with fuses, terminal blocks, and safety disconnect.

15. **Power and Data Service Package:** Manufacturer's standard service OR Service, as directed, to individual seats including terminal devices and wiring with 18 inches (457 mm) of extra length and as follows.
   a. Power Receptacles: 120 V with wiring and receptacle as specified in Division 22.
   b. Data Ports: Data port terminal with wiring and receptacle jack as specified in Division 23.
   c. Location: Manufacturer's standard location OR On raceway beneath the seating OR In the armrest OR Beneath the armrest on front or side of the standard OR In back panel of seat in front, as directed.

16. **Row-Letter and Chair-Number and Donor Plates:** Manufacturer's standard.
   a. Material: Aluminum OR Bronze OR Stainless steel, as directed, with black embossed characters.
   b. Attachment: Manufacturer's standard method OR Adhesive OR Minimum of two mechanical fasteners, as directed.

17. **Tablet Arms:** Manufacturer's standard-size OR Manufacturer's oversize, as directed, fixed OR foldaway, as directed, tablet arm with plastic-laminate writing surface over medium-density fiberboard or plywood core and with rounded, matching PVC edges.
   a. Mounting: Right-hand mounted unless otherwise indicated.
   b. Fold-Away Mechanism: Cast-iron or steel hinge and swivel mechanism that gives positive support in open position and semiautomatic return to stored position below arm block and parallel to chair.

18. **Accessible Seating:**
   a. Provide removable OR rollaway OR swing-away, as directed, chairs where wheelchair spaces are indicated.
   b. Provide chairs without OR with retractable OR with foldup, as directed, arm on aisle side in locations indicated, but not less than 5 percent of aisle seats. Identify these seats with a sign or marker.

C. **Fabrication**

1. Floor Attachments: Fabricate to conform to floor slope, if any, so that standards and pedestals are plumb and chairs are maintained at same angular relationship to vertical throughout Project.
2. For beam-mounted chairs in curved patterns, curve the beam to the various radii required for the rows.
4. Upholstered Chairs: Fabricate as follows:
   a. Two-Part Upholstered Back: In length required to protect seat in raised position, with padded cushion glued to a curved steel, plywood, or molded-plastic support panel covered with easily replaceable fabric, and with curved rear shell that fully encloses upholstery edges.
   b. Two-Part Seats: Upper part, an upholstered cushion with molded padding over no fewer than five serpentine springs attached to reinforced steel frame, with weight-distributing and abrasion-resistant sheeting separating padding from springs, and removable for reupholstering without removing seat from chair. Lower part, steel pan reinforced at stress points and completely enclosing hinges and self-rising mechanism.
      OR
   Two-Part Seats: Upper part, an upholstered cushion with formed padding over a five-ply plywood panel with fabric cover conforming to shape of cushion to conceal inner seat structure and hinge mechanism. Lower part, molded-plastic shell.
   c. One-Part Seats: Double-wall plastic shells fitted with a padded upholstered cushion and covered with easily replaceable fabric OR padded and fully upholstered, as directed.
5. Two-Piece, Molded-Plastic Chairs: Fabricate contoured seat and back separately with double-wall, blow-molded plastic. Fabricate back in length required to protect seat in raised position. Reinforce plastic with steel plates at attachment points.

6. One-Piece, Molded-Plastic Chairs: Provide contoured plastic shell with smoothly rolled edges and reinforcing ribs on underside of shell. Fabricate for attachment of chair to support with self-threading, corrosion-resistant screws.

1.3 EXECUTION

A. Installation
1. Install seating in locations indicated and fastened securely to substrates according to manufacturer’s written installation instructions.
   a. Use installation methods and fasteners that produce fixed audience seating assemblies with individual chairs capable of supporting an evenly distributed 600-lb (272-kg) static load without failure or other conditions that might impair the chair’s usefulness.
   b. Install standards and pedestals plumb.
2. Install seating with chair end standards aligned from first to last row and with backs and seats varied in width OR spacing OR width and spacing, as directed, to optimize sightlines.
3. Install riser-mounted attachments to maintain uniform chair heights above floor.
4. Install chairs in curved rows at a smooth radius.
5. Install seating so moving components operate smoothly and quietly.
6. Install wiring conductors and cables concealed in components of seating and accessible for servicing.

B. Field Quality Control
1. Perform tests and inspections.
   a. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
   b. Tests for Power Receptacles: As specified in Division 22.
   c. Tests for Data Ports: As specified in Division 23.
2. Prepare test and inspection reports.

C. Adjusting
1. Adjust chair backs so that they are aligned with each other in straight OR uniformly curved, as directed, rows.
2. Adjust self-rising seat mechanisms so seats in each row are aligned when in upright position.
3. Verify that all components and devices are operating properly.
4. Verify that seating returns to correct at-rest position.
5. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.

SECTION 12 21 13 13 - HORIZONTAL LOUVER BLINDS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for horizontal louver blinds. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Horizontal louver blinds with aluminum, wood and polymer slats.
   b. Motorized blind operators.

C. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show fabrication and installation details for horizontal louver blinds and motorized blind operators.
   a. Wiring Diagrams: Power, system, and control wiring.
3. Samples: For each exposed finish.
4. Product certificates OR test reports, as directed.
5. Maintenance data.

D. Quality Assurance
1. Fire-Test-Response Characteristics: Provide horizontal louver blinds with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
3. Product Standard: Provide horizontal louver blinds complying with WCSC A 100.1.

E. Delivery, Storage, And Handling
1. Deliver horizontal louver blinds in factory packages, marked with manufacturer and product name, fire-test-response characteristics, lead-free designation, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.2 PRODUCTS

A. Horizontal Louver Blinds, Aluminum Slats
1. Slats: Aluminum; alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radiused corners.
   a. Width: 2 inches (51 mm) OR 1 inch (25 mm) OR 1/2 to 5/8 inch (13 to 16 mm), as directed.
   b. Finish: One color OR One color each side OR As indicated, as directed.
      1) Ionized Coating: Antistatic, dust-repellent, baked polyester finish.
      2) Reflective Coating: Manufacturer’s special coating enhancing the reflection of solar energy on the outside-facing slat surface.
   c. Perforated Slats: Openness factor of 6 to 7 percent.
2. **Headrail:** Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and end plugs.

3. **Bottom Rail:** Formed-steel or extruded-aluminum tube, with plastic or metal capped ends.

4. **Maximum Light-Blocking Blinds:** Designed for eliminating all visible light gaps if slats are tilted closed and with minimal-sized rout holes for ladders hidden and placed near back edge for maximum slat overlap; with headrail and bottom rail extended and formed for light-tight joints between rail and adjacent slats or construction.
   a. Finish: Match color, texture, pattern, and gloss of slats OR Color, texture, pattern, and gloss differing from slats as indicated by manufacturer's designations OR Color, texture, pattern, and gloss differing from slats, matching samples OR Color texture, pattern, and gloss differing from slats as selected from manufacturer's full range, as directed.

5. **Ladders:** Evenly spaced to prevent long-term slat sag.
   a. For Blinds with Nominal Slat Width 1 Inch (25 mm) or Less: Braided string.
   b. For Blinds with Nominal Slat Width 1 Inch (25 mm) OR 2 Inches (51 mm), as directed, or More: Braided string OR Manufacturer's standard-width reinforced vinyl tapes OR Manufacturer's standard-width cloth tapes, as directed.
      1) Tape Color, Texture, and Pattern: Color, texture, and pattern as indicated by manufacturer's designations OR Color, texture, and pattern matching samples OR Color, texture, and pattern as selected from manufacturer's full range, as directed.

6. **Lift-and-Tilt Control:** Motorized operator.

7. **Lift Cords:** Manufacturer's standard.

8. **Tilt Control:** Enclosed worm-gear mechanism, slip clutch or detachable wand preventing overrotation, and linkage rod.

9. **Lift Operation:** Manual.

10. **Valance:** Two slats OR PVC strip OR Manufacturer's standard, as directed.

11. **Mounting:** Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.

12. **Hold-Down Brackets and Hooks or Pins:** Manufacturer's standard.

13. **Side Channels and Perimeter Light Gap Seals:** Manufacturer's standard.

14. **Colors, Textures, Patterns, and Gloss:** As selected from manufacturer's full range.

**B. Horizontal Louver Blinds, Wood Slats**

1. **Slats:** Hardwood, North American OR basswood OR poplar OR ramin, as directed, species, flame-retardant treated; with flat profile and radiused corners and beaded edges OR and double beaded edges, as directed.
   a. Width: 1 inch (25 mm) OR 1-3/8 inch (35 mm) OR 2 inches (51 mm) OR 2-3/8-inch (60-mm), as directed.
   b. Finish: Manufacturer's standard colors as indicated, for striped blind with pattern as indicated on Drawings.

2. **Headrail:** Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends.

3. **Bottom Rail:** Hardwood matching slats.
   a. Finish Color Characteristics: Match color, texture, pattern, and gloss of slats OR Match color, texture, pattern, and gloss of valance OR Color, texture, pattern, and gloss differing from slats as indicated by manufacturer's designations OR Color, texture, pattern, and gloss differing from slats, matching samples OR Color texture, pattern, and gloss differing from slats as selected from manufacturer's full range, as directed.

4. **Maximum Light-Blocking Blinds:** Designed for eliminating all visible light gaps if slats are tilted closed and with minimal-sized rout holes for ladders hidden and placed near back edge for maximum slat overlap; with headrail and bottom rail extended and formed for light-tight joints between rail and adjacent slats or construction.

5. **Ladders:** Braided string OR Manufacturer's standard-width cloth tapes, as directed. Evenly spaced to prevent long-term louver sag.
   a. Tape Color, Texture, and Pattern: Color, texture, and pattern as indicated by manufacturer's designations OR Color, texture, and pattern matching samples OR Color, texture, and pattern as selected from manufacturer's full range, as directed.
6. Tilt Control: Enclosed worm gear mechanism, slip clutch or detachable wand preventing overrotation, and linkage rod.
8. Lift Operation: Motorized operator.
10. Cornice: as directed by the Owner.
11. Mounting: Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.
12. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard, as indicated.
13. Colors, Textures, Patterns, and Gloss: As selected from manufacturer's full range.

C. Horizontal Louver Blinds, Polymer Slats
1. Slats: Lead-free, UV-stabilized, integrally colored, opaque, permanently flexible, extruded PVC OR polymer/wood alloy, as directed, that will not crack or yellow; antistatic, dust-repellent treated; with crowned OR manufacturer's standard, as directed, profile.
   a. Width: 2 inches (51 mm) OR 2-1/2 inches (64 mm), as directed.
   b. Finish: Wood-tone OR Painted, as directed, color as indicated.
   c. Finish: Two colors OR textures OR patterns, as directed, as indicated, one per side of slat.
2. Headrail: Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends.
3. Bottom Rail: Manufacturers standard OR Formed-steel or extruded-aluminum tube, with plastic or metal capped ends OR Hardwood matching slats and trapezoid-shaped bottom angled for minimizing light gaps, as directed.
4. Ladders: Braided string OR Manufacturer's standard-width cloth tapes, as directed. Evenly spaced to prevent long-term slat sag.
   a. Tape Color, Texture, and Pattern: Color, texture, and pattern as selected from manufacturer's full range.
5. Tilt Control: Enclosed worm-gear mechanism and linkage rod.
7. Lift Operation: Motorized operator.
9. Mounting: Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.
10. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard, as indicated.
11. Colors, Textures, Patterns, and Gloss: As selected from manufacturer's full range.

D. Horizontal Louver Blind Fabrication
2. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows:
   a. Blind Units Installed between (inside) Jambs: Width equal to 1/4 inch (6 mm) per side or 1/2 inch (13 mm) total, plus or minus 1/8 inch (3.1 mm), less than jamb-to-jamb dimension of opening in which each blind is installed. Length equal to 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm), less than head-to-sill dimension of opening in which each blind is installed.
   b. Blind Units Installed outside Jambs: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
3. Installation Brackets: Designed for easy removal and reinstallation of blind, for supporting headrail, valance, and operating hardware, and for hardware position and blind mounting method indicated.
4. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to blind hardware and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.
5. Color-Coated Finish:
   a. Metal: For components exposed to view, apply manufacturer's standard baked finish.
b. Wood: Apply manufacturer’s standard opaque OR transparent, as directed, factory-applied finish.

6. Component Color: Provide rails, cords, ladders, and exposed-to-view metal, wood, and plastic matching or coordinating with slat color, unless otherwise indicated.

E. Motorized Horizontal Louver Blind Operators
1. General: Provide factory-assembled blind operation systems designed for blind type, size, weight, construction, use, and operation frequency indicated, with lift OR tilt OR lift-and-tilt, as directed, functions. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by blind manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, power disconnect switches, enclosures protecting controls and all operating parts, headrail, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
   a. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   b. Motor Characteristics: Single phase, 24 OR 110 OR 220, as directed, V, 60 Hz.

3. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

4. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection and internal limit switches; sized by blind manufacturer to start and operate size and weight of blind considering service factor or Project's service conditions without exceeding nameplate ratings.
   a. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   b. Motor Characteristics: Single phase, 24 OR 110 OR 220, as directed, V, 60 Hz.

5. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for surface OR recessed or flush OR within headrail, as directed, mounting. Provide the following devices for remote-control activation of blinds:
   a. Control Stations: Keyed, maintained OR momentary, as directed, contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
   b. Control Stations: Maintained OR Momentary, as directed, contact, three-position, toggle OR rocker, as directed, style, wall-switch-operated control station with open, close, and center off functions.
      1) Color: Ivory OR White OR As indicated, as directed.

7. Operating Features: as directed by the Owner.

8. Accessories:
   a. Solar Power Unit: For use with control system indicated.

1.3 EXECUTION

A. Installation
1. Install horizontal louver blinds level and plumb and aligned with adjacent units according to manufacturer's written instructions, and located so exterior slat edges in any position are not closer than 1 inch (25 mm) OR 2 inches (51 mm), as directed, to interior face of glass. Install intermediate support as required to prevent deflection in headrail. Allow clearances between adjacent blinds and for operating glazed opening's operation hardware if any.
2. Flush Mounted: Install horizontal louver blinds with slat edges flush with finish face of opening if slats are tilted open.
4. Head Mounted: Install headrail on face of opening head.
5. Recessed: Install headrail concealed within blind pocket.
6. Connections: Connect motorized operators to building electrical system.
7. Adjust horizontal louver blinds to operate smoothly, easily, safely, and free of binding or malfunction throughout entire operational range.
8. Clean horizontal louver blind surfaces after installation, according to manufacturer's written instructions.

END OF SECTION 12 21 13 13
SECTION 12 21 13 13a - VERTICAL LOUVER BLINDS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for vertical louver blinds. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   b. Motorized blind operators.

C. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show fabrication and installation details for vertical louver blinds and motorized operators.
   a. Wiring Diagrams: Power, system, and control wiring.
3. Samples: For each exposed finish.
4. Product certificates OR test reports, as directed.
5. Maintenance data.

D. Quality Assurance
1. Fire-Test-Response Characteristics: Provide vertical louver blinds with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Delivery, Storage, And Handling
1. Deliver vertical louver blinds in factory packages, marked with manufacturer and product name, fire-test-response characteristics, lead-free designation, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.2 PRODUCTS

A. Vertical Louver Blinds, Aluminum Vanes
1. Rail System: Headrail OR Dual system with headrail and bottom rail, as directed.
   a. Rails: Extruded aluminum OR Formed steel OR Manufacturer's standard, as directed; long edges returned or rolled; channel-shaped, enclosing operating mechanisms.
      1) Color: Custom color OR As selected from manufacturer's standard color range, as directed.
      2) Anodized aluminum, clear OR color, as directed, anodized.
2. Vanes: Aluminum, alloy, and temper recommended by producer for type of use and finish indicated; with crowned profile and not less than 3/8-inch (9.5-mm) overlap when vanes are rotated fully closed.
Vertical Louver Blinds

A. Nominal Vane Width: 3-1/2 inches (89 mm) wide.

B. Vertical Louver Blinds, PVC Vanes

1. Rail System: Headrail OR Dual system with headrail and bottom rail, as directed.
   a. Rails: Extruded aluminum OR Formed steel OR Manufacturer's standard, as directed; long edges returned or rolled; channel-shaped, enclosing operating mechanisms.
      1) Color: Custom color OR As selected from manufacturer's standard color range, as directed.
      2) Anodized aluminum, clear OR color, as directed, anodized.

2. Vanes: Lead-free, UV-stabilized, integrally colored, opaque, permanently flexible, extruded PVC that will not crack or yellow; with flat OR crowned OR ribbed, as directed, profile and not less than 3/8-inch (9.5-mm) overlap when vanes are rotated fully closed.
   a. Nominal Vane Width: 2 inches (51 mm) OR 3-1/2 inches (89 mm) OR 4 inches (100 mm) OR 5 inches (125 mm), as directed.
   b. Perforated Vanes: Openness factor of 3 OR 6 OR 8 OR 10 OR 12, as directed, percent.

3. Vane Directional Control: Manual, OR Motorized operator, as directed.

4. Traversing Control: Manual OR Motorized operator, as directed.

5. Draw and Stack Position: One way, controls and stack left OR One way, controls and stack right OR One way, controls left and stack opposite OR One way, controls right and stack opposite OR Center split, controls left OR Center split, controls right OR Center stack, controls left OR Center stack, controls right OR Off center, controls left OR Off center, controls right OR As indicated on Drawings OR As indicated in a window treatment schedule, as directed.

6. Cord-Tensioner Mounting: Wall OR Floor OR Sill OR Baseboard OR As indicated, as directed.

7. Valance: One OR Two-tiered, as directed, vane insert; with dust cover.
   a. Finish Color Characteristics: Match color, texture, pattern, and gloss of vanes OR Color, texture, pattern, and gloss differing from vanes as indicated by manufacturer's designations OR Color, texture, pattern, and gloss differing from vanes matching samples OR Color texture, pattern, and gloss differing from vanes as selected from manufacturer's full range, as directed.

8. Louver Bottom: Connecting or spacing chains.

9. Mounting: Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.

10. Stack Release: Permitting stacked vanes to be moved away from stacking position for total access to glazed opening.

11. Colors, Textures, Patterns, and Gloss: As selected from manufacturer's full range.
C. Vertical Louver Blinds, PVC Vanes With Fabric Vane Inserts

1. Rail System: Headrail OR Dual system with headrail and bottom rail, as directed.
   a. Rails: Extruded aluminum OR Formed steel OR Manufacturer's standard, as directed; long edges returned or rolled; channel-shaped, enclosing operating mechanisms.
      1) Color: Custom color OR As selected from manufacturer's standard color range, as directed.
      2) Anodized aluminum, clear OR color, as directed, anodized.

2. Vanes: Lead-free, UV-stabilized, permanently flexible, extruded PVC that will not crack or yellow; with not less than 3/8-inch (9.5-mm) overlap when vanes are rotated fully closed. Provide integrally colored, opaque vane with clear grooves for holding fabric insert.
   a. Nominal Vane Width: 3-1/2 inches (89 mm).
   b. Fabric Insert: Manufacturer's standard; stain and fade resistant.

3. Vane Directional Control: Manual OR Motorized operator, as directed.

4. Traversing Control: Manual OR Motorized operator, as directed.

5. Draw and Stack Position: One way, controls and stack left OR One way, controls and stack right OR One way, controls left and stack opposite OR One way, controls right and stack opposite OR Center split, controls left OR Center split, controls right OR Center stack, controls left OR Center stack, controls right OR Off center, controls left OR Off center, controls right OR As indicated, as directed.

6. Cord-Tensioner Mounting: Wall OR Floor OR Sill OR Baseboard OR As indicated on Drawings, as directed.

7. Valance: One OR Two-tiered, as directed, vane insert; with dust cover. Fabric vane insert matching vanes.

8. Louver Bottom: Connecting or spacing chains.

9. Mounting: Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.

10. Stack Release: Permitting stacked vanes to be moved away from stacking position for total access to glazed opening.

11. Fabric Colors, Textures, and Patterns: As selected from manufacturer's full range.

D. Vertical Louver Blinds, Fabric Vanes

1. Rail System: Headrail OR Dual system with headrail and bottom rail, as directed.
   a. Rails: Extruded aluminum OR Formed steel OR Manufacturer's standard, as directed; long edges returned or rolled; channel-shaped, enclosing operating mechanisms.
      1) Color: Custom color OR As selected from manufacturer's standard color range, as directed.
      2) Anodized aluminum, clear OR color, as directed, anodized.

2. Vanes: Manufacturer's standard OR PVC-coated fiberglass mesh OR PVC-coated polyester mesh, as directed, freehanging fabric with hemmed, nonraveling edges; stain and fade resistant; with not less than 3/8-inch (9.5-mm) overlap when vanes are rotated fully closed.
   a. Nominal Vane Width: 2 inches (51 mm) OR 3-1/2 inches (89 mm) OR 5 inches (125 mm), as directed.

4. Vane Directional Control: Motorized operator.

6. Traversing Control: Motorized operator.

7. Draw and Stack Position: One way, controls and stack left OR One way, controls and stack right OR One way, controls left and stack opposite OR One way, controls right and stack opposite OR Center split, controls left OR Center split, controls right OR Center stack, controls left OR Center stack, controls right OR Off center, controls left OR Off center, controls right OR As indicated, as directed.

8. Cord-Tensioner Mounting: Wall OR Floor OR Sill OR Baseboard OR As indicated, as directed.

9. Valance: One OR Two-tiered, as directed, vane insert; with dust cover. Fabric vane insert matching vanes.

10. Louver Bottom: Connecting or spacing chains OR Weights, as directed.

11. Mounting: Wall mounting OR Ceiling mounting OR End mounting OR Wall extension brackets OR As indicated, as directed.
12. Stack Release: Permitting stacked vanes to be moved away from stacking position for total access to glazed opening.

13. Fabric Colors, Textures, and Patterns: As selected from manufacturer's full range.

E. Vertical Louver Blind Fabrication

1. Product Description: Vertical louver blind consisting of equally spaced, synchronized vanes and rail system with self-aligning carrier mechanisms, carriers, traverse and vane directional mechanisms and controls, and installation hardware.

2. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
   a. Louver Directional and Traversing Control Mechanisms: With permanently lubricated moving parts.

3. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows:
   a. Blind Units Installed between (inside) Jambs: Width equal to 1/4 inch (6 mm) per side or 1/2 inch (13 mm) total less than jamb-to-jamb dimension of opening in which each blind is installed. Length equal to 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm), less than head-to-sill dimension of opening in which each blind is installed.
   b. Blind Units Installed outside Jambs: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

4. Installation Brackets: Designed for easy removal and reinstallation of blind, for supporting headrail, valance, and operating hardware, and for hardware position and blind mounting method indicated.

5. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to blind hardware and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.

6. Color-Coated Finish: For metal components exposed to view, unless anodized or plated finish is indicated. Apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

7. Component Color: Provide cords and exposed-to-view metal and plastic matching or coordinating with vane color, unless otherwise indicated.

F. Motorized Vertical Louver Blind Operators

1. General: Provide factory-assembled blind operation systems designed for blind type, size, weight, construction, use, and operation frequency indicated, with traverse OR rotation OR traverse and rotation, as directed functions. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by blind manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, headrail, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

2. Comply with NFPA 70.

3. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

4. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection and internal limit switches; sized by blind manufacturer to start and operate size and weight of blind considering service factor or Project's service conditions without exceeding nameplate ratings.
   a. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   b. Motor Characteristics: Single phase, 24 OR 110 OR 220, as directed, V, 60 Hz.
   c. Motor Mounting: On top of OR Behind, as directed, track, left OR right, as directed, side of headrail.
   d. Motor Mounting: As indicated.

5. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for surface OR recessed or flush OR within headrail, as directed, mounting. Provide the following devices for remote-control activation of blinds:
a. Control Stations: Keyed, maintained **OR** momentary, **as directed**, contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.

b. Control Stations: Maintained **OR** Momentary, **as directed**, contact, three-position, toggle **OR** rocker, **as directed**, style, wall-switch-operated control station with open, close, and center off functions.

1) Color: Ivory **OR** White **OR** As indicated, **as directed**.

8. Accessories:
   a. Solar Power Unit: For use with control system indicated.

### 1.3 EXECUTION

**A. Installation**

1. Install vertical louver blinds level and plumb and aligned with adjacent units according to manufacturer's written instructions, and located so exterior vane edges in any position are not closer than 2 inches (51 mm) to interior face of glass. Install intermediate support as required to prevent deflection in headrail. Allow clearances between adjacent blinds and for operating glazed opening's operation hardware, if any.

2. Flush Mounted: Install vertical louver blinds with vane edges flush with finish face of opening when vanes are tilted open.

4. Head Mounted: Install headrail on face of opening head.

5. Recessed: Install headrail concealed within blind pocket.

6. Connections: Connect motorized operators to building electrical system.

7. Adjust vertical louver blinds to operate smoothly, easily, safely and free of binding or malfunction throughout entire operational range.

8. Clean vertical louver blind surfaces after installation, according to manufacturer's written instructions.

SECTION 12 24 13 00 - ROLLER SHADES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for roller shades. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes roller shades and motorized shade operators.

C. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: Include plans, elevations, sections, details, details of installation, operational clearances, wiring diagrams, and relationship to adjoining Work.
   a. Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings.
3. Samples: For each exposed finish and for each color and texture required.
4. Window Treatment Schedule: Use same designations indicated on Drawings.
5. Maintenance data.

D. Quality Assurance

1. Fire-Test-Response Characteristics: Provide products passing flame-resistance testing according to NFPA 701 by a testing agency acceptable to authorities having jurisdiction.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
3. Comply with WCMA A 100.1.

E. Delivery, Storage, And Handling

1. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, lead-free designation, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.2 PRODUCTS

A. Roller Shades

1. Shade Band Material: PVC-coated fiberglass OR PVC-coated polyester OR PVC-coated fiberglass and polyester blends OR Fiberglass and acrylic blend OR Metallized film OR Mirror film OR Tinted film OR Owner-furnished material, as directed.
   a. Colors: Match samples OR As selected from manufacturer’s full range OR As indicated in a window treatment schedule, as directed.
   c. Material Openness Factor: As directed percent.
   d. Material UV Blockage: As directed percent.
2. Rollers: Electrogalvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets. Provide capacity for one OR two, as directed, roller shade band(s) per roller.
3. Direction of Roll: Regular, from back of roller OR Reverse, from front of roller OR Regular, from back of roller, and reverse, from front of roller, as indicated on Drawings for double-roller shades, as directed.
4. Mounting Brackets: Galvanized or zinc-plated steel OR Fascia end caps, fabricated from steel finished to match fascia or headbox, as directed.

5. Fascia: L-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; continuous panel concealing front and bottom of shade roller, brackets, and operating hardware and operators; removable design for access.

6. Top/Back Cover: L-shaped; material and finish to match fascia; combining with fascia and end caps to form a six-sided headbox enclosure sized to fit shade roller and operating hardware inside.

7. Pocket-Style Headbox: U-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing shade roller, brackets, and operating hardware and operators within.

8. Pocket with Ceiling Slot Opening: Six-sided box units for recessed installation; fabricated from formed-steel sheet, extruded aluminum, or wood; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing rollers, brackets, and operating hardware and operators within.

9. Bottom Bar: Steel or extruded aluminum, with plastic or metal capped ends. Provide exposed-to-view, external OR concealed, by pocket of shade material, internal, as directed.,-type.

10. Audiovisual Light-Blocking Shades: Designed for eliminating all visible light gaps when shades are fully closed; fabricated from blackout shade band material with fascia OR headbox OR pocket, as directed, and bottom bar extended and formed for light-tight joints among shade components and between shade components and adjacent construction.

11. Skylight Shades: Manufacturer's complete system for operable skylight shades, including operator, operating hardware, and accessories for smooth operation, designed for installation in horizontal position OR inclined position, slope as indicated on Drawings, as directed.

12. Valance: As indicated by manufacturer's designation for style and color OR Style matching hem; as indicated by manufacturer's designation color OR As indicated in a window treatment schedule, as directed.

13. Mounting: Inside OR Outside OR Ceiling OR Recessed in ceiling pocket OR Wall extension brackets OR Bottom-up brackets OR As indicated on Drawings, as directed.

14. Shade Operation: Manual; with spring roller OR continuous-loop bead-chain, clutch, and cord tensioner and bracket OR gear and crank OR cordless system, as directed, lift operator.

15. Hold-Down Brackets and Hooks or Pins and Side Channels: Manufacturer's standard for fixing shade in place, keeping shade band material taut, and reducing light gaps when shades are closed.

16. Shade Operation: Manual; with spring roller OR continuous-loop bead-chain, clutch, and cord tensioner and bracket OR gear and crank OR cordless system, as directed, lift operator.

B. Roller Shade Fabrication

1. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
   a. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch (6 mm) from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.
   b. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

2. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, headbox, roller, and operating hardware and for hardware position and shade mounting method indicated.

3. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

C. Motorized Roller Shade Operators
1. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

2. Comply with NFPA 70.

3. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

4. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
   a. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   b. Motor Characteristics: Single phase, 24 OR 110 OR 220, as directed, V, 60 Hz.

5. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure surface OR recessed or flush, as directed, mounting. Keyed switch OR Toggle-style, wall switch Rocker-style, wall switch OR Rocker-style, group-control wall switch OR Rocker-style, individual/group-control wall switch OR Sun sensor OR Radio OR Infrared OR Timer OR Microprocessor, as directed.

1.3 EXECUTION

A. Roller Shade Installation
   1. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so shade band is not closer than 2 inches (50 mm) to interior face of glass. Allow clearances for window operation hardware.
   2. Connections: Connect motorized operators to building electrical system.
   3. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.
   4. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

END OF SECTION 12 24 13 00
SECTION 12 24 13 00a - PLEATED SHADES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for pleated shades. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following types of horizontal-fold shades and accessories:
   a. Z-pleated shades.
   b. Cellular shades.
   c. Motorized shade operators.

C. Definitions
1. Cellular Shades: Pleated shades with more than one horizontally folded fabric layer forming accordion-folded fabric with enclosed air spaces or cells. Cellular shades may consist of two fabric layers forming a continuous accordion fold of enclosed air spaces or cells for a linear row of cells, one cell wide; three fabric layers forming two interconnected accordion folds of enclosed air spaces or cells for two honeycombed rows of cells, nominally two cells wide; or four fabric layers forming three interconnected accordion folds of enclosed air spaces or cells for three honeycombed rows of cells, nominally three cells wide.
2. Pleated Shades: Permanently creased, horizontally folded shades. Alternatively, pleated shades are synonymous with Z-pleated shades according to the industry. Z-pleated shades consist of one fabric layer forming Z-folded pleats.

D. Submittals
1. Product Data: For each type of product indicated.
   a. Motorized Shade Operators: Include operating instructions.
   b. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.
2. Shop Drawings: Show location and extent of pleated shades. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
   a. Motorized Shade Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
   b. Wiring Diagrams: Power, system, and control wiring.
3. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   a. Suspended ceiling components.
   b. Structural members to which equipment OR suspension systems, as directed, will be attached.
   c. Sizes and locations of initial access modules for acoustical tile.
   d. Items penetrating finished ceiling, including the following:
      1) Lighting fixtures.
      2) Air outlets and inlets.
      3) Speakers.
      4) Sprinklers.
      5) Access panels.
   e. Perimeter moldings.
4. Samples: For the following products:
   a. Shade Fabrics: Not less than 3 inches (76 mm) square, with specified treatments applied. Mark face of material.
b. Valance: Full-size unit, not less than 12 inches (300 mm) long.

5. Maintenance Data.

E. Quality Assurance
1. Fire-Test-Response Characteristics: Provide pleated shades with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency:
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Delivery, Storage, And Handling
1. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, OR lead-free designation, as directed, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.2 PRODUCTS

A. Z-Pleated Shades
1. Z-Pleated Shade Construction: One-fabric thickness, with uniform pleat spacing maintained at all positions.
   a. Nominal Pleat Width: 1 inch (25 mm) OR 2 inches (50 mm) OR 3 inches (76 mm) OR 4 inches (100 mm), as directed.
2. Shade Fabric: Manufacturer's standard OR 100 percent nonwoven polyester with antistatic treatment OR PVC-coated polyester mesh OR 100 percent spun-woven polyester, as directed; stain and fade resistant, width as wide as required for seamless shade.
   a. Fabric Width: 36 inches (910 mm) OR 48 inches (1220 mm) OR 60 inches (1520 mm) OR 72 inches (1830 mm) OR 84 inches (2130 mm) OR 96 inches (2440 mm) OR As indicated on Drawings OR As indicated in a window treatment schedule, as directed.
   b. Pattern: as directed by the Owner.
   c. Style: as directed by the Owner.
   d. Colors: Match samples OR As selected from manufacturer's full range OR As indicated in a window treatment schedule, as directed.
   e. Material Solar-Optical Properties: as directed by the Owner.
   f. Material Openness Factor: percent as directed by the Owner.
   g. Material UV Blockage: percent as directed by the Owner.
3. Headrail: Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends; capacity for one OR two, as directed, shade(s) per headrail, unless otherwise indicated on Drawings OR in a window treatment schedule, as directed.
4. Bottom Rail: Formed-steel or extruded-aluminum tube, sealed with plastic or metal capped ends.
6. R-Value: Not less than 2.22 deg F x h x sq. ft./Btu (0.39 K x sq. m/W) OR 4.8 deg F x h x sq. ft./Btu (0.85 K x sq. m/W), as directed.
7. Mounting: Wall OR Ceiling OR End OR Wall extension brackets OR As indicated on Drawings, as directed, mounting permitting easy removal and replacement without damaging shade or adjacent surfaces and finishes; with spacers and shims required for shade placement and alignment indicated.
8. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard, as directed.
9. Side Channels and Perimeter Seals: Manufacturer's standard for eliminating light gaps when shades are closed.
   a. Lift Control: System including lift cord, crash-proof cord lock, and cord joiner ball OR System including continuous-cord loop, clutch, and cord tensioner and bracket OR Cordless system, as directed, designed to hold shade in place unless force is applied to move shade.
   b. Length of Lift Cord OR Cord Loop, as directed: Manufacturer's standard length OR Full length of shade OR Length required to make operation convenient from floor level OR As indicated on Drawings, as directed.
   c. Position of Lift Cord OR Cord Loop, as directed: As indicated on Drawings OR in a window treatment schedule, as directed.
   d. Position of Lift Cord OR Cord Loop, as directed: Left side OR Right side OR Left end OR Right end, as directed, of headrail, unless otherwise indicated on Drawings OR in a window treatment schedule, as directed.
   e. Cord Tensioner Mounting: Wall OR Floor OR Sill OR Baseboard OR As indicated on Drawings, as directed.

B. Cellular Shades
      a. Nominal Cell Width: 3/8 to 7/16 inch (10 to 11 mm) OR 1/2 inch (13 mm) OR 9/16 inch (14.2 mm) OR 3/4 inch (19 mm), as directed.
      a. Nominal Cell Width: 3/8 inch (10 mm).
      a. Nominal Cell Width: 3/8 inch (10 mm).
   4. Shade Fabric: Manufacturer's standard OR 100 percent nonwoven polyester with antistatic treatment OR 100 percent spun-woven polyester, as directed; stain and fade resistant, width as wide as required for seamless shade.
      a. Fabric Width: 36 inches (910 mm) OR 48 inches (1220 mm) OR 60 inches (1520 mm) OR 72 inches (1830 mm) OR 84 inches (2130 mm) OR 96 inches (2440 mm) OR As indicated on Drawings OR As indicated in a window treatment schedule, as directed.
      b. Pattern: as directed by the Owner.
      c. Style: as directed by the Owner.
      d. Colors: Match samples OR As selected from manufacturer's full range OR As indicated in a window treatment schedule, as directed.
   5. Headrail: Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends; capacity for one OR two, as directed, shade(s) per headrail, unless otherwise indicated on Drawings OR in a window treatment schedule, as directed.
   6. Bottom Rail: Formed-steel or extruded-aluminum tube, sealed with plastic or metal capped ends.
   8. R-Value: Not less than 2.22 deg F x h x sq. ft./Btu (0.39 K x sq. m/W) OR 4.8 deg F x h x sq. ft./Btu (0.85 K x sq. m/W), as directed.
   9. Mounting: Wall OR Ceiling OR End OR Wall extension brackets OR As indicated on Drawings, as directed, mounting permitting easy removal and replacement without damaging shade or adjacent surfaces and finishes; with spacers and shims required for shade placement and alignment indicated.
   10. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard, as indicated.
   11. Side Channels and Perimeter Seals: Manufacturer's standard for eliminating light gaps when shades are closed.
      a. Lift Control: System including lift cord, crash-proof cord lock, and cord joiner ball OR System including continuous-cord loop, clutch, and cord tensioner and bracket OR Cordless system, as directed, designed to hold shade in place unless force is applied to move shade.
b. Length of Lift Cord OR Cord Loop, as directed: Manufacturer's standard length OR Full length of shade OR Length required to make operation convenient from floor level OR As indicated on Drawings, as directed.

c. Position of Lift Cord OR Cord Loop, as directed: As indicated on Drawings OR in a window treatment schedule, as directed.

d. Position of Lift Cord OR Cord Loop, as directed: Left side OR Right side OR Left end OR Right end, as directed, of headrail, unless otherwise indicated on Drawings OR in a window treatment schedule, as directed.

e. Cord Tensioner Mounting: Wall OR Floor OR Sill OR Baseboard OR As indicated on Drawings, as directed.

C. Pleated Shade Fabrication
1. Product Description: Pleated shades each consisting of fabric, rails, ladders, lifting mechanism, self-leveling device, and installation hardware.
2. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
   a. Lifting Mechanism: With permanently lubricated moving parts.
3. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
   a. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch (6 mm) from face of jamb. Length equal to head-to-sill dimension of opening in which each shade is installed.
   b. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
4. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting headrail, valance, as directed, and operating hardware and for hardware position and shade mounting method indicated.
5. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.
6. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.
7. Component Color: Provide rails and cords, as directed, and exposed-to-view ladders, as directed, metal and plastic matching or coordinating with fabric color, unless otherwise indicated.

D. Motorized Pleated Shade Operators
1. General: Provide factory-assembled shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, headrail, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.
2. Comply with NFPA 70.
3. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc, as directed.
4. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and internal limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
   a. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   b. Motor Characteristics: Single phase, 24 OR 110 OR 220, as directed, V, 60 Hz.
c. Motor Mounting: Within manufacturer’s standard headrail enclosure.

5. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for surface OR recessed or flush OR within headrail, as directed, mounting. Provide the following devices for remote-control activation of shades:
   a. Control Stations: Keyed, maintained OR momentary, as directed,-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
   b. Control Stations: Maintained OR Momentary, as directed,-contact, three-position, toggle OR rocker, as directed,-style, wall switch-operated control station with open, close, and center off functions.
      1) Color: Ivory OR White OR As indicated in a window treatment schedule, as directed.
   c. Group Control Stations: Maintained OR Momentary, as directed,-contact, three-position, rocker-style, wall switch-operated control station with open, close, and center off functions for single-switch group control.
      1) Color: Ivory OR White OR As indicated in a window treatment schedule, as directed.
   d. Individual/Group Control Stations: Maintained OR Momentary, as directed,-contact, three-position, toggle OR rocker, as directed,-style, wall switch-operated control station with open, close, and center-off functions for individual and group control.
      1) Color: Ivory OR White OR As indicated in a window treatment schedule, as directed.
   e. Sun Sensor Controls: Programmable system activated by LEDs detecting daylight intensity and responding by automatically adjusting shades.
   f. Radio Controls: Digital system consisting of code-compatible universal coaxial receiver, one per shade OR one per headrail OR where indicated on Drawings, as directed, and two, as directed, portable, multiple-channel transmitters for operating two OR four OR up to 12, as directed, shades individually, each with a single button to open and close shades.
   g. Infrared Controls: System consisting of concealed receiver complete with external eye and connecting modular cable, and two, as directed, portable, multiple-channel transmitters with separate buttons to open and close up to 12, as directed, individual shades or groups of shades, to open and close all shades simultaneously, and to stop.
   h. Timer Controls: Clock timer, 24-hour OR seven-day, as directed, programmable for regular events.
   i. Microprocessor Controls: Electronic programmable means for setting, changing, and adjusting control features. Provide unit isolated from voltage spikes and surges.

7. Operating Features: Include the following:
   a. Group switching with integrated switch control; one face plate for multiple switch cut-outs.
   b. Capable of interface with audiovisual OR multiroom, as directed, control system.
   c. Capable of accepting input from building automation control system.
   d. Override switch.

8. Accessories: Include the following:
   a. Solar Power Unit: For use with control system indicated.

9. Headrail: Manufacturer’s standard formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends; capacity for one OR two, as directed, shade(s) per headrail, unless otherwise indicated on Drawings OR in a window treatment schedule, as directed.
   a. Color: Match shade OR As indicated by manufacturer’s designations OR As selected from manufacturer’s full range OR As indicated in a window treatment schedule, as directed.

1.3 EXECUTION

A. Pleated Shade Installation
1. Install shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so pleat edges are not closer than 2 inches (50 mm) to interior face of glass. Install intermediate support as required to prevent deflection in headrail. Allow clearances for window operation hardware.

2. Flush Mounted: Install shades with pleat edges flush with finish face of opening if shade is in fully lowered position.

4. Head Mounted: Install headrail on face of opening head.

5. Recessed: Install headrail concealed within shade pocket.

6. Connections: Connect motorized operators to building electrical system.

B. Adjusting

1. Adjust and balance pleated shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

C. Cleaning And Protection

1. Clean pleated shade surfaces after installation, according to manufacturer's written instructions.

2. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that pleated shades are without damage or deterioration at time of Final Completion.

3. Replace damaged pleated shades that cannot be repaired, in a manner approved, before time of Final Completion.

SECTION 12 31 16 00 - STONE COUNTERTOPS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for stone countertops. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes stone countertops.

C. Submittals
1. Product Data: For each variety of stone and manufactured products.
2. Shop Drawings: Include plans, sections, details, and attachments to other work.
3. Samples: For each stone type indicated.
4. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
5. Sealant Compatibility Test Report: From sealant manufacturer, complying with requirements in Division 07 Section “Joint Sealants” and indicating that sealants will not stain or damage stone.
6. Maintenance Data: For stone countertops to include in maintenance manuals. Include Product Data for stone-care products used or recommended by Installer, and names, addresses, and telephone numbers of local sources for products.

D. Quality Assurance
1. Installer Qualifications: Fabricator of products.
2. Source Limitations for Stone: Obtain each variety of stone from a single quarry with resources to provide materials of consistent quality in appearance and physical properties.
   a. Make stone slabs available for the Owner to examine for appearance characteristics. the Owner will select aesthetically acceptable slabs.

E. Delivery, Storage, And Handling
1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
2. Store stone on wood A-frames or pallets with nonstaining separators and nonstaining, waterproof covers. Ventilate under covers to prevent condensation.

F. Project Conditions
1. Field Measurements: Verify dimensions of construction to receive stone countertops by field measurements before fabrication.

1.2 PRODUCTS

A. Granite
2. Cut stone from contiguous, matched slabs in which natural markings occur, as directed.
3. Finish: Polished OR Honed OR Thermal OR As indicated OR Match the Owner’s sample, as directed.

B. Marble
a. Stone Abrasion Resistance: Minimum value of 10, based on testing according to ASTM C 241 or ASTM C 1353.
2. Cut stone from contiguous, matched slabs in which natural markings occur, as directed.
3. Finish: Polished OR Honed OR As indicated OR Match the Owner's sample, as directed.

C. Serpentine
1. Serpentine: Comply with ASTM C 1526, Classification I Exterior OR II Interior, as directed.
a. Stone Abrasion Resistance: Minimum value of 10, based on testing according to ASTM C 241 or ASTM C 1353.
2. Cut stone from contiguous, matched slabs in which natural markings occur, as directed.
3. Finish: Polished OR Honed OR As indicated OR Match the Owner's sample, as directed.

D. Slate
1. Slate: Comply with ASTM C 629, Classification I Exterior OR II Interior, as directed, with a fine, even grain and unfading color, from clear, sound stock.
a. Stone Abrasion Resistance: Minimum value of 8, based on testing according to ASTM C 241 or ASTM C 1353.
2. Finish: Honed OR Sand rubbed OR Natural cleft OR As indicated OR Match the Owner's sample, as directed.

E. Adhesives, Grout, Sealants, And Stone Accessories
1. General: Use only adhesives formulated for stone and ceramic tile and recommended by their manufacturer for the application indicated.
2. Water-Cleanable Epoxy Adhesive: ANSI A118.3, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Stone Adhesive: 2-part epoxy or polyester adhesive, formulated specifically for bonding stone to stone, with an initial set time of not more than 2 hours at 70 deg F (21 deg C), and with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
a. Color: Clear OR Match stone, as directed.
5. Sealant for Countertops: Manufacturer's standard sealant of characteristics indicated below that comply with applicable requirements in Division 07 Section "Joint Sealants" and will not stain the stone it is applied to.
a. Single-component, neutral-curing OR acid-curing, as directed, silicone sealant.
b. Color: Clear OR As selected by the Owner from manufacturer's full range, as directed.
c. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Stone Joint Splines: Stainless-steel or brass washers approximately 1 inch (25 mm) in diameter and of thickness to fit snugly in saw-cut kerf in edge of stone units.
7. Stone Cleaner: Cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer and, if a sealer is specified, by sealer manufacturer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.
8. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

F. Stone Fabrication, General
1. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
a. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by the Owner.
2. Grade and mark stone for final locations to produce assembled countertop units with an overall uniform appearance.
3. Fabricate stone countertops in sizes and shapes required to comply with requirements indicated, including details on Drawings and Shop Drawings.
a. For granite, comply with recommendations in NBGQA’s "Specifications for Architectural Granite."

b. For marble and serpentine, comply with recommendations in MIA’s "Dimension Stone--Design Manual."

c. Clean sawed backs of stones to remove rust stains and iron particles.

d. Dress joints straight and at right angle to face, unless otherwise indicated.

e. Cut and drill sinkages and holes in stone for anchors, supports, and attachments.

f. Provide openings, reveals, and similar features as needed to accommodate adjacent work.

g. Fabricate molded edges with machines having abrasive shaping wheels made to reverse contour of edge profile to produce uniform shape throughout entire length of edge and with precisely formed arris slightly eased to prevent snapping, and matched at joints between units. Form corners of molded edges as indicated with outside corners slightly eased, unless otherwise indicated.

h. Finish exposed faces of stone to comply with requirements indicated for finish of each type of stone required and to match approved Samples and mockups. Provide matching finish on exposed edges of countertops, splashes, and cutouts.

4. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.

G. Stone Countertops

2. Nominal Thickness: Provide thickness indicated, but not less than 3/4 inch (20 mm) OR 7/8 inch (22 mm) OR 1-1/4 inches (32 mm), as directed. Gage backs to provide units of identical thickness.

3. Edge Detail: Straight, slightly eased at top OR 3/8-inch (10-mm) bevel OR 3/4-inch (20-mm) full bullnose OR 1-1/4-inch (20-mm) full bullnose OR 3/8-inch (10-mm) radius with 2-inch (50-mm) apron OR 1-1/2-inch (40-mm) laminated bullnose OR As indicated, as directed.

4. Splashes: Provide 3/4-inch- (20-mm-) thick backsplashes OR end splashes OR backsplashes and end splashes, as directed, unless otherwise indicated.

OR

Fabricate countertops in sections for joining in field, with joints at locations indicated and as follows:

a. Bonded Joints: 1/32 inch (0.8 mm) or less in width.

b. Grouted Joints: 1/16 inch (1.5 mm) in width.

c. Sealant-Filled Joints: 1/16 inch (1.5 mm) in width.

d. Splined Joints: Accurately cut kerfs in edges at joints for insertion of metal splines to maintain alignment of surfaces at joints where indicated. Make width of cuts slightly more than thickness of splines to provide snug fit. Provide at least three splines in each joint.

6. Cutouts and Holes:

a. Undercounter Fixtures: Make cutouts for undercounter fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.

1) Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.

2) Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.

3) Provide 3/4-inch (20-mm) full bullnose edges projecting 3/8 inch (10 mm) into fixture opening.

c. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.
1.3 EXECUTION

A. Preparation
1. Advise installers of other work about specific requirements for placement of inserts and similar items to be used by stone countertop Installer for anchoring stone countertops. Furnish installers of other work with Drawings or templates showing locations of these items.
2. Clean dirty or stained stone surfaces by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives. Allow stone to dry before installing.

B. Construction Tolerances
1. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/16 inch in 48 inches (1.5 mm in 1200 mm).
2. Variation from Level: Do not exceed 1/8 inch in 96 inches (3 mm in 2400 mm), 1/4 inch (6 mm) maximum.
3. Variation in Joint Width: Do not vary joint thickness more than 1/4 of nominal joint width.
4. Variation in Plane at Joints (Lipping): Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.
5. Variation in Line of Edge at Joints (Lipping): Do not exceed 1/64-inch (0.4-mm) difference between edges of adjacent units, where edge line continues across joint.

C. Installation Of Countertops
1. General: Install countertops over plywood subtops with full spread of water-cleanable epoxy adhesive.
   OR
   Install countertops by adhering to supports with water-cleanable epoxy adhesive.
2. Do not cut stone in field, unless otherwise indicated. If stone countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.
   OR
   Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight, true, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
3. Set stone to comply with requirements indicated on Drawings and Shop Drawings. Shim and adjust stone to locations indicated, with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances. Install anchors and other attachments indicated or necessary to secure stone countertops in place.
4. Bond joints with stone adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
5. If joints are allowed, space joints with 1/16-inch (1.5-mm) gap for filling with grout OR sealant, as directed. Use temporary shims to ensure uniform spacing.
   a. Install metal splines in kerfs in stone edges at joints where indicated. Fill kerfs with stone adhesive OR setting adhesive OR sealant, as directed, before inserting splines and remove excess immediately after adjoining units are drawn into position.
   b. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
6. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut stone. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
7. Install backsplash and end splash by adhering to wall with water-cleanable epoxy adhesive and to countertops with stone adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
   OR
   Install backsplash and end splash by adhering to countertops with stone adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Leave 1/16-inch (1.5-
mm) gap between splash and wall for filling with sealant. Use temporary shims to ensure uniform spacing.

**OR**

Install backsplash and end splash by adhering to wall with water-cleanable epoxy adhesive. Leave 1/16-inch (1.5-mm) gap between countertop and splash for filling with sealant. Use temporary shims to ensure uniform spacing.

8. If grouted joints are acceptable, grout joints to comply with ANSI A108.10. Remove temporary shims before grouting. Tool grout uniformly and smoothly with plastic tool.

9. Apply sealant to joints and gaps specified for filling with sealant; comply with Division 07 Section "Joint Sealants". Remove temporary shims before applying sealant.

D. Adjusting And Cleaning

1. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.

2. Remove and replace stone countertops of the following description:
   a. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by the Owner.
   b. Defective countertops.
   c. Defective joints, including misaligned joints.
   d. Interior stone countertops and joints not matching approved Samples and mockups.
   e. Interior stone countertops not complying with other requirements indicated.

3. Replace in a manner that results in stone countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.

4. Clean stone countertops not less than six days after completion of sealant installation **OR** installation, as directed, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.

5. Sealer Application: Apply stone sealer to comply with stone producer’s and sealer manufacturer’s written instructions.

END OF SECTION 12 31 16 00
SECTION 12 31 16 00a - KITCHEN CASEWORK, STAINLESS STEEL CABINETS

1.1 GENERAL

A. Description of Work
1. This specification covers the furnishing and installation of materials for kitchen casework, stainless steel cabinets. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Assurance
1. Comply with all provisions of specifications for the design, quality testing, manufacturing and installation of metal kitchen cabinets and specified equipment.
2. All kitchen cabinetry and equipment herein specified and shown on the drawings shall meet the standards, quality of materials, construction, workmanship and finish of Innovative Laboratory Systems Co., 1336 Industrial Rd., Omaha Nebraska, (402) 333-0679. Equal manufacturers acceptable.
3. All metal cabinetry and equipment herein shall be the product of one manufacturer and be the one on which this specification is based or approved of substitutes must be obtained in writing from the Owner ten days prior to the bid due date. All manufacturers other than the specified product shall provide evidence of having a minimum of five years experience in the manufacturing and installation of stainless steel kitchen cabinetry.
4. The manufacturer shall, from one year to date of installation, warrant parts or products manufactured and finished against manufacturing defects in material and any such parts which under normal use prove defective within one year form date of installation, shall be repaired or replaced without charge to the Owner.
5. Wood shall not be used in any portion of the casework construction whether exposed or hidden from view.

C. Submittals
1. Shop Drawings
   a. Identify location of metal cabinetry and related items.
   b. Detail cabinets, shelving, countertops, etc. in related and dimensional position, with sections. Locations for roughing-in of plumbing, including sinks, faucets, strainers, cocks, etc. shall be included
2. Certificates: All bidders shall provide to the Owner independent test results from a nationally recognized testing laboratory on the finishes required for this project with the bid.

1.2 PRODUCTS

A. Material
1. All metal cabinetry shall be fabricated to Type 304 stainless steel free of scales buckles or other defects.
2. Minimum metal gauge: All minimum thickness of metal referred to herein shall be U.S. standard gauge.
   a. 20 Gauge: Inner door panels, inner and outer drawer panels, drawer body, and shelves.
   b. 18 Gauge: Outer door panels, sides, backs, bottoms, and tops.
   c. 16 Gauge: Top rails, cross rails, drawer slides.
   d. 14 Gauge: Leveling and corner gussets.

B. Fabrications
1. Cabinet Grade: Premium and complying with the following.
   a. Align sides, top rails, bottoms and vertical stiles, at intersections, without overlap.
   b. Rounded edges.
c. Full welded seams.
d. Grind exposed welds flush and smooth.

2. Cases: The sides of cabinets shall be formed to make a rabbeted stile 1-1/8" wide. Top of case stiles shall be closed by a mitered 45-degree bend from tip of case side. Stiles shall be closed by welded channel, which contains front shelf adjustment louvers. All case members including intermediate cross rails shall be welded for maximum strength. Use of sheet metal screws to hold intermediate cross rails in place is not acceptable. Sides of all cabinets shall be free from any holes to prevent dust and bacteria from entering the cabinet. Pre-punched holes in the side of any cabinet will not be allowed. All drawer cabinets and cupboard cabinets shall have full backs and bottoms welded into place. Any cabinet without any backs or bottoms will be rejected. All interior bottoms of base and tall cabinets shall be turned down to provide a clean, flush interior free from dust catching ledges and preventing bacterial accumulation. Bottoms of all wall units shall be flushed; recessed bottoms are not acceptable.

3. Doors
   a. Doors shall be double panel reinforced construction 5/8" thick and sound deadened with vertical steel battens. Door fronts and liners shall be welded together for added strength. Door fronts and cases shall be slotted to receive hinges. Hinge wings must be concealed when doors open. Wrap around type hinges are not acceptable. All doors shall have soft rubber bumpers for quiet closing. Rubber bumpers must be securely locked in place. Rubber Bumpers attached by adhesives are not acceptable. All corners of doors shall be welded and ground smooth.
   b. Sliding doors shall be double panel reinforced construction 5/8" thick and operate on nylon rollers suspended from stainless steel track at top of unit and center guide at bottom. Sliding doors shall have recessed door pulls.

4. Drawers
   a. Drawers front shall be double panel reinforced construction with 5/8" thick fronts and sound deadened with vertical steel battens. Drawers shall be all welded construction. All drawers shall have soft rubber bumpers for quiet closing. Rubber bumpers must be securely locked in place. Rubber bumpers attached by adhesives are not acceptable. All edges of drawer fronts shall be closed.
   b. Drawer bodies shall be formed from a single sheet of steel including the bottom, two sides, back and inner front. Interior bottoms of drawers shall be fully covered on four sides for ease in cleaning. The top front of the inner drawer shall be offset to interlock with the outer drawer front.
   c. Flanges on the top of drawer body shall be fully formed channel and bent at a 6-degree angle for maximum strength. Flanges shall be formed to leave the inside of the drawer free form sharp edges. Drawer slide shall be welded to drawer body and be part of a “Z” shaped member in a wrap around design to support drawer body. Drawer slides shall have a 15/16" nylon tired ball bearing roller. Drawer slide shall be roller type, positive in action permitting drawer to be fully opened; yet preventing drawer from accidental removal. Case slides shall be a formed piece of galvanized steel with 15/16" nylon tired ball bearing roller at front of slide. All ball bearing rollers for drawer slide and case slide shall be pre-lubricated to guarantee a smooth, quiet operation. All drawers shall rise upward when opened to prevent engaging of drawers and doors below. Drawers shall have self-closing design during the last 5" of travel.

5. Shelves: Shelves shall be formed from a single sheet of stainless steel with 7/8” face turned back and up at a 30-degree angle and edge of flange shall make firm contact with underside of shelf for sound deadening. All shelves in cabinets shall be adjustable on 1-1/2” center and supported by stainless steel clips placed in embossed louvers. All shelves shall be solid.

6. Hardware: Door catch shall be positive type latch located at upper inside edge of door. Stainless steel strike bracket shall be installed inside of door with accessible removable screws. Bolt shall be nylon self-closing type tested for 300,000 opening and closing cycles. Complete bolt housing shall be recessed behind cross rail. Roller catches and/or friction catches are not acceptable.

7. Hinges: Hinges shall be institutional type, 2-1/2" long, with a metal thickness of least 0.090", containing 5-knuckles, and centered 3” above bottom and below top of door. Doors 45” high and over shall have an additional hinge in center. Hinges shall be stainless steel with smooth rounded joints for easy cleaning. When door is closed, only the joint shall be exposed. Both hinge wings
shall be encased, one within the door, the other within the case. Hinges shall be attached to the door and the case by screws. Hinges welded to door and/or case are not acceptable.

8. Door and Drawer Pull: Door and drawer pull shall be stainless steel with a brushed satin finish. Shoulder screws shall be used so that when handles are mounted they do not cause the door to buckle or cave. Sliding doors shall have recessed door pulls.

9. Base Cabinet Legs: All base cabinets and sink units shall be furnished with integral stainless steel legs with adjustable levelers. Bottom of base cabinets shall be approximately 6” above the floor.

10. Locking Mechanism: All cabinet doors shall be provided with stainless steel angle hasps, with half-inch diameter holes for pad locking, as shown on the drawings. The left door of each door pair shall have a sliding flush bolt on the inside face, as shown on the drawings, to prevent the pair of doors from swinging open when pad locked.

C. Steel Cabinet Finish

1. Test Procedure: Chemical spot tests shall be made by applying 10 to 15 drops (approximately 0.5 cubic cm) of each reagent listed in Table 1 to the surface to be tested. Each reagent spot shall be open to the atmosphere. Ambient temperature is 68-72 degrees F (20-22 degrees C). After one hour, chemicals shall be flushed away with cold water and the surface, washed with detergent and warm water at 150 degrees F (65 degrees C). Surface shall be examined under 100-foot candles of illumination.

D. Kitchen Cabinets Performance Requirements

1. Base Cabinets.
   a. Cabinets Load Test: A 48” wide standing height combination cupboard and drawer cabinet shall be freestanding with installed counter top. Cabinet shall sit 1” off the floor on all four leveling screws and be capable of supporting a uniform distributed load of 2,000 lbs. Door and drawer operation shall not be affected by the load.
   b. Leveling device for floor mounted cabinets shall be capable of supporting a load of 500 lbs. Without failure and capable of adjustment after load is removed.
   c. Cabinet Door Test: An open door shall withstand a load of 200 lbs. applied directly at the outer edge. Door shall be moved through a 180 degree arc and weight removed. Operation of the door after test shall be normal without distortion that will adversely affect operation for the door catch.
   d. Life Cycle Test.
      1) Door hinge shall operate for 300,000 opening and closing cycles without a failure.
      2) Positive door catch shall operate for 300,000 opening and closing cycles without failure.
      3) Drawer shall be tested and operated with a load of 100 lbs. for a minimum of 150,000 opening and closing cycles. After test, drawers shall operate freely without evidence of dragging or scraping.

2. Wall Cabinets
   a. A 48” wide, 30” high, 12 ¾” deep hinged wall case shall support a load of 1 lbs. on cabinet bottom and 100 lbs. on each adjustable shelf for a total of 300 lbs. Cabinet shall not show any significant permanent deflection of cabinet, cabinet bottom or shelves. Doors shall operate smoothly when cabinet is fully loaded.
   b. An adjustable shelf shall support a uniformly distributed load of 100 lbs. When load is removed, shelf should show no significant permanent distortion.
   c. Performance of hinge and catch shall be the same as used on base cabinets.

E. Working Surfaces

1. Stainless Steel: Sink and counter tops shall be fabricated of 16 gauge, Type 304, 18-8 solid stainless steel formed down and back making a 1 ½” high face on all exposed edges. Drainboards and cabinet tops shall be rigidly reinforced the full length of the top. Drainboards shall be two-way pitched to the bowl to provide drainage without channeling or grooving. Drainboards, flanges and splashes shall be integral, being formed from one sheet of metal. Raised edge surrounding unit shall be seamless die formed at front and ends of unit. Sink bowls shall be fabricated of 16 gauge, Type 304, 18-8 solid stainless steel seamless electrically welded to drainboard. All joints shall be electrically welded, ground and polished to a satin finish. Entire
units shall be thoroughly sound deadened on under surface with sprayed or trowelled undercoating. Wood shall not be used. All tops shall have stainless steel runners to facilitate fastening to cabinets.

1.3 EXECUTION

A. Insulations
1. Install cabinets, shelves, counter tops and other equipment level and square. Install sink units to provide positive drainage of bottom surface of the sinks.
2. Wall cabinets shall be hung from the metal stud framing system wherever possible. If the wall cabinets must be hung from the wall surfacing at any location, proper anchors shall be used. Install wall cabinets level and aligned.
3. Install base cabinets firmly on ground. Level all the surfaces by adjusting the leg levelers. Attached countertops to inslatted base cabinets with stainless steel screws as required. Caulk with silicone all around counter tops where it interfaces with the existing walls. Install the flat back panels to the wall surfaces by the most appropriate method and caulk as required.
4. All work, including installation of new casework, flooring, ceiling, ductwork, etc., as well as the demolition of the existing casework, flooring, etc. shall be completed within three (3) consecutive days of work start. Hours of work shall be between 7:30 a.m. 9:00 p.m. All work, including work noted on Punch List, shall be completed by 9:00 p.m. of the third work day after work starts.

B. Temporary Work Station
1. During the period of demolition and new casework installation (3 days maximum) the contractor shall provide a temporary cabinet assembly for use by the Owner. The temporary assembly shall have a 6-foot section of cabinets with countertop, sink and faucet. The faucet shall be temporary connected to an apparatus hose bib for providing cold water to the sink. The sink shall be temporarily connected to a sewer line or floor drain if possible for the discharge or to another approved system of temporary discharge by means of a suitable container. For the latter method, the Contractor shall be responsible for periodically disposing of the waste container’s contents. The temporary cabinet assembly shall be located reasonably close to the existing kitchens and/or dining areas being remodeled. the Owner shall approve the location of the temporary cabinets.

C. Inspection
1. Inspect installed work of other trades and installation conditions for acceptability. Inform the Owner of discrepancies that will jeopardize a complete and proper installation
2. Cleaning: Touching up marred and/or abraded finished surfaces, clean components to post construction accepted levels, remove crating and packing material, broom sweep premises.

SECTION 12 36 61 16 - SOLID POLYMER FABRICATIONS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for cast, mineral filled, nonporous, solid polymer material used for countertops, vanity tops, sinks, bowls, window sills, tub and shower walls, and other applications where a hard, durable, stain resistant surface is desired. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Shop Drawings: Fabrications; indicate joints, shapes, dimensions, accessories and installation details.
2. Product Data: Solid polymer fabrications; panel adhesive; joint adhesive; sealant; heat reflective tape.
3. Samples: Solid polymer fabrications; where colors and patterns are not indicated, submit at least 3 different samples of manufacturer's standard colors and patterns for selection.
4. Test Reports: Tensile strength; hardness; flammability; thermal expansion; boiling water resistance; high temperature resistance; liquid absorption; mold and mildew growth; bacteria growth; impact resistance; sanitation.
5. Operation and Maintenance Data: Solid polymer fabrications; provide manuals indicating manufacturer's care and maintenance data, including repair and cleaning instructions. Provide maintenance kit(s) for selected finish(es).

C. Quality Assurance: Do not change source of supply for materials after work has started if the appearance of finished work would be affected. Variation in component size and location of openings to be plus or minus 1/8 inch (3 mm).

D. Delivery: Do not deliver until areas are ready for installation. Deliver components and materials to the site undamaged in containers, clearly marked and labeled with manufacturer's name. Store in dry, weathertight enclosure. Protect materials to prevent damage to finished surfaces. Provide protective coverings to prevent physical damage or staining after installation until completion of the project.

E. Warranty: Provide the solid surface material manufacturer's 10 year warranty, from date of acceptance of the work.

1.2 PRODUCTS

A. Solid Polymer Fabrications: Provide fabrication of cast, solid polymer material composed of acrylic polymer, mineral fillers and pigments. Material shall not be coated or laminated to substrates. Polymer thickness to be as indicated but not less than 1/4 inch (6 mm). Superficial damage to a depth of 0.010 inch (0.25 mm) shall be repairable by sanding or polishing.

1. Performance Requirements
a. Tensile strength, ASTM D 638: 5800 psi (40 Mpa) minimum
b. Hardness, ASTM D 2583: Barcol Impressor 55 minimum
c. Flammability, ASTM E 84: Class I/A, flame spread 25 maximum; smoke developed 30 maximum
d. Thermal Expansion, ASTM D 696: 0.00002 in/in/F (0.000036 mm/mm/K) maximum
e. Boiling water resistance, NEMA LD 3: No effect
f. High temperature resistance, NEMA LD 3: No effect
g. Liquid absorption, ASTM D 570 (24 hours): 0.10 percent maximum
h. Mold and mildew growth, ASTM G 21: No growth, no effect
i. Bacteria growth, ASTM G 22: No growth, no effect
j. Sanitation, NSF 51: "Food Contact" approval for food area applications
k. Impact resistance, NEMA LD 3 (1/2 lb. (0.227 kg) ball drop): 1/4 inch (6 mm) material, 36 inch (914 mm) drop, no failure OR 1/2 inch (13 mm) material, 120 inch (3048 mm) drop, no failure, as directed.

2. Joint Adhesive: Two part acrylic joint adhesive as recommended by the solid polymer manufacturer to form inconspicuous, non-porous joints by chemical bond.

3. Panel Adhesive: Neoprene based panel adhesive as recommended by the solid polymer manufacturer, UL listed.

4. Sealant: Mildew resistant, FDA compliant and UL listed, silicone sealant as recommended by the solid polymer manufacturer.

5. Heat Reflective Tape: Heat reflective tape as recommended by the solid polymer manufacturer for use with cutouts for heat sources.

6. Mounting Hardware: Provide mounting hardware including sink/bowl clips, inserts and fasteners for attachment of undermount sinks and lavatories.

B. Fabrications: Fabrication requirements.

1. Factory fabricate components to the greatest extent possible to the sizes and shapes indicated, in accordance with approved shop drawings. Where indicated, factory fabricate side and back splashes with 1/2 inch (13 mm) cove at intersections.

2. Form joints between components using manufacturer's standard acrylic joint adhesive. Joints shall be inconspicuous, non-porous, and reinforced with strips of solid polymer material in accordance with the manufacturer's printed instructions.

3. Provide factory cutouts for plumbing and accessories as indicated. Reinforce heated or cooled cutouts in accordance with approved shop drawings and the manufacturer's printed instructions. Support all cutouts in accordance with approved shop drawings and the manufacturer's printed instructions.

4. Cut and finish component edges with clean returns. Round edges of cutouts to 1/8 inch (3 mm) radius. Round corners of cutouts with 1/2 inch (13 mm) minimum radius. Use router to form all cutouts. Provide thick edges where indicated using strips of solid polymer material and manufacturer's acrylic joint adhesive. All joints to be inconspicuous and non-porous. All exposed surfaces to have uniform finish and gloss.

1.3 EXECUTION

A. Installation: Deliver fabrications to the locations indicated. Assemble and install complete with accessories and hardware.

1. Assembly Requirements

a. Install components plumb and level and scribed to adjacent finishes in accordance with approved shop drawings and data.

b. Fasten and support fabrications to walls, brackets, and partitions as indicated. Fasteners shall be appropriate for use with adjoining construction.

c. Form field joints using manufacturer's recommended acrylic adhesive. Joints shall be inconspicuous and non-porous. Keep components and hands clean when forming joints. Seal flexible joints using manufacturer's recommended sealant.

d. Provide integral backsplashes and sidesplashes as indicated. Attach splashes with silicone or joint adhesive as indicated.

e. Keep components and hands clean during installation. Remove excessive adhesive and sealants. Clean finished surfaces of all dirt and stains.

2. Protection: Provide protective coverings to prevent physical damage or staining following installation.

SECTON 12 55 13 00 - DETENTION FURNITURE

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for detention furniture. Product shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Gun lockers.
   b. Security key cabinets.
   c. Detention bunks.
   d. Detention mattresses.
   e. Detention desks.
   f. Detention tables.
   g. Detention seating.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For security sealants, including printed statement of VOC content.
3. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
4. Samples: For factory-applied color finishes.
5. Samples for Verification:
   a. Furniture: Full-size units. Approved Samples may become part of the completed Work.
   b. Detention Mattresses: Not less than 6 inches (152 mm) square by full depth, including core and cover fabric.
7. Product certificates.
8. Maintenance data.
9. Other Informational Submittals:
   a. Field quality-control reports documenting inspections of installed products.
   b. Field quality-control certification signed by Contractor and Detention Specialist, as directed.

D. Quality Assurance
1. Welding Qualifications: Qualify procedures and personnel according to the following:
   a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   b. AWS D1.3, "Structural Welding Code - Sheet Steel."
   c. AWS D1.6, "Structural Welding Code - Stainless Steel."
2. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage And Handling
1. Detention Mattresses: Deliver wrapped to provide protection during transit and Project-site storage. Protect from contact with moisture.

1.2 PRODUCTS

A. Materials
1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; suitable for exposed applications.
2. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, CS (Commercial Steel), Type B; free of scale, pitting, or surface defects; pickled and oiled.
3. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.
4. Steel Tubing: ASTM A 513, Type B unless otherwise indicated; thickness indicated or required by structural loads.
5. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40) unless another weight is indicated or required by structural loads.
7. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency; of type indicated below.
   a. Threaded or wedge type; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed; hot-dip galvanized per ASTM A 153/A 153M or ASTM F 2329.
8. Embedded Plate Anchors: Fabricated from steel shapes and plates, minimum 3/16 inch (4.8 mm) thick; with minimum 1/2-inch- (12.7-mm-) diameter headed studs welded to back of plate.
9. Proprietary Built-in Masonry Anchors: Fabricated from 0.134-inch (3.42-mm) nominal-thickness steel sheet OR 1/4-inch (6-mm) nominal-thickness steel plate OR 1/2-inch (12.7-mm) nominal-thickness steel plate, as directed, into 6-inch- (152-mm-) OR 8-inch- (203-mm-) deep blocks matching size of concrete masonry units; with weld nuts attached on inside to receive field-bolted attachments, as directed.
   a. Finish: Factory primed for field painting for anchors with field-welded attachments OR Polyester powder coat for anchors with bolted attachments OR Epoxy paint for anchors with bolted attachments, as directed.
10. Welding Rods and Bare Electrodes: Select according to AWS specifications.

B. Security Sealants
1. Manufacturer's standard, high-modulus, nonsag, two-part, pick-proof, epoxy sealant, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), recommended for sealing nonmoving interior joints in security applications.

C. Security Fasteners
1. Fasteners operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.
2. Provide drive-system type, head style, material, and protective coating as required for assembly, installation, and strength, and as follows:
   a. Drive-System Type: Pinned Torx-Plus OR Pinned Torx, as directed.
   b. Fastener Strength: 120,000 psi (827 MPa).
   c. Socket Button Head Fasteners:
      2) Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.
   d. Socket Flat Countersunk Head Fasteners:
      2) Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.
   e. Socket Head Cap Fasteners:
      1) Heat-treated alloy steel, ASTM A 574 (ASTM A 574M).
      2) Stainless steel, ASTM F 837 (ASTM F 837M), Group 1 CW.
   f. Protective Coatings for Heat-Treated Alloy Steel:
      1) Zinc and clear trivalent chromium where indicated.
      2) Zinc phosphate with oil, ASTM F 1137, Grade I, or black oxide unless otherwise indicated.

D. Gun Lockers
1. Pistol Lockers:
12 - Furnishings

a. Cabinet: Minimum 20 inches (508 mm) wide by 15 inches (381 mm) high by 10 inches (254 mm) deep; formed from 0.134-inch (3.42-mm) OR 0.075-inch (1.90-mm), as directed, nominal-thickness steel sheet. Line each compartment with mothproofed felt or nonabsorbing, closed-cell padding.
   1) Compartments: Six.

b. Doors: Formed from same material as cabinet, supported by heavy-duty continuous bottom hinge.

c. Locks: Snap OR Cylinder, as directed, type, keyed differently and master keyed, as directed; provide one lock for each compartment.

d. Mounting: Surface OR Recessed, with mounting flange formed from same material as body, as directed.

e. Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

2. Tilt-Out, Pistol Locker:
   a. Cabinet: Minimum 39 inches (991 mm) wide by 15 inches (381 mm) high by 6 inches (152 mm) deep; formed from 0.134-inch (3.42-mm) OR 0.075-inch (1.90-mm), as directed, nominal-thickness steel sheet. Line each compartment with mothproofed felt or nonabsorbing, closed-cell padding.
      1) Compartments: Six.

b. Doors: Formed from same material as cabinet, supported by heavy-duty continuous bottom hinge, with attached tilt-out compartment with formed metal sides.

c. Locks: Snap OR Cylinder, as directed, type, keyed differently and master keyed, as directed; provide one lock for each compartment.

d. Mounting: Surface OR Recessed, with mounting flange formed from same material as body, as directed.

e. Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

E. Security Key Cabinets
   1. Cabinet: Minimum 16 inches (406 mm) wide by 24 inches (610 mm) high by 6-1/2 inches (165 mm) deep; formed from 0.134-inch (3.42-mm) nominal-thickness steel sheet. Provide 0.060-inch (1.52-mm) nominal-thickness, steel sheet interior panels, supported on pivots, for mounting 150 OR 300, as directed, paracentric or mogul keys.

   2. Doors: Formed from same material as cabinet, supported by heavy-duty continuous side hinge welded to cabinet and door; with tumbler deadlock.

   3. Cross-Index System: Set up by key control manufacturer; include labels, two sets of key tags with self-locking key holders, key-gathering envelopes, temporary and permanent markers, and the following:
      a. Card Index: Furnish four sets of index cards for recording key information. Include three receipt forms for each key-holding hook.
      b. Computer Software: Furnish cross-index software for recording and reporting key-holder listings, tracking keys and lock and key history, and printing receipts for transactions. Include instruction manual.

   4. Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

F. Detention Bunks
   1. Freestanding Single Bunks:
      a. Bunk Pan: Formed from 0.134-inch (3.42-mm) OR 0.105-inch (2.66-mm), as directed nominal-thickness steel sheet, perforated with at least six holes, as directed.
         1) Size: Minimum 27 inches (689 mm) wide by 76 inches (1930 mm) long with bunk pan 14 inches (356 mm) above floor.
         2) Turn up edges of back and sides and turn down edge of front OR back, sides, and front, as directed, with minimum 2-inch (51-mm) flanges.

      b. Drawer: Minimum 21 inches (533 mm) wide by 24 inches (610 mm) deep by 5 inches (127 mm) high, with full-width integral pull formed from steel sheet OR solid-steel bar pull, as directed; formed from 0.134-inch (3.42-mm) nominal-thickness steel sheet.

      c. Legs and Frames: Formed from 2-by-2-by-3/16-inch (51-by-51-by-4.8-mm) steel angle welded at connections to each other and to bunk pan; provide four legs for each bunk.

      d. Mounting Plates: Formed from 1/4-inch- (6-mm-) thick steel plate punched with one hole for floor anchorage; provide one mounting plate for each leg.
12. **Furnishings**

   **Detention Furniture**

   August 2021

   **12 - Furnishings**

   **Detention Mattresses**
   1. **General:** Comply with 16 CFR 1632 and California Technical Bulletin 121 as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
   2. **Core:** Fire-resistive solid foam OR Fire-resistive densified polyester OR Cotton, with 10 percent boric acid treatment, tufted to nylon netting to retain shape, as directed.
   3. **Cover Fabric:** Vinyl bonded to nylon scrim; with a minimum total weight of 10 oz./sq. yd. (339 g/sq. m). Fabricate cover of four-corner box construction with seams facing inside of detention mattress except end closing seam located at foot of mattress; sew with nylon thread in a double-lock stitch.
   4. **Thickness:** 4 inches (102 mm) OR 6 inches (152 mm), as directed.

   **Detention Desks**
   1. **Single-Seat, Floor-Mounted Desks:**
      a. **Desk Top:** Formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.105-inch (2.66-mm) nominal-thickness steel OR 0.141-inch- (3.57-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet, with minimum 1-1/2-inch (38-mm) flanged edges.
b. Pedestal: Provide two storage shelves with sides and shelves formed from 0.134-inch (3.42-mm) nominal-thickness steel.

c. Legs: Formed from 1-1/2-inch-square by 3/16-inch (38-mm-square by 4.8-mm-) thick steel tubing welded to desk top and mounting plate for an overall desk height of not less than 30 inches (762 mm).

d. Seat: 12-inch (305-mm) diameter, formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.075-inch (1.90-mm) nominal-thickness steel OR 0.141-inch- (3.57-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet; reinforced with 0.134-inch (3.42-mm) nominal-thickness steel sheet, with minimum 1-1/2-inch (38-mm) flanged edges.

e. Swivel Seat Support: Formed from 1-by-2-by-0.075-inch (25-by-51-by-1.90-mm) nominal-thickness steel tubing, 2-inch-OD-by-0.075-inch (51-mm-OD-by-1.90-mm) nominal-thickness steel tubing, or 3/8-inch- (9.5-mm-) thick, steel plate bar; with 1/2-inch (12.7-mm) pivot pin welded to legs.

f. Towel Bar: Formed from 1/4-by-1-1/2-inch (6-by-38-mm) steel OR stainless-steel, as directed, plate, mounted on one side of desk.

g. Mounting Plates: Formed from 1/4-inch- (6-mm-) thick steel plate punched with one hole for floor anchorage; provide one mounting plate for each leg.

h. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

i. Stainless-Steel Finish: No. 3.

1) Size: Minimum 36 inches (914 mm) wide by 15-1/2 inches (381 mm) deep.

2. Wall-Mounted Desk and Seat:

a. Desk: Formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.141-inch- (3.57-mm-) thick, stainless-steel, as directed, sheet, with minimum 1-1/2-inch (38-mm) flanged edges.

1) Size: Minimum 12 inches (305 mm) wide by 18 inches (457 mm) deep OR 18 inches (457 mm) wide by 18 inches (457 mm) deep OR 24 inches (610 mm) wide by 18 inches (457 mm) deep OR 30 inches (762 mm) deep by 20 inches (508 mm) deep, as directed.

b. Seat: Minimum 12 inches (305 mm) wide by 16 inches (406 mm) OR 18 inches (457 mm), as directed, deep; formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.141-inch- (3.57-mm-) thick, stainless-steel, as directed, sheet, with minimum 1-1/2-inch (38-mm) flanged edges.

c. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

d. Stainless-Steel Finish: No. 3.

I. Detention Tables

1. Pedestal-Style Table:

a. Tabletop: Formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.105-inch (2.66-mm) nominal-thickness steel OR 0.109-inch- (2.78-mm-) thick, stainless-steel OR 0.078-inch- (1.98-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet; reinforced with steel shapes or steel plate, with minimum 1-1/2-inch (38-mm) flanged edges.

1) Size: Minimum 30 inches (762 mm) OR 40 inches (1016 mm), as directed, wide by length required for capacity by 30 inches (762 mm) OR 35 inches (889 mm), as directed, high.

2) Game Top: Engrave, or otherwise integrally incorporate, checkerboard into tabletop.

b. Seats: 12-inch (305-mm) diameter, formed from 0.105-inch (2.66-mm) nominal-thickness steel OR 0.075-inch (1.90-mm) nominal-thickness steel OR 0.078-inch- (1.98-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet; reinforced with 0.134-inch (3.42-mm) nominal-thickness steel plate, with minimum 1-1/2-inch (38-mm) flanged edges.

c. Pedestal Supports: Formed from 3-inch-square by 3/16-inch- (76-mm-square by 4.8-mm-) OR 4-inch-square by 0.134-inch- (102-mm-square by 3.42-mm-), as directed, thick steel
tubing welded to top and base plate. Provide two pedestals for tables with capacity of more than four persons.

d. Seat Framing: Formed from 3-inch-square by 0.134-inch- (76-mm-square by 3.42-mm-) OR 3-by-2-by-3/16-inch- (76-by-51-by-4.8-mm-), as directed, thick steel tubing welded to pedestal supports.

e. Base Plate: Minimum 16-inch- (406-mm-) square, 1/4-inch- (6-mm-) thick steel plate punched with four holes for floor anchorage.

f. Capacity: Four persons OR Six persons OR Eight persons OR As indicated on Drawings, as directed.

g. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

h. Stainless-Steel Finish: No. 3.

2. Bench-Style Table:

a. Tabletop: Formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.105-inch (2.66-mm) nominal-thickness steel OR 0.109-inch- (2.78-mm-) thick, stainless-steel, as directed, sheet; reinforced with steel channel frame or steel plate, with minimum 1-1/2-inch (38-mm) flanged edges.

1) Size: Minimum 24 inches (610 mm) wide by length required for capacity by 30 inches (762 mm) OR 35 inches (889 mm), as directed, high.

b. Benches: 12 inches (305 mm) deep by length of tabletop, formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.105-inch (2.66-mm) nominal-thickness steel OR 0.109-inch- (2.78-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet, with minimum 1-1/2-inch (38-mm) flanged edges.

c. Vertical Supports: Formed from 8-inch (203-mm) hot-rolled steel channels or 0.164-inch- (4.18-mm-) thick, formed-steel channels; braced and welded, with steel base plates punched for floor anchorage. Provide three supports for tables with capacity of more than four persons.

d. Bench Supports: Formed from 2-by-2-1/2-by-1/4-inch- (51-by-64-by-6-mm-) thick steel angle or 2-inch-square by 1/4-inch- (51-mm-square by 6-mm-) thick steel tubing; welded to vertical supports.

e. Floor Anchor: Formed from steel angle punched for floor anchorage.

f. Capacity: Four persons OR Six persons OR Eight persons OR As indicated on Drawings, as directed.

g. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

h. Stainless-Steel Finish: No. 3.

J. Detention Seating

1. Floor-Mounted Stool:

a. Seats: Minimum 12-inch (305-mm) diameter, formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.075-inch (1.90-mm) nominal-thickness steel OR 0.125-inch- (3.18-mm-) thick, stainless-steel OR 0.062-inch- (1.59-mm-) thick, stainless-steel, as directed, sheet; reinforced with 0.134-inch- (3.42-mm-) thick steel sheet cut to interior dimension of seat, with minimum 1-1/2-inch (38-mm) flanged edges.

b. Seat Support: Formed from steel pipe or 2-inch-OD-by-0.075-inch- (51-mm-OD-by-1.90-mm-) thick steel tubing welded to seat reinforcement and base plate for an overall stool height of not less than 18 inches (457 mm).

c. Base Plate: Minimum 6-by-1/4-inch- (152-by-6-mm-) thick, square OR round, as directed, steel punched with four holes for floor anchorage.

d. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

e. Stainless-Steel Finish: No. 3.

2. Wall-Mounted Stool:

a. Seat: Minimum 12-inch (305-mm) diameter, formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.075-inch (1.90-mm) nominal-thickness steel OR 0.125-inch- (3.18-mm-) thick, stainless-steel OR 0.078-inch- (1.98-mm-) thick, stainless-steel, as directed,

August 2021

Detention Furniture
DASNY, Downstate

12 55 13 00 - 7

sheet; reinforced with 0.134-inch- (3.42-mm-) thick steel sheet cut to interior dimension of seat, with minimum 1-1/2-inch (38-mm) flanged edges.

b. Seat Support: Formed from 1-by-2-by-0.075-inch- (25-by-51-by-1.90-mm-) thick steel tubing, 2-inch-OD-by-0.075-inch- (51-mm-OD-by-1.90-mm-) thick steel tubing or 3/8-inch-(9.5-mm-) thick, steel plate bar; welded to seat reinforcement and wall bracket.

c. Swivel Wall Bracket: Minimum 1/2-inch (12.7-mm) pivot pin, with 3/8-inch- (9.5-mm-) thick steel plate for welding to embedded steel plate OR for welding to steel wall OR punched with four holes for wall anchorage, as directed.

d. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

e. Stainless-Steel Finish: No. 3.

3. Floor-Mounted Bench:

a. Bench Top: Formed from 0.134-inch (3.42-mm) nominal-thickness steel OR 0.105-inch (2.66-mm) nominal-thickness steel OR 0.141-inch- (3.57-mm-) thick, stainless-steel OR 0.109-inch- (2.78-mm-) thick, stainless-steel, as directed, sheet, with minimum 1-1/2-inch (38-mm) flanged edges.

1) Size: Minimum 12 inches (305 mm) deep by 48 inches (1219 mm) OR 60 inches (1524 mm) OR 72 inches (1829 mm) OR 96 inches (2438 mm), as directed, long.

b. Supports: Formed from 0.164-inch- (4.18-mm-) thick, formed-steel channels 2-1/2-inch-OD-by-0.0677-inch- (64-mm-OD-by-1.7-mm-) thick steel tubing; welded to bench and base plate for an overall bench height of not less than 18 inches (457 mm). Provide three supports for benches with length of more than 72 inches (1829 mm).

c. Base Plates: Minimum 8-inch-square by 1/4-inch- (203-mm-square by 6-mm-) thick steel plate punched with four holes for floor anchorage.

d. Capacity: Four persons OR Six persons OR Eight persons OR As indicated on Drawings, as directed.

e. Steel Finish: Factory primed for field painting OR Baked enamel or powder coat, as directed.

f. Stainless-Steel Finish: No. 3.

K. Fabrication

1. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

2. Coordinate dimensions and attachment methods of detention furniture with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.

3. Shear and punch metals cleanly and accurately. Remove burrs.

4. Form and grind edges and corners to be free of sharp edges or rough areas.

a. Fabricate detention furniture with no more than 1/32-inch (0.8-mm) gap between component materials. Weld edges that cannot be crimped to meet tolerance so as to provide a seamless joint with no place for concealment of contraband.

5. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.

6. Weld corners and seams continuously to comply with referenced AWS standard and the following:

a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

b. Obtain fusion without undercut or overlap.

c. Remove welding flux immediately.

d. Finish exposed welds and surfaces smooth and blended at exposed connections so that no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

e. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

7. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure detention furniture rigidly in place and to support expected
loads. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce formed-metal units as needed to attach and support other construction.

8. Cut, reinforce, drill, and tap detention furniture as indicated to receive hardware, security fasteners, and similar items.

9. Form exposed work true to line and level with accurate angles, surfaces, and straight sharp edges.

10. Form exposed connections with hairline joints, flush and smooth using concealed fasteners where possible. Use exposed security fasteners of type indicated or, if not indicated, flat-head (countersunk) security fasteners. Locate joints where least conspicuous.

11. Attach drawer slides OR shelves, as directed, to furniture by welding OR with security fasteners, as directed.

L. Steel Finishes

1. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling". After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

3. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
   a. Color and Gloss: As indicated by manufacturer's designations OR Match sample OR As selected from manufacturer's full range, as directed.

M. Stainless-Steel Finishes

1. General: Remove tool and die marks and stretch lines or blend into finish. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

2. Intermediate Polish Finish: No. 3 unless otherwise indicated.

3. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

1.3 EXECUTION

A. Installation

1. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing detention furniture to in-place construction. Include threaded fasteners for concrete and masonry inserts, security fasteners, and other connectors.

2. Cutting, Fitting, and Placement: Obtain manufacturer's written approval for cutting, drilling, and fitting required for installing detention furniture. Set detention furniture accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

3. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry or similar construction.

4. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

5. Field Welding: Comply with the following requirements:
   a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   b. Obtain fusion without undercut or overlap.
   c. Remove welding flux immediately.
d. Finish exposed welds and surfaces smooth and blended at exposed connections so that no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

e. Fillet Welds: Minimum size of 1/8 inch by 1-1/2 inches (3 mm by 38 mm) long, spaced not greater than 12 inches (305 mm) o.c. Fill spaces between welds with security sealant OR auto body filler, as directed, where weld is exposed.

OR

Fillet Welds: Continuous.

6. Adjust doors and latches of detention gun lockers and key cabinets to operate easily without binding. Verify that integral locking devices operate properly.

7. Assemble detention furniture requiring field assembly with security fasteners with no exposed fasteners on exposed faces and frames.

8. Anchor furniture with security fasteners OR by welding OR as indicated on Drawings, as directed, to floors and walls at intervals required by expected loads, but not more than 12 inches (305 mm) o.c.
   a. Install anchors through backup reinforcing plates where necessary to avoid metal distortion.
   b. Use security fasteners with head styles appropriate for installation requirements, strength, and finish of adjacent materials, except that a maximum of two different sets of tools shall be required to operate security fasteners for Project. Provide stainless-steel security fasteners in painted materials.
   c. Weld nuts onto cast-in-place anchors after installation so as to be nonremovable.

9. Apply security sealant OR auto body filler, as directed, at all exposed gaps between detention furniture and adjacent construction greater than 1/16 inch (1.6 mm).

10. Install one detention mattress for each detention bunk.

B. Field Quality Control

1. Detention Specialist shall inspect OR Inspect, as directed, installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

2. Prepare field quality-control certification endorsed by Detention Specialist, as directed, that states installed products and their installation comply with requirements in the Contract Documents.

C. Cleaning And Protection

1. Touchup Painting: Immediately after erection, clean bolted connections and abraded areas of shop paint, and paint exposed areas with same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

SECTION 12 66 13 00 - TELESCOPING STANDS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for telescoping stands. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Wall-attached and Recessed telescoping stands.
   b. Floor-attached and Reverse-fold, freestanding telescoping stands.
   c. Portable telescoping stands.

C. Submittals
1. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for telescoping stands.
2. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   a. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   b. Include wiring diagrams for electrically operated units.
   c. Indicate field measurements on Shop Drawings.
3. Samples: For each exposed finish.
4. LEED Submittal:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood and wood-based materials comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for each certified wood product.
5. Qualification Data: For Installer.
6. Operation and maintenance data.

D. Quality Assurance
1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
2. Manufacturer's Engineering Responsibility: Preparation of data for telescoping stands, including Shop Drawings, and comprehensive engineering analysis by a qualified professional engineer.
3. Safety Standard: Provide telescoping stands that comply with requirements in ICC 300 OR NFPA 102, as directed.
4. Welding: Qualify procedures and personnel according to AWS D1.1 "Structural Welding Code - Steel" and AWS D1.3 "Structural Welding Code - Sheet Steel."
5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
6. Accessibility Requirements: Provide telescoping stands that comply with requirements in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
7. Fire-Test-Response Characteristics of Upholstered Chairs:
8. Forest Certification: Fabricate products with wood components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
12 - Furnishings

12.2 PRODUCTS

A. Materials
1. Wood:
   a. Lumber: Kiln-dried, surfaced four sides; southern pine complying with SPIB’s “Standard Grading Rules for Southern Pine Lumber” for C&Btr Finish (C and better) OR B&B Finish (B and better), as directed, grade-of-finish requirements.
   b. Plywood: APA grade trademarked, DOC PS 1.
2. Steel:
   a. Structural Steel Shapes, Plates, and Bars: ASTM A 36/A 36M.
   c. Uncoated Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold-rolled commercial steel), or ASTM A 1011/A 1011M, Designation CS (hot-rolled commercial steel).
   d. Tubing: ASTM A 500, cold formed; ASTM A 501, hot formed; or ASTM A 513, mechanical.

B. Telescoping Stands
1. Description: Operable systems of multiple-tiered seating on interconnected folding platforms that close, without being dismantled, into a nested stack for storing or moving. Stand units permit opening and closing of adjacent rows, allow individual and collective rows to be locked open for use, and close with vertical faces of upper skirts on the same vertical plane.
2. Wall-Attached Telescoping Stands: Rear of understructure permanently attaches to wall construction.
   a. Operation: Manual OR Automatic, friction-type integral power unit OR Automatic, nonfriction-type integral power unit OR Automatic, power assisted by portable, manually guided, electrically powered unit, as directed.
      1) Limit Switches: Automatically stop integral power system when telescoping stands reach fully opened or closed positions.
      2) Motion Monitor: Flashing light with self-contained warning horn, rated at 85 decibels (dB) at 10 feet (3 m), mounted under telescoping seating for audio and visual warning during integral power operation.
      3) Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.
3. Recessed Telescoping Stands: Rear of understructure permanently attaches to construction so that closed stands are recessed in opening indicated on Drawings OR as directed.
   a. Operation: Manual OR Automatic, friction-type integral power unit OR Automatic, nonfriction-type integral power unit OR Automatic, power assisted by portable, manually guided, electrically powered unit, as directed.
      1) Limit Switches: Automatically stop integral power system when telescoping stands reach fully opened or closed positions.
      2) Motion Monitor: Flashing light with self-contained warning horn, rated at 85 decibels (dB) at 10 feet (3 m), mounted under telescoping seating for audio and visual warning during integral power operation.
      3) Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.
4. Floor-Attached, Freestanding Telescoping Stands: Rear of understructure permanently attaches to floor construction, and stand unit closes by moving the front to the rear for storage.
   a. Operation: Manual OR Automatic, friction-type integral power unit OR Automatic, nonfriction-type integral power unit OR Automatic, power assisted by portable, manually guided, electrically powered unit, as directed.
      1) Limit Switches: Automatically stop integral power system when telescoping stands reach fully opened or closed positions.
      2) Motion Monitor: Flashing light with self-contained warning horn, rated at 85 decibels (dB) at 10 feet (3 m), mounted under telescoping seating for audio and visual warning during integral power operation.
3) Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.

5. Reverse-Fold, Freestanding Telescoping Stands: Front row permanently anchors to floor, and stand unit closes by moving the rear forward for storage. Front-row anchorage allows stands to move 36 inches (914.4 mm) or more, as standard with manufacturer, for additional aisle space when stands are open.
   a. Operation: Manual OR Automatic, friction-type integral power unit OR Automatic, nonfriction-type integral power unit OR Automatic, power assisted by portable, manually guided, electrically powered unit, as directed.
      1) Limit Switches: Automatically stop integral power system when telescoping stands reach fully opened or closed positions.
      2) Motion Monitor: Flashing light with self-contained warning horn, rated at 85 decibels (dB) at 10 feet (3 m), mounted under telescoping seating for audio and visual warning during integral power operation.
      3) Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.

6. Portable Telescoping Stands: Manually operated stands that can be relocated using lift trucks to produce different seating arrangements.
   a. Transport System: Self-contained hydraulic system, integral to stands OR Self-contained air-pallet system, integral to stands OR Portable hydraulic dollies OR Portable air-pallet dollies, as directed, that move stands without marring or damaging floor over which stands move.
      1) Quantity: Two dollies.

7. Row Spacing: As indicated on Drawings OR as directed.

8. Row Rise: As indicated on Drawings OR as directed.

9. Elevated Front Row: In height indicated on Drawings OR as directed.

10. Bench Seats and Skirts:
    a. Material: Lumber with transparent finish OR Molded polyethylene plastic with contour seat surface OR Steel sheet with vinyl-clad finish, as directed.
       1) Colors: As selected from manufacturer's standard.
    b. Bench Height: Not less than 16 inches (406.4 mm) or more than 18 inches (457.2 mm).
    c. Bench Depth: 10 inches (254 mm) OR 12 inches (304.8 mm), as directed.

11. Chairs: Rotating from upright, locked position to folded-down position that allows supporting platform to telescope for storage. In upright position, seats fold up to allow passage of persons within row.
    a. Operation: Manual OR Spring assisted, manual fold up. Automatic release from upright position, except for first row, and automatic fold down to stored position OR Automatic, as directed.
    b. Chair Width: As indicated on Drawings OR as directed.
    c. Seat Height: Not less than 17 inches (431.8 mm) or more than 18 inches (457.2 mm).
    d. Seats: Polyethylene plastic OR Polyethylene plastic with padded upholstery insert OR Fully upholstered spring seat, as directed.
       1) Color: As selected from manufacturer's full range.
    e. Backs: Polyethylene plastic OR Polyethylene plastic with padded upholstery insert OR Fully upholstered, as directed.
       1) Color: As selected from manufacturer's full range.
    f. Armrests: Polyethylene plastic.
       1) Color: As selected from manufacturer's full range.

12. Wheelchair-Accessible Seating: Locate cutouts OR retractable truncated benches OR removable modular chairs, as directed, to provide wheelchair-accessible seating at locations indicated on Drawings.
    a. Equip tiers adjacent to wheelchair-accessible seating with front rails as required by referenced safety standard.
    b. Equip cutouts with full-width front closure panels that match decking construction and finish and that extend from underside of tiers adjacent to cutouts to 1-1/2 inches (38.1 mm) from finished floor.

a. Finish: Polyethylene textured overlay bonded to substrate with exterior glue OR Transparent finish OR Manufacturer's standard finish, as directed.
b. Color: As selected from manufacturer's standard colors.
15. Rails: Structural steel, finished with manufacturer's standard powder coat system.
   a. Color: Black.
   a. Finish: Manufacturer's standard OR Water-based acrylic OR Alkyd-enamel two-coat system, OR Epoxy-resin-based textured powder coat system, as directed, rust-inhibiting finish.
   b. Color: Manufacturer's standard.
17. Support Column Wheels: Nonmarring, soft, rubber-face wheel assembly under each support column.
   a. Include wheels of size, number, and design required to support stands and operate smoothly without damaging the flooring surface, but not less than four per column or less than 3-1/2 inches (88.9 mm) in diameter and 1 inch (25.4 mm) wide.
18. Aisle Closures: Manufacturer's standard that produce flush vertical face at aisles when system is stored.
19. Fasteners: Vibration proof, in manufacturer's standard size and material.
20. Accessories:
   a. Slip-resistant, abrasive tread nosings OR surfaces, as directed, at vertical aisles.
   b. Intermediate aisle steps, fully enclosed, at each vertical aisle.
   c. Transitional top step, fully enclosed, at each vertical aisle where last row of telescoping stands is adjacent to a cross aisle.
   d. Removable front steps, fully enclosed, at each vertical aisle, that engage with front row to prevent accidental separation or movement and are equipped with a minimum of four skid-resistant feet.
   e. Portable access-stair units equipped with handrails, with not less than four full-swiveling, nonmarring wheels and a locking mechanism to prevent movement during use.
   f. Removable OR Folding, nonremovable, as directed, mid-aisle handrails located at centerline of each vertical aisle with seating on both sides.
   g. End rails (guards) that are telescoping and self-storing OR removable, as directed.
   h. Back rails (guards) along rear of units where required by referenced safety standard.
   i. Front rails (guards) along front of units where required by referenced safety standard.
   j. Removable, programming-support front rails to allow seating in upper rows while lower rows remain in the stored position.
   k. Rear fillers including supports for closing openings between top row and rear wall of adjoining construction.
   l. Gap fillers for closing openings between stand units or between stand units and adjoining construction.
   m. End panels covering exposed ends of stands in stored position.
   n. Back panels covering rear of freestanding units. Panels extend full height and width of unit.
   o. Removable scorer's table that attaches to mounting sockets installed in telescoping stand unit.
   p. Folding backrests permanently attached to bench units.
      1) Material: Lumber with transparent finish OR Molded polyethylene plastic with contour support surface in color matching seat, as directed.
   q. Row letters at each row end.
   r. Seat numbers at 18 inches (457 mm) o.c. on benches and on each chair.
   s. Removable spanner seats, designed to span area between adjacent stand units, in locations indicated on Drawings OR as directed.

C. Fabrication
1. Fabricate understructure from structural steel members in size, spacing, and form required to support design loads specified in referenced safety standard.
2. Weld understructure to comply with applicable AWS standards.
3. Round corners and edges of components and exposed fasteners to reduce snagging and pinching hazards.
4. Form exposed sheet metal with flat, flush surfaces, level and true in line, and without cracking and grain separation.
5. Seating Supports: Fabricate supports to withstand, without damage to components, the forces imposed by use of stands without failure or other conditions that might impair the usefulness of seating units.
   a. Cantilever bench seat supports to produce toe space uninterrupted by vertical bracing.

1.3 EXECUTION

A. Installation
   1. Install telescoping stands to comply with referenced safety standard and manufacturer's written instructions.

B. Adjusting And Cleaning
   1. On completion of installation, lubricate, test, and adjust each telescoping stand unit so that it operates according to manufacturer's written operating instructions.
   2. Clean installed telescoping stands on exposed and semiexposed surfaces. Touch up shop-applied finishes or replace components as required to restore damaged or soiled areas.

END OF SECTION 12 66 13 00
SECTION 13 34 19 00 - METAL BUILDING SYSTEMS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for metal building systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Structural-steel framing.
   b. Metal roof panels.
   c. Metal wall panels.
   d. Foam-insulation-core metal wall panels.
   e. Translucent panels.
   f. Metal soffit panels.
   g. Thermal insulation.
   h. Doors and frames.
   i. Windows.
   j. Accessories.

C. Definitions
1. Terminology Standard: See MBMA's "Metal Building Systems Manual" for definitions of terms for metal building system construction not otherwise defined in this Section or in referenced standards.

D. Submittals
1. Product Data: For each type of metal building system component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
   a. Structural-steel-framing system.
   b. Metal roof panels.
   c. Metal wall panels.
   d. Metal liner panels.
   e. Translucent panels.
   f. Insulation and vapor retarder facings.
   g. Flashing and trim.
   h. Doors.
   i. Windows.
   j. Accessories.

2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof panels, documentation indicating that panels comply with Solar Reflectance Index requirement.
   b. Product Data for Credit MR 4.1 and Credit MR 4.2, as directed: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

3. Shop Drawings: For the following metal building system components. Include plans, elevations, sections, details, and attachments to other work.
   a. Anchor-Bolt Plans: Submit anchor-bolt plans and templates before foundation work begins. Include location, diameter, and projection of anchor bolts required to attach metal building to foundation. Indicate column reactions at each location.
b. Structural-Framing Drawings: Show complete fabrication of primary and secondary framing; include provisions for openings. Indicate welds and bolted connections, distinguishing between shop and field applications. Include transverse cross-sections.
   1) Show provisions for attaching roof curbs, service walkways, platforms and pipe racks.

c. Metal Roof and Wall Panel Layout Drawings: Show layouts of metal panels including methods of support. Include details of edge conditions, joints, panel profiles, corners, anchorages, trim, flashings, closures, and special details. Distinguish between factory- and field-assembled work; show locations of exposed fasteners.
   1) Show roof-mounted items including roof hatches, equipment supports, pipe supports and penetrations, lighting fixtures, and items mounted on roof curbs.
   2) Show wall-mounted items including doors, windows, louvers, and lighting fixtures.
   3) Show translucent panels.

4. Samples: For each type of exposed finish required, prepared on Samples of sizes indicated below:
   a. Metal Panels: Nominal 12 inches (300 mm) long by actual panel width. Include fasteners, closures, and other exposed panel accessories.
   b. Translucent Panels: Nominal 12 inches (300 mm) long by actual panel width.
   c. Flashing and Trim: Nominal 12 inches (300 mm) long. Include fasteners and other exposed accessories.
   d. Vapor-Retarder Facings: Nominal 6-inch- (150-mm-) square Samples.
   e. Windows: Full-size, nominal 12-inch- (300-mm-) long frame Samples showing typical profile.
   f. Accessories: Nominal 12-inch- (300-mm-) long Samples for each type of accessory.

5. Door Schedule: For doors and frames. Use same designations indicated on Drawings. Include details of reinforcement.
   a. Door Hardware Schedule: Include details of fabrication and assembly of door hardware. Organize schedule into door hardware sets indicating complete designations of every item required for each door or opening.
   b. Keying Schedule: Detail the Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.

6. Delegated-Design Submittal: For metal building systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

7. Qualification Data: For qualified erector, manufacturer, professional engineer, land surveyor and testing agency.

8. Welding certificates.

9. Metal Building System Certificates: For each type of metal building system, from manufacturer.
   a. Letter of Design Certification: Signed and sealed by a qualified professional engineer. Include the following:
      1) Name and location of Project.
      2) Order number.
      3) Name of manufacturer.
      4) Name of Contractor.
      5) Building dimensions including width, length, height, and roof slope.
      6) Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
      7) Governing building code and year of edition.
      8) Design Loads: Include dead load, roof live load, collateral loads, roof snow load, deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, and auxiliary loads (cranes).
      9) Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
     10) Building-Use Category: Indicate category of building use and its effect on load importance factors.
11) **AISC Certification for Category MB**: Include statement that metal building system and components were designed and produced in an AISC-Certified Facility by an AISC-Certified Manufacturer.

10. **Erector Certificates**: For each product, from manufacturer.

11. **Manufacturer Certificates**: For each product, from manufacturer.

12. **Material Test Reports**: For each of the following products:
   a. Structural steel including chemical and physical properties.
   b. Bolts, nuts, and washers including mechanical properties and chemical analysis.
   c. Tension-control, high-strength, bolt-nut-washer assemblies.
   d. Shop primers.
   e. Nonshrink grout.

13. **Product Test Reports**: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for insulation and vapor-retarder facings. Include reports for thermal resistance, fire-test-response characteristics, water-vapor transmission, and water absorption.

14. **Source quality-control reports**.

15. **Field quality-control reports**.

16. **Surveys**: Show final elevations and locations of major members. Indicate discrepancies between actual installation and the Contract Documents. Have surveyor who performed surveys certify their accuracy.

17. **Maintenance Data**: For metal panel finishes and door hardware to include in maintenance manuals.

18. **Warranties**: Sample of special warranties.

**E. Quality Assurance**

1. **Manufacturer Qualifications**: A qualified manufacturer and member of MBMA.
   a. **AISC Certification for Category MB**: An AISC-Certified Manufacturer that designs and produces metal building systems and components in an AISC-Certified Facility.
   b. **Engineering Responsibility**: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

2. **Land Surveyor Qualifications**: A professional land surveyor who practices in jurisdiction where Project is located and who is experienced in providing surveying services of the kind indicated.

3. **Erector Qualifications**: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.

4. **Testing Agency Qualifications**: Qualified according to ASTM E 329 for testing indicated.

5. **Source Limitations**: Obtain metal building system components, including primary and secondary framing and metal panel assemblies, from single source from single manufacturer.

6. **Welding Qualifications**: Qualify procedures and personnel according to the following:
   a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   b. AWS D1.3, "Structural Welding Code - Sheet Steel."

7. **Structural Steel**: Comply with AISC 360, "Specification for Structural Steel Buildings," for design requirements and allowable stresses.

8. **Cold-Formed Steel**: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" for design requirements and allowable stresses.

9. **Fire-Resistance Ratings**: Where indicated, provide metal panel assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

10. **Fire-Rated Door Assemblies**: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
    a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

11. **Preinstallation Conference**: Conduct conference at Project site.
F. Delivery, Storage, And Handling
   1. Deliver components, sheets, panels, and other manufactured items so as not to be damaged or
      deformed. Package metal panels for protection during transportation and handling.
   2. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and
      surface damage.
   3. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and
      ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of
      water. Do not store metal panels in contact with other materials that might cause staining,
      denting, or other surface damage.
   4. Protect foam-plastic insulation as follows:
      a. Do not expose to sunlight, except to extent necessary for period of installation and
         concealment.
      b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to
         Project site before installation time.
      c. Complete installation and concealment of foam-plastic materials as rapidly as possible in
         each area of construction.

G. Project Conditions
   1. Weather Limitations: Proceed with installation only when weather conditions permit metal panels
      to be installed according to manufacturers' written instructions and warranty requirements.
   2. Field Measurements:
      a. Established Dimensions for Foundations: Comply with established dimensions on
         approved anchor-bolt plans, establishing foundation dimensions and proceeding without
         fabricating structural framing without field measurements. Coordinate anchor-bolt
         installation to ensure that actual anchorage dimensions correspond to established
         dimensions.
      b. Established Dimensions for Metal Panels: Where field measurements cannot be made
         without delaying the Work, either establish framing and opening dimensions and proceed
         with fabricating metal panels without field measurements, or allow for field trimming metal
         panels. Coordinate construction to ensure that actual building dimensions, locations of
         structural members, and openings correspond to established dimensions.

H. Coordination
   1. Coordinate sizes and locations of concrete foundations and casting of anchor-bolt inserts into
      foundation walls and footings. Concrete, reinforcement, and formwork requirements are specified
      in Division 03 Section "Cast-in-place Concrete".
   2. Coordinate installation of roof curbs, equipment supports and roof penetrations, which are
      specified in Division 07 Section "Roof Accessories".
   3. Coordinate metal panel assemblies with rain drainage work, flashing, trim, and construction of
      supports and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

I. Warranty
   1. Special Warranty on Metal Panel Finishes: Manufacturer's standard form in which manufacturer
      agrees to repair finish or replace metal panels that show evidence of deterioration of factory-
      applied finishes within specified warranty period.
      a. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
         1) Color fading more than 5 Hunter units when tested according to ASTM D 2244.
         2) Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
         3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.
      b. Finish Warranty Period: 20 OR 10, as directed, years from date of Final Completion.
   2. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's
      standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel
      assemblies that leak or otherwise fail to remain weathertight within specified warranty period.
      a. Warranty Period: 20 years from date of Final Completion.
1.2 PRODUCTS

A. Metal Building Systems
1. **Description:** Provide a complete, integrated set of metal building system manufacturer’s standard mutually dependent components and assemblies that form a metal building system capable of withstanding structural and other loads, thermally induced movement, and exposure to weather without failure or infiltration of water into building interior.
   a. Provide metal building system of size and with bay spacings, roof slopes, and spans indicated.

2. **Primary-Frame Type:**
   b. Rigid Modular: Solid-member, structural-framing system with interior columns.
   c. Truss-Frame Clear Span: Truss-member, structural-framing system without interior columns.
   d. Truss-Frame Modular: Truss-member, structural-framing system with interior columns.
   e. Lean to: Solid- or truss-member, structural-framing system without interior columns, designed to be partially supported by another structure.

3. **End-Wall Framing:** Manufacturer’s standard, for buildings not required to be expandable, consisting of primary frame, capable of supporting one-half of a bay design load, and end-wall columns **OR** load-bearing end-wall and corner columns and rafters, **as directed.**
   **OR**
   End-Wall Framing: Engineer end walls to be expandable. Provide primary frame, capable of supporting full-bay design loads, and end-wall columns.

4. **Secondary-Frame Type:** Manufacturer’s standard purlins and joists and flush-framed **OR** partially inset-framed **OR** exterior-framed (bypass), **as directed,** girts.

5. **Eave Height:** 16 feet (4.9 m) **OR** 20 feet (6.1 m) **OR** 24 feet (7.3 m) **OR** 28 feet (8.5 m) **OR** Manufacturer’s standard height, as indicated by nominal height on Drawings, **as directed.**

6. **Bay Spacing:** 20 feet (6.1 m) **OR** 25 feet (7.6 m) **OR** 30 feet (9.1 m) **OR** As determined by manufacturer, **as directed.**

7. **Roof Slope:** 1/4 inch per 12 inches (1:48) **OR** 1/2 inch per 12 inches (1:24) **OR** 1 inch per 12 inches (1:12) **OR** 4 inches per 12 inches (1:3) **OR** Manufacturer’s standard for frame type required, **as directed.**

8. **Roof System:** Manufacturer’s standard vertical-rib, standing-seam **OR** trapezoidal-rib, standing-seam **OR** lap-seam, **as directed,** metal roof panels with field-installed insulation, **as directed.**

9. **Exterior Wall System:** Manufacturer’s standard foam-insulation-core metal wall panels.
   **OR**
   Exterior Wall System: Manufacturer’s standard tapered-rib, exposed-fastener **OR** reverse-rib, exposed-fastener **OR** concealed-fastener, **as directed,** metal wall panels with field-installed insulation, **as directed.**

B. Metal Building System Performance
1. **Delegated Design:** Design metal building system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

2. **Structural Performance:** Metal building systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA’s "Metal Building Systems Manual."
   a. **Design Loads:** As indicated on Drawings.
      **OR**
   Design Loads: As required by MBMA’s "Metal Building Systems Manual" **OR** ASCE/SEI 7, **as directed.**

   b. **Deflection Limits:** Design metal building system assemblies to withstand design loads with deflections no greater than the following:
      1) Purlins and Rafters: Vertical deflection of 1/180 **OR** 1/240, **as directed,** of the span.
      2) Girts: Horizontal deflection of 1/180 **OR** 1/240, **as directed,** of the span.
      3) Metal Roof Panels: Vertical deflection of 1/180 **OR** 1/240, **as directed,** of the span.
      4) Metal Wall Panels: Horizontal deflection of 1/180 **OR** 1/240, **as directed,** of the span.
5) Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.

c. Drift Limits: Engineer building structure to withstand design loads with drift limits no greater than the following:
   1) Lateral Drift: Maximum of 1/200 OR 1/400, as directed, of the building height.

d. Metal panel assemblies shall withstand the effects of gravity loads and loads and stresses within limits and under conditions indicated according to ASTM E 1592.

3. Seismic Performance: Metal building systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

4. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

5. Air Infiltration for Metal Roof Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of roof area when tested according to ASTM E 1680 at negative test-pressure difference of 1.57 lbf/sq. ft. (75 Pa).

6. Air Infiltration for Metal Wall Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at static-air-pressure difference of 1.57 lbf/sq. ft. (75 Pa).

7. Water Penetration for Metal Roof Panels: No water penetration when tested according to ASTM E 1646 at test-pressure difference of 2.86 lbf/sq. ft. (137 Pa).

8. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E 331 at a wind-load design pressure of not less than 2.86 lbf/sq. ft. (137 Pa).

9. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for Class 30 OR Class 60 OR Class 90, as directed.

10. Thermal Performance: Provide insulated metal panel assemblies with the following maximum U-factors and minimum R-values for opaque elements when tested according to ASTM C 1363 or ASTM C 518:
   a. Metal Roof Panel Assemblies:
      1) U-Factor: as directed by the Owner.
      2) R-Value: as directed by the Owner.
   b. Metal Wall Panel Assemblies:
      1) U-Factor: as directed by the Owner.
      2) R-Value: as directed by the Owner.

11. Energy Performance (for LEED-NC Credit SS 7.2): Provide roof panels with Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.

12. Energy Performance (for ENERGY STAR requirements): Provide roof panels that are listed on the DOE's ENERGY STAR Roof Products Qualified Product List for low OR steep, as directed, slope roof products.

13. Energy Performance (for roofs that must comply with CEC-Title 24): Provide roof panels with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC.

C. Structural-Steel Framing

1. Primary Framing: Manufacturer's standard primary-framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafter, rake, and canopy beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.
   a. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.
      1) Slight variations in span and spacing may be acceptable if necessary to comply with manufacturer's standard, as approved by the Owner.
b. Rigid Clear-Span Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Interior columns are not permitted.

c. Rigid Modular Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.

d. Truss-Frame, Clear-Span Frames: Rafter frames fabricated from joist girders, and I-shaped column sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.

e. Truss-Frame Modular Frames: Rafter frames fabricated from joist girders, and I-shaped column sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.

f. Long-Bay Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.

g. Frame Configuration: Single gable OR One-directional sloped OR Lean to, with high side connected to and supported by another structure OR Multiple gable OR Load-bearing-wall type OR Multistory, as directed.

h. Exterior Column Type: Uniform depth OR Tapered, as directed.

i. Rafter Type: Uniform depth OR Tapered, as directed.

2. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:

a. End-Wall and Corner Columns: I-shaped sections fabricated from structural-steel shapes; shop-welded, built-up steel plates; or C-shaped, cold-formed, structural-steel sheet.

b. End-Wall Rafters: C-shaped, cold-formed, structural-steel sheet; or I-shaped sections fabricated from shop-welded, built-up steel plates or structural-steel sheets.

3. Secondary Framing: Manufacturer's standard secondary framing, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Unless otherwise indicated, fabricate framing from either cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet, prepainted with coil coating, to comply with the following:

a. Purlins: C- or Z-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes; minimum 2-1/2-inch (64-mm-) wide flanges.

1) Depth: As indicated OR As needed to comply with system performance requirements, as directed.

OR

Purlins: Steel joists of depths indicated.

b. Girts: C- or Z-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes. Form ends of Z-sections with stiffening lips angled 40 to 50 degrees from flange, with minimum 2-1/2-inch (64-mm-) wide flanges.

1) Depth: As indicated OR As required to comply with system performance requirements, as directed.

c. Eave Struts: Unequal-flange, C-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes; to provide adequate backup for metal panels.

d. Flange Bracing: Minimum 2-by-2-by-1/8-inch (51-by-51-by-3-mm) structural-steel angles or 1-inch (25-mm-) diameter, cold-formed structural tubing to stiffen primary-frame flanges.

f. Base or Sill Angles: Minimum 3-by-2-inch (76-by-51-mm) zinc-coated (galvanized) steel sheet.

g. Purlin and Girt Clips: Manufacturer's standard clips fabricated from steel sheet. Provide galvanized clips where clips are connected to galvanized framing members.

h. Secondary End-Wall Framing: Manufacturer's standard sections fabricated from zinc-coated (galvanized) steel sheet OR structural-steel sheet, as directed.

i. Framing for Openings: Channel shapes; fabricated from cold-formed, structural-steel sheet or structural-steel shapes. Frame head and jamb of door openings and head, jamb, and sill of other openings.
j. Miscellaneous Structural Members: Manufacturer's standard sections fabricated from cold-formed, structural-steel sheet; built-up steel plates; or zinc-coated (galvanized) steel sheet; designed to withstand required loads.

4. Canopy Framing: Manufacturer's standard structural-framing system, designed to withstand required loads; fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide frames with attachment plates and splice members, factory drilled for field-bolted assembly.
   a. Type: Straight-beam, eave type OR Purlin-extension type OR Tapered-beam, below-eave type OR As indicated, as directed.

5. Bracing: Provide adjustable wind bracing as follows:
   a. Rods: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 (345); or ASTM A 529/A 529M, Grade 50 (345); minimum 1/2-inch- (13-mm-) diameter steel; threaded full length or threaded a minimum of 6 inches (152 mm) at each end.
   b. Cable: ASTM A 475, 1/4-inch- (6-mm-) diameter, extra-high-strength grade, Class B, zinc-coated, seven-strand steel; with threaded end anchors.
   c. Angles: Fabricated from structural-steel shapes to match primary framing, of size required to withstand design loads.
   d. Rigid Portal Frames: Fabricated from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
   e. Fixed-Base Columns: Fabricated from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
   f. Diaphragm Action of Metal Panels: Design metal building to resist wind forces through diaphragm action of metal panels.
   g. Bracing: Provide wind bracing using any method specified above, at manufacturer's option.

6. Bolts: Provide plain-finish bolts for structural-framing components that are primed or finish painted. Provide zinc-plated or hot-dip galvanized bolts for structural-framing components that are galvanized.

7. Materials:
   a. W-Shapes: ASTM A 992/A 992M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
   b. Channels, Angles, M-Shapes, and S-Shapes: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
   c. Plate and Bar: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
   d. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B.
   e. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B or C, structural tubing.
   f. Structural-Steel Sheet: Hot-rolled, ASTM A 1011/A 1011M, Structural Steel (SS), Grades 30 through 55 (205 through 380), or High-Strength Low-Alloy Steel (HSLAS), Grades 45 through 70 (310 through 480); or cold-rolled, ASTM A 1008/A 1008M, Structural Steel (SS), Grades 25 through 80 (170 through 550), or High-Strength Low-Alloy Steel (HSLAS), Grades 45 through 70 (310 through 480).
   g. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 (230 through 550), or High-Strength Low-Alloy Steel (HSLAS), Grades 50 through 80 (340 through 550); with G60 (Z180) coating designation; mill phosphatized.
   h. Metallic-Coated Steel Sheet Prepainted with Coil Coating: Steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
      1) Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 (230 through 550), or High-Strength Low-Alloy Steel (HSLAS), Grades 50 through 80 (340 through 550); with G90 (Z275) coating designation.
      2) Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Structural Steel (SS), Grade 50 or 80 (340 or 550); with Class AZ50 (AZM150) coating.
   i. Joist Girders: Manufactured according to “Standard Specifications for Joist Girders,” in SJI’s “Standard Specifications and Load Tables for Steel Joists and Joist Girders”; with

steel-angle, top- and bottom-chord members, and end- and top-chord arrangements as indicated and required for primary framing.

   1) Finish: Plain OR Hot-dip zinc coating, ASTM A 153/A 153M, Class C OR Mechanically deposited zinc coating, ASTM B 695, Class 50, as directed.

l. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy-steel structural bolts; ASTM A 563 (ASTM A 563M) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers.
   1) Finish: Plain OR Hot-dip zinc coating, ASTM A 153/A 153M, Class C OR Mechanically deposited zinc coating, ASTM B 695, Class 50, as directed.

m. High-Strength Bolts, Nuts, and Washers: ASTM A 490 (ASTM A 490M), Type 1, heavy-steel structural bolts or tension-control, bolt-washer assemblies with spline ends; ASTM A 563 (ASTM A 563M) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers, plain.

n. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex-head steel structural bolts with spline ends.
   1) Finish: Plain OR Mechanically deposited zinc coating, ASTM B 695, Class 50 OR Mechanically deposited zinc coating, ASTM B 695, Class 50, baked-epoxy coated, as directed.

o. Unheaded Anchor Rods: ASTM F 1554, Grade 36 OR ASTM A 572/A 572M, Grade 50 (345) OR ASTM A 36/A 36M OR ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), as directed.
   1) Configuration: Straight.
   2) Nuts: ASTM A 563 (ASTM A 563M) hex OR heavy-hex, as directed, carbon steel.
   3) Plate Washers: ASTM A 36/A 36M carbon steel.
   5) Finish: Plain OR Hot-dip zinc coating, ASTM A 153/A 153M, Class C OR Mechanically deposited zinc coating, ASTM B 695, Class 50, as directed.

   1) Configuration: Straight.
   2) Nuts: ASTM A 563 (ASTM A 563M) hex OR heavy-hex, as directed, carbon steel.
   3) Plate Washers: ASTM A 36/A 36M carbon steel.
   5) Finish: Plain OR Hot-dip zinc coating, ASTM A 153/A 153M, Class C OR Mechanically deposited zinc coating, ASTM B 695, Class 50, as directed.

q. Threaded Rods: ASTM A 193/A 193M OR ASTM A 572/A 572M, Grade 50 (345) OR ASTM A 36/A 36M OR ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), as directed.
   1) Nuts: ASTM A 563 (ASTM A 563M) hex OR heavy-hex, as directed, carbon steel.
   2) Washers: ASTM F 436 (ASTM F 436M) hardened OR ASTM A 36/A 36M, as directed, carbon steel.
   3) Finish: Plain OR Hot-dip zinc coating, ASTM A 153/A 153M, Class C OR Mechanically deposited zinc coating, ASTM B 695, Class 50, as directed.

r. Recycled Content of Steel Products: Provide steel products with an average recycled content so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

   a. Apply primer to primary and secondary framing to a minimum dry film thickness of 1 mil (0.025 mm).
      1) Prime secondary framing formed from uncoated steel sheet to a minimum dry film thickness of 0.5 mil (0.013 mm) on each side.
b. Prime galvanized members with specified primer after phosphoric acid pretreatment.
c. Primer: SSPC-Paint 15, Type I, red oxide.

D. Metal Roof Panels
1. Vertical-Rib, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels.
   a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
      2) Color: As indicated by manufacturer’s designations OR As selected from manufacturer's full range, as directed.
   b. Clips: Manufacturer's standard, fixed type OR floating type to accommodate thermal movement, as directed; fabricated from zinc-coated (galvanized) steel OR aluminum-zinc alloy-coated steel OR stainless-steel, as directed, sheet.
   c. Joint Type: Panels snapped together.
   OR
   Joint Type: Mechanically seamed, single folded OR double folded OR folded according to manufacturer's standard, as directed.
   d. Panel Coverage: 16 inches (406 mm).
   e. Panel Height: 2 inches (51 mm).
   f. Uplift Rating: UL 30 OR UL 60 OR UL 90, as directed.

2. Trapezoidal-Rib, Standing-Seam Metal Roof Panels: Formed with raised trapezoidal ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels.
   a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
      2) Color: As indicated by manufacturer’s designations OR As selected from manufacturer's full range, as directed.
   b. Clips: Manufacturer's standard, fixed type OR floating type to accommodate thermal movement, as directed; fabricated from zinc-coated (galvanized) steel OR aluminum-zinc alloy-coated steel OR stainless-steel, as directed, sheet.
   c. Joint Type: Panels snapped together.
   OR
   Joint Type: Mechanically seamed, single folded OR double folded OR folded according to manufacturer's standard, as directed.
   d. Panel Coverage: 24 inches (610 mm).
   e. Panel Height: 3 inches (76 mm).
   f. Uplift Rating: UL 30 OR UL 60 OR UL 90, as directed.

3. Tapered-Rib-Profile, Lap-Seam Metal Roof Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
   a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
      2) Color: As indicated by manufacturer’s designations OR As selected from manufacturer's full range, as directed.
   b. Major-Rib Spacing: 6 inches (152 mm) OR 12 inches (305 mm), as directed, o.c.
   c. Panel Coverage: 36 inches (914 mm).
d. Panel Height: 0.75 inch (19 mm) OR 1.125 inches (29 mm) OR 1.188 inches (30 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

4. Tapered-Rib-Profile, Metal Liner Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
   a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
      2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   b. Major-Rib Spacing: 6 inches (152 mm) OR 12 inches (305 mm), as directed, o.c.
   c. Panel Coverage: 36 inches (914 mm).
   d. Panel Height: 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

5. Materials:
   a. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
      1) Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
      2) Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
      3) Surface: Smooth, flat OR Embossed, as directed, finish.

6. Finishes:
   a. Exposed Coil-Coated Finish:
      1) Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      2) Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      3) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
   b. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

E. Metal Wall Panels
1. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
   a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
      2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   b. Major-Rib Spacing: 6 inches (152 mm) OR 12 inches (305 mm), as directed, o.c.
   c. Panel Coverage: 36 inches (914 mm).
   d. Panel Height: 0.75 inch (19 mm) OR 1.125 inches (29 mm) OR 1.188 inches (30 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.
2. Reverse-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with recessed, trapezoidal major valleys and intermediate stiffening valleys symmetrically spaced OR flat pan, as directed,
between major valleys; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.

a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
   2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

b. Major-Rib Spacing: 12 inches (305 mm) o.c.

c. Panel Coverage: 36 inches (914 mm).

d. Panel Height: 1.125 inches (29 mm) OR 1.188 inches (30 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

3. Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and a single wide recess, centered between panel edges OR flush surface, as directed; with flush joint between panels; with 1-inch- (25-mm-) wide flange for attaching interior finish; designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant, as directed, in side laps.

a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
   2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

b. Panel Coverage: 16 inches (406 mm).

c. Panel Height: 3 inches (76 mm).

4. Tapered-Rib-Profile, Metal Liner Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.

a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: Siliconized polyester OR Acrylic enamel, as directed.
   2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

b. Major-Rib Spacing: 6 inches (152 mm) OR 12 inches (305 mm), as directed o.c.

c. Panel Coverage: 36 inches (914 mm).

d. Panel Height: 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

5. Flush-Profile, Metal Liner Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with flush joint between panels; designed for interior side of metal wall panel assemblies and installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant, as directed, in side laps.

a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: Siliconized polyester OR Polyester OR Acrylic enamel, as directed.
   2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

b. Sound Absorption: NRC not less than 0.65 OR 0.85 OR 1.00, as directed when tested according to ASTM C 423.

c. Panel Coverage: 12 inches (305 mm).

d. Panel Height: 1.5 inches (38 mm).

6. Materials:

a. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
1) Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
2) Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
3) Surface: Smooth, flat OR Embossed, as directed, finish.

7. Finishes:
   a. Exposed Coil-Coated Finish:
      1) Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      2) Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      3) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
   b. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

F. Foam-Insulation-Core Metal Wall Panels
1. Description: Provide factory-formed and -assembled, metal wall panels fabricated from two metal facing sheets and an insulation core foamed in place during fabrication, with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
   a. Concealed-Fastener, Foam-Insulation-Core Metal Wall Panels: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.
      1) Facings: Fabricate panel with exterior and interior facings of same material and thickness.
      2) Exterior Surface: Smooth, flat OR Striated OR Shallow ribs OR Shallow V grooves, as directed.
      3) Panel Coverage: 36 inches (914 mm) OR 42 inches (1067 mm), as directed, nominal.
      4) Panel Thickness: 2 inches (51 mm) OR 2.5 inches (64 mm) OR 3 inches (76 mm) OR 4 inches (102 mm) OR 5 inches (127 mm) OR 6 inches (152 mm), as directed.
      5) Thermal-Resistance Value (R-Value): as directed by the Owner.
   b. Panel Performance:
      a. Flatwise Tensile Strength: 30 psi (200 kPa) when tested according to ASTM C 297/C 297M.
      b. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for seven days at 140 deg F (60 deg C) and 100 percent relative humidity according to ASTM D 2126.
      c. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at 200 deg F (93 deg C) according to ASTM D 2126.
      d. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at minus 20 deg F (29 deg C) according to ASTM D 2126.
      e. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for two million cycles.
      f. Autoclave: No delamination when exposed to 2-ps (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
      g. Fire-Test-Response Characteristics: Class A according to ASTM E 108.
3. Polyisocyanurate Insulation-Core Performance:
   a. Density: 2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m) when tested according to ASTM D 1622.
   b. Compressive Strength: Minimum 20 psi (140 kPa) when tested according to ASTM D 1621.
   c. Shear Strength: 26 psi (179 kPa) when tested according to ASTM C 273/C 273M.

4. Materials:
   a. Polyisocyanurate Insulation: Modified polyisocyanurate foam using a non-CFC blowing agent, foamed-in-place or board type as indicated, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
      1) Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
   b. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
      1) Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
      2) Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
      3) Surface: Smooth, flat OR Embossed, as directed, finish.

5. Finishes:
   a. Exposed Coil-Coated Finish:
      1) Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      2) Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      3) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
   b. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

G. Translucent Panels
1. Uninsulated Translucent Panels: Glass-fiber-reinforced polyester, translucent plastic; complying with ASTM D 3841, Type CC2 (general purpose) OR Type CC1 (limited flammability), as directed, Grade 1 (weather resistant); smooth finish on both sides. Match profile of adjacent metal panels.
   a. Roof Panel Weight: Not less than 8 oz./sq. ft. (2441 g/sq. m).
   b. Wall Panel Weight: Not less than 6 oz./sq. ft. (1831 g/sq. m).
   c. Light Transmittance: Not less than 55 percent according to ASTM D 1494.
   d. Metal Edge: Fabricate full length of each side of panel with metal edge for seaming into standing-seam roof panel joint.
   e. Color: White.
2. Insulated Translucent Panels: Fabricate insulating units of two sheets of glass-fiber-reinforced polyester, translucent plastic separated by an air space; complying with ASTM D 3841, Type CC1 (limited flammability), Grade 1 (weather resistant); smooth finish on both sides. Match profile of adjacent metal panels.
   a. Exterior Panel Weight: Not less than 8 oz./sq. ft. (2441 g/sq. m) OR 6 oz./sq. ft. (1831 g/sq. m), as directed.
   b. Interior Panel Weight: Not less than 8 oz./sq. ft. (2441 g/sq. m) OR 6 oz./sq. ft. (1831 g/sq. m) OR 4 oz./sq. ft. (1221 g/sq. m), as directed.
   c. Light Transmittance: Not less than 42 percent according to ASTM D 1494.
   d. Metal Edge: Fabricate full length of each side of panel with metal edge for seaming into standing-seam roof panel joint.

Metal Building Systems

DASNY, Downstate 13 34 19 00 - 15

- Color: White.

3. Mastic for Translucent Panels: Nonstaining, saturated vinyl polymer as recommended by translucent panel manufacturer for sealing laps.

4. Performance:
   a. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      1) Flame-Spread Index: 25 or less.
      2) Smoke-Developed Index: 450 or less.

H. Metal Soffit Panels
   1. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant, as directed, in side laps. Include accessories required for weathertight installation.
   2. Metal Soffit Panels: Match profile and material of metal roof OR wall, as directed, panels.
      a. Finish: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As indicated on Drawings, as directed.
   3. Tapered-Rib-Profile, Exposed-Fastener Metal Soffit Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
      a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
         1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
         2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
      b. Major-Rib Spacing: 6 inches (152 mm) OR 12 inches (305 mm), as directed, o.c.
      c. Panel Coverage: 36 inches (914 mm).
      d. Panel Height: 0.75 inch (19 mm) OR 1.125 inches (29 mm) OR 1.188 inches (30 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.
   4. Concealed-Fastener Metal Soffit Panels: Formed with vertical panel edges and a single wide recess, centered between panel edges OR flush surface, as directed; with flush joint between panels; with 1-inch- (25-mm-) wide flange for attaching interior finish; designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant, as directed, in side laps.
      a. Material: Zinc-coated (galvanized) OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
         1) Exterior Finish: Fluoropolymer OR Siliconized polyester, as directed.
         2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
      b. Panel Coverage: 12 inches (305 mm) OR 16 inches (406 mm), as directed.
      c. Panel Height: 1 inch (25 mm) OR 1.5 inches (38 mm), as directed.

I. Thermal Insulation
   1. Faced Metal Building Insulation: ASTM C 991, Type II, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.
   2. Unfaced Metal Building Insulation: ASTM C 991, Type I, or NAIMA 202, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.
      a. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96/E 96M, Desiccant Method.
         1) Composition: White metallized-polypropylene film facing, fiberglass scrim reinforcement, and kraft-paper backing.
         OR
Composition: Aluminum foil facing, elastomeric barrier coating, fiberglass scrim reinforcement, and kraft-paper backing.

OR
Composition: White polypropylene or vinyl, as directed, film facing, fiberglass scrim reinforcement, and metallized-polyester film backing.

OR

3. Mineral-Fiber-Blanket Insulation: ASTM C 665, type indicated below; consisting of fibers manufactured from glass, slag wool, or rock wool.
   a. Nonreflective Faced: Type II (blankets with nonreflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
   b. Reflective Faced: Type III (blankets with reflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
   c. Unfaced: Type I (blankets without membrane covering), passing ASTM E 136 for combustion characteristics.
   d. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96/E 96M, Desiccant Method.
      1) Composition: White metallized-polypropylene film facing, fiberglass scrim reinforcement, and kraft-paper backing.
      2) Composition: Aluminum foil facing, elastomeric barrier coating, fiberglass scrim reinforcement, and kraft-paper backing.
      3) Composition: White polypropylene or vinyl, as directed, film facing, fiberglass scrim reinforcement, and metallized-polyester film backing.

4. Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I (foil facing), Class 2, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed on unfaced core. Provide units tested for interior exposure without an approved thermal barrier.

5. Retainer Strips: 0.025-inch (0.64-mm) nominal-thickness, formed, metallic-coated steel or PVC retainer clips colored to match insulation facing.

6. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

J. Doors And Frames
1. Swinging Personnel Doors and Frames: As specified in Division 08 Section "Hollow Metal Doors And Frames".

   OR

Swinging Personnel Doors and Frames: Metal building system manufacturer's standard doors and frames; prepared and reinforced at strike and at hinges to receive factory- and field-applied hardware according to BHMA A156 Series.

   a. Steel Doors: 1-3/4 inches (44 mm) thick; fabricated from 0.040-inch (1.02-mm) nominal-thickness, metallic-coated steel face sheets; of seamed or seamless, as directed, hollow-metal construction; with 0.064-inch (1.63-mm) nominal-thickness, inverted metallic-coated steel channels welded to face sheets at top and bottom of door.
      1) Design: Flush panel or as indicated, as directed.
      2) Core: Kraft honeycomb with U-factor rating of at least 0.47 Btu/sq. ft. x h x deg F (2.67 W/sq. m x K).

   OR

Core: Polystyrene foam with U-factor rating of at least 0.16 Btu/sq. ft. x h x deg F (0.91 W/sq. m x K).

   OR

Core: Polyurethane foam with U-factor rating of at least 0.07 Btu/sq. ft. x h x deg F (0.40 W/sq. m x K).
3) Glazing Frames: Steel frames to receive field-installed glass.
4) Glazing: As specified in Division 08 Section "Glazing".

b. Steel Frames: Fabricate 2-inch- (51-mm-) wide face frames from 0.064-inch (1.63-mm) nominal-thickness, metallic-coated steel sheet.
   1) Type: Knocked down for field assembly OR Factory welded, as directed.

c. Fabricate concealed stiffeners, reinforcement, edge channels, and moldings from either cold- or hot-rolled steel sheet.

d. Hardware:
   1) Provide hardware for each door leaf, as follows:
      a) Hinges: BHMA A156.1. Three plain OR antifriction, as directed, bearing, standard-weight, full-mortise, stainless-steel or bronze, template-type hinges; 4-1/2 by 4-1/2 inches (114 by 114 mm), with nonremovable pin.
      b) Lockset: BHMA A156.2. Key-in-lever cylindrical OR Mortise, with lever handle, as directed, type.
      c) Exit Device: BHMA A156.3. Touch- or push-bar type.
      e) Silencers: Pneumatic rubber; three silencers on strike jambs of single door frames and two silencers on heads of double door frames.
      f) Closer: BHMA A156.4. Surface-applied, standard-duty hydraulic type.
      g) Weather Stripping: Vinyl applied to head and jambs, with vinyl sweep at sill.
   2) Provide each pair of double doors with the following hardware in addition to that specified for each leaf:
      a) Astragal: Removable type.
      b) Surface Bolts: Top and bottom of inactive door.

e. Anchors and Accessories: Manufacturer's standard units, galvanized according to ASTM A 123/A 123M.

f. Fabrication: Fabricate doors and frames to be rigid; neat in appearance; and free from defects, warp, or buckle. Provide continuous welds on exposed joints; grind, dress, and make welds smooth, flush, and invisible.

2. Horizontal-Sliding Doors: Manufacturer's standard horizontal-sliding door assembly including structural frame, door panels, brackets, guides, tracks, hardware, and installation accessories.
   a. Door Frames: Channels and zees; fabricated from minimum 0.064-inch (1.63-mm) nominal-thickness, metallic-coated steel sheet or structural-steel shapes.
   b. Door Panels: Same material and finish as metal wall panels.
   c. Hardware: Manufacturer's standard metallic-coated steel track, bottom guides, lock angles for side closure, and brackets. Support each door leaf by two four-wheel trolleys. Provide metallic-coated steel handle for each leaf, and slide bolt or padlock hasp. Flash top of track with metallic-coated steel sheet hood.

3. Materials:
   a. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
   b. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
   c. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.

4. Finishes for Personnel Doors and Frames:
   a. Prime Finish: Factory-apply manufacturer's standard primer immediately after cleaning and pretreating.
      1) Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
         1) Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
K. Windows

1. Aluminum Windows: As specified in Division 08 Section "Aluminum Windows".

   OR

   Aluminum Windows: Metal building system manufacturer's standard, with self-flashing mounting fins, and as follows:

   a. Type, Performance Class, and Performance Grade: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 and as follows:
      1) Horizontal-Sliding Units: HS-LC25 OR HS-C30, as directed.
      2) Single-Hung Units: H-LC25 OR H-C30, as directed.
      3) Fixed Units: F-LC25 OR F-C30, as directed.

   b. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 0.064-inch (1.63-mm) thickness at any location for main frame and sash members.
      1) Thermally Improved Construction: Fabricate window units with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.

   c. Mullions: Between adjacent windows, fabricated of extruded aluminum matching finish of window units.

   d. Fasteners, Anchors, and Clips: Nonmagnetic stainless steel, aluminum, or other noncorrosive material, compatible with aluminum window members, trim, hardware, anchors, and other components of window units. Fasteners shall not be exposed, except for attaching hardware.
      1) Reinforcement: Where fasteners screw-anchor into aluminum less than 0.128 inch (3.26 mm) thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, spline grommet nuts.

   e. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following:
      1) Cam-action sweep sash lock and keeper at meeting rails.
      2) Spring-loaded, snap-type lock at jambs.
      3) Pole-operated, cam-action locking device on meeting rail where rail is more than 72 inches (1830 mm) above floor.
      4) Lift handles for single-hung units.
      5) Nylon sash rollers for horizontal-sliding units.
      6) Steel or bronze operating arms.

   f. Sliding-Type Weather Stripping: Woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric; complying with AAMA 701/702.

   g. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, and as follows:
      1) Aluminum Wire Fabric: 18-by-18 (1.1-by-1.1-mm), 18-by-16 (1.1-by-1.3-mm), or 18-by-14 (1.1-by-1.5-mm) mesh of 0.013-inch- (0.3-mm-) diameter, coated aluminum wire; complying with FS RR-W-365, Type VII.
      OR
      Glass-Fiber Mesh Fabric: 18-by-16 (1.1-by-1.3-mm) or 18-by-14 (1.1-by-1.5-mm) mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D 3656.
      OR

2. Glazing: Comply with requirements specified in Division 08 Section "Glazing".

   OR

   Glazing:

   a. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear), 3 mm thick.
   b. Heat-Treated Float Glass: ASTM C 1048, Type I, Quality-Q3, Class I (clear), Condition A, 3 mm thick.
   c. Tinted Float Glass: ASTM C 1036, Type I, Quality-Q3, Class 2, 3 mm thick.
1) Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray OR Manufacturer's standard color, as directed.

d. Patterned Glass: ASTM C 1036, Type II, Quality-Q6, Class 1 (clear), Form 3, Pattern P3 (random), 3 mm thick.

e. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of 2.5-mm-thick clear float glass separated by a dehydrated interspace, qualified according to ASTM E 2190.

f. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201.

1) Provide safety glazing labeling.

g. Glazing Stops: Screw-applied or snap-on glazing stops coordinated with Division 08 Section "Glazing" and with glazing system indicated. Match material and finish of window frames.

h. Factory-Glazed Fabrication: Glaze window units in the factory to greatest extent possible and practical for applications indicated. Comply with requirements in Division 08 Section "Glazing".

3. Finish:
   a. Mill finish.
   b. Baked-Enamel Finish: Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of 0.7 mil (0.02 mm), medium gloss.

1) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

L. Accessories

1. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.

a. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

2. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including copings, fasciae, corner units, ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.

a. Closures: Provide closures at eaves and ridges, fabricated of same material as metal roof panels.

b. Clips: Manufacturer's standard, formed from steel OR stainless-steel, as directed, sheet, designed to withstand negative-load requirements.

c. Cleats: Manufacturer's standard, mechanically seamed cleats formed from steel OR stainless-steel sheet or nylon-coated aluminum, as directed, sheet.

d. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.

e. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

f. Thermal Spacer Blocks: Where metal panels attach directly to purlins, provide thermal spacer blocks of thickness required to provide 1-inch (25-mm) standoff; fabricated from extruded polystyrene.

3. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including copings, fasciae, mullions, sills, corner units, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.

a. Closures: Provide closures at eaves and rakes, fabricated of same material as metal wall panels.

b. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
c. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch (25-mm)-thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

4. Flashing and Trim: Formed from 0.022-inch (0.56-mm) nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match adjacent metal panels.
   a. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers.
   b. Opening Trim: Formed from 0.022-inch (0.56-mm) OR 0.034-inch (0.86-mm), as directed, nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Trim head and jamb of door openings, and head, jamb, and sill of other openings.

5. Gutters: Formed from 0.022-inch (0.56-mm) nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match roof fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2438-mm-) long sections, sized according to SMACNA’s “Architectural Sheet Metal Manual.”
   a. Gutter Supports: Fabricated from same material and finish as gutters.
   b. Strainers: Bronze, copper, or aluminum wire ball type at outlets.

6. Downspouts: Formed from 0.022-inch (0.56-mm) nominal-thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal wall panels. Fabricate in minimum 10-foot- (3-m-) long sections, complete with formed elbows and offsets.
   a. Mounting Straps: Fabricated from same material and finish as gutters.

7. Roof Ventilators: Gravity type, complete with hardware, flashing, closures, and fittings.
   a. Circular-Revolving Type: Minimum 20-inch- (508-mm-) diameter throat opening; fabricated from 0.028-inch (0.71-mm) nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels; with matching base and rain cap.
      1) Type: Directional OR Stationary, as directed, revolving.
      2) Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire; or aluminum, 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.6-mm) wire.
      3) Dampers: Spring-loaded, butterfly type; pull-chain operation; with pull chain of length required to reach within 36 inches (914 mm) of floor.
      4) Reinforce and brace units, with joints properly formed and edges beaded to be watertight under normal positive-pressure conditions.
      5) Mount ventilators on square-to-round bases for ridge or on-slope mounting, designed to match roof pitch and roll formed to match metal roof panel profile.
   b. Continuous or Sectional-Ridge Type: Factory-engineered and -fabricated, continuous unit; fabricated from 0.022-inch (0.56-mm) nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels. Fabricated in minimum 10-foot- (3-m-) long sections. Provide throat size and total length indicated, complete with side baffles, ventilator assembly, end caps, splice plates, and reinforcing diaphragms.
      1) Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire; or aluminum, 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.6-mm) wire.
      2) Dampers: Manually operated, spring-loaded, vertically rising type; chain and worm gear operator; with pull chain of length required to reach within 36 inches (914 mm) of floor.
      3) Throat Size: 9 inches (229 mm) OR 12 inches (305 mm), as directed.

8. Louvers: Size and design indicated; self-framing and self-flashing. Fabricate welded frames from minimum 0.052-inch (1.32-mm) nominal-thickness, metallic-coated steel sheet; finished to match metal wall panels. Form blades from 0.040-inch (1.02-mm) nominal-thickness, metallic-coated
steel sheet; folded or beaded at edges, set at an angle that excludes driving rains, and secured to frames by riveting or welding. Fabricate louvers with equal blade spacing to produce uniform appearance.

   OR
   Blades: Adjustable type, with weather-stripped edges, and manually operated by hand crank or pull chain.

b. Free Area: Not less than 7.0 sq. ft. (0.65 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.

c. Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire; with rewirable frames, removable and secured with clips; fabricated of same kind and form of metal and with same finish as louvers.
   1) Mounting: Interior OR Exterior, as directed, face of louvers.

d. Vertical Mullions: Provide mullions at spacings recommended by manufacturer, or 72 inches (1830 mm) o.c., whichever is less.

9. Roof Curbs: Fabricated from minimum 0.052-inch (1.32-mm) nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels; with welded top box and bottom skirt, and integral full-length cricket; capable of withstanding loads of size and height indicated.
   a. Curb Subframing: Fabricated from 0.064-inch (1.63-mm) nominal-thickness, angle-, C-, or Z-shaped metallic-coated steel sheet.
   b. Insulation: 1-inch- (25-mm-) thick, rigid type.

10. Service Walkways: Fabricated from 0.052-inch (1.32-mm) nominal-thickness, metallic-coated steel plank grating; with slip-resistant pattern; 18-inch (457-mm) OR 24-inch (610-mm) OR 36-inch (914-mm), as directed, overall width. Support walkways on framing system anchored to metal roof panels without penetrating panels; with predrilled holes and clamps or hooks for anchoring.

12. Materials:
   a. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide fasteners with heads matching color of materials being fastened by means of plastic caps or factory-applied coating.
      1) Fasteners for Metal Roof Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws, with a stainless-steel cap or zinc-aluminum-alloy head and EPDM sealing washer.
         OR
         Fasteners for Metal Roof Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM washer under heads of fasteners bearing on weather side of metal panels.
      2) Fasteners for Metal Wall Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws, with EPDM sealing washers bearing on weather side of metal panels, as directed.
         OR
         Fasteners for Metal Wall Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM sealing washers bearing on weather side of metal panels, as directed.
      3) Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
      4) Blind Fasteners: High-strength aluminum or stainless-steel rivets.
   b. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
   c. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.
   d. Metal Panel Sealants:
1) Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene-compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape of manufacturer's standard size.

2) Joint Sealant: ASTM C 920; one-part elastomeric polyurethane or polysulfide; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended by metal building system manufacturer.

M. Source Quality Control
1. Testing Agency (if required): Engage a qualified testing agency to evaluate product.
2. Special Inspector (if required by local code): Engage a qualified special inspector to perform the following tests and inspections and to submit reports. Special inspector will verify that manufacturer maintains detailed fabrication and quality-control procedures and will review the completeness and adequacy of those procedures to perform the Work.
   a. Special inspections will not be required if fabrication is performed by manufacturer registered and approved by authorities having jurisdiction to perform such Work without special inspection.
      1) After fabrication, submit copy of certificate of compliance to authorities having jurisdiction, certifying that Work was performed according to Contract requirements.
3. Testing: Test and inspect shop connections for metal buildings according to the following:
   a. Bolted Connections: Shop-bolted connections shall be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
   b. Welded Connections: In addition to visual inspection, shop-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
      1) Liquid Penetrant Inspection: ASTM E 165.
      2) Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
      3) Ultrasonic Inspection: ASTM E 164.
      4) Radiographic Inspection: ASTM E 94.
4. Product will be considered defective if it does not pass tests and inspections.
5. Prepare test and inspection reports.

N. Fabrication
1. General: Design components and field connections required for erection to permit easy assembly.
   a. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
   b. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members shall be free of cracks, tears, and ruptures.
3. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.
   a. Make shop connections by welding or by using high-strength bolts.
   b. Join flanges to webs of built-up members by a continuous, submerged arc-welding process.
   c. Brace compression flange of primary framing with steel angles or cold-formed structural tubing between frame web and purlin web or girt web, so flange compressive strength is within allowable limits for any combination of loadings.
   d. Weld clips to frames for attaching secondary framing.
   e. Shop Priming: Prepare surfaces for shop priming according to SSPC-SP 2. Shop prime primary framing with specified primer after fabrication.
4. Secondary Framing: Shop fabricate framing components to indicated size and section by rolling or break-forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.
13 - Special Construction

a. Make shop connections by welding or by using non-high-strength bolts.
b. Shop Priming: Prepare uncoated surfaces for shop priming according to SSPC-SP 2. Shop prime uncoated secondary framing with specified primer after fabrication.

5. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
a. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
2. Before erection proceeds, survey elevations and locations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments to receive structural framing, with erector present, for compliance with requirements and metal building system manufacturer's tolerances.
   a. Engage land surveyor to perform surveying.
3. Proceed with erection only after unsatisfactory conditions have been corrected.

B. Preparation
1. Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition.
2. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural framing, connections, and bracing are in place unless otherwise indicated.

C. Erection Of Structural Framing
1. Erect metal building system according to manufacturer's written erection instructions and erection drawings.
2. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.
3. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.
   a. Set plates for structural members on wedges, shims, or setting nuts as required.
   b. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
   c. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
5. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
   a. Level and plumb individual members of structure.
   b. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.
6. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.
a. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for bolt type and joint type specified.
   1) Joint Type: Snug tightened or pretensioned.

7. Secondary Framing: Erect framing level, plumb, rigid, secure, and true to line. Field bolt secondary framing to clips attached to primary framing.
   a. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
   b. Locate and space wall girts to suit openings such as doors and windows.
   c. Locate canopy framing as indicated.
   d. Provide supplemental framing at entire perimeter of openings, including doors, windows, louvers, ventilators, and other penetrations of roof and walls.

8. Steel Joists and Joist Girders: Install joists, girders, and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders," joist manufacturer's written instructions, and requirements in this Section.
   a. Before installation, splice joists delivered to Project site in more than one piece.
   b. Space, adjust, and align joists accurately in location before permanently fastening.
   c. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
   d. Bolt joists to supporting steel framework using carbon-steel bolts unless otherwise indicated.

OR
   Bolt joists to supporting steel framework using high-strength structural bolts unless otherwise indicated. Comply with RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for high-strength structural bolt installation and tightening requirements.
   e. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

   a. Tighten rod and cable bracing to avoid sag.
   b. Locate interior end-bay bracing only where indicated.

10. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.
   a. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
      1) Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
   b. Install metal panels perpendicular to structural supports unless otherwise indicated.
   c. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
   d. Locate and space fastenings in uniform vertical and horizontal alignment.
   e. Locate metal panel splices over, but not attached to, structural supports with end laps in alignment.
   f. Lap metal flashing over metal panels to allow moisture to run over and off the material.

D. Metal Panel Installation, General

1. Examination: Examine primary and secondary framing to verify that structural-panel support members and anchorages have been installed within alignment tolerances required by manufacturer.
   a. Examine roughing-in for components and systems penetrating metal panels, to verify actual locations of penetrations relative to seams before metal panel installation.

2. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   a. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
      1) Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
   b. Install metal panels perpendicular to structural supports unless otherwise indicated.
   c. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
   d. Locate and space fastenings in uniform vertical and horizontal alignment.
   e. Locate metal panel splices over, but not attached to, structural supports with end laps in alignment.
   f. Lap metal flashing over metal panels to allow moisture to run over and off the material.
3. Lap-Seam Metal Panels: Install screw fasteners using power tools with controlled torque adjusted to compress EPDM washers tightly without damage to washers, screw threads, or metal panels. Install screws in predrilled holes.
   a. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply metal panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
4. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.
5. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated; or, if not indicated, provide types recommended by metal panel manufacturer.
   a. Seal metal panel end laps with double beads of tape or sealant the full width of panel. Seal side joints as recommended by metal panel manufacturer.
   b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

E. Metal Roof Panel Installation
1. General: Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.
   a. Install ridge and hip caps as metal roof panel work proceeds.
   b. Flash and seal metal roof panels with weather closures at eaves and rakes. Fasten with self-tapping screws.
2. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint, at location and spacing and with fasteners recommended by manufacturer.
   a. Install clips to supports with self-drilling or self-tapping fasteners.
   b. Install pressure plates at locations indicated in manufacturer's written installation instructions.
   c. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
      OR
   Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so that clip, metal roof panel, and factory-applied sealant are completely engaged.
   d. Rigidly fasten eave end of metal roof panels and allow ridge end free movement due to thermal expansion and contraction. Predrill panels for fasteners.
   e. Provide metal closures at peaks, rake edges, rake walls and each side of ridge and hip caps.
3. Lap-Seam Metal Roof Panels: Fasten metal roof panels to supports with exposed fasteners at each lapped joint, at location and spacing recommended by manufacturer.
   a. Provide metal-backed sealing washers under heads of exposed fasteners bearing on weather side of metal roof panels.
   b. Provide sealant tape at lapped joints of metal roof panels and between panels and protruding equipment, vents, and accessories.
   c. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps and on side laps of nesting-type metal panels, on side laps of ribbed or fluted metal panels, and elsewhere as needed to make metal panels weatherproof to driving rains.
   d. At metal panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.
4. Metal Fascia Panels: Align bottom of metal panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws. Flash and seal metal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.
5. Metal Roof Panel Installation Tolerances: Shim and align metal roof panels within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

F. Metal Wall Panel Installation
1. **General**: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   a. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
   b. Shim or otherwise plumb substrates receiving metal wall panels.
   c. When two rows of metal panels are required, lap panels 4 inches (102 mm) minimum.
   d. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
   e. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
   f. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws.
   g. Install screw fasteners in predrilled holes.
   h. Install flashing and trim as metal wall panel work proceeds.
   i. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated; or, if not indicated, as necessary for waterproofing.
   j. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws.
   k. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

2. **Metal Wall Panels**: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.

3. **Insulated Metal Wall Panels**: Install insulated metal wall panels on exterior side of girts. Attach panels to supports at each panel joint using concealed clip and fasteners at maximum 42 inches (1067 mm) o.c., spaced not more than manufacturer’s recommendation. Fully engage tongue and groove of adjacent insulated metal wall panels.
   a. Install clips to supports with self-tapping fasteners.
   b. Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels as weather seal.

4. **Installation Tolerances** (for highly finished metal wall panel assemblies): Shim and align metal wall panels within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m), nonaccumulative, on level, plumb, and on location lines as indicated, and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

G. **Translucent Panel Installation**
   1. **Translucent Panels**: Attach translucent panels to structural framing with fasteners according to manufacturer’s written instructions. Install panels perpendicular to supports unless otherwise indicated. Anchor translucent panels securely in place, with provisions for thermal and structural movement.
      a. Provide end laps of not less than 6 inches (152 mm) and side laps of not less than 1-1/2-inch (38-mm) corrugations for metal roof panels.
      b. Provide end laps of not less than 4 inches (102 mm) and side laps of not less than 1-1/2-inch (38-mm) corrugations for metal wall panels.
      c. Align horizontal laps with adjacent metal panels.
      d. Seal intermediate end laps and side laps of translucent panels with translucent mastic.

H. **Metal Soffit Panel Installation**
   1. Provide metal soffit panels the full width of soffits. Install panels perpendicular to support framing.
   2. Flash and seal metal soffit panels with weather closures where panels meet walls and at perimeter of all openings.

I. **Thermal Insulation Installation**
   1. **General**: Install insulation concurrently with metal panel installation, in thickness indicated to cover entire surface, according to manufacturer’s written instructions.
13 - Special Construction

a. Set vapor-retarder-faced units with vapor retarder toward warm side of construction unless otherwise indicated. Do not obstruct ventilation spaces except for firestopping.

b. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to the surrounding construction to ensure airtight installation.

c. Install factory-laminated, vapor-retarder-faced blankets straight and true in one-piece lengths, with both sets of facing tabs sealed, to provide a complete vapor retarder.

**OR**

Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation, with both sets of facing tabs sealed, to provide a complete vapor retarder.

2. Blanket Roof Insulation: Comply with the following installation method:

b. Between-Purlin Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.

c. Over-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Install layer of filler insulation over first layer to fill space formed by metal roof panel standoffs. Hold in place by panels fastened to standoffs.

   1) Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.

d. Two-Layers-between-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Install layer of filler insulation over first layer to fill space between purlins formed by thermal spacer blocks. Hold in place with bands and crossbands below insulation.

   1) Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.

e. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

a. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

b. Sound-Absorption Insulation: Where sound-absorption requirement is indicated for metal liner panels, cover insulation with polyethylene film and provide inserts of wire mesh to form acoustical spacer grid.

4. Board Wall Insulation: Extend board insulation in thickness indicated to cover entire wall. Hold in place by metal wall panels fastened to secondary framing. Comply with manufacturers’ written instructions.

a. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

J. Door And Frame Installation

1. General: Install doors and frames plumb, rigid, properly aligned, and securely fastened in place according to manufacturers’ written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each door frame with elastomeric sealant used for metal wall panels.

2. Personnel Doors and Frames: Install doors and frames according to SDI A250.8. Fit non-fire-rated doors accurately in their respective frames, with the following clearances:

   a. Between Doors and Frames at Jambs and Head: 1/8 inch (3 mm).
   b. Between Edges of Pairs of Doors: 1/8 inch (3 mm).
   c. At Door Sills with Threshold: 3/8 inch (9.5 mm).
   d. At Door Sills without Threshold: 3/4 inch (19.1 mm).
   e. At fire-rated openings, install frames according to, and doors with clearances specified in, NFPA 80.
3. Sliding Service Doors: Bolt support angles to opening head members through factory-punched holes. Bolt door tracks to support angles at maximum 24 inches (610 mm) o.c. Set doors and operating equipment with necessary hardware, jamb and head mold stops, continuous hood flashing, anchors, inserts, hangers, and equipment supports.

4. Field Glazing: Comply with installation requirements in Division 8 Section "Glazing."

5. Door Hardware: Mount units at heights indicated in DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
   a. Install surface-mounted items after finishes have been completed on substrates involved.
   b. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
   c. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
   d. Set thresholds for exterior doors in full bed of butyl-rubber sealant complying with requirements specified in Division 07 Section "Joint Sealants."

K. Window Installation
1. General: Install windows plumb, rigid, properly aligned, without warp or rack of frames or sash, and securely fasten in place according to manufacturer's written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each window frame with elastomeric sealant used for metal wall panels.
   a. Separate dissimilar materials from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified in AAMA/WDMA/CSA 101/I.S.2/A440.
2. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.
3. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
4. Mount screens directly to frames with tapped screw clips.
5. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing."

L. Accessory Installation
1. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
   a. Install components required for a complete metal roof panel assembly, including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
   b. Install components for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
   c. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.
2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   a. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
   b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).
3. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than 36 inches (914
13 - Special Construction

August 2021

Metal Building Systems

DASNY, Downstate

13 34 19 00 - 29

mm) o.c. using manufacturer’s standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

4. Downspouts: Join sections with 1-1/2-inch (38-mm) telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.
   a. Provide elbows at base of downspouts to direct water away from building.

   OR

   Tie downspouts to underground drainage system indicated.

5. Circular Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Mount ventilators on flat level base. Install preformed filler strips at base to seal ventilator to metal roof panels.

6. Continuous Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Join sections with splice plates and end-cap skirt assemblies where required to achieve indicated length. Install preformed filler strips at base to seal ventilator to metal roof panels.

7. Louvers: Locate and place louver units level, plumb, and at indicated alignment with adjacent work.
   a. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
   b. Provide perimeter reveals and openings of uniform width for sealants and joint fillers.
   c. Protect galvanized- and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of corrosion-resistant paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
   d. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 07 Section “Joint Sealants” for sealants applied during louver installation.

8. Roof Curbs: Install curbs at locations indicated on Drawings. Install flashing around bases where they meet metal roof panels.

9. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to panel as recommended by manufacturer.

M. Field Quality Control

1. Special Inspections: Engage, as directed, a qualified special inspector to perform the following special inspections:
   a. Inspection of fabricators.
   b. Steel construction.

2. Testing Agency: Engage, as directed, a qualified testing agency to perform tests and inspections.

3. Tests and Inspections:
   a. High-Strength, Field-Bolted Connections: Connections shall be tested and inspected during installation according to RCSC’s "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
   b. Welded Connections: In addition to visual inspection, field-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
      1) Liquid Penetrant Inspection: ASTM E 165.
      2) Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
      3) Ultrasonic Inspection: ASTM E 164.
      4) Radiographic Inspection: ASTM E 94.

4. Product will be considered defective if it does not pass tests and inspections.

5. Prepare test and inspection reports.

N. Adjusting

1. Doors: After completing installation, test and adjust doors to operate easily, free of warp, twist, or distortion.
2. Door Hardware: Adjust and check each operating item of door hardware and each door to ensure proper operation and function of every unit. Replace units that cannot be adjusted to operate as intended.
3. Windows: Adjust operating sashes and ventilators, screens, hardware, and accessories for a tight fit at contact points and at weather stripping to ensure smooth operation and weathertight closure. Lubricate hardware and moving parts.
4. Roof Ventilators and Adjustable Louvers: After completing installation, including work by other trades, lubricate, test, and adjust units to operate easily and be free of warp, twist, or distortion as needed to provide fully functioning units.
   a. Adjust louver blades to be weathertight when in closed position.

O. Cleaning And Protection
1. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
2. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
3. Touchup Painting: After erection, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted structural framing, bearing plates, and accessories.
   a. Clean and prepare surfaces by SSPC-SP 2, "Hand Tool Cleaning," or by SSPC-SP 3, "Power Tool Cleaning."
   b. Apply a compatible primer of same type as shop primer used on adjacent surfaces.

OR
Touchup Painting: Cleaning and touchup painting are specified in Division 9 painting Sections.
4. Metal Panels: Remove temporary protective coverings and strippable films, if any, as metal panels are installed. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
   a. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.
5. Doors and Frames: Immediately after installation, sand rusted or damaged areas of prime coat until smooth and apply touchup of compatible air-drying primer.
   a. Immediately before final inspection, remove protective wrappings from doors and frames.
   a. Remove factory-glazed glass immediately after installing windows.
   b. Restore louvers damaged during installation and construction period so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by the Owner, remove damaged units and replace with new units.
      1) Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 13 34 19 00
SECTION 13 47 13 13 - CATHODIC PROTECTION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for cathodic protection. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes passive cathodic protection systems that use magnesium or zinc anodes to protect iron and steel piping and tanks.

C. Performance Requirements
1. Delegated Design: Design, supervise, test, and inspect the installation of cathodic protection systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   a. Design cathodic protection for pipelines according to NACE RP0169.
   b. Design cathodic protection for metal underground storage tanks according to NACE RP0285.
2. Survey site and determine soil or water corrosivity (resistivity), current requirements, potential surveys, stray currents, and water chemistry/corrosivity (pH).
3. Select anodes and accessories relevant to level of protection. Design anodes for an estimated life of 15 OR 30, as directed, years before replacement.
4. Cathodic protection systems shall provide protective potential that complies with referenced NACE standards. Insulators are required if needed to insulate protected metals from other structures.

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For cathodic protection. Include plans, evaluations, sections, details, and attachments to other work.
   a. Detail locations of cathodic protection equipment, devices, and outlets, with characteristics and cross-references to products.
   b. Include calculations and details of anode designs.
   c. Include labeling and identifying scheme for wires, cables, and test boxes.
3. Delegated-Design Submittal: For cathodic protection system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified corrosion engineer responsible for their preparation.
   a. Conduct site tests necessary for design, including soil resistivity, close-interval potential surveys, testing during construction, interference testing, and training of the Owner's personnel.
   b. Provide system design calculations, stating the maximum recommended anode current output density, and the rate of gaseous production, if any, at that current density.
4. Coordination Drawings: Plans, drawn to scale, and coordinating connections to piping and tanks.
5. Qualification Data: For qualified professional engineer. Submit evidence of current license, corporate authorization (if applicable) of the engineering business, and NACE certifications.
6. Field quality-control reports.
7. Operation and Maintenance Data: Include the following:
   a. Basic system operation, outlining the step-by-step procedures required for system startup, operation, adjustment of current flow, and shutdown.
   b. Instructions for pipe-to-reference cell and tank-to-reference cell potential measurements and frequency of monitoring.
c. Instructions for dielectric connections, interference and sacrificial-anode bonds; and precautions to ensure safe conditions during repair of pipe, tank or other metallic systems. Instructions shall be neatly bound.

d. Locations of all anodes, test stations, and insulating joints.

e. Structure-to-reference cell potentials as measured during the tests required by "Field Quality Control" Article.

f. Recommendations for maintenance testing, including instructions for pipe-to-reference cell potential measurements and frequency of testing.

g. Precautions to ensure safe conditions during repair of pipe system.

8. Warranty: Sample of special warranty.

E. Quality Assurance

1. Corrosion Engineer Qualifications: A qualified professional engineer who has education and experience in cathodic protection of buried and submerged metal structures and has NACE accreditation or certification as a Corrosion Specialist or Cathodic Protection Specialist.

F. Delivery, Storage, And Handling

1. Protect anodes from exposure to rain and direct sunlight.

G. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace permanent reference electrodes that fail in materials or workmanship within specified warranty period.

   a. Warranty Period: 15 OR 30, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Magnesium Anodes, Type II

2. Chemical composition as percent of weight shall be as follows:

   a. Aluminum: 0.010 maximum.
   b. Manganese: 0.50 to 1.3.
   c. Zinc: 0.05 maximum.
   d. Silicon: 0.50 maximum.
   e. Copper: 0.02 maximum.
   f. Nickel: 0.001 maximum.
   g. Iron: 0.03 maximum.
   h. Other Impurities: 0.05 each; 0.3 maximum total.
   i. Magnesium: Remainder.

3. Anode Core: Galvanized steel with anode wire silver-soldered to the core. Connection shall be recessed and epoxy insulated for 600-V rating. Connection shall be covered with heat-shrinking tubing, and insulation shall be extended over connection.

4. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D 1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.

5. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:

   a. Hydrated Gypsum: 75 percent.
   b. Bentonite Clay: 20 percent.
   c. Anhydrous Sodium Sulfate: 5 percent.
B. Magnesium/Manganese Alloy Anodes
   1. Chemical composition as percent of weight shall be as follows:
      a. Aluminum: 0.01 maximum.
      b. Manganese: 0.50 to 1.3.
      c. Copper: 0.02 maximum.
      d. Nickel: 0.001 maximum.
      e. Iron: 0.03 maximum.
      f. Other Impurities: 0.05 each; 0.3 maximum total.
      g. Magnesium: Remainder.
   2. Bare Anode Weight: 40 lb (18 kg), not including core, and a nominal length of 60 inches (1520 mm).
   3. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D 1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.
   4. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:
      a. Hydrated Gypsum: 75 percent.
      b. Bentonite Clay: 20 percent.
      c. Anhydrous Sodium Sulfate: 5 percent.

C. Zinc Anodes For Buried Service, Type Z-1
   1. Comply with ASTM B 418, Type II.
   2. Chemical composition as percent of weight shall be as follows:
      a. Aluminum: 0.005 maximum.
      b. Cadmium: 0.003 maximum.
      c. Iron: 0.0014 maximum.
      d. Zinc: Remainder.
   3. Bare Anode Ingot Weight: 30 lb (13.6 kg), 2 inches (50 mm) square and 30 inches (760 mm) long. Packaged weight of anode bag shall be 70 lb (32 kg).
   4. Anode Wires: Factory-installed cables, with copper conductors, suitable for direct burial; not less than No. 10 AWG with Type THWN insulation according to ASTM D 1248 and NEMA WC 70/ICEA S-95-658; long enough to extend to accompanying junction box without splicing.
   5. Anode Backfill: Backfill materials packaged in water-permeable fabric sack or cardboard container. Anodes shall be factory installed in packaged backfill using methods that result in dense packing of fill with factory-installed anode spacers to ensure centering of anode in packaged anode backfill. Backfill material shall have the following chemical composition by weight:
      a. Hydrated Gypsum: 75 percent.
      b. Bentonite Clay: 20 percent.
      c. Anhydrous Sodium Sulfate: 5 percent.

D. Permanent Reference Electrodes
   1. Copper/copper sulfate (Cu/CuSO4), suitable for direct burial. Electrode shall be guaranteed by supplier for 15 OR 30, as directed, years' service in the installed environment.

E. Wire And Cable
   1. Anode Header Cable: Single-conductor, Type HMWPE, insulated cable specifically designed for direct-buried dc service in cathodic protection installations.
      a. Conductor: Stranded, annealed, uncoated copper, not less than No. 8 AWG, complying with ASTM B 3 and ASTM B 8.
c. Minimum Average Thickness of Insulation: 110 mils (2.8 mm) for Nos. 8 through 2 AWG, and 125 mils (3.2 mm) for Nos. 1 through 4/0 AWG; rated at 600 V.
d. Connectors: Copper-compression type or exothermic welds.

2. Conductors and Cables: Comply with requirements in Division 26 Section "Low-voltage Electrical Power Conductors And Cables".
a. Bonding Conductors for Joint and Continuity Bonds: Not less than No. 8 AWG, stranded, Type THWN copper conductors.
b. Flexible Pipe Coupling Bonds: Flexible copper straps with electrical resistance equal to No. 1/0 AWG stranded copper wire and with five holes for five exothermic welds to pipe.
c. Test Wires: No. 12 AWG, Type THWN copper conductors.
d. Resistance Wires: No. 16 or No. 22 AWG nickel-chromium wire.
e. Cables for Installation in Conduit: Type THWN copper conductors.

F. Test Stations
1. Plastic Test Stations: Flush-mounted type, manufactured of high-impact-resistant PVC or polycarbonate with watertight conduit connections and cover and removable terminal board having at least five terminals.
2. Test Station Mounting Enclosures:
a. Non-Traffic-Area Boxes: Comply with requirements in Division 26 Section "Raceway And Boxes For Electrical Systems".
b. Traffic-Area Boxes: Comply with requirements in Division 26 Section "Underground Ducts And Raceways For Electrical Systems". Boxes shall have cast-iron covers with a welded bead legend "CP TEST."

G. Sealing, Potting, And Dielectric Compounds
1. Sealing and Dielectric Insulating Compound: Comply with NACE RP0188. Black, rubber based, soft, permanently pliable, tacky, moldable, and unbacked; 0.125 inch (3 mm) OR 0.5 inch (13 mm), as directed, thick.
2. Potting Compound: Comply with NACE RP0188. Cast-epoxy, two-package type; fabricated for this purpose and covered with heat-shrinkable tape.

H. Exothermic Welding Materials
1. Exothermic Weld Kits: Specifically designed by manufacturer for welding materials and shapes required.
2. Exothermic Weld Caps: Dome of high-density polyethylene, 10-mil (0.254-mm) minimum thickness, filled with mastic and containing a tunnel portion to separate lead wire from exothermic weld.

I. Coating Repair Materials
1. Touchup Coating Materials: Comply with requirements in Division 09 Section "High-performance Coatings" for coating systems for touchup of factory-applied coatings.
2. Adhesive-Applied Coating Materials: Coating materials shall be compatible with factory-applied coating system.
   a. Nominal thickness of coating materials shall be not less than 8 mils (0.2 mm) OR 16 mils (0.4 mm) OR 24 mils (0.6 mm) OR 40 mils (1.0 mm) OR 60 mils (1.5 mm), as directed, plus or minus 5 percent.
   b. Coating materials shall be one of the following supplied by factory-applied coating system manufacturer:
      1) Polyvinyl-chloride, pressure-sensitive, adhesive tape.
      2) High-density polyethylene/bituminous rubber compound tape.
      3) Butyl rubber tape.
      4) Coal-tar epoxy.
1.3 **EXECUTION**

A. General Installation Requirements

2. Make connections to ferrous pipe and metal tanks using exothermic welding.
3. Coat welds with the coating repair material and apply an exothermic weld cap.

B. Magnesium Anode Installation

1. Install magnesium anodes at locations that clear obstructions. Install at least 36 inches (900 mm) and no more than 10 feet (3 m) from pipe or tank to be protected. Install in augered holes with top of anode 24 inches (600 mm) below pipe invert elevation OR a minimum of 36 inches (900 mm) below finished grade. In soils that will collapse into augered holes, use casing of galvanized sheet steel.
2. Install anodes in a dry condition after plastic or waterproof protective covering has been completely removed from water-permeable permanent container that houses anode metal. Do not use anode-connecting wire for lowering anode into hole. Backfill annular space around anode with fine earth in 6-inch (150-mm) layers; compact each layer using hand tools. Do not strike anode or connecting wire during backfilling and compacting. After backfilling and compacting to within 6 inches (150 mm) of finished grade, pour approximately 5 gal. (20 L) of water into each filled hole. After water has been absorbed by earth, complete backfilling to finished level.
3. If rock strata are encountered before achieving specified augered hole depth, install anodes horizontally at depth at least as deep as bottom of pipe to be protected.
4. Install anodes spaced as indicated, directly connected OR connected through a test station, as directed, to the pipeline, allowing slack in connecting wire to compensate for movement during backfill operation.
5. For tank protection, connect groups of anodes to collector cable. Make contact, through a test station, with tank to be protected.
6. Do not use resistance wires to reduce current output of individual or group anodes.

C. Zinc Anode Installation

1. Install zinc anode horizontally in a hole at least 3 inches (76 mm) larger than anode. Install anode under new copper water tubing, including service lines, blowoffs, and air releases. Separate piping and anode by at least 24 inches (600 mm), but not more than 60 inches (1520 mm).
2. Install anode midway between both ends of piping. Install anode wire in piping trench and connect to piping at an accessible location. Install anode wire in PVC conduit where rising out of the ground to the aboveground connection.

D. Installation Of Reference Electrodes

1. Install directly beneath the buried metallic component being protected.

E. Cable And Wire Installation

1. Install conductors, except anode wires, in PVC conduit with waterproof PVC junction boxes. Comply with requirements in Division 26 Section "Raceway And Boxes For Electrical Systems" for conduit and its installation.
2. Anode Wire Installation: Cover trench bottom for the anode wire with 3-inch (76-mm) layer of sand or stone-free earth. Center wire on backfill layer and do not stretch or kink the conductor. Place backfill over wire in layers not exceeding 6 inches (150 mm) deep, and compact each layer. Use clean fill, free from roots, vegetable matter, and refuse. Place cable underground-line warning tape within 18 inches (460 mm) of finished grade, above cable and conduit.
3. Bonding Conductors: Install conductors on metallic pipe and tanks, to and across buried flexible couplings, mechanical joints, and flanged joints except at places where insulting joints are specified. Welded and threaded joints are considered electrically continuous and do not require bonding.
   a. Install at least two bonds between parts requiring bonding.
   b. Bonding conductors must contain sufficient slack for anticipated movement between structures. Bonding conductors across pipe joints shall have not less than a 4-inch (100-mm) slack for pipe expansion, contraction, and soil stress.
c. Connect bonding conductors to pipe, coupling follower rings and coupling middle ring or sleeve. Connect bonding conductors with exothermic welds.
4. For wire splicing, use compression connectors or exothermic welds.

F. Test Stations
1. Install test stations as follows:
   a. At 1000-foot (300-m) intervals.
   b. At insulating joints.
   c. At both ends of casings when casing material is included in the cathodic protection system.
   d. Where pipe crosses other metal pipes.
   e. Where pipe connects to existing piping system.
   f. Where pipe connects to dissimilar metal pipe.
   g. At each tank component.
2. Install test stations on backfill complying with requirements for trench bottom fill for anode wires unless otherwise indicated.
3. Terminate test conductors on terminal boards and install a spare set of test leads at each testing location.

G. Pipe Joints
1. Insulating Flange Sets: Cover flanges with sealing and dielectric compound.
2. Insulating Unions: Install electrical isolation at each building entrance and at other locations indicated on approved Delegated-Design Drawings. Cover unions with sealing and dielectric compound.

H. Insulating Pipe Sleeves
1. Install insulating sleeves between metallic piping and metal buildings, hangers, supports, and other metal structures. Completely surround the metallic pipe for the full length of the steel contact and effectively prevent contact between the cathodically protected metallic pipe and other metallic structures. Support insulating sleeve to prevent damage to coating and to accommodate relative movement, vibrations, and temperature differentials.

I. Dissimilar Metals
1. Underground Dissimilar Piping: Coat insulating joint and pipe at joints of dissimilar piping material with sealing and dielectric compound for a minimum distance of 10 pipe diameters on both sides of joint.
2. Underground Dissimilar Valves: Coat dissimilar ferrous valves and pipe with sealing and dielectric compound for a minimum distance of 10 pipe diameters on both sides of valve.
3. Aboveground Dissimilar Pipe and Valves: If dissimilar metal pipe joints and valves are not buried and are exposed only to atmosphere, coat connection or valve, including pipe, with sealing and dielectric compound for a minimum distance of three pipe diameters on both sides of junction.

J. Coatings
1. Field Joints: Apply adhesive-applied coating system in a thickness to achieve corrosion protection equal to adjacent factory-applied coating.

K. Identification
1. Comply with requirements in Division 26 Section "Identification For Electrical Systems".
   a. Identify anode wires and anode header cables with marker tape.
   b. Identify underground wires and cables with underground-line warning tape.
   c. Identify text boxes with engraved, laminated acrylic or melamine label, permanently attached to text box.

L. Field Quality Control
1. Comply with NACE RP0169 and NACE RP0285.
2. Perform tests and inspections.
a. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

3. Tests and Inspections:
   a. Static Pull Test: Choose, at random, one completed anode of each type for this destructive test. Demonstrate that anode wire connections have enough strength to withstand a minimum tensile load of 300 lb (136 kg). If test fails, replace all anodes and repeat test at another randomly selected anode.
   b. Insulation Testing: Before anode system is connected to pipe and tank, test insulation at each insulating joint and fitting. Demonstrate that no metallic contact, or short circuit, exists between the two insulated sections of pipe and tank. Replace defective joints or fittings.
   c. Bonding Tests: Test for electrical continuity across all bonded joints. Repair or add additional bonds until electrical continuity is achieved.
   d. Baseline Potentials: After backfilling of pipe, tank, and anodes is completed, but before anodes are connected to pipe and tank, measure the static potential of pipe and tank to soil. Record initial measurements.
   e. Anode Output: Measure electrical current as anodes or groups of anodes are connected to pipe and tank. Use a low-resistance ammeter. Record current, date, time, and location of each measurement.
   f. Pipe- and- Tank-to-Reference Electrode Potential Measurements: On completion of installation of entire cathodic protection system, make electrode potential measurements according to NACE RP0169, using a copper/copper-sulfate reference electrode and a potentiometer-voltmeter, or a dc voltmeter with an internal resistance (sensitivity) of not less than 100,000 ohms per volt and a full scale of 1 or 2 V. Make measurements at same locations as those used for baseline potentials. Record voltage, date, time, and location of each measurement, using one of the following two methods:
      1) 0.85 V Negative Voltage: With cathodic system in operation, measure a negative voltage of at least minus 0.85 V between pipe or tank and a saturated copper/copper-sulfate reference electrode contacting the earth directly over pipe or tank.
      2) 100-mV Polarization Voltage: Determine polarization voltage shift by interrupting protective current and measuring polarization decay. An immediate voltage shift will occur if protective current is interrupted. Use voltage reading, after immediate shift, as base reading from which to measure polarization decay. Measure at least a minimum polarization voltage shift of 100 mV between pipe or tank and a saturated copper/copper-sulfate reference electrode contacting the earth directly over pipe or tank.

4. Location of Measurements for Piping: For coated piping or conduit, measure from reference electrode in contact with the earth directly over pipe. Measure at intervals not exceeding 400 feet (120 m). Make additional measurements at each distribution service riser, with reference electrode placed directly over service line.

5. Location of Measurements for Tanks: For underground tanks, measure from reference electrode located as follows:
   a. Directly over center of tank.
   b. At a point directly over tank and midway between each pair of anodes.
   c. At each end of tank.

7. Stray Current Measurements: Perform at each test station. Mitigate stray currents due to lightning or overhead ac power transmission lines as provided for in NACE standards.

8. Inspect coatings; comply with NACE RP0188. Repair imperfections of factory-applied coatings as specified in "Coatings" Article.
   a. Use electronic holiday detectors to detect coating imperfections.
   b. All damage to the protective coating during transit and handling shall be repaired before installation.
c. Repair factory-applied coatings to have equal or better corrosion resistance than the factory-applied coating system. Field-repair material shall be of the type approved by, and shall be applied as recommended by, manufacturer of the coating material.

M. Adjusting
   2. During the first year after Final Completion, test, inspect, and adjust cathodic protection system every three months to ensure its continued compliance with specified requirements.

N. Demonstration
   1. Train the Owner's maintenance personnel to adjust, operate, and maintain cathodic protection system.

END OF SECTION 13 47 13 13
SECTION 14 24 13 00 - HYDRAULIC ELEVATORS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for hydraulic elevators. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes hydraulic passenger and service elevators.

C. Definitions
1. Definitions in ASME A17.1 apply to work of this Section.
2. Defective Elevator Work: Operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
3. Service Elevator: A passenger elevator that is also used to carry freight.

D. Submittals
1. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for the following:
   a. Car enclosures and hoistway entrances.
   b. Operation, control, and signal systems.
2. Shop Drawings: Show plans, elevations, sections, and large-scale details indicating service at each landing, machine room layout, coordination with building structure, relationships with other construction, and locations of equipment and signals. Include large-scale layout of car control station and standby power operation control panel, as directed. Indicate variations from specified requirements, maximum dynamic and static loads imposed on building structure at points of support, and maximum and average power demands.
3. Samples: For exposed finishes of cars, hoistway doors and frames, and signal equipment; 3-inch- (75-mm-) square Samples of sheet materials; and 4-inch (100-mm) lengths of running trim members.
4. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service, as shown and specified, are adequate for elevator system being provided.
5. Qualification Data: For Installer.
6. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
7. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
8. Warranty: Special warranty specified in this Section.

E. Quality Assurance
1. Installer Qualifications: Elevator manufacturer or manufacturer’s authorized representative who is trained and approved for installation of units required for this Project.
2. Source Limitations: Obtain elevators, including electric traction passenger elevators specified in another Division 14 Section, through one source from a single manufacturer.
   a. Provide major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cabs, and entrances, manufactured by a single manufacturer.
3. Legal Requirements: Comply with ASME A17.1 and elevator design requirements for earthquake loads in ASCE 7.
a. Effective peak velocity acceleration (Av) for Project's location is less than 0.10 (seismic risk zones 0 and 1) OR greater than or equal to 0.10, but less than 0.20 (seismic risk zone 2) OR greater than or equal to 0.20 (seismic risk zones 3 and 4), as directed.
b. Design earthquake spectral response acceleration, short period (Sds) for Project is determined by Project's location and site classification.
c. Project's seismic design category is A OR B OR C OR D, as directed.
d. Elevator importance factor is 1.5 OR 1.0, as directed.

4. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 OR IBC Standard 3002 OR UL 10B, as directed.

F. Delivery, Storage, And Handling
1. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging.
2. Store materials, components, and equipment off of ground, under cover, and in a dry location. Handle according to manufacturer's written recommendations to prevent damage, deterioration, or soiling.

G. Coordination
1. Coordinate installation of sleeves, block outs, and items that are embedded in concrete or masonry for elevator equipment. Furnish templates and installation instructions and deliver to Project site in time for installation.
2. Furnish well casing and coordinate delivery with related excavation work.
3. Coordinate sequence of elevator installation with other work to avoid delaying the Work.
4. Coordinate locations and dimensions of other work relating to hydraulic elevators including pit ladders, sumps, and floor drains in pits; entrance subsills; and electrical service, electrical outlets, lights, and switches in pits and machine rooms.

H. Warranty
1. Special Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to repair, restore, or replace defective elevator work within specified warranty period.
   a. Warranty Period: One year from date of Final Completion.

1.2 PRODUCTS

A. Systems And Components
1. General: Provide manufacturer's standard elevator systems. Where components are not otherwise indicated, provide standard components published by manufacturer as included in standard preengineered elevator systems and as required for complete system.
2. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations. Provide the following, as directed:
   a. Pump, with fan-cooled squirrel-cage induction motor, mounted on oil tank with vibration isolation mounts. Enclose pump in prime-painted steel enclosure lined with 1-inch- (25-mm-) thick, glass-fiber insulation board.
   b. Submersible pump, with submersible squirrel-cage induction motor, suspended inside oil tank from vibration isolation mounts.
   c. Provide motor with wye-delta OR solid-state, as directed, starting.
   d. Provide variable-voltage variable-frequency motor control.
3. Hydraulic Silencers: Provide hydraulic silencer containing pulsation-absorbing material in a blowout-proof housing at pump unit.
4. Piping: Provide size, type, and weight piping recommended by manufacturer, and provide flexible connectors to minimize sound and vibration transmissions from power unit.
   a. Provide dielectric couplings at cylinder units.

5. Hydraulic Fluid: Elevator manufacturer's standard fire-resistant, as directed, fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.
   OR
   Hydraulic Fluid: Nontoxic, readily biodegradable, fire-resistant, as directed, fluid made from vegetable oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives. Hydraulic fluid is approved by elevator manufacturer for use with elevator equipment.

6. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work where installation of devices is specified in another Section.

7. Protective Cylinder Casing: PVC or HDPE pipe casing complying with ASME A17.1, of sufficient size to provide not less than 1-inch (25-mm) clearance from cylinder and extending above pit floor. Provide means to monitor casing effectiveness to comply with ASME A17.1.

8. Corrosion Protective Filler: A nontoxic, petroleum-based gel formulated for filling the space between hydraulic cylinder and protective casing. Filler is electrically nonconductive, displaces or absorbs water, and gels or solidifies at temperatures below 60 deg F (16 deg C).

10. Guides: Provide either roller guides or sliding guides at top and bottom of car and counterweight frames. If sliding guides are used, provide guide-rail lubricators or polymer-coated, nonlubricated guides.

B. Operation Systems
1. General: Provide manufacturer's standard microprocessor operation system for each elevator OR for each group of elevators, as directed, as required to provide type of operation system indicated.

2. Auxiliary OR Single-Car Auxiliary, as directed, Operations: In addition to primary operation system features, provide the following operational features for elevators where indicated:
   a. Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at main lobby OR fire command station, as directed. Manual operation causes automatic operation to cease.
      OR
      Standby-Powered Lowering: On activation of standby power, if car is at a floor it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down.
      OR
      Standby-Powered Lowering: On activation of standby power, car is lowered to the lowest floor, opens its doors, and shuts down.
      OR
      Battery-Powered Lowering: If power fails and car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
      OR
      Battery-Powered Lowering: When power fails, car is lowered to the lowest floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
   b. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors will begin closing.
c. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls and predetermined weight, as directed, can be adjusted.

3. Group Auxiliary Operations: In addition to primary operation system features, provide the following operational features for elevators and elevator groups where indicated:
   a. Standby Power Operation: On activation of standby power, cars are returned to a designated floor and parked with doors open. Only one car is moved upward at a time, with priority given to loaded cars. If a car cannot be returned after two attempts, it is removed from the system. When all cars have been returned or removed from the system, one car is automatically placed in service. If a car selected for service cannot operate within 60 seconds, the system removes car from service and places another car in service. Cars can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at main lobby OR fire command station, as directed. Manual operation causes automatic operation to cease.

OR
Standby Power Operation: On activation of standby power, cars are returned to lowest floor and parked with doors open. If a car cannot be returned, it is removed from the system. One car is selected for service on standby power by a switch located at main lobby OR fire command station, as directed.

OR
Standby-Powered Lowering: On activation of standby power, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down.

OR
Standby-Powered Lowering: On activation of standby power, cars are lowered to the lowest floor, open their doors, and shut down.

OR
Battery-Powered Lowering: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.

OR
Battery-Powered Lowering: When power fails, cars are lowered to the lowest floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.

b. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors will begin closing.

c. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls and predetermined weight, as directed, can be adjusted.

d. Emergency Hospital OR Priority, as directed, Service: Service is initiated by a keyswitch OR card reader OR remote switch, as directed, at designated floors. One elevator is removed from group operation and directed to the floor where service was initiated. On arriving at the floor, elevator opens its doors and parks and a lighted sign directs passengers to exit elevator, as directed. Car is placed in operation by selecting a floor and pressing door close button or by operating keyswitch to put car in independent service. After responding to floor selected or being removed from independent service, car is returned to group operation. If car is not placed in operation within a preset time after being called, it is returned to group operation.

e. Independent Service: Keyswitch in car control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.

f. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car will respond only to car calls, not to hall calls.
4. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.
   a. Card-Reader Operation: System uses card readers at car control stations OR hall push-button stations, as directed, to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space as indicated for card reader in car OR Provide stripe-swipe card reader integral with each car control station, as directed.
      1) Security access system equipment is specified in Division 28 Section "Access Control".
      OR
      Security access system equipment is not in the Contract.
   b. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at car control stations OR hall push-button stations, as directed. Key is removable only in deactivated position OR in either position, as directed.
   c. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time period has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time period after landing button is pressed.
      1) Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
   d. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby, that causes car OR all cars in a group, as directed, to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

C. Door Reopening Devices
   1. Infrared Array: Provide door reopening devices with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more of the light beams shall cause doors to stop and reopen.
   2. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

D. Finish Materials
   1. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
   2. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
   3. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
   4. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
      a. Textured Stainless-Steel Sheet: Product with coined OR embossed, as directed, texture rolled into exposed surface.
         1) Metal surface is satin polished OR satin relieved OR titanium nitride colored OR oxide colored OR satin polished and titanium nitride colored OR satin relieved and titanium nitride colored OR satin polished and oxide colored OR satin relieved and oxide colored OR color coated and satin relieved OR color coated and bright relieved, as directed, after rolling.
   5. Stainless-Steel Bars: ASTM A 276, Type 304.
   10. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063.
12. Plastic Laminate: High-pressure type complying with NEMA LD 3, Type HGS for flat applications or Type HGL for flat applications, as directed, Type HGP for postformed applications and Type BKV for panel backing.

E. Car Enclosures
1. General: Provide enameled-steel car enclosures to receive removable or steel-framed car enclosures with nonremovable, as directed, wall panels, with car or removable car, as directed, roof, access doors, power door operators, and ventilation.
   a. Provide standard railings complying with ASME A17.1 on car tops where required by ASME A17.1.
   b. Provide finished car including materials and finishes specified below.
2. Materials and Finishes: Provide manufacturer's standards, but not less than the following:
   b. Floor Finish: Specified in a Division 07 or Elevator manufacturer's standard level-loop nylon carpet; color as selected from manufacturer's full range, as directed.
   c. Enameled-Steel Wall Panels: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected from manufacturer's full range.
   d. Stainless-Steel Wall Panels: Flush, hollow-metal construction; fabricated from stainless-steel sheet.
   e. Bronze Wall Panels: Flush, hollow-metal construction; fabricated from bronze sheet.
   f. Plastic-Laminate Wall Panels: Plastic laminate adhesively applied to 1/2-inch (13-mm) fire-retardant-treated particleboard or Elevator manufacturer's standard honeycomb core, as directed, with plastic-laminate panel backing and, as directed, manufacturer's standard protective edge trim. Panels have a flame-spread index of 25 or 75, as directed, or less, when tested according to ASTM E 84. Plastic-laminate color, texture, and pattern as selected from plastic-laminate or elevator, as directed, manufacturer's full range.
   g. Fabricate car with recesses and cutouts for signal equipment.
   h. Fabricate car door frame integrally with front wall of car.
   i. Enameled-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected from manufacturer's full range.
   j. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated from stainless-steel sheet or by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning, as directed.
   k. Bronze Doors: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
   l. Plastic-Laminate Doors: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled cold-rolled steel doors and covering edges with protective edge trim matching return panels, as directed. Plastic-laminate color, texture, and pattern as selected from plastic-laminate or elevator, as directed, manufacturer's full range.
   m. Sight Guards: Provide sight guards on car doors.
   n. Sills: Extruded metal, with grooved surface, 1/4 inch (6.4 mm) thick.
   o. Luminous Ceiling: Fluorescent light fixtures and ceiling panels of translucent acrylic or other permanent rigid plastic.
   p. Metal or Metallic-Finish, Plastic-Laminate, as directed, Ceiling: Flush panels, with incandescent downlights in the center of or four low-voltage downlights in, as directed, each panel. Align ceiling panel joints with joints between wall panels, as directed.
   q. Handrails: Manufacturer's standard handrails, of shape, metal, and finish indicated.

F. Hoistway Entrances
1. General: Provide manufacturer’s standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Provide frame size and profile to coordinate with hoistway wall construction.
   a. Where gypsum board wall construction is indicated, provide self-supporting frames with reinforced head sections.

2. Materials and Fabrication: Provide manufacturer’s standards, but not less than the following:
   a. Enameled-Steel Frames: Formed from cold-rolled or hot-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected from manufacturer’s full range.
   b. Steel Subframes: Formed from cold-rolled or hot-rolled steel sheet with factory-applied enamel finish or corrosion-inhibiting primer. Fabricate to receive applied finish as indicated.
   c. Stainless-Steel Frames: Formed from stainless-steel sheet.
   d. Bronze Frames: Formed from cold-rolled or hot-rolled steel sheet, with enamel finish, and with formed-bronze sheet laminated to steel frames using adhesive that fully bonds metal to metal without telegraphing or oil-canning, as directed.
   e. Enameled-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected from manufacturer’s full range.
   f. Stainless-Steel Doors and Transoms: Flush, hollow-metal construction; fabricated from stainless-steel sheet OR by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning, as directed.
   g. Bronze Doors and Transoms: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
   h. Plastic-Laminate Doors and Transoms: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled cold-rolled steel doors and covering edges with protective edge trim matching door frames, as directed. Plastic-laminate color, texture, and pattern as selected from plastic-laminate OR elevator, as directed, manufacturer’s full range.
   i. Sight Guards: Provide sight guards on doors matching door edges.
   j. Sills: Extruded metal, with grooved surface, 1/4 inch (6.4 mm) thick.

G. Signal Equipment
1. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements with long-life incandescent lamps and acrylic or other permanent, nonyellowing translucent plastic diffusers OR LEDs, as directed.

2. Car Control Stations: Provide manufacturer’s standard recessed OR semirecessed, as directed, car control stations. Mount in return panel adjacent to car door, unless otherwise indicated. OR Swing-Return Car Control Stations: Provide car control stations mounted on rear of hinged return panel adjacent to car door and with buttons, switches, controls, and indicator lights projecting through return panel but substantially flush with face of return panel.
   a. Mark buttons and switches with standard identification for required use or function that complies with ASME A17.1. Use both tactile symbols and Braille.
   b. Provide “No Smoking” sign matching car control station, either integral with car control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.

3. Emergency Communication System: Provide system that complies with ASME A17.1 and the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG).” On activation, system dials preprogrammed number of monitoring station and identifies elevator location to monitoring station. System provides two-way voice communication without using a handset and provides visible signals that indicate when system has been activated and when monitoring station has responded. System is contained in flush-mounted cabinet, with identification, instructions for use, and battery backup power supply.
4. Firefighters' Two-Way Telephone Communication Service: Provide flush-mounted cabinet OR telephone jack, **as directed**, in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in Division 28 Section(s) "Digital, Addressable Fire-alarm System" OR "Zoned (dc Loop) Fire-alarm System".

5. Car Position Indicator: Provide illuminated, **as directed**, digital-type car position indicator, located above car door or above car control station. Also provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served.
   a. Include travel direction arrows if not provided in car control station.

6. Hall Push-Button Stations: Provide one hall push-button station at each landing for each single elevator or group of elevators, but not less than one station for each four elevators in a group, **as directed**.
   OR
   Hall Push-Button Stations: Provide hall push-button stations at each landing as indicated.
   a. Provide manufacturer's standard wall-mounted units.
   b. Provide units with flat faceplate for mounting with body of unit recessed in wall.
   c. Equip units with buttons for calling elevator and for indicating desired direction of travel.
   d. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in Division 28 Section(s) "Digital, Addressable Fire-alarm System" OR "Zoned (dc Loop) Fire-alarm System".

7. Hall Lanterns: Units with illuminated arrows; but provide single arrow at terminal landings. Provide one of the following, **as directed**:
   a. Manufacturer's standard wall-mounted units, for mounting above entrance frames.
   b. Units with flat faceplate for mounting with body of unit recessed in wall and with illuminated elements projecting from faceplate for ease of angular viewing.
   c. Units mounted in both jambs of entrance frame for each elevator, **as directed**.
   d. Units mounted in both car door jambs; may be used only for single elevators or for two-car groups, **as directed**.

8. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
   a. At manufacturer's option, audible signals may be placed on car OR each car, **as directed**.

9. Hall Position Indicators: Provide illuminated, **as directed**, digital-display-type position indicators, located above each, **as directed**, hoistway entrance at ground floor. Provide units with flat faceplate for mounting and with body of unit recessed in wall.
   a. Integrate ground-floor hall lanterns with hall position indicators.

10. Standby Power Elevator Selector Switches: Provide switches, as required by ASME A17.1, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed. For each elevator, provide illuminated signals that indicate when they are operational and when they are at the designated emergency return level with doors open, **as directed**.
    OR
    Fire Command Center Annunciator Panel: Provide panel containing illuminated position indicators for each elevator, clearly labeled with elevator designation; include illuminated signal that indicates when elevator is operational and when it is at the designated emergency return level with doors open. Provide standby power elevator selector switch(es), as required by ASME A17.1, adjacent to position indicators. Provide illuminated signal that indicates when normal power supply has failed.

11. Corridor Call Station Pictograph Signs: Provide signs matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station, unless otherwise indicated.

H. Elevators
1. Elevator Description:
   a. Group Number: Insert a different number for each group of elevators that share a group operation system, as directed by the Owner.
   b. Elevator Number(s): Insert elevator number(s) as shown on Drawings, as directed by the Owner.
c. Service Elevator Number(s): Insert elevator number(s) as shown on Drawings, as directed by the Owner.

d. Type: Under-the-car single cylinder.

OR
Type: Holeless, beside-the-car, single-acting, single OR dual, as directed, cylinder.

OR
Type: Holeless, beside-the-car, telescoping, single OR dual, as directed, cylinder.

OR
Type: Holeless, beside-the-car, roped hydraulic, single OR dual, as directed, cylinder.

e. Rated Load: 2000 lb (908 kg) OR 2100 lb (953 kg) OR 2500 lb (1135 kg) OR 3000 lb (1362 kg) OR 3500 lb (1589 kg) OR 4000 lb (1816 kg) OR 4500 lb (2043 kg) OR 5000 lb (2270 kg), as directed.

f. Freight Loading Class for Service Elevators: Class A.

g. Rated Speed: 75 or 80 fpm (0.38 or 0.41 m/s) OR 100 fpm (0.51 m/s) OR 125 fpm (0.64 m/s) OR 150 fpm (0.76 m/s) OR 175 fpm (0.89 m/s) OR 200 fpm (1.0 m/s), as directed.

h. Operation System: Single automatic OR Selective collective automatic OR Group automatic, as directed, operation.

i. Auxiliary Operations:
   1) Standby power operation.
   2) Standby-powered lowering.
   3) Battery-powered lowering.
   4) Automatic dispatching of loaded car.
   5) Nuisance call cancel.
   6) Emergency hospital OR Priority, as directed, service at designated floors OR all floors, as directed.
   7) Independent service for service elevator OR all cars in group, as directed.
   8) Loaded-car bypass.

j. Security Features: Card-reader operation OR Keyswitch operation OR Keypad operation OR Car-to-lobby feature, as directed.

k. Dual Car Control Stations: Provide two car control stations in each elevator, as directed; equip only one with required keyswitches, if any.

l. Car Enclosures:
   1) Inside Width: 64 inches (1626 mm) OR 68 inches (1727 mm) OR 80 inches (2032 mm) OR 92 inches (2337 mm), as directed, from side wall to side wall.
   2) Inside Depth: 51 inches (1295 mm) OR 53 inches (1346 mm) OR 57 inches (1448 mm) OR 65 inches (1651 mm) OR 87-1/2 inches (2222 mm) OR 90 inches (2286 mm) OR 93 inches (2362 mm) OR 93-1/2 inches (2375 mm) OR 96 inches (2438 mm) OR 101 inches (2565 mm) OR 102 inches (2591 mm), as directed, from back wall to front wall (return panels).
   3) Inside Height: 88 inches (2235 mm) OR 92 inches (2337 mm) OR 94 inches (2388 mm) OR 100 inches (2540 mm) OR 104 inches (2642 mm) OR 108 inches (2743 mm) OR 112 inches (2845 mm), as directed, to underside of ceiling.
   4) Front Walls (Return Panels): Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered, as directed, with integral car door frames.
   5) Car Fixtures: Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered, as directed.
   6) Side and Rear Wall Panels: Enameled steel OR Plastic laminate OR Satin stainless steel, No. 4 finish OR Textured stainless steel, as directed.
   7) Reveals: Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered, as directed.
   8) Door Faces (Interior): Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Textured stainless steel OR Polished bronze, lacquered OR Satin bronze, lacquered OR Plastic laminate, as directed.
   9) Door Sills: Aluminum, mill finish OR Bronze, polished OR Nickel silver, polished, as directed.
10) Ceiling: Luminous ceiling OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Reflective metallic-finish, plastic-laminate, stainless steel OR Reflective metallic-finish, plastic-laminate, bronze, as directed.

11) Handrails: 1-1/2 inches (38 mm) round OR 1/2 by 2 inches (13 by 50 mm) rectangular, as directed, mirror-polished stainless steel, No. 8 finish OR satin stainless steel, No. 4 finish OR mirror-polished bronze, lacquered OR satin bronze, lacquered, as directed, at sides OR sides and rear, as directed, of car.

12) Floor: Manufacturer's standard carpet.
OR
Floor prepared to receive carpet (specified in Division 09 Section "Sheet Carpeting").
OR
Floor prepared to receive resilient tile (specified in Division 09 Section "Resilient Tile Flooring").
OR
Floor prepared to receive sheet vinyl (specified in Division 09 Section "Resilient Sheet Flooring").
OR
Floor recessed and prepared to receive dimension stone tile (specified in Division 09 Section "Stone Tiling") OR ceramic tile (specified in Division 09 Section "Tiling"), as directed.
OR
Floor Thickness, Including Setting Materials: Thickness above plywood subfloor, shall be as directed by the Owner.

m. Hoistway Entrances:
1) Width: 36 inches (914 mm) OR 42 inches (1067 mm) OR 48 inches (1219 mm) OR 54 inches (1372 mm), as directed.
2) Height: 84 inches (2134 mm) OR 96 inches (2438 mm), as directed.
3) Type: Single-speed side sliding OR Two-speed side sliding OR Single-speed center opening OR Two-speed center opening, as directed.
4) Fire-Protection Rating: 1 hour OR 1-1/2 hours, as directed, with 30-minute temperature rise of 450 deg F (250 deg C), as directed.
5) Frames at First Floor OR at Basement Floors, as directed: Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered, as directed.
6) Frames at Other Floors: Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered, as directed.
7) Doors and Transoms at First Floor OR at Basement Floors, as directed: Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Textured stainless steel OR Polished bronze, lacquered OR Satin bronze, lacquered OR Plastic laminate, as directed.
8) Doors and Transoms at Other Floors: Enameled steel OR Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Textured stainless steel OR Polished bronze, lacquered OR Satin bronze, lacquered OR Plastic laminate, as directed.
9) Sills at First Floor OR at Basement Floors, as directed: Aluminum, mill finish OR Bronze, polished OR Nickel silver, polished, as directed.
10) Sills at Other Floors: Aluminum, mill finish OR Bronze, polished OR Nickel silver, polished, as directed.

n. Hall Fixtures at First Floor OR at Basement Floors, as directed: Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered OR Recessed type with no exposed-metal surfaces, as directed.

o. Hall Fixtures at Other Floors: Polished stainless steel, No. 8 finish OR Satin stainless steel, No. 4 finish OR Polished bronze, lacquered OR Satin bronze, lacquered OR Recessed type with no exposed-metal surfaces, as directed.
Additional Requirements:

1) Provide inspection certificate in each car, mounted under acrylic cover with frame made from polished stainless steel, No. 8 finish OR satin stainless steel, No. 4 finish OR polished bronze, lacquered OR satin bronze, lacquered, as directed.

2) Provide blanket hooks in all cars, as directed, and one OR two, as directed, complete set(s) of full-height protective blankets.

1.3 EXECUTION

A. Examination

1. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.

   a. For the record, prepare a written report, endorsed by Installer, listing dimensional discrepancies and conditions detrimental to performance or indicating that dimensions and conditions were found to be satisfactory.

   b. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Installation

1. Excavation for Cylinder: Drill well hole in each, as directed, elevator pit to accommodate installation of cylinder; comply with applicable requirements in Division 31 Section "Earth Moving".

2. Provide waterproof well casing as necessary to retain walls of well hole.

3. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole and provide permanent waterproof seal at bottom of well casing, as directed.

   a. Fill void space between protective casing and cylinder with corrosion protective filler.

   b. Align cylinders and fill space around protective casing with fine sand.

4. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between well OR protective, as directed, casing and pit floor with 4 inches (100 mm) of nonshrink, nonmetallic grout.

5. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.

6. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators.

7. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts designed to effectively prevent transmission of vibrations to structure and thereby eliminate sources of structure-borne noise from elevator system.

8. Install piping above the floor, where possible. Where not possible, install underground piping in Schedule 40 PVC pipe casing assembled with solvent-cemented fittings.

   OR

   Install piping above the floor, where possible. Where not possible, cover underground piping with permanent protective wrapping before backfilling.

9. Lubricate operating parts of systems as recommended by manufacturers.

10. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.

11. Leveling Tolerance: 1/4 inch (6 mm), up or down, regardless of load and direction of travel.

12. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.

13. Locate hall signal equipment for elevators as follows, unless otherwise indicated:

   a. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
b. Place hall lanterns either above or beside each hoistway entrance.
c. Mount hall lanterns at a minimum of 72 inches (1829 mm) above finished floor.

C. Field Quality Control
   1. Acceptance Testing: On completion of elevator installation and before permitting use (either temporary or permanent) of elevators, perform acceptance tests as required and recommended by ASME A17.1 and by governing regulations and agencies.
   2. Advise Owner and authorities having jurisdiction in advance of dates and times tests are to be performed on elevators.

D. Protection
   1. Temporary Use: Limit temporary use for construction purposes to one elevator, as directed. Comply with the following requirements for each, as directed, elevator used for construction purposes:
      a. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
      b. Provide strippable protective film on entrance and car doors and frames.
      c. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
      d. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
      e. Do not load elevators beyond their rated weight capacity.
      f. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
      g. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

E. Demonstration
   1. Train Owner's maintenance personnel to operate, adjust, and maintain elevator(s).
   2. Check operation of each, as directed, elevator with Owner's personnel present and before date of Final Completion. Determine that operation systems and devices are functioning properly.
   3. Check operation of each, as directed, elevator with Owner's personnel present not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

SECTION 14 42 13 00 - WHEELCHAIR LIFTS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for wheelchair lifts. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   b. Inclined and Private-residence, inclined platform lifts.
   c. Inclined and Private-residence, inclined stairway chairlifts.

C. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For each lift. Include plans, elevations, sections, details, and attachments to other work.
   a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: For power, signal, and control wiring.
3. Samples: For each type of exposed finish required.
4. Manufacturer Certificates: Signed by lift manufacturer certifying that runway, ramp or pit, and dimensions as shown on Drawings and that electrical service as shown and specified are adequate for lift being provided.
5. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted use of lifts.
6. Operation and Maintenance Data: For each type of lift to include in operation and maintenance manuals.
7. Warranty: Sample of special warranty.
8. Continuing maintenance proposal.

D. Quality Assurance
1. Legal Requirements: In addition to requirements of authorities having jurisdiction, comply with Americans with Disabilities Act (including the ADA Standards issued by the U.S. Department of Justice and the U.S. Department of Transportation and the United States Access Board’s Guide to the ADA Standards, specifically Chapter 4. “Elevators and Platform Lifts” (available on-line at https://www.access-board.gov), as directed.
2. Fire-Rated, Runway-Enclosure Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 OR IBC Standard OR UL 10B, as directed.
   a. Temperature-Rise Limit: Provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.

E. Warranty
1. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of lifts that fail in materials or workmanship within two OR Four OR Five, as directed, years from date of Final Completion.

F. Maintenance Service
1. Initial Maintenance Service: Beginning at Final Completion, provide 12 months’ full maintenance by skilled employees of lift Installer. Include quarterly preventive maintenance and repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper lift operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.

2. Continuing Maintenance Proposal: From Installer to the Owner, in the form of a standard yearly OR two-year OR five-year, as directed, maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.2 PRODUCTS

A. Materials
1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
2. Steel Tubing: ASTM A 500.
3. Steel Pipe: ASTM A 53/A 53M; standard weight (Schedule 40) unless otherwise indicated or required by structural loads.
4. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel (CS), Type B, exposed, matte finish.
5. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel (CS), Type B, pickled.
6. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 (Z275) zinc coating,
7. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
   a. ASTM A 123/A 123M, for galvanizing steel and iron products.
   b. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
8. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required:
10. Stainless-Steel Tubing: ASTM A 554, Grade MT-304.
11. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240/A 240M or ASTM A 666, Type 304.
12. Stainless-Steel Floor Plate: ASTM A 793.
13. Wood and Wood Panel Products: Comply with requirements in Division 06 Section "Interior Architectural Woodwork".
14. Wood and Wood Panel Products:
   a. Wood: Clear, vertical-grain, straight, kiln-dried wood, AWPA C20-02, Interior Type A, fire-retardant treated, as directed; of manufacturer’s standard species.
   b. Wood Panels: Provide wood panels consisting of wood veneer and wood panel as follows:
      1) Wood Veneer: Laminated to core with moisture-resistant adhesive.
      2) Plywood: DOC PS 1.
      3) Particleboard: ANSI A208.1, made with binder containing no urea formaldehyde, as directed.
      4) Medium-Density Fiberboard: ANSI A208.2, made with binder containing no urea formaldehyde, as directed.
   c. Fire-Retardant-Treated Wood Panels: Provide wood panels consisting of wood veneer and AWPA C27-02 fire-retardant-treated wood panels. Panels shall have flame-spread index of 75 OR 25, as directed, or less and smoke-developed index of 450 or less per ASTM E 84.
      1) Wood Veneer: Laminated to core with moisture-resistant adhesive.
      2) Plywood: DOC PS 1.
      3) Particleboard: ANSI A208.1, made with binder containing no urea formaldehyde, as directed.
      4) Medium-Density Fiberboard: ANSI A208.2, made with binder containing no urea formaldehyde, as directed.

16. Glass:
   a. Comply with requirements in Division 08 Section "Glazing".
      OR
      As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed, and complying with ASME A18.1.
      1) Safety Glazing Products: Comply with testing requirements in 16 CFR 1201, Category II.
      2) Safety Glass Marking: Glass permanently marked with certification label of SGCC or another certification agency or manufacturer acceptable to authorities having jurisdiction.

17. Acrylic Glazing: ASTM D 4802, Category A-1 (cell-cast) or Category A-2 (continuous cast), Finish 1 (smooth or polished), clear or tinted as indicated.

18. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing structural members, guide rails, machines, and other lift components where installation of devices is specified in another Section.

19. Expansion Anchors: Anchor-bolt-and-sleeve assembly of material indicated below with capability to sustain a load equal to 10 times the load imposed as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
   a. Material:
      1) Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.
         OR
         Group 1, Alloy 304 or Alloy 316, stainless-steel bolts and nuts complying with ASTM F 593 (ASTM F 738M) and ASTM F 594 (ASTM F 836M).

B. Vertical Platform Lifts
   1. Private-Residence, as directed, Vertical Platform Lifts: Manufacturer's standard preengineered lift systems as indicated.
   2. Platform Size: 34 by 54 inches (864 by 1372 mm) OR 35 by 48 inches (889 by 1220 mm) OR 35 by 51 inches (889 by 1295 mm) OR 36 by 56 inches (914 by 1422 mm) OR 36 by 60 inches (914 by 1524 mm), as directed.
   3. Door Operation and Clear Opening Width: Low-energy, power-operated doors that remain open for 20 seconds minimum; end door with minimum 32-inch (815-mm) and side door with minimum 42-inch (1065-mm) clear opening width.
   4. Rated Speed: 8 fpm (0.04 m/s) OR 10 fpm (0.05 m/s) OR 12 fpm (0.06 m/s) OR 15 fpm (0.08 m/s) OR 20 fpm (0.10 m/s) OR 22 fpm (0.11 m/s) OR 30 fpm (0.15 m/s), as directed.
   5. Power Supply: 208 V, 60 Hz, 3 phase OR 240 V, 60 Hz, 1 phase OR 120 V, 60 Hz, 1 phase, as directed.
   6. Emergency Operation: Provide emergency manual operation and emergency battery power system OR connection to indicated standby (emergency) power, as directed, to raise or lower units in case of malfunction or power loss.
   7. Attendant Operation: Provide attendant operation at location shown.
   8. Self-Supporting Units: Support vertical loads of units only at base, with lateral support only at landing levels.
   9. Partial, as directed, Runway Enclosure: Manufacturer's standard weather-resistant, as directed, enclosure assembly.
      a. Runway Enclosure: One of the following, as directed.
         1) Rectangular steel-tube frame with flush steel-sheet panels.
         2) Rectangular hot-dip-galvanized steel-tube frame with flush galvanized-steel-sheet panels.
         3) Extruded-aluminum frame with flush galvanized-steel-sheet panels.
         4) Extruded-aluminum frame with flush aluminum-sheet panels: with hot-dip-galvanized steel-tube frame for structural framing that cannot be aluminum.
         5) Rectangular steel-tube frame with wood panels and trim.
6) Rectangular wood frame with wood panels and trim.
7) Rectangular steel-tube frame with fiberglass panels.

b. Glazed Runway Enclosure: Rectangular structure of glazed extruded-aluminum framing with a tinted, acrylic dome roof.
   1) Glazing:
      a) Bronze-tinted acrylic glazing, 6.0 mm thick.
      OR
      Bronze-tinted, float glass OR tempered safety OR laminated safety, as directed, glass, 6.0 mm thick, where indicated.
   
   c. Runway-Enclosure Doors: One of the following, as directed:
      1) Rectangular steel-tube frames with flush steel-sheet panels.
      2) Rectangular steel-tube frames glazed with 6.0-mm-thick, clear acrylic glazing and with 12-inch- (300-mm-) high, steel kick panels.
      3) Wide-stile aluminum entrance doors glazed with bronze-tinted tempered safety glass, 6.0 mm thick.
      4) Enclosure doors matching appearance of adjacent glass-supported railings, complying with Division 05 Section "Decorative Metal Railings".

d. Fire-Rated Runway-Enclosure Door: Provide fire-rated runway-enclosure door where shown OR at upper landing OR at lower landing, as directed.
   1) Fire-Protection Rating: 1-1/2 hours.
   2) Equip door with wired glass vision panel, delay-action door closer, dead latch, dummy trim door handle, and electric strike.

10. Platform: One of the following, as directed:
   a. Galvanized-steel sheet with black rubber flooring.
   b. Stainless-steel floor plate with checkered texture.
   c. Aluminum floor plate with nonskid surface texture.

11. Platform Low-Profile Carriage: Fabricate platform floor assembly to total thickness not exceeding 1-1/2 inches (38 mm).

12. Platform Enclosure and Door: One of the following, as directed:
   a. Rectangular steel-tube frame with flush steel-sheet panels.
   b. Rectangular hot-dip-galvanized steel-tube frame with flush galvanized-steel-sheet panels.
   c. Extruded-aluminum frame with flush galvanized-steel-sheet panels.
   d. Extruded-aluminum frame with flush aluminum-sheet panels; with hot-dip-galvanized steel-tube frame for structural framing that cannot be aluminum.
   e. Rectangular steel-tube frame with wood panels and trim.
   f. Rectangular steel-tube frame with fiberglass panels.
   g. Enclosure walls and doors matching appearance of adjacent glass-supported railings, complying with Division 05 Section "Decorative Metal Railings".

13. Platform Top: Provide a non-load-bearing top, matching construction of enclosure walls. Permanently mark top to indicate that it cannot sustain a load.

14. Fixed Ramp: Provide fixed ramp matching platform to provide transition from floor to lift platform at bottom landing.

15. Retractable Ramp: Provide ramp matching platform to provide transition from lower floor to lift platform. Ramp lowers to floor automatically when lifts reach lower landing and door opens. Ramp rises automatically when lift control is activated for lift to leave lower landing.
   a. Ramp Size: End ramps a minimum of 32 inches (815 mm) and side ramps a minimum of 42 inches (1065 mm) wide; length as required for slope.
   b. Ramp Slope: As indicated OR Maximum 1:12, as directed.
   c. Ramp Finish: Finish ramps to match lift platform OR Ramp finish is specified elsewhere as indicated, as directed.

16. Accessories: Provide units with the following accessories:
   a. Fold-down seat with armrests and safety belt.
   b. Forced Ventilation System: Minimum 1 air change per minute, continuously operating OR thermostatically controlled to activate at 90 deg F (32.22 deg C) , as directed, and with auxiliary power source to operate ventilation for 1 hour in case of power failure.
   c. Lighting system within lift enclosures as indicated on Drawings OR selected from manufacturer's available products, as directed.
C. Inclined Platform Lifts
1. Private-Residence, as directed, Inclined Platform Lifts: Manufacturer's standard preengineered lift systems as indicated.
2. Platform Size: 29 by 33 inches (737 by 838 mm) OR 28 by 35 inches (711 by 889 mm) OR 30 by 35 inches (760 by 889 mm) OR 30 by 36 inches (760 by 914 mm) OR 31 by 39 inches (787 by 991 mm) OR 30 by 41 inches (760 by 1041 mm) OR 30 by 42 inches (760 by 1067 mm) OR 31 by 43 inches (787 by 1092 mm) OR 30 by 48 inches (760 by 1220 mm), as directed.
3. Door Operation and Clear Opening Width: Low-energy, power-operated doors that remain open for 20 seconds minimum; end door with minimum 32-inch (815-mm) and side door with minimum 42-inch (1065-mm) clear opening width.
4. Rated Speed: 20 fpm (0.10 m/s) OR 22 fpm (0.11 m/s) OR 25 fpm (0.13 m/s) OR 30 fpm (0.15 m/s), as directed.
5. Minimum Headroom Clearance during Travel: Minimum of 80 inches (2032 mm) above any point on platform floor.
6. Power Supply: 208 V, 60 Hz, 3 phase OR 240 V, 60 Hz, 1 phase OR 120 V, 60 Hz, 1 phase, as directed.
7. Emergency Operation: Provide emergency manual operation and emergency battery power system OR connection to indicated standby (emergency) power, as directed, to raise or lower units in case of malfunction or power loss.
8. Attendant Operation: Provide attendant operation at location shown.
9. Platform: One of the following, as directed:
   a. Galvanized-steel sheet with black rubber flooring.
   b. Stainless-steel floor plate with checkered texture.
   c. Aluminum floor plate with nonskid surface texture.
10. Automatic Folding Platforms: When not in use, platforms automatically fold up against wall to minimize projection into stairway.
11. Manual Folding Platforms: When not in use, platforms can be folded up against wall to minimize projection into stairway.
12. Platform Guarding: Guard platform with passenger restraining arms OR enclosure, as directed.
   a. Passenger Restraining Arms: Steel OR Galvanized-steel OR Stainless-steel, as directed, tubing, manually OR power, as directed, operated.
   b. Platform Enclosure (Side Walls and Self-Closing Door): One of the following, as directed:
      1) Rectangular steel-tube frame with flush steel-sheet panels.
      2) Enclosure walls and doors matching appearance of adjacent glass-supported railings, complying with Division 05 Section "Decorative Metal Railings".
13. Platform Guarding: Guard platform with automatically OR manually, as directed, actuated, retractable metal guard on lower access end of platform.
14. Fixed Ramp: Provide fixed ramp matching platform to provide transition from floor to lift platform at bottom landing.
15. Retractable Ramp: Provide ramp matching platform to provide transition from floor to lift platform. Ramp lowers to floor automatically when lifts reach landing and enclosure door opens. Ramp rises automatically when lift control is activated for lift to leave landing.
   a. Ramp Size: End ramps a minimum of 32 inches (815 mm) and side ramps a minimum of 42 inches (1065 mm) wide; length as required for slope.
   b. Ramp Slope: As indicated OR Maximum 1:12, as directed.
   c. Ramp Finish: Finish ramps to match lift platform OR Ramp finish is specified elsewhere as indicated, as directed.
16. Supporting Structure: Provide framing to support vertical loads from floor or stair treads and only lateral loads from walls. Fabricate framing from steel OR stainless-steel, as directed, rectangular tubing, plates, shapes, and bars.
17. Guide Rails: Fabricate from steel OR stainless-steel, as directed, tubing.
18. Accessories: Provide units with the following accessories:
   a. Fold-down seat with armrests and safety belt.
   b. Caution sign as required by ASME A18.1.

D. Inclined Stairway Chairlifts
1. Private-Residence, as directed, Inclined Stairway Chairlifts: Manufacturer's standard preengineered lift systems as indicated.
2. **Systems and Machinery:** Manufacturer's standard preengineered lift systems as indicated in published product literature and as follows:
   a. **Rated Capacity:** Minimum 250 lb (113 kg) OR 400 lb (181 kg), as directed.
   b. **Rated Speed:** 18 fpm (0.09 m/s) OR 20 fpm (0.10 m/s) OR 22 fpm (0.11 m/s) OR 25 fpm (0.13 m/s), as directed.

3. **Power Supply:** 120 V, 60 Hz, 1 phase.

4. **Battery Operation:** Provide battery-operated drive with automatic charging system.

5. **Manual Lowering:** Provide means to manually lower units in case of malfunction or power loss.

6. **Folding Units:** Provide units that can be folded up against wall when not in use, to minimize projection into stairway.

7. **Supporting Structure:** Provide brackets to support vertical loads from floor or stair treads and to support lateral loads from walls. Fabricate brackets from steel plates, shapes, or bars.

8. **Accessories:** Provide units with the following accessories:
   a. Tubular-steel, manually operated safety arms designed to restrain and provide grab bar for occupant.
   b. Retractable seat belt.
   c. Seat with back and two handgrips or arms.

**E. General Finish Requirements**

1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

**F. Finishes**

1. **Steel and Galvanized-Steel Factory Finish:**
   a. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard 2-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat.
   b. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard, thermosetting polyester or acrylic urethane powder coating with a cured film thickness not less than 1.5 mils (0.04 mm).
   c. Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

2. **Stainless-Steel Finishes:**
   a. Floor Plate Finish: Mill OR Abrasive blasted, as directed.
   b. Grab Rail Finish: As selected from manufacturer's full range OR Directional satin finish No. 4, as directed.

3. **Aluminum Finishes:**
   a. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm OR AA-M12C22A31, Class II, 0.010 mm, as directed, or thicker.
   b. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm OR AA-M12C22A32/A34, Class II, 0.010 mm, as directed, or thicker.
   1) Color: As selected from full range of industry colors and color densities.
   c. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard, thermosetting polyester or acrylic urethane powder coating with a cured film thickness not less than 1.5 mils (0.04 mm).
   1) Color and Gloss: As selected from manufacturer's full range.

4. **Wood Finish:**
   a. As specified in Division 09 Section "Staining And Transparent Finishing". OR
   As selected from manufacturer's full range, as follows:
   1) Type: Transparent finish OR Transparent finish over stain, as directed, over wood variety indicated.
5. Fiberglass Color and Gloss: As selected from manufacturer's full range.

1.3 EXECUTION

A. Installation
1. Wiring Method: Conceal conductors and cables within housings of units or building construction. Do not install conduit exposed to view in finished spaces. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
2. Coordinate runway doors with platform travel and positioning, for accurate alignment and minimum clearance between platforms, runway doors, sills, and door frames.
3. Position sills accurately and fill space under sills solidly with nonshrink, nonmetallic grout.
4. Coordinate platform doors with platform travel and positioning.
5. Adjust stops for accurate stopping and leveling at each landing, within required tolerances.
   a. Leveling Tolerance: 1/4 inch (6 mm) up or down, regardless of load and direction of travel.
6. Adjust retractable ramps to meet maximum allowable slope and change-in-elevation requirements, and to lie fully against landing surfaces.
7. Lubricate operating parts of lift, including drive mechanism, guide rails, hinges, safety devices, and hardware.
8. Test safety devices and verify smoothness of required protective enclosures and fascias

B. Field Quality Control
1. Acceptance Testing: On completion of lift installation and before permitting use of lifts, perform acceptance tests as required and recommended by ASME A18.1 and authorities having jurisdiction.
2. Operating Test: In addition to above testing, load lifts to rated capacity and operate continuously for 30 minutes between lowest and highest landings served. Readjust stops, signal equipment, and other devices for accurate stopping and operation of system.
3. Advise the Owner, Architect, and authorities having jurisdiction in advance of dates and times tests are to be performed on lifts.

C. Demonstration
1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain lifts. Include a review of emergency systems and emergency procedures to be followed at time of operational failure and other building emergencies.

SECTION 21 05 13 00 - COMMON MOTOR REQUIREMENTS FOR FIRE SUPPRESSION EQUIPMENT

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for common motor requirements for fire suppression equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer’s factory or shipped separately by equipment manufacturer for field installation.

C. Coordination
   1. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
      a. Motor controllers.
      b. Torque, speed, and horsepower requirements of the load.
      c. Ratings and characteristics of supply circuit and required control sequence.
      d. Ambient and environmental conditions of installation location.

1.2 PRODUCTS

A. General Motor Requirements
   1. Comply with requirements in this Section except when stricter requirements are specified in fire suppression equipment schedules or Sections.
   2. Comply with NEMA MG 1 unless otherwise indicated.
   3. Comply with IEEE 841 for severe-duty motors.

B. Motor Characteristics
   1. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
   2. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

C. Polyphase Motors
   1. Description: NEMA MG 1, Design B, medium induction motor.
   2. Efficiency: Energy efficient, as defined in NEMA MG 1.
      a. For motors with 2:1 speed ratio, consequent pole, single winding.
      b. For motors with other than 2:1 speed ratio, separate winding for each speed.
   5. Multispeed Motors: Separate winding for each speed.
   7. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
   8. Temperature Rise: Match insulation rating.
   9. Insulation: Class F.
   10. Code Letter Designation:
        a. Motors 15 HP and Larger: NEMA starting Code F or Code G.
b. Motors Smaller than 15 HP: Manufacturer’s standard starting characteristic.

11. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

D. Polyphase Motors With Additional Requirements

1. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
2. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   a. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   b. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   c. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   d. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

3. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

E. Single-Phase Motors

1. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
   a. Permanent-split capacitor.
   b. Split phase.
   c. Capacitor start, inductor run.
   d. Capacitor start, capacitor run.
3. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
5. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

1.3 EXECUTION (Not Applicable)

END OF SECTION 21 05 13 00
SECTION 21 05 19 00 - WATER DISTRIBUTION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for water distribution. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes water-distribution piping and related components outside the building for water service OR fire-service mains OR combined water service and fire-service mains, as directed.
2. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

C. Definitions
1. EPDM: Ethylene propylene diene terpolymer rubber.
2. LLDPE: Linear, low-density polyethylene plastic.
3. PA: Polyamide (nylon) plastic.
4. PE: Polyethylene plastic.
5. PP: Polypropylene plastic.
6. PVC: Polyvinyl chloride plastic.
7. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
8. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
3. Field quality-control test reports.
4. Operation and Maintenance Data.

E. Quality Assurance
1. Regulatory Requirements:
   a. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
   b. Comply with standards of authorities having jurisdiction for potable-water-service piping, including materials, installation, testing, and disinfection.
   c. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
2. Piping materials shall bear label, stamp, or other markings of specified testing agency.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
4. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.
6. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.
7. NSF Compliance:
   a. Comply with NSF 14 for plastic potable-water-service piping. Include marking "NSF-pw" on piping.
b. Comply with NSF 61 for materials for water-service piping and specialties for domestic water.

F. Delivery, Storage, And Handling

1. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:
   a. Ensure that valves are dry and internally protected against rust and corrosion.
   b. Protect valves against damage to threaded ends and flange faces.
   c. Set valves in best position for handling. Set valves closed to prevent rattling.

2. During Storage: Use precautions for valves, including fire hydrants, according to the following:
   a. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
   b. Protect from weather. Store indoors and maintain temperature higher than ambient dew-point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

3. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

4. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

5. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

6. Protect flanges, fittings, and specialties from moisture and dirt.

7. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

G. Project Conditions

1. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of service.
   b. Do not proceed with interruption of water-distribution service without the Owner's written permission.

H. Coordination

1. Coordinate connection to water main with utility company.

1.2 PRODUCTS

A. Copper Tube And Fittings

1. Soft Copper Tube: ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed, water tube, annealed temper.
   b. Copper, Pressure-Seal Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

2. Hard Copper Tube: ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed, water tube, drawn temper.
   b. Copper, Pressure-Seal Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
3. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.

B. Ductile-Iron Pipe And Fittings
1. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   a. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
   b. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   a. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
   b. Gaskets: AWWA C111, rubber.

   a. Grooved-End, Ductile-Iron Pipe Appurtenances:
      1) Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
      2) Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

C. PE Pipe And Fittings
1. PE, ASTM Pipe: ASTM D 2239, SIDR No. 5.3, 7, or 9; with PE compound number required to give pressure rating not less than 160 psig (1100 kPa) OE 200 psig (1380 kPa), as directed.
   a. Insert Fittings for PE Pipe: ASTM D 2609, made of PA, PP, or PVC with serrated male insert ends matching inside of pipe. Include bands or crimp rings.
   b. Molded PE Fittings: ASTM D 3350, PE resin, socket- or butt-fusion type, made to match PE pipe dimensions and class.

2. PE, AWWA Pipe: AWWA C906, DR No. 7.3, 9, or 9.3; with PE compound number required to give pressure rating not less than 160 psig (1100 kPa) OR 200 psig (1380 kPa), as directed.
   a. PE, AWWA Fittings: AWWA C906, socket- or butt-fusion type, with DR number matching pipe and PE compound number required to give pressure rating not less than 160 psig (1100 kPa) OR 200 psig (1380 kPa), as directed.

3. PE, Fire-Service Pipe: ASTM F 714, AWWA C906, or equivalent for PE water pipe; FMG approved, with minimum thickness equivalent to FMG Class 150 and Class 200.
   a. Molded PE Fittings: ASTM D 3350, PE resin, socket- or butt-fusion type, made to match PE pipe dimensions and class.

D. PVC Pipe And Fittings
1. PVC, Schedule 40 Pipe: ASTM D 1785.

2. PVC, Schedule 80 Pipe: ASTM D 1785.
   a. PVC, Schedule 80 Socket Fittings: ASTM D 2467.
   b. PVC, Schedule 80 Threaded Fittings: ASTM D 2464.

3. PVC, AWWA Pipe: AWWA C900, Class 150 OR Class 200, as directed, with bell end with gasket, and with spigot end.
   a. Comply with UL 1285 for fire-service mains if indicated.
   b. PVC Fabricated Fittings: AWWA C900, Class 150 OR Class 200, as directed, with bell-and-spigot or double-bell ends. Include elastomeric gasket in each bell.
   c. PVC Molded Fittings: AWWA C907, Class 150, with bell-and-spigot or double-bell ends. Include elastomeric gasket in each bell.
   d. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
1) Gaskets: AWWA C111, rubber.
e. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
1) Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

E. Fiberglass Pipe And Fittings
1. AWWA RTRP: AWWA C950, Class 150 OR Class 200 OR Class 250, as directed, Type I OR II, as directed, Grade 1, epoxy OR Grade 2, polyester, as directed, with bell-and-spigot ends for bonded OR with gasket or seal for gasketed, as directed, joints. Liner is optional, unless otherwise indicated. Include FMG approval if used for fire-service mains.
a. RTRF: AWWA C950, similar to pipe in material, pressure class, and joining method.
2. UL RTRP: UL 1713, Class 150 OR Class 200 OR Class 250, as directed, with bell-and-spigot ends with gasket or seal for gasketed joints. Liner is optional, unless otherwise indicated.
a. RTRF: Similar to pipe in material, pressure class, and joining method.

F. Special Pipe Fittings
1. Ductile-Iron Rigid Expansion Joints:
a. Description: Three-piece, ductile-iron assembly consisting of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Select and assemble components for expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
1) Pressure Rating: 250 psig (1725 kPa) minimum.
2) Expansion Required: As directed by the manufacturer or as directed by the Owner.
2. Ductile-Iron Flexible Expansion Joints:
a. Description: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
1) Pressure Rating: 250 psig (1725 kPa) minimum.
2) Offset: As directed by the manufacturer or as directed by the Owner.
3) Expansion Required: As directed by the manufacturer or as directed by the Owner.
3. Ductile-Iron Deflection Fittings:
a. Description: Compound, ductile-iron coupling fitting with sleeve and 1 or 2 flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
1) Pressure Rating: 250 psig (1725 kPa) minimum.

G. Joining Materials
1. Refer to Division 33 Section "Common Work Results For Utilities" for commonly used joining materials.
4. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

H. Piping Specialties
1. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
2. Tubular-Sleeve Pipe Couplings:
a. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.
2) Center-Sleeve Material: Manufacturer's standard OR Carbon steel OR Stainless steel OR Ductile iron OR Malleable iron, as directed.
3) Gasket Material: Natural or synthetic rubber.
4) Pressure Rating: 150 psig (1035 kPa) OR 200 psig (1380 kPa), as directed, minimum.
5) Metal Component Finish: Corrosion-resistant coating or material.

3. Split-Sleeve Pipe Couplings:
   a. Description: Metal, bolted, split-sleeve-type, reducing or transition coupling with sealing pad and closure plates, O-ring gaskets, and bolt fasteners.
      2) Sleeve Material: Manufacturer’s standard OR Carbon steel OR Stainless steel, as directed.
      3) Sleeve Dimensions: Of thickness and width required to provide pressure rating.
      4) Gasket Material: O-rings made of EPDM rubber, unless otherwise indicated.
      5) Pressure Rating: 150 psig (1035 kPa) OR 200 psig (1380 kPa), as directed, minimum.
      6) Metal Component Finish: Corrosion-resistant coating or material.

4. Flexible Connectors:
   a. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with copper-tube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
   b. Ferrous-Metal Piping: Stainless-steel hose covered with stainless-steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.

5. Dielectric Fittings: Combination of copper alloy and ferrous; threaded, solder, or plain end types; and matching piping system materials.
   a. Dielectric Unions: Factory-fabricated union assembly, designed for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C). Include insulating material that isolates dissimilar metals and ends with inside threads according to ASME B1.20.1.
   b. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure to suit system pressures.
   c. Dielectric-Flange Insulation Kits: Field-assembled companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
      1) Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure to suit system pressures.
   d. Dielectric Couplings: Galvanized-steel couplings with inert and noncorrosive thermoplastic lining, with threaded ends and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).
   e. Dielectric Nipples: Electroplated steel nipples with inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types, and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

I. Corrosion-Protection Piping Encasement
   1. Encasement for Underground Metal Piping:
      a. Standards: ASTM A 674 or AWWA C105.
      b. Form: Sheet OR Tube, as directed.
      c. Material: LLDPE film of 0.008-inch (0.20-mm) minimum thickness.
      d. Material: LLDPE film of 0.008-inch (0.20-mm) minimum thickness, or high-density, crosslaminated PE film of 0.004-inch (0.10-mm) minimum thickness.
      e. Material: High-density, crosslaminated PE film of 0.004-inch (0.10-mm) minimum thickness.
      f. Color: Black OR Natural, as directed.

J. Gate Valves
   1. AWWA, Cast-Iron Gate Valves:
      a. Nonrising-Stem, Metal-Seated Gate Valves:
         1) Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
            a) Standard: AWWA C500.
            b) Minimum Pressure Rating: 200 psig (1380 kPa).
c) End Connections: Mechanical joint.
d) Interior Coating: Complying with AWWA C550.

b. Nonrising-Stem, Resilient-Seated Gate Valves:
   1) Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-
      iron gate, resilient seats, bronze stem, and stem nut.
      a) Standard: AWWA C509.
      b) Minimum Pressure Rating: 200 psig (1380 kPa).
      c) End Connections: Mechanical joint.
      d) Interior Coating: Complying with AWWA C550.

c. Nonrising-Stem, High-Pressure, Resilient-Seated Gate Valves:
   1) Description: Ductile-iron body and bonnet; with bronze or ductile-iron gate, resilient
      seats, bronze stem, and stem nut.
      a) Standard: AWWA C509.
      b) Minimum Pressure Rating: 250 psig (1725 kPa).
      c) End Connections: Push on or mechanical joint.
      d) Interior Coating: Complying with AWWA C550.

d. OS&Y, Rising-Stem, Metal-Seated Gate Valves:
   1) Description: Cast- or ductile-iron body and bonnet, with cast-iron double disc,
      bronze disc and seat rings, and bronze stem.
      a) Standard: AWWA C500.
      b) Minimum Pressure Rating: 200 psig (1380 kPa).
      c) End Connections: Flanged.

e. OS&Y, Rising-Stem, Resilient-Seated Gate Valves:
   1) Description: Cast- or ductile-iron body and bonnet, with bronze or gray- or ductile-
      iron gate, resilient seats, and bronze stem.
      a) Standard: AWWA C509.
      b) Minimum Pressure Rating: 200 psig (1380 kPa).
      c) End Connections: Flanged.

2. UL/FMG, Cast-Iron Gate Valves:
   a. UL/FMG, Nonrising-Stem Gate Valves:
      1) Description: Iron body and bonnet with flange for indicator post, bronze seating
         material, and inside screw.
      a) Standards: UL 262 and FMG approved.
      b) Minimum Pressure Rating: 175 psig (1207 kPa).
      c) End Connections: Flanged.

   b. OS&Y, Rising-Stem Gate Valves:
      1) Description: Iron body and bonnet and bronze seating material.
      a) Standards: UL 262 and FMG approved.
      b) Minimum Pressure Rating: 175 psig (1207 kPa).
      c) End Connections: Flanged.

3. Bronze Gate Valves:
   a. OS&Y, Rising-Stem Gate Valves:
      1) Description: Bronze body and bonnet and bronze stem.
      a) Standards: UL 262 and FMG approved.
      b) Minimum Pressure Rating: 175 psig (1207 kPa).
      c) End Connections: Threaded.

   b. Nonrising-Stem Gate Valves:
      1) Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and
         malleable-iron handwheel.
      a) Standard: MSS SP-80.

K. Gate Valve Accessories And Specialties
1. Tapping-Sleeve Assemblies:
   a. Description: Sleeve and valve compatible with drilling machine.
      1) Standard: MSS SP-60.
2) Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.

3) Valve: AWWA, cast-iron, nonrising-stem, metal OR resilient, as directed, seated gate valve with one raised face flange mating tapping-sleeve flange.

2. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches (125 mm) in diameter.
   a. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

3. Indicator Posts: UL 789, FMG-approved, vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.

L. Check Valves
1. AWWA Check Valves:
   a. Description: Swing-check type with resilient seat. Include interior coating according to AWWA C550 and ends to match piping.
      1) Standard: AWWA C508.
      2) Pressure Rating: 175 psig (1207 kPa).

2. UL/FMG, Check Valves:
   a. Description: Swing-check type with pressure rating; rubber-face checks, unless otherwise indicated; and ends matching piping.
      1) Standards: UL 312 and FMG approved.
      2) Pressure Rating: 175 psig (1207 kPa) OR 250 psig (1725 kPa), as directed.

M. Detector Check Valves
1. Detector Check Valves:
   a. Description (with water meter): Galvanized cast-iron body, bolted cover with air-bleed device for access to internal parts, and flanged ends. Include one-piece bronze disc with bronze bushings, pivot, and replaceable seat. Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.
      1) Standards: UL 312 and FMG approved.
      2) Pressure Rating: 175 psig (1207 kPa).
      3) Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.
   b. Description (without water meter): Iron body, corrosion-resistant clapper ring and seat ring material, flanged ends, with connections for bypass and installation of water meter.
      1) Standards: UL 312 and FMG approved.
      2) Pressure Rating: 175 psig (1207 kPa).

N. Butterfly Valves
1. AWWA Butterfly Valves:
   a. Description: Rubber seated.
      1) Standard: AWWA C504.
      2) Body: Cast or ductile iron.
      3) Body Type: Wafer OR Flanged, as directed.
      4) Pressure Rating: 150 psig (1035 kPa).

2. UL Butterfly Valves:
   a. Description: Metal on resilient material seating.
      1) Standards: UL 1091 and FMG approved.
      2) Body: Cast or ductile iron.
      3) Body Type: Wafer OR Flanged, as directed.
      4) Pressure Rating: 175 psig (1207 kPa).

O. Plug Valves
1. Plug Valves:
   a. Description: Resilient-seated eccentric.
      1) Standard: MSS SP-108.
      2) Body: Cast iron.
      3) Pressure Rating: 175-psig (1207-kPa) minimum CWP.
      4) Seat Material: Suitable for potable-water service.

P. Corporation Valves And Curb Valves
1. Service-Saddle Assemblies: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.
   a. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
   b. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
   c. Manifold (if utility company requires multiple connections): Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.
2. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.
3. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches (75 mm) in diameter.
   a. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

Q. Water Meters
1. Water meters will be furnished by utility company.
   NOTE: If water meters are specified in this Section, delete paragraph above and retain and edit paragraphs and subparagraphs below.
2. Displacement-Type Water Meters:
   a. Description: With bronze main case.
      1) Standard: AWWA C700.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
3. Turbine-Type Water Meters:
   a. Description:
      1) Standard: AWWA C701.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
4. Compound-Type Water Meters:
   a. Description:
      1) Standard: AWWA C702.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
5. Remote Registration System:
   a. Description: Utility company standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
      1) Standard: AWWA C706.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
6. Remote Registration System:
   a. Description: Utility company standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
      1) Standard: AWWA C707.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
      3) Data-Acquisition Units: Comply with utility company requirements for type and quantity.
      OR
      Visible Display Units: Comply with utility company requirements for type and quantity.
R. Detector-Type Water Meters
1. Detector-Type Water Meters
2. Description: Main line, proportional meter with second meter on bypass. Register flow in gallons (liters) OR cubic feet (cubic meters), as directed.
   a. Standards: AWWA C703, UL listed, and FMG approved.
   b. Pressure Rating: 150 psig (1035 kPa).
   c. Bypass Meter: AWWA C701, turbine OR AWWA C702, compound, as directed, type, bronze case. 
      1) Size: At least one-half nominal size of main-line meter.
3. Description: Main-line turbine meter with strainer and second meter on bypass. Register flow in gallons (liters) OR cubic feet (cubic meters), as directed.
   a. Standards: AWWA C703, UL listed, and FMG approved.
   b. Pressure Rating: 175 psig (1207 kPa).
   c. Bypass Meter: AWWA C701, turbine-type, bronze case.
      1) Size: At least NPS 2 (DN 50).
4. Remote Registration System:
   a. Description: Utility company standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
      1) Standard: AWWA C706.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
5. Remote Registration System:
   a. Description: Utility company standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
      1) Standard: AWWA C707.
      2) Registration: Flow in gallons (liters) OR cubic feet (cubic meters), as directed.
      3) Data-Acquisition Units: Comply with utility company requirements for type and quantity.
         OR
         Visible Display Units: Comply with utility company requirements for type and quantity.
S. Pressure-Reducing Valves
1. Water Regulators:
   b. Pressure Rating: Initial pressure of 150 psig (1035 kPa).
   c. Size: As directed by the manufacturer or as directed by the Owner.
   d. Design Flow Rate: As directed by the manufacturer or as directed by the Owner.
   e. Design Inlet Pressure: As directed by the manufacturer or as directed by the Owner.
   f. Design Outlet Pressure Setting: As directed by the manufacturer or as directed by the Owner.
   g. Body: Bronze with chrome-plated finish, as directed, for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved, as directed, for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
   i. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
2. Water Control Valves:
   a. Description: Pilot-operation, diaphragm-type, single-seated main water control valve with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
      1) Pressure Rating: Initial pressure of 150 psig (1035 kPa) minimum.
      2) Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
         a) Size: As directed by the manufacturer or as directed by the Owner.
         b) Pattern: Angle OR Globe, as directed, valve design.
         c) Trim: Stainless steel.
      3) Design Flow Rate: As directed by the manufacturer or as directed by the Owner.
      4) Design Inlet Pressure: As directed by the manufacturer or as directed by the Owner.
5) Design Outlet Pressure Setting: As directed by the manufacturer or as directed by
    the Owner.
6) End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged, as directed,
    for NPS 2-1/2 (DN 65) and larger.

T. Relief Valves
1. Air-Release Valves:
   a. Description: Hydromechanical device to automatically release accumulated air.
      1) Standard: AWWA C512.
      2) Pressure Rating: 300 psig (2070 kPa), as directed.
      3) Body Material: Cast iron, as directed.
      4) Trim Material: Stainless steel, brass, or bronze, as directed.
      5) Water Inlet Size: As directed by the manufacturer or as directed by the Owner.
      6) Air Outlet Size: As directed by the manufacturer or as directed by the Owner.
      7) Orifice Size: As directed by the manufacturer or as directed by the Owner.
      8) Design Air-Release Capacity: As directed by the manufacturer or as directed by the
         Owner.
2. Air/Vacuum Valves:
   a. Description: Direct-acting, float-operated, hydromechanical device with large orifice to
      automatically release accumulated air or to admit air during filling of piping.
      1) Standard: AWWA C512.
      2) Pressure Rating: 300 psig (2070 kPa), as directed.
      3) Body Material: Cast iron, as directed.
      4) Trim Material: Stainless steel, brass, or bronze, as directed.
      5) Inlet and Outlet Size: As directed by the manufacturer or as directed by the Owner.
      6) Orifice Size: As directed by the manufacturer or as directed by the Owner.
      7) Design Air Capacity: As directed by the manufacturer or as directed by the Owner.
3. Combination Air Valves:
   a. Description: Float-operated, hydromechanical device to automatically release
      accumulated air or to admit air.
      1) Standard: AWWA C512.
      2) Pressure Rating: 300 psig (2070 kPa), as directed.
      3) Body Material: Cast iron, as directed.
      4) Trim Material: Stainless steel, brass, or bronze, as directed.
      5) Inlet and Outlet Size: As directed by the manufacturer or as directed by the Owner.
      6) Orifice Size: As directed by the manufacturer or as directed by the Owner.
      7) Design Air Capacity: As directed by the manufacturer or as directed by the Owner.

U. Vacuum Breakers
1. Pressure Vacuum Breaker Assembly:
   b. Operation: Continuous-pressure applications.
   c. Pressure Loss: 5 psig (35 kPa), as directed, maximum, through middle 1/3 of flow range.
   d. Size: As directed by the manufacturer or as directed by the Owner.
   e. Design Flow Rate: As directed by the manufacturer or as directed by the Owner.
   f. Selected Unit Flow Range Limits: As directed by the manufacturer or as directed by the
      Owner.
   g. Pressure Loss at Design Flow Rate: As directed by the manufacturer or as directed by the
      Owner.
   h. Accessories: Ball valves on inlet and outlet.

V. Backflow Preventers
1. Reduced-Pressure-Principle Backflow Preventers:
   a. Standard: ASSE 1013 OR AWWA C511, as directed.
   b. Operation: Continuous-pressure applications.
   c. Pressure Loss: 12 psig (83 kPa), as directed, maximum, through middle 1/3 of flow range.
d. Size: As directed by the manufacturer or as directed by the Owner.

e. Design Flow Rate: As directed by the manufacturer or as directed by the Owner.

f. Selected Unit Flow Range Limits: As directed by the manufacturer or as directed by the Owner.

g. Pressure Loss at Design Flow Rate: As directed by the manufacturer or as directed by the Owner. For NPS 2 (DN 50) and smaller; As directed by the manufacturer or as directed by the Owner. For NPS 2-1/2 (DN 65) and larger.

h. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved OR steel with interior lining complying with AWWA C550 or that is FDA approved OR stainless steel, as directed, for NPS 2-1/2 (DN 65) and larger.

i. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged, as directed, for NPS 2-1/2 (DN 65) and larger.

j. Configuration: Designed for horizontal, straight through OR vertical inlet, horizontal center section, and vertical outlet OR vertical, as directed, flow.

k. Accessories:

   1) Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.

   2) Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

2. Double-Check, Backflow-Prevention Assemblies:

   a. Standard: ASSE 1015 OR AWWA C510, as directed.

   b. Operation: Continuous-pressure applications, unless otherwise indicated.

   c. Pressure Loss: 5 psig (35 kPa), as directed, maximum, through middle 1/3 of flow range.

   d. Size: As directed by the manufacturer or as directed by the Owner.

   e. Design Flow Rate: As directed by the manufacturer or as directed by the Owner.

   f. Selected Unit Flow Range Limits: As directed by the manufacturer or as directed by the Owner.

   g. Pressure Loss at Design Flow Rate: As directed by the manufacturer or as directed by the Owner. For NPS 2 (DN 50) and smaller; As directed by the manufacturer or as directed by the Owner. For NPS 2-1/2 (DN 65) and larger.

   h. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved OR steel with interior lining complying with AWWA C550 or that is FDA approved OR stainless steel, as directed, for NPS 2-1/2 (DN 65) and larger.

   i. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged, as directed, for NPS 2-1/2 (DN 65) and larger.

   j. Configuration: Designed for horizontal, straight through, as directed, flow.

   k. Accessories: Ball valves with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate valves with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.

3. Reduced-Pressure-Detector, Fire-Protection Backflow Preventer Assemblies:

   a. Standards: ASSE 1047 and UL listed or FMG approved.

   b. Operation: Continuous-pressure applications.

   c. Pressure Loss: 12 psig (83 kPa), as directed, maximum, through middle 1/3 of flow range.

   d. Size: As directed by the manufacturer or as directed by the Owner.

   e. Design Flow Rate: As directed by the manufacturer or as directed by the Owner.

   f. Selected Unit Flow Range Limits: As directed by the manufacturer or as directed by the Owner.

   g. Pressure Loss at Design Flow Rate: As directed by the manufacturer or as directed by the Owner.

   h. Body: Cast iron with interior lining complying with AWWA C550 or that is FDA approved OR Steel with interior lining complying with AWWA C550 or that is FDA approved OR Stainless steel, as directed.

   i. End Connections: Flanged.

   j. Configuration: Designed for horizontal, straight through OR vertical inlet, horizontal center section, and vertical outlet OR vertical, as directed, flow.
j. **Accessories:**
   1) **Valves:** UL 262, FMG-approved, OS&Y gate type with flanged ends on inlet and outlet.
   2) **Air-Gap Fitting:** ASME A112.1.2, matching backflow preventer connection.
   3) **Bypass:** With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

4. **Double-Check, Detector-Assembly Backflow Preventers:**
   a. **Standards:** ASSE 1048 and UL listed or FMG approved.
   b. **Operation:** Continuous-pressure applications.
   c. **Pressure Loss:** 5 psig (35 kPa), **as directed**, maximum, through middle 1/3 of flow range.
   d. **Size:** As directed by the manufacturer or as directed by the Owner.
   e. **Design Flow Rate:** As directed by the manufacturer or as directed by the Owner.
   f. **Selected Unit Flow Range Limits:** As directed by the manufacturer or as directed by the Owner.
   g. **Pressure Loss at Design Flow Rate:** As directed by the manufacturer or as directed by the Owner.
   h. **Body:** Cast iron with interior lining complying with AWWA C550 or that is FDA approved **OR** Stainless steel, **as directed**.
   i. **End Connections:** Flanged.
   j. **Configuration:** Designed for horizontal, straight through **OR** vertical inlet, horizontal center section, and vertical outlet **OR** vertical, **as directed**, flow.
   k. **Accessories:**
      1) **Valves:** UL 262, FMG-approved, OS&Y gate type with flanged ends on inlet and outlet.
      2) **Bypass:** With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

5. **Backflow Preventer Test Kits:**
   a. **Description:** Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

W. **Water Meter Boxes**
   1. **Description:** Cast-iron body and cover for disc-type water meter, with lettering "WATER METER" in cover; and with slotted, open-bottom base section of length to fit over service piping.
      a. **Option:** Base section may be cast-iron, PVC, clay, or other pipe.
   2. **Description:** Cast-iron body and double cover for disc-type water meter, with lettering "WATER METER" in top cover; and with separate inner cover; air space between covers; and slotted, open-bottom base section of length to fit over service piping.
   3. **Description:** Polymer-concrete body and cover for disc-type water meter, with lettering "WATER" in cover; and with slotted, open-bottom base section of length to fit over service piping. Include vertical and lateral design loadings of 15,000 lb minimum over 10 by 10 inches (6800 kg minimum over 254 by 254 mm) square.
      a. **Use of this meter box is permitted in walks or unpaved areas away from traffic; do not use in roadways.**

X. **Concrete Vaults**
   1. **Description:** Precast, reinforced-concrete vault, designed for A-16 load designation according to ASTM C 857 and made according to ASTM C 858.
      a. **Ladder:** ASTM A 36/A 36M, steel or polyethylene-encased steel steps.
      b. **Manhole:** ASTM A 48/A 48M Class No. 35A minimum tensile strength, gray-iron traffic frame and cover.
         1) **Dimension:** 24-inch (610-mm) minimum diameter, unless otherwise indicated.
      c. **Manhole:** ASTM A 536, Grade 60-40-18, ductile-iron traffic frame and cover.
         1) **Dimension:** 24-inch (610-mm) minimum diameter, unless otherwise indicated.
      d. **Drain:** ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.
Y. Protective Enclosures

1. Freeze-Protection Enclosures:
   a. Description: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from freezing and damage, with heat source to maintain minimum internal temperature of 40 deg F (4 deg C) when external temperatures reach as low as minus 34 deg F (minus 36 deg C).
      1) Standard: ASSE 1060.
      2) Class I: For equipment or devices other than pressure or atmospheric vacuum breakers.
      3) Class I-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
         a) Housing: Reinforced-aluminum OR -fiberglass, as directed, construction.
            i. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
            ii. Drain opening for units with drain connection.
            iii. Access doors with locking devices.
            iv. Insulation inside housing.
            v. Anchoring devices for attaching housing to concrete base.
            b) Electric heating cable or heater with self-limiting temperature control.
   2. Weather-Resistant Enclosures:
      a. Description: Uninsulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage.
         1) Standard: ASSE 1060.
         2) Class III: For equipment or devices other than pressure or atmospheric vacuum breakers.
         3) Class III-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
            i. Housing: Reinforced-aluminum OR -fiberglass, as directed, construction.
            ii. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
            iii. Drain opening for units with drain connection.
            v. Anchoring devices for attaching housing to concrete base.
   3. Expanded-Metal Enclosures:
      a. Description: Enclosure designed to protect aboveground water piping, equipment, or specialties from damage.
         1) Material: ASTM F 1267, expanded metal side and top panels, of weight and with reinforcement of same metal at edges as required for rigidity.
         2) Type: Type I, expanded OR II, expanded and flattened, as directed.
         3) Class: Class 1, uncoated carbon steel OR 2, hot-dip, zinc-coated carbon steel OR 3, corrosion-resisting steel, as directed.
         4) Finish: Manufacturer's enamel paint.
         5) Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
         6) Locking device.
         7) Lugs or devices for securing enclosure to base.
   4. Enclosure Bases:
      a. Description: 4-inch- (100-mm-) OR 6-inch- (150-mm-), as directed, minimum thickness precast concrete, of dimensions required to extend at least 6 inches (150 mm) beyond edges of enclosure housings. Include openings for piping.

Z. Fire Hydrants

1. Dry-Barrel Fire Hydrants:
   a. Description (for AWWA dry-barrel fire hydrants): Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Include interior coating according to
AWWA C550. Hydrant shall have cast-iron body, compression-type valve opening against pressure and closing with pressure.
2) Pressure Rating: 150 psig (1035 kPa) minimum OR 250 psig (1725 kPa), as directed.
3) Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
4) Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
5) Direction of Opening: Open hydrant valve by turning operating nut to left or counterclockwise.
6) Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.

b. Description (for UL/FMG, dry-barrel fire hydrants): Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Hydrant shall have cast-iron body, compression-type valve opening against pressure and closing with pressure.
1) Standards: UL 246, FMG approved.
2) Pressure Rating: 150 psig (1035 kPa) minimum OR 250 psig (1725 kPa), as directed.
3) Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
4) Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
5) Direction of Opening: Open hydrant valve by turning operating nut to left or counterclockwise.
6) Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.

2. Wet-Barrel Fire Hydrants:
   a. Description (for AWWA wet-barrel fire hydrants): Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, NPS 6 (DN 150) threaded or flanged inlet, and base section with NPS 6 (DN 150) mechanical-joint inlet. Include interior coating according to AWWA C550.
1) Standard: AWWA C503.
2) Pressure Rating: 150 psig (1035 kPa) minimum.
3) Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
4) Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
5) Direction of Opening: Open hydrant valves by turning operating nut to left or counterclockwise.
6) Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.
   b. Description (for UL/FMG, wet-barrel fire hydrants): Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, NPS 6 (DN 150) threaded or flanged inlet, and base section with NPS 6 (DN 150) mechanical-joint inlet.
1) Standards: UL 246 and FMG approved.
2) Pressure Rating: 150 psig (1035 kPa) minimum.
3) Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
4) Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
5) Direction of Opening: Open hydrant valves by turning operating nut to left or counterclockwise.
6) Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.

AA. Flushing Hydrants
   1. Post-Type Flushing Hydrants:
      a. Description: Nonfreeze and drainable, of length required for shutoff valve installation below frost line.
1) Pressure Rating: 150 psig (1035 kPa) minimum.
2) Outlet: One, with horizontal discharge.
3) Hose Thread: NPS 2-1/2 (DN 65), with NFPA 1963 external hose thread for use by local fire department, and with cast-iron cap with brass chain.
21 - Fire Suppression

August 2021

Water Distribution

DASNY, Downstate

21 05 19 00 - 15

4) Barrel: Cast-iron or steel pipe with breakaway feature.
5) Valve: Bronze body with bronze-ball or plunger closure, and automatic draining.
6) Security: Locking device for padlock.
7) Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.
8) Inlet: NPS 2 (DN 50) minimum.
9) Operating Wrench: One for each unit.

2. Ground-Type Flushing Hydrants:
   a. Description: Nonfreeze and drainable, of length required for shutoff valve installation below frost line.
      1) Pressure Rating: 150 psig (1035 kPa) minimum.
      2) Outlet: One, with vertical OR angle, as directed, discharge.
      3) Hose Thread: NPS 2-1/2 (DN 65), with NFPA 1963 external hose thread for use by local fire department, and with cast-iron cap with brass chain.
      4) Barrel: Cast-iron or steel pipe.
      5) Valve: Bronze body with bronze-ball or plunger closure, and automatic draining.
      6) Inlet: NPS 2 (DN 50) minimum.
      7) Hydrant Box: Cast iron with cover, for ground mounting.
      8) Operating Wrench: One for each unit.

3. Post-Type Sampling Station:
   a. Description: Nonfreeze and drainable, of length required for shutoff valve installation below frost line.
      1) Pressure Rating: 100 psig (690 kPa) minimum.
      2) Sampling Outlet: One unthreaded nozzle with handle.
      3) Valve: Bronze body with bronze-ball or plunger closure. Include operating handle.
      4) Drain: Tubing with separate manual vacuum pump.
      5) Inlet: NPS 3/4 (DN 20) minimum.
      6) Housing: Weatherproof material with locking device. Include anchor device.
      7) Operating Wrench: One for each unit.

BB. Fire Department Connections
1. Fire Department Connections:
   a. Description: Freestanding, with cast-bronze body, thread inlets according to NFPA 1963 and matching local fire department hose threads, and threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet; 18-inch- (460-mm-) high brass sleeve; and round escutcheon plate.
      1) Standard: UL 405.
      2) Connections: Two NPS 2-1/2 (DN 65) inlets and one NPS 4 (DN 100) OR NPS 6 (DN 150), as directed, outlet.
      3) Connections: Three OR Four, as directed, NPS 2-1/2 (DN 65) inlets and one NPS 6 (DN 150) outlet.
      4) Connections: Six NPS 2-1/2 (DN 65) inlets and one NPS 6 (DN 150) OR NPS 8 (DN 200), as directed, outlet.
      5) Inlet Alignment: Inline, horizontal OR Square, as directed.
      6) Finish Including Sleeve: Polished chrome-plated OR Rough chrome-plated OR Polished bronze, as directed.
      7) Escutcheon Plate Marking: “AUTO SPKR” OR “STANDPIPE” OR “AUTO SPKR & STANDPIPE.”

CC. Alarm Devices
1. Alarm Devices, General: UL 753 and FMG approved, of types and sizes to mate and match piping and equipment.
2. Water-Flow Indicators (can be used with wet-barrel fire hydrants): Vane-type water-flow detector, rated for 250-psig (1725-kPa) working pressure; designed for horizontal or vertical installation; with 2 single-pole, double-throw circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.
3. Supervisory Switches: Single pole, double throw; designed to signal valve in other than fully open position. Mount on stem of OS&Y gate valves and on indicator posts.
4. Pressure Switches: Single pole, double throw; designed to signal increase in pressure. Mount on barrel of dry-barrel fire hydrants.

1.3 EXECUTION

A. Earthwork
1. Refer to Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

B. Piping Applications
1. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.
2. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.
3. Do not use flanges or unions for underground piping.
4. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.
5. Underground water-service piping NPS 3/4 to NPS 3 (DN 20 to DN 80), as directed, shall be selected from the following, as directed:
   a. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper, solder-joint fittings; and brazed OR copper, pressure-seal fittings; and pressure-sealed, as directed, joints.
   b. PE, ASTM pipe; insert fittings for PE pipe; and clamped OR molded PE fittings; and heat-fusion, as directed, joints.
   c. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed; socket fittings; and solvent-cemented joints.
   d. NPS 1 to NPS 3 (DN 25 to DN 80) fiberglass, AWWA RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and bonded joints.
   e. Fiberglass, AWWA RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and bonded joints.
6. Underground water-service piping NPS 4 to NPS 8 (DN 100 to DN 200), as directed, shall be selected from the following, as directed:
   a. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper, solder-joint fittings; and brazed joints.
   b. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed OR mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical OR grooved-end pipe; ductile-iron-pipe appurtenances; and grooved, as directed, joints.
   c. PE, AWWA pipe; PE, AWWA fittings; and heat-fusion joints.
   d. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed; socket fittings; and solvent-cemented joints.
6. Underground water-service piping NPS 4 and NPS 6 (DN 100 and DN 150): NPS 6 (DN 150) PVC, AWWA Class 150 pipe; PVC, AWWA Class 150 fabricated OR molded, as directed, fittings; and gasketed joints.
   f. NPS 8 (DN 200): PVC, AWWA Class 200 pipe; PVC, AWWA Class 200 fabricated OR push-on-joint, ductile-iron OR mechanical-joint, ductile-iron, as directed, fittings; and gasketed joints.
   g. Fiberglass, AWWA RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and bonded joints.
7. Water Meter Box Water-Service Piping NPS 3/4 to NPS 2 (DN 20 to DN 50), as directed, shall be same as underground water-service piping.
8. Aboveground and Vault, as directed, Water-Service Piping NPS 3/4 to NPS 3 (DN 20 to DN 80), as directed, shall be selected from the following:

NOTE: Water-service piping materials listed in subparagraphs below are for potable-water service. They may not be suitable for fire-service mains.
   a. Hard copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper, solder-joint fittings; and brazed OR copper, pressure-seal fittings; and pressure-sealed, as directed, joints.
b. PVC, Schedule 80 pipe; PVC, Schedule 80 socket fittings; and solvent-cemented OR threaded fittings; and threaded, as directed, joints.

c. NPS 1 to NPS 2 (DN 25 to DN 50) fiberglass, AWWA RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and bonded joints.

9. Aboveground and vault, as directed, water-service piping NPS 4 to NPS 8 (DN 100 to DN 200), as directed, shall be selected from the following:
   a. Hard copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper, solder-joint fittings; and brazed joints.
   b. Ductile-iron, grooved-end pipe; ductile-iron, grooved-end appurtenances; and grooved joints.
   c. PVC, Schedule 80 pipe; PVC, Schedule 80 socket fittings; and solvent-cemented OR threaded fittings; and threaded, as directed, joints.
   d. Fiberglass, AWWA RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and bonded joints.

10. Underground Fire-Service-Main Piping NPS 4 to NPS 12 (DN 100 to DN 300), as directed, shall be selected from the following:
    NOTE: Fire-service-main piping materials listed in subparagraphs below are for fire-protection water service. They may not be suitable for potable-water service.
    a. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed OR mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical OR grooved-end pipe; ductile-iron-pipe appurtenances; and grooved, as directed, joints.
    b. PE, Class 150 OR 200, as directed, fire-service pipe; molded PE fittings; and heat-fusion joints.
    c. PVC, AWWA Class 150 pipe listed for fire-protection service; PVC Class 150 fabricated or molded fittings and gasketed joints.
    d. PVC, AWWA Class 200 pipe listed for fire-protection service; PVC Class 200 fabricated fittings and gasketed joints.
    e. Fiberglass, AWWA, FMG-approved RTRP, Class 150 OR 200, as directed; RTRF; and gasketed joints.
    f. Fiberglass, UL RTRP, Class 150 OR 200 OR 250, as directed; RTRF; and gasketed joints.

11. Aboveground and Vault, as directed, Fire-Service-Main Piping NPS 4 to NPS 12 (DN 100 to DN 300), as directed, shall be ductile-iron, grooved-end pipe; ductile-iron-pipe appurtenances; and grooved joints.

12. Underground Combined Water-Service and Fire-Service-Main Piping NPS 6 to NPS 12 (DN 150 to DN 300), as directed, shall be selected from the following:
    a. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed OR mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical OR grooved-end pipe; ductile-iron-pipe appurtenances; and grooved, as directed, joints.
    b. PVC, AWWA Class 150 OR 200, as directed, pipe listed for fire-protection service; PVC fabricated or molded fittings of same class as pipe; and gasketed joints.
    c. Fiberglass, AWWA, FMG-approved RTRP, Class 150 OR 200, as directed; RTRF; and gasketed joints.

13. Aboveground and Vault, as directed, Combined Water Service and Fire-Service-Main Piping NPS 6 to NPS 12 (DN 150 to DN 300), as directed, shall be ductile-iron, grooved-end pipe; ductile-iron-pipe appurtenances; and grooved joints.

C. Valve Applications
1. General Application: Use mechanical-joint-end valves for NPS 3 (DN 80) and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 (DN 50) and smaller installation.

2. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   a. Underground Valves, NPS 3 (DN 80) and Larger: AWWA, cast-iron, nonrising-stem, metal OR resilient OR high-pressure, resilient, as directed,-seated gate valves with valve box.
b. Underground Valves, NPS 4 (DN 100) and Larger, for Indicator Posts: UL/FMG, cast-iron, nonrising-stem gate valves with indicator post.

c. Use the following for valves in vaults and aboveground:

1) Gate Valves, NPS 2 (DN 50) and Smaller: Bronze, nonrising OR rising, as directed, stem.

2) Gate Valves, NPS 3 (DN 80) and Larger: AWWA, cast iron, OS&Y rising stem, metal seated OR AWWA, cast iron, OS&Y rising stem, resilient seated OR UL/FMG, cast iron, OS&Y rising stem, as directed.

3) Check Valves: AWWA C508 OR UL/FMG, as directed, swing type.

d. Pressure-Reducing Valves: Use for water-service piping in vaults and aboveground to control water pressure.

e. Relief Valves: Use for water-service piping in vaults and aboveground.

1) Air-Release Valves: To release accumulated air.

2) Air/Vacuum Valves: To release or admit large volume of air during filling of piping.

3) Combination Air Valves: To release or admit air.

f. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

D. Piping Systems - Common Requirements

1. See Division 22 Section "Common Work Results For Plumbing" for piping-system common requirements.

E. Piping Installation

1. Water-Main Connection (if tap is made by utility company): Arrange with utility company for tap of size and in location indicated in water main.

2. Water-Main Connection (if tap is made by Contractor): Tap water main according to requirements of water utility company and of size and in location indicated.

3. Make connections larger than NPS 2 (DN 50) with tapping machine according to the following:

a. Install tapping sleeve and tapping valve according to MSS SP-60.

b. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.

c. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.

d. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

4. Make connections NPS 2 (DN 50) and smaller with drilling machine according to the following:

a. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.

b. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.

c. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.

d. Install corporation valves into service-saddle assemblies.

e. Install manifold for multiple taps in water main.

f. Install curb valve in water-service piping with head pointing up and with service box.

5. Comply with NFPA 24 for fire-service-main piping materials and installation.

a. Install PE corrosion-protection encasement according to ASTM A 674 or AWWA C105.

b. Install copper tube and fittings according to CDA's "Copper Tube Handbook."

6. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

a. If required, install PE corrosion-protection encasement according to ASTM A 674 or AWWA C105.

7. Install PE pipe according to ASTM D 2774 and ASTM F 645.

8. Install PVC, AWWA pipe according to ASTM F 645 and AWWA M23.

9. Install fiberglass AWWA pipe according to AWWA M45.

10. Bury piping with depth of cover over top at least 30 inches (750 mm), as directed, with top at least 12 inches (300 mm), as directed, below level of maximum frost penetration, and according to the following:

a. Under Driveways: With at least 36 inches (910 mm), as directed, cover over top.
b. Under Railroad Tracks: With at least 48 inches (1220 mm), as directed, cover over top.
c. In Loose Gravelly Soil and Rock: With at least 12 inches (300 mm), as directed, additional cover.

11. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

12. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.
   a. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.

13. Sleeves are specified in Division 22 Section "Common Work Results For Plumbing".

14. Mechanical sleeve seals are specified in Division 22 Section "Common Work Results For Plumbing".

15. For piping with gasketed joints: Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

16. See Division 21 Section "Common Work Results For Fire Suppression" for fire-suppression-water piping inside the building.

17. See Division 22 Section "Common Work Results For Plumbing" for potable-water piping inside the building.

F. Joint Construction

1. See Division 22 Section "Common Work Results For Plumbing" for basic piping joint construction.

2. Make pipe joints according to the following:
   a. Copper-Tubing, Pressure-Sealed Joints: Use proprietary crimping tool and procedure recommended by copper, pressure-seal-fitting manufacturer.
   b. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
   d. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
   e. PE Piping Insert-Fitting Joints: Use plastic insert fittings and fasteners according to fitting manufacturer's written instructions.
   f. PVC Piping Gasketed Joints: Use joining materials according to AWWA C900. Construct joints with elastomeric seals and lubricant according to ASTM D 2774 or ASTM D 3139 and pipe manufacturer's written instructions.
   g. Fiberglass Piping Bonded Joints: Use adhesive and procedure recommended by piping manufacturer.
   h. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure. Refer to Division 22 Section "Common Work Results For Plumbing" for joining piping of dissimilar metals.

G. Anchorage Installation

1. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
   a. Concrete thrust blocks.
   b. Locking mechanical joints.
   c. Set-screw mechanical retainer glands.
   d. Bolted flanged joints.
   e. Heat-fused joints.
   f. Pipe clamps and tie rods.

2. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:
   b. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
3. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

H. Valve Installation
1. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
2. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.
3. UL/FMG, Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
4. UL/FMG, Valves Other Than Gate Valves: Comply with NFPA 24.
5. MSS Valves: Install as component of connected piping system.
6. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.
7. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves. Install full-size valved bypass, as directed.
8. Relief Valves: Comply with AWWA C512. Install aboveground with shutoff valve on inlet.

I. Detector-Check Valve Installation
1. Install in vault or aboveground.
2. Install for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.
3. Support detector check valves, meters, shutoff valves, and piping on brick or concrete piers.

J. Water Meter Installation
1. If water meters are provided by the Contractor: Install water meters, piping, and specialties according to utility company's written instructions.
2. Water Meters: Install displacement OR turbine, as directed, type water meters, NPS 2 (DN 50) and smaller, in meter boxes with shutoff valves on water meter inlets. Include valves on water meter outlets and valved bypass around meters unless prohibited by authorities having jurisdiction.
3. Water Meters: Install compound OR turbine, as directed, type water meters, NPS 3 (DN 80) and larger, in meter vaults. Include shutoff valves on water meter inlets and outlets and valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
4. Water Meters: Install detector-type water meters in meter vault according to AWWA M6. Include shutoff valves on water meter inlets and outlets and full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

K. Roughing-In For Water Meters
1. If Contractor is to rough-in for water meters to be installed by utility company: Rough-in piping and specialties for water meter installation according to utility company's written instructions.

L. Vacuum Breaker Assembly Installation
1. Install pressure vacuum breaker assemblies of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.
2. Do not install pressure vacuum breaker assemblies in vault or other space subject to flooding.

M. Backflow Preventer Installation
1. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.
2. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
3. Do not install bypass piping around backflow preventers.
4. Support NPS 2-1/2 (DN 65) and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.
N. Water Meter Box Installation
   1. Install water meter boxes in paved areas flush with surface.
   2. Install water meter boxes in grass or earth areas with top 2 inches (50 mm), as directed, above surface.

O. Concrete Vault Installation
   1. Install precast concrete vaults according to ASTM C 891.

P. Protective Enclosure Installation
   1. Install concrete base level and with top approximately 2 inches (50 mm), as directed, above grade.
   2. Install protective enclosure over valves and equipment.
   3. Anchor protective enclosure to concrete base.

Q. Fire Hydrant Installation
   1. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.
   3. AWWA Fire Hydrants: Comply with AWWA M17.
   4. UL/FMG Fire Hydrants: Comply with NFPA 24.

R. Flushing Hydrant Installation
   1. Install post-type flushing hydrants with valve below frost line and provide for drainage. Support in upright position. Include separate gate valve or curb valve and restrained joints in supply piping.
   2. Install ground-type flushing hydrants with valve below frost line and provide for drainage. Install hydrant box flush with grade. Include separate gate valve or curb valve and restrained joints in supply piping.
   3. Install sampling stations with valve below frost line and provide for drainage. Attach weather-resistant housing and support in upright position. Include separate curb valve in supply piping.

S. Fire Department Connection Installation
   1. Install ball drip valves at each check valve for fire department connection to mains.
   2. Install protective pipe bollards on two sides of OR on three sides of, as directed, each fire department connection. Pipe bollards are specified in Division 05 Section "Metal Fabrications".

T. Alarm Device Installation
   2. Supervisory Switches: Supervise valves in open position.
      a. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
      b. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.
   3. Locking and Sealing: Secure unsupervised valves as follows:
      b. Post Indicators: Install padlock on wrench on indicator post.
   4. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.
   6. Connect alarm devices to building fire alarm system. Wiring and fire-alarm devices are specified in Division 28.

U. Connections
   1. Piping installation requirements are specified in other Division 22. Drawings indicate general arrangement of piping, fittings, and specialties.
   2. See Division 22 Section "Common Work Results For Plumbing" for piping connections to valves and equipment.
3. Connect water-distribution piping to utility water main OR existing water main, as directed. Use tapping sleeve and tapping valve OR service clamp and corporation valve, as directed.

4. Connect water-distribution piping to interior domestic water OR fire-suppression, as directed, piping.

5. Connect waste piping from concrete vault drains to sanitary sewerage system. See Division 22 for connection to sanitary-sewer OR storm-drainage system. See Division 23 for connection to storm-sewer, as directed, piping.

6. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".

7. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

V. Field Quality Control

1. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

2. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours. 
   a. Increase pressure in 50-psig (350-kPa) increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig (0 kPa). Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

3. Prepare reports of testing activities.

W. Identification

1. Install continuous underground detectable, as directed, warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Division 31 Section "Earth Moving".

2. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Division 22 Section "Common Work Results For Plumbing" for identifying devices.

NOTE: Delete paragraph above if metallic water-service piping without electrically insulated fittings will be used.

X. Cleaning

1. Clean and disinfect water-distribution piping as follows:
   a. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
   b. If fire-protection-water piping is not connected to potable-water supply, use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
   c. If fire-protection-water piping is connected to potable-water supply, use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:
      1) Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours OR Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours, as directed.
      2) After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
      3) Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.

2. Prepare reports of purging and disinfecting activities.
END OF SECTION 21 05 19 00
SECTION 21 05 19 00a - METERS AND GAGES FOR PLUMBING PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for meters and gages for plumbing piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Bimetallic-actuated thermometers.
   b. Filled-system thermometers.
   c. Liquid-in-glass thermometers.
   d. Light-activated thermometers.
   e. Thermowells.
   f. Dial-type pressure gages.
   g. Gage attachments.
   h. Test plugs.
   i. Test-plug kits.
   j. Sight flow indicators.

C. Submittals
1. Product Data: For each type of product indicated.
2. Product Certificates: For each type of meter and gage, from manufacturer.
3. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

1.2 PRODUCTS

A. Bimetallic-Actuated Thermometers
2. Case: Liquid-filled and sealed type(s); stainless steel with 3-inch (76-mm) OR 5-inch (127-mm), as directed, nominal diameter.
3. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F (deg C) OR deg F and deg C, as directed.
4. Connector Type(s): Union joint, adjustable angle OR rigid, back OR rigid, bottom, as directed, with unified-inch screw threads.
5. Connector Size: 1/2 inch (13 mm), with ASME B1.1 screw threads.
6. Stem: 0.25 or 0.375 inch (6.4 or 9.4 mm) in diameter; stainless steel.
7. Window: Plain glass or plastic.
11. Accuracy: Plus or minus 1 OR 1.5, as directed, percent of scale range.

B. Filled-System Thermometers
1. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:
   b. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch (114-mm) OR 5-inch (127-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   c. Element: Bourdon tube or other type of pressure element.
d. Movement: Mechanical, dampening type, as directed, with link to pressure element and connection to pointer.

e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Pointer: Dark-colored metal.

g. Window: Glass or plastic.

h. Ring: Metal OR Stainless steel, as directed.

i. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device OR rigid, back OR rigid, bottom, as directed; with ASME B1.1 screw threads.

j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.

k. Accuracy: Plus or minus 1 percent of scale range.

2. Direct-Mounted, Plastic-Case, Vapor-Actuated Thermometers:

b. Case: Sealed type, plastic; 4-1/2-inch (114-mm) OR 5-inch (127-mm) OR 6-inch (152-mm), as directed, nominal diameter.

c. Element: Bourdon tube or other type of pressure element.

d. Movement: Mechanical, with link to pressure element and connection to pointer.

e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Pointer: Dark-colored metal.

g. Window: Glass or plastic.

h. Ring: Metal OR plastic.

i. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device OR rigid, back OR rigid, bottom, as directed; with ASME B1.1 screw threads.

j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.

k. Accuracy: Plus or minus 1 percent of scale range.

3. Remote-Mounted, Metal-Case, Vapor-Actuated Thermometers:

b. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.

c. Element: Bourdon tube or other type of pressure element.

d. Movement: Mechanical, with link to pressure element and connection to pointer.

e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Pointer: Dark-colored metal.

g. Window: Glass or plastic.

h. Ring: Metal OR Stainless steel, as directed.

i. Connector Type(s): Union joint, back OR bottom, as directed; with ASME B1.1 screw threads.

j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.

k. Accuracy: Plus or minus 1 percent of scale range.

4. Remote-Mounted, Plastic-Case, Vapor-Actuated Thermometers:

b. Case: Sealed type, plastic; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.

c. Element: Bourdon tube or other type of pressure element.

d. Movement: Mechanical, with link to pressure element and connection to pointer.
e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Pointer: Dark-colored metal.

g. Window: Glass or plastic.

h. Ring: Metal or plastic.

i. Connector Type(s): Union joint, threaded, back OR bottom, as directed; with ASME B1.1 screw threads.

j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.

k. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

C. Liquid-In-Glass Thermometers

1. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:
   b. Case: Cast aluminum; 6-inch (152-mm) nominal size.
   c. Case Form: Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red organic liquid.
   e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum or brass and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.
   h. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2. Plastic-Case, Compact-Style, Liquid-in-Glass Thermometers:
   b. Case: Plastic; 6-inch (152-mm) nominal size.
   c. Case Form: Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red organic liquid.
   e. Tube Background: Nonreflective with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum or brass and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.
   h. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

3. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
   b. Case: Cast aluminum; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.
   c. Case Form: Adjustable angle OR Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red organic liquid.
   e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum and of length to suit installation.
   1) Design for Thermowell Installation: Bare stem.
   h. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

4. Plastic-Case, Industrial-Style, Liquid-in-Glass Thermometers:
b. Case: Plastic; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.

c. Case Form: Adjustable angle OR Back angle OR Straight, as directed, unless otherwise indicated.

d. Tube: Glass with magnifying lens and blue or red organic liquid.

e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Window: Glass or plastic.

g. Stem: Aluminum OR Brass OR Stainless steel OR Aluminum, brass, or stainless steel, as directed, and of length to suit installation.

1) Design for Thermowell Installation: Bare stem.

h. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.

i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

D. Light-Activated Thermometers

1. Direct-Mounted, Light-Activated Thermometers:

a. Case: Plastic OR Metal, as directed; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.

b. Scale(s): Deg F (Deg C) OR Deg F and deg C, as directed.

c. Case Form: Adjustable angle.

d. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.

e. Stem: Aluminum and of length to suit installation.

1) Design for Thermowell Installation: Bare stem.

f. Display: Digital.

g. Accuracy: Plus or minus 2 deg F (1 deg C).

2. Remote-Mounted, Light-Activated Thermometers:

a. Case: Plastic, for wall mounting.

b. Scale(s): Deg F (Deg C) OR Deg F and deg C, as directed.

c. Sensor: Bulb and thermister wire.

1) Design for Thermowell Installation: Bare stem.

d. Display: Digital.

e. Accuracy: Plus or minus 2 deg F (1 deg C).

E. Thermowells

1. Thermowells:

b. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.

c. Material for Use with Copper Tubing: CNR or CUNI.

d. Material for Use with Steel Piping: CRES OR CSA, as directed.

e. Type: Stepped shank unless straight or tapered shank is indicated.

f. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.

g. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.

h. Bore: Diameter required to match thermometer bulb or stem.

i. Insertion Length: Length required to match thermometer bulb or stem.

j. Lagging Extension: Include on thermowells for insulated piping and tubing.

k. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

F. Pressure Gages

1. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

2. Direct-Mounted, Plastic-Case, Dial-Type Pressure Gages:
   b. Case: Sealed type; plastic; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   c. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   d. Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/4 or NPS 1/2 (DN 8 or DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   e. Movement: Mechanical, with link to pressure element and connection to pointer.
   f. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.
   g. Pointer: Dark-colored metal.
   h. Window: Glass or plastic.
   i. Ring: Metal OR Stainless steel, as directed.
   j. Accuracy: Grade A, plus or minus 1 percent of middle half of OR Grade B, plus or minus 2 percent of middle half of OR Grade C, plus or minus 3 percent of middle half of OR Grade D, plus or minus 5 percent of whole, as directed, scale range.

3. Remote-Mounted, Metal-Case, Dial-Type Pressure Gages:
   b. Case: Liquid-filled OR Sealed, as directed, type; cast aluminum or drawn steel OR metal, as directed; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.
   c. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   d. Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/4 or NPS 1/2 (DN 8 or DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   e. Movement: Mechanical, with link to pressure element and connection to pointer.
   f. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.
   g. Pointer: Dark-colored metal.
   h. Window: Glass or plastic.
   i. Ring: Metal OR Stainless steel, as directed.
   j. Accuracy: Grade A, plus or minus 1 percent of middle half of OR Grade B, plus or minus 2 percent of middle half of OR Grade C, plus or minus 3 percent of middle half of OR Grade D, plus or minus 5 percent of whole, as directed, scale range.

4. Remote-Mounted, Plastic-Case, Dial-Type Pressure Gages:
   b. Case: Sealed type; plastic; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.
   c. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   d. Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/4 or NPS 1/2 (DN 8 or DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
e. Movement: Mechanical, with link to pressure element and connection to pointer.

f. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.

g. Pointer: Dark-colored metal.

h. Window: Glass or plastic.

i. Accuracy: Grade A, plus or minus 1 percent of middle half of OR Grade B, plus or minus 2 percent of middle half of OR Grade C, plus or minus 3 percent of middle half of OR Grade D, plus or minus 5 percent of whole, as directed, scale range.

G. Gage Attachments
1. Snubbers: ASME B40.100, brass; with NPS 1/4 (DN 8) OR NPS 1/4 or NPS 1/2 (DN 8 or DN 15) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads and piston OR porous-metal, as directed, type surge-dampening device. Include extension for use on insulated piping.

2. Valves: Brass ball OR Brass or stainless-steel needle, as directed, with NPS 1/4 (DN 8) OR NPS 1/4 or NPS 1/2 (DN 8 or DN 15) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads.

H. Test Plugs
1. Description: Test-station fitting made for insertion into piping tee fitting.

2. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

3. Thread Size: NPS 1/4 (DN 8) or NPS 1/2 (DN 15), ASME B1.20.1 pipe thread.

I. Test-Plug Kits
1. Furnish one test-plug kit(s) containing one OR two, as directed, thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

2. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F (minus 4 to plus 52 deg C).

3. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F (minus 18 to plus 104 deg C).

4. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- (51- to 76-mm-) diameter dial and probe. Dial range shall be at least 0 to 200 psig (0 to 1380 kPa).

5. Carrying Case: Metal or plastic, with formed instrument padding.

J. Sight Flow Indicators
1. Description: Piping inline-installation device for visual verification of flow.

2. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.

3. Minimum Pressure Rating: 125 psig (860 kPa) OR 150 psig (1034 kPa), as directed.

5. End Connections for NPS 2 (DN 50) and Smaller: Threaded.

6. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

1.3 EXECUTION

A. Installation
1. Install thermowells with socket extending a minimum of 2 inches (51 mm) into fluid OR one-third of pipe diameter OR to center of pipe, as directed, and in vertical position in piping tees.

2. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
3. Install thermowells with extension on insulated piping.
4. Fill thermowells with heat-transfer medium.
5. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
6. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
7. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
8. Install remote-mounted pressure gages on panel.
9. Install valve and snubber in piping for each pressure gage for fluids.
10. Install test plugs in piping tees.
11. Install thermometers in the following locations:
    a. Inlet and outlet of each water heater.
    b. Inlets and outlets of each domestic water heat exchanger.
    c. Inlet and outlet of each domestic hot-water storage tank.
    d. Inlet and outlet of each remote domestic water chiller.
12. Install pressure gages in the following locations:
    a. Building water service entrance into building.
    b. Inlet and outlet of each pressure-reducing valve.
    c. Suction and discharge of each domestic water pump.

B. Connections
1. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

C. Adjusting
1. Adjust faces of meters and gages to proper angle for best visibility.

D. Thermometer Schedule
1. Thermometers at inlet and outlet of each domestic water heater shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct OR Remote, as directed, -mounted, metal OR plastic, as directed, -case, vapor-actuated type.
   c. Compact OR Industrial, as directed, -style, liquid-in-glass type.
   d. Direct OR Remote, as directed, -mounted, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
2. Thermometers at inlets and outlets of each domestic water heat exchanger shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct OR Remote, as directed, -mounted, metal OR plastic, as directed, -case, vapor-actuated type.
   c. Compact OR Industrial, as directed, -style, liquid-in-glass type.
   d. Direct OR Remote, as directed, -mounted, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
3. Thermometers at inlet and outlet of each domestic hot-water storage tank shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct OR Remote, as directed, -mounted, metal OR plastic, as directed, -case, vapor-actuated type.
   c. Compact OR Industrial, as directed, -style, liquid-in-glass type.
   d. Direct OR Remote, as directed, -mounted, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
4. Thermometers at inlet and outlet of each remote domestic water chiller shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
b. Direct OR Remote, as directed, mounted, metal OR plastic, as directed, case, vapor-actuated type.

c. Compact OR Industrial, as directed, style, liquid-in-glass type.

d. Direct OR Remote, as directed, mounted, light-activated type.

e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

5. Thermometer stems shall be of length to match thermowell insertion length.

E. Thermometer Scale-Range Schedule
1. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C) OR 0 to 100 deg F and minus 20 to plus 50 deg C, as directed.
2. Scale Range for Domestic Cold-Water Piping: 0 to 150 deg F (Minus 20 to plus 70 deg C) OR 0 to 150 deg F and minus 20 to plus 70 deg C, as directed.
3. Scale Range for Domestic Cold-Water Piping: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and 0 to plus 115 deg C, as directed.
4. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.
5. Scale Range for Domestic Hot-Water Piping: 20 to 240 deg F (0 to 150 deg C) OR 20 to 240 deg F and 0 to 150 deg C, as directed.
6. Scale Range for Domestic Hot-Water Piping: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and minus 20 to plus 70 deg C, as directed.
7. Scale Range for Domestic Cool-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C) OR 0 to 100 deg F and minus 20 to plus 50 deg C, as directed.
8. Scale Range for Domestic Cool-Water Piping: 0 to 150 deg F (Minus 20 to plus 70 deg C) OR 0 to 150 deg F and minus 20 to plus 70 deg C, as directed.

F. Pressure-Gage Schedule
1. Pressure gages at discharge of each water service into building shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct OR remote, as directed, mounted, metal case.
   b. Sealed, direct OR remote, as directed, mounted, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
2. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct OR remote, as directed, mounted, metal case.
   b. Sealed, direct OR remote, as directed, mounted, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
3. Pressure gages at suction and discharge of each domestic water pump shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct OR remote, as directed, mounted, metal case.
   b. Sealed, direct OR remote, as directed, mounted, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

G. Pressure-Gage Scale-Range Schedule
1. Scale Range for Water Service Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
2. Scale Range for Water Service Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
3. Scale Range for Water Service Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
4. Scale Range for Domestic Water Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
5. Scale Range for Domestic Water Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
6. Scale Range for Domestic Water Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
7. Scale Range for Domestic Water Piping: 0 to 300 psi (0 to 2500 kPa) OR 0 to 300 psi and 0 to 2500 kPa, as directed.

END OF SECTION 21 05 19 00a
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 21 05 19 00b - METERS AND GAGES FOR HVAC PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for meters and gages for HVAC piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Bimetallic-actuated thermometers.
   b. Filled-system thermometers.
   c. Liquid-in-glass thermometers.
   d. Light-activated thermometers.
   e. Thermowells.
   f. Dial-type pressure gages.
   g. Gage attachments.
   h. Test plugs.
   i. Test-plug kits.
   j. Sight flow indicators.
   k. Orifice flowmeters.
   l. Pitot-tube flowmeters.
   m. Turbine flowmeters.
   n. Venturi flowmeters.
   o. Vortex-shedding flowmeters.
   p. Impeller-turbine, thermal-energy meters.
   q. Ultrasonic, thermal-energy meters.

C. Submittals
1. Product Data: For each type of product indicated.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Product Certificates: For each type of meter and gage, from manufacturer.
4. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

1.2 PRODUCTS

A. Bimetallic-Actuated Thermometers
2. Case: Liquid-filled and sealed type(s); stainless steel with 3-inch (76-mm) OR 5-inch (127-mm), as directed, nominal diameter.
3. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F (deg C) OR deg F and deg C, as directed.
4. Connector Type(s): Union joint, adjustable angle OR rigid, back OR rigid, bottom, as directed, with unified-inch screw threads.
5. Connector Size: 1/2 inch (13 mm), with ASME B1.1 screw threads.
6. Stem: 0.25 or 0.375 inch (6.4 or 9.4 mm) in diameter; stainless steel.
7. Window: Plain glass or plastic.
11. Accuracy: Plus or minus 1 OR 1.5, as directed, percent of scale range.
B. Filled-System Thermometers

1. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:
   b. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch (114-mm) OR 5-inch (127-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   c. Element: Bourdon tube or other type of pressure element.
   d. Movement: Mechanical, dampening type, as directed, with link to pressure element and connection to pointer.
   e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Pointer: Dark-colored metal.
   g. Window: Glass or plastic.
   h. Ring: Metal OR Stainless steel.
   i. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device OR rigid, back OR rigid, bottom, as directed; with ASME B1.1 screw threads.
   j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   k. Accuracy: Plus or minus 1 percent of scale range.

2. Direct-Mounted, Plastic-Case, Vapor-Actuated Thermometers:
   b. Case: Sealed type, plastic; 4-1/2-inch (114-mm) OR 5-inch (127-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   c. Element: Bourdon tube or other type of pressure element.
   d. Movement: Mechanical, with link to pressure element and connection to pointer.
   e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Pointer: Dark-colored metal.
   g. Window: Glass or plastic.
   h. Ring: Metal or plastic.
   i. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device OR rigid, back OR rigid, bottom, as directed; with ASME B1.1 screw threads.
   j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   k. Accuracy: Plus or minus 1 percent of scale range.

3. Remote-Mounted, Metal-Case, Vapor-Actuated Thermometers:
   b. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch (114-mm) OR 5-inch (127-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.
   c. Element: Bourdon tube or other type of pressure element.
   d. Movement: Mechanical, with link to pressure element and connection to pointer.
   e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Pointer: Dark-colored metal.
   g. Window: Glass or plastic.
   h. Ring: Metal OR Stainless steel, as directed.
   i. Connector Type(s): Union joint, back OR bottom, as directed; with ASME B1.1 screw threads.
   j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
2) Design for Thermowell Installation: Bare stem.
   k. Accuracy: Plus or minus 1 percent of scale range.

4. Remote-Mounted, Plastic-Case, Vapor-Actuated Thermometers:
   b. Case: Sealed type, plastic; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.
   c. Element: Bourdon tube or other type of pressure element.
   d. Movement: Mechanical, with link to pressure element and connection to pointer.
   e. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Pointer: Dark-colored metal.
   g. Window: Glass or plastic.
   h. Ring: Metal or plastic.
   i. Connector Type(s): Union joint, threaded, back OR bottom, as directed; with ASME B1.1 screw threads.
   j. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   k. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

C. Liquid-In-Glass Thermometers

1. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:
   b. Case: Cast aluminum; 6-inch (152-mm) nominal size.
   c. Case Form: Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red, as directed, organic liquid.
   e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum or brass and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   h. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2. Plastic-Case, Compact-Style, Liquid-in-Glass Thermometers:
   b. Case: Plastic; 6-inch (152-mm) nominal size.
   c. Case Form: Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red, as directed, organic liquid.
   e. Tube Background: Nonreflective with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum or brass and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   h. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

3. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
   b. Case: Cast aluminum; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.
   c. Case Form: Adjustable angle OR Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red, as directed, organic liquid.
e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.

f. Window: Glass or plastic.

g. Stem: Aluminum and of length to suit installation.
   2) Design for Thermowell Installation: Bare stem.

h. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.

i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

4. Plastic-Case, Industrial-Style, Liquid-in-Glass Thermometers:
   b. Case: Plastic; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.
   c. Case Form: Adjustable angle OR Back angle OR Straight, as directed, unless otherwise indicated.
   d. Tube: Glass with magnifying lens and blue or red, as directed, unless otherwise indicated.
   e. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F (deg C) OR deg F and deg C, as directed.
   f. Window: Glass or plastic.
   g. Stem: Aluminum OR Brass OR Stainless steel, as directed, and of length to suit installation.
      2) Design for Thermowell Installation: Bare stem.
   h. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
   i. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

D. Light-Activated Thermometers
   1. Direct-Mounted, Light-Activated Thermometers:
      a. Case: Plastic OR Metal, as directed; 7-inch (178-mm) OR 9-inch (229-mm), as directed, nominal size unless otherwise indicated.
      b. Scale(s): Deg F (Deg C) OR Deg F and deg C, as directed.
      c. Case Form: Adjustable angle.
      d. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
      e. Stem: Aluminum and of length to suit installation.
         2) Design for Thermowell Installation: Bare stem.
      f. Display: Digital.
      g. Accuracy: Plus or minus 2 deg F (1 deg C).

   2. Remote-Mounted, Light-Activated Thermometers:
      a. Case: Plastic, for wall mounting.
      b. Scale(s): Deg F (Deg C) OR Deg F and deg C, as directed.
      c. Sensor: Bulb and thermister wire.
         2) Design for Thermowell Installation: Bare stem.
      d. Display: Digital.
      e. Accuracy: Plus or minus 2 deg F (1 deg C).

E. Duct-Thermometer Mounting Brackets
   1. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

F. Thermowells
   1. Thermowells:
      b. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
      c. Material for Use with Copper Tubing: CNR OR CUNI, as directed.
d. Material for Use with Steel Piping: CRES OR CSA, as directed.
e. Type: Stepped shank unless straight or tapered shank is indicated.
f. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
g. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
h. Bore: Diameter required to match thermometer bulb or stem.
i. Insertion Length: Length required to match thermometer bulb or stem.
j. Lagging Extension: Include on thermowells for insulated piping and tubing.
k. Bushings: For converting size of thermowell’s internal screw thread to size of thermometer connection.

G. Pressure Gages
1. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
   1) Standard: ASME B40.100.
   2) Case: Liquid-filled OR Sealed OR Open-front, pressure relief OR Solid-front, pressure relief, as directed, type(s); cast aluminum or drawn steel; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   3) Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   4) Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   5) Movement: Mechanical, with link to pressure element and connection to pointer.
   6) Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.
   7) Pointer: Dark-colored metal.
   8) Window: Glass or plastic.
   9) Ring: Metal OR Brass OR Stainless steel, as directed.
   10) Accuracy: Grade A, plus or minus 1 percent of middle half of OR Grade B, plus or minus 2 percent of middle half of OR Grade C, plus or minus 3 percent of middle half of OR Grade D, plus or minus 5 percent of whole, as directed, scale range.

2. Direct-Mounted, Plastic-Case, Dial-Type Pressure Gages:
   b. Case: Sealed type; plastic; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter.
   c. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   d. Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   e. Movement: Mechanical, with link to pressure element and connection to pointer.
   f. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.
   g. Pointer: Dark-colored metal.
   h. Window: Glass or plastic.
   i. Accuracy: Grade A, plus or minus 1 percent of middle half of OR Grade B, plus or minus 2 percent of middle half of OR Grade C, plus or minus 3 percent of middle half of OR Grade D, plus or minus 5 percent of whole, as directed, scale range.

3. Remote-Mounted, Metal-Case, Dial-Type Pressure Gages:
   b. Case: Liquid-filled OR Sealed, as directed, type; cast aluminum or drawn steel OR metal, as directed; 4-1/2-inch (114-mm) OR 6-inch (152-mm), as directed, nominal diameter with back OR front, as directed, flange and holes for panel mounting.
   c. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   d. Pressure Connection: Brass, with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   e. Movement: Mechanical, with link to pressure element and connection to pointer.
   f. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi (kPa) OR psi and kPa, as directed.
21 - Fire Suppression

Meters and Gages for HVAC Piping

August 2021

DASNY, Downstate

H. Gage Attachments

1. Snubbers: ASME B40.100, brass; with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads and piston-type OR porous-metal-type, as directed, surgedampening device. Include extension for use on insulated piping.

2. Siphons: Loop-shaped section of brass OR stainless-steel OR steel, as directed, pipe with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, pipe threads.

3. Valves: Brass ball OR Brass or stainless-steel needle, as directed, with NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe threads.

I. Test Plugs

1. Description: Test-station fitting made for insertion into piping tee fitting.

2. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

3. Thread Size: NPS 1/4 (DN 8) OR NPS 1/2 (DN 15), as directed, ASME B1.20.1 pipe thread.

5. Core Inserts: Chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber.

J. Test-Plug Kits

1. Furnish one test-plug kit(s) containing one OR two, as directed, thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

2. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F (minus 4 to plus 52 deg C).

3. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F (minus 18 to plus 104 deg C).

4. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- (51- to 76-mm-) diameter dial and probe. Dial range shall be at least 0 to 200 psig (0 to 1380 kPa).

5. Carrying Case: Metal or plastic, with formed instrument padding.

K. Sight Flow Indicators

1. Description: Piping inline-installation device for visual verification of flow.
2. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.

3. Minimum Pressure Rating: 125 psig (860 kPa) OR 150 psig (1034 kPa), as directed.

5. End Connections for NPS 2 (DN 50) and Smaller: Threaded.

6. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

L. Flowmeters

1. Orifice Flowmeters:
   a. Description: Flowmeter with sensor, hoses or tubing, fittings, valves, indicator, and conversion chart.
   b. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
   c. Sensor: Wafer-orifice-type, calibrated, flow-measuring element; for installation between pipe flanges.
      1) Design: Differential-pressure-type measurement for gas OR oil OR steam OR water, as directed.
      2) Construction: Cast-iron body, brass valves with integral check valves and caps, and calibrated nameplate.
      3) Minimum Pressure Rating: 300 psig (2070 kPa).
      4) Minimum Temperature Rating: 250 deg F (121 deg C).
   d. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected sensor and having 6-inch- (152-mm-) diameter, or equivalent, dial with fittings and copper tubing for connecting to sensor.
      1) Scale: Gallons per minute (Liters per second).
      2) Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.
   e. Portable Indicators: Hand-held, differential-pressure type, calibrated for connected sensor and having two 12-foot (3.7-m) hoses, with carrying case.
      1) Scale: Gallons per minute (Liters per second).
      2) Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.
   f. Display: Shows rate of flow, with register to indicate total volume in gallons (liters).
   g. Conversion Chart: Flow rate data compatible with sensor and indicator.
   h. Operating Instructions: Include complete instructions with each flowmeter.

2. Pitot-Tube Flowmeters:
   a. Description: Flowmeter with sensor and indicator.
   b. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
   c. Sensor: Insertion type; for inserting probe into piping and measuring flow directly in gallons per minute (liters per second).
      1) Design: Differential-pressure-type measurement for oil OR water, as directed.
      2) Construction: Stainless-steel probe of length to span inside of pipe, with integral transmitter and direct-reading scale.
      3) Minimum Pressure Rating: 150 psig (1035 kPa).
      4) Minimum Temperature Rating: 250 deg F (121 deg C).
   d. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
   e. Integral Transformer: For low-voltage power connection.
   f. Accuracy: Plus or minus 3 percent.
   g. Display: Shows rate of flow, with register to indicate total volume in gallons (liters).
   h. Operating Instructions: Include complete instructions with each flowmeter.

3. Turbine Flowmeters:
   a. Description: Flowmeter with sensor and indicator.
   b. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
   c. Sensor: Impeller turbine; for inserting into pipe fitting or for installing in piping and measuring flow directly in gallons per minute (liters per second).
      1) Design: Device or pipe fitting with inline turbine and integral direct-reading scale for gas OR oil OR steam OR water, as directed.
      2) Construction: Bronze or stainless-steel body, with plastic turbine or impeller.
3) Minimum Pressure Rating: 150 psig (1035 kPa).
4) Minimum Temperature Rating: 180 deg F (82 deg C).

d. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.

e. Accuracy: Plus or minus 1-1/2 percent.

f. Display: Shows rate of flow, with register to indicate total volume in gallons (liters).

g. Operating Instructions: Include complete instructions with each flowmeter.

4. Venturi Flowmeters:

a. Description: Flowmeter with calibrated flow-measuring element, hoses or tubing, fittings, valves, indicator, and conversion chart.

b. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.

c. Sensor: Venturi-type, calibrated, flow-measuring element; for installation in piping.

1) Design: Differential-pressure-type measurement for gas OR oil OR steam OR water, as directed.

2) Construction: Bronze, brass, or factory-primed steel, with brass fittings and attached tag with flow conversion data.

4) Minimum Temperature Rating: 250 deg F (121 deg C).

5) End Connections for NPS 2 (DN 50) and Smaller: Threaded.

6) End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged or welded.

7) Flow Range: Flow-measuring element and flowmeter shall cover operating range of equipment or system served.

d. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected flowmeter element, and having 6-inch- (152-mm-) diameter, or equivalent, dial with fittings and copper tubing for connecting to flowmeter element.

1) Scale: Gallons per minute (Liters per second).

2) Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.

e. Portable Indicators: Hand-held, differential-pressure type, calibrated for connected flowmeter element and having two 12-foot (3.7-m) hoses, with carrying case.

1) Scale: Gallons per minute (Liters per second).

2) Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.

f. Display: Shows rate of flow, with register to indicate total volume in gallons (liters).

g. Conversion Chart: Flow rate data compatible with sensor.

h. Operating Instructions: Include complete instructions with each flowmeter.

5. Vortex-Shedding Flowmeters:

a. Description: Flowmeter with sensor and indicator.

b. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.

c. Sensor: Inline type; for installing between pipe flanges and measuring flow directly in gallons per minute (liters per second).

1) Design: Flow obstruction device, vortex-measurement type for gas OR steam OR liquids, as directed.

2) Construction: Stainless-steel body, with integral transmitter and direct-reading scale.

3) Minimum Pressure Rating: 1000 psig (6900 kPa).

5) Integral Transformer: For low-voltage power operation.

d. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.

e. Accuracy: Plus or minus 0.25 percent for liquids and 0.75 percent for gases.

f. Display: Shows rate of flow, with register to indicate total volume in gallons (liters).

g. Operating Instructions: Include complete instructions with each flowmeter.

M. Thermal-Energy Meters

1. Impeller-Turbine, Thermal-Energy Meters:

a. Description: System with strainer, as directed, flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
b. Flow Sensor: Impeller turbine with corrosion-resistant-metal body and transmitter; for installing in piping.
   1) Design: Total thermal-energy measurement.
   2) Minimum Pressure Rating: 150 psig (1035 kPa).
   3) Minimum Temperature Range: 40 to 250 deg F (5 to 121 deg C).

c. Temperature Sensors: Insertion-type transducer.

d. Indicator: Solid-state, integrating-type meter with integral battery pack, as directed; for wall mounting.
   1) Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units (joules).
   2) Battery Pack: Five-year lithium battery.

e. Accuracy: Plus or minus 1 percent.

f. Display: Visually indicates total fluid volume in gallons (liters) and thermal-energy flow in kilowatts per hour or British thermal units (joules).

g. Strainer: Full size of main line piping.

h. Operating Instructions: Include complete instructions with each thermal-energy meter system.

2. Ultrasonic, Thermal-Energy Meters:

a. Description: Meter with flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.

c. Temperature Sensors: Insertion-type or strap-on transducer.

d. Indicator: Solid-state, integrating-type meter with integral battery pack, as directed.
   1) Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units (joules).
   2) Battery Pack: Five-year lithium battery.

e. Accuracy: Plus or minus 1 percent.

f. Display: Visually indicates total fluid volume in gallons (liters) and thermal-energy flow in kilowatts per hour or British thermal units (joules).

g. Operating Instructions: Include complete instructions with each thermal-energy meter system.

1.3 EXECUTION

A. Installation

1. Install thermowells with socket extending a minimum of 2 inches (51 mm) into fluid OR one-third of pipe diameter OR to center of pipe, as directed, and in vertical position in piping tees.

2. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

3. Install thermowells with extension on insulated piping.

4. Fill thermowells with heat-transfer medium.

5. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

6. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.

7. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.

8. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

9. Install remote-mounted pressure gages on panel.

10. Install valve and snubby in piping for each pressure gage for fluids (except steam).

11. Install valve and syphon fitting in piping for each pressure gage for steam.

12. Install test plugs in piping tees.

13. Install flow indicators in piping systems in accessible positions for easy viewing.

14. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer’s written instructions.

15. Install flowmeter elements in accessible positions in piping systems.

16. Install wafer-orifice flowmeter elements between pipe flanges.
17. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
18. Install permanent indicators on walls or brackets in accessible and readable positions.
19. Install connection fittings in accessible locations for attachment to portable indicators.
20. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.
21. Install thermometers in the following locations:
   a. Inlet and outlet of each hydronic zone.
   b. Inlet and outlet of each hydronic boiler.
   c. Two inlets and two outlets of each chiller.
   d. Inlet and outlet of each hydronic coil in air-handling units.
   e. Two inlets and two outlets of each hydronic heat exchanger.
   f. Inlet and outlet of each thermal-storage tank.
   g. Outside-, return-, supply-, and mixed-air ducts.
22. Install pressure gages in the following locations:
   a. Discharge of each pressure-reducing valve.
   b. Inlet and outlet of each chiller chilled-water and condenser-water connection.
   c. Suction and discharge of each pump.

B. Connections
1. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
2. Connect flowmeter-system elements to meters.
3. Connect flowmeter transmitters to meters.
4. Connect thermal-energy meter transmitters to meters.

C. Adjusting
1. After installation, calibrate meters according to manufacturer's written instructions.
2. Adjust faces of meters and gages to proper angle for best visibility.

D. Thermometer Schedule
1. Thermometers at inlet and outlet of each hydronic zone shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
2. Thermometers at inlet and outlet of each hydronic boiler shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
3. Thermometers at inlets and outlets of each chiller shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.
4. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

5. Thermometers at inlets and outlets of each hydronic heat exchanger shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

6. Thermometers at inlet and outlet of each hydronic heat-recovery unit shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

7. Thermometers at inlet and outlet of each thermal-storage tank shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.
   e. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

8. Thermometers at outside-, return-, supply-, and mixed-air ducts shall be one of the following:
   a. Liquid-filled OR Sealed, as directed, bimetallic-actuated type.
   b. Direct-mounted OR Remote-mounted, as directed, metal-case OR plastic-case, as directed, vapor-actuated type.
   c. Compact-style OR Industrial-style, as directed, liquid-in-glass type.
   d. Direct-mounted OR Remote-mounted, as directed, light-activated type.

9. Thermometer stems shall be of length to match thermowell insertion length.

E. Thermometer Scale-Range Schedule

1. Scale Range for Chilled-Water Piping: Minus 40 to plus 160 deg F (Minus 40 to plus 100 deg C) OR Minus 40 to plus 160 deg F and minus 40 to plus 100 deg C, as directed.
2. Scale Range for Chilled-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C) OR 0 to 100 deg F and minus 20 to plus 50 deg C, as directed.
3. Scale Range for Chilled-Water Piping: 0 to 150 deg F (Minus 20 to plus 70 deg C) OR 0 to 150 deg F and minus 20 to plus 70 deg C, as directed.
4. Scale Range for Chilled-Water Piping: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.
5. Scale Range for Condenser-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C) OR 0 to 100 deg F and minus 20 to plus 50 deg C, as directed.
6. Scale Range for Condenser-Water Piping: 0 to 150 deg F (Minus 20 to plus 70 deg C) OR 0 to 150 deg F and minus 20 to plus 70 deg C, as directed.
7. Scale Range for Condenser-Water Piping: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.
8. Scale Range for Condenser-Water Piping: 20 to 240 deg F (0 to 150 deg C) OR 20 to 240 deg F and 0 to 150 deg C, as directed.
9. Scale Range for Condenser-Water Piping: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and 0 to plus 115 deg C, as directed.
10. Scale Range for Heating, Hot-Water Piping: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.

11. Scale Range for Heating, Hot-Water Piping: 20 to 240 deg F (0 to 150 deg C) OR 20 to 240 deg F and 0 to 150 deg C, as directed.

12. Scale Range for Heating, Hot-Water Piping: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and 0 to plus 115 deg C, as directed.

13. Scale Range for Heating, Hot-Water Piping: 50 to 400 deg F (0 to 200 deg C) OR 50 to 400 deg F and 0 to 200 deg C, as directed.

14. Scale Range for Heating, Hot-Water Piping: 50 to 550 deg F (10 to 300 deg C) OR 50 to 550 deg F and 10 to 300 deg C, as directed.

15. Scale Range for Steam and Steam-Condensate Piping: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.

16. Scale Range for Steam and Steam-Condensate Piping: 20 to 240 deg F (0 to 150 deg C) OR 20 to 240 deg F and 0 to 150 deg C, as directed.

17. Scale Range for Steam and Steam-Condensate Piping: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and 0 to plus 115 deg C, as directed.

18. Scale Range for Steam and Steam-Condensate Piping: 50 to 400 deg F (0 to 200 deg C) OR 50 to 400 deg F and 0 to 200 deg C, as directed.

19. Scale Range for Steam and Steam-Condensate Piping: 50 to 550 deg F (10 to 300 deg C) OR 50 to 550 deg F and 10 to 300 deg C, as directed.

20. Scale Range for Air Ducts: Minus 40 to plus 110 deg F (Minus 40 to plus 45 deg C) OR Minus 40 to plus 110 deg F and minus 40 to plus 45 deg C, as directed.

21. Scale Range for Air Ducts: Minus 40 to plus 160 deg F (Minus 40 to plus 100 deg C) OR Minus 40 to plus 160 deg F and minus 40 to plus 100 deg C, as directed.

22. Scale Range for Air Ducts: 0 to 100 deg F (Minus 20 to plus 50 deg C) OR 0 to 100 deg F and minus 20 to plus 50 deg C, as directed.

23. Scale Range for Air Ducts: 0 to 150 deg F (Minus 20 to plus 70 deg C) OR 0 to 150 deg F and minus 20 to plus 70 deg C, as directed.

24. Scale Range for Air Ducts: 0 to 250 deg F (0 to 150 deg C) OR 0 to 250 deg F and 0 to 150 deg C, as directed.

25. Scale Range for Air Ducts: 20 to 240 deg F (0 to 150 deg C) OR 20 to 240 deg F and 0 to 150 deg C, as directed.

26. Scale Range for Air Ducts: 30 to 240 deg F (0 to plus 115 deg C) OR 30 to 240 deg F and 0 to plus 115 deg C, as directed.

F. Pressure-Gage Schedule

1. Pressure gages at discharge of each pressure-reducing valve shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct-mounted OR remote-mounted, as directed, metal case.
   b. Sealed, direct-mounted OR remote-mounted, as directed, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

2. Pressure gages at inlet and outlet of each chiller chilled-water and condenser-water connection shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct-mounted OR remote-mounted, as directed, metal case.
   b. Sealed, direct-mounted OR remote-mounted, as directed, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

3. Pressure gages at suction and discharge of each pump shall be one of the following:
   a. Liquid-filled OR Sealed OR Open-front, pressure-relief OR Solid-front, pressure-relief, as directed, direct-mounted OR remote-mounted, as directed, metal case.
   b. Sealed, direct-mounted OR remote-mounted, as directed, plastic case.
   c. Test plug with chlorosulfonated polyethylene synthetic OR EPDM, as directed, self-sealing rubber inserts.

G. Pressure-Gage Scale-Range Schedule
1. Scale Range for Chilled-Water Piping: 30 in. Hg to 15 psi (minus 100 to 0 kPa) OR 30 in. Hg to 15 psi and minus 100 to 0 kPa, as directed.
2. Scale Range for Chilled-Water Piping: 0 to 30 psi (0 to 240 kPa) OR 0 to 30 psi and 0 to 240 kPa, as directed.
3. Scale Range for Chilled-Water Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
4. Scale Range for Chilled-Water Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
5. Scale Range for Chilled-Water Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
6. Scale Range for Chilled-Water Piping: 0 to 300 psi (0 to 2500 kPa) OR 0 to 300 psi and 0 to 2500 kPa, as directed.
7. Scale Range for Chilled-Water Piping: 0 to 600 psi (0 to 4000 kPa) OR 0 to 600 psi and 0 to 4000 kPa, as directed.
8. Scale Range for Condenser-Water Piping: 30 in. Hg to 15 psi (minus 100 to 0 kPa) OR 30 in. Hg to 15 psi and minus 100 to 0 kPa, as directed.
9. Scale Range for Condenser-Water Piping: 0 to 30 psi (0 to 240 kPa) OR 0 to 30 psi and 0 to 240 kPa, as directed.
10. Scale Range for Condenser-Water Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
11. Scale Range for Condenser-Water Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
12. Scale Range for Condenser-Water Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
13. Scale Range for Condenser-Water Piping: 0 to 300 psi (0 to 2500 kPa) OR 0 to 300 psi and 0 to 2500 kPa, as directed.
14. Scale Range for Condenser-Water Piping: 0 to 600 psi (0 to 4000 kPa) OR 0 to 600 psi and 0 to 4000 kPa, as directed.
15. Scale Range for Heating, Hot-Water Piping: 30 in. Hg to 15 psi (minus 100 to 0 kPa) OR 30 in. Hg to 15 psi and minus 100 to 0 kPa, as directed.
16. Scale Range for Heating, Hot-Water Piping: 0 to 30 psi (0 to 240 kPa) OR 0 to 30 psi and 0 to 240 kPa, as directed.
17. Scale Range for Heating, Hot-Water Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
18. Scale Range for Heating, Hot-Water Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
19. Scale Range for Heating, Hot-Water Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
20. Scale Range for Heating, Hot-Water Piping: 0 to 300 psi (0 to 2500 kPa) OR 0 to 300 psi and 0 to 2500 kPa, as directed.
21. Scale Range for Heating, Hot-Water Piping: 0 to 600 psi (0 to 4000 kPa) OR 0 to 600 psi and 0 to 4000 kPa, as directed.
22. Scale Range for Steam Piping: 30 in. Hg to 15 psi (minus 100 to 0 kPa) OR 30 in. Hg to 15 psi and minus 100 to 0 kPa, as directed.
23. Scale Range for Steam Piping: 0 to 30 psi (0 to 240 kPa) OR 0 to 30 psi and 0 to 240 kPa, as directed.
24. Scale Range for Steam Piping: 0 to 100 psi (0 to 600 kPa) OR 0 to 100 psi and 0 to 600 kPa, as directed.
25. Scale Range for Steam Piping: 0 to 160 psi (0 to 1100 kPa) OR 0 to 160 psi and 0 to 1100 kPa, as directed.
26. Scale Range for Steam Piping: 0 to 200 psi (0 to 1400 kPa) OR 0 to 200 psi and 0 to 1400 kPa, as directed.
27. Scale Range for Steam Piping: 0 to 300 psi (0 to 2500 kPa) OR 0 to 300 psi and 0 to 2500 kPa, as directed.
28. Scale Range for Steam Piping: 0 to 600 psi (0 to 4000 kPa) OR 0 to 600 psi and 0 to 4000 kPa, as directed.
1. Flowmeters for Chilled-Water Piping: Orifice OR Pitot-tube OR Turbine OR Venturi OR Vortex-shedding, as directed, type.
2. Flowmeters for Condenser-Water Piping: Orifice OR Pitot-tube OR Turbine OR Venturi OR Vortex-shedding, as directed, type.
3. Flowmeters for Heating, Hot-Water Piping: Orifice OR Pitot-tube OR Turbine OR Venturi OR Vortex-shedding, as directed, type.
4. Flowmeters for Steam and Steam-Condensate Piping: Orifice OR Turbine OR Venturi OR Vortex-shedding, as directed, type.

I. Thermal-Energy Meter Schedule
1. Thermal-Energy Meters for Chilled-Water Piping: Impeller-turbine OR Ultrasonic, as directed, type.
2. Thermal-Energy Meters for Condenser-Water Piping: Impeller-turbine OR Ultrasonic, as directed, type.
4. Thermal-Energy Meters for Steam and Steam-Condensate Piping: Impeller-turbine OR Ultrasonic, as directed, type.

SECTION 21 05 48 13 - VIBRATION AND SEISMIC CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of vibration and seismic controls for fire-suppression piping and equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Isolation pads.
   b. Isolation mounts.
   c. Restrained elastomeric isolation mounts.
   d. Restraining braces.

C. Definitions
3. OSHPD: Office of Statewide Health Planning and Development for the State of California.

D. Performance Requirements
1. Seismic-Restraint Loading:
   a. Site Class as Defined in the IBC: A OR B OR C OR D OR E OR F, as directed.
   b. Assigned Seismic Use Group or Building Category as Defined in the IBC: I OR II OR III, as directed.
      1) Component Importance Factor: 1.0 OR 1.5, as directed.
      2) Component Response Modification Factor: 1.5 OR 2.5 OR 3.5 OR 5.0, as directed.
      3) Component Amplification Factor: 1.0 OR 2.5, as directed.
   c. Design Spectral Response Acceleration at Short Periods (0.2 Second): As required to meet Project requirements.
   d. Design Spectral Response Acceleration at 1-Second Period: As required to meet Project requirements.

E. Submittals
1. Product Data: For each product indicated.
2. Delegated-Design Submittal: For vibration isolation and seismic-restraint calculations and details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
3. Welding certificates.
4. Qualification Data: For professional engineer.

F. Quality Assurance
1. Comply with seismic-restraint requirements in the IBC and NFPA 13 unless requirements in this Section are more stringent.
2. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
3. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing
Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

1.2 PRODUCTS

A. Vibration Isolators

1. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
   a. Resilient Material: Oil- and water-resistant neoprene OR rubber OR hermetically sealed compressed fiberglass, as directed.

2. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.
   a. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
   b. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

3. Restrained Mounts: All-directional mountings with seismic restraint.
   a. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
   b. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

B. Seismic-Restraint Devices

1. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed.
   a. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.

2. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

3. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections OR Reinforcing steel angle clamped, as directed, to hanger rod.

4. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.

5. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings and matched to type and size of attachment devices used.

6. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

7. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

8. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless
C. Factory Finishes
   1. Finish
      a. Manufacturer's standard prime-coat finish ready for field painting.  
         OR
         Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping. 
         1) Powder coating on springs and housings. 
         2) All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use. 
         3) Baked enamel or powder coat for metal components on isolators for interior use. 
         4) Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

1.3 EXECUTION

A. Applications
   1. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed.
   2. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
   3. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

B. Vibration-Control And Seismic-Restraint Device Installation
   1. Equipment Restraints: 
      a. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
      b. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed, providing required submittals for component.
   2. Piping Restraints:
      b. Space lateral supports a maximum of 40 feet (12 m) o.c., and longitudinal supports a maximum of 80 feet (24 m) o.c.
      c. Brace a change of direction longer than 12 feet (3.7 m).
   3. Install cables so they do not bend across edges of adjacent equipment or building structure.
   4. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed, providing required submittals for component.
   5. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
   6. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
   7. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
   8. Drilled-in Anchors:
      a. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered.
during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.

b. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.

c. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.

d. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.

e. Set anchors to manufacturer’s recommended torque, using a torque wrench.

f. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

C. Accommodation Of Differential Seismic Motion

1. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 21 Section "Wet-pipe Sprinkler Systems" for piping flexible connections.

END OF SECTION 21 05 48 13
SECTION 21 07 00 00 - FIRE-SUPPRESSION SYSTEMS INSULATION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for fire-suppression systems insulation. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Insulation Materials:
      1) Calcium silicate.
      2) Cellular glass.
      3) Flexible elastomeric.
      4) Mineral fiber.
      5) Phenolic.
      6) Polyisocyanurate.
      7) Polyolefin.
      8) Polystyrene.
   b. Insulating cements.
   c. Adhesives.
   d. Mastics.
   e. Lagging adhesives.
   f. Sealants.
   g. Factory-applied jackets.
   h. Field-applied fabric-reinforcing mesh.
   i. Field-applied cloths.
   j. Field-applied jackets.
   k. Tapes.
   l. Securements.
   m. Corner angles.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings:
   a. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   b. Detail attachment and covering of heat tracing inside insulation.
   c. Detail insulation application at pipe expansion joints for each type of insulation.
   d. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
   e. Detail removable insulation at piping specialties and equipment connections.
   f. Detail application of field-applied jackets.
   g. Detail application at linkages of control devices.
   h. Detail field application for fire-suppression water storage tanks.
4. Field quality-control reports.

D. Quality Assurance
1. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84,
by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

a. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

b. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

E. Delivery, Storage, And Handling

1. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.2 PRODUCTS

A. Insulation Materials

1. Comply with requirements in Part 1.3 schedule articles for where insulating materials shall be applied.

2. Products shall not contain asbestos, lead, mercury, or mercury compounds.

3. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

4. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

5. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

6. Calcium Silicate:

   a. Prefomed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.

   b. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.

   a. Block Insulation: ASTM C 552, Type I.

   b. Special-Shaped Insulation: ASTM C 552, Type III.

   c. Board Insulation: ASTM C 552, Type IV.

   d. Prefomed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.

   e. Prefomed Pipe Insulation with Factory-Applied ASJ OR ASJ-SSL, as directed: Comply with ASTM C 552, Type II, Class 2.

   f. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

8. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

10. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation without factory-applied jacket OR with factory-applied ASJ OR with factory-applied FSK jacket, as directed. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

11. Mineral-Fiber, Prefformed Pipe Insulation:

   a. Type I, 850 deg F (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, without factory-applied jacket OR with factory-applied ASJ OR with factory-applied ASJ-SSL, as directed. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

   b. Type II, 1200 deg F (649 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, without factory-applied
jacket OR with factory-applied ASJ OR with factory-applied ASJ-SSL, as directed. Factory-applied jacket requirements are specified in “Factory-Applied Jackets” Article.

12. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ OR FSK jacket, as directed, complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. (40 kg/cu. m) or more. Thermal conductivity (k-value) at 100 deg F (55 deg C) is 0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in “Factory-Applied Jackets” Article.

13. Phenolic:
   a. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
   b. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
   c. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
      1) Preformed Pipe Insulation: None OR ASJ, as directed.
      2) Board for Equipment Applications: None OR ASJ, as directed.

   a. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed 0.19 Btu x in./h x sq. ft. x deg F (0.027 W/m x K) at 75 deg F (24 deg C) after 180 days of aging.
   b. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to 1-1/2 inches (38 mm) as tested by ASTM E 84.
   c. Fabricate shapes according to ASTM C 450 and ASTM C 585.
      1) Pipe Applications: None OR ASJ OR ASJ-SSL OR PVDC OR PVDC-SSL, as directed.
      2) Equipment Applications: None OR ASJ OR ASJ-SSL OR PVDC OR PVDC-SSL, as directed.

15. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

16. Polystyrene: Rigid, extruded cellular polystyrene intended for use as thermal insulation. Comply with ASTM C 578, Type IV or Type XIII, except thermal conductivity (k-value) shall not exceed 0.26 Btu x in./h x sq. ft. x deg F (0.038 W/m x K) after 180 days of aging. Fabricate shapes according to ASTM C 450 and ASTM C 585.

B. Insulating Cements
   2. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

C. Adhesives
   1. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
   2. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F (10 to 427 deg C).
      a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Cellular-Glass, Phenolic, Polyisocyanurate, and Polystyrene Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F (minus 59 to plus 149 deg C).
      a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

6. Polystyrene Adhesive: Solvent- or water-based, synthetic resin adhesive with a service temperature range of minus 20 to plus 140 deg F (29 to plus 60 deg C).

   a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

8. PVC Jacket Adhesive: Compatible with PVC jacket.
   a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Mastics
1. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
   a. For indoor applications, use mastics that have a VOC content of $\text{Insert value}$ g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
   a. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
   b. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
   c. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.

3. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
   a. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
   b. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
   c. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.

4. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
   a. Water-Vapor Permeance: ASTM F 1249, 3 perms (2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
   b. Service Temperature Range: Minus 20 to plus 200 deg F (Minus 29 to plus 93 deg C).
   c. Solids Content: 63 percent by volume and 73 percent by weight.

E. Lagging Adhesives
1. Description: Comply with MIL-A-3316C, Class I, Grade A, and shall be compatible with insulation materials, jackets, and substrates.
   a. For indoor applications, use lagging adhesives that have a VOC content of $\text{Insert value}$ g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment and pipe insulation.
   c. Service Temperature Range: Minus 50 to plus 180 deg F (Minus 46 to plus 82 deg C).

F. Sealants
1. Joint Sealants:
   a. Materials shall be compatible with insulation materials, jackets, and substrates.
   b. Permanently flexible, elastomeric sealant.
   c. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
   d. Color: White or gray.
   e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. FSK and Metal Jacket Flashing Sealants:
a. Materials shall be compatible with insulation materials, jackets, and substrates.
b. Fire- and water-resistant, flexible, elastomeric sealant.
c. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
d. Color: Aluminum.
e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
   a. Materials shall be compatible with insulation materials, jackets, and substrates.
   b. Fire- and water-resistant, flexible, elastomeric sealant.
   c. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
   e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

G. Factory-Applied Jackets
   1. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
      a. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
      b. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
      c. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
      d. PVDC Jacket for Indoor Applications: 4-mil- (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms (0.013 metric perms) when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
      e. PVDC Jacket for Outdoor Applications: 6-mil- (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms (0.007 metric perms) when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.

H. Field-Applied Fabric-Reinforcing Mesh
   1. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. inch (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
   2. Woven Glass-Fiber Fabric for Equipment Insulation: Approximately 6 oz./sq. yd. (203 g/sq. m) with a thread count of 5 strands by 5 strands/sq. inch (2 strands by 2 strands/sq. mm) for covering equipment.
   3. Woven Polyester Fabric: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. inch (4 strands by 4 strands/sq. mm), in a Leno weave.

I. Field-Applied Cloths
   1. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).

J. Field-Applied Jackets
   1. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
   2. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
      a. Adhesive: As recommended by jacket material manufacturer.
      b. Color: White OR Color-code jackets based on system. Color as selected by the Owner, as directed.
      c. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
1) Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

d. Factory-fabricated tank heads and tank side panels.

3. Metal Jacket:
      1) Sheet and roll stock ready for shop or field sizing OR Factory cut and rolled to size, as directed.
      2) Finish and thickness are indicated in field-applied jacket schedules.
      3) Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper OR 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      4) Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      5) Factory-Fabricated Fitting Covers:
         a) Same material, finish, and thickness as jacket.
         b) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
         c) Tee covers.
         d) Flange and union covers.
         e) End caps.
         f) Beveled collars.
         g) Valve covers.
         h) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
   b. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
      1) Sheet and roll stock ready for shop or field sizing OR Factory cut and rolled to size, as directed.
      2) Material, finish, and thickness are indicated in field-applied jacket schedules.
      3) Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper OR 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      4) Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      5) Factory-Fabricated Fitting Covers:
         a) Same material, finish, and thickness as jacket.
         b) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
         c) Tee covers.
         d) Flange and union covers.
         e) End caps.
         f) Beveled collars.
         g) Valve covers.
         h) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

K. Tapes
   1. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
      a. Width: 3 inches (75 mm).
      b. Thickness: 11.5 mils (0.29 mm).
      c. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
      d. Elongation: 2 percent.
      e. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
      f. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
   2. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
      a. Width: 3 inches (75 mm).
b. Thickness: 6.5 mils (0.16 mm).
c. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
d. Elongation: 2 percent.
e. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
f. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

3. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
   a. Width: 2 inches (50 mm).
   b. Thickness: 6 mils (0.15 mm).
   c. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
   d. Elongation: 500 percent.
   e. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

   a. Width: 2 inches (50 mm).
   b. Thickness: 3.7 mils (0.093 mm).
   c. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
   d. Elongation: 5 percent.
   e. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

5. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
   a. Width: 3 inches (75 mm).
   b. Film Thickness: 4 mils (0.10 mm).
   c. Adhesive Thickness: 1.5 mils (0.04 mm).
   d. Elongation at Break: 145 percent.
   e. Tensile Strength: 55 lbf/inch (10.1 N/mm) in width.

6. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
   a. Width: 3 inches (75 mm).
   b. Film Thickness: 6 mils (0.15 mm).
   c. Adhesive Thickness: 1.5 mils (0.04 mm).
   d. Elongation at Break: 145 percent.
   e. Tensile Strength: 55 lbf/inch (10.1 N/mm) in width.

L. Securements
   1. Bands:
      a. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 OR Type 316, as directed; 0.015 inch (0.38 mm) thick, 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, wide with wing seal OR closed seal, as directed.
      b. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, wide with wing seal OR closed seal, as directed.
      c. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

   2. Insulation Pins and Hangers:
      a. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
         1) Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
         2) Spindle: Copper- or zinc-coated, low carbon steel OR Aluminum OR Stainless steel, as directed, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
         3) Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
      b. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1) **Baseplate:** Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.

2) **Spindle:** Copper- or zinc-coated, low carbon steel OR Aluminum OR Stainless steel, as directed, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.

3) Adhesive-backed base with a peel-off protective cover.

   c. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, galvanized-steel OR aluminum OR stainless-steel, as directed, sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.

   1) Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

3. **Staples:** Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.

4. **Wire:** 0.080-inch (2.0-mm) nickel-copper alloy OR 0.062-inch (1.6-mm) soft-annealed, stainless steel OR 0.062-inch (1.6-mm) soft-annealed, galvanized steel, as directed.

### 1.3 EXECUTION

**A. Preparation**

1. **Surface Preparation:** Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

   OR

   Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

   a. **Stainless Steel:** Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

   b. **Carbon Steel:** Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

2. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

3. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

**B. General Installation Requirements**

1. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.

2. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

3. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

4. Install insulation with longitudinal seams at top and bottom of horizontal runs.

5. Install multiple layers of insulation with longitudinal and end seams staggered.

6. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

8. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

9. Install insulation with least number of joints practical.

10. Where vapor barrier is indicated, seal joins, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

   a. Install insulation continuously through hangers and around anchor attachments.
b. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

c. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

d. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

11. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

12. Install insulation with factory-applied jackets as follows:
   a. Draw jacket tight and smooth.
   b. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
   c. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) OR 4 inches (100 mm), as directed, o.c.
      1) For below ambient services, apply vapor-barrier mastic over staples.
   d. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
   e. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

13. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

14. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

15. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

16. For above ambient services, do not install insulation to the following:
   a. Vibration-control devices.
   b. Testing agency labels and stamps.
   c. Nameplates and data plates.
   d. Manholes.
   e. Handholes.
   f. Cleanouts.

C. Penetrations
1. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
   a. Seal penetrations with flashing sealant.
   b. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   c. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
   d. Seal jacket to roof flashing with flashing sealant.

2. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

3. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
   a. Seal penetrations with flashing sealant.
   b. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install
insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.

c. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).

d. Seal jacket to wall flashing with flashing sealant.

4. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

5. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

a. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

6. Insulation Installation at Floor Penetrations:

a. Pipe: Install insulation continuously through floor penetrations.

b. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping".

D. Equipment, Tank, And Vessel Insulation Installation

1. Secure insulation with adhesive and anchor pins and speed washers.

a. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 OR 50, as directed, percent coverage of tank and vessel surfaces.

b. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.

c. Protect exposed corners with secured corner angles.

d. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:

1) Do not weld anchor pins to ASME-labeled pressure vessels.

2) Select insulation hangers and adhesive that are compatible with service temperature and with substrate.

3) On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints, and 16 inches (400 mm) o.c. in both directions.

4) Do not overcompress insulation during installation.

5) Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.

6) Impale insulation over anchor pins and attach speed washers.

7) Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

e. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.

f. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches (150 mm) from each end. Install wire or cable between two circumferential girdles 12 inches (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.

g. Stagger joints between insulation layers at least 3 inches (75 mm).

h. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.

i. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.

j. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
2. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
   a. Apply 100 percent coverage of adhesive to surface with manufacturer’s recommended adhesive.
   b. Seal longitudinal seams and end joints.

E. General Pipe Insulation Installation
1. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
2. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   a. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
   b. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   c. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   d. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
   e. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
   f. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
   g. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
   h. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
   i. Stencil or label the outside insulation jacket of each union with the word “UNION.” Match size and color of pipe labels.
3. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
4. Install removable insulation covers at locations indicated. Installation shall conform to the following:
   a. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
   b. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
c. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.

d. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

e. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

F. Calcium Silicate Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:
   a. Secure single-layer insulation with stainless-steel bands at 12-inch (300-mm) intervals and tighten bands without deforming insulation materials.
   b. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12-inch (300-mm) intervals.
   c. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
   d. Finish flange insulation same as pipe insulation.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
   c. Finish fittings insulation same as pipe insulation.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   b. Install insulation to flanges as specified for flange insulation application.
   c. Finish valve and specialty insulation same as pipe insulation.

G. Cellular-Glass Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:
   a. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.
   c. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
   d. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.

d. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed sections of cellular-glass insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

H. Flexible Elastomeric Insulation Installation
1. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
2. Insulation Installation on Pipe Flanges:
   a. Install pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
   d. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install mitered sections of pipe insulation.
   b. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed valve covers manufactured of same material as pipe insulation when available.
   b. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.
   d. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

I. Mineral-Fiber Insulation Installation
1. Insulation Installation on Straight Pipes and Tubes:
   a. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.
   c. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
   d. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
d. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
   c. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   d. Install insulation to flanges as specified for flange insulation application.

J. Phenolic Insulation Installation
   1. General Installation Requirements:
      a. Secure single-layer insulation with stainless-steel bands at 12-inch (300-mm) intervals and tighten bands without deforming insulation materials.
      b. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with 0.062-inch (1.6-mm) wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12-inch (300-mm) intervals.
   2. Insulation Installation on Straight Pipes and Tubes:
      a. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
      b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.
      c. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
      d. For insulation with factory-applied jackets with vapor retarders on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
   3. Insulation Installation on Pipe Flanges:
      a. Install preformed pipe insulation to outer diameter of pipe flange.
      b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
      c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
   4. Insulation Installation on Pipe Fittings and Elbows:
      a. Install preformed insulation sections of same material as straight segments of pipe insulation.
   5. Insulation Installation on Valves and Pipe Specialties:
      a. Install preformed insulation sections of same material as straight segments of pipe insulation.
      b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
      c. Install insulation to flanges as specified for flange insulation application.

K. Polyisocyanurate Insulation Installation
   1. Insulation Installation on Straight Pipes and Tubes:
a. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.
b. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
c. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm) thickness.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyisocyanurate block insulation of same thickness as pipe insulation.

3. Insulation Installation on Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed sections of polyisocyanurate insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

L. Polyolefin Insulation Installation
   1. Insulation Installation on Straight Pipes and Tubes:
      a. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
   2. Insulation Installation on Pipe Flanges:
      a. Install pipe insulation to outer diameter of pipe flange.
      b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
      c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
      d. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
   3. Insulation Installation on Pipe Fittings and Elbows:
      a. Install mitered sections of polyolefin pipe insulation.
      b. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
   4. Insulation Installation on Valves and Pipe Specialties:
      a. Install cut sections of polyolefin pipe and sheet insulation to valve body.
      b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
      c. Install insulation to flanges as specified for flange insulation application.
      d. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

M. Polystyrene Insulation Installation
   1. Insulation Installation on Straight Pipes and Tubes:
      a. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.
      b. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
c. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm) thickness.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness as pipe insulation.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed insulation sections of same material as straight segments of pipe insulation.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed section of polystyrene insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

N. Field-Applied Jacket Installation
1. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
   a. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
   b. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
   c. Completely encapsulate insulation with coating, leaving no exposed insulation.

2. Where FSK jackets are indicated, install as follows:
   a. Draw jacket material smooth and tight.
   b. Install lap or joint strips with same material as jacket.
   c. Secure jacket to insulation with manufacturer's recommended adhesive.
   d. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
   e. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

3. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
   a. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

4. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

5. Where PVDC jackets are indicated, install as follows:
   a. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
   b. Wrap factory-presized jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches (50 mm) over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
   c. Continuous jacket can be spiral wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
   d. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches (850 mm) or less. The 33-1/2-inch- (850-mm-) circumference limit allows for 2-inch- (50-mm-) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal.
Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.

e. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

O. Finishes
1. Equipment and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 07.
   a. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
2. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
3. Color: Final color as selected by the Owner. Vary first and second coats to allow visual inspection of the completed Work.
4. Do not field paint aluminum or stainless-steel jackets.

P. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections:
   a. Inspect field-insulated equipment, randomly selected by the Owner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
   b. Inspect pipe, fittings, strainers, and valves, randomly selected by the Owner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
3. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

Q. Equipment Insulation Schedule
1. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
2. Insulate indoor and outdoor equipment in paragraphs below that is not factory insulated.
3. Fire-suppression water storage tank insulation shall be one of the following:
   a. Cellular Glass: 2 inches (50 mm) thick.
   b. Flexible Elastomeric: 1 inch (25 mm) thick.
   c. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   d. Mineral-Fiber Pipe and Tank: 1 inch (25 mm) thick.
   e. Phenolic: 1 inch (25 mm) thick.
   f. Polyisocyanurate: 1 inch (25 mm) thick.
   g. Polyolefin: 1 inch (25 mm) thick.

R. Piping Insulation Schedule, General
1. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
2. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
   a. Indoor fire-suppression piping.
   b. Underground piping.

S. Indoor Piping Insulation Schedule
1. Indoor Engine Coolant Piping for Remote Radiator of Engine-Driven Fire Pump:
a. All Pipe Sizes: Insulation shall be one of the following:
   1) Calcium Silicate: 2 inches (50 mm) thick.
   2) Cellular Glass: 2 inches (50 mm) thick.
   3) Mineral-Fiber, Preformed Pipe, Type I or II: 2 inches (50 mm) thick.

2. Indoor Engine Exhaust Piping and Silencer, All Pipe Sizes: Calcium silicate, 4 inches (100 mm) thick.

T. Outdoor, Aboveground Piping Insulation Schedule
1. Outdoor Engine Coolant Piping for Remote Radiator of Engine-Driven Fire Pump:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Calcium Silicate: 2 inches (50 mm) thick.
      2) Cellular Glass: 2 inches (50 mm) thick.
      3) Mineral-Fiber, Preformed Pipe, Type I or II: 2 inches (50 mm) thick.

2. Outdoor Engine Exhaust Piping and Silencer, All Pipe Sizes: Calcium silicate, 4 inches (100 mm) thick.

3. Outdoor Fire-Suppression Piping Filled with Water:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 2 inches (50 mm) thick.
      2) Flexible Elastomeric: 2 inches (50 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.
      4) Phenolic: 2 inches (50 mm) thick.
      5) Polyisocyanurate: 2 inches (50 mm) thick.
      6) Polyleofin: 2 inches (50 mm) thick.
      7) Polystyrene: 2 inches (50 mm) thick.

U. Indoor, Field-Applied Jacket Schedule
1. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
2. If more than one material is listed, selection from materials listed is Contractor's option.
3. Piping, Concealed:
   a. None.
   b. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   c. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   d. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

4. Piping, Exposed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

V. Outdoor, Field-Applied Jacket Schedule
1. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
2. If more than one material is listed, selection from materials listed is Contractor's option.

3. Equipment, Concealed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

4. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):
   a. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   b. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

5. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
   a. Aluminum OR Painted Aluminum, as directed, Smooth OR Stucco Embossed, as directed, with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   b. Stainless Steel, Type 304 OR Type 316, as directed, Smooth Stucco Embossed, as directed, with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

6. Outdoor Exposed Piping:
   a. PVC: 20 mils (0.5 mm) OR 30 mils (0.8 mm) OR 40 mils (1.0 mm), as directed, thick.
   b. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   c. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed with Z-Shaped Locking Seam, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

END OF SECTION 21 07 00 00
SECTION 21 11 19 00 - FIRE-SUPPRESSION STANDPIPES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for fire-suppression
      standpipes. Products shall be as follows or as directed by the Owner. Installation procedures
      shall be in accordance with the product manufacturer’s recommendations. Demolition and
      removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Pipes, fittings, and specialties.
      b. Fire-protection valves.
      c. Hose connections.
      d. Hose stations.
      e. Monitors.
      f. Fire-department connections.
      g. Alarm devices.
      h. Manual control stations.
      i. Control panels.
      j. Pressure gages.

C. Definitions
   1. High-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at
      working pressure higher than standard 175 psig (1200 kPa), but not higher than 250 psig
      (1725 kPa) **OR** 300 psig (2070 kPa), as directed.
   2. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at
      working pressure 175 psig (1200 kPa) maximum.

D. System Descriptions
   1. Automatic Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections.
      Has open water-supply valve with pressure maintained and is capable of supplying water
      demand.
   2. Automatic Wet-Type, Class II Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations.
      Has open water-supply valve with pressure maintained and is capable of supplying water
      demand.
   3. Automatic Wet-Type, Class III Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations and
      NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve with pressure maintained
      and is capable of supplying water demand.
   4. Automatic Dry-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections.
      Has open water-supply valve and dry-pipe valve with standpipes containing compressed air.
      Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe
      valve. Water then flows into standpipes.
   5. Automatic Dry-Type, Class II Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations. Has
      open water-supply valve and dry-pipe valve with standpipes containing compressed air.
      Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe
      valve. Water then flows into standpipes.
   6. Automatic Dry-Type, Class III Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations and
      NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve and dry-pipe valve with
      standpipes containing compressed air. Opening fire-hose valve releases compressed air and
      permits water pressure to open dry-pipe valve. Water then flows into standpipes.
   7. Semiautomatic Dry-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose
      connections. Has open water-supply valve and deluge valve with standpipes containing air.
Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.

8. Semiautomatic Dry-Type, Class II Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations. Has open water-supply valve and deluge valve with standpipes containing air. Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.

9. Semiautomatic Dry-Type, Class III Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations and NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve and deluge valve with standpipes containing air. Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.

10. Manual Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections. Has small water supply to maintain water in standpipes. Piping is wet, but water must be pumped into standpipes to satisfy demand.

11. Manual Dry-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections. Does not have permanent water supply. Piping is dry. Water must be pumped into standpipes to satisfy demand.

E. Performance Requirements
2. High-Pressure, Fire-Suppression Standpipe System Component: Listed for 250-psig (1725-kPa) minimum OR 300-psig (2070-kPa), as directed, working pressure.
3. Delegated Design: Design fire-suppression standpipes, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
4. Fire-suppression standpipe design shall be approved by authorities having jurisdiction.
   a. Minimum residual pressure at each hose-connection outlet is as follows:
      1) NPS 1-1/2 (DN 40) Hose Connections: 65 psig (450 kPa).
      2) NPS 2-1/2 (DN 65) Hose Connections: 100 psig (690 kPa).
   b. Maximum residual pressure at required flow at each hose-connection outlet is as follows unless otherwise indicated:
      1) NPS 1-1/2 (DN 40) Hose Connections: 100 psig (690 kPa).
      2) NPS 2-1/2 (DN 65) Hose Connections: 175 psig (1200 kPa).
5. Seismic Performance: Fire-suppression standpipes shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

F. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For fire-suppression standpipes. Include plans, elevations, sections, details, and attachments to other work.
   a. Wiring Diagrams: For power, signal, and control wiring.
3. Delegated-Design Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
4. Qualification Data: For qualified Installer and professional engineer.
5. Approved Standpipe Drawings: Working plans, prepared according to NFPA 14, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
7. Fire-hydrant flow test report.
10. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals.

G. Quality Assurance
1. Installer Qualifications:
   a. Installer's responsibilities include designing, fabricating, and installing fire-suppression standpipes and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      1) Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

2. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NFPA 14, "Installation of Standpipe and Hose Systems."

H. Project Conditions
1. Interruption of Existing Fire-Suppression Standpipe Service: Do not interrupt fire-suppression standpipe service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire-suppression standpipe service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of fire-suppression standpipe service.
   b. Do not proceed with interruption of fire-suppression standpipe service without the Owner's written permission.

1.2 PRODUCTS

A. Piping Materials
1. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

B. Steel Pipe And Fittings
1. Standard Weight, Galvanized- and Black-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.
2. Schedule 30, Galvanized- and Black-Steel Pipe: ASTM A 135; ASTM A 795/A 795M, Type E; or ASME B36.10M, wrought steel; with wall thickness not less than Schedule 30 and not more than Schedule 40. Pipe ends may be factory or field formed to match joining method.
3. Thinwall Galvanized- and Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, threadable, with wall thickness less than Schedule 30 and equal to or greater than Schedule 10. Pipe ends may be factory or field formed to match joining method.
4. Schedule 10, Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 5 (DN 125) and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10 (DN 150 to DN 250), plain end.
6. Hybrid Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, lightwall, with wall thickness less than Schedule 10 and greater than Schedule 5.
10. Malleable- or Ductile-Iron Unions: UL 860.
14. Grooved-Joint, Steel-Pipe Appurtenances:
   a. Pressure Rating: 175 psig (1200 kPa) OR 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed, minimum.
b. Galvanized and Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.

c. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

C. Copper Tube And Fittings

1. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) and ASTM B 88, Type M (ASTM B 88M, Type C) water tube, drawn temper.

5. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

6. Grooved-Joint, Copper-Tube Appurtenances:
   a. Grooved-End, Copper Fittings: ASTM B 75 (ASTM B 75M), copper tube or ASTM B 584, bronze castings.
   b. Grooved-End-Tube Couplings: To fit copper tube dimensions, with design similar to AWWA C606. Include ferrous housing sections, EPDM-rubber gasket suitable for hot and cold water, and bolts and nuts.

D. Piping Joining Materials

1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free.
   a. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   b. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

2. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

E. Listed Fire-Protection Valves

1. General Requirements:
   a. Valves shall be UL listed or FM approved.
   b. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
   c. Minimum Pressure Rating for High-Pressure Piping: 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed.

2. Ball Valves:
   a. Standard: UL 1091 except with ball instead of disc.
   b. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
   c. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
   d. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

3. Bronze Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
   d. End Connections: Threaded.

4. Iron Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Cast or ductile iron.
   d. Style: Lug or wafer.
5. Check Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Type: Swing check.
   d. Body Material: Cast iron.
   e. End Connections: Flanged or grooved.

6. Bronze OS&Y Gate Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
   d. End Connections: Threaded.

7. Iron OS&Y Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast or ductile iron.
   d. End Connections: Flanged or grooved.

8. Indicating-Type Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.
   c. Valves NPS 2 (DN 50) and Smaller:
      1) Valve Type: Ball or butterfly.
      2) Body Material: Bronze.
      3) End Connections: Threaded.
   d. Valves NPS 2-1/2 (DN 65) and Larger:
      1) Valve Type: Butterfly.
      2) Body Material: Cast or ductile iron.
      3) End Connections: Flanged, grooved, or wafer.
   e. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch OR electrical, 115-V ac, prewired, two-circuit, supervisory switch OR visual, as directed, indicating device.

9. NRS Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast iron with indicator post flange.
   d. Stem: Nonrising.
   e. End Connections: Flanged or grooved.

10. Indicator Posts:
    b. Type: Horizontal for wall mounting.
    c. Body Material: Cast iron with extension rod and locking device.
    d. Operation: Wrench OR Hand wheel, as directed.

F. Trim And Drain Valves
1. General Requirements:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.

2. Angle Valves.
3. Ball Valves.
5. Plug Valves.

G. Specialty Valves
1. General Requirements:
b. Pressure Rating:
   1) Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
   2) High-Pressure Piping Specialty Valves: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.

c. Body Material: Cast or ductile iron.

d. Size: Same as connected piping.

e. End Connections: Flanged or grooved.

2. Alarm Valves:
   b. Design: For horizontal or vertical installation.
   c. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, as directed, and fill-line attachment with strainer.
   d. Drip Cup Assembly (if retarding chamber is required): Pipe drain without valves and separate from main drain piping.
   e. Drip Cup Assembly (if retarding chamber is not required): Pipe drain with check valve to main drain piping.

3. Dry-Pipe Valves:
   b. Design: Differential-pressure type.
   c. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
   d. Air-Pressure Maintenance Device:
      1) Standard: UL 260.
      2) Type: Automatic device to maintain minimum air pressure in piping.
      3) Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 175-psig (1200-kPa) OR 300-psig (2070-kPa), as directed, outlet pressure.
   e. Air Compressor:
      2) Motor Horsepower: Fractional.
      3) Power: 120-V ac, 60 Hz, single phase.

4. Deluge Valves:
   b. Design: Hydraulically operated, differential-pressure type.
   c. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
   d. Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.
   e. Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.
   f. Air-Pressure Maintenance Device:
      1) Standard: UL 260.
      2) Type: Automatic device to maintain minimum air pressure in piping.
      3) Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator, or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 175-psig (1200-kPa) OR 300-psig (2070-kPa), as directed, outlet pressure.
   g. Air Compressor:
      2) Motor Horsepower: Fractional.
3) Power: 120-V ac, 60 Hz, single phase.

5. Pressure-Reducing Valves:
   a. UL 668 hose valve, with integral UL 1468 reducing device.
   b. Pressure Rating: 300 psig (2070 kPa) minimum.
   c. Material: Brass or bronze.
   d. Inlet: Female pipe threads.
   e. Outlet: Threaded with or without adapter having male hose threads.
   f. Pattern: Angle or gate.
   g. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.

6. Automatic (Ball Drip) Drain Valves:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.
   c. Type: Automatic draining, ball check.
   e. End Connections: Threaded.

H. Hose Connections
1. Adjustable-Valve Hose Connections:
   a. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
   b. Pressure Rating: 300 psig (2070 kPa) minimum.
   c. Material: Brass or bronze.
   d. Size: NPS 1-1/2 or NPS 2-1/2 (DN 40 or DN 65), as indicated.
   e. Inlet: Female pipe threads.
   f. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
   g. Pattern: Angle or gate.
   h. Pressure-Control Device Type: Pressure reducing OR restricting, as directed.
   i. Design Outlet Pressure Setting: as directed by the Owner.
   j. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.

2. Nonadjustable-Valve Hose Connections:
   a. Standard: UL 668 hose valve for connecting fire hose.
   b. Pressure Rating: 300 psig (2070 kPa) minimum.
   c. Material: Brass or bronze.
   d. Size: NPS 1-1/2 or NPS 2-1/2 (DN 40 or DN 65), as indicated.
   e. Inlet: Female pipe threads.
   f. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
   g. Pattern: Angle or gate.
   h. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.

I. NPS 1-1/2 (DN 40) Rack-Type Hose Stations
1. Hose Rack:
   a. Standard: UL 47.
   b. Material: Brass or bronze with polished chrome-plated OR Steel with red-enamel, as directed, finish.
   c. Type: Hose-rack assembly. Include hose valve, hose rack, water-retention device, hose pins, and hose.
   d. Operation: Semiautomatic.
   e. Sized to hold fire hose.

2. Hose Valve:
   a. Standard: UL 668 NPS 1-1/2 (DN 40), for connecting fire hose.
   b. Type: Adjustable OR Nonadjustable, as directed.
   c. Pressure-Control Device: Not required OR Pressure reducing OR Pressure restricting, as directed.
d. Design Outlet Pressure Setting: Not applicable OR as directed.
e. Hose Valve and Trim Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
f. Pressure Rating: 300 psig (2070 kPa) minimum.
g. Pattern: Angle.
h. Material: Brass or bronze.
i. Pressure-Control Device: UL 1468 integral or for field installation if indicated.
j. Size: NPS 1-1/2 (DN 40).
k. Inlet: Female pipe threads.
l. Outlet: Male hose threads according to NFPA 1963 and matching local fire-department threads.

3. Hose:
   b. Size: NPS 1-1/2 (DN 40).
   c. Length: 50 feet (15 m) OR 75 feet (23 m) OR 100 feet (30 m), as directed.
   d. Jacket: Combination of natural and synthetic threads OR Natural thread OR Synthetic thread, as directed.
   e. Lining: Combination of rubber and plastic compounds OR Rubber compound OR Plastic compound, as directed.
   f. Cover: Rubber, plastic, or combination of rubber and plastic compounds.
   g. Nozzle: UL 401.
      1) Material: Brass OR Polished brass OR Rough chrome-plated brass OR Polished chrome-plated brass OR Polycarbonate plastic, as directed.
      2) Type: Plain, for nonadjustable water stream OR Spray, adjustable from shutoff to fog spray or straight stream OR Spray, adjustable from shutoff to full fog; for use on electrical fires, as directed.

J. NPS 1-1/2 BY NPS 2-1/2 (DN 40 BY DN 65) Rack-Type Hose Stations
1. Hose Rack:
   a. Standard: UL 47.
   b. Material: Brass or bronze with polished chrome-plated OR Steel with red-enamel, as directed, finish.
   c. Type: Hose-rack assembly. Include hose valve, reducer adapter, hose rack, water-retention device, hose pins, and hose.
   d. Operation: Semiautomatic.
   e. Sized to hold fire hose.

2. Hose Valve:
   a. Standard: UL 668, NPS 2-1/2 (DN 65), for connecting fire hose.
   b. Type: Adjustable OR Nonadjustable, as directed.
   c. Pressure-Control Device: Not required OR Pressure reducing OR Pressure restricting, as directed.
   d. Design Outlet Pressure Setting: Not applicable OR as directed.
   e. Hose Valve and Trim Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   f. Pressure Rating: 300 psig (2070 kPa) minimum.
   g. Pattern: Angle.
   h. Material: Brass or bronze.
   i. Pressure-Control Device: UL 1468, integral or for field installation if indicated.
   j. Size: NPS 2-1/2 (DN 65).
   k. Inlet: Female pipe threads.
   l. Outlet: Male hose threads according to NFPA 1963 and matching local fire-department threads.
   m. Reducer Adapter: NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40).

3. Hose:
b. Size: NPS 1-1/2 (DN 40).
c. Length: 50 feet (15 m) OR 75 feet (23 m) OR 100 feet (30 m), as directed.
d. Jacket: Combination of natural and synthetic threads OR Natural thread OR Synthetic thread, as directed.
e. Lining: Combination of rubber and plastic compounds OR Rubber compound OR Plastic compound, as directed.
f. Cover: Rubber, plastic, or combination of rubber and plastic compounds.
g. Nozzle: UL 401 spray nozzle unless plain nozzle is indicated.
1) Material: Brass OR Polished brass OR Rough chrome-plated brass OR Polished chrome-plated brass OR Polycarbonate plastic, as directed.
2) Type: Plain, for nonadjustable water stream OR Spray, adjustable from shutoff to fog spray or straight stream OR Spray, adjustable from shutoff to full fog; for use on electrical fires, as directed.

K. NPS 1-1/2 (DN 40) Reel-Type Hose Stations
1. Hose Reel:
   a. Standard: UL 47.
   b. Hose Reel and Bracket Material: Steel.
   c. Type: Hose-reel assembly. Include hose valve, wall bracket, hose reel, water-retention device, hose pins, and hose.
   d. Operation: Semiautomatic.
   e. Sized to hold fire hose.
2. Hose Valve:
   a. Standard: UL 668, NPS 1-1/2 (DN 40), for connecting fire hose.
   b. Type: Adjustable OR Nonadjustable, as directed.
   c. Pressure-Control Device: Not required OR Pressure reducing OR Pressure restricting, as directed.
   d. Design Outlet Pressure Setting: Not applicable OR as directed.
   e. Hose Valve and Trim Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   f. Pressure Rating: 300 psig (2070 kPa) minimum.
   g. Pattern: Angle.
   h. Material: Brass or bronze.
   i. Pressure-Control Device: UL 1468, integral or for field installation if indicated.
   j. Size: NPS 1-1/2 (DN 40).
   k. Inlet: Female pipe threads.
   l. Outlet: Male hose threads according to NFPA 1963 and matching local fire-department threads.
3. Hose:
   b. Size: NPS 1-1/2 (DN 40).
   c. Length: 50 feet (15 m) OR 75 feet (23 m) OR 100 feet (30 m), as directed.
   d. Jacket: Combination of natural and synthetic threads OR Natural thread OR Synthetic thread, as directed.
   e. Lining: Combination of rubber and plastic compounds OR Rubber compound OR Plastic compound, as directed.
   f. Cover: Rubber, plastic, or combination of rubber and plastic compounds.
   g. Nozzle: UL 401.
1) Material: Brass OR Polished brass OR Rough chrome-plated brass OR Polished chrome-plated brass OR Polycarbonate plastic, as directed.
2) Type: Spray, adjustable from shutoff to fog spray or straight stream OR full fog; for use on electrical fires, as directed.

L. Monitors
1. Type: Stationary.
2. Nozzle: UL 401, NPS 2-1/2 (DN 65), brass, adjustable from fog spray to straight stream to shutoff.
3. Horizontal Rotation: 360 degrees with locking device.
4. Vertical Rotation: 80-degree elevation and 60-degree depression with locking device.
5. Waterway: Double OR Single, as directed, brass or stainless-steel tube.
7. Water Stream Flow: 500 gpm (31.5 L/s) OR 750 gpm (47.3 L/s) OR 1000 gpm (63 L/s), as directed.
8. Operation: Lever OR Wheel, as directed.
9. Base Inlet Size: NPS 2-1/2 (DN 65) OR NPS 3 (DN 80) OR NPS 4 (DN 100), as directed.

M. Fire-Department Connections
1. Exposed-Type, Fire-Department Connection:
   b. Type: Exposed, projecting, for wall mounting.
   c. Pressure Rating: 175 psig (1200 kPa) minimum.
   e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. Caps: Brass, lugged type, with gasket and chain.
   g. Escutcheon Plate: Round, brass, wall type.
   h. Outlet: Back, with pipe threads.
   i. Number of Inlets: Two OR Three, as directed.
   j. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE" OR "STANDPIPE", as directed.
   k. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   l. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150), as directed.
2. Flush-Type, Fire-Department Connection:
   b. Type: Flush, for wall mounting.
   c. Pressure Rating: 175 psig (1200 kPa) minimum.
   e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. Caps: Brass, lugged type, with gasket and chain.
   g. Escutcheon Plate: Rectangular, brass, wall type.
   h. Outlet: With pipe threads.
   i. Body Style: Horizontal OR Square OR Vertical, as directed.
   j. Number of Inlets: Two OR Three OR Four OR Six, as directed.
   k. Outlet Location: Back OR Bottom OR Left side OR Right side OR Top, as directed.
   l. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE" OR "STANDPIPE", as directed.
   m. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   n. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150) OR NPS 8 (DN 200), as directed.
3. Yard-Type, Fire-Department Connection:
   b. Type: Exposed, freestanding.
   c. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
f. Caps: Brass, lugged type, with gasket and chain.
g. Escutcheon Plate: Round, brass, floor type.
h. Outlet: Bottom, with pipe threads.
i. Number of Inlets: Two OR Three OR Four, as directed.
j. Sleeve: Brass OR Not required, as directed.
k. Sleeve Height: 18 inches (460 mm).
l. Escutcheon Plate Marking: Similar to “AUTO SPKR & STANDPIPE” OR “STANDPIPE”, as directed.
m. Finish, Including Sleeve: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
n. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150), as directed.

N. Alarm Devices
1. Alarm-device types shall match piping and equipment connections.
2. Water-Motor-Operated Alarm:
a. Standard: UL 753.
b. Type: Mechanically operated, with Pelton wheel.
c. Alarm Gong: Cast aluminum with red-enamel factory finish.
d. Size: 10-inch (250-mm) diameter.
e. Components: Shaft length, bearings, and sleeve to suit wall construction.
g. Outlet: NPS 1 (DN 25) drain connection.
3. Electrically Operated Alarm Bell:
b. Type: Vibrating, metal alarm bell.
c. Size: 6-inch (150-mm) minimum OR 8-inch (200-mm) minimum OR 10-inch (250-mm), as directed, diameter.
d. Finish: Red-enamel factory finish, suitable for outdoor use.
4. Water-Flow Indicators:
c. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
d. Type: Paddle operated.
e. Pressure Rating: 250 psig (1725 kPa).
f. Design Installation: Horizontal or vertical.
5. Pressure Switches:
b. Type: Electrically supervised water-flow switch with retard feature.
d. Design Operation: Rising pressure signals water flow.
6. Valve Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled valve is in other than fully open position.
7. Indicator-Post Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled indicator-post valve is in other than fully open position.

O. Manual Control Stations
1. **Description**: UL listed or FM approved, hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

**P. Control Panels**

1. **Description**: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
   a. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
   b. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

   OR

   Manual Control Stations: Hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

**Q. Pressure Gages**

1. **Standard**: UL 393.
2. **Dial Size**: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
3. **Pressure Gage Range**: 0 to 250 psig (0 to 1725 kPa) minimum OR 0 to 300 psig (0 to 2070 kPa), as directed.
4. **Water System Piping Gage**: Include "WATER" or "AIR/WATER" label on dial face.
5. **Air System Piping Gage**: Include retard feature, as directed, and "AIR" or "AIR/WATER" label on dial face.

**R. Escutcheons**

1. **General**: Manufactured ceiling, floor, and wall escutcheons and floor plates.
2. **One-Piece, Cast-Brass Escutcheons**: Polished chrome-plated or rough-brass finish with set-screws.
4. **One-Piece, Stamped-Steel Escutcheons**: Chrome-plated finish with set-screw or spring clips.
5. **Split-Casting, Cast-Brass Escutcheons**: Polished chrome-plated or rough-brass finish with concealed hinge and set-screw.
6. **Split-Plate, Stamped-Steel Escutcheons**: Chrome-plated finish with concealed OR exposed-rivet, as directed, hinge, set-screw or spring clips.
7. **One-Piece Floor Plates**: Cast-iron flange with holes for fasteners, as directed.
8. **Split-Casting Floor Plates**: Cast brass with concealed hinge.

**S. Sleeves**

1. **Cast-Iron Wall-Pipe Sleeves**: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
2. **Galvanized-Steel-Sheet Sleeves**: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
3. **Molded-PE Sleeves**: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
4. **Molded-PVC Sleeves**: Permanent, with nailing flange for attaching to wooden forms.
5. **PVC-Pipe Sleeves**: ASTM D 1785, Schedule 40.
6. **Galvanized-Steel-Pipe Sleeves**: ASTM A 53/A 53M, Type E, standard weight, zinc coated, plain ends.
7. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
a. Underdeck Clamp: Clamping ring with set-screws.

T. Sleeve Seals
1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
a. Sealing Elements: EPDM-rubber or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
b. Pressure Plates: Carbon steel OR Plastic OR Stainless steel, as directed.
c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements.

U. Grout
2. Characteristics: Nonshrink, and recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

1.3 EXECUTION

A. Preparation
1. Perform fire-hydrant flow test according to NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
2. Report test results promptly and in writing.

B. Service-Entrance Piping
1. Connect fire-suppression standpipe piping to water-service piping at service entrance into building. Comply with requirements for exterior piping in Division 21 Section "Facility Fire-suppression Water-service Piping".
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories at connection to fire-suppression water-service piping. Comply with requirements for backflow preventers in Division 21 Section "Facility Fire-suppression Water-service Piping", as directed.
3. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

C. Water-Supply Connections
1. Connect fire-suppression standpipe piping to building’s interior water-distribution piping. Comply with requirements for interior piping in Division 22 Section "Domestic Water Piping".
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories at connection to water-distribution piping. Comply with requirements for backflow preventers in Division 22 Section "Domestic Water Piping Specialties", as directed.
   OR
   Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

D. Piping Installation
1. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
a. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with the Owner before deviating from approved working plans.
2. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.
3. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
4. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
5. Install drain valves on standpipes. Extend drain piping to outside of building.
6. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.
7. Install alarm devices in piping systems.
8. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.
9. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
10. Drain dry-type standpipe system piping.
11. Pressurize and check dry-type standpipe system piping and air-pressure maintenance devices OR air compressors, as directed.
12. Fill wet-type standpipe system piping with water.
13. Install electric heating cables and pipe insulation on wet-type, fire-suppression standpipe piping in areas subject to freezing. Comply with requirements for heating cables in Division 21 Section “Heat Tracing For Fire-suppression Piping” and for piping insulation in Division 21 Section “Fire-suppression Systems Insulation”.
14. Connect compressed-air supply to dry-pipe sprinkler piping.
   OR
   Connect air compressor to the following piping and wiring:
   a. Pressure gages and controls.
   b. Electrical power system.
   c. Fire-alarm devices, including low-pressure alarm.

E. Joint Construction
1. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
2. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
3. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
4. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
5. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
6. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
7. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
8. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
   a. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

F. Valve And Specialties Installation
1. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 14 and authorities having jurisdiction.
2. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
3. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
4. Specialty Valves:
   a. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
   b. Alarm Valves: Install bypass check valve and retarding chamber drain-line connection.
   c. Dry-Pipe and Deluge Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
      1) Install air compressor and compressed-air supply piping.
      2) Install compressed-air supply piping from building's compressed-air piping system.

OR

Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range; and 175-psig (1200-kPa) maximum inlet pressure.

G. Hose-Connection Installation
1. Install hose connections adjacent to standpipes.
2. Install freestanding hose connections for access and minimum passage restriction.
3. Install NPS 1-1/2 (DN 40) hose-connection valves with flow-restricting device.
4. Install NPS 2-1/2 (DN 65) hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40) reducer adapter and flow-restricting device.
5. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Division 10 Section "Fire Extinguisher Cabinets”.

H. Hose-Station Installation
1. Install freestanding hose stations for access and minimum passage restriction.
2. Install NPS 1-1/2 (DN 40) hose-station valves with flow-restricting device unless otherwise indicated.
3. Install NPS 2-1/2 (DN 65) hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40) reducer adapter and flow-restricting device unless otherwise indicated.
4. Install freestanding hose stations with support or bracket attached to standpipe.
5. Install wall-mounted, rack hose stations in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Division 10 Section "Fire Extinguisher Cabinets”.
6. Install hose-reel hose stations on wall with bracket.

I. Monitor Installation
1. Install monitors on standpipe piping.

J. Fire-Department Connection Installation
1. Install wall-type, fire-department connections.
2. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-place Concrete".
   a. Install two OR three, as directed, protective pipe bollards around OR on sides of, as directed, each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications".
3. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

K. Escutcheon Installation
1. Install escutcheons for penetrations of walls, ceilings, and floors.
2. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
   b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set-screw OR stamped steel with set-screw or spring clips OR stamped steel with spring clips, as directed.
   c. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set-screw OR One piece or split plate, stamped steel with set-screw OR Split plate, stamped steel with set-screw, as directed.
   d. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.
   e. Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.
   f. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.
3. Escutcheons for Existing Piping:
   b. Insulated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge and spring clips.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
   e. Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set-screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set-screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set-screw or spring clips, as directed.
   f. Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set-screw or spring clips, as directed.
   g. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

L. Sleeve Installation
1. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.
2. Sleeves are not required for core-drilled holes.
3. Permanent sleeves are not required for holes formed by removable PE sleeves.
4. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.
5. Install sleeves in new partitions, slabs, and walls as they are built.
6. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants".
7. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants".

8. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

9. Seal space outside of sleeves in concrete slabs and walls with grout.

10. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

11. Install sleeve materials according to the following applications:
   a. Sleeves for Piping Passing through Concrete Floor Slabs: Molded PE OR Molded PVC OR Galvanized-steel pipe, as directed.
   b. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe OR Stack sleeve fittings, as directed.
      1) Extend sleeves 2 inches (50 mm) above finished floor level.
      2) For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements for flashing in Division 07 Section "Sheet Metal Flashing And Trim".
   c. Sleeves for Piping Passing through Gypsum-Board Partitions:
      1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
      2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.
      3) Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.
   d. Sleeves for Piping Passing through Concrete Roof Slabs: Molded PE OR Molded PVC OR Galvanized-steel-pipe, as directed.
   e. Sleeves for Piping Passing through Exterior Concrete Walls:
      1) Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
      2) Cast-iron wall pipe sleeves for pipes NPS 6 (DN 150) and larger.
      3) Install sleeves that are large enough to provide 1-inch (25-mm) annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.
   f. Sleeves for Piping Passing through Interior Concrete Walls:
      1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
      2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.

12. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestop materials and installations in Division 07 Section "Penetration Firestopping".

M. Sleeve Seal Installation
   1. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.
   2. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

N. Identification
   1. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14.
   2. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification For Electrical Systems".

O. Field Quality Control
   1. Perform tests and inspections.
   2. Tests and Inspections:
      a. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

c. Flush, test, and inspect standpipe systems according to NFPA 14, “System Acceptance” chapter.

d. Energize circuits to electrical equipment and devices.

e. Start and run air compressors.

f. Coordinate with fire-alarm tests. Operate as required.

g. Coordinate with fire-pump tests. Operate as required.

h. Verify that equipment hose threads are same as local fire-department equipment.

3. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.

4. Prepare test and inspection reports.

P. Demonstration

1. Train the Owner's maintenance personnel to adjust, operate, and maintain specialty valves.

Q. Piping Schedule

1. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded OR grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved, as directed, joints.

2. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:

   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

   b. Standard-weight OR Schedule 30 or thinwall, as directed, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.

   f. Thinwall OR Schedule 10, as directed, OR nonstandard OD, thinwall or hybrid, as directed, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

   g. Thinwall OR Schedule 10, as directed, OR nonstandard OD, thinwall or hybrid, as directed, black-steel pipe with plain ends; welding fittings; and welded joints.

   h. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast- or wrought-copper solder-joint fittings; and brazed joints.

   i. Type L (Type B) OR Type M (Type B), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

3. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 5 to NPS 8 (DN 125 to DN 200), shall be one of the following:

   a. Standard-weight OR Schedule 30, as directed, or thinwall, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
f. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

g. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.

h. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.

i. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

4. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 10 and NPS 12 (DN 250 and DN 300), shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   f. Thinwall OR Schedule 10, as directed, OR nonstandard OD, thinwall or hybrid, as directed, black-steel pipe with plain ends; welding fittings; and welded joints.

5. High-pressure, wet-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   f. Thinwall OR Schedule 10, as directed, OR nonstandard OD, thinwall or hybrid, as directed, black-steel pipe with plain ends; welding fittings; and welded joints.

6. High-pressure, wet-type, fire-suppression standpipe piping, NPS 5 (DN 125) and larger, shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   f. Thinwall OR Schedule 10, as directed, OR nonstandard OD, thinwall or hybrid, as directed, black-steel pipe with plain ends; welding fittings; and welded joints.
7. Standard-pressure, dry-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   d. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

8. Standard-pressure, dry-type, fire-suppression standpipe piping, NPS 5 and NPS 6 (DN 125 and DN 150), shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   d. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

SECTION 21 13 13 00 - WET-PIPE FIRE-SUPPRESSION SPRINKLERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for wet-pipe fire-suppression sprinklers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Pipes, fittings, and specialties.
   b. Fire-protection valves.
   c. Fire-department connections.
   d. Sprinklers.
   e. Excess-pressure pumps.
   f. Alarm devices.
   g. Manual control stations.
   h. Control panels.
   i. Pressure gages.

C. Definitions
1. High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed.
2. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig (1200 kPa) maximum.

D. System Descriptions
1. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.
2. Deluge Sprinkler System: Open sprinklers are attached to piping connected to water supply through deluge valve. Fire-detection system, in same area as sprinklers, opens valve. Water flows into piping system and discharges from attached sprinklers when valve opens.

E. Performance Requirements
1. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
2. High-Pressure Piping System Component: Listed for 250-psig (1725-kPa) minimum OR 300-psig (2070-kPa), as directed, working pressure.
3. Delegated Design: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
4. Sprinkler system design shall be approved by authorities having jurisdiction.
   a. Margin of Safety for Available Water Flow and Pressure: 10 OR 20, as directed, percent, including losses through water-service piping, valves, and backflow preventers.
   b. Sprinkler Occupancy Hazard Classifications:
      1) Automobile Parking Areas: Ordinary Hazard, Group 1.
      2) Building Service Areas: Ordinary Hazard, Group 1.
      3) Churches: Light Hazard.
      4) Electrical Equipment Rooms: Ordinary Hazard, Group 1.
      5) Dry Cleaners: Ordinary Hazard, Group 2.
      6) General Storage Areas: Ordinary Hazard, Group 1.
7) Laundries: Ordinary Hazard, Group 1.
8) Libraries except Stack Areas: Light Hazard.
9) Library Stack Areas: Ordinary Hazard, Group 2.
11) Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
12) Office and Public Areas: Light Hazard.
13) Plastics Processing Areas: Extra Hazard, Group 2.
14) Printing Plants: Extra Hazard, Group 1.
15) Repair Garages: Ordinary Hazard, Group 2.
16) Residential Living Areas: Light Hazard.
17) Restaurant Service Areas: Ordinary Hazard, Group 1.
18) Solvent Cleaning Areas: Extra Hazard, Group 2.
19) Upholstering Plants: Extra Hazard, Group 1.

c. Minimum Density for Automatic-Sprinkler Piping Design:
1) Residential (Dwelling) Occupancy: 0.05 gpm over 400-sq. ft. (2.04 mm/min. over 37.2-sq. m) area.
2) Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m) area.
3) Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m) area.
4) Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm over 1500-sq. ft. (8.1 mm/min. over 139-sq. m) area.
5) Extra-Hazard, Group 1 Occupancy: 0.30 gpm over 2500-sq. ft. (12.2 mm/min. over 232-sq. m) area.
6) Extra-Hazard, Group 2 Occupancy: 0.40 gpm over 2500-sq. ft. (16.3 mm/min. over 232-sq. m) area.
7) Special Occupancy Hazard: As determined by authorities having jurisdiction.

d. Minimum Density for Deluge-Sprinkler Piping Design:
1) Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm (6.1 mm/min.) over entire area.
2) Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm (8.1 mm/min.) over entire area.
3) Extra-Hazard, Group 1 Occupancy: 0.30 gpm (12.2 mm/min.) over entire area.
4) Extra-Hazard, Group 2 Occupancy: 0.40 gpm (16.3 mm/min.) over entire area.
5) Special Occupancy Hazard: As determined by authorities having jurisdiction.

e. Maximum Protection Area per Sprinkler: Per UL listing.  
OR
Maximum Protection Area per Sprinkler:
1) Residential Areas: 400 sq. ft. (37 sq. m).
2) Office Spaces: 120 sq. ft. (11.1 sq. m) OR 225 sq. ft. (20.9 sq. m), as directed.
3) Storage Areas: 130 sq. ft. (12.1 sq. m).
4) Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
5) Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
6) Other Areas: According to NFPA 13 recommendations unless otherwise indicated.

f. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
1) Light-Hazard Occupancies: 100 gpm (6.3 L/s) for 30 minutes.
2) Ordinary-Hazard Occupancies: 250 gpm (15.75 L/s) for 60 to 90 minutes.
3) Extra-Hazard Occupancies: 500 gpm (31.5 L/s) for 90 to 120 minutes.

5. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

F. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content and chemical components.
3. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
a. Wiring Diagrams: For power, signal, and control wiring.

4. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

5. Qualification Data: For qualified Installer and professional engineer, as directed.

6. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.

7. Welding certificates.

9. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."

10. Field quality-control reports.

11. Operation and maintenance data.

G. Quality Assurance

1. Installer Qualifications:
   a. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      1) Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

2. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
   a. NFPA 13, "Installation of Sprinkler Systems."
   b. NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."
   c. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

H. Project Conditions

1. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of sprinkler service.
   b. Do not proceed with interruption of sprinkler service without the Owner's written permission.

1.2 PRODUCTS

A. Piping Materials

1. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

B. Steel Pipe And Fittings

1. Standard Weight, Galvanized- and Black-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

2. Schedule 30, Galvanized- and Black-Steel Pipe: ASTM A 135; ASTM A 795/A 795M, Type E; or ASME B36.10M, wrought steel; with wall thickness not less than Schedule 30 and not more than Schedule 40. Pipe ends may be factory or field formed to match joining method.
3. Thinwall Galvanized- and Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, threadable, with wall thickness less than Schedule 30 and equal to or greater than Schedule 10. Pipe ends may be factory or field formed to match joining method.

4. Schedule 10, Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 5 (DN 125) and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10 (DN 150 to DN 250), plain end.

6. Hybrid Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, lightwall, with wall thickness less than Schedule 10 and greater than Schedule 5.

15. Grooved-Joint, Steel Appurtenances:
   a. Pressure Rating: 175 psig (1200 kPa) OR 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed, minimum.
   b. Galvanized and Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
   c. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

16. Steel Pressure-Seal Fittings: UL 213, FM-approved, 175-psig (1200-kPa) pressure rating with steel housing, rubber O-rings, and pipe stop; for use with fitting manufacturers' pressure-seal tools.

C. Copper Tube And Fittings

1. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) and ASTM B 88, Type M (ASTM B 88M, Type C) water tube, drawn temper.

5. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

6. Copper Pressure-Seal Fittings:
   b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber O-ring seal in each end.
   c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze fitting with EPDM-rubber O-ring seal in each end.

7. Grooved-Joint, Copper-Tube Appurtenances:
   a. Grooved-End, Copper Fittings: ASTM B 75 (ASTM B 75M), copper tube or ASTM B 584, bronze castings.
   b. Grooved-End-Tube Couplings: To fit copper-tube dimensions, with design similar to AWWA C606. Include ferrous housing sections, EPDM-rubber gasket suitable for hot and cold water, and bolts and nuts.

8. Copper-Tube, Extruded-Tee Connections:
   a. Description: Tee formed in copper tube according to ASTM F 2014.

D. CPVC Pipe And Fittings
1. CPVC Pipe: ASTM F 442/F 442M and UL 1821, SDR 13.5, for 175-psig (1200-kPa) rated pressure at 150 deg F (62 deg C), with plain ends. Include "LISTED" and "CPVC SPRINKLER PIPE" markings.

2. CPVC Fittings: UL listed or FM approved, for 175-psig (1200-kPa) rated pressure at 150 deg F (62 deg C), socket type. Include "LISTED" and "CPVC SPRINKLER FITTING" markings.
   a. NPS 3/4 to NPS 1-1/2 (DN 20 to DN 40): ASTM F 438 and UL 1821, Schedule 40, socket type.
   b. NPS 2 to NPS 3 (DN 50 to DN 80): ASTM F 439 and UL 1821, Schedule 80, socket type.
   c. CPVC-to-Metal Transition Fittings: CPVC, one piece, with dimensions equivalent to pipe; one end with threaded brass insert, and one socket end.
   d. CPVC-to-Metal Transition Unions: CPVC, with dimensions equivalent to pipe; one end with threaded brass insert, and one socket end.
   e. Flanges: CPVC, one or two pieces.

E. Piping Joining Materials
1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free.
   a. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   b. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
2. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
5. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F 493, solvent cement recommended by pipe and fitting manufacturer, and made for joining CPVC sprinkler pipe and fittings. Include cleaner or primer recommended by pipe and fitting manufacturer.
   a. Use solvent cement that has a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Use adhesive primer that has a VOC content of 650 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Plastic, Pipe-Flange Gasket, and Bolts and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

F. Cover System For Sprinkler Piping
1. Description: System of support brackets and covers made to protect sprinkler piping.
2. Brackets: Glass-reinforced nylon.

G. Listed Fire-Protection Valves
1. General Requirements:
   a. Valves shall be UL listed or FM approved.
   b. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
   c. Minimum Pressure Rating for High-Pressure Piping: 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed.
2. Ball Valves:
   a. Standard: UL 1091 except with ball instead of disc.
   b. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
   c. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
   d. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.
3. Bronze Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
4. Iron Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Cast or ductile iron.
   d. Style: Lug or wafer.
   OR
   End Connections: Grooved.

5. Check Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Type: Swing check.
   d. Body Material: Cast iron.
   e. End Connections: Flanged or grooved.

6. Bronze OS&Y Gate Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
   d. End Connections: Threaded.

7. Iron OS&Y Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast or ductile iron.
   d. End Connections: Flanged or grooved.

8. Indicating-Type Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.
   c. Valves NPS 2 (DN 50) and Smaller:
      1) Valve Type: Ball or butterfly.
      2) Body Material: Bronze.
      3) End Connections: Threaded.
   d. Valves NPS 2-1/2 (DN 65) and Larger:
      1) Valve Type: Butterfly.
      2) Body Material: Cast or ductile iron.
      3) End Connections: Flanged, grooved, or wafer.
   e. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch OR electrical, 115-V ac, prewired, two-circuit, supervisory switch OR visual, as directed, indicating device.

9. NRS Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast iron with indicator post flange.
   d. Stem: Nonrising.
   e. End Connections: Flanged or grooved.

10. Indicator Posts:
    b. Type: Horizontal for wall mounting.
    c. Body Material: Cast iron with extension rod and locking device.
    d. Operation: Wrench OR Hand wheel, as directed.

H. Trim And Drain Valves
1. General Requirements:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.

2. Angle Valves.
3. Ball Valves.
4. **Globe Valves.**

5. **Plug Valves.**

I. **Specialty Valves**

1. **General Requirements:**
   b. **Pressure Rating:**
      1) Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
      2) High-Pressure Piping Specialty Valves: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. **Body Material:** Cast or ductile iron.
   d. **Size:** Same as connected piping.
   e. **End Connections:** Flanged or grooved.

2. **Alarm Valves:**
   a. **Standard:** UL 193.
   b. **Design:** For horizontal or vertical installation.
   c. **Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, as directed, and fill-line attachment with strainer.
   d. **Drip Cup Assembly:** Pipe drain without valves and separate from main drain piping.

3. **Deluge Valves:**
   a. **Standard:** UL 260.
   b. **Design:** Hydraulically operated, differential-pressure type.
   c. **Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
   d. **Wet, Pilot-Line Trim Set:** Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.

4. **Automatic (Ball Drip) Drain Valves:**
   a. **Standard:** UL 1726.
   b. **Pressure Rating:** 175 psig (1200 kPa) minimum.
   c. **Type:** Automatic draining, ball check.
   d. **Size:** NPS 3/4 (DN 20).
   e. **End Connections:** Threaded.

J. **Fire-Department Connections**

1. **Exposed-Type, Fire-Department Connection:**
   a. **Standard:** UL 405.
   b. **Type:** Exposed, projecting, for wall mounting.
   c. **Pressure Rating:** 175 psig (1200 kPa) minimum.
   d. **Body Material:** Corrosion-resistant metal.
   e. **Inlets:** Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. **Caps:** Brass, lugged type, with gasket and chain.
   g. **Escutcheon Plate:** Round, brass, wall type.
   h. **Outlet:** Back, with pipe threads.
   i. **Number of Inlets:** Two OR Three, as directed.
   j. **Escutcheon Plate Marking:** Similar to "AUTO SPKR & STANDPIPE" OR "AUTO SPKR", as directed.
   k. **Finish:** Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   l. **Outlet Size:** NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150), as directed.

2. **Flush-Type, Fire-Department Connection:**
   a. **Standard:** UL 405.
   b. **Type:** Flush, for wall mounting.
21 - Fire Suppression

Wet-Pipe Fire-Suppression Sprinklers

DASNY, Downstate

August 2021

K. Sprinkler Specialty Pipe Fittings

1. Branch Outlet Fittings:
   b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
   d. Type: Mechanical-T and -cross fittings.
   e. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
   f. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
   g. Branch Outlets: Grooved, plain-end pipe, or threaded.

2. Flow Detection and Test Assemblies:
   b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
   d. Size: Same as connected piping.
   e. Inlet and Outlet: Threaded.

3. Branch Line Testers:
   b. Pressure Rating: 175 psig (1200 kPa).
d. Size: Same as connected piping.
e. Inlet: Threaded.
f. Drain Outlet: Threaded and capped.
g. Branch Outlet: Threaded, for sprinkler.

4. Sprinkler Inspector's Test Fittings:
b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
c. Body Material: Cast- or ductile-iron housing with sight glass.
d. Size: Same as connected piping.
e. Inlet and Outlet: Threaded.

5. Adjustable Drop Nipples:
b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
d. Size: Same as connected piping.
e. Length: Adjustable.
f. Inlet and Outlet: Threaded.

6. Flexible, Sprinkler Hose Fittings:
b. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
c. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
d. Size: Same as connected piping, for sprinkler.

L. Sprinklers
1. General Requirements:
b. Pressure Rating for Residential Sprinklers: 175 psig (1200 kPa) maximum.
c. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
d. Pressure Rating for High-Pressure Automatic Sprinklers: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.

2. Automatic Sprinklers with Heat-Responsive Element:
b. Nonresidential Applications: UL 199.
c. Residential Applications: UL 1626.
d. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

a. Characteristics:
   1) Nominal 1/2-inch (12.7-mm) Orifice: With Discharge Coefficient K between 5.3 and 5.8.
   2) Nominal 17/32-inch (13.5-mm) Orifice: With Discharge Coefficient K between 7.4 and 8.2.

4. Sprinkler Finishes:
a. Chrome plated.
b. Bronze.
c. Painted.

5. Special Coatings:
a. Wax.
b. Lead.
c. Corrosion-resistant paint.

6. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
Wet-Pipe Fire-Suppression Sprinklers

21 - Fire Suppression

a. Ceiling Mounting: Chrome-plated steel, one piece, flat OR Chrome-plated steel, two piece, with 1-inch (25-mm) vertical adjustment OR Plastic, white finish, one piece, flat, as directed.

b. Sidewall Mounting: Chrome-plated steel OR Plastic, white finish, as directed, one piece, flat.

7. Sprinkler Guards:
   b. Type: Wire cage with fastening device for attaching to sprinkler.

M. Excess-Pressure Pumps
   a. Pump and Motor: Directly connected.
   b. Motor: Comply with requirements in Division 21 Section "Common Work Results For Fire Suppression".
2. Miscellaneous Components: Wet-pipe kit of switches, fittings, valves, mounting brackets, and connections for power, hydraulic piping, and wiring from alarm devices.
4. Lights: To indicate sprinkler system's operating condition.
   a. White Light: Pressure is normal.
   b. Red Light: Pressure is low.
5. Capacity: 2.0 gpm at 75-psig (0.13 L/s at 520-kPa) differential pressure and 1/3 hp OR 1.85 gpm at 100-psig (0.12 L/s at 690-kPa) differential pressure and 1/2 hp OR 3.5 gpm at 100-psig (0.22 L/s at 690-kPa) differential pressure and 1/2 hp, as directed.

N. Alarm Devices
1. Alarm-device types shall match piping and equipment connections.
2. Water-Motor-Operated Alarm:
   a. Standard: UL 753.
   b. Type: Mechanically operated, with Pelton wheel.
   c. Alarm Gong: Cast aluminum with red-enamel factory finish.
   d. Size: 10-inch (250-mm) diameter.
   e. Components: Shaft length, bearings, and sleeve to suit wall construction.
   g. Outlet: NPS 1 (DN 25) drain connection.
3. Electrically Operated Alarm Bell:
   b. Type: Vibrating, metal alarm bell.
   c. Size: 6-inch (150-mm) minimum-diameter OR 8-inch (200-mm) minimum-diameter OR 10-inch (250-mm) diameter, as directed.
   d. Finish: Red-enamel factory finish, suitable for outdoor use.
4. Water-Flow Indicators:
   c. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
   d. Type: Paddle operated.
   e. Pressure Rating: 250 psig (1725 kPa).
   f. Design Installation: Horizontal or vertical.
5. Pressure Switches:
   b. Type: Electrically supervised water-flow switch with retard feature.
   d. Design Operation: Rising pressure signals water flow.
6. Valve Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled valve is in other than fully open position.

7. Indicator-Post Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled indicator-post valve is in other than fully open position.

O. Manual Control Stations
1. Description: UL listed or FM approved, hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

P. Control Panels
1. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
   a. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
   b. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
      OR Manual Control Stations: Hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

Q. Pressure Gages
2. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
3. Pressure Gage Range: 0 to 250 psig (0 to 1725 kPa) minimum OR 0 to 300 psig (0 to 2070 kPa), as directed.
4. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
5. Air System Piping Gage: Include retard feature, directed, and "AIR" or "AIR/WATER" label on dial face.

R. Escutcheons
1. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.
2. One-Piece, Cast-Brass Escutcheons: Polished chrome-plated OR rough-brass, as directed, finish with set-screws.
4. One-Piece, Stamped-Steel Escutcheons: Chrome-plated finish with set-screw OR spring clips, as directed.
5. Split-Casting, Cast-Brass Escutcheons: Polished chrome-plated OR rough-brass, as directed, finish with concealed hinge and set-screw.
6. Split-Plate, Stamped-Steel Escutcheons: Chrome-plated finish with concealed OR exposed-rivet, as directed, hinge, set-screw OR spring clips, as directed.
7. One-Piece Floor Plates: Cast-iron flange with holes for fasteners, as directed.
8. Split-Casting Floor Plates: Cast brass with concealed hinge.

S. Sleeves
1. Cast-Iron Wall Pipe Sleeves: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
2. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
3. Molded-PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
4. Molded-PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.
5. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
7. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set-screws.

T. Sleeve Seals
1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
   a. Sealing Elements: EPDM-rubber or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   b. Pressure Plates: Carbon steel OR Plastic OR Stainless steel, as directed.
   c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements.

U. Grout
2. Characteristics: Nonshrink, and recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

1.3 EXECUTION

A. Preparation
1. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
2. Report test results promptly and in writing.

B. Service-Entrance Piping
1. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements for exterior piping in Division 21 Section “Facility Fire-suppression Water-service Piping”.
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories indicated at connection to water-service piping. Comply with requirements for backflow preventers in Division 21 Section “Facility Fire-suppression Water-service Piping”, as directed.
   OR
   Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

C. Water-Supply Connections
1. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements for interior piping in Division 22 Section "Domestic Water Piping”.
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements for backflow preventers in Division 22 Section "Domestic Water Piping Specialties”, as directed.
   OR
Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

D. Piping Installation
1. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
   a. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with the Owner before deviating from approved working plans.
4. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
5. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
6. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
7. Install "Inspector’s Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
8. Install sprinkler piping with drains for complete system drainage.
9. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
10. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
11. Install alarm devices in piping systems.
12. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.
13. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
14. Pressurize and check preaction sprinkler system piping and air-pressure maintenance devices OR air compressors, as directed.
15. Fill sprinkler system piping with water.
16. Install electric heating cables and pipe insulation on sprinkler piping in areas subject to freezing. Comply with requirements for heating cables in Division 21 Section "Heat Tracing For Fire-suppression Piping" and for piping insulation in Division 21 Section "Fire-suppression Systems Insulation".

E. Joint Construction
1. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
2. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
3. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
4. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
5. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
6. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
7. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
8. **Twist-Locked Joints:** Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.

9. **Steel-Piping, Pressure-Sealed Joints:** Join lightwall steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.

10. **Welded Joints:** Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
   a. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

11. **Steel-Piping, Cut-Grooved Joints:** Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

12. **Steel-Piping, Roll-Grooved Joints:** Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

13. **Steel-Piping, Pressure-Sealed Joints:** Join Schedule 5 steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.

14. **Brazed Joints:** Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.

15. **Copper-Tubing Grooved Joints:** Roll rounded-edge groove in end of tube according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

16. **Copper-Tubing, Pressure-Sealed Joints:** Join copper tube and copper pressure-seal fittings with tools recommended by fitting manufacturer.

17. **Extruded-Tee Connections:** Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

18. **Dissimilar-Material Piping Joints:** Make joints using adapters compatible with materials of both piping systems.

19. **Plastic-Piping, Solvent-Cement Joints:** Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
   b. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.

**F. Installation Of Cover System For Sprinkler Piping**

1. Install cover system, brackets, and cover components for sprinkler piping according to manufacturer's "Installation Manual" and with NFPA 13 or NFPA 13R for supports.

**G. Valve And Specialties Installation**

1. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.

2. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

3. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

4. **Specialty Valves:**
   a. **General Requirements:** Install in vertical position for proper direction of flow, in main supply to system.
   b. **Alarm Valves:** Include bypass check valve and retarding chamber drain-line connection.
   c. **Deluge Valves:** Install in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

**H. Excess-Pressure Pump Installation**

1. Assemble components and mount on wood backing. Comply with requirements in Division 06 Section "Rough Carpentry" for wood backing material and installation.
2. Install excess-pressure pumps, controls, devices, and supports for sprinkler piping application.
   a. Mounting: Install on wall, where indicated OR attached to water-supply pipe, as directed.

I. Sprinkler Installation
1. Install sprinklers in suspended ceilings in center of narrow dimension of, as directed, acoustical ceiling panels.
2. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
3. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

J. Fire-Department Connection Installation
1. Install wall-type, fire-department connections.
2. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-place Concrete".
   a. Install two OR three, as directed, protective pipe bollards around OR on sides of, as directed, each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications".
3. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

K. Escutcheon Installation
1. Install escutcheons for penetrations of walls, ceilings, and floors.
2. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
   b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set-screw OR stamped steel with set-screw or spring clips OR stamped steel with spring clips, as directed.
   c. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set-screw OR One piece or split plate, stamped steel with set-screw OR Split plate, stamped steel with set-screw, as directed.
   d. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.
   e. Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.
   f. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.
3. Escutcheons for Existing Piping:
   b. Insulated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge and spring clips.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set-screw, as directed.
   e. Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set-screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set-screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set-screw or spring clips, as directed.
   f. Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set-screw or spring clips, as directed.
   g. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.
L. Sleeve Installation
1. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.
2. Sleeves are not required for core-drilled holes.
3. Permanent sleeves are not required for holes formed by removable PE sleeves.
4. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.
5. Install sleeves in new partitions, slabs, and walls as they are built.
6. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants".
7. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants".
8. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.
9. Seal space outside of sleeves in concrete slabs and walls with grout.
10. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.
11. Install sleeve materials according to the following applications:
   a. Sleeves for Piping Passing through Concrete Floor Slabs: Molded PE OR Molded PVC OR Galvanized-steel pipe, as directed.
   b. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe OR Stack sleeve fittings, as directed.
      1) Extend sleeves 2 inches (50 mm) above finished floor level.
      2) For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements for flashing in Division 07 Section "Sheet Metal Flashing And Trim".
   c. Sleeves for Piping Passing through Gypsum-Board Partitions:
      1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
      2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.
      3) Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.
   d. Sleeves for Piping Passing through Concrete Roof Slabs: Molded PE OR Molded PVC OR Galvanized-steel pipe, as directed.
   e. Sleeves for Piping Passing through Exterior Concrete Walls:
      1) Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
      2) Cast-iron wall-pipe sleeves for pipes NPS 6 (DN 150) and larger.
      3) Install sleeves that are large enough to provide 1-inch (25-mm) annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.
   f. Sleeves for Piping Passing through Interior Concrete Walls:
      1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
      2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.

M. Sleeve Seal Installation
1. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.
2. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
N. Identification
1. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
2. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification For Electrical Systems".

O. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections:
   a. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
   b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   c. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
   d. Energize circuits to electrical equipment and devices.
   e. Start and run excess-pressure pumps.
   f. Coordinate with fire-alarm tests. Operate as required.
   g. Coordinate with fire-pump tests. Operate as required.
   h. Verify that equipment hose threads are same as local fire-department equipment.
3. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
4. Prepare test and inspection reports.

P. Cleaning
1. Clean dirt and debris from sprinklers.
2. Remove and replace sprinklers with paint other than factory finish.

Q. Piping Schedule
1. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded OR grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved, as directed, joints.
2. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
3. Copper-tube, extruded-tee connections may be used for tee branches in copper tubing instead of specified copper fittings. Branch-connection joints must be brazed.
4. CPVC pipe; Schedule 40 OR Schedule 80, as directed, CPVC fittings; and solvent-cemented joints may be used for light-hazard and residential occupancies.
5. Standard-pressure, wet-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with plain ends; uncoated, plain-end-pipe fittings; and twist-locked joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with plain ends; galvanized, plain-end-pipe fittings; and twist-locked joints.
   e. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   f. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   g. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   h. Thinwall OR Schedule 10, as directed, nonstandard OD, thinwall or hybrid black-steel pipe with roll-grooved ends; uncoated, groove-end fittings for steel piping; groove-end-pipe couplings for steel piping; and grooved joints.
   i. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with plain ends; uncoated, plain-end-pipe fittings; and twist-locked joints.
j. Thinwall OR Schedule 10, as directed, nonstandard OD, thinwall or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.

k. Schedule 5 steel pipe; steel pressure-seal fittings; and pressure-sealed joints.

l. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.

m. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; copper pressure-seal fittings; and pressure-sealed joints.

n. NPS 2 (DN 50), Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

6. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   f. Thinwall OR Schedule 10, as directed, nonstandard OD, thinwall or hybrid black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   g. Thinwall OR Schedule 10, as directed, nonstandard OD, thinwall or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.
   h. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   i. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; copper pressure-seal fittings; and pressure-sealed joints.
   j. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

7. Standard-pressure, wet-pipe sprinkler system, NPS 5 (DN 125) and larger, shall be one of the following:
   a. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   c. Standard-weight or Schedule 30, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   e. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   f. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   g. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.
   h. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
21 - Fire Suppression

i. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

8. High-pressure, wet-pipe sprinkler system, NPS 4 (DN 100) and smaller, shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   d. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.

9. High-pressure, wet-pipe sprinkler system, NPS 5 (DN 125) and larger, shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   d. Thinwall OR Schedule 10, as directed, or hybrid black-steel pipe with plain ends; welding fittings; and welded joints.

R. Sprinkler Schedule

1. Use sprinkler types in subparagraphs below for the following applications:
   a. Rooms without Ceilings: Upright sprinklers.
   b. Rooms with Suspended Ceilings: Pendent sprinklers OR Recessed sprinklers OR Flush sprinklers OR Concealed sprinklers, as directed.
   c. Wall Mounting: Sidewall sprinklers.
   d. Spaces Subject to Freezing: Upright sprinklers OR Pendent, dry sprinklers OR Sidewall, dry sprinklers, as directed.
   e. Deluge-Sprinkler Systems: Upright and pendent, open sprinklers.
   f. Special Applications: Extended-coverage, flow-control, and quick-response sprinklers where indicated.

2. Provide sprinkler types in subparagraphs below with finishes indicated.
   a. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
   b. Flush Sprinklers: Bright chrome, with painted white escutcheon.
   c. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
   d. Residential Sprinklers: Dull chrome.
   e. Upright, Pendent, and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 21 13 13 00
SECTION 21 13 16 00 - DRY-PIPE FIRE-SUPPRESSION SPRINKLERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for dry-pipe fire-suppression sprinklers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
a. Pipes, fittings, and specialties.
b. Fire-protection valves.
c. Fire-department connections.
d. Sprinkler specialty pipe fittings.
e. Sprinklers.
f. Alarm devices.
g. Manual control stations.
h. Control panels.
i. Pressure gages.

C. Definitions
1. Standard-Pressure Sprinkler Piping: Dry-pipe sprinkler system piping designed to operate at working pressure 175 psig (1200 kPa) maximum.

D. System Descriptions
1. Dry-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Opening of sprinklers releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into piping and discharges from sprinklers that are open.
2. Combined Dry-Pipe and Preaction Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Fire-detection system in same area as sprinklers actuates tripping devices that open dry-pipe valve without loss of air pressure and actuates fire alarm. Water discharges from sprinklers that have opened.
3. Single-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of fire-detection system in same area as sprinklers opens deluge valve, permitting water to flow into piping and to discharge from sprinklers that have opened.
4. Double-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of a fire-detection system in the same area as sprinklers opens the deluge valve permitting water to flow into the sprinkler piping; a closed solenoid valve in the sprinkler piping is opened by another fire-detection device; then water will discharge from sprinklers that have opened.

E. Performance Requirements
1. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
2. Delegated Design: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Sprinkler system design shall be approved by authorities having jurisdiction.
   a. Margin of Safety for Available Water Flow and Pressure: 10 OR 20, as directed, percent, including losses through water-service piping, valves, and backflow preventers.
   b. Sprinkler Occupancy Hazard Classifications:
      1) Automobile Parking Areas: Ordinary Hazard, Group 1.
      2) Building Service Areas: Ordinary Hazard, Group 1.
3) Churches: Light Hazard.
4) Electrical Equipment Rooms: Ordinary Hazard, Group 1.
5) Dry Cleaners: Ordinary Hazard, Group 2.
6) General Storage Areas: Ordinary Hazard, Group 1.
7) Laundries: Ordinary Hazard, Group 1.
8) Libraries Except Stack Areas: Light Hazard.
9) Library Stack Areas: Ordinary Hazard, Group 2.
11) Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
12) Office and Public Areas: Light Hazard.
13) Plastics Processing Areas: Extra Hazard, Group 2.
14) Printing Plants: Extra Hazard, Group 1.
15) Repair Garages: Ordinary Hazard, Group 2.
16) Restaurant Service Areas: Ordinary Hazard, Group 1.
17) Solvent Cleaning Areas: Extra Hazard, Group 2.
18) Upholstering Plants: Extra Hazard, Group 1.

c. Minimum Density for Automatic-Sprinkler Piping Design:
   1) Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m) area.
   2) Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m) area.
   3) Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm over 1500-sq. ft. (8.1 mm/min. over 139-sq. m) area.
   4) Extra-Hazard, Group 1 Occupancy: 0.30 gpm over 2500-sq. ft. (12.2 mm/min. over 232-sq. m) area.
   5) Extra-Hazard, Group 2 Occupancy: 0.40 gpm over 2500-sq. ft. (16.3 mm/min. over 232-sq. m) area.
   6) Special Occupancy Hazard: As determined by authorities having jurisdiction.

d. Maximum Protection Area per Sprinkler: Per UL listing.
   OR
   Maximum Protection Area per Sprinkler:
   1) Office Spaces: 120 sq. ft. (11.1 sq. m) OR 225 sq. ft. (20.9 sq. m), as directed.
   2) Storage Areas: 130 sq. ft. (12.1 sq. m).
   3) Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
   4) Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
   5) Other Areas: According to NFPA 13 recommendations unless otherwise indicated.

e. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
   1) Light-Hazard Occupancies: 100 gpm (6.3 L/s) for 30 minutes.
   2) Ordinary-Hazard Occupancies: 250 gpm (15.75 L/s) for 60 to 90 minutes.
   3) Extra-Hazard Occupancies: 500 gpm (31.5 L/s) for 90 to 120 minutes.

4. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

F. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: For dry-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
      a. Wiring Diagrams: For power, signal, and control wiring.
   3. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   4. Qualification Data: For qualified Installer and professional engineer, as directed.
   5. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
7. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."

8. Field quality-control reports.

9. Operation and maintenance data.

G. Quality Assurance
1. Installer Qualifications:
   a. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
   1) Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

3. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
   a. NFPA 13, "Installation of Sprinkler Systems."
   b. NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."
   c. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

H. Project Conditions
1. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of sprinkler service.
   b. Do not proceed with interruption of sprinkler service without the Owner's written permission.

1.2 PRODUCTS

A. Piping Materials
1. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and joining methods for specific services, service locations, and pipe sizes.

B. Steel Pipe And Fittings
1. Standard Weight, Galvanized-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.
2. Schedule 30, Galvanized-Steel Pipe: ASTM A 135; ASTM A 795/A 795M, Type E; or ASME B36.10M, wrought steel; with wall thickness not less than Schedule 30 and not more than Schedule 40. Pipe ends may be factory or field formed to match joining method.
3. Thinwall Galvanized-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, threadable, with wall thickness less than Schedule 30 and equal to or greater than Schedule 10. Pipe ends may be factory or field formed to match joining method.
5. Galvanized, Steel Couplings: ASTM A 865, threaded.
7. Malleable- or Ductile-Iron Unions: UL 860.
9. Plain-End-Pipe Fittings: UL 213, ductile-iron body with retainer lugs that require one-quarter turn or screwed retainer pin to secure pipe in fitting.
10. Grooved-Joint, Steel-Pipe Appurtenances:
21 - Fire Suppression

a. Pressure Rating: 175 psig (1200 kPa) OR 250 psig (1725 kPa) OR 300 psig (2070 kPa), as directed, minimum.
b. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
c. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

C. Copper Tube And Fittings
1. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) and ASTM B 88, Type M (ASTM B 88M, Type C) water tube, drawn temper.
5. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
6. Copper Pressure-Seal Fittings:
   b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber O-ring seal in each end.
   c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze fitting with EPDM-rubber O-ring seal in each end.
7. Grooved-Joint, Copper-Tube Appurtenances:
   a. Grooved-End, Copper Fittings: ASTM B 75 (ASTM B 75M), copper tube or ASTM B 584, bronze castings.
   b. Grooved-End-Tube Couplings: To fit copper tube, with dimensions and design similar to AWWA C606. Include ferrous housing sections, EPDM-rubber gasket suitable for hot and cold water, and bolts and nuts.
8. Copper-Tube, Extruded-Tee Connections:
   a. Description: Tee formed in copper tube according to ASTM F 2014.

D. Piping Joining Materials
1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free.
   a. Class 125, Cast-Iron and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   b. Class 250, Cast-Iron and Class 300, Raised-Face Flanges: Ring-type gaskets.
2. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

E. Listed Fire-Protection Valves
1. General Requirements:
   a. Valves shall be UL listed or FM approved.
   b. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
2. Ball Valves:
   a. Standard: UL 1091 except with ball instead of disc.
   b. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
   c. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
   d. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

F. Bronze Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
   d. End Connections: Threaded.
G. Iron Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Cast or ductile iron.
   d. Style: Lug or wafer.
      OR
   End Connections: Grooved.

H. Check Valves:
   a. Standard: UL 312
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Type: Swing check.
   d. Body Material: Cast iron.
   e. End Connections: Flanged or grooved.

2. Bronze OS&Y Gate Valves:
   b. Pressure Rating: 175 psig (1200 kPa).
   c. Body Material: Bronze.
   d. End Connections: Threaded.

3. Iron OS&Y Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast or ductile iron.
   d. End Connections: Flanged or grooved.

4. Indicating-Type Butterfly Valves:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.
   c. Valves NPS 2 (DN 50) and Smaller:
      1) Valve Type: Ball or butterfly.
      2) Body Material: Bronze.
      3) End Connections: Threaded.
   d. Valves NPS 2-1/2 (DN 65) and Larger:
      1) Valve Type: Butterfly.
      2) Body Material: Cast or ductile iron.
      3) End Connections: Flanged, grooved, or wafer.
   e. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch
      OR electrical, 115-V ac, prewired, two-circuit, supervisory switch OR visual, as directed,
      indicating device.

5. NRS Gate Valves:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast iron with indicator post flange.
   d. Stem: Nonrising.
   e. End Connections: Flanged or grooved.

6. Indicator Posts:
   b. Type: Horizontal for wall mounting.
   c. Body Material: Cast iron with extension rod and locking device.
   d. Operation: Wrench OR Hand wheel, as directed.

I. Trim And Drain Valves
1. General Requirements:
      published by FM Global, listing.
   b. Pressure Rating: 175 psig (1200 kPa) minimum.

2. Angle Valves.
3. Ball Valves.
5. Plug Valves.

J. Specialty Valves
   1. General Requirements:
      b. Pressure Rating:
         1) Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
         2) High-Pressure Piping Specialty Valves: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
      c. Body Material: Cast or ductile iron.
      d. Size: Same as connected piping.
      e. End Connections: Flanged or grooved.
   2. Dry-Pipe Valves:
      a. Standard: UL 260
      b. Design: Differential-pressure type.
      c. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
      d. Air-Pressure Maintenance Device:
         1) Standard: UL 260.
         2) Type: Automatic device to maintain minimum air pressure in piping.
         3) Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 175-psig (1200-kPa) OR 300-psig (2070-kPa), as directed, outlet pressure.
      e. Air Compressor:
         2) Motor Horsepower: Fractional.
         3) Power: 120-V ac, 60 Hz, single phase.
   3. Deluge Valves:
      b. Design: Hydraulically operated, differential-pressure type.
      c. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
      d. Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.
      e. Air-Pressure Maintenance Device:
         1) Standard: UL 260.
         2) Type: Automatic device to maintain minimum air pressure in piping.
         3) Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 175-psig (1200-kPa) OR 300-psig (2070-kPa), as directed, outlet pressure.
      f. Air Compressor:
         2) Motor Horsepower: Fractional.
         3) Power: 120-V ac, 60 Hz, single phase.
   4. Automatic (Ball Drip) Drain Valves:
b. Pressure Rating: 175 psig (1200 kPa) minimum.
c. Type: Automatic draining, ball check.
e. End Connections: Threaded.

K. Fire-Department Connections
1. Exposed-Type, Fire-Department Connection:
   b. Type: Exposed, projecting, for wall mounting.
   c. Pressure Rating: 175 psig (1200 kPa) minimum.
   e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. Caps: Brass, lugged type, with gasket and chain.
   g. Escutcheon Plate: Round, brass, wall type.
   h. Outlet: Back, with pipe threads.
   i. Number of Inlets: Two OR Three, as directed.
   j. Escutcheon Plate Marking: Similar to “AUTO SPKR & STANDPIPE” OR “AUTO SPKR”, as directed.
   k. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   l. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150), as directed.

2. Flush-Type, Fire-Department Connection:
   b. Type: Flush, for wall mounting.
   c. Pressure Rating: 175 psig (1200 kPa) minimum.
   e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. Caps: Brass, lugged type, with gasket and chain.
   g. Escutcheon Plate: Rectangular, brass, wall type.
   h. Outlet: With pipe threads.
   i. Body Style: Horizontal OR Square OR Vertical, as directed.
   j. Number of Inlets: Two OR Three OR Four OR Six, as directed.
   k. Outlet Location: Back OR Bottom OR Left side OR Right side OR Top, as directed.
   l. Escutcheon Plate Marking: Similar to “AUTO SPKR & STANDPIPE” OR “AUTO SPKR”, as directed.
   m. Finish: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
   n. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150) OR NPS 8 (DN 200), as directed.

3. Yard-Type, Fire-Department Connection:
   b. Type: Exposed, freestanding.
   c. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   e. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
   f. Caps: Brass, lugged type, with gasket and chain.
   g. Escutcheon Plate: Round, brass, floor type.
   h. Outlet: Bottom, with pipe threads.
   i. Number of Inlets: Two OR Three OR Four, as directed.
   j. Sleeve: Brass OR Not required, as directed.
   k. Sleeve Height: 18 inches (460 mm).
l. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE" OR "AUTO SPKR", as directed.
m. Finish, Including Sleeve: Polished chrome plated OR Rough brass or bronze OR Rough chrome plated, as directed.
n. Outlet Size: NPS 4 (DN 100) OR NPS 5 (DN 125) OR NPS 6 (DN 150), as directed.

L. Sprinkler Specialty Pipe Fittings
1. General Requirements for Dry-Pipe-System Fittings: UL listed for dry-pipe service.
2. Branch Outlet Fittings:
   b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
   d. Type: Mechanical-T and -cross fittings.
   e. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
   f. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
   g. Branch Outlets: Grooved, plain-end pipe, or threaded.
3. Flow Detection and Test Assemblies:
   b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
   d. Size: Same as connected piping.
   e. Inlet and Outlet: Threaded.
4. Branch Line Testers:
   b. Pressure Rating: 175 psig (1200 kPa) minimum.
   d. Size: Same as connected piping.
   e. Inlet: Threaded.
   f. Drain Outlet: Threaded and capped.
   g. Branch Outlet: Threaded, for sprinkler.
5. Sprinkler Inspector's Test Fittings:
   b. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Cast- or ductile-iron housing with sight glass.
   d. Size: Same as connected piping.
   e. Inlet and Outlet: Threaded.
6. Adjustable Drop Nipples:
   b. Pressure Rating: 250 psig (1725 kPa) minimum OR 300 psig (2070 kPa), as directed.
   c. Body Material: Steel pipe with EPDM O-ring seals.
   d. Size: Same as connected piping.
   e. Length: Adjustable.
   f. Inlet and Outlet: Threaded.
7. Flexible, Sprinkler Hose Fittings:
   b. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
   c. Pressure Rating: 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
   d. Size: Same as connected piping, for sprinkler.

M. Sprinklers
1. General Requirements:
b. Pressure Rating for Residential Sprinklers: 175 psig (1200 kPa) maximum.
c. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
d. Pressure Rating for High-Pressure Automatic Sprinklers: 250 psig (1725 kPa) minimum
   OR 300 psig (2070 kPa), as directed.
2. Automatic Sprinklers with Heat-Responsive Element:
a. Nonresidential Applications: UL 199.
b. Residential Applications: UL 1626.
c. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with discharge coefficient K of 5.6, and
   for “Ordinary” temperature classification rating unless otherwise indicated or required by
   application.
3. Sprinkler Finishes:
a. Chrome plated.
b. Bronze.
c. Painted.
4. Special Coatings:
a. Wax.
b. Lead.
c. Corrosion-resistant paint.
5. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting
   applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with
   sprinklers.
a. Ceiling Mounting: Chrome-plated steel, one piece, flat OR Chrome-plated steel, two piece,
   with 1-inch (25-mm) vertical adjustment OR Plastic, white finish, one piece, flat, as
   directed.
b. Sidewall Mounting: Chrome-plated steel OR Plastic, white finish, as directed, one piece,
   flat.
6. Sprinkler Guards:
b. Type: Wire cage with fastening device for attaching to sprinkler.

N. Alarm Devices
1. Alarm-device types shall match piping and equipment connections.
2. Water-Motor-Operated Alarm:
a. Standard: UL 753.
b. Type: Mechanically operated, with Pelton wheel.
c. Alarm Gong: Cast aluminum with red-enamel factory finish.
d. Size: 10-inch (250-mm) diameter.
e. Components: Shaft length, bearings, and sleeve to suit wall construction.
g. Outlet: NPS 1 (DN 25) drain connection.
3. Electrically Operated Alarm Bell:
b. Type: Vibrating, metal alarm bell.
c. Size: 6-inch (150-mm) minimum OR 8-inch (200-mm) minimum OR 10-inch (250-mm), as
   directed, diameter.
d. Finish: Red-enamel factory finish, suitable for outdoor use.
4. Pressure Switches:
b. Type: Electrically supervised water-flow switch with retard feature.
d. Design Operation: Rising pressure signals water flow.
5. Valve Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled valve is in other than fully open position.
6. Indicator-Post Supervisory Switches:
b. Type: Electrically supervised.
d. Design: Signals that controlled indicator-post valve is in other than fully open position.

O. Manual Control Stations
1. Description: UL listed or FM Global approved, hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

P. Control Panels
1. Description: Single-area, two-area, or single-area cross-zoned type control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
2. Panels: UL listed and FM Global approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
a. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
OR Manual Control Stations: Hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

Q. Pressure Gages
2. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
3. Pressure Gage Range: 0 to 250 psig (0 to 1725 kPa) minimum OR 0 to 300 psig (0 to 2070 kPa), as directed.
4. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
5. Air System Piping Gage: Include retard feature, as directed, and "AIR" or "AIR/WATER" label on dial face.

R. Escutcheons
1. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.
2. One-Piece, Cast-Brass Escutcheons: Polished chrome-plated or rough-brass finish with setscrews.
4. One-Piece, Stamped-Steel Escutcheons: Chrome-plated finish with set-screw or spring clips.
5. Split-Casting, Cast-Brass Escutcheons: Polished chrome-plated or rough-brass finish with concealed hinge and set-screw.
6. Split-Plate, Stamped-Steel Escutcheons: Chrome-plated finish with concealed OR exposed-rivet, as directed, hinge, set-screw or spring clips.
7. One-Piece Floor Plates: Cast-iron flange with holes for fasteners, as directed.
8. Split-Casting Floor Plates: Cast brass with concealed hinge.

S. Sleeves
1. Cast-Iron Wall Pipe Sleeves: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
2. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
3. Molded-PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
4. Molded-PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.
5. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
7. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set-screws.

T. Sleeve Seals
1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
   a. Sealing Elements: EPDM-rubber or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   b. Pressure Plates: Carbon steel OR Plastic OR Stainless steel, as directed.
   c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements.

U. Grout
2. Characteristics: Nonshrink, and recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

1.3 EXECUTION

A. Preparation
1. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
2. Report test results promptly and in writing.

B. Service-Entrance Piping
1. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements in Division 21 Section "Facility Fire-suppression Water-service Piping" for exterior piping.
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories indicated at connection to water-service piping. Comply with requirements in Division 21 Section "Facility Fire-suppression Water-service Piping" for backflow preventers, as directed.
3. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

C. Water-Supply Connections
1. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements in Division 22 Section "Domestic Water Piping" for interior piping.
2. Install shutoff valve, backflow preventer, as directed, pressure gage, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for backflow preventers, as directed.
3. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

D. Piping Installation
1. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
a. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with the Owner before deviating from approved working plans.

2. Piping Standard: Comply with requirements in NFPA 13 for installation of sprinkler piping.
3. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
4. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
5. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
6. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
7. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
8. Install sprinkler piping with drains for complete system drainage.
9. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
10. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or to outside building.
11. Connect compressed-air supply to dry-pipe sprinkler piping.

E. Joint Construction
1. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
2. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
3. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
4. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
5. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
6. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
7. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
8. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.

12. Copper-Tubing, Pressure-Sealed Joints: Join copper tube and copper pressure-seal fittings with tools recommended by fitting manufacturer.

13. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

F. Valve And Specialties Installation

1. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.

2. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

3. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

4. Specialty Valves:
   a. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
   b. Dry-Pipe and Deluge Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
      1) Install air compressor and compressed-air supply piping.
      2) Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range; and 175-psig (1200-kPa) maximum inlet pressure.
      3) Install compressed-air supply piping from building's compressed-air piping system.

G. Sprinkler Installation

1. Install sprinklers in suspended ceilings in center of narrow dimension of, as directed, acoustical ceiling panels.

2. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.

3. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

H. Fire-Department Connection Installation

1. Install wall-type, fire-department connections.

2. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-place Concrete".
   a. Install two OR three, as directed, protective pipe bollards around OR on sides of, as directed, each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications".

3. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

I. Escutcheon Installation

1. Install escutcheons for penetrations of walls, ceilings, and floors.

2. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set-screw OR stamped steel with set-screw or spring clips OR stamped steel with spring clips, as directed.

c. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set-screw OR One piece or split plate, stamped steel with set-screw OR Split plate, stamped steel with set-screw, as directed.

d. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.

e. Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set-screw OR stamped steel with spring clips OR stamped steel with set-screw or spring clips, as directed.

f. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3. Escutcheons for Existing Piping:

b. Insulated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge and spring clips.

c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.

d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set-screw, as directed.

e. Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set-screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set-screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set-screw or spring clips, as directed.

f. Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set-screw or spring clips, as directed.

g. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

J. Sleeve Installation

1. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

2. Sleeves are not required for core-drilled holes.

3. Permanent sleeves are not required for holes formed by removable PE sleeves.

4. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

5. Install sleeves in new partitions, slabs, and walls as they are built.

6. For interior wall penetrations, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section “Joint Sealants”.

7. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section “Joint Sealants”.

8. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

9. Seal space outside of sleeves in concrete slabs and walls with grout.

10. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe unless otherwise indicated.

11. Install sleeve materials according to the following applications:

a. Sleeves for Piping Passing through Concrete Floor Slabs: Molded PE OR Molded PVC OR Galvanized-steel pipe, as directed.
b. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe OR Stack sleeve fittings, as directed.
   1) Extend sleeves 2 inches (50 mm) above finished floor level.
   2) For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements for flashing in Division 07 Section "Sheet Metal Flashing And Trim".

c. Sleeves for Piping Passing through Gypsum-Board Partitions:
   1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
   2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.
   3) Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.

d. Sleeves for Piping Passing through Concrete Roof Slabs: Molded PE OR Molded PVC OR Galvanized-steel pipe, as directed.

e. Sleeves for Piping Passing through Exterior Concrete Walls:
   1) Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
   2) Cast-iron wall pipe sleeves for pipes NPS 6 (DN 150) and larger.
   3) Install sleeves that are large enough to provide 1-inch (25-mm) annular clear space between sleeve and pipe when sleeve seals are used.

e. Sleeves for Piping Passing through Interior Concrete Walls:
   1) PVC-pipe OR Galvanized-steel-pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
   2) Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.

12. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestop materials and installations.

K. Sleeve Seal Installation
   1. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.
   2. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

L. Identification
   1. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
   2. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification For Electrical Systems".

M. Field Quality Control
   1. Perform tests and inspections.
   2. Tests and Inspections:
      a. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
      b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
      c. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
      d. Energize circuits to electrical equipment and devices.
      e. Start and run air compressors.
      f. Coordinate with fire-alarm tests. Operate as required.
      g. Coordinate with fire-pump tests. Operate as required.
      h. Verify that equipment hose threads are same as local fire-department equipment.
   3. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
   4. Prepare test and inspection reports.
N. Cleaning
1. Clean dirt and debris from sprinklers.
2. Remove and replace sprinklers with paint other than factory finish.

O. Demonstration
1. Train the Owner's maintenance personnel to adjust, operate, and maintain specialty valves.

P. Piping Schedule
1. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded OR grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved, as directed, joints.
2. Sprinkler specialty fittings may be used, downstream of control vales, instead of specified fittings.
3. Copper-tube, extruded-tee connections may be used for tee branches in copper tubing instead of specified copper fittings. Branch-connection joints must be brazed.
4. Standard-pressure, dry-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight OR Schedule 30 OR thinwall, as directed, galvanized-steel pipe with plain ends; plain-end-pipe fittings; and twist-locked joints.
   c. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   d. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   e. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; copper pressure-seal fittings; and pressure-sealed joints.
   f. NPS 2 (DN 50), Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.
5. Standard-pressure, dry-pipe sprinkler system, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   d. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; copper pressure-seal fittings; and pressure-sealed joints.
   e. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.
6. Standard-pressure, dry-pipe sprinkler system, NPS 5 and NPS 6 (DN 125 and DN 150), shall be one of the following:
   a. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   c. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with plain ends; cast-or wrought-copper solder-joint fittings; and brazed joints.
   d. Type L (Type B) OR Type M (Type C), as directed, hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

Q. Sprinkler Schedule
1. Use sprinkler types in subparagraphs below for the following applications:
21 - Fire Suppression

a. Rooms without Ceilings: Upright sprinklers.
b. Rooms with Suspended Ceilings: Dry pendent sprinklers OR Dry recessed sprinklers OR Dry flush sprinklers OR Dry concealed sprinklers, as directed.
c. Wall Mounting: Dry sidewall sprinklers.
d. Spaces Subject to Freezing: Upright sprinklers OR Dry pendent sprinklers OR Dry sidewall sprinklers, as directed.
e. Special Applications: Extended-coverage and quick-response sprinklers where indicated.

2. Provide sprinkler types in subparagraphs below with finishes indicated.
a. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
b. Flush Sprinklers: Bright chrome, with painted white escutcheon.
c. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
d. Upright, Pendent, and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 21 13 16 00
SECTION 21 13 39 00 - FOAM FIRE EXTINGUISHING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for foam fire extinguishing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes fixed, low-expansion, AFFF fire-extinguishing systems and the following:
   a. Concentrate piping and piping specialties.
   b. Proportioning tanks and proportioning devices.
   c. Foam concentrate.
   d. Discharge devices.
   e. Monitoring and alarm devices.

C. Definitions
1. AFFF: Aqueous film-forming foam.

D. System Description
1. Description: Engineered, fixed, wet-pipe OR dry-pipe, OR preaction, OR deluge, as directed, automatically actuated, low-expansion, AFFF OR AR-AFFF, as directed, fire-extinguishing system for flammable-liquid fires. System includes diaphragm proportioning tanks and devices as described in NFPA 16.

E. Performance Requirements
2. Minimum design parameters to be used with the approval of authorities having jurisdiction are as follows:
   a. Solution: 3 percent foam-water solution.
   b. Sprinkler Spacing: Maximum of 100 sq. ft. (9.5 sq. m) per sprinkler, and maximum 12-foot (3.7-m) spacing.
   c. Design Density: Minimum 0.16 gpm/sq. ft. (0.108 L/s per sq. m).
   d. Foam Supply: Minimum 10-minute discharge time.
   e. Water Supply: Minimum 60 minutes.
   f. Remote Area: Minimum 5000-sq. ft. (476-sq. m) design area for closed-sprinkler systems. Open-sprinkler systems shall discharge over the entire system area.
   g. Sprinkler Temperature Rating: Maximum 250 to 300 deg F (121 to 149 deg C) at a roof or ceiling, and 135 to 170 deg F (57 to 77 deg C) for intermediate sprinklers.
3. Seismic Performance: Fire-suppression piping shall be capable of withstanding the effects of earthquake motions determined according to NFPA 13.

F. Submittals
1. Product Data: For the following:
   a. Piping and equipment seismic restraints.
   b. Valves.
   c. Proportioning tanks and proportioning devices.
   d. Foam concentrate.
   e. Discharge devices. Include flow characteristics.
   f. Monitoring and alarm devices. Include electrical data.
2. Shop Drawings: Signed and sealed by a qualified professional engineer. Include the following for each hazard area, drawn to scale:
   a. Include plans, elevations, sections, details, and attachments to other work. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: Power, signal, and control wiring.
   c. Design Calculations: For amount of foam concentrate required for each hazard area.
   d. Plans: Show the following:
      1) Foam-solution proportioning tanks and devices, piping, discharge devices, monitoring and alarm devices, and accessories.
      2) Method of attaching hangers to building structure.
      3) Fire alarm panel.
      4) Equipment and furnishings.
3. Permit-Approved Drawings: Working plans, prepared according to NFPA 16, that have been approved by authorities having jurisdiction. Include design calculations.
5. Field quality-control test reports.
6. Operation and Maintenance Data: For foam fire extinguishing to include in emergency, operation, and maintenance manuals.

G. Quality Assurance
1. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
3. FMG Compliance: Provide components that are FMG approved and that are listed in FMG’s “Fire Protection Approval Guide.”
4. UL Compliance: Provide equipment listed in UL’s “Fire Protection Equipment Directory.”

1.2 PRODUCTS

A. Pipe And Fittings
1. Steel Pipe: ASTM A 53/A 53M, ASTM A 135, ASTM A 106, or ASTM A 795, Type E or S, Grade A or B, Schedule 40, with factory- or field-formed threaded ends.
   f. Steel Threaded Couplings: ASTM A 865.
2. Stainless Steel: ASTM A 312/A 312M, Schedule 40, with factory-formed threaded or beveled ends; ASTM A 376/A 376M for seamless pipe; or ASTM A 213/A 213M, ASTM A 249/A 249M, and ASTM A 269 for seamless and welded tubing.
   a. Class 150 Threaded Fittings: ASME B16.3 and MSS SP 114.
   b. Butt-Weld Fittings: ASTM A 403/A 403M.
   c. Flanges, Forged Fittings and Flanges, and Socket-Weld Fittings: ASTM A 182/A 182M.
   d. Bar Stock and Compression Fittings: ASTM A 276 and ASTM A 479/A 479M.
3. Red Brass Pipe: ASTM B 43, Schedule 40, with factory- or field-formed threaded ends.
4. Refer to Division 21 Section “Common Work Results For Fire Suppression” for basic joining materials.
B. Valves
1. Ball Valves: Bronze body with threaded or flanged ends. Comply with UL 1091, except with stainless-steel ball instead of disc.

C. Specialties
1. Concentrate Storage Tank: Buna-N, bladder-type proportioning tank complying with UL 162 and ASME Boiler and Pressure Vessel Code: Section VIII. Include bladder, internal piping, fill and drain, pipe assembly, glass sight gage, piping, and valves. Concentrate to be contained in the bladder.
   a. Orientation: Horizontal design with saddle OR Vertical design with skirt, as directed, support.
2. Proportioning Controller: Venturi type complying with UL 162 and of capacity to match design at minimum and maximum flow.
3. Concentrate Control Valve: Water-operated ball or deluge valve designed to open with flow through the proportioning controller.
4. Concentrate Strainers: Bronze body and stainless-steel mesh strainer with minimum 0.125-inch (3.2-mm) perforations to remove solids that would block system components.
5. Provide devices that comply with NFPA 16, are compatible with the foam concentrate, and are designed to be drained and cleaned.

D. Foam Concentrate
1. Description: AFFF OR AR-AFFF, as directed, liquid concentrate, complying with NFPA 11 and UL 162, for making foam-water fire-extinguishing foam solution.

E. Pressure Gages
1. Description: Comply with UL 393, with 3-1/2-inch- (90-mm-) minimum diameter dial, 0- to 300-psig (0- to 2070-kPa) dial range, and caption "WATER" or "CONCENTRATE" on dial face.

F. Discharge Devices
1. General: Discharge devices shall be listed and approved by UL and FMG.
2. Sprinklers: Closed OR Open, as directed, air-aspirating OR non-air-aspirating, as directed, type complying with UL 162 and suitable for discharging foam.
3. Spray Nozzles: Foam-water spray nozzles including foam generator and distributing deflector complying with UL 162 and designed to distribute foam or water in the absence of foam solution in a special pattern peculiar to a particular head.

G. Monitoring Devices
1. Valve Supervisory Switches: UL 753, electrical, single pole, double throw, with normally closed contacts. Include design that signals controlled valve is in other than fully open position.

H. Alarm Devices
1. Description: UL listed or FMG approved, low voltage, and surface mounting. Alarm and monitoring devices are specified in Division 28 Section(s) "Digital, Addressable Fire-alarm System" OR "Zoned (dc Loop) Fire-alarm System".

1.3 EXECUTION
A. Concentrate Storage Tank Installation
1. Install proportioning tanks on concrete bases. Concrete bases are specified in Division 21 Section "Common Work Results For Fire Suppression".
2. Install tanks level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
3. Install seismic restraints for tanks. Anchor tanks to substrate.

B. Piping Applications
1. Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
2. AFFF-Concentrate Piping: Steel pipe, malleable- or cast-iron threaded fittings, and threaded joints.
3. AFFF-Concentrate Piping: Steel pipe with welded fittings and joints.
4. AR-AFFF-Concentrate Piping: Brass OR Stainless-steel, as directed, pipe, threaded fittings, and joints.
5. AR-AFFF-Concentrate Piping: Stainless-steel pipe with welded fittings and joints.
6. Foam-solution piping is specified in Division 21 Section "Wet-pipe Sprinkler Systems".

C. Piping Installation
1. Install piping and other components level and plumb.
2. Refer to Division 21 Section "Common Work Results For Fire Suppression" for basic pipe installation and joint construction.
3. Install proportioning tanks anchored to substrate.
4. Install pipe and fittings, valves, and discharge devices according to requirements listed in NFPA 16, "Installation of Deluge Foam-Water Sprinkler and Foam-Water Spray Systems."
   a. Support piping using supports and methods according to NFPA 13.
   b. Install seismic restraints for proportioning tanks and piping systems.
   c. Install monitoring and alarm devices according to NFPA 16 and NFPA 72.

D. Connections
1. Piping installation requirements are specified in Division 21 Section "Wet-pipe Sprinkler Systems". Drawings indicate general arrangement of piping, fittings, and specialties.
2. Provide concentrate control, maintenance service, and drain valves with piping to permit maintenance of the foam concentrate with continuous sprinkler system service.
3. Install proportioning controller in fire-suppression piping to provide coverage to area indicated on Drawings.
4. Install piping adjacent to equipment to allow service and maintenance.
5. Connect electrical devices to building's fire alarm system. Electrical power, wiring, and devices are specified in Division 28 Section(s) "Digital, Addressable Fire-alarm System" OR "Zoned (dc Loop) Fire-alarm System".

E. Labeling
1. Install labeling on piping, equipment, and panels according to Division 22 Section "Identification For Plumbing Piping And Equipment".

F. Charging System
1. Fill proportioning tanks with foam concentrate after field quality-control testing is complete and satisfactory results have been achieved.

G. Field Quality Control
1. Inspection: Engage the services of a qualified professional engineer to inspect installed fire-extinguishing systems, prepare installation report, and certify that installation complies with the Contract Documents, calculations, and requirements of authorities having jurisdiction.
2. Comply with operating instructions and procedures in NFPA 16, "Acceptance Tests" Chapter. Include the following tests and inspections to demonstrate compliance with requirements:
   a. Check mechanical items.
   b. Inspect equipment and fire-extinguishing foam concentrate, and check mountings for adequate anchoring to substrate.
   c. Check electrical systems.
   d. Flush piping.
   e. Perform acceptance test.
   f. Perform pressure test.
   g. Perform operating test.
   h. Perform discharge test.
i. Correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or does not perform as specified and indicated, then retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.

1) Report test results promptly and in writing and authorities having jurisdiction.

3. Perform the following field tests and inspections and prepare test reports:
   a. After installing foam fire-extinguishing piping system and after electrical circuitry has been energized, test for compliance with requirements.
   b. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, "Inspection and Test Procedures" and "System Function Tests." Certify compliance with test parameters.
   c. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   d. Operational Test: After electrical circuitry has been energized, start systems to confirm proper unit operation.
   e. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

4. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 21 13 39 00
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 21 22 16 00 - CLEAN-AGENT EXTINGUISHING SYSTEMS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for clean-agent extinguishing systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes clean-agent extinguishing systems and the following:
   a. Piping and piping specialties.
   b. Extinguishing-agent containers.
   c. Extinguishing agent.
   d. Detection and alarm devices.
   e. Control and alarm panels.
   f. Accessories.
   g. Connection devices for and wiring between system components.
   h. Connection devices for power and integration into building’s fire alarm system.

C. Definitions

D. System Description
1. Clean-agent fire-extinguishing system shall be an engineered system for total flooding of the hazard area including the room cavity below the ceiling and below the raised floor. Provide separate zones above and below the raised floor. If smoke is detected below the raised floor, agent shall be discharged in the underfloor zone only. If smoke is detected above the raised floor, agent shall be discharged in zones above and below the floor.

E. Performance Requirements
1. Design clean-agent extinguishing system and obtain approval from authorities having jurisdiction. Design system for Class A, B, or C fires as appropriate for areas being protected and include safety factor. Use clean agent indicated and in concentration suitable for normally occupied areas.
2. Performance Requirements: Discharge HFC 227ea within 10 seconds and maintain 7.1 percent concentration by volume at 70 deg F (21 deg C) for 10-minute holding time in hazard areas.
   a. HFC 227ea concentration in hazard areas greater than 9.0 percent immediately after discharge or less than 5.8 percent throughout holding time will not be accepted without written authorization from the Owner and authorities having jurisdiction.
   b. System Capabilities: Minimum 620-psig (4278-kPa) calculated working pressure and 360-psig (2484-kPa) initial charging pressure.
3. Performance Requirements: Discharge IG-541 within 60 seconds and maintain 38 percent concentration by volume at 70 deg F (21 deg C) for 10-minute holding time in hazard areas.
   a. IG-541 concentration in hazard areas greater than 40 percent immediately after discharge or less than 32 percent throughout holding time will not be accepted without written authorization from the Owner and authorities having jurisdiction.
   b. System Capabilities: Minimum 2175-psig (15-MPa) calculated working pressure upstream from orifice union, minimum 1000-psig (6895-kPa) calculated working pressure downstream from orifice union, and 2175-psig (15-MPa) initial charging pressure.
OR

Verified Detection: Devices located in single zone. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating second-detection device.

5. System Operating Sequence: As follows:
   a. Actuating First Detector: Visual indication on annunciator panel, energize audible alarm and visual alarms (slow pulse), shut down air-conditioning and ventilating systems serving protected area, close doors in protected area, and send signal to fire alarm system.
   b. Actuating Second Detector: Visual indication on annunciator panel, energize audible and visual alarms (fast pulse), shut down power to protected equipment, start time delay for extinguishing-agent discharge for 30 seconds, and discharge extinguishing agent. On agent discharge, release preaction valve to allow water to fill sprinkler system.
   c. Extinguishing-agent discharge will operate audible alarms and strobe lights inside and outside the protected area.

6. System Operating Sequence: System shall be cross-zoned, air-sampling detectors and photoelectric detectors reporting to a fully programmable microprocessor-based control panel programmed to operate as follows:
   a. If one photoelectric detector and air-sampling detector reaches the third detection level (Fire 1), agent discharge will be initiated as described for the third detection level (Fire 1) below.
   b. Air-Sampling System:
      1) First Detection Level (Alert): Mild audible and visual indication on annunciator panel. Strobe lights flash slowly in the protected area.
      2) Second Detection Level (Action): Strong audible and visual indication on annunciator panel. Strobe lights flash rapidly in the protected area.
      3) Third Detection Level (Fire 1): Strong audible and visual indication on annunciator panel. Energize horn(s), bell(s), and strobe light(s) in the protected area and outside entry doors. Shut down air-conditioning and ventilating systems serving the protected area, and close doors in the protected area. Send signal to fire alarm system, initiate 30-second time delay for extinguishing-agent discharge, and discharge extinguishing agent. At agent discharge, terminate power to equipment in the protected area, and release preaction valve to allow water flow to sprinkler system.
      4) Fourth Detection Level (Fire 2): Same as Fire 1.

8. Operating abort switches will delay extinguishing-agent discharge while being activated, and switches must be reset to prevent agent discharge. Release of hand pressure on the switch will cause agent discharge if the time delay has expired.

9. EPO: Will terminate power to protected equipment immediately on actuation.

10. Low-Agent Pressure Switch: Initiate trouble alarm if sensing less than set pressure.

11. Power Transfer Switch: Transfer from normal to stand-by power source.

12. Seismic Performance: Fire-suppression piping and containers shall be capable of withstanding the effects of earthquake motions determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."

F. Submittals
   1. Product Data: For each product indicated.
   2. LEED Submittal:
      a. Product Data for Credit EA 4: Documentation required by Credit EA 4 indicating that clean agents comply.
   3. Shop Drawings: Signed and sealed by a qualified professional engineer. Include design calculations.
   4. Permit Approved Drawings: Working plans, prepared according to NFPA 2001, that have been approved by authorities having jurisdiction. Include design calculations.
   5. Field quality-control test reports.
   6. Maintenance Data: For components to include in maintenance manuals.

G. Quality Assurance
1. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of clean-agent extinguishing systems that are similar to those indicated for this Project in material, design, and extent.

2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.2 PRODUCTS

A. Piping Materials
1. Refer to Part 1.3 piping applications Article retained for applications of pipe, tube, fitting, and joining materials.
2. Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 2001, Section "Distribution," for charging pressure of system.

B. Pipe And Fittings
1. Steel Pipe: ASTM A 53/A 53M, Type S, Grade B or ASTM A 106, Grade B; Schedule 40, or Schedule 80, seamless steel pipe.
   a. Threaded Fittings:
      2) Flanges and Flanged Fittings: ASME B16.5, Class 300, unless Class 600 is indicated.
   b. Forged-Steel Welding Fittings: ASME B16.11, Class 3000, socket pattern.
   c. Grooved-End Fittings: FMG approved and NRTL listed, ASTM A 47/A 47M malleable iron or ASTM A 536 ductile iron, with dimensions matching steel pipe and ends factory grooved according to AWWA C606.
2. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness, unless thickness or specific material is indicated.
   b. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
   d. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
   e. Steel, Keyed Couplings: UL 213, AWWA C606, approved or listed for clean-agent service, and matching steel-pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gasket, and steel bolts and nuts.

C. Valves
1. General: Brass; suitable for intended operation.
2. Container Valves: With rupture disc or solenoid and manual-release lever, capable of immediate and total agent discharge and suitable for intended flow capacity.
3. Valves in Sections of Closed Piping and Manifolds: Fabricate to prevent entrapment of liquid, or install valve and separate pressure relief device.
4. Valves in Manifolds: Check valve; installed to prevent loss of extinguishing agent when container is removed from manifold.

D. Extinguishing-Agent Containers
1. Description: Steel tanks complying with ASME Boiler and Pressure Vessel Code: Section VIII, for unfired pressure vessels. Include minimum working-pressure rating that matches system charging pressure, valve, pressure switch, and pressure gage.
   a. Finish: Red OR Manufacturer's standard color, as directed, enamel or epoxy paint.
   b. Manifold: Fabricate with valves, pressure switches, and connections for multiple storage containers, as indicated.
      OR
      Manifold: Fabricate with valves, pressure switches, selector switch, and connections for main- and reserve-supply banks of multiple storage containers.
   c. Storage-Tank Brackets: Factory- or field-fabricated retaining brackets consisting of steel straps and channels; suitable for container support, maintenance, and tank refilling or replacement.

E. Fire-Extinguishing Clean Agent
      OR
      Clean Agent: IG-541, mixture of nitrogen, argon, and carbon dioxide inert gases.

F. Discharge Nozzles
   1. Equipment manufacturer's standard one-piece brass or aluminum alloy of type, discharge pattern, and capacity required for application.

G. Manifold And Orifice Unions
   1. Description: NRTL-listed device with minimum 2175-psig (15-MPa) pressure rating, to control flow and reduce pressure of IG-541 gas in piping.
      a. NPS 2 (DN 50) and Smaller: Piping assembly with orifice, sized for system design requirements.
      b. NPS 2-1/2 (DN 65) and Larger: Piping assembly with nipple, sized for system design requirements.

H. Control Panels
   1. Description: FMG approved or NRTL listed, including equipment and features required for testing, supervising, and operating fire-extinguishing system.
   2. Power Requirements: 120/240-V ac; with electrical contacts for connection to system components and fire alarm system, and transformer or rectifier as needed to produce power at voltage required for accessories and alarm devices.
   3. Enclosure: NEMA ICS 6, Type 1, enameled-steel cabinet.
      a. Mounting: Recessed flush with surface OR Surface, as directed.
   4. Supervised Circuits: Separate circuits for each independent hazard area.
      a. Detection circuits equal to the required number of zones, or addressable devices assigned to the required number of zones.
      c. Alarm circuit.
      d. Release circuit.
      e. Abort circuit.
      f. EPO circuit.
   5. Provide the following control-panel features:
      a. Electrical contacts for shutting down fans, activating dampers, and operating system electrical devices.
      b. Automatic switchover to standby power at loss of primary power.
      c. Storage container, low-pressure indicator.
      d. Service disconnect to interrupt system operation for maintenance with visual status indication on the annunciator panel.
   6. Annunciator Panel: Graphic type showing protected, hazard-area plans and locations of detectors, abort, EPO, and manual stations. Include lamps to indicate device-initiating alarm, electrical contacts for connection to control panel, and stainless-steel or aluminum enclosure.
7. **Standby Power**: Lead-acid or nickel-cadmium batteries with capacity to operate system for 72 hours and alarm for minimum of 15 minutes. Include automatic battery charger, with varying charging rate between trickle and high depending on battery voltage, that is capable of maintaining batteries fully charged. Include manual voltage control, dc voltmeter, dc ammeter, electrical contacts for connection to control panel, and suitable enclosure.

I. Detection Devices
1. **Description**: Comply with NFPA 2001 and NFPA 72, and include the following types:
   a. **Ionization Detectors**: Comply with UL 268, dual-chamber type, having sampling and referencing chambers, with smoke-sensing element.
   b. **Photoelectric Detectors**: Comply with UL 268, consisting of LED light source and silicon photodiode receiving element.
   c. **Remote Air-Sampling Detector System**: Includes air-sampling pipe network, a laser-based photoelectric detector, a sample transport fan, and a control unit.
      1) Comply with UL 268 and NRTL listed, operating at 24-V dc, nominal.
      2) **Pipe Network**: CPVC tubing connects control unit with calibrated sampling holes.
      3) **Smoke Detector**: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of four preset values.
      4) **Sample Transport Fan**: Centrifugal type, creating a minimum static pressure of 0.05-inch wg (12.5 Pa) at all sampling ports.
      5) **Control Unit**: Multizone unit as indicated on Drawings. Provides same system power supply, supervision, and alarm features as specified for the control panel plus separate trouble indication for airflow and detector problems.
      6) **Signals to the Central Fire Alarm Control Panel**: Any type of local system trouble is reported to the central fire alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to the central fire alarm control panel as separately identified zones.

J. Manual Stations
1. **General Description**: Surface OR Semirecessed, as directed, FMG approved or NRTL listed, with clear plastic hinged cover, 120-V ac or low voltage compatible with controls. Include contacts for connection to control panel.
2. **Manual Release**: "MANUAL RELEASE" caption, and red finish. Unit can manually discharge extinguishing agent with operating device that remains engaged until unlocked.
3. **Abort Switch**: "ABORT" caption, momentary contact, with green finish.
4. **EPO Switch**: "EPO" caption, with yellow finish.

K. Switches
1. **Description**: FMG approved or NRTL listed, where available, 120-V ac or low voltage compatible with controls. Include contacts for connection to control panel.
   a. **Low-Agent Pressure Switches**: Pneumatic operation.
   b. **Power Transfer Switches**: Key-operation selector, for transfer of release circuit signal from main supply to reserve supply.
   c. **Door Closers**: Magnetic retaining and release device or electrical interlock to cause the door operator to drive the door closed.

L. Alarm Devices
1. **Description**: FMG approved or NRTL listed, low voltage, and surface mounting, unless otherwise indicated.
2. **Bells**: Minimum 6-inch (150-mm) diameter.
3. **Horns**: 90 to 94 dBA.
4. **Strobe Lights**: Translucent lens, with "FIRE" or similar caption.

M. Electrical Power And Wiring
1. Electrical power, wiring, and devices are specified in Division 22.
### 1.3 EXECUTION

**A. Piping Applications**

1. Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.

2. Fittings Working Pressure: 620 psig (4278 kPa) minimum.

3. Flanged Joints: Class 300 minimum.

4. NPS 2 (DN 50) and Smaller: ASTM B 88, Type K OR L, as directed, (ASTM B 88M, Type A OR B, as directed,) copper tube; copper, solder-joint fittings; and brazed joints.

   OR

   NPS 2 (DN 50) and Smaller: Schedule 40, steel pipe; malleable-iron threaded fittings; and threaded joints.

5. NPS 2-1/2 and NPS 3 (DN 65 and DN 80): ASTM B 88, Type K OR L, as directed, (ASTM B 88M, Type A OR B, as directed,) copper tube; copper, solder-joint fittings; and brazed joints.

   OR

   NPS 2-1/2 and NPS 3 (DN 65 and DN 80): Schedule 40, steel pipe; forged-steel welding fittings; and welded joints.

   OR

   NPS 2-1/2 and NPS 3 (DN 65 and DN 80): Schedule 40, steel pipe; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

6. NPS 4 (DN 100) and Larger: Schedule 40, steel pipe; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

   OR

   NPS 4 (DN 100) and Larger: Schedule 40, steel pipe; forged-steel welding fittings; and welded joints.

**B. Piping Applications**

1. Piping between Storage Containers and Orifice Union:
   a. Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
   b. Fittings Working Pressure: 2175 psig (15 MPa) minimum.
   c. Flanged Joints: Class 600 minimum.
   d. All Sizes: Schedule 80, steel pipe; forged-steel welding fittings; and welded joints.

2. Piping Downstream from Orifice Union:
   a. Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
   b. Fittings Working Pressure: 1000 psig (6900 kPa) minimum.
   c. Flanged Joints: Class 300 minimum.
   d. All Sizes: Schedule 40 OR 80, as directed, steel pipe; forged-steel welding fittings; and welded joints.

**C. Clean-Agent Extinguishing Piping Installation**

1. Install clean-agent extinguishing piping and other components level and plumb and according to manufacturers' written instructions.

2. Refer to Division 21 Section "Common Work Results For Fire Suppression" for basic pipe installation and joint construction.

3. Grooved Piping Joints: Groove pipe ends according to AWWA C606 dimensions. Assemble grooved-end steel pipe and steel, grooved-end fittings with steel, keyed couplings and lubricant according to manufacturer's written instructions.

4. Install extinguishing-agent containers anchored to substrate.

5. Install pipe and fittings, valves, and discharge nozzles according to requirements listed in NFPA 2001, Section "Distribution," and in ASME B31.1.
   a. Install valves designed to prevent entrapment of liquid or install pressure relief devices in valved sections of piping systems.
   b. Support piping using supports and methods according to NFPA 13.
   c. Install seismic restraints for extinguishing-agent containers and piping systems.
d. Install control panels, detection system components, alarms, and accessories, complying with requirements of NFPA 2001, Section “Detection, Actuation, and Control Systems,” as required for supervised system application.

D. Connections
1. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Install piping adjacent to extinguishing-agent containers to allow service and maintenance.
3. Connect electrical devices to control panel and to building’s fire alarm system. Electrical power, wiring, and devices are specified in Division 28 Section(s) “Digital, Addressable Fire-alarm System” OR “Zoned (dc Loop) Fire-alarm System”.

E. Labeling
1. Install labeling on piping, extinguishing-agent containers, other equipment, and panels according to NFPA 2001.
2. Install signs at entry doors for protected areas to warn occupants that they are entering a room protected with a clean-agent fire extinguishing system.
3. Install signs at entry doors to advise persons outside the room the meaning of the horn(s), bell(s), and strobe light(s) outside the protected space.

F. Field Quality Control
1. Comply with operating instructions and procedures of NFPA 2001, Section “Approval of Installations.” Include the following tests and inspections to demonstrate compliance with requirements:
   a. Check mechanical items.
   b. Inspect extinguishing-agent containers and extinguishing agent, and check mountings for adequate anchoring to substrate.
   c. Check electrical systems.
   e. Perform functional pre-discharge test.
   f. Perform system functional operational test including, EPO, abort, and manual release.
   g. Check remote monitoring operations.
   h. Check control-panel primary power source.
   i. Perform “puff” test on piping system, using nitrogen.
2. Perform field-acceptance tests of each clean-agent extinguishing system when installation is complete. Perform system testing only after hazard-area enclosure construction has been completed and openings sealed. Comply with operating instructions and procedures of NFPA 2001, Section “Approval of Installations.” Include the following to demonstrate compliance with requirements:
   b. Perform system functional operational test.
   c. Check remote monitoring operations.
   d. Check control-panel primary power source.
   e. Perform “puff” test on piping system, using nitrogen.
3. Correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be corrected or does not perform as specified and indicated, then retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
   a. Report test results promptly and in writing to the Owner and authorities having jurisdiction.
4. Perform the following field tests and inspections and prepare test reports:
   a. After installing clean-agent extinguishing piping system and after electrical circuitry has been energized, test for compliance with requirements.
   b. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Sections “Inspection and Test Procedures” and “System Function Tests.” Certify compliance with test parameters.
   c. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
d. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.

e. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

5. Remove and replace malfunctioning units and retest as specified above.

G. Cleaning
1. Each pipe section shall be cleaned internally after preparation and before assembly by means of swabbing, using a suitable nonflammable cleaner. Pipe network shall be free of particulate matter and oil residue before installing nozzles or discharge devices.

H. System Filling
1. Preparation:
   a. Verify that piping system installation is completed and cleaned.
   b. Check for complete enclosure integrity.
   c. Check operation of ventilation and exhaust systems.

2. Filling Procedures:
   a. Fill extinguishing-agent containers with extinguishing agent and pressurize to indicated charging pressure.
   b. Install filled extinguishing-agent containers.
   c. Energize circuits.
   d. Adjust operating controls.

I. Demonstration
1. Train the Owner’s maintenance personnel to adjust, operate, and maintain clean-agent extinguishing systems.

SECTION 21 30 00 00 - ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for electric-drive, centrifugal fire pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. End-suction, In-line, and Split-case fire pumps.
   b. Fire-pump accessories and specialties.
   c. Flowmeter systems.

C. Performance Requirements
1. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.
   a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: For power, signal, and control wiring.
3. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
4. Product Certificates: For each fire pump, from manufacturer.
5. Source quality-control reports.
6. Field quality-control reports.
7. Operation and maintenance data.

E. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."

1.2 PRODUCTS

A. General Requirements For Centrifugal Fire Pumps
1. Description: Factory-assembled and -tested fire-pump and driver unit.
2. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.

3. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

B. End-Suction Fire Pumps
1. Pump:
   a. Standard: UL 448, for end-suction pumps for fire service.
   c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   d. Wear Rings: Replaceable bronze.
   e. Shaft and Sleeve: Steel shaft with bronze sleeve.
      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   f. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

3. Driver:
   a. Standard: UL 1004A.
   b. Type: Electric motor; NEMA MG 1, polyphase Design B.

C. In-Line Fire Pumps
1. Pump:
   a. Standard: UL 448, for in-line pumps for fire service.
   c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   d. Wear Rings: Replaceable bronze.
   e. Shaft and Sleeve: Steel shaft with bronze sleeve.
      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   f. Mounting: Pump and driver shaft is vertical, with motor above pump and pump on base.

2. Coupling: None or rigid.

3. Driver:
   a. Standard: UL 1004A.
   b. Type: Electric motor; NEMA MG 1, polyphase Design B.

D. Horizontally Mounted, Single-Stage, Split-Case Fire Pumps
1. Pump:
   a. Standard: UL 448, for split-case pumps for fire service.
   c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   d. Wear Rings: Replaceable bronze.
   e. Shaft and Sleeve: Steel shaft with bronze sleeve.
      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   f. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

3. Driver:
   a. Standard: UL 1004A.
   b. Type: Electric motor; NEMA MG 1, polyphase Design B.

E. Horizontally Mounted, Multistage, Split-Case Fire Pumps
1. Pump:
   a. Standard: UL 448, for split-case pumps for fire service.
b. Number of Stages: Two.
d. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
e. Wear Rings: Replaceable bronze.
f. Shaft and Sleeve: Steel shaft with bronze sleeve.
   1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
   2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
g. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
3. Driver:
   a. Standard: UL 1004A.
   b. Type: Electric motor; NEMA MG 1, polyphase Design B.

F. Vertically Mounted, Single-Stage, Split-Case Fire Pumps
1. Pump:
   a. Standard: UL 448, for split-case pumps for fire service.
   c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   d. Wear Rings: Replaceable bronze.
   e. Shaft and Sleeve: Steel shaft with bronze sleeve.
      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   f. Mounting: Pump and driver shafts are vertical, with motor above pump and pump on base.
2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
3. Driver:
   a. Standard: UL 1004A.
   b. Type: Electric motor; NEMA MG 1, polyphase Design B.

G. Fire-Pump Accessories And Specialties
2. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.
3. Relief Valves:
   a. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.
4. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.
5. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.
6. Discharge Cone: Closed OR Open, as directed, type.
7. Hose Valve Manifold Assembly:
   d. Automatic Drain Valve: UL 1726.
   e. Manifold:
      1) Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
      2) Body: Flush type, brass or ductile iron, with number of outlets required by NFPA 20.
      4) Adapters and Caps with Chain: Brass or bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
      5) Escutcheon Plate: Brass or bronze; rectangular.
6) Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.

7) Exposed Parts Finish: Polished OR Rough, as directed, brass, chrome plated, as directed.

8) Escutcheon Plate Marking: Equivalent to “FIRE PUMP TEST.”

OR

Manifold:
1) Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
2) Body: Exposed type, brass, with number of outlets required by NFPA 20.
3) Escutcheon Plate: Brass or bronze; round.
4) Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads. Include caps and chains.
5) Exposed Parts Finish: Polished OR Rough, as directed, brass, chrome plated, as directed.
6) Escutcheon Plate Marking: Equivalent to “FIRE PUMP TEST.”

H. Flowmeter Systems
1. Description: UL-listed or FM-Approved, fire-pump flowmeter system with capability to indicate flow to not less than 175 percent of fire-pump rated capacity.
2. Pressure Rating: 175 psig (1200 kPa) minimum OR 250 psig (1725 kPa), as directed.
3. Sensor: Annubar probe, orifice plate, or venturi unless otherwise indicated. Sensor size shall match pipe, tubing, flowmeter, and fittings.
4. Permanently Mounted Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter. Include bracket or device for wall mounting.
   a. Tubing Package: NPS 1/8 or NPS 1/4 (DN 6 or DN 10) soft copper OR plastic, as directed, tubing with copper or brass fittings and valves.
   OR
   Portable Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter and with two 12-foot- (3.7-m-) long hoses in carrying case.

I. Grout
2. Characteristics: Nonshrink and recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

J. Source Quality Control
1. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."
   a. Verification of Performance: Rate fire pumps according to UL 448.
2. Fire pumps will be considered defective if they do not pass tests and inspections.
3. Prepare test and inspection reports.

1.3 EXECUTION

A. Installation
1. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
2. Equipment Mounting: Install fire pumps on concrete bases. Comply with requirements for concrete bases specified in Division 03 Section “Cast-in-place Concrete.”
   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

d. Install anchor bolts to elevations required for proper attachment to supported equipment.

3. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.

4. Support piping and pumps separately so weight of piping does not rest on pumps.

5. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed.

6. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed.

7. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.

8. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NFPA 20 and manufacturer's written instructions.

10. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

B. Alignment

1. Align end-suction and split-case pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.

2. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.

3. Align piping connections.

4. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

C. Connections

1. Comply with requirements for piping and valves specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed. Drawings indicate general arrangement of piping, fittings, and specialties.

2. Install piping adjacent to pumps and equipment to allow service and maintenance.

3. Connect relief-valve discharge to drainage piping or point of discharge.

4. Connect flowmeter-system meters, sensors, and valves to tubing.

5. Connect fire pumps to their controllers.

D. Identification

1. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

E. Field Quality Control

1. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driven fire-pump controllers specified in Division 21 Section(s) "Electric-drive, Centrifugal Fire Pumps" OR "Diesel-drive, Centrifugal Fire Pumps" OR "Electric-drive, Vertical-turbine Fire Pumps" OR "Diesel-drive, Vertical-turbine Fire Pumps".

2. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

3. Perform tests and inspections.

   a. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

4. Tests and Inspections:
a. After installing components, assemblies, and equipment including controller, test for compliance with requirements.

b. Test according to NFPA 20 for acceptance and performance testing.

c. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

d. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

e. Test and adjust controls and safety. Replace damaged and malfunctioning controls and equipment.

5. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.

6. Prepare test and inspection reports.

7. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to the Owner.

F. Demonstration

1. Train the Owner’s maintenance personnel to adjust, operate, and maintain fire pumps.

END OF SECTION 21 30 00 00
SECTION 21 30 00 00a - DIESEL-DRIVE, CENTRIFUGAL FIRE PUMPS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for diesel-drive, centrifugal fire pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. End-suction and Split-case fire pumps.
      b. Fire-pump accessories and specialties.
      c. Flowmeter systems.

C. Performance Requirements
   1. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   2. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.

D. Submittals
   1. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
   2. Shop Drawings: For fire pumps, engine drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.
      a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
      b. Wiring Diagrams: For power, signal, and control wiring.
   3. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.
      a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
      c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
   4. Product Certificates: For each fire pump, from manufacturer.
   5. Source quality-control reports.
   6. Field quality-control reports.
   7. Operation and maintenance data.

E. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."

1.2 PRODUCTS
A. General Requirements For Centrifugal Fire Pumps
   1. Description: Factory-assembled and -tested fire-pump and driver unit.
   2. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
   3. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

B. End-Suction Fire Pumps
   1. Pump:
      a. Standard: UL 448, for end-suction pumps for fire service.
      c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
      d. Wear Rings: Replaceable bronze.
      e. Shaft and Sleeve: Steel shaft with bronze sleeve.
         1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
         2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
      f. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
   2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
   3. Driver:
      b. Type: Diesel engine.
         1) Coolant: Type recommended by driver manufacturer.
      OR
      Engine Cooling System: Factory-installed water piping, valves, strainer, pressure regulator, heat exchanger, coolant pump, bypass piping, and fittings.
         1) Piping: ASTM B 88, Type L (ASTM B 88M, Type B), copper water tube; ASME B16.22, wrought-copper, solder-joint pressure fittings; AWS A5.8/A5.8M, BCuP Series brazing filler metal; and brazed joints.
      f. Dual Batteries: Lead-acid-storage type with 100 percent standby reserve capacity.
      g. Fuel System: Comply with NFPA 20.
         1) Fuel Storage Tank: Size indicated but not less than required by NFPA 20. Include floor legs, direct-reading level gage, and secondary containment tank with capacity at least equal to fuel storage tank.
      h. Exhaust System: ASTM A 53/A 53M, Type E or S, Schedule 40, black steel pipe; ASME B16.9, weld-type pipe fittings; ASME B16.5, steel flanges; and ASME B16.21, nonmetallic gaskets. Fabricate double-wall, ventilated thimble from steel pipe.
         1) Exhaust Connector: Flexible type.
         2) Exhaust Silencer: Industrial OR Residential, as directed, type.

C. Single-Stage, Split-Case Fire Pumps
   1. Pump:
      a. Standard: UL 448, for split-case pumps for fire service.
      c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
      d. Wear Rings: Replaceable bronze.
      e. Shaft and Sleeve: Steel shaft with bronze sleeve.
         1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
         2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
      f. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
   2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
3. Driver:
   b. Type: Diesel engine.
      1) Coolant: Type recommended by driver manufacturer.
      OR
      Engine Cooling System: Factory-installed water piping, valves, strainer, pressure regulator, heat exchanger, coolant pump, bypass piping, and fittings.
      1) Piping: ASTM B 88, Type L (ASTM B 88M, Type B), copper water tube; ASME B16.22, wrought-copper, solder-joint pressure fittings; AWS A5.8/A5.8M, BCuP Series brazing filler metal; and brazed joints.
   f. Dual Batteries: Lead-acid-storage type with 100 percent standby reserve capacity.
   g. Fuel System: Comply with NFPA 20.
      1) Fuel Storage Tank: Size indicated but not less than required by NFPA 20. Include floor legs, direct-reading level gage, and secondary containment tank with capacity at least equal to fuel storage tank.
   h. Exhaust System: ASTM A 53/A 53M, Type E or S, Schedule 40, black steel pipe; ASME B16.9, weld-type pipe fittings; ASME B16.5, steel flanges; and ASME B16.21, nonmetallic gaskets. Fabricate double-wall, ventilated thimble from steel pipe.
      1) Exhaust Connector: Flexible type.
      2) Exhaust Silencer: Industrial OR Residential, as directed, type.

D. Multistage, Split-Case Fire Pumps
1. Pump:
   a. Standard: UL 448, for split-case pumps for fire service.
   b. Number Stages: Two.
   d. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   e. Wear Rings: Replaceable bronze.
   f. Shaft and Sleeve: Steel shaft with bronze sleeve.
      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   g. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

2. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

3. Driver:
   b. Type: Diesel engine.
      1) Coolant: Type recommended by driver manufacturer.
      OR
      Engine Cooling System: Factory-installed water piping, valves, strainer, pressure regulator, heat exchanger, coolant pump, bypass piping, and fittings.
      1) Piping: ASTM B 88, Type L (ASTM B 88M, Type B), copper water tube; ASME B16.22, wrought-copper, solder-joint pressure fittings; AWS A5.8/A5.8M, BCuP Series brazing filler metal; and brazed joints.
   f. Dual Batteries: Lead-acid-storage type with 100 percent standby reserve capacity.
   g. Fuel System: Comply with NFPA 20.
      1) Fuel Storage Tank: Size indicated but not less than required by NFPA 20. Include floor legs, direct-reading level gage, and secondary containment tank with capacity at least equal to fuel storage tank.
h. Exhaust System: ASTM A53/A 53M, Type E or S, Schedule 40, black steel pipe; ASME B16.9, weld-type pipe fittings; ASME B16.5, steel flanges; and ASME B16.21, nonmetallic gaskets. Fabricate double-wall, ventilated thimble from steel pipe.
1) Exhaust Connector: Flexible type.
2) Exhaust Silencer: Industrial OR Residential, as directed, type.

E. Fire-Pump Accessories And Specialties
2. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.
3. Relief Valves:
   a. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.
4. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.
5. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.
6. Discharge Cone: Closed OR Open, as directed, type.
7. Hose Valve Manifold Assembly:
   d. Automatic Drain Valve: UL 1726.
   e. Manifold:
      1) Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
      2) Body: Flush type, brass or ductile iron, with number of outlets required by NFPA 20.
      4) Adapters and Caps with Chain: Brass or bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
      5) Escutcheon Plate: Brass or bronze; rectangular.
      6) Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
      7) Exposed Parts Finish: Polished OR Rough, as directed, brass, as directed, chrome plated, as directed.
      8) Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

OR Manifold:
1) Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
2) Body: Exposed type, brass, with number of outlets required by NFPA 20.
3) Escutcheon Plate: Brass or bronze; round.
4) Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads. Include caps and chains.
5) Exposed Parts Finish: Polished OR Rough, as directed, brass, as directed, chrome plated, as directed.
6) Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

F. Flowmeter Systems
1. Description: UL-listed or FM-Approved, fire-pump flowmeter system with capability to indicate flow to not less than 175 percent of fire-pump rated capacity.
2. Pressure Rating: 175 psig (1200 kPa) minimum OR 250 psig (1725 kPa), as directed.
3. Sensor: Annubar probe, orifice plate, or venturi unless otherwise indicated. Sensor size shall match pipe, tubing, flowmeter, and fittings.
4. Permanently Mounted Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter. Include bracket or device for wall mounting.
a. Tubing Package: NPS 1/8 or NPS 1/4 (DN 6 or DN 10) soft copper OR plastic, as directed, tubing with copper or brass fittings and valves.

OR
Portable Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter and with two 12-foot- (3.7-m-) long hoses in carrying case.

G. Grout
2. Characteristics: Nonshrink and recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

H. Source Quality Control
1. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."
   a. Verification of Performance: Rate fire pumps according to UL 448.
2. Fire pumps will be considered defective if they do not pass tests and inspections.
3. Prepare test and inspection reports.

1.3 EXECUTION
A. Installation
1. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
2. Equipment Mounting: Install fire pumps on concrete bases. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-place Concrete."
   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
   b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   d. Install anchor bolts to elevations required for proper attachment to supported equipment.
3. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.
4. Support piping and pumps separately so weight of piping does not rest on pumps.
5. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed.
6. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed.
7. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.
8. Install fuel system according to NFPA 20.
9. Install water supply and drain piping for diesel-engine heat exchangers. Extend drain piping from heat exchangers to point of disposal.
10. Install exhaust-system piping for diesel engines. Extend to point of termination outside structure. Install pipe and fittings with welded joints; install components having flanged connections with gasketed joints.
11. Install condensate-drain piping for diesel-engine exhaust system. Extend drain piping from low points of exhaust system to condensate traps and to point of disposal.
12. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NFPA 20 and manufacturer's written instructions.
13. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
14. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

B. Alignment
   1. Align end-suction and split-case pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
   2. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks or shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
   3. Align piping connections.
   4. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

C. Connections
   1. Comply with requirements for piping and valves specified in Division 21 Section(s) "Fire-suppression Standpipes" OR "Wet-pipe Sprinkler Systems", as directed. Drawings indicate general arrangement of piping, fittings, and specialties.
   2. Install piping adjacent to pumps and equipment to allow service and maintenance.
   3. Connect relief-valve discharge to drainage piping or point of discharge.
   4. Connect flowmeter-system meters, sensors, and valves to tubing.
   5. Connect fire pumps to their controllers.

D. Identification
   1. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

E. Field Quality Control
   1. Test each fire pump with its controller as a unit. Comply with requirements for diesel-engine-driver fire-pump controllers specified in Division 21 Section(s) "Electric-drive, Centrifugal Fire Pumps" OR "Diesel-drive, Centrifugal Fire Pumps" OR "Electric-drive, Vertical-turbine Fire Pumps" OR "Diesel-drive, Vertical-turbine Fire Pumps".
   2. Perform tests and inspections.
      a. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
   3. Tests and Inspections:
      a. After installing components, assemblies, and equipment including controller, test for compliance with requirements.
      b. Test according to NFPA 20 for acceptance and performance testing.
      c. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
      d. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
      e. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   4. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
   5. Prepare test and inspection reports.
   6. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to the Owner.

F. Startup Service
   1. Perform startup service.
      a. Complete installation and startup checks according to manufacturer's written instructions.
G. Demonstration
   1. Train the Owner's maintenance personnel to adjust, operate, and maintain fire pumps.

END OF SECTION 21 30 00 00a
SECTION 21 31 00 00 - PRESSURE-MAINTENANCE PUMPS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for pressure-maintenance pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Multistage, pressure-maintenance pumps.
   b. Regenerative-turbine, pressure-maintenance pumps.
   c. Submersible, pressure-maintenance pumps.
   d. Vertical-turbine, pressure-maintenance pumps.

C. Performance Requirements
1. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.

D. Submittals
1. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
2. Shop Drawings: For pumps, accessories, and specialties. Include plans, elevations, sections, details, and attachments to other work.
   a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: For power, signal, and control wiring.
3. Field quality-control reports.
4. Operation and maintenance data.

E. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.2 PRODUCTS

A. Multistage, Pressure-Maintenance Pumps
1. Description: Factory-assembled and -tested, multistage, barrel-type vertical pump as defined in HI 2.1-2.2 and HI 2.3; designed for surface installation with pump and motor direct coupled and mounted vertically.
2. Pump Construction:
   b. Suction and Discharge Chamber: Cast iron with flanged inlet and outlet.
   c. Pump Head/Motor Mount: Cast iron.
   d. Impellers: Stainless steel, balanced, and keyed to shaft.
   e. Pump Shaft: Stainless steel.
   f. Seal: Mechanical type with carbon rotating face and silicon-carbide stationary seat.
   g. Intermediate Chamber Bearings: Aluminum-oxide ceramic or bronze.
   h. Chamber-Base Bearing: Tungsten carbide.
   i. O-Rings: EPDM or NBR.
3. Motor: Single speed with permanently lubricated ball bearings and rigidly mounted to pump head. Comply with requirements in Division 15 Section "Common Motor Requirements for Fire Suppression Equipment."
   a. Power Cord: Factory-connected to motor for field connection to controller and at least 10 feet (3 m) long.
4. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

B. Regenerative-Turbine, Pressure-Maintenance Pumps
1. Description: Factory-assembled and -tested, close-coupled, single-stage, regenerative-turbine centrifugal pump as defined in HI 1.1-1.2 and HI 1.3; with pump and motor mounted horizontally.
2. Pump Construction:
   a. Casing: Radially split, cast iron, with threaded inlet and outlet.
   b. Impeller: Bronze, balanced, and keyed to shaft.
   c. Pump Shaft: Stainless steel OR steel, as directed, with deflector.
   d. Shaft Sleeve: Bronze.
   e. Seal: Mechanical type with spring-loaded rotating head.
   a. Power Cord: Factory-connected to motor for field connection to controller and at least 10 feet (3 m) long.
4. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

C. Submersible, Pressure-Maintenance Pumps
1. Description: Factory-assembled and -tested, vertical, multistage, submersible pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted below pump.
2. Pump Construction:
   a. Pump Head or Elbow: Cast iron, for surface discharge, with flanged or threaded connections.
   c. Bearings: Bronze.
   d. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
   e. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections 10 feet (3 m) or less, with strainer of cast or fabricated bronze or stainless steel between pump and bowl section.
3. Motor: Single speed with permanently lubricated ball bearings and capable of continuous operation under water. Comply with requirements in Division 15 Section "Common Motor Requirements for Fire Suppression Equipment."
   a. Power Cord: Capable of continuous under-water operation, factory-connected to motor for field connection to controller, and at least 10 feet (3 m) long.
4. Base: Cast iron or steel with hole for electrical cable.
5. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

D. Vertical-Turbine, Pressure-Maintenance Pumps
1. Description: Factory-assembled and -tested, vertical, multistage, open-line-shaft turbine pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head.
2. Pump Construction:
   a. Pump Head: Cast iron, for surface discharge, with flange except connections may be threaded in sizes in which flanges are not available.
   b. Pump Head Seal: Stuffing box and stuffing.
   c. For static water levels of 50 feet (15 m) or less and for water-lubricated bearings.
      1) Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
      2) Line Shaft Bearings: Rubber sleeve, water lubricated.
   d. For static water levels between 50 and 200 feet (15 and 61 m) and for oil-lubricated bearings.
      1) Line Shaft: Steel.
      2) Line Shaft Bearings: Corrosion resistant, oil lubricated.
   e. Impeller Shaft: Monel metal or stainless steel.
f. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
g. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections 10 feet (3 m) or less, with strainer of cast or fabricated bronze or stainless steel at bottom.

   a. Power Cord: Factory-connected to motor for field connection to controller and at least 10 feet (3 m) long.

4. Base: Cast iron or steel with hole for electrical cable.

5. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

E. Motors
1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 15 Section "Common Motor Requirements for Fire Suppression Equipment."
   a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   b. Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 16 Sections.

1.3 EXECUTION

A. Equipment Installation
1. NFPA Standard: Comply with NFPA 20 for installation of pressure-maintenance pumps.
2. Base-Mounted Pump Mounting: Install pumps on concrete bases. Comply with requirements for concrete bases specified in Division 3 Section "Cast-in-Place Concrete."
   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
   b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   d. Install anchor bolts to elevations required for proper attachment to supported equipment.
   e. Attach pumps to equipment base using anchor bolts.
3. Install multistage and regenerative-turbine, pressure-maintenance pumps according to HI 1.4.
4. Install submersible and vertical-turbine, pressure-maintenance pumps according to HI 2.4.

B. Field Quality Control
1. Perform tests and inspections.
   a. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
2. Tests and Inspections:
   a. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Pressure-maintenance pumps will be considered defective if they do not pass tests and inspections.
4. Prepare test and inspection reports.

C. Adjusting
1. Lubricate pumps as recommended by manufacturer.
2. Set field-adjustable pressure-switch ranges as indicated.
END OF SECTION 21 31 00 00
SECTION 21 31 00 00a - CONTROLLERS FOR FIRE-PUMP DRIVERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for controllers for fire-pump drivers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Full-service, full-voltage OR reduced-voltage, as directed, controllers rated 600 V and less.
   b. Limited-service controllers rated 600 V and less.
   c. Controllers for diesel-drive fire pumps.
   d. Remote alarm panels.
   e. Low-suction-shutdown panels.

C. Definitions
1. ATS: Automatic transfer switch(es).
2. ECM: Electronic control module.
3. MCCB: Molded-case circuit breaker.

D. Performance Requirements
1. Seismic Performance: Fire-pump controllers and alarm panels shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

E. Submittals
1. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.
   a. Show tabulations of the following:
      1) Each installed unit's type and details.
      2) Enclosure types and details for types other than NEMA 250, Type 2.
      3) Factory-installed devices.
      4) Nameplate legends.
      5) Short-circuit current (withstand) rating of integrated unit.
      6) Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
      7) Specified modifications.
   b. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
   c. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.
3. Qualification Data: For qualified testing agency.
4. Seismic Qualification Certificates: For each type of product indicated, from manufacturer.
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

5. Product Certificates: For each type of product indicated, from manufacturer.

6. Manufacturer’s factory test reports of fully assembled and tested equipment.

7. Source quality-control reports.

8. Field quality-control reports.

9. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. Include the following:
   a. Manufacturer’s written instructions for setting field-adjustable timers, controls, and status and alarm points.
   b. Manufacturer’s written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.

F. Quality Assurance

1. Testing Agency Qualifications: Member company of an NRTL.

2. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Comply with standards of authorities having jurisdiction pertaining to materials and installation.

5. Comply with NFPA 20 and NFPA 70.

6. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Division 16 Section “Vibration and Seismic Controls for Electrical Systems.”

G. Delivery, Storage, And Handling

1. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

2. If stored in areas subject to weather, protect controllers from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install temporary electric heating, with at least 250 W per controller OR connect factory-installed space heaters to temporary electrical service, as directed.

H. Project Conditions

1. Environmental Limitations:
   a. Ambient Temperature Rating: Not less than 40 deg F (5 deg C) and not exceeding 122 deg F (50 deg C) unless otherwise indicated.
   b. Altitude Rating: Not exceeding 6600 feet (2010 m) unless otherwise indicated.

2. Interruption of Existing Electric Service: Notify the Owner no fewer than seven days in advance of proposed interruption of electric service, and comply with NFPA 70E.

I. Coordination

1. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.

2. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.2 PRODUCTS

A. Full-Service Controllers

1. General Requirements for Full-Service Controllers:
   a. Comply with NFPA 20 and UL 218.
b. Listed by an NRTL for electric-motor driver for fire-pump service.
c. Combined automatic and nonautomatic OR Nonautomatic, as directed, operation.
d. Factory assembled, wired, and tested; continuous-duty rated.
e. Service Equipment Label: NRTL labeled for use as service equipment.

2. Method of Starting:
   a. Pressure OR Nonpressure, as directed, switch actuated.
      1) Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
      2) System pressure recorder, electric ac driven, with spring backup.
      3) Programmable minimum-run-time relay to prevent short cycling.
      4) Programmable timer for weekly tests.
   b. Magnetic Controller: Across-the-line OR Autotransformer OR Part-winding OR Primary-resistor OR Wye-delta (open transition) OR Wye-delta (closed transition), as directed, type.
      OR
      Solid-State Controller: Reduced-voltage type.
   c. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.

3. Method of Stopping: Automatic and nonautomatic shutdown after automatic starting OR Nonautomatic, as directed.

4. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.

5. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and nonthermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.

6. Door-Mounted Operator Interface and Controls:
   a. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
   b. Method of Control and Indication:
      1) Microprocessor-based logic controller, with multiline digital readout.
      2) Membrane keypad.
      3) LED alarm and status indicating lights.
   c. Local and Remote, as directed, Alarm and Status Indications:
      1) Controller power on.
      2) Motor running condition.
      3) Loss-of-line power.
      4) Line-power phase reversal.
      5) Line-power single-phase condition.
   d. Audible alarm, with silence push button.
   e. Nonautomatic START and STOP push buttons or switches.

7. Optional Features:
   a. Extra Output Contacts:
      1) One N.O. contact(s) for motor running condition.
      2) One set(s) of contacts for loss-of-line power.
      3) One each, Form C contacts for high and low reservoir level.
   b. Local alarm bell.
   c. Door-mounted thermal or impact printer for alarm and status logs.
   d. Operator Interface Communications Ports: USB, Ethernet, and RS485.

8. ATS:
   a. Complies with NFPA 20, UL 218, and UL 1008.
   b. Integral with controller as a listed combination fire-pump controller and power transfer switch.
   c. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
   d. Allows manual transfer from one source to the other.
   e. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
OR
Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with nonthermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.

f. Local and Remote, as directed, Alarm and Status Indications:
1) Normal source available.
2) Alternate source available.
3) In normal position.
4) In alternate position.
5) Isolating means open.

g. Audible alarm, with silence push button.
h. Nonautomatic (manual, nonelectric) means of transfer.
i. Engine test push button.
j. Start generator output contacts.
k. Timer for weekly generator tests.

B. Limited-Service Controllers
1. General Requirements for Limited-Service Controllers:
   a. Comply with NFPA 20 and UL 218.
   b. Listed by an NRTL for electric-motor driver for fire-pump service.
   c. Combined automatic and nonautomatic OR Nonautomatic, as directed, operation.
   d. Factory assembled, wired, and tested; continuous-duty rated.
   e. Service Equipment Label: NRTL labeled for use as service equipment.

2. Method of Starting:
   a. Pressure OR Nonpressure, as directed, switch actuated.
      1) Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
      2) System pressure recorder, electric ac driven, with spring backup.
      3) Programmable minimum-run-time relay to prevent short cycling.
      4) Programmable timer for weekly tests.
   b. Across-the-line magnetic controller.
   c. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.

3. Method of Stopping: Automatic and nonautomatic shutdown after automatic starting OR Nonautomatic, as directed.

4. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.

5. Method of Isolation and Overcurrent Protection: Inverse-time, nonadjustable MCCB, with an externally mounted operating handle.

6. Door-Mounted Operator Interface and Controls:
   a. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
   b. Method of Control and Indication:
      1) Microprocessor-based logic controller, with multiline LCD digital readout.
      2) Membrane keypad.
      3) LED alarm and status indicating lights.
   c. Local and Remote, as directed Alarm and Status Indications:
      1) Controller power on.
      2) Motor running condition.
      3) Loss-of-line power.
      4) Line-power phase reversal.
      5) Line-power single-phase condition.
   d. Audible alarm, with silence push button.
   e. Nonautomatic START and STOP push buttons.
7. Optional Features:
   a. Extra Output Contacts:
      1) One N.O. contact(s) for motor running condition.
      2) One set(s) of contacts for loss-of-line power.
      3) One each, Form C contacts for high and low reservoir level.
   b. Local alarm bell.
   c. Door-mounted thermal or impact printer for alarm and status logs.
   d. Operator Interface Communications Ports: USB, Ethernet, and RS485.

8. ATS:
   a. Complies with NFPA 20, UL 218, and UL 1008.
   b. Integral with controller as a listed combination fire-pump controller and power transfer switch.
   c. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
   d. Allows manual transfer from one source to the other.
   e. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.

OR

Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with nonthermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.

   f. Local and Remote, as directed, Alarm and Status Indications:
      1) Normal source available.
      2) Alternate source available.
      3) In normal position.
      4) In alternate position.
      5) Isolating means open.
   g. Audible alarm, with silence push button.
   h. Nonautomatic (manual, nonelectric) means of transfer.
   i. Engine test push button.
   j. Start generator output contacts.
   k. Timer for weekly generator tests.

C. Standalone ATS
   1. General Requirements for Standalone ATS:
      a. Complies with NFPA 20, UL 218, and UL 1008.
      b. Listed by an NRTL for fire-pump service.
      c. Automatic and nonautomatic operation.
      d. Separate from controller and individually listed as a fire-pump-controller power transfer switch.
      e. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
      f. Allows manual transfer from one source to the other; factory assembled, wired, and tested.
   2. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at ATS location.
   3. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
   4. Alternate-Source Isolating and Disconnecting Means:
      a. Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current.
      b. Externally mounted operating handle.
      c. Circuit breaker provided with nonthermal sensing, instantaneous-only, short-circuit overcurrent protection.
      d. Equipped with a voltage surge arrester.
   5. Door-Mounted Operator Interface and Controls:
a. Monitor, display, and control devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.

b. Method of Control and Indication:
   1) Microprocessor-based logic controller, with multiline LCD readout.
   2) Membrane keypad.
   3) LED alarm and status indicating lights.

c. Local and Remote, as directed, Alarm and Status Indications:
   1) Normal source available.
   2) Alternate source available.
   3) In normal position.
   4) In alternate position.
   5) Isolating means open.

d. Audible alarm, with silence push button.

e. Nonautomatic (manual, nonelectric) means of transfer.

f. Engine test push button.

g. Start generator output contacts.

h. Timer for weekly generator tests

6. Optional Features:
   a. Extra Output Contacts:
      1) One each, Form A; isolating means open.
      2) One each, Form C; in normal or alternate position
   b. Door-mounted thermal or impact printer for alarm and status logs.

D. Controllers For Diesel-Drive Fire Pumps

1. General Requirements for Controllers:
   a. Comply with NFPA 20 and UL 218.
   b. Listed by an NRTL for diesel-engine driver for fire-pump service.
   c. Combined automatic and nonautomatic OR Nonautomatic, as directed operation.
   d. Factory assembled, wired, and tested.

2. Method of Starting:
   a. Pressure OR Nonpressure, as directed, switch actuated.
      1) Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
      2) System pressure recorder, electric ac driven, with spring backup.
      3) Programmable minimum-run-time relay to prevent short cycling.
      4) Programmable timer for weekly tests.
   b. Dual, redundant dc-voltage battery units, with automatic changeover.
   c. Emergency Control: Bypasses all automatic control circuits during manual starting and running.
   d. Automatic engine start on loss of ac power to the controller.

3. Method of Stopping: Automatic and nonautomatic shutdown after automatic starting OR Nonautomatic, as directed.

4. Door-Mounted Operator Interface and Controls:
   a. Monitor, display, and control devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
   b. Method of Control and Indication:
      1) Microprocessor-based logic controller, with multiline LCD readout.
      2) Membrane keypad.
      3) LED alarm and status indicating lights.
   c. Local and Remote, as directed, Alarm and Status Indications:
      1) Controller power on.
      2) Engine-lubrication-system critically low oil pressure.
      3) Engine-jacket coolant high temperature.
      4) Engine fail-to-start.
      5) Engine overspeed shutdown.
6) Low fuel level.
7) Missing or failed battery.
8) Battery charger failure.
9) System overpressure.
10) ECM selector switch in alternate ECM position.
11) Fuel injector malfunction.

d. Audible alarm.
e. Nonautomatic START and STOP push buttons or switches.

5. Optional Features:
a. Extra Output Contacts:
   1) One Form C contacts for low pump-room temperature.
   2) One each, Form C contacts for high and low fuel levels.
   3) One each, Form C contacts for high and low reservoir levels.
b. Door-mounted thermal or impact printer for alarm and status logs.
d. Powered louver contacts.
e. Powered engine-oil heater contacts.

6. Battery Charger System:
a. Built-in, independent, dual battery chargers with automatic changeover; 12-V dc OR 24-V dc, as directed, for lead-acid OR nickel-cadmium, as directed, batteries.
b. Standard: UL 1236.

E. Remote Alarm Panels
1. General Requirements for Remote Alarm Panels: Comply with NFPA 20 and UL 218; listed by an NRTL for fire-pump service.
3. Supervisory and Normal Control Voltage: 120-V ac OR 240-V ac, as directed; single OR dual, as directed, source.
4. Audible and Visual Alarm and Status Indications:
   a. Driver running.
   b. Loss of phase.
   c. Phase reversal.
   d. Supervised power on.
   e. Common OR Separate, as directed, trouble on the controller.
   f. Controller connected to alternate power source.
5. Audible and Visual Alarm and Status Indications: Manufacturer's standard indicating lights; push-to-test OR non-push-to-test, with separate test push button, as directed.
   a. Engine running.
   b. Controller main switch turned to the off or manual position.
   c. Supervised power on.
   d. Common OR Separate, as directed, trouble on the controller or engine.
   e. Common pump room trouble.
   f. Controller connected to alternate power source.
6. Audible alarm, with silence push button.
7. Pump REMOTE START push button.

F. Low-Suction-Shutdown Panels
1. General Requirements for Low-Suction-Shutdown Panels:
   a. Listed by an NRTL for fire-pump service.
   b. Factory assembled, wired, and tested.
   c. Prevents automatic start of fire pump, and shuts down automatically started fire pump, on low-suction pressure.
   d. Automatic OR Manual, as directed, reset.
2. Operation: External contact input OR Integral pressure switch, as directed.
3. Supervisory and Normal Control Voltage: 120-V ac OR 240-V ac, as directed; single OR dual, as directed, source.
4. Include audible and visual alarms and status indications, with silence push button, for the following conditions:
a. Control power available.
b. Low-suction pressure.
c. Normal-suction pressure.

G. Enclosures
1. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.
   a. Indoor, Dry and Clean Locations: Type 1 (IEC IP10).
   b. Indoor Locations Subject to Dripping Noncorrosive Liquids: Type 2 (IEC IP11).
   c. Outdoor Locations: Type 3R (IEC IP14) OR Type 4 (IEC IP56) OR Type 4X (IEC IP56), as directed.
   d. Other Wet or Damp, Indoor Locations: Type 4 (IEC IP56) OR Type 4X (IEC IP56), as directed.
   e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12 (IEC IP12).
2. Enclosure Color: Manufacturer’s standard “fire-pump-controller red”.
3. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.
4. Optional Features:
   a. Floor stands, 12 inches (305 mm) high, for floor-mounted controllers.
   b. Space heater, 120-V ac OR 240-V ac, as directed, with humidistat, as directed, with thermostat, as directed.
   c. Tropicalization.

H. Source Quality Control
1. Testing: Test and inspect fire-pump controllers according to requirements in NFPA 20 and UL 218.
   a. Verification of Performance: Rate controllers according to operation of functions and features specified.
2. Fire-pump controllers will be considered defective if they do not pass tests and inspections.
3. Prepare test and inspection reports.

1.3 EXECUTION

A. Examination
1. Examine areas and surfaces to receive equipment, with Installer present, for compliance with requirements and other conditions affecting performance.
2. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Controller Installation
1. Install controllers within sight of their respective drivers.
2. Connect controllers to their dedicated pressure-sensing lines.
3. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than 79 inches (2006 mm) above finished floor, and bottom of enclosure not less than 12 inches (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Division 16 Section "Hangers and Supports for Electrical Systems."
4. Floor-Mounting Controllers: Install controllers on 4-inch (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches (305 mm) above finished floor. Comply with requirements for concrete bases specified in Division 3 Section "Cast-in-Place Concrete."
a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
d. Install anchor bolts to elevations required for proper attachment to supported equipment.

5. Seismic Bracing: Comply with requirements specified in Division 16 Section "Vibration and Seismic Controls for Electrical Systems."

7. Comply with NEMA ICS 15.

C. Standalone ATS Installation

1. Wall-Mounting ATS: Install ATS on walls with disconnect operating handles not higher than 79 inches (2006 mm) above finished floor, and bottom of enclosure not less than 12 inches (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Division 16 Section "Hangers and Supports for Electrical Systems."

2. Floor-Mounting ATS: Install ATS on 4-inch (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches (305 mm) above finished floor. Comply with requirements for concrete bases specified in Division 3 Section "Cast-in-Place Concrete."

   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.

   b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.

   c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

   d. Install anchor bolts to elevations required for proper attachment to supported equipment.

3. Seismic Bracing: Comply with requirements specified in Division 16 Section "Vibration and Seismic Controls for Electrical Systems."

D. Remote Alarm And Low-Suction-Shutdown, as directed, Panel Installation

1. Install panels on walls with tops not higher than 72 inches (1829 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Division 16 Section "Hangers and Supports for Electrical Systems."

2. Install wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Division 16 Section "Control-Voltage Electrical Power Cables."

3. Install wiring between remote alarm and low-suction-shutdown, as directed, panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Division 16 Section "Control-Voltage Electrical Power Cables."

4. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Division 13 Section "Digital, Addressable Fire-Alarm System."

5. Bundle, train, and support wiring in enclosures.

6. Connect remote manual and automatic activation devices where applicable.
G. Identification
1. Comply with requirements in NFPA 20 for marking fire-pump controllers.
2. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Division 16 Section "Electrical Identification."

H. Field Quality Control
1. Perform tests and inspections.
2. Acceptance Testing Preparation:
   a. Inspect and Test Each Component:
      1) Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
      2) Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
      3) Test continuity of each circuit.
   b. Verify and Test Each Electric-Driver Controller:
      1) Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify the Owner before starting the motor(s).
      2) Test each motor for proper phase rotation.
   c. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
   d. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Field Acceptance Tests:
   a. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to the Owner and authorities having jurisdiction.
   b. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
   c. Engage manufacturer's factory-authorized service representative to be present during the testing.
   d. Perform field acceptance tests as outlined in NFPA 20.
4. Controllers will be considered defective if they do not pass tests and inspections.
5. Prepare test and inspection reports.

I. Startup Service
1. Perform startup service.
   a. Complete installation and startup checks according to manufacturer's written instructions.

J. Adjusting
1. Adjust controllers and battery charger systems, as directed, to function smoothly and as recommended by manufacturer.
2. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.
3. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Final Completion.
4. Set field-adjustable pressure switches.

K. Protection
1. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
2. Replace controllers whose interiors have been exposed to water or other liquids prior to Final Completion.

L. Demonstration
1. Train the Owner's maintenance personnel to adjust, operate, and maintain controllers, remote alarm panels, as directed, low-suction-shutdown panels, as directed, and to use and reprogram microprocessor-based controls within this equipment, as directed.

SECTION 22 01 40 81 - EMERGENCY PLUMBING FIXTURES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for emergency plumbing fixtures. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following emergency plumbing fixtures:
   a. Emergency showers.
   b. Eyewash equipment.
   c. Self-contained eyewash equipment.
   d. Personal eyewash equipment.
   e. Eye/face wash equipment.
   f. Hand-held drench hoses.
   g. Combination units.
   h. Water-tempering equipment.

C. Definitions
1. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.
2. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.
4. Tepid: Moderately warm.

D. Submittals
1. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.
2. Shop Drawings: Diagram power, signal, and control wiring.
3. Operation and maintenance data.

E. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.
2. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."
4. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

1.2 PRODUCTS

1.3 PERFORMANCE REQUIREMENTS

A. Comply with ANSI/ISEA Z358.1 for emergency plumbing fixtures including third-party certification of fixtures.

B. Comply with ASSE 1071 for temperature-actuated mixing valves for plumbed emergency fixtures.
C. Comply with ASME A112.18.1/CSA B125.1 for water-supply fittings.

D. Comply with ASME A112.18.2/CSA B125.2 for plumbing waste fittings.

E. Comply with NSF 61 and NSF 372 for fixture materials that will be in contact with potable water.

F. Comply with requirements in ICC A117.1 for plumbing fixtures for people with disabilities.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Emergency Showers:
1. Description: Plumbed, single-shower-head horizontal, wall-mounting OR vertical, ceiling-mounting OR freestanding, as directed, emergency shower.
   a. Capacity: Deliver potable water at rate not less than 20 gpm (76 L/min.) for at least 15 minutes.
   b. Supply Piping: NPS 1 (DN 25) OR NPS 1-1/4 (DN 32) OR galvanized steel OR chrome-plated brass or stainless steel OR PVC, as directed, with flow regulator and stay-open control valve.
   c. Control-Valve Actuator: Pull rod OR chain, as directed.
   d. Shower Head: 8-inch (200-mm) minimum diameter, chrome-plated brass or stainless steel OR plastic, as directed.

2. Description: Plumbed, multiple-spray emergency shower with eight OR 12 OR 16, as directed, small shower heads or nozzles.
   a. Capacity: Deliver potable water at rate not less than 20 gpm (76 L/min.) for at least 15 minutes.
   b. Supply Piping: NPS 1-1/4 (DN 32) minimum galvanized OR chrome-plated brass or stainless steel, as directed, steel with flow regulator and stay-open control valve.
   c. Control-Valve Actuator: Paddle OR Treadle, as directed.

3. Description: Plumbed, freeze-protected, freestanding emergency shower.
   a. Capacity: Deliver potable water at rate not less than 20 gpm (76 L/min.) for at least 15 minutes.
   c. Control-Valve Actuator: Pull rod OR chain, as directed.
   d. Shower Head: 8-inch (200-mm) minimum diameter, chrome-plated brass or stainless steel OR plastic, as directed.
   e. Heating System: 120 OR 240, as directed, -V ac electric; and insulation with protective jacket.

I. Eyewash Equipment
1. Description: Plumbed, freestanding eyewash equipment.
   a. Capacity: Deliver potable water at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Supply Piping: NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. Control-Valve Actuator: Paddle OR Push bar OR Treadle, as directed.
   d. Receptor: Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
   e. Drain Piping: NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2 OR Omit drain piping OR Include galvanized-steel indirect connection to drainage system, as directed.

2. Description: Plumbed, accessible, as directed, wall-mounting eyewash equipment with receptor and wall bracket.
   a. Capacity: Deliver potable water at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
b. Supply Piping: NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
d. Receptor: Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
e. Drain Piping: NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2.

3. Description: Plumbed, accessible, as directed, wall-mounting eyewash equipment with wall bracket.
   a. Capacity: Deliver potable water at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Supply Piping: NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. Control-Valve Actuator: Paddle OR Movement sensor, as directed.

4. Description: Plumbed, adjacent-to-sink, swivel, counter-mounting eyewash equipment.
   a. Capacity: Deliver potable water at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Supply Piping: NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.

J. Self-Contained Eyewash Equipment:
1. Description: Portable, pressurized, self-contained eyewash equipment.
   a. Capacity: Deliver flushing fluid at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Tank: 10 gal. (3.8 L), stainless steel, cylindrical, and suitable for on-floor installation.
   c. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
   d. Piping: Chrome-plated copper alloy or stainless steel with flow regulator and stay-open control valve.
   e. Control-Valve Actuator: Paddle.

2. Description: Static, nonpressurized, self-contained eyewash equipment.
   a. Capacity: Deliver flushing fluid at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Tank: 14 gal. (53 L) minimum, plastic, and suitable for shelf mounting.
   c. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
   d. Actuator: Pull-down front panel.
   e. Spray Heads: Protected, twin.

3. Description: Freeze-protected, static, nonpressurized, self-contained eyewash equipment with heating system.
   a. Capacity: Deliver flushing fluid at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
   b. Tank: 14 gal. (53 L) minimum OR 20 gal. (76 L) minimum, as directed, plastic, and suitable for shelf mounting.
   c. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
   d. Actuator: Pull-down front panel.
   e. Spray Heads: Protected, twin.
   f. Heating System: Electric, 120-V ac; and insulation with protective jacket.

K. Personal Eyewash Equipment:
1. Description: Portable, pressurized, personal eyewash equipment with spray heads.
   a. Capacity: Deliver flushing fluid at rate not less than 0.4 gpm (1.5 L/min.), as directed.
   b. Tank: 5 gal. (19 L), stainless steel, cylindrical, and with base suitable for on-floor installation.
   c. Flushing Fluid: Medically acceptable solution manufactured and labeled according to applicable regulations.
22. **Plumbing**

**Emergency Plumbing Fixtures**

**L. Eye/Face Wash Equipment:**

1. **Description:** Plumbed, freestanding, pedestal eye/face wash equipment.
   a. **Capacity:** Deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
   b. **Supply Piping:** NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. **Control-Valve Actuator:** Paddle OR Push bar OR Treadle, as directed.
   d. **Receptor:** Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
   e. **Drain Piping:** NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2. Include galvanized-steel indirect connection to drainage system.

2. **Description:** Plumbed, accessible, as directed, wall-mounting eye/face wash equipment with receptor and wall bracket.
   a. **Capacity:** Deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
   b. **Supply Piping:** NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. **Control-Valve Actuator:** Paddle.
   d. **Receptor:** Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
   e. **Drain Piping:** NPS 1-1/4 (DN 32) minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2.

3. **Description:** Plumbed, accessible, as directed, wall-mounting eye/face wash equipment without receptor and with wall bracket.
   a. **Capacity:** Deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
   b. **Supply Piping:** NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. **Control-Valve Actuator:** Paddle.

4. **Description:** Plumbed, adjacent-to-sink, swivel, counter-mounting eye/face wash equipment.
   a. **Capacity:** Deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
   b. **Supply Piping:** NPS 1/2 (DN 15) chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   c. **Control-Valve Actuator:** Paddle.

**M. Hand-Held Drench Hoses:**

1. **Description:** Plumbed, wall-mounting, hand-held drench hose with wall bracket.
2. Description: Plumbed, counter-mounting, hand-held drench hose.
   a. Capacity: Deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
   b. Supply Fitting: NPS 1/2 (DN 15) brass with flow regulator.
   c. Hose: Rubber or plastic.
   d. Control-Valve Actuator: Hand-held squeeze valve.
   e. Spray Heads: Single OR Twin, as directed.

N. Combination Units:
1. Description: Plumbed, accessible, as directed, freestanding, with emergency shower and eyewash OR eye/face wash OR drench hose, as directed, equipment.
   a. Piping: Galvanized steel OR Chrome-plated brass or stainless steel OR PVC, as directed.
      1) Unit Supply: NPS 1-1/4 (DN 32) minimum OR NPS 1-1/2 (DN 40), as directed, from top OR side, as directed.
      2) Unit Drain: Outlet at side near bottom.
      4) Eyewash OR Eye/Face Wash OR Drench Hose, as directed, Supply: NPS 1/2 (DN 15) with flow regulator and stay-open control valve.
   b. Shower Capacity: Deliver potable water at rate not less than 20 gpm (76 L/min.) for at least 15 minutes.
      1) Control-Valve Actuator: Pull rod OR Pull chain OR Treadle, as directed.
      2) Shower Head: 8-inch (200-mm) minimum diameter, chrome-plated brass or stainless steel OR plastic, as directed.
   c. Eyewash Equipment: With capacity to deliver potable water at rate not less than 0.4 gpm (1.5 L/min.) for at least 15 minutes.
      1) Control-Valve Actuator: Paddle OR Push bar, as directed.
      2) Receptor: Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
   d. Eye/Face Wash Equipment: With capacity to deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
      1) Control-Valve Actuator: Paddle OR Push bar, as directed.
      2) Receptor: Chrome-plated brass or stainless-steel OR Plastic, as directed, bowl.
   e. Hand-Held Drench Hose: With capacity to deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.
      1) Hose: Rubber or plastic.
      2) Control-Valve Actuator: Hand-held squeeze valve.
      3) Spray Head(s): Single OR Twin, as directed.

2. Description: Plumbed, accessible, as directed, freeze-protected, freestanding, with emergency shower and eye/face wash equipment.
   a. Piping: Galvanized steel.
      1) Unit Supply: NPS 1-1/4 (DN 32) minimum OR NPS 1-1/2 (DN 40), as directed, from top OR side OR bottom, as directed.
      3) Eye/Face Wash Supply: NPS 1/2 (DN 15) with flow regulator and stay-open control valve.
   b. Heating System: Electric, 120 OR 240, as directed, -V ac; and insulation with protective jacket.
   c. Shower Capacity: Deliver potable water at rate not less than 20 gpm (76 L/min.) for at least 15 minutes.
      1) Control-Valve Actuator: Pull rod OR Pull chain OR Treadle, as directed.
2) Shower Head: 8-inch (200-mm) minimum diameter, chrome-plated brass or stainless steel OR plastic, as directed.

d. Eye/Face Wash Equipment: With capacity to deliver potable water at rate not less than 3.0 gpm (11.4 L/min.) for at least 15 minutes.

1) Control-Valve Actuator: Paddle OR Push bar, as directed.

O. Water-Tempering Equipment:
1. Description: Factory-fabricated, hot- and cold-water-tempering equipment with thermostatic mixing valve.
   a. Thermostatic Mixing Valve: Designed to provide 85 deg F (29 deg C) tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F (3 deg C) throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.

2. Description: Factory-fabricated, steam and cold-water, water-tempering equipment with thermostatic mixing valve.
   a. Thermostatic Mixing Valve: Designed to provide 85 deg F (29 deg C) tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F (3 deg C) throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, steam controls, heat exchanger, high-temperature-limit and freeze-protection devices, metal piping, and corrosion-resistant enclosure.

3. Description: Factory-fabricated, water-tempering equipment with electric heating.
   a. Heating System: Electric, designed to provide 85 deg F (29 deg C) tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F (3 deg C) throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, heating coils, high-temperature-limit device, metal piping, and corrosion-resistant enclosure.

   1) Electrical Characteristics: 208-V ac, 38 OR 220-V ac, 40 OR 277-V ac, 32, as directed, A, single phase, 60 Hz.

1.4 EXECUTION

A. Installation
1. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
2. Install fixtures level and plumb.
3. Fasten fixtures to substrate.
4. Install shutoff valves in water-supply piping to fixtures. Use ball, gate, or globe valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Valves are specified in Division 22 Section "General-duty Valves For Plumbing Piping".
   a. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency plumbing fixture.
   b. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
5. Install shutoff valve and strainer in steam piping and shutoff valve in condensate return piping.
6. Install dielectric fitting in supply piping to fixture if piping and fixture connections are made of different metals. Dielectric fittings are specified in Division 22 Section "Common Work Results For Plumbing".
7. Install thermometers in supply and outlet piping connections to water-tempering equipment. Thermometers are specified in Division 22 Section "Meters And Gages For Plumbing Piping".
8. Install trap and waste to wall on drain outlet of fixture receptors that are indicated to be directly connected to drainage system.
9. Install indirect waste piping to wall on drain outlet of fixture receptors that are indicated to be indirectly connected to drainage system. Drainage piping is specified in Division 22 Section "Sanitary Waste And Vent Piping".
10. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Escutcheons are specified in Division 22 Section "Common Work Results For Plumbing".
11. Fill self-contained fixtures with flushing fluid.
12. Install equipment nameplates or equipment markers on fixtures and equipment signs on water-tempering equipment. Identification materials are specified in Division 22 Section "Identification For Plumbing Piping And Equipment".
13. Piping installation requirements are specified in other Division 14. Drawings indicate general arrangement of piping, fittings, and specialties.
14. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment.
15. Connect hot- and cold-water-supply piping to hot- and cold-water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures.
16. Connect cold-water and steam supply and condensate return piping to steam and cold-water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures.
17. Connect cold water and electrical power to electric heating water-tempering equipment.
18. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary drainage and vent piping.
19. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary or storm drainage piping.
20. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
21. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

B. Field Quality Control
1. Electrical-Component Testing: After electrical circuitry has been energized, test for compliance with requirements.
   a. Test and adjust controls and safeties.
2. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.

C. Adjusting
1. Adjust or replace fixture flow regulators for proper flow.
2. Adjust equipment temperature settings.

SECTION 22 05 13 00 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for common motor requirements for plumbing equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

C. Coordination
1. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   a. Motor controllers.
   b. Torque, speed, and horsepower requirements of the load.
   c. Ratings and characteristics of supply circuit and required control sequence.
   d. Ambient and environmental conditions of installation location.

1.2 PRODUCTS

A. General Motor Requirements
1. Comply with requirements in this Section except when stricter requirements are specified in plumbing equipment schedules or Sections.
2. Comply with NEMA MG 1 unless otherwise indicated.
3. Comply with IEEE 841 for severe-duty motors.

B. Motor Characteristics
1. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
2. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

C. Polyphase Motors
1. Description: NEMA MG 1, Design B, medium induction motor.
2. Efficiency: Energy efficient, as defined in NEMA MG 1.
   a. For motors with 2:1 speed ratio, consequent pole, single winding.
   b. For motors with other than 2:1 speed ratio, separate winding for each speed.
5. Multispeed Motors: Separate winding for each speed.
7. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
8. Temperature Rise: Match insulation rating.
9. Insulation: Class F.
10. Code Letter Designation:
   a. Motors 15 HP and Larger: NEMA starting Code F or Code G.
   b. Motors Smaller than 15 HP: Manufacturer’s standard starting characteristic.
11. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

D. Polyphase Motors With Additional Requirements
   1. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
   2. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
      a. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
      b. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
      c. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
      d. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   3. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

E. Single-Phase Motors
   1. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
      a. Permanent-split capacitor.
      b. Split phase.
      c. Capacitor start, inductor run.
      d. Capacitor start, capacitor run.
   3. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
   5. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

1.3 EXECUTION (Not Applicable)
SECTION 22 05 16 00 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for expansion fittings and loops for plumbing piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Flexible-hose packless expansion joints.
   b. Metal-bellows packless expansion joints.
   c. Rubber packless expansion joints.
   d. Grooved-joint expansion joints.
   e. Pipe loops and swing connections.
   f. Alignment guides and anchors.

C. Performance Requirements
1. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
2. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

D. Submittals
1. Product Data: For each type of product indicated.
2. Delegated-Design Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   a. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
   b. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
   c. Alignment Guide Details: Detail field assembly and attachment to building structure.
   d. Schedule: Indicate type, manufacturer’s number, size, material, pressure rating, end connections, and location for each expansion joint.
3. Welding certificates.
4. Product Certificates: For each type of expansion joint, from manufacturer.
5. Maintenance Data: For expansion joints to include in maintenance manuals.

E. Quality Assurance
1. Welding Qualifications: Qualify procedures and personnel according to the following:
   a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   b. ASME Boiler and Pressure Vessel Code: Section IX.

1.2 PRODUCTS

A. Packless Expansion Joints
1. Flexible-Hose Packless Expansion Joints:
   a. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
   b. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
c. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
   1) Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
   2) Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 450 deg F (3450 kPa at 232 deg C) ratings.

d. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with threaded end connections.
   1) Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F (2070 kPa at 21 deg C) and 225 psig at 450 deg F (1550 kPa at 232 deg C) ratings.
   2) Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 450 deg F (3450 kPa at 232 deg C) ratings.

e. Expansion Joints for Steel Piping NPS 2 (DN 50) and Smaller: Stainless-steel fittings with threaded end connections.
   1) Stainless-steel hoses and single-braid, stainless-steel sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 325 psig at 600 deg F (2170 kPa at 315 deg C) ratings.
   2) Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 600 deg F (3450 kPa at 315 deg C) ratings.

f. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6 (DN 65 to DN 150): Stainless-steel fittings with flanged end connections.
   1) Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70 deg F (1380 kPa at 21 deg C) and 145 psig at 600 deg F (1000 kPa at 315 deg C) ratings.
   2) Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70 deg F (1900 kPa at 21 deg C) and 200 psig at 600 deg F (1380 kPa at 315 deg C) ratings.

g. Expansion Joints for Steel Piping NPS 8 to NPS 12 (DN 200 to DN 300): Stainless-steel fittings with flanged end connections.
   1) Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70 deg F (860 kPa at 21 deg C) and 90 psig at 600 deg F (625 kPa at 315 deg C) ratings.
   2) Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F (1130 kPa at 21 deg C) and 120 psig at 600 deg F (830 kPa at 315 deg C) ratings.

2. Metal-Bellows Packless Expansion Joints:
   b. Type: Circular, corrugated bellows with external tie rods.
   c. Minimum Pressure Rating: 150 psig (1035 kPa) OR 175 psig (1200 kPa), as directed, unless otherwise indicated.
   d. Configuration: Single joint OR Single joint with base and double joint with base, as directed, class(es) unless otherwise indicated.
   e. Expansion Joints for Copper Tubing: Single OR Multi, as directed, -ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
      1) End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint or threaded.
      2) End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint or threaded.
      3) End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.

3. Rubber Packless Expansion Joints:
c. Arch Type: Single OR Multiple, as directed, arches with external control rods, as directed.
d. Spherical Type: Single OR Multiple, as directed spheres with external control rods, as directed.
e. Minimum Pressure Rating for NPS 1-1/2 to NPS 4 (DN 40 to DN 100): 150 psig (1035 kPa) at 220 deg F (104 deg C).
f. Minimum Pressure Rating for NPS 5 and NPS 6 (DN 125 and DN 150): 140 psig (966 kPa) at 200 deg F (93 deg C).
g. Minimum Pressure Rating for NPS 8 to NPS 12 (DN 200 to DN 300): 140 psig (966 kPa) at 180 deg F (82 deg C).
h. Material for Fluids Containing Acids, Alkalies, or Chemicals: BR OR CSM OR EPDM, as directed.
i. Material for Fluids Containing Gas, Hydrocarbons, or Oil: Buna-N OR CR, as directed.
j. Material for Water: BR OR Buna-N OR CR OR CSM OR EPDM OR NR, as directed.
k. End Connections: Full-faced, integral steel flanges with steel retaining rings.

B. Grooved-Joint Expansion Joints
1. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
2. Standard: AWWA C606, for grooved joints.
3. Nipples: Galvanized, as directed, ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.
4. Couplings: Five OR Seven OR 10 OR 12, as directed, flexible type for steel-pipe dimensions. Include ferrous housing sections, Buna-N gasket suitable for diluted acid, alkaline fluids, and cold and hot water OR EPDM gasket suitable for cold and hot water, as directed, and bolts and nuts.

C. Alignment Guides And Anchors
1. Alignment Guides:
   a. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.
2. Anchor Materials:
   a. Steel Shapes and Plates: ASTM A 36/A 36M.
   b. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
   c. Washers: ASTM F 844, steel, plain, flat washers.
   d. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
      2) Expansion Plug: Zinc-coated steel.
   e. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
      1) Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
      2) Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.

1.3 EXECUTION

A. Expansion-Joint Installation
1. Install expansion joints of sizes matching sizes of piping in which they are installed.
2. Install metal-bellows expansion joints according to EJMA’s “Standards of the Expansion Joint Manufacturers Association, Inc.”
3. Install rubber packless expansion joints according to FSA-NMEJ-702.
4. Install grooved-joint expansion joints to grooved-end steel piping

B. Pipe Loop And Swing Connection Installation
   1. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
   2. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.
   3. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.
   4. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

C. Alignment-Guide And Anchor Installation
   1. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
   2. Install one OR two, as directed, guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
   3. Attach guides to pipe and secure guides to building structure.
   4. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
   5. Anchor Attachments:
      b. Anchor Attachment to Galvanized-Steel Pipe: Attach with pipe hangers. Use MSS SP-69, Type 42, riser clamp welded to anchor.
      c. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.
   6. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
      a. Anchor Attachment to Steel Structural Members: Attach by welding.
      b. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
   7. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

SECTION 22 05 29 00 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for hangers and supports for plumbing piping and equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Metal pipe hangers and supports.
      b. Trapeze pipe hangers.
      c. Fiberglass pipe hangers.
      d. Metal framing systems.
      e. Fiberglass strut systems.
      f. Thermal-hanger shield inserts.
      g. Fastener systems.
      h. Pipe stands.
      i. Pipe positioning systems.
      j. Equipment supports.

C. Definitions
   1. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

D. Performance Requirements
   1. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   2. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
      a. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
      b. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
      c. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

E. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:
      a. Trapeze pipe hangers.
      b. Metal framing systems.
      c. Fiberglass strut systems.
      d. Pipe stands.
      e. Equipment supports.
   3. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
      a. Detail fabrication and assembly of trapeze hangers.
      b. Design Calculations: Calculate requirements for designing trapeze hangers.

F. Quality Assurance
2. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.2 PRODUCTS

A. Metal Pipe Hangers And Supports
1. Carbon-Steel Pipe Hangers and Supports:
   a. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   b. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
   c. Nonmetallic Coatings: Plastic coating, jacket, or liner.
   d. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
   e. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel OR stainless steel, as directed.
2. Stainless-Steel Pipe Hangers and Supports:
   a. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   b. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Copper Pipe Hangers:
   a. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
   b. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel OR stainless steel, as directed.

B. Trapeze Pipe Hangers
1. Description: MSS SP-59, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

C. Fiberglass Pipe Hangers
1. Clevis-Type, Fiberglass Pipe Hangers:
   a. Description: Similar to MSS SP-58, Type 1, steel pipe hanger except hanger is made of fiberglass or fiberglass-reinforced resin.
   b. Hanger Rods: Continuous-thread rod, washer, and nuts made of fiberglass, polyurethane or stainless steel.
2. Strap-Type, Fiberglass Pipe Hangers:
   a. Description: Similar to MSS SP-58, Type 9 or Type 10, steel pipe hanger except hanger is made of fiberglass-reinforced resin.
   b. Hanger Rod and Fittings: Continuous-thread rod, washer, and nuts made of stainless steel.

D. Metal Framing Systems
1. MFMA Manufacturer Metal Framing Systems:
   a. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
   c. Channels: Continuous slotted steel channel with inturned lips.
d. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

e. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel OR stainless steel, as directed.

f. Metallic Coating: Electroplated zinc OR Hot-dipped galvanized OR Mill galvanized OR In-line, hot galvanized OR Mechanically-deposited zinc, as directed.

OR

Paint Coating: Vinyl OR Vinyl alkyd OR Epoxy OR Polyester OR Acrylic OR Amine OR Alkyd, as directed.

OR

Plastic Coating: PVC OR Polyurethane OR Epoxy OR Polyester, as directed.

OR

Combination Coating: <Insert coating materials in order of application>.

2. Non-MFMA Manufacturer Metal Framing Systems:

a. Description: Shop- or field-fabricated pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.

c. Channels: Continuous slotted steel channel with inturned lips.

d. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

e. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel OR stainless steel, as directed.

f. Coating: Zinc OR Paint OR PVC, as directed.

E. Fiberglass Strut Systems

1. Description: Shop- or field-fabricated pipe-support assembly similar to MFMA-4 for supporting multiple parallel pipes.

a. Channels: Continuous slotted fiberglass or other plastic channel with inturned lips.

b. Channel Nuts: Fiberglass nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

c. Hanger Rods: Continuous-thread rod, nuts, and washer made of fiberglass OR stainless steel, as directed.

F. Thermal-Hanger Shield Inserts

1. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig (688-kPa) or ASTM C 591, Type VI, Grade 1 polysisocyanurate with 125-psig (862-kPa) minimum compressive strength and vapor barrier.

2. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig (688-kPa), ASTM C 552, Type II cellular glass with 100-psig (688-kPa) or ASTM C 591, Type VI, Grade 1 polysisocyanurate with 125-psig (862-kPa) minimum compressive strength.

3. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

4. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

5. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

G. Fastener Systems

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated OR stainless-, as directed, steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

H. Pipe Stands

1. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
2. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

3. Low-Type, Single-Pipe Stand: One-piece plastic OR stainless-steel, as directed, base unit with plastic roller, for roof installation without membrane penetration.

4. High-Type, Single-Pipe Stand:
   a. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
   b. Base: Plastic OR Stainless steel, as directed.
   c. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
   d. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

5. High-Type, Multiple-Pipe Stand:
   a. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
   b. Bases: One or more; plastic.
   c. Vertical Members: Two or more protective-coated-steel channels.
   d. Horizontal Member: Protective-coated-steel channel.
   e. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

6. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

I. Pipe Positioning Systems
   1. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

J. Equipment Supports
   1. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

K. Miscellaneous Materials
   1. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
   2. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
      b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

1.3 EXECUTION

A. Hanger And Support Installation
   1. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
      a. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
      b. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
3. **Fiberglass Pipe-Hanger Installation**: Comply with applicable portions of MSS SP-69 and MSS SP-89. Install hangers and attachments as required to properly support piping from building structure.

4. **Metal Framing System Installation**: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

5. **Fiberglass Strut System Installation**: Arrange for grouping of parallel runs of piping, and support together on field-assembled fiberglass struts.

6. **Thermal-Hanger Shield Installation**: Install in pipe hanger or shield for insulated piping.

7. **Fastener System Installation**:
   a. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
   b. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

8. **Pipe Stand Installation**:
   a. **Pipe Stand Types except Curb-Mounted Type**: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
   b. **Curb-Mounted-Type Pipe Stands**: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Division 7 Section "Roof Accessories" for curbs.

9. **Pipe Positioning-System Installation**: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. See Division 15 plumbing fixture Sections for requirements for pipe positioning systems for plumbing fixtures.

10. Install hangers and supports complete with necessary attachments, inserts, bolts, nuts, washers, and other accessories.

12. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

13. Install lateral bracing with pipe hangers and supports to prevent swaying.

14. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65) and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

15. **Load Distribution**: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

16. **Pipe Slopes**: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

17. **Insulated Piping**:
   a. Attach clamps and spacers to piping.
      1) **Piping Operating above Ambient Air Temperature**: Clamp may project through insulation.
      2) **Piping Operating below Ambient Air Temperature**: Use thermal-hanger shield insert with clamp sized to match OD of insert.
      3) Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
   b. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
      1) **Option**: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
   c. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
      1) **Option**: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
   d. **Shield Dimensions for Pipe**: Not less than the following:
      1) NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
2) NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
3) NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
4) NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
5) NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.
e. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
f. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

B. Equipment Supports
1. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
2. Grouting: Place grout under supports for equipment and make bearing surface smooth.
3. Provide lateral bracing, to prevent swaying, for equipment supports.

C. Metal Fabrications
1. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
2. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
3. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
b. Obtain fusion without undercut or overlap.
c. Remove welding flux immediately.
d. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

D. Adjusting
1. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
2. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

E. Painting
1. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
a. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).

OR
Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 9 painting Sections OR Section “High-Performance Coatings”, as directed.
2. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

F. Hanger And Support Schedule
1. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
2. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
3. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
4. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
5. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
6. Use stainless-steel pipe hangers and fiberglass pipe hangers and fiberglass strut systems and stainless-steel or corrosion-resistant attachments for hostile environment applications.
7. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
8. Use padded hangers for piping that is subject to scratching.
9. Use thermal-hanger shield inserts for insulated piping and tubing.
10. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
   b. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F (566 deg C), pipes NPS 4 to NPS 24 (DN 100 to DN 600), requiring up to 4 inches (100 mm) of insulation.
   c. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
   d. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 (DN 15 to DN 600) if little or no insulation is required.
   e. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4 (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
   f. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8 (DN 20 to DN 200).
   g. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 24 (DN 15 to DN 750).
   h. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
   i. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
   j. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8 (DN 10 to DN 200).
   k. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3 (DN 10 to DN 80).
   l. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
   m. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
   n. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
   o. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
   p. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 (DN 65 to DN 900) if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
   q. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30 (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
   r. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24 (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
s. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

t. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 (DN 50 to DN 600) if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.

u. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 (DN 50 to DN 750) if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

11. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
   b. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 (DN 20 to DN 600) if longer ends are required for riser clamps.

12. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
   b. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
   c. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
   d. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
   e. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F (49 to 232 deg C) piping installations.

13. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
   b. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
   c. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
   d. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
   e. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
   f. C-Clamps (MSS Type 23): For structural shapes.
   g. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
   h. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
   i. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
   j. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
   k. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
   l. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
      1) Light (MSS Type 31): 750 lb (340 kg).
      2) Medium (MSS Type 32): 1500 lb (680 kg).
      3) Heavy (MSS Type 33): 3000 lb (1360 kg).
   m. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
   n. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
   o. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
14. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
   b. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
   c. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

15. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   a. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
   b. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
   c. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
   d. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
   e. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
   f. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
   g. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
   h. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
      1) Horizontal (MSS Type 54): Mounted horizontally.
      2) Vertical (MSS Type 55): Mounted vertically.
      3) Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

16. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

17. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

18. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

19. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

SECTION 22 05 48 13 - VIBRATION AND SEISMIC CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of vibration and seismic controls for plumbing piping and equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Isolation pads.
   b. Isolation mounts.
   c. Restrained elastomeric isolation mounts.
   d. Freestanding and Restrained spring isolators.
   e. Housed spring mounts.
   f. Elastomeric hangers.
   g. Spring hangers.
   h. Spring hangers with vertical-limit stops.
   i. Pipe riser resilient supports.
   j. Resilient pipe guides.
   k. Seismic snubbers.
   l. Restraining braces and cables.
   m. Steel and Inertia, vibration isolation equipment bases.

C. Definitions
3. OSHPD: Office of Statewide Health Planning and Development for the State of California.

D. Performance Requirements
1. Seismic-Restraint Loading:
   a. Site Class as Defined in the IBC: A OR B OR C OR D OR E OR F, as directed.
   b. Assigned Seismic Use Group or Building Category as Defined in the IBC: I OR II OR III, as directed.
      1) Component Importance Factor: 1.0 OR 1.5, as directed.
      2) Component Response Modification Factor: 1.5 OR 2.5 OR 3.5 OR 5.0, as directed.
      3) Component Amplification Factor: 1.0 OR 2.5, as directed.
   c. Design Spectral Response Acceleration at Short Periods (0.2 Second): Percentage as directed.
   d. Design Spectral Response Acceleration at 1-Second Period: Percentage as directed.

E. Submittals
1. Product Data: For each product indicated.
2. Delegated-Design Submittal: For vibration isolation and seismic-restraint calculations and details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
3. Welding certificates.
4. Qualification Data: For professional engineer.
5. Field quality-control test reports.

F. Quality Assurance
1. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

2. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

3. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproved by ICC-ES, or preapproved by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

1.2 PRODUCTS

A. Vibration Isolators

1. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
   a. Resilient Material: Oil- and water-resistant neoprene OR rubber OR hermetically sealed compressed fiberglass, as directed.

2. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.
   a. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
   b. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

3. Restrained Mounts: All-directional mountings with seismic restraint.
   a. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
   b. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

4. Spring Isolators: Freestanding, laterally stable, open-spring isolators.
   a. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
   b. Minimum Additional Travel: 50 percent of the required deflection at rated load.
   c. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
   d. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
   e. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch- (6-mm-) thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig (3447 kPa).
   f. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

5. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
   a. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
b. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.

c. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

d. Minimum Additional Travel: 50 percent of the required deflection at rated load.

e. Lateral Stiffness: More than 80 percent of rated vertical stiffness.

f. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

a. Housing: Ductile-iron or steel housing to provide all-directional seismic restraint.

b. Base: Factory drilled for bolting to structure.

c. Snubbers: Vertically adjustable to allow a maximum of 1/4-inch (6-mm) travel up or down before contacting a resilient collar.

7. Elastomeric Hangers: Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.

8. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.

a. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.

b. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

c. Minimum Additional Travel: 50 percent of the required deflection at rated load.

d. Lateral Stiffness: More than 80 percent of rated vertical stiffness.

e. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

f. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.

g. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

a. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.

b. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

c. Minimum Additional Travel: 50 percent of the required deflection at rated load.

d. Lateral Stiffness: More than 80 percent of rated vertical stiffness.

e. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

f. Elastomeric Element: Molded, oil-resistant rubber or neoprene.

g. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.

h. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

10. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch- (13-mm-) thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig (3.45 MPa) and for equal resistance in all directions.

11. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch- (13-mm-) thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

Vibration And Seismic Controls For Plumbing Piping And Equipment
B. Vibration Isolation Equipment Bases
   a. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
      1) Include supports for suction and discharge elbows for pumps.
   b. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
   c. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
   a. Design Requirements: Lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
      1) Include supports for suction and discharge elbows for pumps.
   b. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
   c. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
   d. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

C. Seismic-Restraint Devices
1. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed.
   a. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.
2. Snubbers: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
   a. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
   b. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
   c. Maximum 1/4-inch (6-mm) air gap, and minimum 1/4-inch (6-mm-) thick resilient cushion.
3. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
4. Restraint Cables: ASTM A 603 galvanized-steel OR ASTM A 492 stainless-steel, as directed, cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.
5. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections OR Reinforcing steel angle clamped, as directed, to hanger rod.
6. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
7. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
8. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
9. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

10. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

D. Factory Finishes
1. Finish:
   a. Manufacturer's standard prime-coat finish ready for field painting.
      OR
   Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
      1) Powder coating on springs and housings.
      2) All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
      3) Baked enamel or powder coat for metal components on isolators for interior use.
      4) Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

1.3 EXECUTION
A. Applications
1. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed.
2. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
3. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

B. Vibration-Control And Seismic-Restraint Device Installation
1. Equipment Restraints:
   a. Install seismic snubbers on plumbing equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
   b. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inches (3.2 mm).
   c. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed, providing required submittals for component.
2. Piping Restraints:
   a. Comply with requirements in MSS SP-127.
   b. Space lateral supports a maximum of 40 feet (12 m) o.c., and longitudinal supports a maximum of 80 feet (24 m) o.c.
   c. Brace a change of direction longer than 12 feet (3.7 m).
3. Install cables so they do not bend across edges of adjacent equipment or building structure.
4. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES OR OSHPD OR an agency acceptable to authorities having jurisdiction, as directed, providing required submittals for component.
5. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.

6. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

7. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

8. Drilled-in Anchors:
   a. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
   b. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
   c. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
   d. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
   e. Set anchors to manufacturer’s recommended torque, using a torque wrench.
   f. Install zinc-coated steel anchors for interior and stainless steel anchors for exterior applications.

C. Accommodation Of Differential Seismic Motion
1. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 22 Section “Domestic Water Piping” for piping flexible connections.

D. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections:
   a. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
   b. Schedule test with the Owner before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days’ advance notice.
   c. Obtain approval before transmitting test loads to structure. Provide temporary load-spreading members.
   d. Test at least four of each type and size of installed anchors and fasteners selected.
   e. Test to 90 percent of rated proof load of device.
   f. Measure isolator restraint clearance.
   g. Measure isolator deflection.
   h. Verify snubber minimum clearances.
   i. Air-Mounting System Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   j. Air-Mounting System Operational Test: Test the compressed-air leveling system.
   k. Test and adjust air-mounting system controls and safeties.
   l. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
3. Remove and replace malfunctioning units and retest as specified above.
4. Prepare test and inspection reports.
E. Adjusting
   1. Adjust isolators after piping system is at operating weight.
   2. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
   3. Adjust active height of sprint isolators.
   4. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION 22 05 48 13
Vibration And Seismic Controls For Plumbing Piping And Equipment

August 2021

22 05 48 13 - 8

DASNY, Downstate
SECTION 22 05 53 00 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for identification for plumbing piping and equipment. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Equipment labels.
   b. Warning signs and labels.
   c. Pipe labels.
   d. Stencils.
   e. Valve tags.
   f. Warning tags.

C. Submittals
1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Equipment Labels
1. Metal Labels for Equipment:
   a. Material and Thickness: Brass, 0.032-inch (0.8-mm) OR Stainless steel, 0.025-inch (0.64-mm) OR Aluminum, 0.032-inch (0.8-mm) OR anodized aluminum, 0.032-inch (0.8-mm), as directed, minimum thickness, and having predrilled or stamped holes for attachment hardware.
   b. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
   c. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   d. Fasteners: Stainless-steel rivets OR self-tapping screws, as directed.
   e. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

2. Plastic Labels for Equipment:
   a. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch (1.6 mm) OR 1/8 inch (3.2 mm), as directed, thick, and having predrilled holes for attachment hardware.
   b. Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.
   c. Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
   d. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
   e. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
   f. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   g. Fasteners: Stainless-steel rivets OR self-tapping screws, as directed.
   h. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
3. Label Content: Include equipment’s Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

4. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

B. Warning Signs And Labels
1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch (1.6 mm) OR 1/8 inch (3.2 mm), as directed, thick, and having predrilled holes for attachment hardware.
2. Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.
3. Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets OR self-tapping screws, as directed.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
9. Label Content: Include caution and warning information, plus emergency notification instructions.

C. Pipe Labels
1. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
2. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover OR cover full, as directed, circumference of pipe and to attach to pipe without fasteners or adhesive.
4. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
   a. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
   b. Lettering Size: At least 1-1/2 inches (38 mm) high.

D. Stencils
1. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; and minimum letter height of 3/4 inch (19 mm) for access panel and door labels, equipment labels, and similar operational instructions.
   a. Stencil Material: Aluminum OR Brass OR Fiberboard, as directed.
   b. Stencil Paint: Exterior, gloss, alkyd enamel OR acrylic enamel, as directed, black unless otherwise indicated. Paint may be in pressurized spray-can form.
   c. Identification Paint: Exterior, alkyd enamel OR acrylic enamel, as directed, in colors according to ASME A13.1 unless otherwise indicated.

E. Valve Tags
1. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
   a. Tag Material: Brass, 0.032-inch (0.8-mm) OR Stainless steel, 0.025-inch (0.64-mm) OR Aluminum, 0.032-inch (0.8-mm) OR anodized aluminum, 0.032-inch (0.8-mm), as directed, minimum thickness, and having predrilled or stamped holes for attachment hardware.
   b. Fasteners: Brass wire-link chain OR beaded chain OR S-hook, as directed.
2. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
   a. Valve-tag schedule shall be included in operation and maintenance data.

F. Warning Tags
   1. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
      a. Size: 3 by 5-1/4 inches (75 by 133 mm) minimum OR Approximately 4 by 7 inches (100 by 178 mm), as directed.
      b. Fasteners: Brass grommet and wire OR Reinforced grommet and wire or string, as directed.
      c. Nomenclature: Large-size primary caption such as “DANGER,” “CAUTION,” or “DO NOT OPERATE.”
      d. Color: Yellow background with black lettering.

1.3 EXECUTION

A. Preparation
   1. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

B. Equipment Label Installation
   1. Install or permanently fasten labels on each major item of mechanical equipment.
   2. Locate equipment labels where accessible and visible.

C. Pipe Label Installation
   1. Piping Color-Coding: Painting of piping is specified in Division 09 Section(s) “Interior Painting” OR “High-performance Coatings”, as directed.
   2. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels with painted, color-coded bands or rectangles OR complying with ASME A13.1, as directed, on each piping system.
      b. Stencil Paint: Use for pipe marking.
   3. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
      a. Near each valve and control device.
      b. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
      c. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
      d. At access doors, manholes, and similar access points that permit view of concealed piping.
      e. Near major equipment items and other points of origination and termination.
      f. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
      g. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
   4. Pipe Label Color Schedule:
      a. Low-Pressure, Compressed-Air Piping:
         1) Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
         2) Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.
      b. Medium-Pressure, Compressed-Air Piping:
         1) Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
         2) Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.
      c. Domestic Water Piping:
1) Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
2) Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.

d. Sanitary Waste and Storm Drainage Piping:
1) Background Color: Black OR Blue OR Red OR White OR Yellow, as directed.
2) Letter Color: Black OR Blue OR Red OR White OR Yellow, as directed.

D. Valve-Tag Installation
1. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
2. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
   a. Valve-Tag Size and Shape:
      1) Cold Water: 1-1/2 inches (38 mm) OR 2 inches (50 mm), as directed, round OR square, as directed.
      2) Hot Water: 1-1/2 inches (38 mm) OR 2 inches (50 mm), as directed, round OR square, as directed.
      3) Low-Pressure Compressed Air: 1-1/2 inches (38 mm) OR 2 inches (50 mm), as directed, round OR square, as directed.
      4) High-Pressure Compressed Air: 1-1/2 inches (38 mm) OR 2 inches (50 mm), as directed, round OR square, as directed.
   b. Valve-Tag Color:
      1) Cold Water: Natural OR Green, as directed.
      2) Hot Water: Natural OR Green, as directed.
      3) Low-Pressure Compressed Air: Natural OR Green, as directed.
      4) High-Pressure Compressed Air: Natural OR Green, as directed.
   c. Letter Color:
      1) Cold Water: Black OR White, as directed.
      2) Hot Water: Black OR White, as directed.
      3) Low-Pressure Compressed Air: Black OR White, as directed.
      4) High-Pressure Compressed Air: Black OR White, as directed.

E. Warning-Tag Installation
1. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 22 05 53 00
SECTION 22 05 76 00 - SANITARY SEWERAGE

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for sanitary sewerage. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Pipe and fittings.
   b. Nonpressure and pressure couplings.
   c. Expansion joints and deflection fittings.
   d. Backwater valves.
   e. Cleanouts.
   f. Encasement for piping.
   g. Manholes.

C. Definitions
1. FRP: Fiberglass-reinforced plastic.

D. Submittals
1. Product Data: For the following:
   a. Expansion joints and deflection fittings.
   b. Backwater valves.
2. Shop Drawings: For manholes. Include plans, elevations, sections, details, and frames and covers.
3. Coordination Drawings: Show pipe sizes, locations, and elevations. Show other piping in same trench and clearances from sewer system piping. Indicate interface and spatial relationship between manholes, piping, and proximate structures.
4. Profile Drawings: Show system piping in elevation. Draw profiles to horizontal scale of not less than 1 inch equals 50 feet (1:50) and to vertical scale of not less than 1 inch equals 5 feet (1:50). Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing system piping.
5. Product Certificates: For each type of cast-iron soil pipe and fitting, from manufacturer.
6. Field quality-control reports.

E. Delivery, Storage, And Handling
1. Do not store plastic manholes, pipe, and fittings in direct sunlight.
2. Protect pipe, pipe fittings, and seals from dirt and damage.
3. Handle manholes according to manufacturer’s written rigging instructions.

F. Project Conditions
1. Interruption of Existing Sanitary Sewerage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of service.
   b. Do not proceed with interruption of service without the Owner written permission.

1.2 PRODUCTS

A. Hub-And-Spigot, Cast-Iron Soil Pipe And Fittings
1. Pipe and Fittings: ASTM A 74, Service class OR Service and Extra-Heavy classes OR Extra-Heavy class, as directed.
2. Gaskets: ASTM C 564, rubber.

B. Hubless Cast-Iron Soil Pipe And Fittings
1. Pipe and Fittings: ASTM A 888 or CISPI 301.
2. CISPI-Trademark, Shielded Couplings:
   a. Description: ASTM C 1277 and CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
3. Heavy-Duty, Shielded Couplings:
   a. Description: ASTM C 1277 and ASTM C 1540, with stainless-steel shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
4. Cast-Iron, Shielded Couplings:
   a. Description: ASTM C 1277 with ASTM A 48/A 48M, two-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve with integral, center pipe stop.
5. Unshielded Couplings:
   a. Description: ASTM C 1277 and ASTM C 1461, rigid, sleeve-type, reducing- or transition-type mechanical coupling, with integral, center pipe stop, molded from ASTM C 1440, TPE material; with corrosion-resistant-metal tension band and tightening mechanism on each end.

C. Ductile-Iron, Gravity Sewer Pipe And Fittings
1. Pipe: ASTM A 746, for push-on joints.
2. Standard Fittings: AWWA C110, ductile or gray iron, for push-on joints.
3. Compact Fittings: AWWA C153, ductile iron, for push-on joints.

D. Ductile-Iron, Pressure Pipe And Fittings
1. Push-on-Joint Piping:
   b. Standard Fittings: AWWA C110, ductile or gray iron.
   d. Gaskets: AWWA C111, rubber, of shape matching pipe and fittings.
2. Mechanical-Joint Piping:
   a. Pipe: AWWA C151, with bolt holes in bell.
   b. Standard Fittings: AWWA C110, ductile or gray iron, with bolt holes in bell.
   c. Compact Fittings: AWWA C153, with bolt holes in bells.
   d. Glands: Cast or ductile iron; with bolt holes and high-strength, cast-iron or high-strength, low-alloy steel bolts and nuts.
   e. Gaskets: AWWA C111, rubber, of shape matching pipe, fittings, and glands.

E. ABS Pipe And Fittings
   a. NPS 3 to NPS 6 (DN 80 to DN 150): SDR 35.
   b. NPS 8 to NPS 12 (DN 200 to DN 300): SDR 42.

F. PVC Pipe And Fittings
1. PVC Cellular-Core Sewer Piping:
   a. Pipe: ASTM F 891, Sewer and Drain Series, PS 50 minimum stiffness, PVC cellular-core pipe with plain ends for solvent-cemented joints.
   b. Fittings: ASTM D 3034, SDR 35, PVC socket-type fittings.
2. PVC Corrugated Sewer Piping:
   b. Fittings: ASTM F 949, PVC molded or fabricated, socket type.

3. PVC Profile Sewer Piping:
   b. Fittings: ASTM D 3034, PVC with bell ends.

4. PVC Type PSM Sewer Piping:
   b. Fittings: ASTM D 3034, PVC with bell ends.

5. PVC Gravity Sewer Piping:
   a. Pipe and Fittings: ASTM F 679, T-1 OR T-2, as directed, wall thickness, PVC gravity sewer pipe with bell-and-spigot ends and with integral ASTM F 477, elastomeric seals for gasketed joints.

6. PVC Pressure Piping:
   a. Pipe: AWWA C900, Class 100 OR Class 150 OR Class 200, as directed, PVC pipe with bell-and-spigot ends for gasketed joints.
   b. Fittings: AWWA C900, Class 100 OR Class 150 OR Class 200, as directed, PVC pipe with bell ends.

7. PVC Water-Service Piping:
   a. Pipe: ASTM D 1785, Schedule 40 OR Schedule 80, as directed, PVC, with plain ends for solvent-cemented joints.
   b. Fittings: ASTM D 2466, Schedule 40 OR ASTM D 2467, Schedule 80, as directed, PVC, socket type.

G. fiberglass pipe and fittings
1. fiberglass Sewer pipe: ASTM D 3262, RTRP, for gasketed joints fabricated with Type 2, polyester OR Type 4, epoxy, as directed, resin.
   a. Liner: Reinforced thermoset OR Nonreinforced thermoset OR Thermoplastic OR No liner, as directed.
   b. Grade: Reinforced, surface layer matching pipe resin OR Nonreinforced, surface layer matching pipe resin OR No surface layer, as directed.
   c. Stiffness: 9 psig (62 kPa) OR 18 psig (124 kPa) OR 36 psig (248 kPa) OR 72 psig (496 kPa), as directed.

2. fiberglass Nonpressure Fittings: ASTM D 3840, RTRF, for gasketed joints.
   a. Laminating Resin: Type 1, polyester OR Type 2, epoxy, as directed, resin.
   b. Reinforcement: Grade with finish compatible with resin.

H. concrete pipe and fittings
1. Nonreinforced-Concrete Sewer Pipe and Fittings: ASTM C 14 (ASTM C 14M), Class 1 OR Class 2 OR Class 3, as directed, with bell-and-spigot OR tongue-and-groove, as directed, ends for gasketed joints with ASTM C 443 (ASTM C 443M), rubber gaskets.

   a. Bell-and-spigot OR tongue-and-groove, as directed, ends for gasketed joints, with ASTM C 443 (ASTM C 443M), rubber gaskets.
   b. Class II, Wall A OR Wall B OR Wall C, as directed.
   c. Class III, Wall A OR Wall B OR Wall C, as directed.
   d. Class IV, Wall A OR Wall B OR Wall C, as directed.
   e. Class V, Wall A OR Wall B, as directed.

I. Nonpressure-Type Transition Couplings
1. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined and corrosion-resistant-metal tension band and tightening mechanism on each end.

2. Sleeve Materials:
   b. For Concrete Pipes: ASTM C 443 (ASTM C 443M), rubber.
   c. For Fiberglass Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
   d. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
   e. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

3. Unshielded, Flexible Couplings:
   a. Description: Elastomeric sleeve, with stainless-steel shear ring, as directed, and corrosion-resistant-metal tension band and tightening mechanism on each end.

4. Shielded, Flexible Couplings:
   a. Description: ASTM C 1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

5. Ring-Type, Flexible Couplings:
   a. Description: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

6. Nonpressure-Type, Rigid Couplings:
   a. Description: ASTM C 1461, sleeve-type, reducing- or transition-type mechanical coupling, molded from ASTM C 1440, TPE material; with corrosion-resistant-metal tension band and tightening mechanism on each end.

J. Pressure-Type Pipe Couplings
1. Tubular-Sleeve Couplings: AWWA C219, with center sleeve, gaskets, end rings, and bolt fasteners.
2. Metal, bolted, sleeve-type, reducing or transition coupling, for joining underground pressure piping. Include 150-psig (1035-kPa) OR 200-psig (1380-kPa), as directed, minimum pressure rating and ends of same sizes as piping to be joined.
3. Center-Sleeve Material: Manufacturer's standard OR Carbon steel OR Stainless steel OR Ductile iron OR Malleable iron, as directed.
4. Gasket Material: Natural or synthetic rubber.
5. Metal Component Finish: Corrosion-resistant coating or material.

K. Expansion Joints And Deflection Fittings
1. Ductile-Iron, Flexible Expansion Joints:
   a. Description: Compound fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections, rated for 250-psig (1725-kPa) minimum working pressure and for offset and expansion indicated.
2. Ductile-Iron Expansion Joints:
   a. Description: Three-piece assembly of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Include rating for 250-psig (1725-kPa) minimum working pressure and for expansion indicated.
3. Ductile-Iron Deflection Fittings:
   a. Description: Compound coupling fitting with ball joint, flexing section, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include rating for 250-psig (1725-kPa) minimum working pressure and for up to 15 degrees of deflection.

L. Backwater Valves
1. Cast-Iron Backwater Valves:
   a. Description: ASME A112.14.1, gray-iron body and bolted cover, with bronze seat.
   b. Horizontal type; with swing check valve and hub-and-spigot ends.
c. Combination horizontal and manual gate-valve type; with swing check valve, integral gate valve, and hub-and-spigot ends.
d. Terminal type; with bronze seat, swing check valve, and hub inlet.

2. PVC Backwater Valves:
a. Description: Horizontal type; with PVC body, PVC removable cover, and PVC swing check valve.

M. Cleanouts
1. Cast-Iron Cleanouts:
a. Description: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.
b. Top-Loading Classification(s): Light Duty OR Medium Duty OR Heavy Duty OR Extra-Heavy Duty, as directed.
c. Sewer Pipe Fitting and Riser to Cleanout: ASTM A 74, Service class, cast-iron soil pipe and fittings.

2. PVC Cleanouts:
a. Description: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

N. Encasement For Piping
1. Standard: ASTM A 674 or AWWA C105.
2. Material: Linear low-density polyethylene film of 0.008-inch (0.20-mm) OR high-density, cross-laminated polyethylene film of 0.004-inch (0.10-mm), as directed, minimum thickness.
3. Form: Sheet OR Tube, as directed.
4. Color: Black OR Natural, as directed.

O. Manholes
1. Standard Precast Concrete Manholes:
a. Description: ASTM C 478 (ASTM C 478M), precast, reinforced concrete, of depth indicated, with provision for sealant joints.
b. Diameter: 48 inches (1200 mm) minimum unless otherwise indicated.
c. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.
d. Base Section: 6-inch (150-mm) minimum thickness for floor slab and 4-inch (100-mm) minimum thickness for walls and base riser section; with separate base slab or base section with integral floor.
e. Riser Sections: 4-inch (100-mm) minimum thickness, of length to provide depth indicated.
f. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated; with top of cone of size that matches grade rings.
g. Joint Sealant: ASTM C 990 (ASTM C 990M), bitumen or butyl rubber.
h. Resilient Pipe Connectors: ASTM C 923 (ASTM C 923M), cast or fitted into manhole walls, for each pipe connection.
i. Steps: Individual FRP steps or FRP ladder OR Individual FRP steps, FRP ladder, or ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP OR ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP, as directed; wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
j. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.

OR

Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.
2. Designed Precast Concrete Manholes:
   a. Description: ASTM C 913; designed according to ASTM C 890 for A-16 (AASHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.
   b. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole as required to prevent flotation.
   c. Joint Sealant: ASTM C 990 (ASTM 990M), bitumen or butyl rubber.
   d. Resilient Pipe Connectors: ASTM C 923 (ASTM C 923M), cast or fitted into manhole walls, for each pipe connection.
   e. Steps: Individual FRP steps or FRP ladder OR Individual FRP steps, FRP ladder, or ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP OR ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP, as directed; wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
   f. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
      OR
      Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.
3. Fiberglass Manholes:
   a. Description: ASTM D 3753.
   b. Diameter: 48 inches (1200 mm) minimum unless otherwise indicated.
   c. Ballast: Increase thickness of concrete base as required to prevent flotation.
   d. Base Section: Concrete, 6-inch (150-mm) minimum thickness.
   e. Resilient Pipe Connectors (if required): ASTM C 923 (ASTM C 923M), cast or fitted into manhole walls, for each pipe connection.
   f. Steps: Individual FRP steps or FRP ladder, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
   g. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
      OR
      Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.
4. Manhole Frames and Covers:
   a. Description: Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser, with 4-inch- (100-mm-) minimum-width flange and 26-inch- (660-mm-) diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "SANITARY SEWER."
   b. Material: ASTM A 536, Grade 60-40-18 ductile OR ASTM A 48/A 48M, Class 35 gray, as directed, iron unless otherwise indicated.
5. Manhole-Cover Inserts:
   a. Description: Manufactured, plastic form, of size to fit between manhole frame and cover and designed to prevent stormwater inflow. Include handle for removal and gasket for gastight sealing.
   b. Type: Solid OR Drainage with vent holes OR Valve, as directed.

P. Concrete
1. General: Cast-in-place concrete complying with ACI 318, ACI 350/350R (ACI 350M/350RM), and the following:
   a. Cement: ASTM C 150, Type II.
   b. Fine Aggregate: ASTM C 33, sand.
   d. Water: Potable.
2. Portland Cement Design Mix: 4000 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio.
   b. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (420 MPa) deformed steel.
3. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.
   a. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.
      1) Invert Slope: 1 OR 2, as directed, percent through manhole.
   b. Benches: Concrete, sloped to drain into channel.
      1) Slope: 4 OR 8, as directed, percent.
4. Ballast and Pipe Supports: Portland cement design mix, 3000 psi (20.7 MPa) minimum, with 0.58 maximum water/cementitious materials ratio.
   b. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (420 MPa) deformed steel.

1.3 EXECUTION

A. Earthwork
   1. Excavating, trenching, and backfilling are specified in Division 31 Section "Earth Moving".

B. Piping Installation
   1. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground sanitary sewer piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.
   2. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for using lubricants, cements, and other installation requirements.
   3. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.
   4. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.
   5. When installing pipe under streets or other obstructions that cannot be disturbed, use pipe-jacking process of microtunneling.
   6. Install gravity-flow, nonpressure, drainage piping according to the following:
      a. Install piping pitched down in direction of flow, at minimum slope of 1 OR 2, as directed, percent unless otherwise indicated.
      b. Install piping NPS 6 (DN 150) and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place-concrete supports or anchors.
      c. Install piping with 36-inch (915-mm) OR 48-inch (1220-mm) OR 60-inch (1520-mm) OR 72-inch (1830-mm), as directed, minimum cover.
      d. Install hub-and-spigot, cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
      e. Install hubless cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
      f. Install ductile-iron, gravity sewer piping according to ASTM A 746.
g. Install ABS sewer piping according to ASTM D 2321 and ASTM F 1668.

h. Install PVC cellular-core sewer piping according to ASTM D 2321 and ASTM F 1668.

i. Install PVC corrugated sewer piping according to ASTM D 2321 and ASTM F 1668.

j. Install PVC profile sewer piping according to ASTM D 2321 and ASTM F 1668.

k. Install PVC Type PSM sewer piping according to ASTM D 2321 and ASTM F 1668.

l. Install PVC gravity sewer piping according to ASTM D 2321 and ASTM F 1668.

m. Install fiberglass sewer piping according to ASTM D 3839 and ASTM F 1668.

n. Install nonreinforced-concrete sewer piping according to ASTM C 1479 and ACPA’s “Concrete Pipe Installation Manual.”

o. Install reinforced-concrete sewer piping according to ASTM C 1479 and ACPA’s “Concrete Pipe Installation Manual.”

7. Install force-main, pressure piping according to the following:
   a. Install piping with restrained joints at tee fittings and at horizontal and vertical changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer’s proprietary restraint system, or cast-in-place-concrete supports or anchors.
   b. Install piping with 36-inch (915-mm) OR 48-inch (1220-mm) OR 60-inch (1520-mm) OR 72-inch (1830-mm), as directed, minimum cover.
   c. Install ductile-iron pressure piping according to AWWA C600 or AWWA M41.
   d. Install ductile-iron special fittings according to AWWA C600.
   e. Install PVC pressure piping according to AWWA M23 or to ASTM D 2774 and ASTM F 1668.
   f. Install PVC water-service piping according to ASTM D 2774 and ASTM F 1668.

8. If required to provide protection for metal piping, install corrosion-protection piping encasement over the following underground metal piping according to ASTM A 674 or AWWA C105:
   b. Hubless cast-iron soil pipe and fittings.
   c. Ductile-iron pipe and fittings.
   d. Expansion joints and deflection fittings.

9. Clear interior of piping and manholes of dirt and superfluous material as work progresses. Maintain swab or drag in piping, and pull past each joint as it is completed. Place plug in end of incomplete piping at end of day and when work stops.

C. Pipe Joint Construction

1. Join gravity-flow, nonpressure, drainage piping according to the following:
   b. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI’s “Cast Iron Soil Pipe and Fittings Handbook” for lead and oakum calked joints.
   c. Join hubless cast-iron soil piping according to CISPI 310 and CISPI’s “Cast Iron Soil Pipe and Fittings Handbook” for hubless-coupling joints.
   d. Join ductile-iron, gravity sewer piping according to AWWA C600 for push-on joints.
   e. Join ABS sewer piping according to ASTM D 2321 and ASTM D 2751 for elastomeric-seal joints.
   f. Join PVC cellular-core sewer piping according to ASTM D 2321 and ASTM F 891 for solvent-cemented joints.
   g. Join PVC corrugated sewer piping according to ASTM D 2321.
   h. Join PVC profile sewer piping according to ASTM D 2321 for elastomeric-seal joints or ASTM F 794 for gasketed joints.
   i. Join PVC Type PSM sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomeric-seal joints or ASTM D 3034 for elastomeric-gasket joints.
   j. Join PVC gravity sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomeric-seal joints or ASTM D 3034 for elastomeric-gasket joints.
   k. Join fiberglass sewer piping according to ASTM D 4161 for elastomeric-seal joints.
   l. Join nonreinforced-concrete sewer piping according to ASTM C 14 (ASTM C 14M) and ACPA’s “Concrete Pipe Installation Manual” for rubber-gasket joints.
   m. Join reinforced-concrete sewer piping according to ACPA’s “Concrete Pipe Installation Manual” for rubber-gasket joints.
n. Join dissimilar pipe materials with nonpressure-type, flexible OR rigid, as directed, couplings.

2. Join force-main, pressure piping according to the following:
   a. Join ductile-iron pressure piping according to AWWA C600 or AWWA M41 for push-on joints.
   b. Join ductile-iron special fittings according to AWWA C600 or AWWA M41 for push-on joints.
   c. Join PVC pressure piping according to AWWA M23 for gasketed joints.
   d. Join PVC water-service piping according to ASTM D 2855.
   e. Join dissimilar pipe materials with pressure-type couplings.

3. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
   a. Use nonpressure flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.
      1) Unshielded OR Shielded, as directed, flexible OR rigid, as directed, couplings for pipes of same or slightly different OD.
      2) Unshielded, increaser/reducer-pattern, flexible OR rigid, as directed, couplings for pipes with different OD.
      3) Ring-type flexible couplings for piping of different sizes where annular space between smaller piping’s OD and larger piping’s ID permits installation.
   b. Use pressure pipe couplings for force-main joints.

D. Manhole Installation
1. General: Install manholes complete with appurtenances and accessories indicated.
2. Install precast concrete manhole sections with sealants according to ASTM C 891.
3. Install FRP manholes according to manufacturer’s written instructions.
4. Form continuous concrete channels and benches between inlets and outlet.
5. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches (76 mm) above finished surface elsewhere unless otherwise indicated.
6. Install manhole-cover inserts in frame and immediately below cover.

E. Concrete Placement
1. Place cast-in-place concrete according to ACI 318.

F. Backwater Valve Installation
1. Install horizontal-type backwater valves in piping manholes or pits.
2. Install combination horizontal and manual gate valves in piping and in manholes.
3. Install terminal-type backwater valves on end of piping and in manholes. Secure units to sidewalls.

G. Cleanout Installation
1. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts, and use cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.
   a. Use Light-Duty, top-loading classification cleanouts in earth OR unpaved foot-traffic, as directed, areas.
   b. Use Medium-Duty, top-loading classification cleanouts in paved foot-traffic areas.
   c. Use Heavy-Duty, top-loading classification cleanouts in vehicle-traffic service areas.
   d. Use Extra-Heavy-Duty, top-loading classification cleanouts in roads.
2. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches (450 by 450 by 300 mm) deep. Set with tops 1 inch (25 mm) above surrounding grade.
3. Set cleanout frames and covers in concrete pavement and roads with tops flush with pavement surface.

H. Connections
1. Connect nonpressure, gravity-flow drainage piping to building’s sanitary building drains specified in Division 22 Section "Sanitary Waste And Vent Piping".
2. Connect force-main piping to building's sanitary force mains specified in Division 22 Section "Sanitary Waste And Vent Piping". Terminate piping where indicated.

3. Make connections to existing piping and underground manholes.
   a. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye fitting plus 6-inch (150-mm) overlap with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
   b. Make branch connections from side into existing piping, NPS 4 to NPS 20 (DN 100 to DN 500). Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
   c. Make branch connections from side into existing piping, NPS 21 (DN 525) or larger, or to underground manholes by cutting opening into existing unit large enough to allow 3 inches (76 mm) of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of pipe or manhole wall, encase entering connection in 6 inches (150 mm) of concrete for minimum length of 12 inches (300 mm) to provide additional support of collar from connection to undisturbed ground.
      1) Use concrete that will attain a minimum 28-day compressive strength of 3000 psi (20.7 MPa) unless otherwise indicated.
      2) Use epoxy-bonding compound as interface between new and existing concrete and piping materials.
   d. Protect existing piping and manholes to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

4. Connect to grease OR oil OR sand, as directed, interceptors specified in Division 22 Section "Sanitary Waste Interceptors".

I. Closing Abandoned Sanitary Sewer Systems
   1. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:
      a. Close open ends of piping with at least 8-inch- (203-mm-) thick, brick masonry bulkheads.
      b. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.
   2. Abandoned Manholes: Excavate around manhole as required and use either procedure below:
      a. Remove manhole and close open ends of remaining piping.
      b. Remove top of manhole down to at least 36 inches (915 mm) below final grade. Fill to within 12 inches (300 mm) of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.

J. Identification
   1. Materials and their installation are specified in Division 31 Section "Earth Moving". Arrange for installation of green warning tapes directly over piping and at outside edges of underground manholes.
      a. Use warning tape OR detectable warning tape, as directed, over ferrous piping.
      b. Use detectable warning tape over nonferrous piping and over edges of underground manholes.

K. Field Quality Control
   1. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches (600 mm) of backfill is in place, and again at completion of Project.
      a. Submit separate report for each system inspection.
      b. Defects requiring correction include the following:
         1) Alignment: Less than full diameter of inside of pipe is visible between structures.
2) Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
3) Damage: Crushed, broken, cracked, or otherwise damaged piping.
4) Infiltration: Water leakage into piping.
5) Exfiltration: Water leakage from or around piping.
c. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
d. Reinspect and repeat procedure until results are satisfactory.

2. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.
   a. Do not enclose, cover, or put into service before inspection and approval.
   b. Test completed piping systems according to requirements of authorities having jurisdiction.
   c. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
   d. Submit separate report for each test.
   e. Hydrostatic Tests: Test sanitary sewerage according to requirements of authorities having jurisdiction and the following:
      1) Fill sewer piping with water. Test with pressure of at least 10-foot (3-m) head of water, and maintain such pressure without leakage for at least 15 minutes.
      2) Close openings in system and fill with water.
      3) Purge air and refill with water.
      4) Disconnect water supply.
      5) Test and inspect joints for leaks.
   OR
   Air Tests: Test sanitary sewerage according to requirements of authorities having jurisdiction, UNI-B-6, and the following:
      6) Option: Test plastic gravity sewer piping according to ASTM F 1417.
      7) Option: Test concrete gravity sewer piping according to ASTM C 924 (ASTM C 924M).
   f. Force Main: Perform hydrostatic test after thrust blocks, supports, and anchors have hardened. Test at pressure not less than 1-1/2 times the maximum system operating pressure, but not less than 150 psig (1035 kPa).
      1) Ductile-Iron Piping: Test according to AWWA C600, "Hydraulic Testing" Section.
      2) PVC Piping: Test according to AWWA M23, "Testing and Maintenance" Chapter.
   g. Manholes: Perform hydraulic test according to ASTM C 969 (ASTM C 969M).

3. Leaks and loss in test pressure constitute defects that must be repaired.
4. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

L. Cleaning
   1. Clean dirt and superfluous material from interior of piping. Flush with potable water.

END OF SECTION 22 05 76 00
SECTION 22 05 76 00a - STORM DRAINAGE PIPING SPECIALTIES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for storm drainage piping specialties. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Roof drains.
      b. Miscellaneous storm drainage piping specialties.
      c. Cleanouts.
      d. Backwater valves.
      e. Trench drains.
      f. Channel drainage systems.
      g. Through-penetration firestop assemblies.
      h. Flashing materials.

C. Submittals
   1. Product Data: For each type of product indicated.

D. Quality Assurance
   1. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

1.2 PRODUCTS

A. Metal Roof Drains
   1. Cast-Iron, Large-Sump, General-Purpose Roof Drains:
      a. Standard: ASME A112.6.4, for general-purpose roof drains.
      b. Body Material: Cast iron.
      c. Dimension of Body: Nominal 14-inch (357-mm) diameter.
      d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.
      e. Flow-Control Weirs: Not required OR Required, as directed.
      f. Outlet: Bottom OR Side, as directed.
      g. Extension Collars: Not required OR Required, as directed.
      h. Underdeck Clamp: Not required OR Required, as directed.
      i. Expansion Joint: Not required OR Required, as directed.
      j. Sump Receiver Plate: Not required OR Required, as directed.
      k. Dome Material: Aluminum OR Cast iron OR PE OR Stainless steel, as directed.
      l. Perforated Gravel Guard: Stainless steel OR Not required, as directed.
      m. Vandal-Proof Dome: Not required OR Required, as directed.
      n. Water Dam: Not required OR 2 inches (51 mm) high, as directed.
   2. Cast-Iron, Medium-Sump, General-Purpose Roof Drains:
      a. Standard: ASME A112.6.4, for general-purpose roof drains.
      b. Body Material: Cast iron.
      c. Dimension of Body: 8- to 12-inch (203- to 305-mm) diameter.
      d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.
      e. Flow-Control Weirs: Not required OR Required, as directed.
      f. Outlet: Bottom OR Side, as directed.
      g. Extension Collars: Not required OR Required, as directed.
      h. Underdeck Clamp: Not required OR Required, as directed.
i. Expansion Joint: Not required OR Required, as directed.

j. Sump Receiver Plate: Not required OR Required, as directed.

k. Dome Material: Aluminum OR Cast iron OR Copper OR PE OR Stainless steel, as directed.

l. Wire Mesh: Stainless steel or brass over dome OR Not required, as directed.

m. Perforated Gravel Guard: Stainless steel OR Not required, as directed.

n. Vandal-Proof Dome: Not required OR Required, as directed.

o. Water Dam: Not required OR 2 inches (51 mm) high, as directed.

3. Copper, Medium-Sump, General-Purpose Roof Drains:

a. Standard: ASME A112.6.4, for general-purpose roof drains.

b. Body Material: Copper.

c. Dimension of Body: 8- to 12-inch (203- to 305-mm) diameter.

d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.

e. Flow-Control Weirs: Not required OR Required, as directed.

f. Outlet: Bottom OR Side, as directed.

g. Extension Collars: Not required OR Required, as directed.

h. Underdeck Clamp: Not required OR Required, as directed.

i. Expansion Joint: Not required OR Required, as directed.

j. Sump Receiver Plate: Not required OR Required, as directed.

k. Dome Material: Aluminum OR Cast iron OR Copper OR PE OR Stainless steel, as directed.

l. Wire Mesh: Stainless steel or brass over dome OR Not required, as directed.

m. Perforated Gravel Guard: Stainless steel OR Not required, as directed.

n. Vandal-Proof Dome: Not required OR Required, as directed.

o. Water Dam: Not required OR 2 inches (51 mm) high, as directed.

4. Cast-Iron, Small-Sump, General-Purpose Roof Drains:

a. Standard: ASME A112.6.4, for general-purpose roof drains.

b. Body Material: Cast iron.

c. Dimension of Body: Nominal 8-inch (203-mm) diameter.

d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.

e. Outlet: Bottom OR Side, as directed.

f. Extension Collars: Not required OR Required, as directed.

g. Underdeck Clamp: Not required OR Required, as directed.

h. Expansion Joint: Not required OR Required, as directed.

i. Sump Receiver Plate: Not required OR Required, as directed.

j. Dome Material: Cast iron.

k. Wire Mesh: Stainless steel or brass over dome OR Not required, as directed.

l. Vandal-Proof Dome: Not required OR Required, as directed.

5. Copper, Small-Sump, General-Purpose Roof Drains:

a. Standard: ASME A112.6.4, for general-purpose roof drains.

b. Body Material: Copper.

c. Dimension of Body: Nominal 8-inch (203-mm) diameter.

d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.

e. Outlet: Bottom OR Side, as directed.

f. Extension Collars: Not required OR Required, as directed.

g. Underdeck Clamp: Not required OR Required, as directed.

h. Expansion Joint: Not required OR Required, as directed.

i. Sump Receiver Plate: Not required OR Required, as directed.

j. Dome Material: Cast iron.

k. Wire Mesh: Stainless steel or brass over dome OR Not required, as directed.

l. Vandal-Proof Dome: Not required OR Required, as directed.

6. Metal, Cornice and Gutter Roof Drains:

a. Standard: ASME A112.6.4, for cornice and gutter roof drains.

b. Body Material: Metal.

c. Dimension of Body: Nominal 6-inch (152-mm) diameter.

d. Outlet: Bottom OR Side OR 45-degree angle, as directed.

e. Dome Material: Bronze.
7. Metal, Parapet Roof Drains:
   a. Standard: ASME A112.6.4, for parapet roof drains.
   b. Body Material: Cast iron.
   c. Outlet: Back OR Angle, as directed.
      d. Grate Material: Bronze OR Cast iron OR Nickel-bronze alloy, as directed.
   e. Vandal-Proof Grate: Not required OR Required, as directed.

8. Metal, Large-Sump, Promenade Roof Drains:
   a. Standard: ASME A112.6.4, for promenade roof drains.
   b. Body Material: Cast iron.
   c. Dimension of Body: Nominal 14-inch (357-mm) diameter.
   d. Dimension of Frame and Grate: Nominal 14 inches (357 mm) square.
   e. Outlet: Bottom.
   f. Grate Material: Bronze OR Cast iron OR Nickel-bronze alloy, as directed.
   g. Vandal-Proof Grate: Not required OR Required, as directed.
   h. Extension Collars: Not required OR Required, as directed.
   i. Underdeck Clamp: Not required OR Required, as directed.
   j. Expansion Joint: Not required OR Required, as directed.
   k. Sump Receiver Plate: Not required OR Required, as directed.

9. Metal, Medium-Sump, Promenade Roof Drains:
   a. Standard: ASME A112.6.4, for promenade roof drains.
   b. Body Material: Cast iron.
   c. Dimension of Body: 11- to 12-inch (280- to 305-mm) diameter.
   d. Dimension of Frame and Grate: Nominal 12 inches (305 mm) square.
   e. Outlet: Bottom.
   f. Grate Material: Bronze OR Cast iron OR Nickel-bronze alloy, as directed.
   g. Vandal-Proof Grate: Not required OR Required, as directed.
   h. Extension Collars: Not required OR Required, as directed.
   i. Underdeck Clamp: Not required OR Required, as directed.
   j. Expansion Joint: Not required OR Required, as directed.
   k. Sump Receiver Plate: Not required OR Required, as directed.

10. Metal, Small-Sump, Promenade Roof Drains:
    a. Standard: ASME A112.6.4, for promenade roof drains.
    b. Body Material: Cast iron.
    c. Dimension of Body: Nominal 8-inch (203-mm) diameter.
    d. Dimension of Frame and Grate: Nominal 8 inches (203 mm) square.
    e. Outlet: Bottom.
    f. Grate Material: Bronze OR Cast iron OR Nickel-bronze alloy, as directed.
    g. Vandal-Proof Grate: Not required OR Required, as directed.
    h. Extension Collars: Not required OR Required, as directed.
    i. Underdeck Clamp: Not required OR Required, as directed.
    j. Expansion Joint: Not required OR Required, as directed.
    k. Sump Receiver Plate: Not required OR Required, as directed.

11. Metal, Medium-Sump, Deck Roof Drains:
    a. Standard: ASME A112.6.4, for deck roof drains; ASME A112.6.3, for floor drains.
    b. Body Material: Metal.
    c. Flange: Anchor OR Anchor with weep holes OR Not required, as directed.
    d. Clamping Device: Not required OR Required, as directed.
    e. Integral Backwater Valve: Not required OR Required, as directed.
    f. Outlet: Bottom OR End OR Side, as directed.
    g. Grate Material: Cast iron.
    h. Grate Finish: Painted OR Not required, as directed.
    i. Overall Dimension of Frame and Grate: Nominal 14 inches (357 mm) round OR square, as directed.
    j. Top-Loading Classification: Extra-Heavy Duty OR Heavy Duty, as directed.
       k. Vandal-Proof Frame and Grate: Not required OR Required, as directed.

12. Metal, Small-Sump, Deck Roof Drains:
    a. Standard: ASME A112.6.4, for deck roof drains; ASME A112.6.3, for floor drains.
b. Body Material: Metal.
c. Flange: Anchor OR Anchor with weep holes OR Not required, as directed.
d. Clamping Device: Not required OR Required, as directed.
e. Integral Backwater Valve: Not required OR Required, as directed.
f. Outlet: Bottom OR End OR Side, as directed.
g. Grate Material: Cast iron.
h. Grate Finish: Painted OR Not required, as directed.
i. Overall Dimension of Frame and Grate: Nominal 8 inches (203 mm) round OR square, as directed.
j. Top-Loading Classification: Extra-Heavy Duty OR Heavy Duty OR Light Duty OR Medium Duty, as directed.
k. Vandal-Proof Frame and Grate: Not required OR Required, as directed.

B. Plastic Roof Drains
1. Plastic Roof Drains:
   a. Standard: ASME A112.6.4, for plastic roof drains.
   b. Body Material: ABS or PVC.
   c. Sump Diameter: <Insert nominal dimension>.
   d. Combination Flashing Ring and Gravel Stop: Not required OR Required, as directed.
   e. Outlet: Bottom.
   f. Extension Collars: Not required OR Required, as directed.
   g. Underdeck Clamp: Not required OR Required, as directed.
   h. Expansion Joint: Not required OR Required, as directed.
   i. Sump Receiver Plate: Not required OR Required, as directed.
   j. Dome Material: Aluminum OR Cast iron OR PE OR Stainless steel, as directed.
   k. Vandal-Proof Dome: Not required OR Required, as directed.

C. Miscellaneous Storm Drainage Piping Specialties
1. Downspout Adaptors:
   a. Description: Manufactured, gray-iron casting, for attaching to horizontal-outlet, parapet roof drain and to exterior, sheet metal downspout.
   b. Size: Inlet size to match parapet drain outlet.
2. Downspout Boots:
   a. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 (DN 100) outlet; and shop-applied bituminous coating.
   b. Size: Inlet size to match downspout and NPS 4 (DN 100) outlet.
3. Conductor Nozzles:
   a. Description: Bronze body with threaded inlet and bronze wall flange with mounting holes.
   b. Size: Same as connected conductor.

D. Cleanouts
1. Floor Cleanouts:
   a. Standard: ASME A112.36.2M, for adjustable housing OR cast-iron soil pipe with cast-iron ferrule OR heavy-duty, adjustable housing OR threaded, adjustable housing, as directed, cleanouts.
   b. Size: Same as connected branch.
   c. Type: Adjustable housing OR Cast-iron soil pipe with cast-iron ferrule OR Heavy-duty, adjustable housing OR Threaded, adjustable housing, as directed.
   d. Body or Ferrule Material: Cast iron OR Stainless steel, as directed.
   e. Clamping Device: Not required OR Required, as directed.
   f. Outlet Connection: Inside calk OR Spigot OR Threaded, as directed.
   g. Closure: Brass plug with straight threads and gasket OR Brass plug with tapered threads OR Cast-iron plug OR Plastic plug, as directed.
   h. Adjustable Housing Material: Cast iron OR Plastic, as directed, with threads OR set-screws or other device, as directed.
   i. Frame and Cover Material and Finish: Nickel-bronze, copper alloy OR Painted cast iron OR Polished bronze OR Rough bronze OR Stainless steel, as directed.
2. Test Tees:
   a. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
   b. Size: Same as connected drainage piping.
   c. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil-pipe test tee as required to match connected piping.
   d. Closure Plug: Countersunk or raised head, brass.
   e. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

3. Wall Cleanouts:
   a. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
   b. Size: Same as connected drainage piping.
   c. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch OR Hubless, cast-iron soil-pipe test tee, as directed, as required to match connected piping.
   d. Closure: Countersunk OR Countersunk or raised-head OR Raised-head, as directed, drilled-and-threaded OR brass OR cast-iron, as directed, plug.
   e. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
   f. Wall Access: Round, deep, chrome-plated bronze OR flat, chrome-plated brass or stainless-steel, as directed, cover plate with screw.
   g. Wall Access: Round OR Square, as directed, nickel-bronze, copper-alloy, or stainless-steel wall-installation frame and cover.

4. Plastic Floor Cleanouts:
   a. Size: Same as connected branch.
   b. Body Material: PVC.
   c. Closure Plug: PVC.
   d. Riser: Drainage pipe fitting and riser to cleanout of same material as drainage piping.

E. Backwater Valves
1. Cast-Iron, Horizontal Backwater Valves:
   b. Size: Same as connected piping.
   c. Body Material: Cast iron.
   d. Cover: Cast iron with bolted or threaded access check valve.
   e. End Connections: Hub and spigot or hubless.
   f. Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang closed OR open for airflow unless subject to backflow condition, as directed.
   g. Extension: ASTM A 74, Service class; full-size, cast-iron soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.

2. Cast-Iron, Drain-Outlet Backwater Valves:
   a. Size: Same as floor drain outlet.
   b. Body Material: Cast iron or bronze made for vertical installation in bottom outlet of floor drain.
   c. Check Valve: Removable ball float.
   d. Inlet: Threaded.
   e. Outlet: Threaded or spigot.

3. Plastic, Horizontal Backwater Valves:
   b. Size: Same as connected piping.
   c. Body Material: ABS OR PVC, as directed.
   d. Cover: Same material as body with threaded access to check valve.
   e. Check Valve: Removable swing check.
   f. End Connections: Socket type.

F. Trench Drains
1. Trench Drains:
   b. Body Material: Cast iron.
   c. Flange: Anchor OR Anchor with weep holes OR Not required, as directed.
   d. Clamping Device: Not required OR Required, as directed.
   e. Outlet: Bottom OR End OR Side, as directed.
   f. Grate Material: Ductile iron or gray iron OR stainless steel, as directed.
   g. Grate Finish: Painted OR Not required, as directed.
   h. Dimensions of Frame and Grate: <Insert dimensions>.
   i. Top-Loading Classification: Extra-Heavy Duty OR Heavy Duty OR Light Duty OR Medium Duty, as directed.

G. Channel Drainage Systems
1. Narrow, Sloped-Invert, Polymer-Concrete, Channel Drainage Systems:
   a. Type: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
   1) Channel Sections: Narrow, interlocking-joint, sloped-invert, polymer-concrete modular units with end caps. Include rounded bottom, with built-in invert slope of 0.6 percent and with outlets in number, sizes, and locations indicated. Include extension sections necessary for required depth.
      a) Dimensions: 4-inch (102-mm) inside width. Include number of units required to form total lengths indicated.
      b) Frame: Galvanized steel or gray iron for grates OR Not required, as directed.
   2) Grates: Manufacturer's designation "heavy duty" OR "medium duty", as directed, with slots or perforations, and of width and thickness that fit recesses in channel sections.
      a) Material: Ductile iron OR Fiberglass OR Galvanized steel OR Gray iron OR Stainless steel, as directed.
      b) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections OR Not required, as directed.
   3) Covers: Solid ductile or gray iron, of width and thickness that fit recesses in channel sections, and of lengths indicated.
   4) Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.
   5) Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2. Narrow, Level-Invert, Polymer-Concrete, Channel Drainage Systems:
   a. Type: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
   1) Channel Sections: Narrow, interlocking-joint, precast, polymer-concrete modular units with end caps. Include rounded bottom, with level invert and with NPS 4 (DN 100) outlets in number and locations indicated.
      a) Dimensions: 5-inch (127-mm) inside width and 9-3/4-inch (248-mm) depth. Include number of units required to form total lengths indicated.
      b) Frame: Galvanized steel or gray iron for grates OR Not required, as directed.
   2) Grates: Manufacturer's designation "heavy duty" OR "medium duty", as directed, with slots or perforations, and of width and thickness that fit recesses in channel sections.
      a) Material: Ductile iron OR Fiberglass OR Galvanized steel OR Gray iron OR Stainless steel, as directed.
      b) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections OR Not required, as directed.
   3) Covers: Solid ductile or gray iron, of width and thickness that fit recesses in channel sections, and of lengths indicated.
4) Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.

5) Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

3. Wide, Level-Invert, Polymer-Concrete, Channel Drainage Systems:
   a. Type: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
   1) Channel Sections: Wide, interlocking-joint, precast, polymer-concrete modular units with end caps. Include flat or rounded bottom, with level invert and with outlets in number, sizes, and locations indicated.
      a) Dimensions: 8-inch (203-mm) inside width and 13-3/4-inch (350-mm) depth. Include number of units required to form total lengths indicated.
      b) Frame: Galvanized steel or gray iron for grates OR Not required, as directed.
   2) Grates: Manufacturer's designation "heavy duty" OR "medium duty", as directed, with slots or perforations, and of width and thickness that fit recesses in channel sections.
      a) Material: Ductile iron OR Fiberglass OR Galvanized steel OR Gray iron OR Stainless steel, as directed.
      b) Locking Mechanism: Manufacturer's standard device for securing grates to channel sections OR Not required, as directed.
   3) Covers: Solid ductile or gray iron, of width and thickness that fit recesses in channel sections, and of lengths indicated.
   4) Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.
   5) Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

H. Through-Penetration Firestop Assemblies
   1. Through-Penetration Firestop Assemblies:
      a. Standard: ASTM E 814, for through-penetration firestop assemblies.
      c. Size: Same as connected pipe.
      d. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
      e. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
      f. Special Coating: Corrosion resistant on interior of fittings.

I. Flashing Materials
   1. Copper Sheet: ASTM B 152/B 152M, 12 oz./sq. ft. (3.7 kg/sq. m or 0.41-mm thickness).
   2. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch (1.01-mm) minimum thickness unless otherwise indicated. Include G90 (Z275) hot-dip galvanized, mill-phosphatized finish for painting if indicated.
   3. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil (1.01-mm) minimum thickness.
   4. Fasteners: Metal compatible with material and substrate being fastened.
   5. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.

1.3 EXECUTION

A. Installation
1. Install roof drains at low points of roof areas according to roof membrane manufacturer’s written installation instructions. Roofing materials are specified in Division 7 Sections.
   a. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
   b. Install expansion joints, if indicated, in roof drain outlets.
   c. Position roof drains for easy access and maintenance.
2. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downsputs.
3. Install downspout boots at grade with top 6 inches (152 mm) OR 12 inches (305 mm) OR 18 inches (457 mm), as directed, above grade. Secure to building wall.
4. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.
5. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
   a. Use cleanouts the same size as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
   b. Locate cleanouts at each change in direction of piping greater than 45 degrees.
   c. Locate cleanouts at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
   d. Locate cleanouts at base of each vertical soil and waste stack.
6. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
7. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
8. Install horizontal backwater valves in floor with cover flush with floor.
10. Install test tees in vertical conductors and near floor.
11. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
12. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface unless otherwise indicated.
13. Assemble channel drainage system components according to manufacturer’s written instructions. Install on support devices so that top will be flush with adjacent surface.
15. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

B. Connections
1. Comply with requirements for piping specified in Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Flashing Installation
1. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
   a. Lead Sheets: Burn joints of 6.0-lb/sq. ft. (30-kg/sq. m) lead sheets, 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of 4.0-lb/sq. ft. (20-kg/sq. m) lead sheets, 0.0625-inch (1.6-mm) thickness or thinner.
   b. Copper Sheets: Solder joints of copper sheets.
2. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
   a. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches (250 mm) and with skirt or flange extending at least 8 inches (200 mm) around pipe.
   b. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.
   c. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
3. Set flashing on floors and roofs in solid coating of bituminous cement.
4. Secure flashing into sleeve and specialty clamping ring or device.
5. Fabricate and install flashing and pans, sumps, and other drainage shapes.

D. Protection
1. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
2. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 05 76 00a
SECTION 22 07 19 00 - PLUMBING INSULATION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for plumbing insulation. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Insulation Materials:
      1) Calcium silicate.
      2) Cellular glass.
      3) Flexible elastomeric.
      4) Mineral fiber.
      5) Phenolic.
      6) Polyisocyanurate.
      7) Polyolefin.
      8) Polystyrene.
   b. Insulating cements.
   c. Adhesives.
   d. Mastics.
   e. Lagging adhesives.
   f. Sealants.
   g. Factory-applied jackets.
   h. Field-applied fabric-reinforcing mesh.
   i. Field-applied cloths.
   j. Field-applied jackets.
   k. Tapes.
   l. Securements.
   m. Corner angles.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings:
   a. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   b. Detail attachment and covering of heat tracing inside insulation.
   c. Detail insulation application at pipe expansion joints for each type of insulation.
   d. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
   e. Detail removable insulation at piping specialties, equipment connections, and access panels.
   f. Detail application of field-applied jackets.
   g. Detail application at linkages of control devices.
   h. Detail field application for each equipment type.
4. Field quality-control reports.

D. Quality Assurance
1. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
   a. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   b. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

E. Delivery, Storage, And Handling
1. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.2 PRODUCTS

A. Insulation Materials
1. Comply with requirements in Part 1.3 schedule articles for where insulating materials shall be applied.
2. Products shall not contain asbestos, lead, mercury, or mercury compounds.
3. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
4. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
5. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
6. Calcium Silicate:
   a. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
   b. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
   c. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
   a. Block Insulation: ASTM C 552, Type I.
   b. Special-Shaped Insulation: ASTM C 552, Type III.
   c. Board Insulation: ASTM C 552, Type IV.
   d. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
   e. Preformed Pipe Insulation with Factory-Applied ASJ OR ASJ-SSL, as directed: Comply with ASTM C 552, Type II, Class 2.
   f. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
8. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
11. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation without factory-applied jacket OR with factory-applied ASJ OR with factory-applied FSK jacket, as directed. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

13. Mineral-Fiber, Preformed Pipe Insulation:
   a. Type I, 850 deg F (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, without factory-applied jacket OR with factory-applied ASJ OR with factory-applied ASJ-SSL, as directed. Factory-applied jacket requirements are specified in “Factory-Applied Jackets” Article.

14. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ OR FSK jacket, as directed, complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. (40 kg/cu. m) or more. Thermal conductivity (k-value) at 100 deg F (55 deg C) is 0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in “Factory-Applied Jackets” Article.

15. Phenolic:
   a. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
   b. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
   c. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

   a. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed 0.19 Btu x in./h x sq. ft. x deg F (0.027 W/m x K) at 75 deg F (24 deg C) after 180 days of aging.
   b. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to 1-1/2 inches (38 mm) as tested by ASTM E 84.
   c. Fabricate shapes according to ASTM C 450 and ASTM C 585.

17. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

18. Polystyrene: Rigid, extruded cellular polystyrene intended for use as thermal insulation. Comply with ASTM C 578, Type IV or Type XIII, except thermal conductivity (k-value) shall not exceed 0.26 Btu x in./h x sq. ft. x deg F (0.038 W/m x K) after 180 days of aging. Fabricate shapes according to ASTM C 450 and ASTM C 585.

B. Insulating Cements
2. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

C. Adhesives
1. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
2. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F (10 to 427 deg C).
   a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Cellular-Glass, Phenolic, Polyisocyanurate, and Polystyrene Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F (minus 59 to plus 149 deg C).
a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

4. **Flexible Elastomeric and Polyolefin Adhesive**: Comply with MIL-A-24179A, Type II, Class I.
   a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

5. **Mineral-Fiber Adhesive**: Comply with MIL-A-3316C, Class 2, Grade A.
   a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

6. **Polystyrene Adhesive**: Solvent- or water-based, synthetic resin adhesive with a service temperature range of 20 to plus 140 deg F (29 to plus 60 deg C).

   a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

8. **PVC Jacket Adhesive**: Compliant with PVC jacket.
   a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. **Mastics**
1. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
   a. For indoor applications, use mastics that have a VOC content of "Insert value" g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. **Vapor-Barrier Mastic**: Water based; suitable for indoor and outdoor use on below ambient services.
   a. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
   b. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
   c. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.

3. **Vapor-Barrier Mastic**: Solvent based; suitable for indoor use on below ambient services.
   a. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.03 metric perm) at 35-mil (0.9-mm) dry film thickness.
   b. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
   c. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.

4. **Vapor-Barrier Mastic**: Solvent based; suitable for outdoor use on below ambient services.
   a. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
   b. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
   c. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.

5. **Breather Mastic**: Water based; suitable for indoor and outdoor use on above ambient services.
   a. Water-Vapor Permeance: ASTM F 1249, 3 perms (2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
   b. Service Temperature Range: Minus 20 to plus 200 deg F (Minus 29 to plus 93 deg C).
   c. Solids Content: 63 percent by volume and 73 percent by weight.

E. **Lagging Adhesives**
1. Description: Comply with MIL-A-3316C, Class I, Grade A, and shall be compatible with insulation materials, jackets, and substrates.
   a. For indoor applications, use lagging adhesives that have a VOC content of "Insert value" g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment and pipe insulation.
   c. Service Temperature Range: Minus 50 to plus 180 deg F (Minus 46 to plus 82 deg C).
F. Sealants
   1. Joint Sealants:
      a. Materials shall be compatible with insulation materials, jackets, and substrates.
      b. Permanently flexible, elastomeric sealant.
      c. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
      d. Color: White or gray.
      e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. FSK and Metal Jacket Flashing Sealants:
      a. Materials shall be compatible with insulation materials, jackets, and substrates.
      b. Fire- and water-resistant, flexible, elastomeric sealant.
      c. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
      d. Color: Aluminum.
      e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
      a. Materials shall be compatible with insulation materials, jackets, and substrates.
      b. Fire- and water-resistant, flexible, elastomeric sealant.
      c. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
      e. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

G. Factory-Applied Jackets
   1. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
      a. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
      b. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
      c. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
      d. PVDC Jacket for Indoor Applications: 4-mil- (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms (0.013 metric perms) when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
      e. PVDC Jacket for Outdoor Applications: 6-mil- (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms (0.007 metric perms) when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.

H. Field-Applied Fabric-Reinforcing Mesh
   1. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. inch (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
   2. Woven Glass-Fiber Fabric for Equipment Insulation: Approximately 6 oz./sq. yd. (203 g/sq. m) with a thread count of 5 strands by 5 strands/sq. inch (2 strands by 2 strands/sq. mm) for covering equipment.
   3. Woven Polyester Fabric: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. inch (4 strands by 4 strands/sq. mm), in a Leno weave, for equipment and pipe.

I. Field-Applied Cloths
1. **Woven Glass-Fiber Fabric:** Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).

J. **Field-Applied Jackets**
1. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
2. **PVC Jacket:** High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   a. **Adhesive:** As recommended by jacket material manufacturer.
   b. **Color:** White OR Color-code jackets based on system. Color as selected by the Owner, as directed.
   c. **Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.**
      1) **Shapes:** 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
   d. **Factory-fabricated tank heads and tank side panels.**
3. **Metal Jacket:**
   a. **Aluminum Jacket:** Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005, Temper H-14.
      1) Sheet and roll stock ready for shop or field sizing OR Factory cut and rolled to size, as directed.
      2) Finish and thickness are indicated in field-applied jacket schedules.
      3) **Moisture Barrier for Indoor Applications:** 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper OR 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      4) **Moisture Barrier for Outdoor Applications:** 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      5) **Factory-Fabricated Fitting Covers:**
         a) Same material, finish, and thickness as jacket.
         b) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
         c) Tee covers.
         d) Flange and union covers.
         e) End caps.
         f) Beveled collars.
         g) Valve covers.
         h) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
   b. **Stainless-Steel Jacket:** ASTM A 167 or ASTM A 240/A 240M.
      1) Sheet and roll stock ready for shop or field sizing OR Factory cut and rolled to size, as directed.
      2) Material, finish, and thickness are indicated in field-applied jacket schedules.
      3) **Moisture Barrier for Indoor Applications:** 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper OR 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      4) **Moisture Barrier for Outdoor Applications:** 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper OR 2.5-mil- (0.063-mm-) thick Polysurlyn, as directed.
      5) **Factory-Fabricated Fitting Covers:**
         a) Same material, finish, and thickness as jacket.
         b) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
         c) Tee covers.
         d) Flange and union covers.
         e) End caps.
         f) Beveled collars.
         g) Valve covers.
         h) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
4. Underground Direct-Buried Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.

K. Tapes
1. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
   a. Width: 3 inches (75 mm).
   b. Thickness: 11.5 mils (0.29 mm).
   c. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
   d. Elongation: 2 percent.
   e. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
   f. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
2. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
   a. Width: 3 inches (75 mm).
   b. Thickness: 6.5 mils (0.16 mm).
   c. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
   d. Elongation: 2 percent.
   e. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
   f. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
3. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
   a. Width: 2 inches (50 mm).
   b. Thickness: 6 mils (0.15 mm).
   c. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
   d. Elongation: 500 percent.
   e. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
   a. Width: 2 inches (50 mm).
   b. Thickness: 3.7 mils (0.093 mm).
   c. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
   d. Elongation: 5 percent.
   e. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.
5. PVDC Tape: White vapor-retarder PVDC tape with acrylic adhesive.
   a. Width: 3 inches (75 mm).
   b. Film Thickness: 4 mils (0.10 mm) OR 6 mils (0.15 mm), as directed.
   c. Adhesive Thickness: 1.5 mils (0.04 mm).
   d. Elongation at Break: 145 percent.
   e. Tensile Strength: 55 lbf/inch (10.1 N/mm) in width.

L. Securements
1. Bands:
   a. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 OR Type 316, as directed; 0.015 inch (0.38 mm) thick, 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, wide with wing seal OR closed seal, as directed.
   b. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, wide with wing seal OR closed seal, as directed.
   c. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
2. Insulation Pins and Hangers:
   a. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) OR 0.135-inch- (3.5-mm-), as directed, diameter shank, length to suit depth of insulation indicated.
   b. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) OR 0.135-inch- (3.5-mm-),
c. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1) Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
2) Spindle: Copper- or zinc-coated, low carbon steel OR Aluminum OR Stainless steel, as directed, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
3) Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

d. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1) Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
2) Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
3) Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

e. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1) Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
2) Spindle: Copper- or zinc-coated, low carbon steel OR Aluminum OR Stainless steel, as directed, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
3) Adhesive: Adhesive-backed base with a peel-off protective cover.

f. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, galvanized-steel OR aluminum OR stainless-steel, as directed, sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.

3) Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

M. Corner Angles
1. PVC Corner Angles: 30 mils (0.8 mm) thick, minimum 1 by 1 inch (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
2. Aluminum Corner Angles: 0.040 inch (1.0 mm) thick, minimum 1 by 1 inch (25 by 25 mm), aluminum according to ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14.
3. Stainless-Steel Corner Angles: 0.024 inch (0.61 mm) thick, minimum 1 by 1 inch (25 by 25 mm), stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 OR Type 316, as directed.
1.3 EXECUTION

A. Preparation

1. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

   OR

   Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
   a. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
   b. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

2. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

3. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

B. General Installation Requirements

1. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.

2. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

3. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

4. Install insulation with longitudinal seams at top and bottom of horizontal runs.

5. Install multiple layers of insulation with longitudinal and end seams staggered.

6. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

8. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

9. Install insulation with least number of joints practical.

10. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

   a. Install insulation continuously through hangers and around anchor attachments.
   b. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   c. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   d. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

11. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

12. Install insulation with factory-applied jackets as follows:

   a. Draw jacket tight and smooth.
   b. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
   c. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) OR 4 inches (100 mm), as directed, o.c.
1) For below ambient services, apply vapor-barrier mastic over staples.
   d. Cover joints and seams with tape as recommended by insulation material manufacturer to
      maintain vapor seal.
   e. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at
      ends adjacent to pipe flanges and fittings.

13. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal
    thickness.

14. Finish installation with systems at operating conditions. Repair joint separations and cracking
    due to thermal movement.

15. Repair damaged insulation facings by applying same facing material over damaged areas.
    Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal
    patches similar to butt joints.

16. For above ambient services, do not install insulation to the following:
   a. Vibration-control devices.
   b. Testing agency labels and stamps.
   c. Nameplates and data plates.
   d. Manholes.
   e. Handholes.
   f. Cleanouts.

C. Penetrations

1. Insulation Installation at Roof Penetrations: Install insulation continuously through roof
   penetrations.
   a. Seal penetrations with flashing sealant.
   b. For applications requiring only indoor insulation, terminate insulation above roof surface
      and seal with joint sealant. For applications requiring indoor and outdoor insulation, install
      insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with
      joint sealant.
   c. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below
      top of roof flashing.
   d. Seal jacket to roof flashing with flashing sealant.

2. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with
   sleeve seal. Seal terminations with flashing sealant.

3. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously
   through wall penetrations.
   a. Seal penetrations with flashing sealant.
   b. For applications requiring only indoor insulation, terminate insulation inside wall surface
      and seal with joint sealant. For applications requiring indoor and outdoor insulation, install
      insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with
      joint sealant.
   c. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2
      inches (50 mm).
   d. Seal jacket to wall flashing with flashing sealant.

4. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install
   insulation continuously through walls and partitions.

5. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation
   continuously through penetrations of fire-rated walls and partitions.
   a. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping
      and fire-resistive joint sealers.

6. Insulation Installation at Floor Penetrations:
   a. Pipe: Install insulation continuously through floor penetrations.
   b. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07
      Section "Penetration Firestopping".

D. Equipment, Tank, And Vessel Insulation Installation

1. Mineral Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with
   adhesive and anchor pins and speed washers.
a. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 OR 50, as directed, percent coverage of tank and vessel surfaces.
b. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
c. Protect exposed corners with secured corner angles.
d. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
   1) Do not weld anchor pins to ASME-labeled pressure vessels.
   2) Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
   3) On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints, and 16 inches (400 mm) o.c. in both directions.
   4) Do not overcompress insulation during installation.
   5) Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
   6) Impale insulation over anchor pins and attach speed washers.
   7) Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
e. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
f. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches (150 mm) from each end. Install wire or cable between two circumferential girdles 12 inches (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.
g. Stagger joints between insulation layers at least 3 inches (75 mm).
h. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
i. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
j. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

2. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
a. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
b. Seal longitudinal seams and end joints.

3. Insulation Installation on Pumps:
a. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch (150-mm) centers, starting at corners. Install 3/8-inch- (10-mm-) diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
b. Fabricate boxes from galvanized steel OR aluminum OR stainless steel, as directed, at least 0.040 inch (1.0 mm) OR 0.050 inch (1.3 mm) OR 0.060 inch (1.6 mm), as directed, thick.
c. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

E. General Pipe Insulation Installation
1. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
2. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   a. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
   b. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   c. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   d. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
   e. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
   f. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
   g. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
   h. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
   i. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.

3. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

4. Install removable insulation covers at locations indicated. Installation shall conform to the following:
   a. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
   b. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
   c. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
   d. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
e. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

F. Calcium Silicate Insulation Installation
1. Insulation Installation on Domestic Water Boiler Breechings:
   a. Secure single-layer insulation with stainless-steel bands at 12-inch (300-mm) intervals and tighten bands without deforming insulation material.
   b. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12-inch (300-mm) intervals.
   c. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

2. Insulation Installation on Straight Pipes and Tubes:
   a. Secure single-layer insulation with stainless-steel bands at 12-inch (300-mm) intervals and tighten bands without deforming insulation materials.
   b. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12-inch (300-mm) intervals.
   c. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

3. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
   d. Finish flange insulation same as pipe insulation.

4. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer’s written instructions.
   b. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
   c. Finish fittings insulation same as pipe insulation.

5. Insulation Installation on Valves and Pipe Specialties:
   a. Install mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   b. Install insulation to flanges as specified for flange insulation application.
   c. Finish valve and specialty insulation same as pipe insulation.

G. Cellular-Glass Insulation Installation
1. Insulation Installation on Straight Pipes and Tubes:
   a. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
   c. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
   d. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.

d. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

3. Insulation Installation on Pipe Fittings and Elbows:

   a. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer’s written instructions.

   b. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

4. Insulation Installation on Valves and Pipe Specialties:

   a. Install preformed sections of cellular-glass insulation to valve body.

   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

   c. Install insulation to flanges as specified for flange insulation application.

H. Flexible Elastomeric Insulation Installation

1. Seal longitudinal seams and end joints with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

2. Insulation Installation on Pipe Flanges:

   a. Install pipe insulation to outer diameter of pipe flange.

   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.

   d. Secure insulation to flanges and seal seams with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3. Insulation Installation on Pipe Fittings and Elbows:

   a. Install mitered sections of pipe insulation.

   b. Secure insulation materials and seal seams with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

4. Insulation Installation on Valves and Pipe Specialties:

   a. Install preformed valve covers manufactured of same material as pipe insulation when available.

   b. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

   c. Install insulation to flanges as specified for flange insulation application.

   d. Secure insulation to valves and specialties and seal seams with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

I. Mineral-Fiber Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:

   a. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

   b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

   c. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.

   d. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

2. Insulation Installation on Pipe Flanges:
a. Install preformed pipe insulation to outer diameter of pipe flange.

b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.

d. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed sections of same material as straight segments of pipe insulation when available.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

J. Phenolic Insulation Installation

1. General Installation Requirements:
   a. Secure single-layer insulation with stainless-steel bands at 12-inch (300-mm) intervals and tighten bands without deforming insulation materials.
   b. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm).
      Secure inner layer with 0.062-inch (1.6-mm) wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12-inch (300-mm) intervals.

2. Insulation Installation on Straight Pipes and Tubes:
   a. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   b. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
   c. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
   d. For insulation with factory-applied jackets with vapor retarders on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

3. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.

4. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer’s written instructions.

5. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer’s written instructions.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

K. Polyisocyanurate Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:
a. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.

b. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.

c. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm) thickness.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polycylcocrate block insulation of same thickness as pipe insulation.

3. Insulation Installation on Fittings and Elbows:
   a. Install preformed sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed sections of polyisocyanurate insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

L. Polyolefin Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:
   a. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

2. Insulation Installation on Pipe Flanges:
   a. Install pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
   d. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install mitered sections of polyolefin pipe insulation.
   b. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install cut sections of polyolefin pipe and sheet insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.
   d. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

M. Polystyrene Insulation Installation

1. Insulation Installation on Straight Pipes and Tubes:
   a. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.
b. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.

c. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

2. Insulation Installation on Pipe Flanges:
   a. Install preformed pipe insulation to outer diameter of pipe flange.
   b. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm) thickness.
   c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness as pipe insulation.

3. Insulation Installation on Pipe Fittings and Elbows:
   a. Install preformed insulation sections of same material as straight segments of pipe insulation. Secure according to manufacturer’s written instructions.

4. Insulation Installation on Valves and Pipe Specialties:
   a. Install preformed section of polystyrene insulation to valve body.
   b. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   c. Install insulation to flanges as specified for flange insulation application.

N. Field-Applied Jacket Installation
   1. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
      a. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
      b. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
      c. Completely encapsulate insulation with coating, leaving no exposed insulation.
   2. Where FSK jackets are indicated, install as follows:
      a. Draw jacket material smooth and tight.
      b. Install lap or joint strips with same material as jacket.
      c. Secure jacket to insulation with manufacturer’s recommended adhesive.
      d. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
      e. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
   3. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer’s recommended adhesive.
      a. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
   4. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.
   5. Where PVDC jackets are indicated, install as follows:
      a. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
      b. Wrap factory-presized jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches (50 mm) over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
      c. Continuous jacket can be spiral wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer’s written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
      d. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches (850 mm) or less. The 33-1/2-inch- (850-mm-)
circumference limit allows for 2-inch (50-mm-) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.

e. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

O. Finishes
1. Equipment and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 07.
   a. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
2. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
3. Color: Final color as selected by the Owner. Vary first and second coats to allow visual inspection of the completed Work.
4. Do not field paint aluminum or stainless-steel jackets.

P. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections:
   a. Inspect field-insulated equipment, randomly selected by the Owner, by removing field-applied jacket and insulation in layers in reverse order of their installation.Extent of inspection shall be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
   b. Inspect pipe, fittings, strainers, and valves, randomly selected by the Owner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
3. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

Q. Domestic Water Boiler Breeching Insulation Schedule
1. Round, exposed breeching and connector insulation shall be one of the following:
   a. Calcium Silicate: 4 inches (100 mm) thick.
   b. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
   c. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
2. Round, concealed breeching and connector insulation shall be one of the following:
   a. Calcium Silicate: 4 inches (100 mm) thick.
   b. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
   c. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
3. Rectangular, exposed breeching and connector insulation shall be one of the following:
   a. Calcium Silicate: 4 inches (100 mm) thick.
   b. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.
   c. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
4. Rectangular, concealed breeching and connector insulation shall be one of the following:
   a. Calcium Silicate: 4 inches (100 mm) thick.
b. High-Temperature Mineral-Fiber Blanket: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.

c. High-Temperature Mineral-Fiber Board: 3 inches (75 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.

R. Equipment Insulation Schedule

1. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.

2. Insulate indoor and outdoor equipment in paragraphs below that is not factory insulated.

3. Heat-exchanger (water-to-water for domestic water heating service) insulation shall be one of the following:
   a. Calcium Silicate: 3 inches (75 mm) thick.
   b. Cellular Glass: 3 inches (75 mm) thick.
   c. Mineral-Fiber Board: 2 inches (50 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   d. Mineral-Fiber Pipe and Tank: 2 inches (50 mm) thick.

4. Steam-to-hot-water converter insulation shall be one of the following:
   a. Calcium Silicate: 3 inches (75 mm) thick.
   b. Cellular Glass: 3 inches (75 mm) thick.
   c. Mineral-Fiber Board: 2 inches (50 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   d. Mineral-Fiber Pipe and Tank: 2 inches (50 mm) thick.

5. Domestic water pump insulation shall be one of the following:
   a. Cellular Glass: 2 inches (50 mm) thick.
   b. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   c. Phenolic: 1 inch (25 mm) thick.
   d. Polyisocyanurate: 1 inch (25 mm) thick.

6. Domestic chilled-water (potable) pump insulation shall be one of the following:
   a. Cellular Glass: 3 inches (75 mm) thick.
   b. Mineral-Fiber Board: 2 inches (50 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   c. Phenolic: 1 inch (25 mm) thick.
   d. Polyisocyanurate: 1-1/2 inches (38 mm) thick.

7. Domestic hot-water pump insulation shall be one of the following:
   a. Cellular Glass: 2 inches (50 mm) thick.
   b. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   c. Phenolic: 1 inch (25 mm) thick.
   d. Polyisocyanurate: 1 inch (25 mm) thick.

8. Domestic water, domestic chilled-water (potable), and domestic hot-water hydropneumatic tank insulation shall be one of the following:
   a. Cellular Glass: 1-1/2 inches (38 mm) thick.
   b. Flexible Elastomeric: 1 inch (25 mm) thick.
   c. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   d. Mineral-Fiber Pipe and Tank: 1 inch (25 mm) thick.
   e. Phenolic: 1 inch (25 mm) thick.
   f. Polyisocyanurate: 1 inch (25 mm) thick.
   g. Polyolefin: 1 inch (25 mm) thick.

9. Domestic hot-water storage tank insulation shall be one of the following, of thickness to provide an R-value of 12.5:
   a. Cellular glass.
   b. Mineral-Fiber Board: 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   c. Mineral-fiber pipe and tank.
   d. Phenolic.

10. Domestic water storage tank insulation shall be one of the following:
a. Cellular Glass: 2 inches (50 mm) thick.
b. Flexible Elastomeric: 1 inch (25 mm) thick.
c. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
d. Mineral-Fiber Pipe and Tank: 1 inch (25 mm) thick.
e. Phenolic: 1 inch (25 mm) thick.
f. Polyisocyanurate: 1 inch (25 mm) thick.
g. Polyolefin: 1 inch (25 mm) thick.

11. Domestic chilled-water (potable) storage tank insulation shall be one of the following:
   a. Cellular Glass: 2 inches (50 mm) thick.
   b. Flexible Elastomeric: 1 inch (25 mm) thick.
   c. Mineral-Fiber Board: 1 inch (25 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   d. Mineral-Fiber Pipe and Tank: 1 inch (25 mm) thick.
   e. Phenolic: 1 inch (25 mm) thick.
   f. Polyisocyanurate: 1 inch (25 mm) thick.
   g. Polyolefin: 1 inch (25 mm) thick.

12. Piping system filter-housing insulation shall be one of the following:
   a. Cellular Glass: 3 inches (75 mm) thick.
   b. Mineral-Fiber Board: 2 inches (50 mm) thick and 2-lb/cu. ft. (32-kg/cu. m) OR 3-lb/cu. ft. (48-kg/cu. m) OR 6-lb/cu. ft. (96-kg/cu. m), as directed, nominal density.
   c. Mineral-Fiber Pipe and Tank: 2 inches (50 mm) thick.
4) Phenolic: 1 inch (25 mm) thick.
5) Polyisocyanurate: 1 inch (25 mm) thick.
6) Polyolefin: 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.

b. NPS 1-1/2 (DN 40) and Larger: Insulation shall be one of the following:
1) Cellular Glass: 1-1/2 inches (38 mm) thick.
2) Flexible Elastomeric: 1 inch (25 mm) thick.
3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
4) Phenolic: 1 inch (25 mm) thick.
5) Polyisocyanurate: 1 inch (25 mm) thick.
6) Polyolefin: 1 inch (25 mm) thick.

3. Domestic Chilled Water (Potable):
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 1-1/2 inches (38 mm) thick.
      2) Flexible Elastomeric: 1 inch (25 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
      4) Phenolic: 1 inch (25 mm) thick.
      5) Polyisocyanurate: 1 inch (25 mm) thick.
      6) Polyolefin: 1 inch (25 mm) thick.

4. Stormwater and Overflow:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 1-1/2 inches (38 mm) thick.
      2) Flexible Elastomeric: 1 inch (25 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
      4) Phenolic: 1 inch (25 mm) thick.
      5) Polyisocyanurate: 1 inch (25 mm) thick.
      6) Polyolefin: 1 inch (25 mm) thick.

5. Roof Drain and Overflow Drain Bodies:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 1-1/2 inches (38 mm) thick.
      2) Flexible Elastomeric: 1 inch (25 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
      4) Phenolic: 1 inch (25 mm) thick.
      5) Polyisocyanurate: 1 inch (25 mm) thick.
      6) Polyolefin: 1 inch (25 mm) thick.

6. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Flexible Elastomeric: 1/2 inch (13 mm) OR 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.
      2) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) OR 1 inch (25 mm) thick.
      3) Polyolefin: 1/2 inch (13 mm) OR 3/4 inch (19 mm) OR 1 inch (25 mm) thick.

7. Sanitary Waste Piping Where Heat Tracing Is Installed:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 2 inches (50 mm) thick.
      2) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches (38 mm) thick.
      3) Phenolic: 1-1/2 inches (38 mm) thick.
      4) Polyisocyanurate: 1-1/2 inches (38 mm) thick.

8. Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 1-1/2 inches (38 mm) thick.
      2) Flexible Elastomeric: 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) OR 1 inch (25 mm), as directed, thick.
      4) Phenolic: 1 inch (25 mm) thick.
      5) Polyisocyanurate: 1 inch (25 mm) thick.
      6) Polyolefin: 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.
9. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet (3 m) of Drain Receiving Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 1-1/2 inches (38 mm) thick.
      2) Flexible Elastomeric: 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) OR 1 inch (25 mm), as directed, thick.
      4) Phenolic: 1 inch (25 mm) thick.
      5) Polysiocyanurate: 1 inch (25 mm) thick.
      6) Polyolefin: 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick.

10. Hot Service Drains:
    a. All Pipe Sizes: Insulation shall be one of the following:
      1) Calcium Silicate: 1-1/2 inches (38 mm) thick.
      2) Cellular Glass: 1-1/2 inches (38 mm) thick.
      3) Mineral-Fiber, Preformed Pipe, Type I or II: 1 inch (25 mm) thick.

11. Hot Service Vents:
    a. All Pipe Sizes: Insulation shall be one of the following:
      1) Calcium Silicate: 1-1/2 inches (38 mm) thick.
      2) Cellular Glass: 1-1/2 inches (38 mm) thick.
      3) Mineral-Fiber, Preformed Pipe, Type I or II: 1 inch (25 mm) thick.

U. Outdoor, Aboveground Piping Insulation Schedule
1. Domestic Water Piping:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 2 inches (50 mm) thick.
      2) Flexible Elastomeric: 2 inches (50 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.
      4) Phenolic: 2 inches (50 mm) thick.
      5) Polysiocyanurate: 2 inches (50 mm) thick.
      6) Polyolefin: 2 inches (50 mm) thick.
      7) Polystyrene: 2 inches (50 mm) thick.

2. Domestic Hot and Recirculated Hot Water:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 2 inches (50 mm) thick.
      2) Flexible Elastomeric: 2 inches (50 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.
      4) Phenolic: 2 inches (50 mm) thick.
      5) Polysiocyanurate: 2 inches (50 mm) thick.
      6) Polyolefin: 2 inches (50 mm) thick.

3. Sanitary Waste Piping Where Heat Tracing Is Installed:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Cellular Glass: 2 inches (50 mm) thick.
      2) Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.
      3) Phenolic: 2 inches (50 mm) thick.
      4) Polysiocyanurate: 2 inches (50 mm) thick.

4. Hot Service Drains:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Calcium Silicate: 1-1/2 inches (38 mm) thick.
      2) Cellular Glass: 1-1/2 inches (38 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

5. Hot Service Vents:
   a. All Pipe Sizes: Insulation shall be one of the following:
      1) Calcium Silicate: 1-1/2 inches (38 mm) thick.
      2) Cellular Glass: 1-1/2 inches (38 mm) thick.
      3) Mineral-Fiber, Preformed Pipe Insulation, Type II: 1 inch (25 mm) thick.
1. Loose-fill insulation, for belowground piping, is specified in Division 28.
2. Sanitary Waste Piping, All Sizes, Where Heat Tracing Is Installed: Cellular glass, 2 inches (50 mm) thick.
3. Chilled Water, All Sizes: Cellular glass, 2 inches (50 mm) thick.

W. Indoor, Field-Applied Jacket Schedule
1. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
2. If more than one material is listed, selection from materials listed is Contractor's option.
3. Equipment, Concealed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.
4. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.
5. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
   a. None.
   b. Aluminum OR Painted Aluminum, as directed, Smooth OR Stucco Embossed, as directed, with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   c. Stainless Steel, Type 304 OR Type 316, as directed, Smooth OR Stucco Embossed, as directed, with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.
6. Piping, Concealed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Painted Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

7. Piping, Exposed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

X. Outdoor, Field-Applied Jacket Schedule
1. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
2. If more than one material is listed, selection from materials listed is Contractor's option.
3. Equipment, Concealed:
   a. None.
   b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.
   c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   d. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
   e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

4. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):
   a. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   b. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

5. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
   a. Aluminum OR Painted Aluminum, as directed, Smooth OR Stucco Embossed, as directed with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   b. Stainless Steel, Type 304 OR Type 316, as directed, Smooth OR Stucco Embossed, as directed, with 1-1/4-Inch- (32-mm-) Deep Corrugations OR 2-1/2-Inch- (65-mm-) Deep Corrugations OR 4-by-1-Inch (100-by-25-mm) Box Ribs, as directed: 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

6. Piping, Concealed:
   a. None.
b. PVC OR PVC, Color-Coded by System, as directed: 20 mils (0.5 mm) OR 30 mils (0.8 mm), as directed, thick.

c. Aluminum, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.

d. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.

e. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

7. Piping, Exposed:
   a. PVC: 20 mils (0.5 mm) OR 30 mils (0.8 mm) OR 40 mils (1.0 mm), as directed, thick.
   b. Aluminum OR Painted Aluminum, as directed, Smooth OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.0 mm), as directed, thick.
   c. Stainless Steel, Type 304 OR Type 316, as directed, Smooth 2B Finish OR Corrugated OR Stucco Embossed, as directed, with Z-Shaped Locking Seam, as directed: 0.010 inch (0.25 mm) OR 0.016 inch (0.41 mm) OR 0.020 inch (0.51 mm) OR 0.024 inch (0.61 mm), as directed, thick.

Y. Underground, Field-Installed Insulation Jacket
   1. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

SECTION 22 11 16 00 - DOMESTIC WATER PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for domestic water piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
a. Under-building slab and aboveground domestic water pipes, tubes, fittings, and specialties inside the building.
b. Encasement for piping.
c. Specialty valves.
d. Flexible connectors.
e. Water meters furnished by utility company for installation by Contractor.
   OR
   Water meters.
f. Escutcheons.
g. Sleeves and sleeve seals.
h. Wall penetration systems.

C. Performance Requirements
1. Seismic Performance: Domestic water piping and support and installation shall withstand effects of earthquake motions determined according to ASCE/SEI 7.

D. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content.
3. Field quality-control reports.

E. Quality Assurance
1. Piping materials shall bear label, stamp, or other markings of specified testing agency.
2. Comply with NSF 14 for plastic, potable domestic water piping and components. Include marking "NSF-pw" on piping, as directed.
3. Comply with NSF 61 for potable domestic water piping and components.

F. Project Conditions
1. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of water service.
   b. Do not proceed with interruption of water service without the Owner's written permission.

1.2 PRODUCTS

A. Piping Materials
1. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
B. Copper Tube And Fittings

1. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) water tube, drawn temper.
   d. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
   e. Copper Pressure-Seal-Joint Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze or wrought-copper fitting with EPDM-rubber O-ring seal in each end.
   f. Copper Push-on-Joint Fittings:
      1) Description: Cast-copper fitting complying with ASME B16.18 or wrought-copper fitting complying with ASME B 16.22; with stainless-steel teeth and EPDM-rubber O-ring seal in each end instead of solder-joint ends.
   g. Copper-Tube Extruded-Tee Connections:
      1) Description: Tee formed in copper tube according to ASTM F 2014.

h. Grooved-Joint Copper-Tube Appurtenances:
   1) Copper Grooved-End Fittings: ASTM B 75 (ASTM B 75M) copper tube or ASTM B 584 bronze castings.
   2) Grooved-End Tube Couplings: Copper-tube dimensions and design similar to AWWA C606. Include ferrous housing sections, EPDM-rubber gaskets suitable for hot and cold water, and bolts and nuts.

2. Soft Copper Tube: ASTM B 88, Type K (ASTM B 88M, Type A) and ASTM B 88, Type L (ASTM B 88M, Type B) water tube, annealed temper.
   b. Copper Pressure-Seal-Joint Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber O-ring seal in each end.
      2) NPS 3 and NPS 4 (DN 80 and DN 100): Cast-bronze or wrought-copper fitting with EPDM-rubber O-ring seal in each end.

c. Ductile-Iron Pipe And Fittings

1. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   a. Standard-Pattern, Mechanical-Joint Fittings: AWWA C110, ductile or gray iron.
   b. Compact-Pattern, Mechanical-Joint Fittings: AWWA C153, ductile iron.
      1) Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   a. Standard-Pattern, Push-on-Joint Fittings: AWWA C110, ductile or gray iron.
      1) Gaskets: AWWA C111, rubber.
   b. Compact-Pattern, Push-on-Joint Fittings: AWWA C153, ductile iron.
      1) Gaskets: AWWA C111, rubber.

   a. Grooved-Joint, Ductile-Iron-Pipe Appurtenances:
      1) Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
      2) Grooved-End, Ductile-Iron-Pipe Couplings: AWWA C606 for ductile-iron-pipe dimensions. Include ferrous housing sections, EPDM-rubber gaskets suitable for hot and cold water, and bolts and nuts.

d. Galvanized-Steel Pipe And Fittings

d. Flanges: ASME B16.1, Class 125, cast iron.

e. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:
   1) Galvanized, Grooved-End Fittings for Galvanized-Steel Piping: ASTM A 47/A 47M, malleable-iron casting; ASTM A 106/A 106M, steel pipe; or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
   2) Grooved-End-Pipe Couplings for Galvanized-Steel Piping: AWWA C606 for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gaskets suitable for hot and cold water, and bolts and nuts.

E. CPVC Piping
1. CPVC Pipe: ASTM F 441/F 441M, Schedule 40 and Schedule 80.
   b. CPVC Threaded Fittings: ASTM F 437, Schedule 80.

F. PEX Tube And Fittings
1. PEX Distribution System: ASTM F 877, SDR 9 tubing.
   a. Fittings for PEX Tube: ASTM F 1807, metal-insert type with copper or stainless-steel crimp rings and matching PEX tube dimensions.
   b. Manifold: Multiple-outlet, plastic or corrosion-resistant-metal assembly complying with ASTM F 877; with plastic or corrosion-resistant-metal valve for each outlet.

G. PVC Pipe And Fittings
1. PVC Pipe: ASTM D 1785, Schedule 40 and Schedule 80.
   b. PVC Schedule 80 Threaded Fittings: ASTM D 2464.

H. Piping Joining Materials
1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free, unless otherwise indicated; full-face or ring type unless otherwise indicated.

2. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

   a. Use CPVC solvent cement that has a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

   a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

7. Plastic, Pipe-Flange Gaskets, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

I. Encasement For Piping
1. Standard: ASTM A 674 or AWWA C105.
2. Form: Sheet OR Tube, as directed.
3. Material: LLDPE film of 0.008-inch (0.20-mm) OR LLDPE film of 0.008-inch (0.20-mm) minimum thickness or high-density, cross-laminated PE film of 0.004-inch (0.10-mm) OR High-density, cross-laminated PE film of 0.004-inch (0.10-mm), as directed, minimum thickness.
4. Color: Black OR Natural, as directed.

J. Specialty Valves
1. Comply with requirements in Division 22 Section "General-duty Valves For Plumbing Piping" for general-duty metal valves.
2. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves, drain valves, backflow preventers, and vacuum breakers.
3. CPVC Union Ball Valves:
   a. Description:
      1) Standard: MSS SP-122.
      2) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73 deg F (23 deg C).
      3) Body Material: CPVC.
      4) Body Design: Union type.
      5) End Connections for Valves NPS 2 (DN 50) and Smaller: Detachable, socket OR threaded, as directed.
      6) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Detachable, socket OR threaded OR flanged, as directed.
      7) Ball: CPVC; full port.
      8) Seals: PTFE or EPDM-rubber O-rings.
      9) Handle: Tee shaped.
4. PVC Union Ball Valves:
   a. Description:
      1) Standard: MSS SP-122.
      2) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73 deg F (23 deg C).
      3) Body Material: PVC.
      4) Body Design: Union type.
      5) End Connections for Valves NPS 2 (DN 50) and Smaller: Detachable, socket OR threaded, as directed.
      6) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Detachable, socket OR threaded OR flanged, as directed.
      7) Ball: PVC; full port.
      8) Seals: PTFE or EPDM-rubber O-rings.
      9) Handle: Tee shaped.
5. CPVC Non-Union Ball Valves:
   a. Description:
      1) Standard: MSS SP-122.
      2) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73 deg F (23 deg C).
      3) Body Material: CPVC.
      4) Body Design: Non-union type.
      5) End Connections: Socket or threaded.
      6) Ball: CPVC; full or reduced port.
      7) Seals: PTFE or EPDM-rubber O-rings.
      8) Handle: Tee shaped.
6. PVC Non-Union Ball Valves:
   a. Description:
      1) Standard: MSS SP-122.
      2) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73 deg F (23 deg C).
      3) Body Material: PVC.
      4) Body Design: Non-union type.
5) End Connections: Socket or threaded.
6) Ball: PVC; full or reduced port.
7) Seals: PTFE or EPDM-rubber O-rings.
8) Handle: Tee shaped.

7. CPVC Butterfly Valves:
   a. Description:
      1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73
deg F (23 deg C).
      2) Body Material: CPVC.
      3) Body Design: Lug or wafer type.
      4) Seat: EPDM rubber.
      5) Seals: PTFE or EPDM-rubber O-rings.
      6) Disc: CPVC.
      7) Stem: Stainless steel.
      8) Handle: Lever.

8. PVC Butterfly Valves:
   a. Description:
      1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73
deg F (23 deg C).
      2) Body Material: PVC.
      3) Body Design: Lug or wafer type.
      4) Seat: EPDM rubber.
      5) Seals: PTFE or EPDM-rubber O-rings.
      6) Disc: PVC.
      7) Stem: Stainless steel.
      8) Handle: Lever.

9. CPVC Ball Check Valves:
   a. Description:
      1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73
deg F (23 deg C).
      2) Body Material: CPVC.
      3) Body Design: Union-type ball check.
      4) End Connections for Valves NPS 2 (DN 50) and Smaller: Detachable, socket OR
threaded, as directed.
      5) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Detachable,
socket OR threaded OR flanged, as directed.
      6) Ball: CPVC.
      7) Seals: EPDM- or FKM-rubber O-rings.

10. PVC Ball Check Valves:
    a. Description:
        1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73
deg F (23 deg C).
        2) Body Material: PVC.
        3) Body Design: Union-type ball check.
        4) End Connections for Valves NPS 2 (DN 50) and Smaller: Detachable, socket OR
threaded, as directed.
        5) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Detachable,
socket OR threaded OR flanged, as directed.
        6) Ball: PVC.
        7) Seals: EPDM- or FKM-rubber O-rings.

11. CPVC Gate Valves:
    a. Description:
        1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73
deg F (23 deg C).
        2) Body Material: CPVC.
        3) Body Design: Nonrising stem.
        4) End Connections for Valves NPS 2 (DN 50) and Smaller: Socket OR Threaded, as
directed.
5) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket OR Threaded OR Flanged, as directed.

6) Gate and Stem: Plastic.

7) Seals: EPDM rubber.

8) Handle: Wheel.

12. PVC Gate Valves:
   a. Description:
      1) Pressure Rating: 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, at 73 deg F (23 deg C).
      2) Body Material: PVC.
      3) Body Design: Nonrising stem.
      4) End Connections for Valves NPS 2 (DN 50) and Smaller: Socket OR Threaded, as directed.
      5) End Connections for Valves NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Socket OR Threaded OR Flanged, as directed.
      6) Gate and Stem: Plastic.
      7) Seals: EPDM rubber.
      8) Handle: Wheel.

K. Transition Fittings
   1. General Requirements:
      a. Same size as pipes to be joined.
      b. Pressure rating at least equal to pipes to be joined.
      c. End connections compatible with pipes to be joined.
   2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
   4. Plastic-to-Metal Transition Fittings:
      a. Description: CPVC OR PVC, as directed, one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert and one solvent-cement-socket threaded, as directed, end.
   5. Plastic-to-Metal Transition Unions:
      a. Description: CPVC OR PVC, as directed, four-part union. Include brass or stainless-steel, as directed, threaded end, solvent-cement-joint or threaded, as directed, plastic end, rubber O-ring, and union nut.

L. Dielectric Fittings
   1. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.
   2. Dielectric Unions:
      a. Description:
         1) Pressure Rating: 150 psig (1035 kPa) OR 250 psig (1725 kPa), as directed, at 180 deg F (82 deg C).
         2) End Connections: Solder-joint copper alloy and threaded ferrous.
   3. Dielectric Flanges:
      a. Description:
         1) Factory-fabricated, bolted, companion-flange assembly.
         2) Pressure Rating: 150 psig (1035 kPa) OR 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
         3) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
   4. Dielectric-Flange Kits:
      a. Description:
         1) Nonconducting materials for field assembly of companion flanges.
         2) Pressure Rating: 150 psig (1035 kPa).
         3) Gasket: Neoprene or phenolic.
4) Bolt Sleeves: Phenolic or polyethylene.
5) Washers: Phenolic with steel backing washers.

5. Dielectric Couplings:
   a. Description:
      1) Galvanized-steel coupling.
      2) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
      3) End Connections: Female threaded.
      4) Lining: Inert and noncorrosive, thermoplastic.

6. Dielectric Nipples:
   a. Description:
      1) Electroplated steel nipple complying with ASTM F 1545.
      2) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
      3) End Connections: Male threaded or grooved.
      4) Lining: Inert and noncorrosive, propylene.

M. Flexible Connectors
1. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
   a. Working-Pressure Rating: Minimum 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed.
   b. End Connections NPS 2 (DN 50) and Smaller: Threaded copper pipe or plain-end copper tube.
   c. End Connections NPS 2-1/2 (DN 65) and Larger: Flanged copper alloy.

2. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
   a. Working-Pressure Rating: Minimum 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed.
   b. End Connections NPS 2 (DN 50) and Smaller: Threaded steel-pipe nipple.
   c. End Connections NPS 2-1/2 (DN 65) and Larger: Flanged steel nipple.

N. Water Meters
1. Displacement-Type Water Meters:
   a. Description:
      1) Standard: AWWA C700.
      2) Pressure Rating: 150-psig (1035-kPa) working pressure.
      3) Body Design: Nutating disc; totalization meter.
      4) Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility.
      5) Case: Bronze.
      6) End Connections: Threaded.

2. Turbine-Type Water Meters:
   a. Description:
      1) Standard: AWWA C701.
      2) Pressure Rating: 150-psig (1035-kPa) working pressure.
      3) Body Design: Turbine; totalization meter.
      4) Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
      5) Case: Bronze.
      6) End Connections for Meters NPS 2 (DN 50) and Smaller: Threaded.
      7) End Connections for Meters NPS 2-1/2 (DN 65) and Larger: Flanged.

3. Compound-Type Water Meters:
   a. Description:
      1) Standard: AWWA C702.
      2) Pressure Rating: 150-psig (1035-kPa) working pressure.
      3) Body Design: With integral mainline and bypass meters; totalization meter.
      4) Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
      5) Case: Bronze.
      6) Pipe Connections: Flanged.
4. Fire-Service-Type Water Meters:
   a. Description:
      1) Standard: AWWA C703 and UL listing.
      2) Pressure Rating: 175-psig (1200-kPa) working pressure.
      3) Body Design:
         a) Proportional, Detector-Type Water Meters: With meter on bypass.
            i. Bypass Meter: AWWA C701, turbine OR AWWA C702, compound, as directed, type with bronze case; size not less than one-half nominal size of main-line meter.
         b) Turbine-Type Water Meters: With strainer, and with meter on bypass.
            i. Strainer: Full size, matching water meter.
            ii. Bypass Meter: AWWA C701, turbine type with bronze case; not less than NPS 2 (DN 50).
   4) Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
   5) Case: Bronze.
   6) Pipe Connections for Meters NPS 2 (DN 50) and Smaller: Threaded.
   7) Pipe Connections for Meters NPS 2-1/2 (DN 65) and Larger: Flanged.

5. Remote Registration System: Direct-reading type complying with AWWA C706; modified with signal transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.
   OR
   Remote Registration System: Encoder type complying with AWWA C707; modified with signal transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.

O. Escutcheons
   1. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.
   2. One Piece, Cast Brass: Polished, chrome-plated OR rough-brass, as directed, finish with setscrews.
   4. One Piece, Stamped Steel: Chrome-plated finish with setscrew OR spring clips, as directed.
   5. Split Casting, Cast Brass: Polished, chrome-plated OR rough-brass, as directed, finish with concealed hinge and setscrew.
   6. Split Plate, Stamped Steel: Chrome-plated finish with concealed OR exposed-rivet, as directed, hinge, setscrew OR spring clips, as directed.
   7. One-Piece Floor Plates: Cast-iron flange with holes for fasteners, as directed.
   8. Split-Casting Floor Plates: Cast brass with concealed hinge.

P. Sleeves
   1. Cast-Iron Wall Pipes: Fabricated of cast iron, and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
   2. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
   3. Molded-PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
   4. Molded-PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.
   5. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
   7. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
      a. Underdeck Clamp: Clamping ring with setscrews.

Q. Sleeve Seals
   1. Description: Modular sealing element unit, designed for field assembly, used to fill annular space between pipe and sleeve.
a. Sealing Elements: EPDM-rubber OR NBR, as directed, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
b. Pressure Plates: Carbon steel OR Plastic OR Stainless steel, as directed.
c. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements.

R. Wall Penetration Systems
1. Description: Wall-sleeve assembly, consisting of housing and gland, gaskets, and pipe sleeve.
   a. Carrier-Pipe Deflection: Up to 5 percent without leakage.
   b. Housing: Ductile-iron casting with hub, waterstop, anchor ring, and locking devices. Include gland, bolts, and nuts.
   c. Housing-to-Sleeve Gasket: EPDM rubber OR NBR, as directed.
   d. Housing-to-Carrier-Pipe Gasket: AWWA C111, EPDM rubber OR NBR, as directed.
   e. Pipe Sleeve: AWWA C151, ductile-iron pipe OR ASTM A 53/A 53M, Schedule 40, zinc-coated steel pipe, as directed.

S. Grout
2. Characteristics: Nonshrink; recommended for interior and exterior applications.
3. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

1.3 EXECUTION

A. Earthwork
1. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

B. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
2. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
3. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
4. Install underground copper tube and ductile-iron pipe in PE encasement according to ASTM A 674 or AWWA C105.
5. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping" for pressure gages and Division 22 Section "Domestic Water Piping Specialties" for drain valves and strainers.
6. Install shutoff valve immediately upstream of each dielectric fitting.
7. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for pressure-reducing valves.
8. Install domestic water piping level with 0.25 percent slope downward toward drain OR without pitch, as directed, and plumb.
9. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
10. Install seismic restraints on piping. Comply with requirements in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment" for seismic-restraint devices.
11. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
12. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

13. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

14. Install piping adjacent to equipment and specialties to allow service and maintenance.

15. Install piping to permit valve servicing.

16. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.

17. Install piping free of sags and bends.

18. Install fittings for changes in direction and branch connections.

19. Install PEX piping with loop at each change of direction of more than 90 degrees.

20. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

21. Install pressure gages on suction and discharge piping from each plumbing pump and packaged booster pump. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping" for pressure gages.

22. Install thermostats in hot-water circulation piping. Comply with requirements in Division 22 Section "Domestic Water Pumps" for thermostats.

23. Install thermometers on inlet OR inlet and outlet, as directed, piping from each water heater. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.

C. Joint Construction

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

2. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

5. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

6. Pressure-Sealed Joints: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.

7. Copper-Tubing, Push-on Joints: Clean end of tube. Measure insertion depth with manufacturer's depth gage. Join copper tube and push-on-joint fittings by inserting tube to measured depth.

8. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

11. Steel-Piping Grooved Joints: Cut OR Roll, as directed, groove end of pipe. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

12. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
13. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
   b. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   c. PVC Piping: Join according to ASTM D 2855.
14. PEX Piping Joints: Join according to ASTM F 1807.
15. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

D. Valve Installation
1. General-Duty Valves: Comply with requirements in Division 22 Section "General-duty Valves For Plumbing Piping" for valve installations.
2. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball or gate valves for piping NPS 2 (DN 50) and smaller. Use butterfly or gate valves for piping NPS 2-1/2 (DN 65) and larger.
3. Install drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping. Drain valves are specified in Division 22 Section "Domestic Water Piping Specialties".
   a. Hose-End Drain Valves: At low points in water mains, risers, and branches.
4. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Set balancing valves partly open to restrict but not stop flow. Use ball valves for piping NPS 2 (DN 50) and smaller and butterfly valves for piping NPS 2-1/2 (DN 65) and larger. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves.
5. Install calibrated balancing valves in each hot-water circulation return branch and discharge side of each pump and circulator. Set calibrated balancing valves partly open to restrict but not stop flow. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for calibrated balancing valves.

E. Transition Fitting Installation
1. Install transition couplings at joints of dissimilar piping.
2. Transition Fittings in Underground Domestic Water Piping:
   a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type coupling.
   b. NPS 2 (DN 50) and Larger: Sleeve-type coupling.
3. Transition Fittings in Aboveground Domestic Water Piping NPS 2 (DN 50) and Smaller: Plastic-to-metal transition fittings OR unions, as directed.

F. Dielectric Fitting Installation
1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric couplings OR nipples OR unions, as directed.
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges OR flange kits OR nipples, as directed.
4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

G. Flexible Connector Installation
1. Install flexible connectors in suction and discharge piping connections to each domestic water pump and in suction and discharge manifold connections to each domestic water booster pump, as directed.
2. Install bronze-hose flexible connectors in copper domestic water tubing.
3. Install stainless-steel-hose flexible connectors in steel domestic water piping.

H. Water Meter Installation
1. Rough-in domestic water piping for water meter installation, and install water meters, as directed, according to utility company's requirements.
2. Water meters will be furnished and installed by utility company.
   OR
   Install water meters according to AWWA M6 and utility company’s requirements.

3. Install displacement-type water meters with shutoff valve on water-meter inlet. Install valve on water-meter outlet and valved bypass around meter unless prohibited by authorities having jurisdiction.
   OR
   Install turbine-type water meters with shutoff valve on water-meter inlet. Install valve on water-meter outlet and valved bypass around meter unless prohibited by authorities having jurisdiction.
   OR
   Install compound-type water meters with shutoff valves on water-meter inlet and outlet and on valved bypass around meter. Support meters, valves, and piping on brick or concrete piers.
   OR
   Install fire-service water meters with shutoff valves on water-meter inlet and outlet and on full-size valved bypass around meter. Support meter, valves, and piping on brick or concrete piers.

4. Install remote registration system according to standards of utility company and of authorities having jurisdiction.

I. Hanger And Support Installation

1. Comply with requirements in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment" for seismic-restraint devices.

2. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for pipe hanger and support products and installation.
   a. Vertical Piping: MSS Type 8 or 42, clamps.
   b. Individual, Straight, Horizontal Piping Runs:
      1) 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
      2) Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
      3) Longer Than 100 Feet (30 m) If Indicated: MSS Type 49, spring cushion rolls.
   c. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   d. Base of Vertical Piping: MSS Type 52, spring hangers.

3. Support vertical piping and tubing at base and at each floor.

4. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch (10 mm).

5. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 3/4 (DN 20) and Smaller: 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 1 and NPS 1-1/4 (DN 25 and DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   c. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   d. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
   e. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
   f. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
   g. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.
   h. NPS 8 to NPS 12 (DN 200 to DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.

6. Install supports for vertical copper tubing every 10 feet (3 m).

7. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1-1/4 (DN 32) and Smaller: 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   b. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   c. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   d. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
   e. NPS 3 and NPS 3-1/2 (DN 80 and DN 90): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
   f. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
   g. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
   h. NPS 8 to NPS 12 (DN 200 to DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.

8. Install supports for vertical steel piping every 15 feet (4.5 m).
9. Install vinyl-coated hangers for CPVC piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1 (DN 25) and Smaller: 36 inches (900 mm) with 3/8-inch (10-mm) rod.
   b. NPS 1-1/4 to NPS 2 (DN 32 to DN 50): 48 inches (1200 mm) with 3/8-inch (10-mm) rod.
   c. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.
   d. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
   e. NPS 6 (DN 150): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
   f. NPS 8 (DN 200): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.
10. Install supports for vertical CPVC piping every 60 inches (1500 mm) for NPS 1 (DN 25) and smaller, and every 72 inches (1800 mm) for NPS 1-1/4 (DN 32) and larger.
11. Install vinyl-coated hangers for PEX piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1 (DN 25) and Smaller: 32 inches (815 mm) with 3/8-inch (10-mm) rod.
12. Install hangers for vertical PEX piping every 48 inches (1200 mm).
13. Install vinyl-coated hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 2 (DN 50) and Smaller: 48 inches (1200 mm) with 3/8-inch (10-mm) rod.
   b. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.
   c. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
   d. NPS 6 (DN 150): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
   e. NPS 8 (DN 200): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.
14. Install supports for vertical PVC piping every 48 inches (1200 mm).
15. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

J. Connections
  1. Drawings indicate general arrangement of piping, fittings, and specialties.
  2. Install piping adjacent to equipment and machines to allow service and maintenance.
  3. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
  4. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
     a. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
     b. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
     c. Plumbing Fixtures: Cold- and hot-water supply piping in sizes indicated, but not smaller than required by plumbing code. Comply with requirements in Division 22 Section(s) "Plumbing Fixtures" OR "Healthcare Plumbing Fixtures" OR "Emergency Plumbing Fixtures" OR "Security Plumbing Fixtures", as directed, for connection sizes.
     d. Equipment: Cold- and hot-water supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

K. Escutcheon Installation
  1. Install escutcheons for penetrations of walls, ceilings, and floors.
  2. Escutcheons for New Piping:
     a. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
     b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set screw OR stamped steel with set screw or spring clips OR stamped steel with spring clips, as directed.
     c. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set screw OR One piece or split plate, stamped steel with set screw OR Split plate, stamped steel with set screw, as directed.
d. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

e. Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

f. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3. Escutcheons for Existing Piping:
   b. Insulated Piping: Split plate, stamped steel with concealed OR exposed-rivet, as directed, hinge and spring clips.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set screw, as directed.
   e. Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set screw or spring clips, as directed.
   f. Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set screw or spring clips, as directed.
   g. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

L. Sleeve Installation
1. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.
2. Sleeves are not required for core-drilled holes.
3. Permanent sleeves are not required for holes formed by removable PE sleeves.
4. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.
5. Install sleeves in new partitions, slabs, and walls as they are built.
6. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants" for joint sealants.
7. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants" for joint sealants.
8. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals OR wall penetration systems, as directed, specified in this Section.
9. Seal space outside of sleeves in concrete slabs and walls with grout.
10. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.
11. Install sleeve materials according to the following applications:
   a. Sleeves for Piping Passing through Concrete Floor Slabs: Molded PE OR Molded PVC OR Steel pipe, as directed.
   b. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Steel pipe OR Stack sleeve fittings, as directed.
      1) Extend sleeves 2 inches (50 mm) above finished floor level.
      2) For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
   c. Sleeves for Piping Passing through Gypsum-Board Partitions:
1) PVC pipe OR Steel pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
2) Galvanized-steel sheet sleeves for pipes NPS 6 (DN 150) and larger.
3) Exception: Sleeves are not required for water supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.

d. Sleeves for Piping Passing through Concrete Roof Slabs: Molded PE OR Molded PVC OR Steel pipe, as directed.
e. Sleeves for Piping Passing through Exterior Concrete Walls:
   1) Steel pipe sleeves for pipes smaller than NPS 6 (DN 150).
   2) Cast-iron wall pipe sleeves for pipes NPS 6 (DN 150) and larger.
   3) Install sleeves that are large enough to provide 1-inch (25-mm) annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.
   4) Do not use sleeves when wall penetration systems are used.
f. Sleeves for Piping Passing through Interior Concrete Walls:
   1) PVC pipe OR Steel pipe, as directed, sleeves for pipes smaller than NPS 6 (DN 150).
   2) Galvanized-steel sheet sleeves for pipes NPS 6 (DN 150) and larger.

12. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section “Penetration Firestopping” for firestop materials and installations.

M. Sleeve Seal Installation
1. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.
2. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

N. Wall Penetration System Installation
1. Install wall penetration systems in new, exterior concrete walls.
2. Assemble wall penetration system components with sleeve pipe. Install so that end of sleeve pipe and face of housing are flush with wall. Adjust locking devices to secure sleeve pipe in housing.

O. Identification
1. Identify system components. Comply with requirements in Division 22 Section "Identification For Plumbing Piping And Equipment" for identification materials and installation.
2. Label pressure piping with system operating pressure.

P. Field Quality Control
1. Perform tests and inspections.
2. Piping Inspections:
   a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
   b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
      2) Final Inspection: Arrange final inspection for authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
   c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
   d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
3. Piping Tests:
   a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.

c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.

d. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.

e. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.

f. Prepare reports for tests and for corrective action required.

4. Domestic water piping will be considered defective if it does not pass tests and inspections.

5. Prepare test and inspection reports.

Q. Adjusting

1. Perform the following adjustments before operation:

   a. Close drain valves, hydrants, and hose bibbs.
   b. Open shutoff valves to fully open position.
   c. Open throttling valves to proper setting.
   d. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
     1) Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide flow of hot water in each branch.
     2) Adjust calibrated balancing valves to flows indicated.
   e. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
   f. Remove and clean strainer screens. Close drain valves and replace drain plugs.
   g. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
   h. Check plumbing specialties and verify proper settings, adjustments, and operation.

R. Cleaning

1. Clean and disinfect potable and non-potable, as directed, domestic water piping as follows:

   a. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   b. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
     1) Flush piping system with clean, potable water until dirty water does not appear at outlets.
     2) Fill and isolate system according to either of the following:
        a) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.
        b) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for three hours.
     3) Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
     4) Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

2. Clean non-potable domestic water piping as follows:

   a. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   b. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
     1) Flush piping system with clean, potable water until dirty water does not appear at outlets.
2) Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

3. Prepare and submit reports of purging and disinfecting activities.
4. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

S. Piping Schedule
1. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
2. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
3. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
4. Under-building-slab, domestic water, building service piping, NPS 3 (DN 80) and smaller, shall be one of the following:
   a. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper solder-joint fittings; and brazed OR copper pressure-seal fittings; and pressure-sealed, as directed, joints.
   b. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
5. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 (DN 100 to DN 200) and larger, shall be one of the following:
   a. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A) OR ASTM B 88, Type L (ASTM B 88M, Type B), as directed; wrought-copper solder-joint fittings; and brazed joints.
   b. Mechanical-joint, ductile-iron pipe; standard-pattern OR compact-pattern, as directed, mechanical-joint fittings; and mechanical joints.
   c. Push-on-joint, ductile-iron pipe; standard-pattern OR compact-pattern, as directed, push-on-joint fittings; and gasketed joints.
   d. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.
   e. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
6. Under-building slab, combined domestic water, building-service, and fire-service-main piping, NPS 6 to NPS 12 (DN 150 to DN 300), shall be one of the following:
   a. Mechanical-joint, ductile-iron pipe; standard-pattern OR compact-pattern, as directed, mechanical-joint fittings; and mechanical joints.
   b. Push-on-joint, ductile-iron pipe; standard-pattern OR compact-pattern, as directed, push-on-joint fittings; and gasketed joints.
   c. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.
7. Under-building-slab, domestic water piping, NPS 2 (DN 50) and smaller, shall be one of the following:
   a. Hard OR Soft, as directed, copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper solder-joint fittings; and brazed OR copper pressure-seal-joint fittings; and pressure-sealed, as directed, joints.
   b. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
8. Aboveground domestic water piping, NPS 2 (DN 50) and smaller, shall be one of the following:
   a. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
   b. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; cast-copper OR wrought-copper, as directed, solder-joint fittings; and brazed OR soldered, as directed, joints.
   c. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; copper pressure-seal-joint fittings; and pressure-sealed joints.
   d. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B) OR, as directed; copper push-on-joint fittings; and push-on joints.
   e. CPVC, Schedule 40 pipe; CPVC, Schedule 40 OR Schedule 80 pipe; CPVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
f. CPVC, Schedule 80 pipe; CPVC, Schedule 80 threaded fittings; and threaded joints.
g. CPVC Tubing System: CPVC tube; CPVC socket fittings; and solvent-cemented joints. NPS 1-1/2 (DN 40) and NPS 2 (DN 50) CPVC pipe with CPVC socket fittings may be used instead of tubing.
h. PEX Tube, NPS 1 (DN 25) and smaller; fittings for PEX tube; and crimped joints.
i. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.

9. Aboveground domestic water piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
   a. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; cast-copper OR wrought-copper, as directed, solder-joint fittings; and brazed OR soldered, as directed, joints.
   b. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; copper pressure-seal-joint fittings; and pressure-sealed joints.
   c. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B, as directed; grooved-joint copper-tube appurtenances; and grooved joints.
   d. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
   e. Galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
   f. CPVC, Schedule 40 pipe; CPVC, Schedule 40 OR Schedule 80 pipe; CPVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
   g. CPVC, Schedule 80 pipe; CPVC, Schedule 80 threaded fittings; and threaded joints.
   h. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.

10. Aboveground domestic water piping, NPS 5 to NPS 8 (DN 125 to DN 200), shall be one of the following:
    a. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; cast-copper OR wrought-copper, as directed, solder-joint fittings; and brazed OR soldered, as directed, joints.
    b. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B), as directed; grooved-joint copper-tube appurtenances; and grooved joints.
    c. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
    d. Galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
    e. CPVC, Schedule 40 pipe; CPVC, Schedule 40 OR Schedule 80 pipe; CPVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.
    f. CPVC, Schedule 80 pipe; CPVC, Schedule 80 threaded fittings; and threaded joints.
    g. PVC, Schedule 40 pipe; PVC, Schedule 40 OR Schedule 80 pipe; PVC, Schedule 80, as directed, socket fittings; and solvent-cemented joints.

11. Aboveground, combined domestic-water-service and fire-service-main piping, NPS 6 to NPS 12 (DN 150 to DN300), shall be one of the following:
    a. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.
    b. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
    c. Galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

T. Valve Schedule
1. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   a. Shutoff Duty: Use ball or gate valves for piping NPS 2 (DN 50) and smaller. Use butterfly, ball, or gate valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
   b. Throttling Duty: Use ball or globe valves for piping NPS 2 (DN 50) and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
22 - Plumbing

DASNY, Downstate

c. Hot-Water Circulation Piping, Balancing Duty: Calibrated OR Memory-stop, as directed, balancing valves.
d. Drain Duty: Hose-end drain valves.

2. Use check valves to maintain correct direction of domestic water flow to and from equipment.
3. Iron grooved-end valves may be used with grooved-end piping.
4. CPVC and PVC valves matching piping materials may be used.

END OF SECTION 22 11 16 00
SECTION 22 11 16 00a - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   2. Hubless, cast-iron soil pipe and fittings.
   3. Galvanized-steel pipe and fittings.
   4. Stainless steel drainage pipe and fittings.
   5. Ductile-iron pipe and fittings.
   6. Copper tube and fittings.
   7. ABS pipe and fittings.
   8. PVC pipe and fittings.
  10. Encasement for underground metal piping.

B. Related Requirements:
   1. Section 221313 "Facility Sanitary Sewers" for sanitary sewerage piping and structures outside the building.
   2. Section 221329 "Sanitary Sewerage Pumps" for effluent and sewage pumps.
   3. Section 226600 "Chemical-Waste Systems for Laboratory and Healthcare Facilities" for chemical-waste and vent piping systems.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
   1. <Double click to insert sustainable design text for adhesives.>

C. Shop Drawings: For hubless, single-stack drainage system. Include plans, elevations, sections, and details.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and elevations, or Building Information Model (BIM) drawn to scale, showing items described in this Section and coordinated with all building trades.

B. Seismic Qualification Certificates: For waste and vent piping, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Detailed description of piping anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.
1.4 FIELD CONDITIONS

A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify [Architect] [Construction Manager] [Owner] no fewer than [two] <Insert number> days in advance of proposed interruption of sanitary waste service.
2. Do not proceed with interruption of sanitary waste service without [Architect's] [Construction Manager's] [Owner's] written permission.

1.5 WARRANTY

A. Listed manufacturers to provide labeling and warranty of their respective products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Components and installation are capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: [10 ft. head of water (30 kPa head of water)] <Insert pressure>.
2. Waste, Force-Main Piping: [50 psig (345 kPa)] [100 psig (690 kPa)] [150 psig (1035 kPa)] <Insert pressure>.

B. Seismic Performance: Soil, waste, and vent piping and support and installation to withstand the effects of earthquake motions determined in accordance with [ASCE/SEI 7] <Insert requirement>. See Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment":

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[ and the unit will be fully operational after the seismic event]."
2. Component Importance Factor: [1.5] [1.0].

C. <Insert requirements for Component Amplification Factor and Component Response Modification Factor>.

2.2 PIPING MATERIALS

A. Piping materials to bear label, stamp, or other markings of specified testing agency.

B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>

B. Pipe and Fittings:
1. Marked with CISPI collective trademark.
2. ASTM A74, [service] [and] [extra-heavy] cast iron.

C. Gaskets: ASTM C564, rubber.
D. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.4 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
B. Pipe and Fittings:
   1. Marked with CISPI collective trademark.
   2. ASTM A888 or CISPI 301.
   1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
D. CISPI, Hubless-Piping Couplings:
   1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
   3. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.
E. Heavy-Duty, Hubless-Piping Couplings:
   1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
   3. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

2.5 GALVANIZED-STEEL PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
B. Galvanized-Steel Pipe: ASTM A53/A53M, Type E, standard-weight cast iron. Include square-cut-grooved or threaded ends matching joining method.
D. Steel Pipe Pressure Fittings:
   1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

F. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
3. Grooved Mechanical Couplings for Galvanized-Steel Piping: ASTM F1476, Type I. Include ferrous housing sections with continuous curved keys, EPDM-rubber gasket suitable for hot and cold water, and bolts and nuts.

2.6 STAINLESS STEEL DRAINAGE PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
B. Description: Comply with requirements of ASME A112.3.1 drainage pattern.
C. Material: [Type 304 stainless steel] [Type 316L stainless steel] [Type 304 or 316L stainless steel].
D. Pipe Construction: Seamless.
E. Internal Sealing Rings: [EPDM] [NBR] <Insert material> , marked or color-coded for the application.
F. Joints: Single or double, socket and spigot ends.

2.7 DUCTILE-IRON PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
B. Ductile-Iron, Mechanical-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot ends unless grooved or flanged ends are indicated.
3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

C. Ductile-Iron, Push-on-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with push-on-joint bell and plain spigot ends unless grooved or flanged ends are indicated.

E. Ductile-Iron, Grooved-End Pipe Appurtenances:

2. Grooved Mechanical Couplings for Ductile-Iron Pipe: ASTM F1476, Type I. Include ferrous housing sections with continuous curved keys, EPDM-rubber center-leg gasket suitable for hot and cold water, and bolts and nuts.

2.8 COPPER TUBE AND FITTINGS

A. Copper Type DWV Tube: ASTM B306, drainage tube, drawn temper.

B. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.

C. Hard Copper Tube: ASTM B88, Type L and Type M (ASTM B88M, Type B and Type C), water tube, drawn temper.

D. Soft Copper Tube: ASTM B88, Type L (ASTM B88M, Type B), water tube, annealed temper.

E. Copper Pressure Fittings:

2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

G. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.

1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

H. Solder: ASTM B32, lead free with ASTM B813, water-flushable flux.

2.9 ABS PIPE AND FITTINGS

A. NSF Marking: Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

D. Cellular-Core ABS Pipe: ASTM F628, Schedule 40.

E. ABS Socket Fittings: ASTM D2661, made in accordance with ASTM D3311, drain, waste, and vent patterns.

F. Solvent Cement: ASTM D2235.

1. <Double click to insert sustainable design text for solvent cement.>

2. <Double click to insert sustainable design text for solvent cement.>
2.10 PVC PIPE AND FITTINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>

B. Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic drain, waste, and vent piping and "NSF-sewer" marking for plastic sewer piping.

D. Cellular-Core PVC Pipe: ASTM F891, Schedule 40.

E. PVC Socket Fittings: ASTM D2665, made in accordance with ASTM D3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.

F. Adhesive Primer: ASTM F656.
   1. <Double click to insert sustainable design text for adhesive primer.>
   2. <Double click to insert sustainable design text for adhesive primer.>

G. Solvent Cement: ASTM D2564.
   1. <Double click to insert sustainable design text for solvent cement.>

2.11 SPECIALTY PIPE FITTINGS

A. Transition Couplings:
   1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections of same size as and compatible with pipes to be joined.
   2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
   3. Unshielded, Nonpressure Transition Couplings:
      a. <Double click to find, evaluate, and insert list of manufacturers and products.>
      c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
      d. End Connections: Same size as and compatible with pipes to be joined.
      e. Sleeve Materials:
         2) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926 PVC.
         3) For Dissimilar Pipes: ASTM D5926 PVC or other material compatible with pipe materials being joined.
   4. Shielded, Nonpressure Transition Couplings:
      a. <Double click to find, evaluate, and insert list of manufacturers and products.>
      c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
      d. End Connections: Same size as and compatible with pipes to be joined.
   5. Pressure Transition Couplings:
a. <Double click here to find, evaluate, and insert list of manufacturers and products.>

c. Description: Metal sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.

d. Center-Sleeve Material: [Manufacturer's standard] [Carbon steel] [Stainless steel] [Ductile iron] [Malleable iron].

e. Gasket Material: Natural or synthetic rubber.

f. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

2. Dielectric Unions:

   a. <Double click here to find, evaluate, and insert list of manufacturers and products.>

   b. Description:

      1) Standard: ASSE 1079.
      2) Pressure Rating: [125 psig (860 kPa) minimum at 180 deg F (82 deg C)] [150 psig (1035 kPa)] [250 psig (1725 kPa)] <Insert pressure>.
      3) End Connections: Solder-joint copper alloy and threaded ferrous.

3. Dielectric Flanges:

   a. <Double click here to find, evaluate, and insert list of manufacturers and products.>

   b. Description:

      1) Standard: ASSE 1079.
      2) Factory-fabricated, bolted, companion-flange assembly.
      3) Pressure Rating: [125 psig (860 kPa) minimum at 180 deg F (82 deg C)] [150 psig (1035 kPa)] [175 psig (1200 kPa)] [300 psig (2070 kPa)] <Insert pressure>.
      4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

4. Dielectric-Flange Insulating Kits:

   a. <Double click here to find, evaluate, and insert list of manufacturers and products.>

   b. Description:

      1) Nonconducting materials for field assembly of companion flanges.
      2) Pressure Rating: [150 psig (1035 kPa)] <Insert pressure>.
      3) Gasket: Neoprene or phenolic.
      4) Bolt Sleeves: Phenolic or polyethylene.
      5) Washers: Phenolic with steel backing washers.

5. Dielectric Nipples:

   a. <Double click here to find, evaluate, and insert list of manufacturers and products.>

   b. Description:

      1) Standard: IAPMO PS 66.
      2) Electroplated steel nipple.
      3) Pressure Rating: [300 psig (2070 kPa) at 225 deg F (107 deg C)] <Insert pressure and temperature>.
      4) End Connections: Male threaded or grooved.
      5) Lining: Inert and noncorrosive, propylene.
2.12 ENCASEMENT FOR UNDERGROUND METAL PIPING

A. Standard: ASTM A674 or AWWA C105/A 21.5.

B. Material: [Linear low-density polyethylene film of 0.008-inch (0.20-mm)] [or] [high-density, cross-laminated polyethylene film of 0.004-inch (0.10-mm)] minimum thickness.

C. Form: [Sheet] [or] [tube].

D. Color: [Black] [or] [natural] <Insert color>.

PART 3 - EXECUTION

3.1 EARTH MOVING

A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 “Earth Moving.”

3.2 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.
   1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
   2. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in [Section 220548 “Vibration and Seismic Controls for Plumbing Piping and Equipment”] [Section 220548.13 “Vibration Controls for Plumbing Piping and Equipment”].

K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.
   1. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical.
2. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe.
   a. Straight tees, elbows, and crosses may be used on vent lines.
3. Do not change direction of flow more than 90 degrees.
4. Use proper size of standard increasers and reducers if pipes of different sizes are connected.
   a. Reducing size of waste piping in direction of flow is prohibited.

L. Lay buried building waste piping beginning at low point of each system.
1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
3. Maintain swab in piping and pull past each joint as completed.

M. Install soil and waste and vent piping at the following minimum slopes unless otherwise indicated:
1. Building Sanitary Waste: Two percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; [1] [2] <Insert number> percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
2. Horizontal Sanitary Waste Piping: [Two] <Insert number> percent downward in direction of flow.
3. Vent Piping: [One] <Insert number> percent down toward vertical fixture vent or toward vent stack.

1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.

O. Install steel piping in accordance with applicable plumbing code.

P. Install stainless-steel piping in accordance with ASME A112.3.1 and applicable plumbing code.

Q. Install aboveground copper tubing in accordance with CDA's "Copper Tube Handbook."

R. Install aboveground ABS piping in accordance with ASTM D2661.

S. Install aboveground PVC piping in accordance with ASTM D2665.

T. Install underground [ABS] [and] [PVC] piping in accordance with ASTM D2321.

U. Install engineered soil and waste and vent piping systems as follows:
3. Reduced-Size Venting: Comply with standards of authorities having jurisdiction.

V. Install underground, ductile-iron, force-main piping according to AWWA C600.
1. Install buried piping inside building between wall and floor penetrations and connection to sanitary sewer piping outside building with restrained joints.
2. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
3. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.

W. Install underground, copper, force-main tubing in accordance with CDA's "Copper Tube Handbook."

  1. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.

X. Install force mains at elevations indicated.

Y. Plumbing Specialties:

  1. Install backwater valves in sanitary waster gravity-flow piping.

     a. Comply with requirements for backwater valves specified in Section 221319 "Sanitary Waste Piping Specialties."

  2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary waste gravity-flow piping.

     a. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping.

     b. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."

  3. Install drains in sanitary waste gravity-flow piping.

     a. Comply with requirements for drains specified in Section 221319 "Sanitary Waste Piping Specialties."

Z. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

AA. Install sleeves for piping penetrations of walls, ceilings, and floors.

  1. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

BB. Install sleeve seals for piping penetrations of concrete walls and slabs.

  1. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

CC. Install escutcheons for piping penetrations of walls, ceilings, and floors.

  1. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION

C. Hubless, Cast-Iron Soil Piping Coupled Joints:

D. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1.
   1. Cut threads full and clean using sharp dies.
   2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
      a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
      b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
      c. Do not use pipe sections that have cracked or open welds.

E. Join stainless-steel pipe and fittings with gaskets in accordance with ASME A112.3.1.

F. Join copper tube and fittings with soldered joints in accordance with ASTM B828. Use ASTM B813, water-flushable, lead-free flux and ASTM B32, lead-free-alloy solder.

G. Grooved Joints: Cut groove ends of pipe in accordance with AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

H. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

I. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:
   1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. ABS Piping: Join in accordance with ASTM D2235 and ASTM D2661 appendixes.
   3. PVC Piping: Join in accordance with ASTM D2855 and ASTM D2665 appendixes.

J. Joint Restraints and Sway Bracing:
   1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:
      a. Provide axial restraint for pipe and fittings [5 inches (125 mm)] <Insert dimensions> and larger, upstream and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
      b. Provide rigid sway bracing for pipe and fittings [4 inches (100 mm)] <Insert dimensions> and larger, upstream and downstream of all changes in direction 45 degrees and greater.
      c. Provide rigid sway bracing for pipe and fittings [5 inches (125 mm)] <Insert dimensions> and larger, upstream and downstream of all changes in direction and branch openings.

3.4 SPECIALTY PIPE FITTING INSTALLATION

A. Transition Couplings:
   1. Install transition couplings at joints of piping with small differences in ODs.
   2. In Waste Drainage Piping: [Unshielded] [Shielded], nonpressure transition couplings.
   4. In Underground Force Main Piping:
a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
b. NPS 2 (DN 50) and Larger: Pressure transition couplings.

B. Dielectric Fittings:
1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for [NPS 2 (DN 50)] <Insert pipe size> and Smaller: Use dielectric [nipples] [unions].
3. Dielectric Fittings for [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)] <Insert pipe size range>: Use dielectric [flanges] [flange kits] [nipples].

3.5 VALVE INSTALLATION

A. General valve installation requirements for general-duty valve installation are specified in the following Sections:
1. Section 220523.12 "Ball Valves for Plumbing Piping."
2. Section 220523.13 "Butterfly Valves for Plumbing Piping."
3. Section 220523.14 "Check Valves for Plumbing Piping."
4. Section 220523.15 "Gate Valves for Plumbing Piping."

B. Shutoff Valves:
1. Install shutoff valve on each sewage pump discharge.
2. Install [gate] [full-port ball] valve for piping NPS 2 (DN 50) and smaller.
3. Install [gate] <Insert type> valve for piping NPS 2-1/2 (DN 65) and larger.

C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to backflow.
1. Horizontal Piping: Horizontal backwater valves.[Use normally closed type unless otherwise indicated.]
2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
3. Install backwater valves in accessible locations.
4. Comply with requirements for backwater valve specified in Section 221319 "Sanitary Waste Piping Specialties."

3.6 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

B. Comply with requirements for pipe hanger and support devices and installation specified in [Section 220529 "Hangers and Supports for Plumbing Piping and Equipment"] [Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment"].
1. Install [carbon-steel] <Insert material> pipe hangers for horizontal piping in noncorrosive environments.
2. Install [stainless steel] [fiberglass] pipe hangers for horizontal piping in corrosive environments.
3. Install [carbon-steel] <Insert material> pipe support clamps for vertical piping in noncorrosive environments.
4. Install stainless steel pipe support clamps for vertical piping in corrosive environments.

5. Vertical Piping: MSS Type 8 or Type 42 clamps.

6. Install individual, straight, horizontal piping runs:
   a. 100 Ft. (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer Than 100 Ft. (30 m): MSS Type 43, adjustable roller hangers.
   c. Longer Than 100 Ft. (30 m) if Indicated: MSS Type 49, spring cushion rolls.

7. Multiple, Straight, Horizontal Piping Runs 100 Ft. (30 m) or Longer: MSS Type 44 pipe rolls.
   Support pipe rolls on trapeze.

8. Base of Vertical Piping: MSS Type 52 spring hangers.

C. Install hangers for [cast-iron] [steel] [stainless steel] [and] [copper] soil piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

D. Install hangers for [ABS] [and] [PVC] piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

E. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting[, valve,] and coupling.

F. Support vertical runs of [cast-iron] [steel] [stainless steel] [and] [copper] soil piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

G. Support vertical runs of [ABS] [and] [PVC] piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect waste and vent piping to the following:
   1. Plumbing Fixtures: Connect waste piping in sizes indicated, but not smaller than required by plumbing code.
   2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
   3. Plumbing Specialties: Connect waste and vent piping in sizes indicated, but not smaller than required by plumbing code.
   4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
   5. Install horizontal backwater valves [with cleanout cover flush with floor] [in pit with pit cover flush with floor] <Insert description>.
   6. Comply with requirements for [backwater valves] [cleanouts] [and] [drains] specified in Section 221319 “Sanitary Waste Piping Specialties.”
   7. Equipment: Connect waste piping as indicated.
      a. Provide shutoff valve if indicated and union for each connection.
      b. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.

D. Connect force-main piping to the following:
1. Sanitary Sewer: To exterior force main.
2. Sewage Pump: To sewage pump discharge.

E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

F. Make connections in accordance with the following unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping.

B. Comply with requirements for identification specified in Section 220553 “Identification for Plumbing Piping and Equipment.”

3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary waste and vent piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
   a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced waste and vent piping until it has been tested and approved.
   a. Expose work that was covered or concealed before it was tested.

3. Roughing-in Plumbing Test Procedure: Test waste and vent piping except outside leaders on completion of roughing-in.
   a. Close openings in piping system and fill with water to point of overflow, but not less than 10 ft. head of water (30 kPa head of water).
b. From 15 minutes before inspection starts to completion of inspection, water level must not drop.
c. Inspect joints for leaks.

4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight.
   a. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1 inch wg (250 Pa).
   b. Use U-tube or manometer inserted in trap of water closet to measure this pressure.
   c. Air pressure must remain constant without introducing additional air throughout period of inspection.
   d. Inspect plumbing fixture connections for gas and water leaks.

5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

E. Test force-main piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
   1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.
      a. Expose work that was covered or concealed before it was tested.
   2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials.
      a. Isolate test source and allow to stand for four hours.
      b. Leaks and loss in test pressure constitute defects that must be repaired.
   3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
   4. Prepare reports for tests and required corrective action.

3.10 CLEANING AND PROTECTION
A. Clean interior of piping. Remove dirt and debris as work progresses.
B. Protect sanitary waste and vent piping during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
C. Place plugs in ends of uncompleted piping at end of day and when work stops.
D. Exposed [ABS] [and] [PVC] Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.
E. Repair damage to adjacent materials caused by waste and vent piping installation.

3.11 PIPING SCHEDULE
A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
B. Aboveground, soil and waste piping [NPS 4 (DN 100) and smaller] <Insert pipe size range> are to be [any of] the following:

1. Service cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings [and hubless, single-stack aerator fittings]; [CISPI] [heavy-duty] hubless-piping couplings; and coupled joints.
4. Stainless steel pipe and fittings, sealing rings, and gasketed joints.
5. Copper Type DWV tube, copper drainage fittings, and soldered joints.
6. [Solid-wall] [Cellular-core] ABS pipe, ABS socket fittings, and solvent-cemented joints.
7. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
8. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

C. Aboveground, soil and waste piping [NPS 5 (DN 125) and larger] <Insert pipe size range> are to be [any of] the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings [and hubless, single-stack aerator fittings]; [CISPI] [heavy-duty] hubless-piping couplings; and coupled joints.
4. Stainless steel pipe and fittings, sealing rings, and gasketed joints.
5. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
6. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

D. Aboveground, vent piping [NPS 4 (DN 100) and smaller] <Insert pipe size range> is to be [any of] the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings [and hubless, single-stack aerator fittings]; [CISPI] [heavy-duty] hubless-piping couplings; and coupled joints.
4. Stainless steel pipe and fittings gaskets, and gasketed joints.
5. Copper Type DWV tube, copper drainage fittings, and soldered joints.
   a. Option for Vent Piping, NPS 2-1/2 and NPS 3-1/2 (DN 65 and DN 90): Hard copper tube, Type M (Type C); copper pressure fittings; and soldered joints.
6. [Solid-wall] [Cellular-core] ABS pipe, ABS socket fittings, and solvent-cemented joints.
7. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
8. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

E. Aboveground, vent piping [NPS 5 (DN 125) and larger] <Insert pipe size range> is to be [any of] the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; [CISPI] [heavy-duty] hubless-piping couplings; and coupled joints.
4. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
5. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

F. Underground, soil, waste, and vent piping [NPS 4 (DN 100) and smaller] <Insert pipe size range> are to be [any of] the following:

1. [Extra-heavy] [Service] cast-iron soil piping; [gaskets; and gasketed] [caulking materials; and caulked] joints.
2. Hubless, cast-iron soil pipe and fittings; [CISPI] [heavy-duty] [cast-iron] hubless-piping couplings; and coupled joints.
3. Stainless steel pipe and fittings, gaskets, and gasketed joints.
4. [Solid-wall] [Cellular-core] ABS pipe, ABS socket fittings, and solvent-cemented joints.
5. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
6. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

G. Underground, soil and waste piping [NPS 5 (DN 125) and larger] <Insert pipe size range> are to be [any of] the following:
   1. [Extra-heavy] [Service], cast-iron soil piping; [gaskets; and gasketed] [caulking materials; and caulked] joints.
   2. Hubless, cast-iron soil pipe and fittings; [CISPI] [heavy-duty] [cast-iron] hubless-piping couplings; coupled joints.
   3. [Solid-wall] [Cellular-core] PVC pipe, PVC socket fittings, and solvent-cemented joints.
   4. Dissimilar Pipe-Material Couplings: [Unshielded] [Shielded], nonpressure transition couplings.

H. Aboveground sanitary-sewage force mains [NPS 1-1/2 and NPS 2 (DN 40 and DN 50)] <Insert pipe size range> are to be [any of] the following:
   1. Hard copper tube, Type L (Type B); copper pressure fittings; and soldered joints.
   2. Galvanized-steel pipe, pressure fittings, and threaded joints.

I. Aboveground sanitary-sewage force mains [NPS 2-1/2 to NPS 6 (DN 65 to DN 150)] <Insert pipe size range> are to be [any of] the following:
   1. Hard copper tube, Type L (Type B); copper pressure fittings; and soldered joints.
   2. Galvanized-steel pipe, pressure fittings, and threaded joints.
   3. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

J. Underground sanitary-sewage force mains [NPS 4 (DN 100) and smaller] <Insert pipe size range> are to be [any of] the following:
   1. [Hard] [Soft] copper tube, Type L (Type B); [wrought-]copper pressure fittings; and soldered joints.
   2. Ductile-iron, mechanical-joint piping and mechanical joints.
   3. Ductile-iron, push-on-joint piping and push-on joints.
   4. Ductile-iron, grooved-joint piping and grooved joints.
   5. Fitting-type transition coupling for piping smaller than NPS 1-1/2 (DN 40) and pressure transition coupling for NPS 1-1/2 (DN 40) and larger if dissimilar pipe materials.

K. Underground sanitary-sewage force mains [NPS 5 (DN 125) and larger] <Insert pipe size range> are to be [any of] the following:
   1. Hard copper tube, Type L (Type B); [wrought-]copper pressure fittings; and soldered joints.
   2. Ductile-iron, mechanical-joint piping and mechanical joints.
   3. Ductile-iron, push-on-joint piping and push-on joints.
   4. Ductile-iron, grooved-joint piping and grooved joints.
   5. Pressure transition couplings if dissimilar pipe materials.

END OF SECTION 22 11 16 00a
SECTION 22 11 16 00b - STORM DRAINAGE PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for storm drainage piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes:
   a. Pipe, tube, and fittings.
   b. Special pipe fittings.
   c. Encasement for underground metal piping.

C. Performance Requirements
1. Components and installation shall be capable of withstanding the following minimum working-pressure, unless otherwise indicated:
   a. Storm Drainage Piping: 10-foot head of water (30 kPa).
   b. Storm Drainage, Force-Main Piping: 50 psig (345 kPa) OR 100 psig (690 kPa) OR 150 psig (1035 kPa), as directed.
2. Seismic Performance: Soil, waste, and vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures."

D. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content.
3. Shop Drawings: For controlled-flow OR siphonic roof drainage system, as directed by the Owner. Include calculations, plans, and details. Controlled-Flow Storm Drainage System: Include calculations, plans, and details.
4. Seismic Qualification Certificates: For storm drainage piping, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
5. Field quality-control inspection and test reports.

E. Quality Assurance
1. Piping materials shall bear label, stamp, or other markings of specified testing agency.

F. Project Conditions
1. Interruption of Existing Storm-Drainage Service: Do not interrupt service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of storm-drainage service.
b. Do not proceed with interruption of storm-drainage service without the Owner’s written permission.

1.2 PRODUCTS

A. Piping Materials
   1. Refer to Part 1.3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining methods for specific services, service locations, and pipe sizes.

B. Hub-And-Spigot, Cast-Iron Soil Pipe And Fittings
   1. Pipe and Fittings: ASTM A 74, Service and Extra-Heavy class(es).
   2. Gaskets: ASTM C 564, rubber.

C. Hubless Cast-Iron Soil Pipe And Fittings
   1. Pipe and Fittings: ASTM A 888 or CISPI 301.
   2. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
      a. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.
      c. Heavy-Duty, Shielded, Cast-Iron Couplings: ASTM A 48/A 48M, two-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.
   3. Rigid, Unshielded Couplings: ASTM C 1461, sleeve-type, reducing- or transition-type mechanical coupling molded from ASTM C 1440, TPE material with corrosion-resistant-metal tension band and tightening mechanism on each end.

D. Galvanized-Steel Pipe And Fittings
   1. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade A or B, Standard Weight or Schedule 40, galvanized. Include ends matching joining method.
   2. Drainage Fittings: ASME B16.12, galvanized, as directed, threaded, cast-iron drainage pattern.
   3. Pressure Fittings:
      b. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
      c. Gray-Iron, Threaded Fittings: ASME B16.4, Class 125, galvanized, as directed, standard pattern.
      e. Cast-Iron, Flanged Fittings: ASME B16.1, Class 125, galvanized, as directed.
   4. Grooved-Joint Systems:
      a. Grooved-End, Steel-Piping Fittings: ASTM A 47/A 47M, galvanized, as directed, malleable-iron casting; ASTM A 106, galvanized-steel pipe; or ASTM A 536, galvanized, as directed, ductile-iron casting; with dimensions matching steel pipe.
      b. Grooved-End, Steel-Piping Couplings: AWWA C606, for steel-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

E. Ductile-Iron, Pipe and Fittings
   1. Ductile-Iron, Mechanical-Joint Piping
      a. Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot end, unless grooved or flanged ends are indicated.
c. Glands, Gaskets, and Bolts: AWWA C111/A121.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2. Ductile-Iron, Push-on-Joint,
   a. Ductile-Iron Pipe: AWWA C151/A21.51, with push-on-joint bell and plain spigot end, unless grooved or flanged ends are indicated.

3. Ductile Iron, Grooved-Joint Piping:
   b. Ductile-Iron-Pipe Appurtenances:
      2) Grooved Mechanical Couplings for Ductile-Iron Pipe: ASTM F 1476, Type I. Include ferrous housing sections with continuous curved keys, EPMD-rubber center-leg gasket suitable for hot and cold water, and bolts and nuts.

F. Copper Tube And Fittings
4. Soft Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B), water tube, annealed temper.
5. Copper Pressure Fittings:
   b. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
   a. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
   b. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

G. ABS Pipe And Fittings
3. ABS Socket Fittings: ASTM D 2661, made to ASTM D 3311, drain, waste, and vent patterns.
4. Solvent Cement: ASTM D 2235
   a. Use ABS solvent cement that has a VOC content of 325 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

H. PVC Pipe And Fittings
3. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
   a. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
I. Specialty Pipe Fittings
   1. Transition Couplings:
      a. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
      b. Fitting-Type Transition Couplings: Manufactured piping coupling or specified-piping-system fitting.
      c. Unshielded, Nonpressure Transition Couplings:
         1) Standard: ASTM C 1173.
         2) Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
         3) Sleeve Materials:
            b) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
            c) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
      d. Shielded, Nonpressure Transition Couplings:
         1) Standard: ASTM C 1460.
         2) Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
      e. Pressure Transition Couplings:
         g. Description: Metal, sleeve-type couplings same size as, with pressure rating at least equal to and ends compatible with, pipes to be joined.
         h. Center-Sleeve Material: Manufacturer's standard OR Carbon steel OR Stainless steel OR Ductile iron OR Malleable iron, as directed.
         i. Gasket Material: Natural or synthetic rubber.
         j. Metal Component Finish: Corrosion-resistant coating or material.
   2. Dielectric Fittings:
      a. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
      b. Dielectric Unions:
         1) Description:
            a) Standard: ASSE 1079.
            b) Pressure Rating: 150 psig (1035 kPa) OR 250 psig (1725 kPa) at 180 deg F (82 deg C), as directed.
            c) End Connections: Solder-joint copper alloy and threaded ferrous.
      c. Dielectric Flanges:
         1) Description:
            a) Standard: ASSE 1079.
            b) Factory-fabricated, bolted, companion-flange assembly.
            c) Pressure Rating: 150 psig (1035 kPa) OR 175 psig (1200 kPa) minimum OR 300 psig (2070 kPa), as directed.
            d) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
      d. Dielectric-Flange Insulating Kits:
         1) Description:
            a) Nonconducting materials for field assembly of companion flanges.
            b) Pressure Rating: 150 psig (1035 kPa)
            c) Gasket: Neoprene or phenolic.
            d) Bolt Sleeves: Phenolic or polyethylene.
            e) Washers: Phenolic with steel-backing washers.
      e. Dielectric Nipples:
1. Description:
   a) Electroplated steel nipple complying with ASTM F 1545.
   b) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
   c) End Connections: Male threaded or grooved.
   d) Lining: Inert and noncorrosive, propylene.

J. Encasement For Underground Metal Piping
1. Description: ASTM A 674 or AWWA C105
2. Material: High-density, crosslaminated PE film of 0.004-inch (0.10-mm) OR LLDPE film of 0.008-inch (0.20-mm), as directed, minimum thickness.
3. Form: Sheet OR Tube, as directed.
4. Color: Black OR Natural, as directed.

1.3 EXECUTION

A. Earth Moving
1. Refer to Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

B. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.
2. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
3. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
4. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
5. Install piping to permit valve servicing.
6. Install piping at indicated slopes.
7. Install piping free of sags and bends.
8. Install fittings for changes in direction and branch connections.
9. Install piping to allow application of insulation.
10. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".
11. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
12. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
13. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
   a. Building Storm Drain: 1 percent OR 2 percent, as directed, downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent OR 2 percent, as directed, downward in direction of flow for piping NPS 4 (DN 100) and larger.
   b. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.
   a. Install encasement on underground piping according to ASTM A 674 or AWWA C105.
   b. Install steel piping according to applicable plumbing code.
15. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."
16. Install aboveground ABS piping according to ASTM D 2661.
17. Install aboveground ABS piping according to ASTM D 2661.
18. Install aboveground PVC piping according to ASTM D 2665.
19. Install underground ABS and PVC piping according to ASTM D 2321.
20. Install engineered controlled-flow OR siphonic, as directed, drain specialties and storm drainage piping in locations indicated.
21. Install underground, ductile-iron, force-main piping according to AWWA C600. Install buried piping inside building between wall and floor penetrations and connection to storm sewer piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
   a. Install encasement on piping according to ASTM A 674 or AWWA C105.
22. Install underground, copper, force-main tubing according to CDA's "Copper Tube Handbook."
   a. Install encasement on piping according to ASTM A 674 or AWWA C105.
23. Install force mains at elevations indicated.
24. Plumbing Specialties:
   a. Install backwater valves in storm drainage gravity-flow piping. Comply with requirements for backwater valves specified in Division 33 Section "Storm Utility Drainage Piping".
   b. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Division 33 Section "Storm Utility Drainage Piping".
   c. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Division 33 Section "Storm Utility Drainage Piping".
25. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
26. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results For Plumbing".
27. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Common Work Results For Plumbing".
28. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results For Plumbing".

C. Joint Construction
1. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results For Plumbing".
5. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
6. Join copper tube and fittings with soldered joints according to ASTM B 828 procedure. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
7. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fittings. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
9. Plastic, Nonpressure-Piping, Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
   c. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

D. Specialty Pipe Fitting Installation
   1. Transition Couplings:
      a. Install transition couplings at joints of piping with small differences in OD's.
      b. In Drainage Piping: Unshielded OR Shielded, as directed nonpressure transition couplings.
      d. In Underground Force-Main Piping:
         1) NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
         2) NPS 2 (DN 50) and Larger: Pressure transition couplings.

   2. Dielectric Fittings:
      a. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
      b. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric nipples OR unions, as directed.
      c. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges OR flange kits OR nipples, as directed.
      d. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

E. Valve Installation
   1. General valve installation requirements are specified in Division 22 Section "General-duty Valves For Plumbing Piping".
   2. Shutoff Valves: Install shutoff valve on each sump pump discharge.
      a. Install gate or full-port ball valve for piping NPS 2 (DN 50) and smaller.
      b. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.
   3. Check Valves: Install swing check valve, between pump and shutoff valve, on each sump pump discharge.
   4. Backwater Valves: Install backwater valves in piping subject to backflow.
      a. Horizontal Piping: Horizontal backwater valves. Use normally closed type, unless otherwise indicated.
      b. Install backwater valves in accessible locations.
      c. Comply with requirements for backwater valve specified in Division 22 Section "Storm Drainage Piping Specialties".

F. Hanger And Support Installation
   1. Comply with requirements for seismic-restraint devices specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".
   2. Comply with requirements for pipe hangers and supports and installation specified in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment".
      a. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
      b. Install stainless-steel OR fiberglass pipe hangers, as directed, for horizontal piping in corrosive environments.
      c. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
      d. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
      e. Vertical Piping: MSS Type 8 or Type 42, clamps.
      f. Individual, Straight, Horizontal Piping Runs:
         1) 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
         2) Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
         3) Longer Than 100 Feet (30 m), if Indicated: MSS Type 49, spring cushion rolls.
      g. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
      h. Base of Vertical Piping: MSS Type 52, spring hangers.
3. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.

4. Support vertical piping and tubing at base and at each floor.

5. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

6. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
   c. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
   d. NPS 6 (DN 150): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
   e. NPS 8 to NPS 12 (DN 200 to DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.

7. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).

8. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1-1/4 (DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   b. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   c. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   d. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
   e. NPS 3 (DN 80): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
   f. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
   g. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
   h. NPS 8 to NPS 12 (DN 200 to DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.

9. Install supports for vertical steel piping every 15 feet (4.5 m).

10. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
    a. NPS 1-1/4 (DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
    b. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
    c. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
    d. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
    e. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
    f. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.

11. Install supports for vertical copper tubing every 10 feet (3 m).

12. Install hangers for ABS and PVC piping with the following maximum horizontal spacing and minimum rod diameters:
    a. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 48 inches (1200 mm) with 3/8-inch (10-mm) rod.
    b. NPS 3 (DN 80): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.
    c. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
    d. NPS 6 (DN 150): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
    e. NPS 8 to NPS 12 (DN 200 to DN 300): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.

13. Install supports for vertical ABS and PVC piping every 48 inches (1200 mm).

14. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

G. Connections

1. Drawings indicate general arrangement of piping, fittings, and specialties.

2. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

3. Connect storm drainage piping to roof drains and storm drainage specialties.
   a. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
b. Install horizontal backwater valves with cleanout cover flush with floor OR in pit with pit cover flush with floor, as directed.

c. Comply with requirements for backwater valves, cleanouts and drains specified in Division 22 Section "Storm Drainage Piping Specialties".

4. Connect force-main piping to the following:
   a. Storm Sewer: To exterior force main or storm manhole.
   b. Sump Pumps: To sump pump discharge.

5. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

6. Make connections according to the following unless otherwise indicated:
   a. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
   b. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

H. Identification
1. Identify exposed storm drainage piping. Comply with requirements for identification specified in Division 22 Section "Identification For Plumbing Piping And Equipment".

I. Field Quality Control
1. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
   b. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

2. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

3. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

4. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
   a. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
   b. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   c. Test Procedure: Test storm drainage piping, except outside leaders, as directed, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
   d. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
   e. Prepare reports for tests and required corrective action.

5. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
   a. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   b. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
   c. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
   d. Prepare reports for tests and required corrective action.
J. Cleaning
1. Clean interior of piping. Remove dirt and debris as work progresses.
2. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
3. Place plugs in ends of uncompleted piping at end of day and when work stops.

K. Piping Schedule
1. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
2. Aboveground storm drainage piping NPS 6 (DN 150) and smaller shall be any of the following:
   a. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
   b. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, hubless-piping couplings; and coupled joints.
   c. Galvanized-steel pipe, drainage fittings, and threaded joints.
   d. Copper tube and fittings in first subparagraph below are only available in NPS 1-1/4 to NPS 8 (DN 32 to DN 200).
   e. Copper DWV tube, copper drainage fittings, and soldered joints.
   f. Solid-wall OR Cellular-core ABS pipe, as directed, ABS socket fittings, and solvent-cemented joints.
   g. Solid-wall OR Cellular-core PVC pipe, as directed, PVC socket fittings, and solvent-cemented joints.
   h. Dissimilar Pipe-Material Couplings: Unshielded OR Shielded, as directed, nonpressure transition couplings.
3. Aboveground, storm drainage piping NPS 8 (DN 200) and larger shall be any of the following:
   a. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed OR calking materials; and calked joints, as directed.
   b. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, cast-iron, hubless-piping couplings; and coupled joints.
   c. Solid-wall OR Cellular-core ABS pipe, as directed, ABS socket fittings, and solvent-cemented joints.
   d. Solid-wall OR Cellular-core PVC pipe, as directed, PVC socket fittings, and solvent-cemented joints.
   e. Dissimilar Pipe-Material Couplings: Unshielded OR Shielded, as directed, nonpressure transition couplings.
4. Underground storm drainage piping NPS 6 (DN 150) and smaller shall be any of the following:
   a. Extra Heavy OR Service class, as directed, cast-iron soil pipe and fittings; gaskets; and gasketed OR calking materials; and calked joints, as directed.
   b. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, cast-iron, hubless-piping couplings; and coupled joints.
   c. Solid-wall OR Cellular-core ABS pipe, as directed, ABS socket fittings, and solvent-cemented joints.
   d. Solid-wall OR Cellular-core PVC pipe, as directed, PVC socket fittings, and solvent-cemented joints.
   e. Dissimilar Pipe-Material Couplings: Unshielded OR Shielded, as directed, nonpressure transition couplings.
5. Underground, storm drainage piping NPS 8 (DN 200) and larger shall be any of the following:
   a. Extra Heavy OR Service class, as directed, cast-iron soil pipe and fittings; gaskets; and gasketed OR calking materials; and calked joints as directed.
   b. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, cast-iron, hubless-piping couplings; and coupled joints.
   c. Solid-wall OR Cellular-core PVC pipe, as directed, PVC socket fittings, and solvent-cemented joints.
   d. Cellular-core, sewer and drain series, PVC pipe; PVC socket fittings; and solvent-cemented joints.
   e. Dissimilar Pipe-Material Couplings: Unshielded OR Shielded, as directed, nonpressure transition couplings.
6. Aboveground storm drainage force mains NPS 1-1/2 and NPS 2 (DN 40 and DN 50) shall be any of the following:
   a. Hard copper tube, copper pressure fittings, and soldered joints.
b. Galvanized-steel pipe, pressure fittings, and threaded joints.

7. Aboveground storm drainage force mains **NPS 2-1/2 to NPS 6 (DN 65 to DN 150)** shall be any of the following:
   a. Hard copper tube, copper pressure fittings, and soldered joints.
   b. Galvanized-steel pipe, pressure fittings, and threaded joints.
   c. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
   d. Fitting-type transition couplings if dissimilar pipe materials.

8. Underground storm drainage force mains NPS 4 (DN 100) and smaller shall be any of the following:
   a. Hard OR **Soft**, as directed, copper tube; **wrought**-copper pressure fittings; and soldered joints.
   b. Ductile-iron, mechanical-joint piping and mechanical joints.
   c. Ductile-iron, push-on-joint piping and push-on joints.
   d. Ductile-iron, grooved-joint piping and grooved joints.
   e. Fitting-type transition coupling for piping smaller than NPS 1-1/2 (DN 40) and pressure transition coupling for NPS 1-1/2 (DN 40) and larger if dissimilar pipe materials.

9. Underground storm drainage force mains NPS 5 (DN 125) and larger shall be any of the following:
   a. Hard copper tube; **wrought**-copper pressure fittings; and soldered joints.
   b. Ductile-iron, mechanical-joint piping and mechanical joints.
   c. Ductile-iron, push-on-joint piping and push-on joints.
   d. Ductile-iron, grooved-joint piping and grooved joints.
   e. Pressure transition couplings if dissimilar pipe materials.

END OF SECTION 22 11 16 00b
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 22 11 16 00c - HYDRONIC PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for hydronic piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:
   a. Hot-water heating piping.
   b. Chilled-water piping.
   c. Dual-temperature heating and cooling water piping.
   d. Condenser-water piping.
   e. Glycol cooling-water piping.
   f. Makeup-water piping.
   g. Condensate-drain piping.
   h. Blowdown-drain piping.
   i. Air-vent piping.
   j. Safety-valve-inlet and -outlet piping.

C. Definitions
1. PTFE: Polytetrafluoroethylene.
2. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
3. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

D. Performance Requirements
1. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature:
   a. Hot-Water Heating Piping: \( \text{psig (kPa)} \), as directed by the Owner at 200 deg F (93 deg C).
   b. Chilled-Water Piping: \( \text{psig (kPa)} \), as directed by the Owner at 200 deg F (93 deg C).
   c. Dual-Temperature Heating and Cooling Water Piping: \( \text{psig (kPa)} \), ethylene at 200 deg F (93 deg C).
   d. Condenser-Water Piping: \( \text{psig (kPa)} \), as directed by the Owner at 150 deg F (66 deg C).
   e. Glycol Cooling-Water Piping: \( \text{psig (kPa)} \), as directed by the Owner at 150 deg F (66 deg C).
   f. Makeup-Water Piping: 80 psig (552 kPa) at 150 deg F (66 deg C).
   g. Condensate-Drain Piping: 150 deg F (66 deg C).
   h. Blowdown-Drain Piping: 200 deg F (93 deg C).
   i. Air-Vent Piping: 200 deg F (93 deg C).
   j. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

E. Submittals
1. Product Data: For each type of the following:
   a. Plastic pipe and fittings with solvent cement.
   b. RTRP and RTRF with adhesive.
   c. Pressure-seal fittings.
   d. Valves. Include flow and pressure drop curves based on manufacturer’s testing for calibrated-orifice balancing valves and automatic flow-control valves.
   e. Air control devices.
g. Hydronic specialties.

2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content.

3. Shop Drawings: Detail, at 1/4 (1:50) scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

5. Qualification Data: For Installer.

6. Field quality-control test reports.

7. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

8. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.

F. Quality Assurance
   1. Installer Qualifications:
      a. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
      b. Fiberglass Pipe and Fitting Installers: Installers of RTRF and RTRP shall be certified by the manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.

2. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

3. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
   a. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

4. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

1.2 PRODUCTS

A. Copper Tube And Fittings
   1. Drawn-Temper Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Type B) OR ASTM B 88, Type M (ASTM B 88M, Type C), as directed.
   2. Annealed-Temper Copper Tubing: ASTM B 88, Type K (ASTM B 88M, Type A).
   3. DWV Copper Tubing: ASTM B 306, Type DWV.
      a. Grooved-End Copper Fittings: ASTM B 75 (ASTM B 75M), copper tube or ASTM B 584, bronze casting.
      b. Grooved-End-Tube Couplings: Rigid pattern, unless otherwise indicated; gasketed fitting. Ductile-iron housing with keys matching pipe and fitting grooves, prelubricated, as directed, EPDM gasket rated for minimum 230 deg F (110 deg C) for use with housing, and steel bolts and nuts.
   5. Copper or Bronze Pressure-Seal Fittings:
      a. Housing: Copper.
      b. O-Rings and Pipe Stops: EPDM.
      c. Tools: Manufacturer's special tools.
      d. Minimum 200-psig (1379-kPa) working-pressure rating at 250 deg F (121 deg C).
   6. Copper, Mechanically Formed Tee Option: For forming T-branch on copper water tube.

B. Steel Pipe And Fittings
1. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as indicated in Part 1.3 “Piping Applications” Article.
2. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in Part 1.3 “Piping Applications” Article.
5. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in Part 1.3 "Piping Applications" Article.
7. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   b. End Connections: Butt welding.
   c. Facings: Raised face.
8. Grooved Mechanical-Joint Fittings and Couplings:
   a. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
   b. Couplings: Ductile- or malleable-iron housing and synthetic rubber gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
9. Steel Pressure-Seal Fittings:
   a. Housing: Steel.
   b. O-Rings and Pipe Stop: EPDM.
   c. Tools: Manufacturer's special tool.
   d. Minimum 300-psi (2070-kPa) working-pressure rating at 230 deg F (110 deg C).
10. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

C. Plastic Pipe And Fittings
1. CPVC Plastic Pipe: ASTM F 441/F 441M, Schedules 40 and 80, plain ends as indicated in Part 1.3 “Piping Applications” Article.
3. PVC Plastic Pipe: ASTM D 1785, Schedules 40 and 80, plain ends as indicated in Part 1.3 “Piping Applications” Article.

D. Fiberglass Pipe And Fittings
1. RTRP: ASTM D 2996, filament-wound pipe with tapered bell and spigot ends for adhesive joints.
2. RTRF: Compression or spray-up/contact molded of same material, pressure class, and joining method as pipe.
3. Flanges: ASTM D 4024. Full-face gaskets suitable for the service, minimum 1/8-inch (3.2-mm) thick, 60-70 durometer. ASTM A 307, Grade B, hex head bolts with washers.

E. Joining Materials
1. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

3. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

5. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.

7. Solvent Cements for Joining Plastic Piping:
   a. CPVC Piping: ASTM F 493.
      1) Use CPVC solvent cement that has a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      2) Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
      1) Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      2) Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

8. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.
   a. Use fiberglass adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

9. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

F. Transition Fittings
   1. Plastic-to-Metal Transition Fittings:
      a. CPVC OR PVC, as directed, one-piece fitting with one threaded brass or copper insert and one Schedule 80 solvent-cement-joint end.

   2. Plastic-to-Metal Transition Unions:
      a. MSS SP-107, CPVC OR PVC, as directed, union. Include brass or copper end, Schedule 80 solvent-cement-joint end, rubber gasket, and threaded union.

G. Dielectric Fittings
   1. Description: Combination fitting of copper-alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
   2. Insulating Material: Suitable for system fluid, pressure, and temperature.
   3. Dielectric Unions:
      a. Factory-fabricated union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).

   4. Dielectric Flanges:
      a. Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

   5. Dielectric-Flange Kits:
      a. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
      b. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.

   6. Dielectric Couplings:
      a. Galvanized-steel coupling with inert and noncorrosive thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

   7. Dielectric Nipples:
a. Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

H. Valves
1. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 22 Section(s) "General-duty Valves For Plumbing Piping" OR Division 23 Section(s) "General-duty Valves For HVAC Piping".
2. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23 Section "Instrumentation And Control For HVAC".
3. Plastic Ball Valves:
   a. Body: One-, two-, or three-piece CPVC or PVC to match piping.
   b. Ball: Full-port CPVC or PVC to match piping.
   c. Seats: PTFE.
   d. Seals: EPDM.
   e. End Connections: Socket, union, or flanged.
   f. Handle Style: Tee shape.
   g. CWP Rating: Equal to piping service.
   h. Maximum Operating Temperature: Equal to piping service.
   i. Comply with MSS SP-122.
4. Plastic Butterfly Valves:
   a. Body: PVC or CPVC to match piping wafer type for installation between flanges.
   b. Disc: EPDM-coated steel.
   c. Seats: PTFE.
   d. Handle Style: Locking lever.
   e. CWP Rating: Equal to piping service.
   f. Maximum Operating Temperature: Equal to piping service.
5. Plastic Check Valves:
   a. Body: One-, two-, or three-piece PVC or CPVC to match piping.
   b. Ends: Socket or flanged.
   c. Seats: PTFE.
   d. Check Style: Swing or ball type.
   e. CWP Rating: Equal to piping service.
   f. Maximum Operating Temperature: Equal to piping service.
6. Bronze, Calibrated-Orifice, Balancing Valves:
   a. Body: Bronze, ball or plug type with calibrated orifice or venturi.
   b. Ball: Brass or stainless steel.
   c. Plug: Resin.
   d. Seat: PTFE.
   e. End Connections: Threaded or socket.
   f. Pressure Gage Connections: Integral seals for portable differential pressure meter.
   g. Handle Style: Lever, with memory stop to retain set position.
   h. CWP Rating: Minimum 125 psig (860 kPa).
   i. Maximum Operating Temperature: 250 deg F (121 deg C).
7. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
   a. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
   b. Ball: Brass or stainless steel.
   c. Stem Seals: EPDM O-rings.
   d. Disc: Glass and carbon-filled PTFE.
   e. Seat: PTFE.
   f. End Connections: Flanged or grooved.
   g. Pressure Gage Connections: Integral seals for portable differential pressure meter.
   h. Handle Style: Lever, with memory stop to retain set position.
   i. CWP Rating: Minimum 125 psig (860 kPa).
   j. Maximum Operating Temperature: 250 deg F (121 deg C).
8. Diaphragm-Operated, Pressure-Reducing Valves:
   a. Body: Bronze or brass.
   b. Disc: Glass and carbon-filled PTFE.
c. Seat: Brass.
d. Stem Seals: EPDM O-rings.
e. Diaphragm: EPT.
f. Low inlet-pressure check valve.
g. Inlet Strainer: removable without system shutdown.
h. Valve Seat and Stem: Noncorrosive.
i. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed,
with operating pressure and capacity factory set and field adjustable.

9. Diaphragm-Operated Safety Valves:
a. Body: Bronze or brass.
b. Disc: Glass and carbon-filled PTFE.
c. Seat: Brass.
d. Stem Seals: EPDM O-rings.
e. Diaphragm: EPT.
f. Wetted, Internal Work Parts: Brass and rubber.
g. Inlet Strainer: removable without system shutdown.
h. Valve Seat and Stem: Noncorrosive.
i. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure
Vessel Code: Section IV, and selected to suit system in which installed, with operating
pressure and capacity factory set and field adjustable.

10. Automatic Flow-Control Valves:
a. Body: Brass or ferrous metal.
b. Piston and Spring Assembly: Stainless steel OR Corrosion resistant, as directed, tamper
proof, self cleaning, and removable.
c. Combination Assemblies: Include bronze or brass-alloy ball valve.
d. Identification Tag: Marked with zone identification, valve number, and flow rate.
e. Size: Same as pipe in which installed.
f. Performance: Maintain constant flow, plus or minus 5 percent over system pressure
fluctuations.
g. Minimum CWP Rating: 175 psig (1207 kPa) OR 300 psig (2070 kPa), as directed.
h. Maximum Operating Temperature: 200 deg F (93 deg C) OR 250 deg F (121 deg C), as
directed.

I. Air Control Devices
1. Manual Air Vents:
a. Body: Bronze.
b. Internal Parts: Nonferrous.
c. Operator: Screwdriver or thumbscrew.
d. Inlet Connection: NPS 1/2 (DN 15).
e. Discharge Connection: NPS 1/8 (DN 6).
f. CWP Rating: 150 psig (1035 kPa).
g. Maximum Operating Temperature: 225 deg F (107 deg C).

2. Automatic Air Vents:
a. Body: Bronze or cast iron.
b. Internal Parts: Nonferrous.
c. Operator: Noncorrosive metal float.
d. Inlet Connection: NPS 1/2 (DN 15).
e. Discharge Connection: NPS 1/4 (DN 8).
f. CWP Rating: 150 psig (1035 kPa).
g. Maximum Operating Temperature: 240 deg F (116 deg C).

3. Expansion Tanks:
a. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191
deg C) maximum operating temperature, with taps in bottom of tank for tank fitting and taps
in end of tank for gage glass. Tanks shall be factory tested with taps fabricated and
labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
b. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and
stainless-steel ball check, 100-gal. (379-L) unit only; sized for compression-tank diameter.
Provide tank fittings for 125-psig (860-kPa) working pressure and 250 deg F (121 deg C) maximum operating temperature.

c. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig (860-kPa) working pressure and 240 deg F (116 deg C) maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.

d. Gage Glass: Full height with dual manual shutoff valves, 3/4-inch- (20-mm-) diameter gage glass, and slotted-metal glass guard.

4. Diaphragm-Type OR Bladder-Type, as directed, Expansion Tanks:
   a. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   b. Diaphragm OR Bladder, as directed: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
   c. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

5. Tangential-Type Air Separators:
   a. Tank: Welded steel; ASME constructed and labeled for 125-psig (860-kPa) minimum working pressure and 375 deg F (191 deg C) maximum operating temperature.
   b. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
   c. Tangential Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; flanged connections for NPS 2-1/2 (DN 65) and larger.
   d. Blowdown Connection: Threaded.
   e. Size: Match system flow capacity.

6. In-Line Air Separators:
   a. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
   b. Maximum Working Pressure: Up to 175 psig (1207 kPa).
   c. Maximum Operating Temperature: Up to 300 deg F (149 deg C).

7. Air Purgers:
   a. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
   c. Maximum Operating Temperature: 250 deg F (121 deg C).

J. Chemical Treatment
1. Bypass Chemical Feeder: Welded steel construction; 125-psig (860-kPa) working pressure; 5-gal. (19-L) capacity; with fill funnel and inlet, outlet, and drain valves.
   a. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.

2. Ethylene and Propylene Glycol: Industrial grade with corrosion inhibitors and environmental-stabilizer additives for mixing with water in systems indicated to contain antifreeze or glycol solutions.

K. Hydronic Piping Specialties
1. Y-Pattern Strainers:
   a. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
   b. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
   c. Strainer Screen: 40 OR 60, as directed, -mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
   d. CWP Rating: 125 psig (860 kPa).

2. Basket Strainers:
   a. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
   b. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
c. Strainer Screen: 40 OR 60, as directed, mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
d. CWP Rating: 125 psig (860 kPa).

3. T-Pattern Strainers:
   a. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
   b. End Connections: Grooved ends.
   c. Strainer Screen: 40 OR 60, as directed, mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
   d. CWP Rating: 750 psig (5170 kPa).

4. Stainless-Steel Bellow, Flexible Connectors:
   b. End Connections: Threaded or flanged to match equipment connected.
   c. Performance: Capable of 3/4-inch (20-mm) misalignment.
   d. CWP Rating: 150 psig (1035 kPa).
   e. Maximum Operating Temperature: 250 deg F (121 deg C).

5. Spherical, Rubber, Flexible Connectors:
   b. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
   c. Performance: Capable of misalignment.
   d. CWP Rating: 150 psig (1035 kPa).
   e. Maximum Operating Temperature: 250 deg F (121 deg C).

6. Expansion fittings are specified in Division 22 Section(s) "Expansion Fittings And Loops For Plumbing Piping" OR Division 23 Section(s) "Expansion Fittings And Loops For Hvac Piping".

1.3 EXECUTION

1. Hot-water heating piping, aboveground, NPS 2 (DN 50) and smaller, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed OR pressure-seal, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe; Class 125, cast-iron OR 150, malleable-iron OR 250, cast-iron OR 300, malleable-iron, as directed, fittings; cast-iron flanges and flange fittings; and threaded joints.
   c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
   d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.

2. Hot-water heating piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   c. Schedule 40 OR 30 OR 20, as directed, steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
   d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.
   e. RTRP and RTRF with adhesive or flanged joints.

3. Hot-water heating piping installed belowground and within slabs shall be either of the following:
   a. Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints. Use the fewest possible joints.
   b. RTRP and RTRF with adhesive or flanged joints.

4. Chilled-water piping, aboveground, NPS 2 (DN 50) and smaller, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed OR pressure-seal, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe; Class 125, cast-iron OR 150, malleable-iron OR 250, cast-iron OR 300, malleable-iron, as directed, fittings; cast-iron flanges and flange fittings; and threaded joints.
   c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
5. Chilled-water piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   c. Schedule 40 OR 30 OR 20, as directed, steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
   d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.
   e. RTRP and RTRF with adhesive or flanged joints.

6. Chilled-water piping installed belowground and within slabs shall be either of the following:
   a. Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints. Use the fewest possible joints.
   b. RTRP and RTRF with adhesive or flanged joints.

7. Dual-temperature heating and cooling water piping, aboveground, NPS 2 (DN 50) and smaller, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed OR pressure-seal, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe; Class 125, cast-iron OR 150, malleable-iron OR 250, cast-iron OR 300, malleable-iron, as directed, fittings; cast-iron flanges and flange fittings; and threaded joints.
   c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
   d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.

8. Dual-temperature heating and cooling water piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
   a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
   b. Schedule 40 OR 30 OR 20, as directed, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   c. Schedule 40 OR 30 OR 20, as directed, steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
   d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.
   e. RTRP and RTRF with adhesive or flanged joints.

9. Dual-temperature heating and cooling water piping installed belowground and within slabs shall be either of the following:
   a. Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints. Use the fewest possible joints.
   b. RTRP and RTRF with adhesive or flanged joints.

10. Condenser-water piping, aboveground, NPS 2 (DN 50) and smaller, shall be any of the following:
    a. Schedule 80 OR 40 OR 30 OR 20, as directed, steel pipe; Class 125, cast-iron OR 150, malleable-iron OR 250, cast-iron OR 300, malleable-iron, as directed, fittings; cast-iron flanges and flange fittings; and threaded joints.
    c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
    d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.

11. Condenser-water piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
    a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
    b. Schedule 80 OR 40 OR 30 OR 20, as directed, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
    c. Schedule 80 OR 40 OR 30 OR 20, as directed, steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
    d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.
    e. RTRP and RTRF with adhesive or flanged joints.

12. Condenser-water piping installed belowground and within slabs shall be either of the following:
a. Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints. Use the fewest possible joints.
b. RTRP and RTRF with adhesive or flanged joints.

13. Glycol cooling-water piping, aboveground, NPS 2 (DN 50) and smaller, shall be any of the following:
a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed OR pressure-seal, as directed, joints.
b. Schedule 40 OR 30 OR 20, as directed, steel pipe; Class 125, cast-iron OR 150, malleable-iron OR 250, cast-iron OR 300, malleable-iron, as directed, fittings; cast-iron flanges and flange fittings; and threaded joints.
c. Schedule 5 steel pipe; steel, pressure-seal couplings and fittings; and pressure-seal joints.
d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.

14. Glycol cooling-water piping, aboveground, NPS 2-1/2 (DN 65) and larger, shall be any of the following:
a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
b. Schedule 40 OR 30 OR 20, as directed, steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
c. Schedule 40 OR 30 OR 20, as directed, steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
d. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.
e. RTRP and RTRF with adhesive or flanged joints.

15. Glycol cooling-water piping installed belowground and within slabs shall be either of the following:
a. Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints. Use the fewest possible joints.
b. RTRP and RTRF with adhesive or flanged joints.

16. Makeup-water piping installed aboveground shall be either of the following:
a. Type L (B) OR M (C), as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
b. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings and solvent-welded joints.

17. Makeup-Water Piping Installed Belowground and within Slabs: Type K (A), annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.

18. Condensate-Drain Piping: Type M (C) OR DWV, as directed, drawn-temper copper tubing, wrought-copper fittings, and soldered joints or Schedule 40 PVC plastic pipe and fittings and solvent-welded joints, as directed. OR Condensate-Drain Piping: Schedule 40 PVC plastic pipe and fittings and solvent-welded joints.

19. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.

20. Air-Vent Piping:
a. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
b. Outlet: Type K (A), annealed-temper copper tubing with soldered or flared joints.

21. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.

B. Valve Applications
1. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
2. Install throttling-duty OR calibrated-orifice, balancing, as directed, valves at each branch connection to return main.
3. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
4. Install check valves at each pump discharge and elsewhere as required to control flow direction.
5. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

6. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

C. Piping Installations

1. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

2. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

3. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

4. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

5. Install piping to permit valve servicing.

6. Install piping at indicated slopes.

7. Install piping free of sags and bends.

8. Install fittings for changes in direction and branch connections.

9. Install piping to allow application of insulation.

10. Select system components with pressure rating equal to or greater than system operating pressure.

11. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

12. Install drains, consisting of a tee fitting, NPS 3/4 (DN 20) ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

13. Install piping at a uniform grade of 0.2 percent upward in direction of flow.

14. Reduce pipe sizes using eccentric reducer fitting installed with level side down.

15. Install branch connections to mains using mechanically formed, as directed, tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.

16. Install valves according to Division 22 Section(s) "General-duty Valves For Plumbing Piping" OR Division 23 Section(s) "General-duty Valves For Hvac Piping".

17. Install unions in piping, NPS 2 (DN 50) and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

18. Install flanges in piping, NPS 2-1/2 (DN 65) and larger, at final connections of equipment and elsewhere as indicated.

19. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 (DN 20) nipple and ball valve in blowdown connection of strainers NPS 2 (DN 50) and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2 (DN 50).

20. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 22 Section(s) "Expansion Fittings And Loops For Plumbing Piping" OR Division 23 Section(s) "Expansion Fittings And Loops For Hvac Piping".

21. Identify piping as specified in Division 22 Section(s) "Identification For Plumbing Piping And Equipment" OR Division 23 Section(s) "Identification For Hvac Piping And Equipment".

D. Hangers And Supports

1. Hanger, support, and anchor devices are specified in Division 22 Section(s) "Hangers And Supports For Plumbing Piping And Equipment" OR Division 23 Section(s) "Hangers And Supports For Hvac Piping And Equipment". Comply with the following requirements for maximum spacing of supports.

2. Seismic restraints are specified in Division 21 Section(s) "Vibration And Seismic Controls For Fire-suppression Piping And Equipment" OR Division 22 Section(s) "Vibration And Seismic Controls For Plumbing Piping And Equipment".
3. Install the following pipe attachments:
   a. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet (6 m) long.
   b. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet (6 m) or longer.
   c. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
   d. Spring hangers to support vertical runs.
   e. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
   f. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.

4. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
   a. NPS 3/4 (DN 20): Maximum span, 7 feet (2.1 m); minimum rod size, 3/8 inch (10 mm).
   b. NPS 1 (DN 25): Maximum span, 7 feet (2.1 m); minimum rod size, 3/8 inch (10 mm).
   c. NPS 1-1/4 (DN 32): Maximum span, 7 feet (2.1 m); minimum rod size, 3/8 inch (10 mm).
   d. NPS 1-1/2 (DN 40): Maximum span, 9 feet (2.7 m); minimum rod size, 3/8 inch (10 mm).
   e. NPS 2 (DN 50): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (10 mm).
   f. NPS 2-1/2 (DN 65): Maximum span, 11 feet (3.4 m); minimum rod size, 1/2 inch (12 mm).
   g. NPS 3 (DN 80): Maximum span, 12 feet (3.7 m); minimum rod size, 1/2 inch (12 mm).
   h. NPS 3-1/2 (DN 90): Maximum span, 13 feet (4 m); minimum rod size, 1/2 inch (12 mm).
   i. NPS 4 (DN 100): Maximum span, 14 feet (4.3 m); minimum rod size, 5/8 inch (16 mm).
   j. NPS 5 (DN 125): Maximum span, 16 feet (4.9 m); minimum rod size, 5/8 inch (16 mm).
   k. NPS 6 (DN 150): Maximum span, 17 feet (5.2 m); minimum rod size, 3/4 inch (20 mm).
   l. NPS 8 (DN 200): Maximum span, 19 feet (5.8 m); minimum rod size, 3/4 inch (20 mm).
   m. NPS 10 (DN 250): Maximum span, 22 feet (6.7 m); minimum rod size, 7/8 inch (20 mm).
   n. NPS 12 (DN 300): Maximum span, 23 feet (7 m); minimum rod size, 7/8 inch (20 mm).
   o. NPS 14 (DN 350): Maximum span, 25 feet (7.6 m); minimum rod size, 1 inch (24 mm).
   p. NPS 16 (DN 400): Maximum span, 27 feet (8.2 m); minimum rod size, 1 inch (24 mm).
   q. NPS 18 (DN 450): Maximum span, 28 feet (8.5 m); minimum rod size, 1 inch (24 mm).
   r. NPS 20 (DN 500): Maximum span, 30 feet (9.1 m); minimum rod size, 1-1/4 inches (30 mm).

5. Install hangers for drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
   a. NPS 3/4 (DN 20): Maximum span, 5 feet (1.5 m); minimum rod size, 3/8 inch (10 mm).
   b. NPS 1 (DN 25): Maximum span, 6 feet (1.8 m); minimum rod size, 3/8 inch (10 mm).
   c. NPS 1-1/4 (DN 32): Maximum span, 7 feet (2.1 m); minimum rod size, 3/8 inch (10 mm).
   d. NPS 1-1/2 (DN 40): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
   e. NPS 2 (DN 50): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
   f. NPS 2-1/2 (DN 65): Maximum span, 9 feet (2.7 m); minimum rod size, 1/2 inch (12 mm).
   g. NPS 3 (DN 80): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (12 mm).

6. Plastic Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.

7. Fiberglass Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.

8. Support vertical runs at roof, at each floor, and at 10-foot (3-m) intervals between floors.

E. Pipe Joint Construction
1. Join pipe and fittings according to the following requirements and Division 21 specifying piping systems.
2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

9. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   c. PVC Pressure Piping: Join ASTM D 1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D 2855.
   d. PVC Nonpressure Piping: Join according to ASTM D 2855.

10. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

12. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.

F. Hydronic Specialties Installation

1. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
   OR
   Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.

2. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

3. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 (DN 50) and larger.
   OR
   Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

4. Install bypass chemical feeders in each hydronic system where indicated, in upright position with top of funnel not more than 48 inches (1200 mm) above the floor. Install feeder in minimum NPS 3/4 (DN 20) bypass line, from main with full-size, full-port, ball valve in the main between bypass connections. Install NPS 3/4 (DN 20) pipe from chemical feeder drain, to nearest equipment drain and include a full-size, full-port, ball valve.

5. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
   a. Install tank fittings that are shipped loose.
b. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.

**OR**

Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

G. Terminal Equipment Connections
1. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
2. Install control valves in accessible locations close to connected equipment.
3. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
4. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 22 Section(s) "Meters And Gages For Plumbing Piping" OR Division 23 Section(s) "Meters And Gages For Hvac Piping".

H. Chemical Treatment
1. Perform an analysis of makeup water to determine type and quantities of chemical treatment needed to keep system free of scale, corrosion, and fouling, and to sustain the following water characteristics:
   a. pH: 9.0 to 10.5.
   b. "P" Alkalinity: 100 to 500 ppm.
   c. Boron: 100 to 200 ppm.
   d. Chemical Oxygen Demand: Maximum 100 ppm. Modify this value if closed system contains glycol.
   e. Corrosion Inhibitor:
      1) Sodium Nitrate: 1000 to 1500 ppm.
      2) Molybdate: 200 to 300 ppm.
      3) Chromate: 200 to 300 ppm.
      4) Sodium Nitrate Plus Molybdate: 100 to 200 ppm each.
      5) Chromate Plus Molybdate: 50 to 100 ppm each.
   f. Soluble Copper: Maximum 0.20 ppm.
   g. Tolyiriazole Copper and Yellow Metal Corrosion Inhibitor: Minimum 10 ppm.
   h. Total Suspended Solids: Maximum 10 ppm.
   i. Ammonia: Maximum 20 ppm.
   j. Free Caustic Alkalinity: Maximum 20 ppm.
   k. Microbiological Limits:
      1) Total Aerobic Plate Count: Maximum 1000 organisms/ml.
      2) Total Anaerobic Plate Count: Maximum 100 organisms/ml.
      3) Nitrate Reducers: 100 organisms/ml.
      4) Sulfate Reducers: Maximum 0 organisms/ml.
      5) Iron Bacteria: Maximum 0 organisms/ml.
2. Fill system with fresh water and add liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products from piping. Circulate solution for a minimum of 24 hours, drain, clean strainer screens, and refill with fresh water.
3. Add initial chemical treatment and maintain water quality in ranges noted above for the first year of operation.
4. Fill systems indicated to have antifreeze or glycol solutions with the following concentrations:
   a. Hot-Water Heating Piping: Minimum percent ethylene, as directed by the Owner OR propylene, as directed, glycol.
   b. Chilled-Water Piping: Minimum percent ethylene, as directed by the Owner OR propylene, as directed, glycol.
   c. Dual-Temperature Heating and Cooling Water Piping: Minimum percent, as directed by the Owner ethylene OR propylene, as directed, glycol.
   d. Glycol Cooling-Water Piping: Minimum percent ethylene, as directed by the Owner. OR propylene, as directed, glycol.
I. Field Quality Control
   1. Prepare hydronic piping according to ASME B31.9 and as follows:
      a. Leave joints, including welds, uninsulated and exposed for examination during test.
      b. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
      c. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
      d. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
      e. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
   2. Perform the following tests on hydronic piping:
      a. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
      b. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
      c. Isolate expansion tanks and determine that hydronic system is full of water.
      d. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
      e. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
      f. Prepare written report of testing.
   3. Perform the following before operating the system:
      a. Open manual valves fully.
      b. Inspect pumps for proper rotation.
      c. Set makeup pressure-reducing valves for required system pressure.
      d. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
      e. Set temperature controls so all coils are calling for full flow.
      f. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
      g. Verify lubrication of motors and bearings.

END OF SECTION 22 11 16 00c
SECTION 22 11 16 00d - STEAM AND CONDENSATE PIPING

1.1 GENERAL
A. Description Of Work
1. This specification covers the furnishing and installation of materials for steam and condensate piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following for LP and HP steam and condensate piping:
   a. Pipe and fittings.
   b. Strainers.
   c. Flash tanks.
   d. Safety valves.
   e. Pressure-reducing valves.
   f. Steam traps.
   g. Thermostatic air vents and vacuum breakers.
   h. Steam and condensate meters.

C. Definitions
1. HP Systems: High-pressure piping operating at more than 15 psig (104 kPa) as required by ASME B31.1.
2. LP Systems: Low-pressure piping operating at 15 psig (104 kPa) or less as required by ASME B31.9.
3. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
4. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

D. Performance Requirements
1. Components and installation shall be capable of withstanding the following minimum working pressures and temperatures:
   a. HP Steam Piping: \(<\text{Insert psig (kPa).}>\)
   b. LP Steam Piping: \(<\text{Insert psig (kPa).}>\)
   c. Condensate Piping: \(<\text{Insert psig (kPa)> at 250 deg F (121 deg C).}\)
   d. Makeup-Water Piping: 80 psig (552 kPa) at 150 deg F (66 deg C).
   e. Blowdown-Drain Piping: Equal to pressure of the piping system to which it is attached.
   f. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is attached.
   g. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is attached.

E. Submittals
1. Product Data: For each type of the following:
   a. RTRP and RTRF with adhesive.
   b. Pressure-reducing and safety valve.
   c. Steam trap.
   d. Air vent and vacuum breaker.
   e. Flash tank.
   f. Meter.
2. Shop Drawings: Detail, 1/4 inch equals 1 foot (1:50) scale, flash tank assemblies and fabrication of pipe anchors, hangers, pipe, multiple pipes, alignment guides, and expansion joints and loops and their attachment to the building structure. Detail locations of anchors, alignment guides, and expansion joints and loops.
3. Welding certificates.
4. Field quality-control test reports.
5. Operation and Maintenance Data: For valves, safety valves, pressure-reducing valves, steam traps, air vents, vacuum breakers, and meters to include in emergency, operation, and maintenance manuals.

F. Quality Assurance
1. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code - Steel."
2. Pipe Welding: Qualify processes and operators according to the following:
   a. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
3. ASME Compliance: Comply with ASME B31.1, "Power Piping" AND/OR ASME B31.9, "Building Services Piping", as directed, for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp flash tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

1.2 PRODUCTS

A. Copper Tube And Fittings
1. Drawn-Temper Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Type B) OR ASTM B 88, Type M (ASTM B 88M, Type C), as directed.
2. Annealed-Temper Copper Tubing: ASTM B 88, Type K (ASTM B 88M, Type A).

B. Steel Pipe And Fittings
1. Steel Pipe: ASTM A 53/A 53M, black steel, plain ends, Type, Grade, and Schedule as indicated in Part 3 piping applications articles.
2. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125, 150, and 300 as indicated in Part 3 piping applications articles.
3. Malleable-Iron Threaded Fittings: ASME B16.3; Classes 150 and 300 as indicated in Part 3 piping applications articles.
5. Cast-Iron Threaded Flanges and Flanged Fittings: ASME B16.1, Classes 125 and 250 as indicated in Part 3 piping applications articles; raised ground face, and bolt holes spot faced.
7. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   b. End Connections: Butt welding.
   c. Facings: Raised face.
8. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, black steel of same Type, Grade, and Schedule as pipe in which installed.
9. Stainless-Steel Bellows, Flexible Connectors:
   b. End Connections: Threaded or flanged to match equipment connected.
   c. Performance: Capable of 3/4-inch (20-mm) misalignment.
   d. CWP Rating: 150-psig (1035-kPa).
   e. Maximum Operating Temperature: 250 deg F (121 deg C).

C. Fiberglass Pipe And Fittings
1. RTRP: ASTM D 2996 filament-wound pipe with tapered bell and spigot ends for adhesive joints.
2. RTRF: Compression or spray-up/contact molded fittings of same material, pressure class, and joining method as pipe.
3. Flanges: ASTM D 4024 full-face gaskets suitable for the service, minimum 1/8 inch (3.2 mm) thick, 60-70 durometer. ASTM A 307, Grade B, hex head bolts with washers.

D. Joining Materials
1. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
      1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
4. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAu-1, silver alloy for joining copper with bronze or steel.
5. Welding Filler Metals: Comply with AWS D10.12 (AWS D10.12M) for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
6. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

E. Dielectric Fittings
1. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
2. Insulating Material: Suitable for system fluid, pressure, and temperature.
3. Dielectric Unions:
   a. Factory-fabricated union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
4. Dielectric Flanges:
   a. Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
5. Dielectric-Flange Kits:
   a. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   b. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

F. Valves
1. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-duty Valves For Hvac Piping".
2. Stop-Check Valves:
   a. Body and Bonnet: Malleable iron.
   b. End Connections: Flanged.
   c. Disc: Cylindrical with removable liner and machined seat.
   d. Stem: Brass alloy.
   e. Operator: Outside screw and yoke with cast-iron handwheel.
   g. Pressure Class: 250.

G. Strainers
1. Y-Pattern Strainers:
   a. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
   b. End Connections: Threaded ends for strainers NPS 2 (DN 50) and smaller; flanged ends for strainers NPS 2-1/2 (DN 65) and larger.
c. Strainer Screen: Stainless-steel, 20 mesh strainer, and perforated stainless-steel basket with 50 percent free area.

d. Tapped blowoff plug.

e. CWP Rating: 250-psig (1725-kPa) working steam pressure.

2. Basket Strainers:
   a. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
   b. End Connections: Threaded ends for strainers NPS 2 (DN 50) and smaller; flanged ends for strainers NPS 2-1/2 (DN 65) and larger.
   c. Strainer Screen: Stainless-steel, 20 mesh strainer, and perforated stainless-steel basket with 50 percent free area.
   d. CWP Rating: 250-psig (1725-kPa) working steam pressure.

H. Flash Tanks
   1. Shop or factory fabricated of welded steel according to ASME Boiler and Pressure Vessel Code, for 150-psig (1035-kPa) rating; and bearing ASME label. Fabricate with tappings for low-pressure steam and condensate outlets, high-pressure condensate inlet, air vent, safety valve, and legs.

I. Safety Valves
   1. Bronze OR Brass, as directed, Safety Valves:
      b. End Connections: Threaded inlet and outlet.
      c. Spring: Fully enclosed steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
      d. Pressure Class: 250.
      e. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
      f. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.
   2. Cast-Iron Safety Valves:
      a. Disc Material: Forged copper alloy with bronze nozzle.
      b. End Connections: Raised-face flanged inlet and threaded or flanged outlet connections.
      c. Spring: Fully enclosed cadmium-plated steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
      d. Pressure Class: 250.
      e. Drip-Pan Elbow: Cast iron and having threaded inlet, outlet, and drain, with threads complying with ASME B1.20.1.
      f. Exhaust Head: Cast iron and having threaded inlet and drain, with threads complying with ASME B1.20.1.
      g. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.

J. Pressure-Reducing Valves
   2. Description: Pilot-actuated, diaphragm type, with adjustable pressure range and positive shutoff.
   4. End Connections: Threaded connections for valves NPS 2 (DN 50) and smaller and flanged connections for valves NPS 2-1/2 (DN 65) and larger.
   5. Trim: Hardened stainless steel.
   6. Head and Seat: Replaceable, main head stem guide fitted with flushing and pressure-arresting device cover over pilot diaphragm.

K. Steam Traps
   1. Thermostatic Traps:
      b. Trap Type: Balanced-pressure.
      c. Bellows: Stainless steel or monel.
d. Head and Seat: Replaceable, hardened stainless steel.
e. Pressure Class: 125.

2. Thermodynamic Traps:
   b. End Connections: Threaded.
   c. Disc and Seat: Stainless steel.
   d. Maximum Operating Pressure: 600 psig (4140 kPa).

3. Float and Thermostatic Traps:
   a. Body and Bolted Cap: ASTM A 126, cast iron.
   b. End Connections: Threaded.
   c. Float Mechanism: Replaceable, stainless steel.
   d. Head and Seat: Hardened stainless steel.
   e. Trap Type: Balanced pressure.
   f. Thermostatic Bellows: Stainless steel or monel.
   g. Thermostatic air vent capable of withstanding 45 deg F (25 deg C) of superheat and resisting water hammer without sustaining damage.
   h. Vacuum Breaker: Thermostatic with phosphor bronze bellows, and stainless steel cage, valve, and seat.
   i. Maximum Operating Pressure: 125 psig (860 kPa).

4. Inverted Bucket Traps:
   b. End Connections: Threaded.
   c. Head and Seat: Stainless steel.
   e. Bucket: Brass or stainless steel.
   f. Strainer: Integral stainless-steel inlet strainer within the trap body.
   g. Air Vent: Stainless-steel thermostatic vent.
   h. Pressure Rating: 250 psig (1725 kPa).

L. Thermostatic Air Vents And Vacuum Breakers
   1. Thermostatic Air Vents:
      a. Body: Cast iron, bronze or stainless steel.
      b. End Connections: Threaded.
      d. Thermostatic Element: Phosphor bronze bellows in a stainless-steel cage.
      e. Pressure Rating: 125 psig (861 kPa) OR 300 psig (2068 kPa), as directed.

   2. Vacuum Breakers:
      a. Body: Cast iron, bronze, or stainless steel.
      b. End Connections: Threaded.
      c. Sealing Ball, Retainer, Spring, and Screen: Stainless steel.
      d. O-ring Seal: EPR.
      e. Pressure Rating: 125 psig (861 kPa) OR 300 psig (2068 kPa), as directed.

M. Steam Meters
   1. Meters shall have a microprocessor to display totalizer flow, flow rate, temperature, pressure, time, and date; alarms for high and low flow rate and temperature.
      a. Computer shall have 4 to 20-mA or 2 to 10 volt output for temperature, pressure, and contact closure for flow increments.
      b. Independent timers to store four peak flow rates and total flow.
      c. Interface compatible with central workstation described in Division 23 Section "Instrumentation And Control For Hvac".
      d. Microprocessor Enclosure: NEMA 250, Type 4.

   2. Sensor:
      a. Venturi, of stainless-steel OR carbon-steel, as directed, construction, for insertion in pipeline between flanges. At least 10:1 turndown with plus or minus 1 percent accuracy over full-flow range.
b. Vortex type with stainless-steel wetted parts and wafer OR flange, as directed, connections; and with a piezoelectric sensor removable and serviceable without shutting down the process. At least 10:1 turndown with plus or minus 1 percent accuracy over full-flow range.

c. Spring-loaded, variable-area flowmeter type; density compensated with stainless-steel wetted parts and wafer OR flange, as directed, connections. At least 10:1 turndown with plus or minus 2 percent accuracy over full-flow range.

N. Condensate Meters
1. Body: Cast iron, bronze, or brass.
2. Turbine: Copper, brass, or stainless steel.
3. Connections: Threaded for NPS 2 (DN 50) and smaller and flanged for NPS 2-1/2 (DN 65).
4. Totalizer: Meters shall have a microprocessor to display flow, flow rate, time, and date; alarms for high and low flow rate, pressure, and temperature.
   a. Computer shall have 4- to 20-mA or 2- to 10-volt output for temperature, pressure, and contact closure for flow increments.
   b. Independent timers to store four peak flow rates and total flow.
   c. Interface compatible with central workstation specified in Division 23 Section "Instrumentation And Control For Hvac".
   d. Microprocessor Enclosure: NEMA 250, Type 4.

1.3 EXECUTION

A. LP Steam Piping Applications
1. LP Steam Piping, NPS 2 (DN 50) and Smaller: Schedule 40 OR 80, as directed, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
2. LP Steam Piping, NPS 2-1/2 through NPS 12 (DN 65 through DN 300): Schedule 40 OR 80, as directed, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
3. LP Steam Piping, NPS 14 through NPS 18 (DN 350 through DN 450): Schedule 30, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
4. LP Steam Piping, NPS 20 (DN 500) and Larger: Schedule 20, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
5. Condensate piping above grade, NPS 2 (DN 50) and smaller, shall be either of the following, as directed:
   a. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
   b. RTRP and RTRF with adhesive or flanged joints.
6. Condensate piping above grade, NPS 2-1/2 (DN 65) and larger, shall be either of the following, as directed:
   a. Schedule 80, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
   b. RTRP and RTRF with adhesive or flanged joints.
7. Condensate piping below grade, NPS 2 (DN 50) and smaller, shall be either of the following, as directed:
   a. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
   b. RTRP and RTRF with adhesive or flanged joints.
8. Condensate piping below grade, NPS 2-1/2 (DN 65) and larger, shall be either of the following, as directed:
   a. Schedule 80, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
   b. RTRP and RTRF with adhesive or flanged joints.
B. HP Steam Piping Applications
1. HP Steam Piping, NPS 2 (DN 50) and Smaller: Schedule 40 OR 80, as directed, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
2. HP Steam Piping, NPS 2-1/2 through NPS 12 (DN 65 through DN 300): Schedule 40 OR 80, as directed, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
3. HP Steam Piping, NPS 14 through NPS 18 (DN 350 through DN 450): Schedule 30, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
4. HP Steam Piping, NPS 20 (DN 500) and Larger: Schedule 20, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
5. Condensate piping above grade, NPS 2 (DN 50) and smaller, shall be either of the following, as directed:
   a. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
   b. RTRP and RTRF with adhesive or flanged joints.
6. Condensate piping above grade, NPS 2-1/2 (DN 65) and larger, shall be either of the following, as directed:
   a. Schedule 80, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
   b. RTRP and RTRF with adhesive or flanged joints.
7. Condensate piping below grade, NPS 2 (DN 50) and smaller, shall be either of the following, as directed:
   a. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
   b. RTRP and RTRF with adhesive or flanged joints.
8. Condensate piping below grade, NPS 2-1/2 (DN 65) and larger, shall be either of the following, as directed:
   a. Schedule 80, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
   b. RTRP and RTRF with adhesive or flanged joints.

C. Ancillary Piping Applications
1. Makeup-water piping installed above grade shall be either of the following, as directed:
   a. Drawn-temper copper tubing, wrought-copper fittings, and soldered OR brazed, as directed, joints.
   b. Schedule 40 OR 80, as directed, CPVC plastic pipe and fittings, and solvent welded joints.
2. Makeup-Water Piping Installed below Grade and within Slabs: Annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.
3. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
4. Air-Vent Piping:
   a. Inlet: Same as service where installed.
   b. Outlet: Type K (A) annealed-temper copper tubing with soldered or flared joints.
5. Vacuum-Breaker Piping: Outlet, same as service where installed.
6. Safety-Valve-Inlet and -Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

D. Valve Applications
1. Install shutoff duty valves at branch connections to steam supply mains, at steam supply connections to equipment, and at the outlet of steam traps.
2. Install safety valves on pressure-reducing stations and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install safety-valve discharge piping, without valves, to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

E. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Use indicated piping locations and arrangements if such were used to size pipe and
calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

2. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

3. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

4. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

5. Install piping to permit valve servicing.

6. Install piping free of sags and bends.

7. Install fittings for changes in direction and branch connections.

8. Install piping to allow application of insulation.

9. Select system components with pressure rating equal to or greater than system operating pressure.

10. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

11. Install drains, consisting of a tee fitting, NPS 3/4 (DN 20) full port-ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

12. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.

13. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.

14. Reduce pipe sizes using eccentric reducer fitting installed with level side down.

15. Install branch connections to mains using mechanically formed, as directed, tee fittings in main pipe, with the branch connected to top of main pipe.

16. Install valves according to Division 23 Section "General-duty Valves For Hvac Piping".

17. Install unions in piping, NPS 2 (DN 50) and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

18. Install flanges in piping, NPS 2-1/2 (DN 65) and larger, at final connections of equipment and elsewhere as indicated.

19. Install strainers on supply side of control valves, pressure-reducing valves, traps, and elsewhere as indicated. Install NPS 3/4 (DN 20) nipple and full port ball valve in blowdown connection of strainers NPS 2 (DN 50) and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2 (DN 50).

20. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 23 Section "Expansion Fittings And Loops For Hvac Piping".

21. Identify piping as specified in Division 23 Section "Identification For Hvac Piping And Equipment".

22. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.
   a. On straight runs with no natural drainage points, install drip legs at intervals not exceeding 300 feet (90 m).
   b. Size drip legs same size as main. In steam mains NPS 6 (DN 150) and larger, drip leg size can be reduced, but to no less than NPS 4 (DN 100).

23. Flash Tank:
   a. Pitch condensate piping down toward flash tank.
   b. If more than one condensate pipe discharges into flash tank, install a check valve in each line.
   c. Install thermostatic air vent at tank top.
   d. Install safety valve at tank top.
   e. Install full-port ball valve, and swing check valve on condensate outlet.
   f. Install inverted bucket or float and thermostatic trap at low-pressure condensate outlet, sized for three times the calculated heat load.
   g. Install pressure gage on low-pressure steam outlet according to Division 23 Section "Meters And Gages For Hvac Piping".

F. Steam-Trap Installation
1. Install steam traps in accessible locations as close as possible to connected equipment.
2. Install full-port ball valve, strainer, and union upstream from trap; install union, check valve, and full-port ball valve downstream from trap unless otherwise indicated.

G. Pressure-Reducing Valve Installation
1. Install pressure-reducing valves in accessible location for maintenance and inspection.
2. Install bypass piping around pressure-reducing valves, with globe valve equal in size to area of pressure-reducing valve seat ring, unless otherwise indicated.
3. Install gate valves on both sides of pressure-reducing valves.
4. Install unions or flanges on both sides of pressure-reducing valves having threaded- or flanged-end connections respectively.
5. Install pressure gages on low-pressure side of pressure-reducing valves after the bypass connection according to Division 23 Section "Meters And Gages For Hvac Piping".
6. Install strainers upstream for pressure-reducing valve.
7. Install safety valve downstream from pressure-reducing valve station.

H. Steam Or Condensate Meter Installation
1. Install meters with lengths of straight pipe upstream and downstream according to steam meter manufacturer's instructions.
2. Provide data acquisition wiring. Refer to Division 23 Section "Instrumentation And Control For Hvac".

I. Safety Valve Installation
1. Install safety valves according to ASME B31.1, "Power Piping" OR ASME B31.9, "Building Services Piping," as directed
2. Pipe safety-valve discharge without valves to atmosphere outside the building.
3. Install drip-pan elbow fitting adjacent to safety valve and pipe drain connection to nearest floor drain.
4. Install exhaust head with drain to waste, on vents equal to or larger than NPS 2-1/2 (DN 65).

J. Hangers And Supports
1. Install hangers and supports according to Division 23 Section "Hangers And Supports For Hvac Piping And Equipment". Comply with requirements below for maximum spacing.
2. Seismic restraints are specified in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment".
3. Install the following pipe attachments:
   a. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet (6 m) long.
   b. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet (6 m) or longer.
   c. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
   d. Spring hangers to support vertical runs.
4. Install hangers with the following maximum spacing and minimum rod sizes:
   a. NPS 3/4 (DN 20): Maximum span, 9 feet (2.7 m); minimum rod size, 1/4 inch (6.4 mm).
   b. NPS 1 (DN 25): Maximum span, 9 feet (2.7 m); minimum rod size, 1/4 inch (6.4 mm).
   c. NPS 1-1/2 (DN 40): Maximum span, 12 feet (3.7 m); minimum rod size, 3/8 inch (10 mm).
   d. NPS 2 (DN 50): Maximum span, 15 feet (4.6 m); minimum rod size, 3/8 inch (10 mm).
   e. NPS 2-1/2 (DN 65): Maximum span, 14 feet (4.3 m); minimum rod size, 3/8 inch (10 mm).
   f. NPS 3 (DN 80): Maximum span, 15 feet (4.6 m); minimum rod size, 3/8 inch (10 mm).
   g. NPS 4 (DN 100): Maximum span, 17 feet (5.2 m); minimum rod size, 1/2 inch (13 mm).
   h. NPS 6 (DN 150): Maximum span, 21 feet (6.4 m); minimum rod size, 1/2 inch (13 mm).
   i. NPS 8 (DN 200): Maximum span, 24 feet (7.3 m); minimum rod size, 5/8 inch (16 mm).
   j. NPS 10 (DN 250): Maximum span, 26 feet (8 m); minimum rod size, 3/4 inch (19 mm).
   k. NPS 12 (DN 300): Maximum span, 30 feet (9.1 m); minimum rod size, 7/8 inch (22 mm).
   l. NPS 14 (DN 350): Maximum span, 32 feet (9.8 m); minimum rod size, 1 inch (25 mm).
   m. NPS 16 (DN 400): Maximum span, 35 feet (10.7 m); minimum rod size, 1 inch (25 mm).
   n. NPS 18 (DN 450): Maximum span, 37 feet (11.3 m); minimum rod size, 1-1/4 inches (32 mm).
5. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:
   a. NPS 1/2 (DN 15): Maximum span, 4 feet (1.2 m); minimum rod size, 1/4 inch (6.4 mm).
   b. NPS 3/4 (DN 20): Maximum span, 5 feet (1.5 m); minimum rod size, 1/4 inch (6.4 mm).
   c. NPS 1 (DN 25): Maximum span, 6 feet (1.8 m); minimum rod size, 1/4 inch (6.4 mm).
   d. NPS 1-1/2 (DN 40): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
   e. NPS 2 (DN 50): Maximum span, 8 feet (2.4 m); minimum rod size, 3/8 inch (10 mm).
   f. NPS 2-1/2 (DN 65): Maximum span, 9 feet (2.7 m); minimum rod size, 3/8 inch (10 mm).
   g. NPS 3 (DN 80): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (10 mm).

6. Support vertical runs at roof, at each floor, and at 10-foot (3-m) intervals between floors.

7. Fiberglass Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.

K. Pipe Joint Construction
   1. Join pipe and fittings according to the following requirements and Division 21 specifying piping systems.
   2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
   3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
   6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
      a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
      b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
   8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
   9. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

L. Terminal Equipment Connections
   1. Size for supply and return piping connections shall be the same as or larger than equipment connections.
   2. Install traps and control valves in accessible locations close to connected equipment.
   3. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
   4. Install vacuum breakers downstream from control valve, close to coil inlet connection.
   5. Install a drip leg at coil outlet.

M. Field Quality Control
   1. Prepare steam and condensate piping according to ASME B31.1, "Power Piping" AND/OR ASME B31.9, "Building Services Piping," as directed, and as follows:
      a. Leave joints, including welds, uninsulated and exposed for examination during test.
      b. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
      c. Flush system with clean water. Clean strainers.
d. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.

2. Perform the following tests on steam and condensate piping:
   a. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
   b. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength.
   c. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.

3. Prepare written report of testing.

END OF SECTION 22 11 16 00d
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 22 11 16 00e - REFRIGERANT PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for refrigerant piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes refrigerant piping used for air-conditioning applications.

C. Performance Requirements
1. Line Test Pressure for Refrigerant R-134a:
   c. Hot-Gas and Liquid Lines: 225 psig (1551 kPa).
2. Line Test Pressure for Refrigerant R-407C:
3. Line Test Pressure for Refrigerant R-410A:
   a. Suction Lines for Air-Conditioning Applications: 300 psig (2068 kPa).

D. Submittals
1. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer’s test data, for the following:
   a. Thermostatic expansion valves.
   b. Solenoid valves.
   c. Hot-gas bypass valves.
   d. Filter dryers.
   e. Strainers.
   f. Pressure-regulating valves.
2. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.
   a. Shop Drawing Scale: 1/4 inch equals 1 foot (1:50).
   b. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
3. Welding certificates.
4. Field quality-control test reports.
5. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

E. Quality Assurance
1. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, “Welding and Brazing Qualifications.”

F. Product Storage And Handling
1. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

1.2 PRODUCTS

A. Copper Tube And Fittings
1. Copper Tube: ASTM B 88, Type K or L (ASTM B 88M, Type A or B) OR ASTM B 280, Type ACR, as directed.
4. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
6. Flexible Connectors:
   b. End Connections: Socket ends.
   c. Offset Performance: Capable of minimum 3/4-inch (20-mm) misalignment in minimum 7-inch- (180-mm-) long assembly.
   d. Pressure Rating: Factory test at minimum 500 psig (3450 kPa).
   e. Maximum Operating Temperature: 250 deg F (121 deg C).

B. Steel Pipe And Fittings
1. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; Type, Grade, and wall thickness as selected in Part 3 piping applications articles.
2. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
3. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, bevel-welded end connection, and raised face.
5. Flanged Unions:
   a. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 (DN 25 to DN 40) and ductile iron for NPS 2 to NPS 3 (DN 50 to DN 80). Apply rust-resistant finish at factory.
   b. Gasket: Fiber asbestos free.
   c. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Apply rust-resistant finish at factory.
   d. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.
   e. Offset Performance: Capable of minimum 3/4-inch (20-mm) misalignment in minimum 7-inch- (180-mm-) long assembly.
   f. Pressure Rating: Factory test at minimum 400 psig (2760 kPa).
   g. Maximum Operating Temperature: 330 deg F (165 deg C).
6. Flexible Connectors:
   b. End Connections:
      1) NPS 2 (DN 50) and Smaller: With threaded-end connections.
      2) NPS 2-1/2 (DN 65) and Larger: With flanged-end connections.
   c. Offset Performance: Capable of minimum 3/4-inch (20-mm) misalignment in minimum 7-inch- (180-mm-) long assembly.
   d. Pressure Rating: Factory test at minimum 500 psig (3450 kPa).
   e. Maximum Operating Temperature: 250 deg F (121 deg C).
C. Valves And Specialties

1. Diaphragm Packless Valves:
   a. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
   b. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
   c. Operator: Rising stem and hand wheel.
   d. Seat: Nylon.
   e. End Connections: Socket, union, or flanged.
   g. Maximum Operating Temperature: 275 deg F (135 deg C).

2. Packed-Angle Valves:
   a. Body and Bonnet: Forged brass or cast bronze.
   b. Packing: Molded stem, back seating, and replaceable under pressure.
   c. Operator: Rising stem.
   e. Seal Cap: Forged-brass or valox hex cap.
   f. End Connections: Socket, union, threaded, or flanged.
   g. Working Pressure Rating: 500 psig (3450 kPa).
   h. Maximum Operating Temperature: 275 deg F (135 deg C).

3. Check Valves:
   a. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
   b. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
   c. Piston: Removable polytetrafluoroethylene seat.
   d. Closing Spring: Stainless steel.
   e. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
   f. End Connections: Socket, union, threaded, or flanged.
   g. Maximum Opening Pressure: 0.50 psig (3.4 kPa).
   h. Working Pressure Rating: 500 psig (3450 kPa).
   i. Maximum Operating Temperature: 275 deg F (135 deg C).

4. Service Valves:
   a. Body: Forged brass with brass cap including key end to remove core.
   b. Core: Removable ball-type check valve with stainless-steel spring.
   c. Seat: Polytetrafluoroethylene.
   d. End Connections: Copper spring.
   e. Working Pressure Rating: 500 psig (3450 kPa).

5. Solenoid Valves: Comply with ARI 760 and UL 429; listed and labeled by an NRTL.
   c. Seat: Polytetrafluoroethylene.
   d. End Connections: Threaded.
   e. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch (16-GRC) conduit adapter, and 24 OR 115 OR 208, as directed, -V ac coil.
   g. Maximum Operating Temperature: 240 deg F (116 deg C).
   h. Manual operator.

6. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
   a. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
   c. Seat Disc: Polytetrafluoroethylene.
   d. End Connections: Threaded.
   e. Working Pressure Rating: 400 psig (2760 kPa).

7. Thermostatic Expansion Valves: Comply with ARI 750.
   a. Body, Bonnet, and Seal Cap: Forged brass or steel.
   c. Packing and Gaskets: Non-asbestos.
   d. Capillary and Bulb: Copper tubing filled with refrigerant charge.
e. Suction Temperature: 40 deg F (4.4 deg C).
f. Superheat: Adjustable OR Nonadjustable, as directed.
g. Reverse-flow option (for heat-pump applications).
h. End Connections: Socket, flare, or threaded union.
i. Working Pressure Rating: 700 psig (4820 kPa) OR 450 psig (3100 kPa), as directed.

8. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
   a. Body, Bonnet, and Seat Cap: Ductile iron or steel.
   c. Packing and Gaskets: Non-asbestos.
   e. Seat: Polytetrafluoroethylene.
   f. Equalizer: Internal OR External, as directed.
   g. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with
      1/2-inch (16-GRC) conduit adapter, and 24 OR 115 OR 208, as directed,-V ac coil.
   h. End Connections: Socket.
i. Set Pressure: as directed by the Owner.
   j. Throttling Range: Maximum 5 psig (34 kPa).
   k. Working Pressure Rating: 500 psig (3450 kPa).

9. Straight-Type Strainers:
   b. Screen: 100-mesh stainless steel.
   c. End Connections: Socket or flare.
   e. Maximum Operating Temperature: 275 deg F (135 deg C).

10. Angle-Type Strainers:
    a. Body: Forged brass or cast bronze.
    b. Drain Plug: Brass hex plug.
    c. Screen: 100-mesh monel.
    d. End Connections: Socket or flare.
    e. Working Pressure Rating: 500 psig (3450 kPa).
    f. Maximum Operating Temperature: 275 deg F (135 deg C).

11. Moisture/Liquid Indicators:
    b. Window: Replaceable, clear, fused glass window with indicating element protected by filter
       screen.
    c. Indicator: Color coded to show moisture content in ppm.
    d. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
    e. End Connections: Socket or flare.
    g. Maximum Operating Temperature: 240 deg F (116 deg C).

12. Replaceable-Core Filter Dryers: Comply with ARI 730.
    a. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and
       neoprene gaskets.
    b. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
    c. Desiccant Media: Activated alumina OR charcoal, as directed.
    d. Designed for reverse flow (for heat-pump applications).
    e. End Connections: Socket.
    f. Access Ports: NPS 1/4 (DN 8) connections at entering and leaving sides for pressure
       differential measurement.
    g. Maximum Pressure Loss: 2 psig (14 kPa).
    h. Rated Flow: as directed by the Owner.
    i. Working Pressure Rating: 500 psig (3450 kPa).

    b. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
22. Plumbing

Refrigerant Piping

DASNY, Downstate

14. Mufflers:
   b. End Connections: Socket or flare.
   d. Maximum Operating Temperature: 275 deg F (135 deg C).

15. Receivers: Comply with ARI 495.
   a. Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
   b. Comply with UL 207; listed and labeled by an NRTL.
   c. Body: Welded steel with corrosion-resistant coating.
   d. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
   e. End Connections: Socket or threaded.
   g. Maximum Operating Temperature: 275 deg F (135 deg C).

16. Liquid Accumulators: Comply with ARI 495.
   b. End Connections: Socket or threaded.
   d. Maximum Operating Temperature: 275 deg F (135 deg C).

D. Refrigerants

1. ASHRAE 34, R-134a: Tetrafluoroethane.
2. ASHRAE 34, R-407C: Difluoromethane/Pentafluoroethane/1,1,1,2-Tetrafluoroethane.

1.3 EXECUTION

A. Piping Applications For Refrigerant R-134a
   1. Suction Lines NPS 1-1/2 (DN 40) and Smaller for Conventional Air-Conditioning Applications:
      Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR
      soldered, as directed, joints.  
      OR
      Suction Lines NPS 4 (DN 100) and Smaller OR NPS 2 to NPS 4 (DN 50 to DN 100), as directed, 
      for Conventional Air-Conditioning Applications: Copper, Type ACR OR L (B), as directed, 
      drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.
   2. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: 
      Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR 
      soldered, as directed, joints. 
      OR
      Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: 
      Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with 
      soldered joints. 
      OR
      Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed:
      a. NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR, annealed-temper tubing and 
         wrought-copper fittings with brazed OR soldered, as directed, joints.
      OR
NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

b. NPS 4 (DN 100): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

3. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.

OR

Safety-Relief-Valve Discharge Piping: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with soldered joints.

OR

Safety-Relief-Valve Discharge Piping:

a. NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

b. NPS 4 (DN 100): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

B. Piping Applications For Refrigerant R-407c

1. Suction Lines NPS 1-1/2 (DN 40) and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings

OR

Suction Lines NPS 4 (DN 100) and Smaller OR NPS 2 to NPS 4 (DN 50 to DN 100), as directed, for Conventional Air-Conditioning Applications: Copper, Type ACR OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

2. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed:

a. NPS 1 (DN 25) and Smaller: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

NPS 1 (DN 25) and Smaller: Copper, Type ACR OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

b. NPS 1-1/4 to NPS 2 (DN 32 to DN 50): Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

c. NPS 4 (DN 100): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

3. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.

OR

Safety-Relief-Valve Discharge Piping: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with soldered joints.

OR

Safety-Relief-Valve Discharge Piping:

a. NPS 1 (DN 25) and Smaller: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR soldered joints.

OR

NPS 1 (DN 25) and Smaller: Copper, Type ACR OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.
b. NPS 1-1/4 to NPS 2 (DN 32 to DN 50): Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

c. NPS 4 (DN 100): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with soldered joints.

C. Piping Applications For Refrigerant R-410a

1. Suction Lines NPS 1-1/2 (DN 40) and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Suction Lines NPS 3-1/2 (DN 90) and Smaller OR NPS 2 to NPS 3-1/2 (DN 50 to DN 90), as directed, for Conventional Air-Conditioning Applications: Copper, Type ACR OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Suction Lines NPS 4 (DN 100) and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with soldered joints.

2. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type ACR OR L (B), as directed, annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed:

a. NPS 5/8 (DN 18) and Smaller: Copper, Type ACR OR L (B), as directed, annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

b. NPS 3/4 to NPS 1 (DN 20 to DN 25) and Smaller: Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

c. NPS 1-1/4 (DN 32) and Smaller: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.

d. NPS 1-1/2 to NPS 2 (DN 40 to DN 50): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.

OR

Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications, as directed, NPS 2 to NPS 4 (DN 50 to DN 100): Schedule 40, black-steel and wrought-steel fittings with welded joints.

3. Safety-Relief-Valve Discharge Piping: Copper, Type ACR OR L (B), as directed, annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Safety-Relief-Valve Discharge Piping: Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

OR

Safety-Relief-Valve Discharge Piping: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.

OR
Safety-Relief-Valve Discharge Piping: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.

Safety-Relief-Valve Discharge Piping:

a. NPS 5/8 (DN 18) and Smaller: Copper, Type ACR OR L (B), as directed, annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

b. NPS 3/4 to NPS 1 (DN 20 to DN 25) and Smaller: Copper, Type K (A), annealed- or drawn-temper tubing and wrought-copper fittings with brazed OR soldered, as directed, joints.

c. NPS 1-1/4 (DN 32) and Smaller: Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with 95-5 tin-antimony soldered joints.

d. NPS 1-1/2 to NPS 2 (DN 40 to DN 50): Copper, Type ACR OR K (A) OR L (B), as directed, drawn-temper tubing and wrought-copper fittings with Alloy HB soldered joints.

Safety-Relief-Valve Discharge Piping NPS 2 to NPS 4 (DN 50 to DN 100): Schedule 40, black-steel and wrought-steel fittings with welded joints.

D. Valve And Specialty Applications

1. Install diaphragm packless OR packed-angle, as directed, valves in suction and discharge lines of compressor.

2. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.

3. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.

4. Except as otherwise indicated, install diaphragm packless OR packed-angle, as directed, valves on inlet and outlet side of filter dryers.

5. Install a full-sized, three-valve bypass around filter dryers.

6. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.

7. Install thermostatic expansion valves as close as possible to distributors on evaporators.
   a. Install valve so diaphragm case is warmer than bulb.
   b. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
   c. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.

8. Install safety relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.

9. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

10. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for device being protected:
   a. Solenoid valves.
   b. Thermostatic expansion valves.
   c. Hot-gas bypass valves.
   d. Compressor.

11. Install filter dryers in liquid line between compressor and thermostatic expansion valve, and in the suction line at the compressor, as directed.

12. Install receivers sized to accommodate pump-down charge.

13. Install flexible connectors at compressors.

E. Piping Installation

1. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

2. Install refrigerant piping according to ASHRAE 15.
3. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

6. Install piping adjacent to machines to allow service and maintenance.

7. Install piping free of sags and bends.

8. Install fittings for changes in direction and branch connections.

9. Select system components with pressure rating equal to or greater than system operating pressure.

10. Refer to Division 23 Section(s) "Instrumentation And Control For HVAC" AND "Sequence Of Operations For HVAC Controls" for solenoid valve controllers, control wiring, and sequence of operation.

11. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

12. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Division 08 Section "Access Doors And Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.

13. Install refrigerant piping in protective conduit where installed belowground.

14. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.

15. Slope refrigerant piping as follows:
   a. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
   b. Install horizontal suction lines with a uniform slope downward to compressor.
   c. Install traps and double risers to entrain oil in vertical runs.
   d. Liquid lines may be installed level.

16. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

17. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
   a. Shot blast the interior of piping.
   b. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
   c. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
   d. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
   e. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
   f. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.

18. Install pipe sleeves at penetrations in exterior walls and floor assemblies.

19. Seal penetrations through fire and smoke barriers according to Division 07 Section "Penetration Firestopping".

20. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.

21. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.

22. Seal pipe penetrations through exterior walls according to Division 07 Section "Joint Sealants" for materials and methods.

23. Identify refrigerant piping and valves according to Division 23 Section "Identification For HVAC Piping And Equipment".

F. Pipe Joint Construction

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.
4. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
   a. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
   b. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.
6. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
7. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
8. Welded Joints: Construct joints according to AWS D10.12/D10.12M.
9. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

G. Hangers And Supports
1. Hanger, support, and anchor products are specified in Division 23 Section "Hangers And Supports For Hvac Piping And Equipment".
2. Install the following pipe attachments:
   a. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet (6 m) long.
   b. Roller hangers and spring hangers for individual horizontal runs 20 feet (6 m) or longer.
   c. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
   d. Spring hangers to support vertical runs.
   e. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
3. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
   a. NPS 1/2 (DN 15): Maximum span, 60 inches (1500 mm); minimum rod size, 1/4 inch (6.4 mm).
   b. NPS 5/8 (DN 18): Maximum span, 60 inches (1500 mm); minimum rod size, 1/4 inch (6.4 mm).
   c. NPS 1 (DN 25): Maximum span, 72 inches (1800 mm); minimum rod size, 1/4 inch (6.4 mm).
   d. NPS 1-1/4 (DN 32): Maximum span, 96 inches (2400 mm); minimum rod size, 3/8 inch (9.5 mm).
   e. NPS 1-1/2 (DN 40): Maximum span, 96 inches (2400 mm); minimum rod size, 3/8 inch (9.5 mm).
   f. NPS 2 (DN 50): Maximum span, 96 inches (2400 mm); minimum rod size, 3/8 inch (9.5 mm).
   g. NPS 2-1/2 (DN 65): Maximum span, 108 inches (2700 mm); minimum rod size, 3/8 inch (9.5 mm).
   h. NPS 3 (DN 80): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (9.5 mm).
   i. NPS 4 (DN 100): Maximum span, 12 feet (3.7 m); minimum rod size, 1/2 inch (13 mm).
4. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
   a. NPS 2 (DN 50): Maximum span, 10 feet (3 m); minimum rod size, 3/8 inch (9.5 mm).
   b. NPS 2-1/2 (DN 65): Maximum span, 11 feet (3.4 m); minimum rod size, 3/8 inch (9.5 mm).
   c. NPS 3 (DN 80): Maximum span, 12 feet (3.7 m); minimum rod size, 3/8 inch (9.5 mm).
   d. NPS 4 (DN 100): Maximum span, 14 feet (4.3 m); minimum rod size, 1/2 inch (13 mm).
5. Support multifloor vertical runs at least at each floor.

H. Field Quality Control
1. Perform tests and inspections and prepare test reports.
2. Tests and Inspections:
   a. Comply with ASME B31.5, Chapter VI.
   b. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
   c. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
      1) Fill system with nitrogen to the required test pressure.
      2) System shall maintain test pressure at the manifold gage throughout duration of test.
      3) Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
      4) Remake leaking joints using new materials, and retest until satisfactory results are achieved.

I. System Charging
1. Charge system using the following procedures:
   a. Install core in filter dryers after leak test but before evacuation.
   b. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers (67 Pa). If vacuum holds for 12 hours, system is ready for charging.
   c. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig (14 kPa).
   d. Charge system with a new filter-dryer core in charging line.

J. Adjusting
1. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
2. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
3. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
4. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
   a. Open shutoff valves in condenser water circuit.
   b. Verify that compressor oil level is correct.
   c. Open compressor suction and discharge valves.
   d. Open refrigerant valves except bypass valves that are used for other purposes.
   e. Check open compressor-motor alignment and verify lubrication for motors and bearings.
5. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION 22 11 16 00e
THIS PAGE INTENTIONALLY LEFT BLANK
1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for general-service compressed-air piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes piping and related specialties for general-service compressed-air systems operating at 200 psig (1380 kPa) or less.

C. Definitions
   2. CR: Chlorosulfonated polyethylene synthetic rubber.
   3. EPDM: Ethylene-propylene-diene terpolymer rubber.
   4. HDPE: High-density polyethylene plastic.
   5. NBR: Acrylonitrile-butadiene rubber.
   6. PE: Polyethylene plastic.
   7. PVC: Polyvinyl chloride plastic.
   8. High-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures between 150 and 200 psig (1035 and 1380 kPa).
   9. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of 150 psig (1035 kPa) or less.

D. Performance Requirements
   1. Seismic Performance: Compressed-air piping and support and installation shall withstand effects of seismic events determined according to SEI/ASCE 7, "Minimum Design Loads for Buildings and Other Structures."

E. Submittals
   1. Product Data: For the following:
      a. Plastic pipes, fittings, and valves.
      b. Dielectric fittings.
      c. Flexible pipe connectors.
      d. Safety valves.
      e. Pressure regulators. Include rated capacities and operating characteristics.
      f. Automatic drain valves.
      g. Filters. Include rated capacities and operating characteristics.
      h. Lubricators. Include rated capacities and operating characteristics.
      i. Quick couplings.
      j. Hose assemblies.
   2. Brazing OR Welding, as directed, certificates.
   3. Field quality-control test reports.
   4. Operation and maintenance data.

F. Quality Assurance
   2. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
   3. ASME Compliance:

G. Project Conditions
1. Interruption of Existing Compressed-Air Service: Do not interrupt compressed-air service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary compressed-air service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of compressed-air service.
   b. Do not proceed with interruption of compressed-air service without the Owner's written permission.

1.2 PRODUCTS
A. Pipes, Tubes, And Fittings
1. Schedule 40, Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B, black or hot-dip zinc coated with ends threaded according to ASME B1.20.1.
   d. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel, threaded.
   f. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel.
   g. Grooved-End Fittings and Couplings:
      1) Grooved-End Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron casting; with grooves according to AWWA C606 and dimensions matching steel pipe.
      2) Couplings: AWWA C606 or UL 213, for steel-pipe dimensions and rated for 300-psig (2070-kPa) minimum working pressure. Include ferrous housing sections, gasket suitable for compressed air, and bolts and nuts. Provide EDPM gaskets for oil-free compressed air. Provide NBR gaskets if compressed air contains oil or oil vapor.
   a. Pressure-Seal Fittings: Listed and labeled by a qualified testing agency and FMG-approved, carbon-steel, pressure-seal housing with O-ring end seals suitable for compressed-air piping and rated for 300-psig (2070-kPa) minimum working pressure. Provide EDPM seals for oil-free compressed air. Provide NBR seals if compressed air contains oil or oil vapor.
3. Copper Tube: ASTM B 88, Type K or L (ASTM B 88M, Type A or B) and ASTM B 88, Type M (ASTM B 88M, Type C) seamless, drawn-temper, water tube.
   a. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, wrought copper with dimensions for brazed joints.
   b. Cast-Copper-Alloy Flanges: ASME B16.24, Class 150 or 300.
   c. Copper Unions: ASME B16.22 or MSS SP-123.
   d. Press-Type Fittings, NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
   e. Press-Type Fittings, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
   g. Grooved-End Fittings and Couplings:
      1) Grooved-End Fittings: ASTM B 75 (ASTM B 75M), copper tube or ASTM B 584, bronze castings.
2) Couplings: Copper-tube dimensions and design similar to AWWA C606. Include ferrous housing sections, gasket suitable for compressed air, and bolts and nuts. Provide EDPM gasket for oil-free compressed air. Provide NBR gasket if compressed air contains oil or oil vapor.

4. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

5. PVC Pipe: ASTM D 1785, Schedule 40.
   a. PVC Fittings: ASTM D 2466, Schedule 40, socket type.

6. Blue ABS Piping System: Made of ASTM D 3965, ABS-resin modified to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are light blue and sizes are in millimeters.
   a. Transition Fittings, 20 to 63 mm: Composite union with ABS socket end, CR O-ring, and malleable-iron union nut and threaded end; with construction similar to MSS SP-107, transition union.
   b. Transition Fittings, 90 to 110 mm: Flange assembly with ABS flange, CR gasket, and metal flange of material matching piping to be connected.
   c. Valves, 20 to 63 mm: ABS union ball valve with socket ends.
   d. Valves, 90 to 110 mm: ABS butterfly valve with lever handle.

7. Green ABS Piping System: Made of ASTM D 3965, ABS-resin modified to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are dark green with SDR of 9.0 and same OD as ASTM A 53/A 53M, steel pipe.
   a. Transition Fittings, NPS 1/2 to NPS 2 (DN 15 to DN 50): Composite union with ABS socket end, CR O-ring, ABS union nut, and brass solder-joint end; with construction similar to MSS SP-107, transition union.
   b. Transition Fittings, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): ABS flange, CR gasket, and metal flange of material matching piping to be connected.
   c. Valves, NPS 1/2 to NPS 2 (DN 15 to DN 50): Union ball valve with socket ends.
   d. Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Union ball valve with flanged ends. Include safety exhaust feature in Part 3 “Valve Applications” Article if required.

8. HDPE Piping System: Made of ASTM D 1248, HDPE resin to provide shatter-resistant pipe for compressed-air service. Pipe and fittings are dark blue with pipe dimensions about the same OD as ASTM D 3035, PE pipe.
   a. Transition Fittings, NPS 1/2 to NPS 2 (DN 15 to DN 50): HDPE adapter with one socket end and one end with threaded brass insert.
   b. Transition Fittings, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): HDPE flange, CR gasket, and metal flange of material matching piping to be connected.
   c. Valves, NPS 1/2 to NPS 3 (DN 15 to DN 80): HDPE union ball valve with socket ends.

B. Joining Materials
   1. Pipe-Flange Gasket Materials: Suitable for compressed-air piping system contents.
      a. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
         1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
         2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
   2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
   3. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
   5. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.
   7. Solvent Cements for Joining Plastic Piping:
      a. ABS Piping: ASTM D 2235.
      b. PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.
1. Metal Ball, Butterfly, Check, Gate, and Globe Valves: Comply with requirements in Division 22 Section "General-duty Valves For Plumbing Piping".

D. Dielectric Fittings
1. General Requirements for Dielectric Fittings: Combination fitting of copper alloy and ferrous materials with insulating material; suitable for system fluid, pressure, and temperature. Include threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
2. Dielectric Unions: Factory-fabricated union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
3. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
4. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   a. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.

E. Flexible Pipe Connectors
1. Bronze-Hose Flexible Pipe Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
   a. Working-Pressure Rating: 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed, minimum.
   b. End Connections, NPS 2 (DN 50) and Smaller: Threaded copper pipe or plain-end copper tube.
   c. End Connections, NPS 2-1/2 (DN 65) and Larger: Flanged copper alloy.
2. Stainless-Steel-Hose Flexible Pipe Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
   a. Working-Pressure Rating: 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed, minimum.
   b. End Connections, NPS 2 (DN 50) and Smaller: Threaded steel pipe nipple.
   c. End Connections, NPS 2-1/2 (DN 65) and Larger: Flanged steel nipple.

F. Sleeves
1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
2. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.

G. Escutcheons
1. General Requirements: Manufactured wall and ceiling escutcheons and floor plates, with ID to closely fit around pipe and tube and OD that completely covers opening.
   a. Finish: Polished chrome-plated OR Rough brass, as directed.
   a. Finish: Polished chrome-plated OR Rough brass, as directed.
5. One-Piece, Stamped-Steel Escutcheons: With set screw OR spring clips, as directed, and chrome-plated finish.
6. Split-Plate, Stamped-Steel Escutcheons: With concealed OR exposed-rivet, as directed, hinge, set screw OR spring clips, as directed, and chrome-plated finish.
7. One-Piece, Floor-Plate Escutcheons: Cast iron.
8. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

H. Specialties
construction; National Board certified, labeled, and factory sealed; constructed of bronze body
with poppet-type safety valve for compressed-air service.
   a. Pressure Settings: Higher than discharge pressure and same or lower than receiver
    pressure rating.
2. Air-Main Pressure Regulators: Bronze body, direct acting, spring-loaded manual pressure-setting
   adjustment, and rated for 250-psig (1725-kPa) inlet pressure, unless otherwise indicated.
   a. Type: Pilot operated.
3. Air-Line Pressure Regulators: Diaphragm OR Pilot, as directed, operated, bronze body, direct
   acting, spring-loaded manual pressure-setting adjustment, and rated for 200-psig (1380-kPa)
   minimum inlet pressure, unless otherwise indicated.
   OR
   Air-Line Pressure Regulators: Diaphragm operated, aluminum alloy or plastic body, direct acting,
   spring-loaded manual pressure-setting adjustment, and rated for 200-psig (1380-kPa) minimum
   inlet pressure, unless otherwise indicated.
4. Automatic Drain Valves: Stainless-steel body and internal parts, rated for 200-psig (1380-kPa)
   minimum working pressure, capable of automatic discharge of collected condensate. Include
   mounting bracket if wall mounting is indicated, as directed.
5. Coalescing Filters: Coalescing type with activated carbon capable of removing water and oil
   aerosols; with color-change dye to indicate when carbon is saturated and warning light to indicate
   when selected maximum pressure drop has been exceeded. Include mounting bracket if wall
   mounting is indicated, as directed.
6. Mechanical Filters: Two-stage, mechanical-separation-type, air-line filters. Equip with deflector
   plates, resin-impregnated-ribbon-type filters with edge filtration, and drain cock. Include mounting
   bracket if wall mounting is indicated, as directed.
7. Air-Line Lubricators: With drip chamber and sight dome for observing oil drop entering air
   stream; with oil-feed adjustment screw and quick-release collar for easy bowl removal. Include
   mounting bracket if wall mounting is indicated, as directed.
   a. Provide with automatic feed device for supplying oil to lubricator.

I. Quick Couplings
1. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick
   connection and disconnection of compressed-air hose.
2. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and
   stainless-steel or nickel-plated-steel operating parts.
   a. Socket End: With one-way valve and threaded inlet for connection to piping or threaded
      hose fitting.
   b. Plug End: Flow-sensor-bleeder, check-valve OR Straight-through, as directed, type with
      barbed outlet for attaching hose.
3. Valveless Quick Couplings: Straight-through brass body with stainless-steel or nickel-plated-steel
   operating parts.
   a. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching
      hose.
   b. Plug End: With barbed outlet for attaching hose.

J. Hose Assemblies
1. Description: Compatible hose, clamps, couplings, and splicers suitable for compressed-air
   service, of nominal diameter indicated, and rated for 300-psig (2070-kPa) minimum working
   pressure, unless otherwise indicated.
   a. Hose: Reinforced single OR double, as directed,-wire-braid, CR-covered hose for
      compressed-air service.
   b. Hose Clamps: Stainless-steel clamps or bands.
   c. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or
      gasket-seal swivel coupling with barbed ends for connecting two sections of hose.
   d. Hose Splicers: One-piece, straight-through brass or stainless-steel fitting with barbed ends
      for connecting two sections of hose.

K. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   a. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

1.3 EXECUTION

A. Piping Applications

1. Compressed-Air Piping between Air Compressors and Receivers: Use one of the following piping materials for each size range:
   a. NPS 2 (DN 50) and Smaller: Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.
   b. NPS 2 (DN 50) and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.
   c. NPS 2 (DN 50) and Smaller: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
   d. NPS 2 (DN 50) and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed joints.
   e. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.
   f. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; grooved-end fittings; couplings; and grooved joints.
   g. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.
   h. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed joints.
   i. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Type K or L (Type A or B), copper tube; press-type fittings; and pressure-sealed joints.
   j. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): 63-mm and smaller, blue ABS pipe and fittings; transition fittings; valves; and solvent-cemented joints.
   k. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Green ABS pipe and fittings, transition fittings, and valves; and solvent-cemented joints.
   l. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): HDPE pipe, fittings, and valves; and heat-fusion joints.
   m. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.
   n. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; grooved-end fittings; couplings; and grooved joints.

2. Low-Pressure Compressed-Air Distribution Piping: Use one of the following piping materials for each size range:
   a. NPS 2 (DN 50) and Smaller: Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.
   b. NPS 2 (DN 50) and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.
   c. NPS 2 (DN 50) and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed or soldered, as directed, joints.
   d. NPS 2 (DN 50) and Smaller: Type K or L (Type A or B), copper tube; press-type fittings; and pressure-sealed joints.
   e. NPS 2 (DN 50) and Smaller: 63-mm and smaller, blue ABS pipe and fittings; transition fittings; valves; and solvent-cemented joints.
   f. NPS 2 (DN 50) and Smaller: Green ABS pipe and fittings, transition fittings, and valves; and solvent-cemented joints.
   g. NPS 2 (DN 50) and Smaller: HDPE pipe, fittings, and valves; and heat-fusion joints.
   h. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.
   i. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Schedule 40, black OR galvanized, as directed, steel pipe; grooved-end fittings; couplings; and grooved joints.
j. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.

k. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Type K or L (Type A or B), copper tube; grooved-end copper fittings; couplings; and grooved joints.

l. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Type K or L (Type A or B), copper tube; press-type fittings; and pressure-sealed joints.

m. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): 90- and 110-mm, blue ABS pipe and fittings; transition fittings; and solvent-cemented joints. Include butterfly valves and flanged joints.

n. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): NPS 3 and NPS 4 (DN 80 and DN 100), green ABS pipe and fittings; transition fittings; and solvent-cemented joints. Include ball valves and flanged joints.

o. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): NPS 3 and NPS 4 (DN 80 and DN 100), HDPE pipe and fittings; valves; and heat-fusion joints.

p. NPS 5 and NPS 6 (DN 125 and DN 150): Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.

q. NPS 5 (DN 125) and Larger: Schedule 40, black OR galvanized, as directed, steel pipe; grooved-end fittings; couplings; and grooved joints.

r. NPS 5 to NPS 8 (DN 125 to DN 200): Type K or L (Type A or B), copper tube; grooved-copper fittings; couplings; and grooved joints.

3. High-Pressure Compressed-Air Distribution Piping: Use one of the following piping materials for each size range:

a. NPS 2 (DN 50) and Smaller: Schedule 40, black OR galvanized, as directed, steel pipe; threaded, malleable-iron fittings; and threaded joints.

b. NPS 2 (DN 50) and Smaller: Schedule 5, galvanized-steel pipe; pressure-seal fittings; and pressure-sealed joints.

c. NPS 2 (DN 50) and Smaller: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.

d. NPS 2 (DN 50) and Smaller: Type K or L (Type A or B), copper tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.

3. Drain Piping: Use one of the following piping materials:

a. NPS 2 (DN 50) and Smaller: Type M (Type C) copper tube; wrought-copper fittings; and brazed or soldered joints.

b. NPS 2 (DN 50) and Smaller: PVC pipe and fittings; and solvent-cemented joints.

B. Valve Applications

1. General-Duty Valves: Comply with requirements in Division 22 Section "General-duty Valves For Plumbing Piping" for metal general-duty valves. Use metal valves, unless otherwise indicated.

a. Metal General-Duty Valves: Use valve types specified in "Valve Applications" Article in Division 22 Section "General-duty Valves For Plumbing Piping" according to the following:
1) Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.

2) High-Pressure Compressed Air: Valve types specified for medium-pressure compressed air.

3) Equipment Isolation NPS 2 (DN 50) and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.

4) Grooved-end valves may be used with grooved-end piping and grooved joints.

b. Plastic General-Duty Valves: Provide valves, made by piping manufacturer, that are compatible with piping. Do not use plastic valves between air compressors and receivers.

1) Blue ABS Piping System: Ball and butterfly valves.

2) Green ABS Piping System: Ball valves.

3) HDPE Piping System: Ball valves.

C. Piping Installation

1. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

2. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.

3. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.

4. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.

5. Install piping adjacent to equipment and machines to allow service and maintenance.

6. Install air and drain piping with 1 percent slope downward in direction of flow.

7. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.

8. Equipment and Specialty Flanged Connections:

a. Use steel companion flange with gasket for connection to steel pipe.

b. Use cast-copper-alloy companion flange with gasket and brazed OR soldered, as directed, joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.

9. Flanged joints may be used instead of specified joint for any piping or tubing system.

10. Extended-tee outlets with brazed branch connection may be used for copper tubing, within extruded-tee connection diameter to run tube diameter ratio for tube type, according to Extruded Tee Connections Sizes and Wall Thickness for Copper Tube (Inches) Table in ASTM F 2014.

11. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.

12. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.

13. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping”.

15. Install piping free of sags and bends.

16. Install fittings for changes in direction and branch connections.

17. Install seismic restraints on piping. Seismic-restraint devices are specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment”.

D. Joint Construction

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

6. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Join according to ASTM B 828 or CDA's "Copper Tube Handbook."
7. Extruded-Tee Outlets for Copper Tubing: Form branches according to ASTM F 2014, with tools recommended by procedure manufacturer, and using operators qualified according to Part 1 "Quality Assurance" Article.
8. Flanged Joints: Use asbestos-free, nonmetallic gasket suitable for compressed air. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.
12. Solvent-Cemented Joints for ABS Piping: Clean and dry joining surfaces. Join according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. Join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2235 Appendix.
13. Solvent-Cemented Joints for PVC Piping: Clean and dry joining surfaces. Join according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.

E. Valve Installation
1. General-Duty Valves: Comply with requirements in Division 22 Section "General-duty Valves For Plumbing Piping".
2. Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.
3. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.
4. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

F. Dielectric Fitting Installation
1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. NPS 2 (DN 50) and Smaller: Use dielectric unions.
3. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges.
4. NPS 5 (DN 125) and Larger: Use dielectric flange kits.

G. Flexible Pipe Connector Installation
1. Install flexible pipe connectors in discharge piping and in inlet air piping from remote air-inlet filter, as directed, of each air compressor.
2. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.
3. Install stainless-steel-hose flexible pipe connectors in steel compressed-air piping.

H. Specialty Installation
1. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.
2. Install air-main pressure regulators in compressed-air piping at or near air compressors.
3. Install air-line pressure regulators in branch piping to equipment and tools, as directed.
4. Install automatic drain valves on aftercoolers, receivers, and dryers. Discharge condensate onto nearest floor drain.
5. Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters. Mount on wall at locations indicated, as directed.
6. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters. Mount on wall at locations indicated, as directed.
7. Install air-line lubricators in branch piping to machine tools. Mount on wall at locations indicated, as directed.
8. Install quick couplings at piping terminals for hose connections.
9. Install hose assemblies at hose connections.

I. Connections
1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment and machine.

J. Sleeve Installation
1. Sleeves are not required for core-drilled holes.
2. Permanent sleeves are not required for holes formed by removable PE sleeves.
3. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs using galvanized-steel pipe OR galvanized-steel sheet OR stack sleeve fittings OR PVC pipe, as directed.
   OR
   Install sleeves for pipes passing through concrete and masonry walls, gypsum board partitions, and concrete floor and roof slabs.
   a. Wall Penetrations: Cut sleeves to length for mounting flush with both surfaces.
   b. Floor Penetrations: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
4. Install sleeves in new walls and slabs as new walls and slabs are constructed.
5. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
   a. PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
   b. Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum board partitions.
   c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
      1) Seal space outside of sleeve fittings with grout.
6. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping".

K. Escutcheon Installation
1. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
   a. New Piping:
      1) Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
      2) Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set screw OR stamped steel with set screw or spring clips OR stamped steel with spring clips, as directed.
      3) Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split-casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set screw OR One piece or split
plate, stamped steel with set screw OR Split plate, stamped steel with set screw, as directed.

4) Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

5) Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

6) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

b. Existing Piping:
   1) Chrome-Plated Piping: Split-casting, cast brass with chrome-plated finish.
   2) Insulated Piping: Split-plate, stamped steel with concealed OR exposed-rivet, as directed, hinge and spring clips.
   3) Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
   4) Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set screw, as directed.
   5) Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set screw or spring clips, as directed.
   6) Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set screw or spring clips, as directed.
   7) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

L. Hanger And Support Installation
   1. Comply with requirements in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment" for seismic-restraint devices.
   2. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for pipe hanger and support devices.
   3. Vertical Piping: MSS Type 8 or 42, clamps.
   4. Individual, Straight, Horizontal Piping Runs:
      a. 100 Feet (30 m) or Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
   5. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls.
      Support pipe rolls on trapeze.
   6. Base of Vertical Piping: MSS Type 52, spring hangers.
   7. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
   8. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
   9. Install hangers for Schedule 40, steel piping with the following maximum horizontal spacing and minimum rod diameters:
      a. NPS 1/4 to NPS 1/2 (DN 8 to DN 15): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
      b. NPS 3/4 to NPS 1-1/4 (DN 20 to DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
      c. NPS 1-1/2 (DN 40): 12 feet (3.7 m) with 3/8-inch (10-mm) rod.
      d. NPS 2 (DN 50): 13 feet (4 m) with 3/8-inch (10-mm) rod.
      e. NPS 2-1/2 (DN 65): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
      f. NPS 3 (DN 80): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
      g. NPS 3-1/2 (DN 90): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
      h. NPS 4 (DN 100): 17 feet (5.2 m) with 5/8-inch (16-mm) rod.
      i. NPS 5 (DN 125): 19 feet (5.8 m) with 5/8-inch (16-mm) rod.
      j. NPS 6 (DN 150): 21 feet (6.4 m) with 3/4-inch (19-mm) rod.
      k. NPS 8 (DN 200): 24 feet (7.3 m) with 3/4-inch (19-mm) rod.
      l. NPS 10 (DN 250): 26 feet (7.9 m) with 7/8-inch (22-mm) rod.
10. Install supports for vertical, Schedule 40, steel piping every 15 feet (4.6 m).

11. Install hangers for Schedule 5, steel piping with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1/2 (DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   c. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   f. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.

12. Install supports for vertical, Schedule 5, steel piping every 10 feet (3 m).

13. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
   h. NPS 2 (DN 65): 13 feet (4 m) with 1/2-inch (13-mm) rod.
   i. NPS 3 (DN 80): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
   j. NPS 3-1/2 (DN 90): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
   k. NPS 4 (DN 100): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
   l. NPS 5 (DN 125): 18 feet (5.5 m) with 1/2-inch (13-mm) rod.
   m. NPS 6 (DN 150): 20 feet (6 m) with 3/4-inch (19-mm) rod.
   n. NPS 8 (DN 200): 23 feet (7 m) with 3/4-inch (19-mm) rod.

14. Install supports for vertical copper tubing every 10 feet (3 m).

15. Install vinyl-coated hangers for ABS piping with the following maximum horizontal spacing and minimum rod diameters:
   a. All Sizes: Install continuous support for piping with compressed air at normal operating temperature above 100 deg F (38 deg C).
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 30 inches (760 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 38 inches (975 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 40 inches (1015 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 45 inches (1140 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 52 inches (1330 mm) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 58 inches (1470 mm) with 3/8-inch (10-mm) rod.
   h. NPS 3 (DN 80): 68 inches (1730 mm) with 1/2-inch (13-mm) rod.
   i. NPS 4 (DN 100): 76 inches (1900 mm) with 1/2-inch (13-mm) rod.

16. Install supports for vertical ABS piping every 48 inches (1220 mm).

17. Install vinyl-coated hangers for HDPE piping with the following maximum horizontal spacing and minimum rod diameters:
   a. All Sizes: Install continuous support for piping with compressed air at normal operating temperature above 100 deg F (38 deg C).
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 30 inches (760 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 35 inches (890 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 40 inches (1015 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 43 inches (1090 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 49 inches (1245 mm) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 55 inches (1400 mm) with 3/8-inch (10-mm) rod.
   h. NPS 3 and NPS 4 (DN 80 and DN 100): 96 inches (2440 mm) with 1/2-inch (13-mm) rod.

18. Install supports for vertical HDPE piping every 48 inches (1220 mm).

M. Labeling And Identification
1. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification For Plumbing Piping And Equipment".

N. Field Quality Control
1. Perform field tests and inspections.
2. Tests and Inspections:
   a. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig (345 kPa) above system operating pressure, but not less than 150 psig (1035 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
   b. Piping Leak Tests for ABS Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen, at temperature of 110 deg F (43 deg C) or less, to pressure of 40 psig (275 kPa) above system operating pressure, but not less than 80 psig (550 kPa) OR 100 psig (690 kPa), as directed, or more than 120 psig (825 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
   c. Piping Leak Tests for HDPE Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen, at temperature of 100 deg F (38 deg C) or less, to pressure of 40 psig (275 kPa) above system operating pressure, but not less than 100 psig (690 kPa) OR 125 psig (860 kPa) OR 150 psig (1035 kPa), as directed, or more than 180 psig (1240 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
   d. Repair leaks and retest until no leaks exist.
   e. Inspect filters, lubricators, and pressure regulators for proper operation.
3. Prepare test reports.

END OF SECTION 22 11 16 00f
SECTION 22 11 16 00g - COMPRESSED-AIR PIPING FOR LABORATORY AND HEALTHCARE FACILITIES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for compressed-air piping for laboratory and healthcare facilities. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Compressed-air piping and specialties for nonmedical laboratory facilities, designated “laboratory air,” operating at 50 psig (345 kPa) OR 100 psig (690 kPa) OR 125 psig (860 kPa), as directed.
      b. Medical air piping and specialties, designated “medical air,” operating at 50 to 55 psig (345 to 380 kPa).
      c. Dental air piping and specialties, designated “dental air,” operating at 80 to 100 psig (550 to 690 kPa).
      d. Gas-powered-tool air piping and specialties, designated “instrument air,” operating at 175 psig (1200 kPa).
      e. Healthcare laboratory air piping and specialties, designated “medical laboratory air,” operating at 100 psig (690 kPa).

C. Definitions
   2. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
   3. Medical Compressed-Air Piping Systems: Include medical air, dental air, instrument air, and medical laboratory air piping systems.

D. Submittals
   1. Product Data: For the following:
      a. Compressed-air tubes and fittings.
      b. Compressed-air valves and valve boxes.
      c. Medical compressed-air service connections.
      d. Medical compressed-air pressure control panels.
      e. Medical compressed-air manifolds.
      f. Medical compressed-air alarm system components.
   2. Shop Drawings: Diagram power, signal, and control wiring.
   3. Piping Material Certification: Signed by Installer certifying that medical compressed-air piping materials comply with NFPA 99 requirements.
   5. Field quality-control test reports.
   6. Operation and maintenance data.

E. Quality Assurance
   1. Installer Qualifications:
      a. Medical Compressed-Air Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010.
      b. Pressure-Seal Joining Procedure for Copper Tubing: Qualify operators according to training provided by Viega; Plumbing and Heating Systems.
   2. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the vacuum piping testing indicated, that is a member of the Medical Gas...
Professional Healthcare Organization OR is an NRTL, as directed, and that is acceptable to authorities having jurisdiction.

a. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.

3. Source Limitations: Obtain compressed-air service connections of same type and from same manufacturer as service connections provided for in Division 22 Section "Gas Piping For Laboratory And Healthcare Facilities".

5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

6. ASME Compliance:
   a. Comply with ASME B31.1, "Power Piping," for laboratory compressed-air piping operating at more than 150 psig (1035 kPa).
   b. Comply with ASME B31.9, "Building Services Piping," for laboratory compressed-air piping operating at 150 psig (1035 kPa) or less.

F. Project Conditions
1. Interruption of Existing Laboratory and Medical Compressed-Air Service(s): Do not interrupt laboratory or medical compressed-air service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of laboratory and medical compressed-air service(s).
   b. Do not proceed with interruption of laboratory and medical compressed-air service(s) without the Owner’s written permission.

1.2 PRODUCTS

A. Pipes, Tubes, And Fittings
1. Copper Medical Gas Tube: ASTM B 819, Type K OR Type L, as directed, seamless, drawn temper, that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in green for Type K tube and in blue for Type L tube.
   a. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.
   b. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.
   c. Copper Unions: ASME B16.22 or MSS SP-123, wrought copper or cast-copper alloy.
   d. Press-Type Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
2. Memory-Metal Couplings: Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.
3. Copper Water Tube: ASTM B 88, Type M (ASTM B 88M, Type C), seamless, drawn temper.
b. Press-Type Fittings:
   1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
   2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

   a. PVC Fittings: ASTM D 2466, Schedule 40, socket type.

B. Joining Materials
   2. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
   3. Threaded-Joint Tape: PTFE.

C. Valves
   1. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
   2. Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
      a. Pressure Rating: 300 psig (2070 kPa) minimum.
      b. Ball: Full-port, chrome-plated brass.
      c. Seats: PTFE or TFE.
      d. Handle: Lever type with locking device, as directed.
      e. Stem: Blowout proof with PTFE or TFE seal.
   3. Check Valves: In-line pattern, bronze.
      a. Pressure Rating: 300 psig (2070 kPa) minimum.
      b. Operation: Spring loaded.
      c. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
   4. Zone Valves: MSS SP-110, 3-piece body, brass or bronze ball valve with gage.
      a. Pressure Rating: 300 psig (2070 kPa) minimum.
      b. Ball: Full-port, chrome-plated brass.
      c. Seats: PTFE or TFE.
      d. Handle: Lever type with locking device, as directed.
      e. Stem: Blowout proof with PTFE or TFE seal.
      g. Pressure Gage: Manufacturer installed on one copper-tube extension.
   5. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gages and in sizes required to permit manual operation of valves.
      b. Cover Plate: Aluminum or extruded-anodized aluminum OR Satin-chrome finish steel OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.
      c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

   OR
   Zone Valve Boxes: Formed or extruded aluminum with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gages and in sizes required to permit manual operation of valves.
   b. Cover Plate: Aluminum or extruded-anodized aluminum OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.

Compressed-Air Piping For Laboratory And Healthcare Facilities

DASNY, Downstate
c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

6. Safety Valves: Bronze-body, ASME-construction, poppet, pressure-relief type with settings to match system requirements.

7. Pressure Regulators: Bronze body and trim; spring-loaded, diaphragm-operated relieving type; manual pressure-setting adjustment; rated for 250-psig (1725-kPa) minimum inlet pressure; and capable of controlling delivered air pressure within 0.5 psig for each 10-psig (5.0 kPa for each 100-kPa) inlet pressure.

8. Automatic Drain Valves: Stainless-steel body and internal parts, rated for 200-psig (1380-kPa) minimum working pressure, capable of automatic discharge of collected condensate. Include mounting bracket where wall mounting is indicated, as directed.

D. Medical Compressed-Air Service Connections

1. Connection Devices: For specific medical compressed-air pressure and service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.

a. Roughing-in Assembly:
   1) Steel outlet box for recessed mounting and concealed piping.
   2) Brass-body outlet block with secondary check valve that will prevent gas flow when primary valve is removed.
   3) Double seals that will prevent air leakage.
   4) ASTM B 819, NPS 3/8 (DN 10) copper outlet tube brazed to valve with service marking and tube-end dust cap.

b. Finishing Assembly:
   1) Brass housing with primary check valve.
   2) Double seals that will prevent air leakage.
   3) Cover plate with gas-service label.

c. Quick-Coupler Service Connections: Pressure outlet with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive-locking ring that retains equipment stem in valve during use.

d. D.I.S.S. Service Connections: Pressure outlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.

e. Cover Plates: One piece, stainless steel, with NAAMM AMP 503, No. 4 finish OR anodized aluminum, as directed, and permanent, color-coded, identifying label matching corresponding service.

E. Medical Compressed-Air Pressure Control Panels

1. Description: Steel box and support brackets for recessed roughing in with stainless-steel or anodized-aluminum cover plate with printed operating instructions. Include manifold assembly consisting of inlet supply valve, inlet supply pressure gage, line-pressure control regulator, outlet supply pressure gage, D.I.S.S. service connection, and piping outlet for remote service connection.

b. Line-Pressure Control Regulator: Self-relieving diaphragm type with precision manual adjustment.

c. Pressure Gages: 0- to 300-psig (0- to 2070-kPa) range.

Before final assembly, provide temporary dust shield and U-tube for testing.

e. Label cover plate "Air Pressure Control."
F. Medical Compressed-Air Manifolds
   1. General Requirements for Medical Compressed-Air Manifolds: Comply with NFPA 99, Ch. 5, "Manifolds for Gas Cylinders without Reserve Supply."
   2. Central Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, pressure changeover switch, line-pressure regulator, shutoff valves, and safety valve.
   3. Manifold and Headers: Duplex, nonferrous-metal header for number of cylinders indicated, divided into two equal banks. Units include design for 2000-psig (13.8-MPa) minimum inlet pressure. Include cylinder bank headers with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.
   4. Compressed-Air Cylinders: Will be furnished by the Owner OR Number and type of compressed-air cylinders required for complete manifold systems, as directed.
   5. Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line-pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder bank header.
   6. Mounting: Wall with mounting brackets for manifold control cabinet and headers OR Floor with support legs for manifold control cabinet, as directed.
   7. Label manifold control unit with permanent label identifying compressed air and system operating pressure.
   8. Medical Air Manifolds: For 4 cylinders and 1250-cu. ft./h (9.85-L/s) OR 8 cylinders and 2500-cu. ft./h (19.7-L/s), as directed, capacity at 55-psig (380-kPa) line pressure.
   9. Instrument Air Manifolds: For 8 cylinders and 2000-cu. ft./h (15.7-L/s) OR 12 cylinders and 3000-cu. ft./h (23.6-L/s), as directed, capacity at 200-psig (1380-kPa) minimum line pressure.

G. Medical Compressed-Air-Piping Alarm Systems
   1. Panels for medical compressed-air piping systems may be combined in single panels with medical vacuum and medical gas piping systems.
   2. Components: Designed for continuous service and to operate on power supplied from 120 OR 240 OR 277, as directed. AC power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.
   3. Dew Point Monitors: Continuous line monitoring, having panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, factory- or field-installed valved bypass, and visual and cancelable audio signal for dryer site and master alarm panels. Alarm signals when pressure dew point rises above 39 deg F (4 deg C) at 55 psig (380 kPa). a. Operation: Chilled-mirror method OR Chilled-mirror method or hygrometer moisture analyzer with sensor probe OR Hygrometer moisture analyzer with sensor probe, as directed.
   4. Pressure Switches or Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
      a. Low-Pressure Operating Range: 0- to 100-psig (0- to 690-kPa).
      b. High-Pressure Operating Range: Up to 250-psig (1725-kPa).
   5. Carbon Monoxide Monitors: Panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, and factory- or field-installed valved bypass. Alarm signals when carbon monoxide level rises above 10 ppm.
   6. General Requirements for Medical Compressed-Air Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
      a. Mounting: Exposed, surface OR Recessed, as directed, installation.
      b. Enclosures: Fabricated from minimum 0.047-inch- (1.2-mm-) thick steel or minimum 0.05-inch- (1.27-mm-) thick aluminum, with knockouts for electrical and piping connections.
   7. Master Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
      a. Include alarm signals when the following conditions exist:
         1) Medical Air: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa), backup air compressor is in operation, pressure drop across filter assembly increases more than 2 psig (13.8 kPa), dew point rises above 39 deg F (4 deg C) at 55 psig (380 kPa), carbon monoxide level rises above 10 ppm, and high water level is reached in receiver for liquid-ring, medical air compressor systems.

Compressed-Air Piping For Laboratory And Healthcare Facilities
2) Dental Air: Pressure drops below 65 psig (450 kPa) or rises above 110 psig (760 kPa), backup air compressor is in operation, pressure drop across filter assembly increases more than 2 psig (13.8 kPa), dew point rises above 50 deg F (10 deg C) at 125 psig (860 kPa), and carbon monoxide level rises above 10 ppm.

3) Instrument Air: Pressure drops below 165 psig (1140 kPa) or rises above 185 psig (1275 kPa).

4) Medical Laboratory Air: Pressure drops below 90 psig (630 kPa) or rises above 110 psig (760 kPa).

8. Anesthetizing-Area Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Air: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
      2) Instrument Air: Pressure drops below 165 psig (1140 kPa) or rises above 185 psig (1275 kPa).

9. Area Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
   a. Include alarm signals when the following condition exists:
      1) Medical Air: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).

10. Dental-Area Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
    a. Include alarm signals when the following conditions exist:
       1) Dental Air: Pressure drops below 65 psig (450 kPa) or rises above 110 psig (760 kPa), backup air compressor is in operation, pressure drop across filter assembly increases more than 2 psig (13.8 kPa), dew point rises above 50 deg F (10 deg C) at 125 psig (860 kPa), and carbon monoxide level rises above 10 ppm.
       2) Instrument Air: Pressure drops below 165 psig (1140 kPa) or rises above 185 psig (1275 kPa).

11. Medical Laboratory Area Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
    a. Include alarm signals when the following condition exists:
       1) Medical Laboratory Air: Pressure drops below 90 psig (630 kPa) or rises above 110 psig (760 kPa).

H. Computer Interface Cabinet
   1. Description: Wall-mounting, welded-steel control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical compressed-air-piping-system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing 20, as directed, alarm signals.

I. Compressed-Air-Cylinder Storage Racks
   1. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders as indicated or provide equivalent manufactured wall racks.
   2. Freestanding Storage Racks: Fabricate racks as indicated or provide equivalent manufactured storage racks.

J. Flexible Pipe Connectors
   1. Description: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
      a. Working-Pressure Rating: 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed, minimum.
      b. End Connections: Threaded copper pipe or plain-end copper tube.
K. **Sleeves**
   1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
   2. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
      a. Underdeck Clamp: Clamping ring with set screws.

L. **Escutcheons**
   1. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to closely fit around pipe and tube and OD that completely covers opening.
      a. Finish: Polished chrome-plated OR Rough brass, **as directed**.
      a. Finish: Polished chrome-plated OR Rough brass, **as directed**.
   5. One-Piece, Stamped-Steel Escutcheons: With set screw OR spring clips, **as directed**, and chrome-plated finish.
   6. Split-Plate, Stamped-Steel Escutcheons: With concealed OR exposed-rivet, **as directed**, hinge, set screw OR spring clips, **as directed**, and chrome-plated finish.
   7. One-Piece, Floor-Plate Escutcheons: Cast iron.
   8. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

M. **Grout**
   1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
      a. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
      b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
      c. Packaging: Premixed and factory packaged.

N. **Nitrogen**
   1. Description: Comply with USP 28 - NF 23 for oil-free dry nitrogen.

1.3 **EXECUTION**

A. **Piping Applications**
   1. Connect new tubing to existing tubing with memory-metal couplings.
   2. Laboratory Air Piping: Use one of the following piping materials for each size range:
      a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
      b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas tube; press-type fittings; and pressure-sealed joints.
      c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
   3. Medical Air Piping: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
   4. Dental Air Piping: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
   5. Instrument Air Piping:
      a. NPS 3 (DN 80) and Smaller: Use Type K **OR** Type L, **as directed**, copper medical gas tube; wrought-copper fittings; and brazed joints.
      b. NPS 3-1/2 (DN 90) and Larger: Use Type K, copper medical gas tube; wrought-copper fittings; and brazed joints.
   6. Medical Laboratory Air Piping: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
7. Drain Piping: Use one of the following piping materials:
   a. Copper water tube, cast- or wrought-copper fittings, and soldered or press-type fittings, and pressure-sealed, as directed, joints.
   b. PVC pipe, PVC fittings, and solvent-cemented joints.

B. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
2. Comply with ASSE Standard #6010 for installation of compressed-air piping.
3. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
6. Install piping adjacent to equipment and specialties to allow service and maintenance.
7. Install air and drain piping with 1 percent slope downward in direction of flow.
8. Install nipples, unions, special fittings, and valves with pressure ratings same as or higher than system pressure rating used in applications below unless otherwise indicated.
9. Install eccentric reducers, if available, where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
10. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
11. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping".
12. Install piping to permit valve servicing.
13. Install piping free of sags and bends.
14. Install fittings for changes in direction and branch connections.
15. Install medical compressed-air piping to medical compressed-air service connections specified in this Section, to medical compressed-air service connections in equipment specified in Division 22 Section "Gas Piping For Laboratory And Healthcare Facilities", and to equipment specified in other Sections requiring medical compressed-air service.
16. Install seismic restraints on compressed-air piping. Seismic-restraint devices are specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".
17. Install compressed-air service connections recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
18. Connect compressed-air piping to air compressors and to compressed-air outlets and equipment requiring compressed-air service.
19. Install unions in copper compressed-air tubing adjacent to each valve and at final connection to each piece of equipment, machine, and specialty.

C. Valve Installation
1. Install shutoff valve at each connection to and from compressed-air equipment and specialties.
2. Install check valves to maintain correct direction of compressed-air flow from compressed-air equipment.
3. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.
4. Install zone valves and gages in valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.
5. Install safety valves on compressed-air receivers where required by NFPA 99 and where recommended by specialty manufacturers.
6. Install pressure regulators on compressed-air piping where reduced pressure is required.
7. Install automatic drain valves on equipment, specialties, and piping with drain connection. Run drain piping to floor drain so contents spill over or into it.
8. Install flexible pipe connectors in discharge piping and in inlet air piping from remote air-inlet filter, as directed, of each air compressor.

D. Joint Construction
1. Ream ends of PVC pipes and remove burrs.
2. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
3. Threaded Joints: Apply appropriate tape to external pipe threads.
7. Memory-Metal Coupling Joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
8. Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. Apply primer and join according to ASME B31.9 for solvent-cemented joints, and ASTM D 2672.

E. Compressed-Air Service Component Installation
1. Install compressed-air pressure control panel in walls. Attach to substrate.
2. Install compressed-air manifolds on concrete base, as directed, anchored to substrate.
3. Install compressed-air cylinders and connect to manifold piping.
4. Install compressed-air manifolds with seismic restraints as indicated.
5. Install compressed-air-cylinder wall storage racks attached to substrate.

F. Medical Compressed-Air-Piping Alarm System Installation
1. Alarm panels for medical compressed-air piping systems may be combined in single panels with medical vacuum piping systems and medical gas piping systems.
2. Install alarm system components for medical compressed-air-piping according to and in locations required by NFPA 99.
3. Install area and master alarm panels for medical compressed-air piping system where indicated.
4. Install computer interface cabinet with connection to medical compressed-air-piping alarm system and to facility computer.

G. Sleeve Installation
1. Sleeves are not required for core-drilled holes.
2. Permanent sleeves are not required for holes formed by removable PE sleeves.
3. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs using galvanized-steel pipe OR galvanized-steel sheet OR stack sleeve fittings OR PVC pipe, as directed.
   a. Wall Penetrations: Cut sleeves to length for mounting flush with both surfaces.
   b. Floor Penetrations: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

OR
Install sleeves in new walls and slabs as new walls and slabs are constructed.
4. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
   a. PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
b. Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger penetrating gypsum board partitions.

c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim" for flashing.

1) Seal space outside of sleeve fittings with grout.

5. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping".

H. Escutcheon Installation

1. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

a. New Piping:

1) Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
2) Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set screw OR stamped steel with set screw or spring clips OR stamped steel with spring clips, as directed.
3) Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece, or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set screw OR One piece or split plate, stamped steel with set screw OR Split plate, stamped steel with set screw, as directed.
4) Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.
5) Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.
6) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

b. Existing Piping:

1) Chrome-Plated Piping: Split casting, cast brass with chrome-plated finish.
2) Insulated Piping: Split plate, stamped steel with concealed OR exposed-rivet, as directed, hinge and spring clips.
3) Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
4) Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set screw, as directed.
5) Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set screw or spring clips, as directed.
6) Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set screw or spring clips, as directed.
7) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

I. Hanger And Support Installation

1. Comply with requirements in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment" for seismic-restraint devices.
2. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for pipe hanger and support devices.

3. Vertical Piping: MSS Type 8 or 42, clamps.

4. Individual, Straight, Horizontal Piping Runs:
   a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel, clevis hangers.
   b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable, roller hangers.

5. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for trapeze hangers.

6. Base of Vertical Piping: MSS Type 52, spring hangers.

7. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.

8. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

9. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
   h. NPS 2-1/2 (DN 65): 13 feet (4 m) with 1/2-inch (13-mm) rod.
   i. NPS 3 (DN 80): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
   j. NPS 3-1/2 (DN 90): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
   k. NPS 4 (DN 100): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
   l. NPS 5 (DN 125): 18 feet (5.5 m) with 1/2-inch (13-mm) rod.
   m. NPS 6 (DN 150): 20 feet (6 m) with 5/8-inch (16-mm) rod.
   n. NPS 8 (DN 200): 23 feet (7 m) with 3/4-inch (19-mm) rod.

10. Install supports for vertical copper tubing every 10 feet (3 m).

J. Labeling And Identification
   1. Install identifying labels and devices for nonmedical laboratory compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification For Plumbing Piping And Equipment".

2. Install identifying labels and devices for medical compressed-air piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
   a. Medical Air: Black letters on yellow background.
   b. Dental Air: Black letters on yellow-and-white diagonal stripe background.
   c. Instrument Air: White letters on red background.
   d. Medical Laboratory Air: Black letters on yellow-and-white checkerboard background.

K. Field Quality Control For Compressed-Air Piping In Nonmedical Laboratory Facilities
   1. Perform tests and inspections of compressed-air piping in nonmedical laboratory facilities and prepare test reports.

2. Tests and Inspections:
   a. Piping Leak Tests for Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry nitrogen to pressure of 50 psig (345 kPa) above system operating pressure, but not less than 150 psig (1035 kPa). Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
   b. Repair leaks and retest until no leaks exist.
   c. Inspect filters and pressure regulators for proper operation.
L. Field Quality Control For Medical Compressed-Air Piping In Healthcare Facilities
   1. Perform tests and inspections of medical compressed-air piping systems in healthcare facilities and prepare test reports.
   2. Tests and Inspections:
      a. Medical Compressed-Air Testing Coordination: Perform tests, inspections, verifications, and certification of medical compressed-air piping systems concurrently with tests, inspections, and certification of medical vacuum piping and medical gas piping systems.
      b. Preparation: Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
         1) Initial blowdown.
         2) Initial pressure test.
         3) Cross-connection test.
         4) Piping purge test.
         5) Standing pressure test for positive-pressure medical compressed-air piping.
         6) Repair leaks and retest until no leaks exist.
      c. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical compressed-air piping systems and perform the following tests and inspections:
         1) Standing pressure test.
         2) Individual-pressurization OR Individual-pressurization or pressure-differential OR Pressure-differential, as directed, cross-connection test.
         3) Valve test.
         4) Master and area alarm tests.
         5) Piping purge test.
         6) Piping particulate test.
         7) Piping purity test.
         8) Final tie-in test.
         9) Operational pressure test.
        10) Medical air purity test.
        11) Verify correct labeling of equipment and components.
      d. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
         1) Inspections performed.
         2) Procedures, materials, and gases used.
         3) Test methods used.
         4) Results of tests.
   3. Remove and replace components that do not pass tests and inspections and retest as specified above.

END OF SECTION 22 11 16 00g
SECTION 22 11 16 00h - VACUUM PIPING FOR LABORATORY AND HEALTHCARE FACILITIES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for vacuum piping for laboratory and healthcare facilities. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Laboratory low-vacuum piping and specialties, designated "laboratory low vacuum" operating at 12 inches mercury (40.6 kPa vacuum) OR 20 inches mercury (67.7 kPa vacuum), as directed.
   b. Laboratory high-vacuum piping and specialties, designated "laboratory high vacuum" operating at 24 inches mercury (81.3 kPa vacuum) OR 29 inches mercury (98.2 kPa vacuum), as directed.
   c. Medical surgical vacuum piping and specialties, designated "medical vacuum" operating at 15 inches mercury (380 mm mercury or 50.7 kPa vacuum) OR 20 inches mercury (510 mm mercury or 67.7 kPa vacuum) OR 30 inches mercury (760 mm mercury or 101.4 kPa vacuum), as directed.
   d. Waste anesthetic gas disposal piping and specialties, designated "WAGD evacuation" operating at 14 inches mercury (355 mm mercury or 47.2 kPa vacuum) OR 15 inches mercury (380 mm mercury or 50.7 kPa vacuum), as directed.
   e. Dental vacuum piping and specialties, designated "dental vacuum" operating at 10 inches mercury (255 mm mercury or 33.8 kPa vacuum) OR 12 inches mercury (305 mm mercury or 40.6 kPa vacuum), as directed.
   f. Oral-evacuation piping and specialties, designated "HVE" operating at 5 inches mercury (127 mm mercury or 16.9 kPa vacuum) OR 8 inches mercury (203 mm mercury or 27.0 kPa vacuum), as directed.
   g. Healthcare laboratory vacuum piping and specialties, designated "medical laboratory vacuum" operating at 12 inches mercury (40.6 kPa vacuum) OR 20 inches mercury (67.7 kPa vacuum) OR 24 inches mercury (81.3 kPa vacuum), as directed.

C. Definitions
2. HVE: High-volume (oral) evacuation.
3. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
4. WAGD: Waste anesthetic gas disposal.
5. Medical vacuum piping systems include medical vacuum, WAGD evacuation, dental vacuum, HVE, and medical laboratory vacuum piping systems.

D. Submittals
1. Product Data: For the following:
   a. Vacuum pipes OR tubes, as directed, and fittings.
   b. Vacuum valves and valve boxes.
   c. Medical vacuum service connections and vacuum-bottle brackets.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content.
3. Shop Drawings: Diagram power, signal, and control wiring.
4. Piping Material Certification: Signed by Installer certifying that medical vacuum piping materials comply with NFPA 99 requirements.
5. Qualification Data: For Installer and testing agency.
7. Field quality-control test reports.
8. Operation and maintenance data.

E. Quality Assurance
1. Installer Qualifications:
   a. Medical Vacuum Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010.
   b. Extruded-Tee Outlet Procedure: Qualify operators according to training provided by T-DRILL Industries Inc., for making branch outlets.
   c. Pressure-Seal Joining Procedure for Copper Tubing: Qualify operators according to training provided by Viega; Plumbing and Heating Systems.
2. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the vacuum piping testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL, and that is acceptable to authorities having jurisdiction.
   a. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.
3. Source Limitations: Obtain vacuum service connections of same type and from same manufacture as service connections provided for in Division 22 Section "Gas Piping For Laboratory And Healthcare Facilities".
5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Project Conditions
1. Interruption of Existing Laboratory or Medical Vacuum Service(s): Do not interrupt laboratory or medical vacuum service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of laboratory or medical vacuum service(s).
   b. Do not proceed with interruption of laboratory or medical vacuum service(s) without the Owner’s written permission.

1.2 PRODUCTS

A. Pipes, Tubes, And Fittings
1. Copper Medical Gas Tube: ASTM B 819, Type L, seamless, drawn temper that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in blue.
   a. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.
   b. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.
   c. Copper Unions: ASME B16.22 or MSS SP-123, wrought copper or cast-copper alloy.
   d. Press-Type Fittings:
1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

2. Copper Water Tube: ASTM B 88, Type M (ASTM B 88M, Type C), seamless, drawn temper.
   d. Copper Unions: ASME B16.22 or MSS SP-123, wrought copper or cast-copper alloy.
   e. Press-Type Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

4. Memory-Metal Couplings: Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.

5. PVC Pipe: ASTM D 1785, Schedule 40 and Schedule 80.
   a. PVC Pressure Fittings: ASTM D 2466, Schedule 40 and ASTM D 2467, Schedule 80; socket type.

B. Joining Materials
2. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
3. Threaded-Joint Tape: PTFE.
4. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness, full-face type.
5. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
   a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Valves
1. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
   a. Exception: Factory cleaning and bagging are not required for valves for WAGD service.
2. Copper-Alloy Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Ball: Full-port, chrome-plated brass.
   c. Seats: PTFE or TFE.
   d. Handle: Lever type with locking device, as directed.
   e. Stem: Blowout proof with PTFE or TFE seal.
3. Bronze Check Valves: In-line pattern.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Operation: Spring loaded.
   c. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
4. Zone Valves: MSS SP-110, 3-piece-body, brass or bronze ball valve with gage.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Ball: Full-port, chrome-plated brass.
   c. Seats: PTFE or TFE.
   d. Handle: Lever type with locking device, as directed.
22. Plumbing

Vacuum Piping for Laboratory and Healthcare Facilities

August 2021

DASNY, Downstate

22 - Plumbing

e. Stem: Blowout proof with PTFE or TFE seal.
g. Vacuum Gage: Manufacturer installed on one copper-tube extension.

5. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with vacuum gages and in sizes required to permit manual operation of valves.
   b. Cover Plate: Aluminum or extruded-anodized aluminum OR Satin-chrome finish steel OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.
   c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

6. Zone Valve Boxes: Formed or extruded aluminum with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with vacuum gages and in sizes required to permit manual operation of valves.
   b. Cover Plate: Aluminum or extruded-anodized aluminum OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.
   c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

7. PVC Ball Valves: MSS SP-122, with union ends and 150-psig (1035-kPa) minimum working-pressure rating and suitable for vacuum service.

8. PVC Butterfly Valves: Lug type with lever handle and 150-psig (1035-kPa) minimum working-pressure rating and suitable for vacuum service.

9. PVC Check Valves: Ball-, in-line-, piston-, or swing-check design with flanged or union ends and 70-psig (480-kPa) OR 100-psig (690-kPa), as directed, minimum working-pressure rating and suitable for vacuum service.

10. Safety Valves: Bronze-body, ASME-construction, pressure-relief type with settings to match system requirements.

11. Automatic Drain Valves: Stainless-steel body and internal parts, rated for 200-psig (1380-kPa) minimum working pressure, capable of automatic discharge of collected condensate. Include mounting bracket where wall mounting is indicated.

D. Medical Vacuum Service Connections

1. Connection Devices: For specific medical vacuum service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.
   a. Roughing-in Assembly:
      1) Steel outlet box for recessed mounting and concealed piping.
      2) Brass-body inlet block.
      3) Seals that will prevent vacuum leakage.
      4) ASTM B 819, NPS 3/8 (DN 10) copper outlet tube brazed to valve with service marking and tube-end dust cap.
   b. Finishing Assembly:
      1) Brass housing with primary check valve.
      2) Seals that will prevent vacuum leakage.
      3) Cover plate with gas-service label.
   c. Quick-Coupler Service Connections: Suction inlets for medical vacuum OR medical vacuum and WAGD evacuation OR WAGD evacuation, as directed, service outlets with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive-locking ring that retains equipment stem in valve during use.
   d. D.I.S.S. Service Connections: Suction inlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.
2) WAGD Evacuation Service Connections: CGA V-5, D.I.S.S. No. 2220.

   e. Vacuum Bottle Brackets: One piece, with pattern and finish matching corresponding service cover plate.

   f. Cover Plates: One piece, stainless steel, with NAAMM AMP 503, No. 4 finish OR metal, with chrome-plated finish OR anodized aluminum, as directed, and permanent, color-coded, identifying label matching corresponding service.

E. Medical Vacuum Piping Alarm Systems

1. Panels for medical vacuum piping systems may be combined in single panels with medical compressed-air and medical gas piping systems.

2. Components: Designed for continuous service and to operate on power supplied from 120-V OR 240-V, as directed, ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.

3. Vacuum Switches or Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
   a. Vacuum Operating Range: 0- to 30-in. Hg (0- to 101-kPa vacuum).

4. General Requirements for Medical Vacuum Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
   a. Mounting: Exposed, surface OR Recessed, as directed, installation.
   b. Enclosures: Fabricated from minimum 0.047-inch- (1.2-mm-) thick steel or minimum 0.05-inch- (1.27-mm-) thick aluminum, with knockouts for electrical and piping connections.

5. Master Alarm Panels: With separate trouble alarm signals, vacuum gages, and indicators for medical vacuum piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Vacuum: Vacuum drops below 12-in. Hg (40 kPa vacuum) and backup vacuum pump is in operation.
      2) WAGD Evacuation: Vacuum drops below 12-in. Hg (40 kPa vacuum).
      3) Dental Vacuum: Vacuum drops below 6-in. Hg (20 kPa vacuum) and backup vacuum producer is in operation.
      4) HVE: 4-in. Hg (13 kPa vacuum) and backup vacuum producer is in operation.
      5) Medical Laboratory Vacuum: Vacuum drops below 10-in. Hg (34 kPa vacuum).

6. Anesthetizing-Area Alarm Panels: Separate trouble alarm signals; vacuum gages; and indicators for medical vacuum piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Vacuum: Vacuum drops below 12-in. Hg (40 kPa vacuum).
      2) WAGD Evacuation: Vacuum drops below 12-in. Hg (40 kPa vacuum).

7. Area Alarm Panels: Separate trouble alarm signals; vacuum gages; and indicators for medical vacuum piping systems.
   a. Include alarm signals when the following condition exists:
      1) Medical Vacuum: Vacuum drops below 12-in. Hg (40 kPa vacuum).

8. Dental Area Alarm Panels: Separate trouble alarm signals; vacuum gages; and indicators for medical vacuum piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Dental Vacuum: Vacuum drops below 6-in. Hg (20 kPa vacuum) and backup vacuum producer is in operation.
      2) HVE: 4-in. Hg (13 kPa vacuum) and backup vacuum producer is in operation.

9. Medical Laboratory Area Alarm Panels: Separate trouble alarm signals; vacuum gages; and indicators for medical vacuum piping systems.
   a. Include alarm signals when the following condition exists:
      1) Medical Vacuum: Vacuum drops below 12-in. Hg (40 kPa vacuum).

F. Computer Interface Cabinet

1. Description: Wall-mounting, welded-steel, control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical vacuum piping system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing 20 alarm signals.

G. Flexible Pipe Connectors
1. Description: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
   a. Working-Pressure Rating: 200 psig (1380 kPa) OR 250 psig (1725 kPa), as directed, minimum.
   b. End Connections: Threaded copper pipe or plain-end copper tube.

H. Sleeves
1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
2. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.

I. Escutcheons
1. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to closely fit around pipe and tube and OD that completely covers opening.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
5. One-Piece, Stamped-Steel Escutcheons: With set screw OR spring clips, as directed, and chrome-plated finish.
6. Split-Plate, Stamped-Steel Escutcheons: With concealed OR exposed-rivet, as directed, hinge, set screw OR spring clips, as directed, and chrome-plated finish.
7. One-Piece, Floor-Plate Escutcheons: Cast iron.
8. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

J. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   a. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

K. Nitrogen
1. Description: Comply with USP 28 - NF 23 for oil-free dry nitrogen.

1.3 EXECUTION

A. Preparation
1. Cleaning of Medical Gas Tubing: If manufacturer-cleaned and -capped fittings or tubing are not available or if precleaned fittings or tubing must be recleaned because of exposure, have supplier or separate agency acceptable to authorities having jurisdiction perform the following procedures:
   a. Clean medical gas tube and fittings, valves, gages, and other components of oil, grease, and other readily oxidizable materials as required for oxygen service according to CGA G-4.1, "Cleaning Equipment for Oxygen Service."
   b. Wash medical gas tubing and components in hot, alkaline-cleaner-water solution of sodium carbonate or trisodium phosphate in proportion of 1 lb (0.453 kg) of chemical to 3 gal. (11.3 L) of water.
      1) Scrub to ensure complete cleaning.
      2) Rinse with clean, hot water to remove cleaning solution.
B. Piping Applications

1. Connect new copper tubing to existing tubing with memory-metal couplings.

2. Nonhealthcare Laboratory Low Vacuum Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.

3. Nonhealthcare Laboratory High Vacuum Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.

4. Medical Vacuum Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.

5. WAGD Evacuation Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.

6. Dental Vacuum Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.

7. HVE Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
   c. NPS 4 (DN 100) and Smaller: Schedule 40 PVC pipe, Schedule 40 PVC fittings OR Schedule 80 PVC pipe, Schedule 80 PVC fittings, as directed, and solvent-cemented joints.
   d. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed OR soldered, as directed, joints.
   e. NPS 5 to NPS 8 (DN 125 to DN 200): Schedule 40 PVC pipe, Schedule 40 PVC fittings OR Schedule 80 PVC pipe, Schedule 80 PVC fittings, as directed, and solvent-cemented joints.

8. Medical Laboratory Vacuum Piping: Use one of the following piping materials for each size range:
   a. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.
   b. NPS 4 (DN 100) and Smaller: Type L, copper medical gas OR M (C) copper water, as directed, tube; press-type fittings; and pressure-sealed joints.
c. NPS 5 to NPS 8 (DN 125 to DN 200): Type L, copper medical gas OR M (C) copper water, as directed, tube; wrought-copper fittings; and brazed joints.

9. Drain Piping: Use one of the following piping materials:
   a. Copper water tube, cast- or wrought-copper fittings, and soldered OR press-type fittings, and pressure-sealed, as directed, joints.
   b. PVC pipe, PVC fittings, and solvent-cemented joints.

C. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of vacuum piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
2. Comply with ASSE Standard #6010 for installation of vacuum piping.
3. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
6. Install piping adjacent to equipment and specialties to allow service and maintenance.
7. Install vacuum and drain piping with 1 percent slope downward in direction of flow.
8. Install nipples, unions, and special fittings, and valves with pressure ratings same as or higher than piping pressure rating used in applications below unless otherwise indicated.
9. Install eccentric reducers, if available, where vacuum piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
10. Provide drain leg and drain trap at end of each main and branch and at low points.
11. Install thermometer and vacuum gage on inlet piping to each vacuum producer and on each receiver and separator, as directed. Comply with requirements in Division 22 Section "Meters And Gages For Plumbing Piping".
12. Install piping to permit valve servicing.
13. Install piping free of sags and bends.
14. Install fittings for changes in direction and for branch connections. Extruded-tee branch outlets in copper tubing may be made where specified.
15. Install medical vacuum piping to medical vacuum service connections specified in this Section and to equipment specified in other Sections requiring medical vacuum service.
16. Install seismic restraints on vacuum piping. Seismic-restraint devices are specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".
17. Install medical vacuum service connections recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
18. Install medical vacuum bottle bracket adjacent to each wall-mounted medical vacuum service connection suction inlet.
19. Connect vacuum piping to vacuum producers and to equipment requiring vacuum service.
20. Install unions, in copper vacuum tubing adjacent to each valve and at final connection to each piece of equipment, machine, and specialty.
21. Install unions, in PVC vacuum piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment, machine, and specialty.
22. Install flanges, in PVC vacuum piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment, machine, and specialty.

D. Valve Applications
1. Valves for Copper Vacuum Tubing: Use copper alloy ball and bronze check types.
2. Valves for PVC Vacuum Piping:
   a. NPS 4 (DN 100) and Smaller: Use copper alloy ball and bronze OR PVC ball, butterfly, and, as directed, check types.
   b. NPS 5 (DN 125) and Larger: Use PVC butterfly and check types.
E. Valve Installation
1. Install shutoff valve at each connection to and from vacuum equipment and specialties.
2. Install check valves to maintain correct direction of vacuum flow to vacuum-producing equipment.
3. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.
4. Install zone valves and gages in valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.
5. Install safety valves on vacuum receivers, where required by NFPA 99, and where recommended by specialty manufacturers.
6. Install automatic drain valves on equipment, specialties, and piping with drain connection. Run drain piping to floor drain, so contents spill over or into it.
7. Install flexible pipe connectors in suction inlet piping to each vacuum producer.

F. Joint Construction
1. Ream ends of pipes and tubes and remove burrs.
2. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
4. Threaded Joints: Apply appropriate tape to external pipe threads.
7. Extruded-Tee Outlets: Form branches in copper tube according to ASTM F 2014, with tools recommended by procedure manufacture.
8. Flanged Joints:
   a. Copper Tubing: Install flange on copper tubes. Use pipe-flange gasket between flanges. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.
   b. PVC Piping: Install PVC flange on PVC pipes. Use pipe-flange gasket between flanges. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.
10. Memory-Metal Coupling Joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
11. Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.

G. Medical Vacuum Piping Alarm System Installation
1. Panels for medical vacuum piping systems may be combined in single panels with medical compressed-air piping systems and medical gas piping systems.
2. Install medical vacuum piping system alarm system components in locations required by and according to NFPA 99.
3. Install medical vacuum piping system area and master alarm panels where indicated.
4. Install computer interface cabinet with connection to medical vacuum piping alarm system and to facility computer.

H. Sleeve Installation
1. Sleeves are not required for core-drilled holes.
2. Permanent sleeves are not required for holes formed by removable PE sleeves.
3. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs using galvanized-steel pipe OR galvanized-steel sheet OR stack sleeve fittings OR PVC pipe, as directed.
   a. Wall Penetrations: Cut sleeves to length for mounting flush with both surfaces.
b. Floor Penetrations: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

OR
Install sleeves in new walls and slabs as new walls and slabs are constructed.

4. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).

b. Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum board partitions.

c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim" for flashing.

1) Seal space outside of sleeve fittings with grout.

5. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping".

I. Escutcheon Installation
1. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

a. New Piping:

1) Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.

2) Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set screw OR stamped steel with spring clips, as directed.

3) Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One-piece, stamped steel with set screw OR One piece or split plate, stamped steel with set screw OR Split plate, stamped steel with set screw, as directed.

4) Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

5) Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.

6) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

b. Existing Piping:

1) Chrome-Plated Piping: Split casting, cast brass with chrome-plated finish.

2) Insulated Piping: Split plate, stamped steel with concealed OR exposed-rivet, as directed, hinge and spring clips.

3) Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.

4) Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set screw, as directed.

5) Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set screw or spring clips, as directed.
6) Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set screw or spring clips, as directed.
7) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

J. Hanger And Support Installation

1. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for pipe hanger and support devices.
2. Vertical Piping: MSS Type 8 or 42, clamps.
3. Individual, Straight, Horizontal Piping Runs:
   a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel, clevis hangers.
   b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable, roller hangers.
4. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for trapeze hangers.
5. Base of Vertical Piping: MSS Type 52, spring hangers.
6. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
7. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
8. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
   h. NPS 2-1/2 (DN 65): 13 feet (4 m) with 1/2-inch (13-mm) rod.
   i. NPS 3 (DN 80): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
   j. NPS 3-1/2 (DN 90): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
   k. NPS 4 (DN 100): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
   l. NPS 5 (DN 125): 18 feet (5.5 m) with 1/2-inch (13-mm) rod.
   m. NPS 6 (DN 150): 20 feet (6 m) with 5/8-inch (16-mm) rod.
   n. NPS 8 (DN 200): 23 feet (7 m) with 3/4-inch (19-mm) rod.
9. Install supports for vertical copper tubing every 10 feet (3 m).
10. Install hangers OR vinyl-coated hangers, as directed, for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
    a. NPS 1 (DN 25) and Smaller: 30 inches (760 mm) with 3/8-inch (10-mm) rod.
    b. NPS 1-1/2 to NPS 2 (DN 40 to DN 50): 36 inches (900 mm) with 3/8-inch (10-mm) rod.
    c. NPS 2-1/2 and NPS 3 (DN 65 and DN 80): 42 inches (1150 mm) with 1/2-inch (13-mm) rod.
    d. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1220 mm) with 1/2-inch (13-mm) rod.
    e. NPS 6 and NPS 8 (DN 150 and DN 200): 54 inches (1350 mm) with 5/8-inch (16-mm) rod.
11. Install supports for vertical PVC piping every 48 inches (1220 mm).

K. Labeling And Identification

1. Install identifying labels and devices for laboratory vacuum piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification For Plumbing Piping And Equipment".
2. Install identifying labels and devices for medical vacuum piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
   a. Medical Vacuum: Black letters on white background.
   b. WAGD: White letters on violet background.
   c. Dental Vacuum: Black boxed letters on white-and-black diagonal stripe background.
   d. HVE: Black boxed letters on white-and-black diagonal stripe background.
e. Medical Laboratory Vacuum: Black boxed letters on white-and-black checkerboard background.

L. Field Quality Control For Laboratory Facility Nonmedical Vacuum Piping
1. Perform tests and inspections of vacuum piping in nonmedical laboratory facilities.
2. Tests and Inspections:
   a. Piping Leak Tests for Vacuum Piping: Test new and modified parts of existing piping. Cap and fill vacuum piping with oil-free, dry nitrogen. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
      1) Test Pressure for Copper Tubing: 100 psig (690 kPa) OR 150 psig (1035 kPa), as directed.
      2) Test Pressure for PVC Piping: 50 psig (345 kPa) OR 100 psig (690 kPa), as directed.
   b. Repair leaks and retest until no leaks exist.
   c. Inspect filters for proper operation.
3. Prepare test reports.

M. Field Quality Control For Healthcare Facility Medical Vacuum Piping
1. Perform tests and inspections of medical vacuum piping systems in healthcare facilities and prepare test reports.
2. Tests and Inspections:
   a. Medical Vacuum Testing Coordination: Perform tests, inspections, verifications, and certification of medical vacuum piping systems concurrently with tests, inspections, and certification of medical compressed-air piping and medical gas piping systems.
   b. Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
      1) Initial blow down.
      2) Initial pressure test.
      3) Cross-connection test.
      4) Piping purge test.
      5) Standing pressure test for vacuum systems.
      6) Repair leaks and retest until no leaks exist.
   c. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical vacuum piping systems and perform the following tests and inspections:
      1) Standing pressure test.
      2) Individual-pressurization OR Pressure-differential, as directed, cross-connection test.
      3) Valve test.
      4) Master and area alarm tests.
      5) Piping purge test.
      6) Final tie-in test.
      7) Operational vacuum test.
      8) Verify correct labeling of equipment and components.
   d. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
      1) Inspections performed.
      2) Procedures, materials, and gases used.
      3) Test methods used.
      4) Results of tests.
3. Remove and replace components that do not pass tests and inspections and retest as specified above.

N. Demonstration
1. Train the Owner's maintenance personnel to adjust, operate, and maintain medical vacuum alarm systems.
END OF SECTION 22 11 16 00h
SECTION 22 11 16 00i - GAS PIPING FOR LABORATORY AND HEALTHCARE FACILITIES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for gas piping for laboratory and healthcare facilities. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
   a. Carbon dioxide piping and specialties designated "medical carbon dioxide" operating at 50 to 55 psig (345 to 380 kPa).
   b. Helium piping, designated "medical helium" operating at 50 to 55 psig (345 to 380 kPa).
   c. Nitrogen piping and specialties designated "medical nitrogen" operating at 160 to 185 psig (1100 to 1275 kPa) OR higher than 200 psig (1380 kPa), as directed.
   d. Nitrous oxide piping and specialties designated "medical nitrous oxide" operating at 50 to 55 psig (345 to 380 kPa).
   e. Oxygen piping and specialties designated "medical oxygen" operating at 50 to 55 psig (345 to 380 kPa).

C. Definitions

1. CR: Chlorosulfonated polyethylene synthetic rubber.
3. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
4. Medical gas piping systems include medical carbon dioxide, medical helium, medical nitrogen, medical nitrous oxide, and medical oxygen nonflammable gas for healthcare facility patient care or for healthcare laboratory applications.
5. Specialty Gas: Gas, other than medical gas, for nonmedical laboratory facility applications.

D. Performance Requirements

1. Seismic Performance: Gas manifolds, Bulk gas storage tanks, Gas manifolds and bulk gas storage tanks, and piping shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

E. Submittals

1. Product Data: For the following:
   a. Tubes and fittings.
   b. Valves and valve boxes.
   c. Medical gas service connections.
   d. Electrical service connections.
   e. Patient service consoles.
   f. Medical nitrogen pressure control panels.
   g. Ceiling columns. Include integral service connections.
   h. Ceiling hose assemblies. Include integral service connections.
   i. Gas manifolds.
   j. Bulk gas storage tanks. Include rated capacities and operating weights.
   k. Medical gas alarm system components.
   l. Gas cylinder storage racks.
2. Shop Drawings: Diagram power, signal, and control wiring.
3. Piping Material Certification: Signed by Installer certifying that medical gas piping materials comply with NFPA 99 requirements.
5. Manufacturer Seismic Qualification Certification: Submit certification that gas manifolds and bulk gas storage tanks, accessories, and components will withstand seismic forces defined in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment". Include the following:
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
6. Certificates of Shop Inspection and Data Report for Bulk Gas Storage Tanks: As required by ASME Boiler and Pressure Vessel Code.
7. Field quality-control test reports.
8. Operation and maintenance data.

F. Quality Assurance
1. Installer Qualifications:
   a. Medical Gas Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010 for installers.
2. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the medical gas piping testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
   a. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.
4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
5. ASME Compliance: Fabricate and label bulk medical gas storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
6. NFPA Compliance:
8. UL Compliance:
   b. Comply with UL 544, "Medical and Dental Equipment," for medical gas specialties.

G. Project Conditions
1. Interruption of Existing Specialty and Medical Gas Service(s): Do not interrupt specialty or medical gas service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of specialty and medical gas service(s).
   b. Do not proceed with interruption of specialty and medical gas service(s) without the Owner's written permission.
1.2 PRODUCTS

A. Pipes, Tubes, And Fittings

1. Copper Medical Gas Tube: ASTM B 819, Type K OR Type L, as directed, seamless, drawn temper that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in green for Type K tube and blue for Type L tube.
   a. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.
   b. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.
   c. Copper Unions: ASME B16.22 or MSS SP-123, wrought copper or cast-copper alloy.
   d. Press-Type Fittings:
      1) NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
   e. Memory-Metal Couplings: Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory-alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.

2. PVC Pipe: ASTM D 1785, Schedule 40 and Schedule 80.
   a. PVC Fittings: ASTM D 2466, Schedule 40 OR ASTM D 2467, Schedule 80, as directed; socket type.

B. Joining Materials

2. Threaded-Joint Tape: PTFE.

C. Valves

1. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
2. Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Ball: Full-port, chrome-plated brass.
   c. Seats: PTFE or TFE.
   d. Handle: Lever type with locking device, as directed.
   e. Stem: Blowout proof with PTFE or TFE seal.
3. Check Valves: In-line pattern, bronze.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Operation: Spring loaded.
   c. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
4. Zone Valves: MSS SP-110, 3-piece-body, brass or bronze ball valve with gage.
   a. Pressure Rating: 300 psig (2070 kPa) minimum.
   b. Ball: Full-port, chrome-plated brass.
   c. Seats: PTFE or TFE.
   d. Handle: Lever type with locking device, as directed.
   e. Stem: Blowout proof with PTFE or TFE seal.
   g. Pressure Gage: Manufacturer-installed on one copper-tube extension.
5. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gages and in sizes required to permit manual operation of valves.
b. Cover Plate: Aluminum or extruded-anodized aluminum OR Satin-chrome finish steel OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.

c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

OR

Zone Valve Boxes: Formed or extruded aluminum with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gages and in sizes required to permit manual operation of valves.

b. Cover Plate: Aluminum or extruded-anodized aluminum OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.

b. Cover Plate: Aluminum or extruded-anodized aluminum OR Stainless steel with NAAMM AMP 503, No. 4 finish, as directed, with frangible or removable windows.

c. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.

6. Emergency Oxygen Connections: Low-pressure oxygen inlet assembly for connection to building oxygen piping systems.

a. Enclosure: Weatherproof hinged locking cover with caption similar to “Emergency Low-Pressure Gaseous Oxygen Inlet.”

b. Inlet: Manufacturer-installed, NPS 1 or NPS 1-1/4 (DN 25 or DN 32), ASTM B 819, copper tubing with NPS 1 (DN 25) minimum ball valve and plugged inlet.

c. Safety Valve: Bronze-body, pressure relief valve set at 75 or 80 psig (520 or 550 kPa).

d. Instrumentation: Pressure gage.

7. Safety Valves: Bronze-body, ASME-construction, poppet, pressure-relief type with settings to match system requirements.

8. Pressure Regulators: Bronze OR Stainless-steel, as directed, body and trim; spring-loaded, diaphragm-operated, relieving type; manual pressure-setting adjustment; rated for 250-psig (1725-kPa) minimum inlet pressure; and capable of controlling delivered gas pressure within 0.5 psig for each 10-psig (5.0 kPa for each 100-kPa) inlet pressure.

D. Medical Gas Service Connections

1. General Requirements for Medical Gas Service Connections: For specific medical gas pressure and suction service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.

a. Roughing-in Assembly:
   1) Steel outlet box for recessed mounting and concealed piping.
   2) Brass-body outlet block with secondary check valve that will prevent gas flow when primary valve is removed. Suction inlets to be without secondary valve.
   3) Double seals that will prevent gas leakage.
   4) ASTM B 819, NPS 3/8 (DN 10) copper outlet tube brazed to valve with service marking and tube-end dust cap.

b. Finishing Assembly:
   1) Brass housing with primary check valve.
   2) Double seals that will prevent gas leakage.
   3) Cover plate with gas-service label.

c. Quick-Coupler Service Connections: Pressure outlets for carbon dioxide, nitrous oxide, oxygen, and <insert medical gas> service connections with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive-locking ring that retains equipment stem in valve during use.

d. D.I.S.S. Service Connections: Pressure outlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.
   1) Medical Carbon Dioxide Service Connections: D.I.S.S. No. 1080.
4) Medical Nitrous Oxide Service Connections: D.I.S.S. No. 1040.

e. Cover Plates: One piece, stainless steel, with NAAMM AMP 503. No. 4 finish OR metal, with chrome-plated finish OR anodized aluminum, as directed, and permanent, color-coded, identifying label matching corresponding service.

E. Electrical Service Connections
1. Power Outlets: UL 498, Hospital Grade, 125-V receptacles; color selected. Include the following configurations complying with NEMA WD 1:
   a. L5-20R, locking type, 20 A, single or duplex.
   b. L5-20R, isolated ground, locking type, 20 A, single or duplex.
   c. Explosion proof, 20 A, 2 pole, 3 wire, single; suitable for Class I, Group C hazardous location and interchangeable with receptacles used in nonhazardous areas; flush mounted.
   d. 5-20R, straight blade, 20 A, duplex.
   e. 5-20R, isolated ground, straight blade, 20 A, duplex.

2. Electrical Accessory Outlets: Provide the following configured receptacles in color selected:
   a. Patient Equipment Ground Jack: Single pole, 30 A.
   b. Patient Monitoring: Single, 5 and 37 pin.

3. Wall Outlet Cover Plates: One piece, stainless steel, with NAAMM AMP 503, No. 4 finish OR metal, with chrome-plated finish OR anodized aluminum, as directed, and permanent identifying label.

F. Patient Service Consoles
1. General Requirements for Patient Service Consoles: Recessed- or semirecessed-mounting wall units with medical gas service connections as specified in "Medical Gas Service Connections" Article and electrical service connections as specified in "Electrical Service Connections" Article, as directed. Include labels indicating services, and the following:
   a. Recessed- or semirecessed-mounting steel console box or mounting bracket.
   b. Concealed supplies.
   c. Cover Plate: One piece, anodized aluminum OR stainless steel, as directed, and permanent identifying label with service connections for the following:
      1) Medical Air: Quick-coupler pressure outlet.
      2) Medical Oxygen: Quick-coupler pressure outlet.
      3) Medical Vacuum: Quick-coupler suction inlet.
      4) Medical vacuum bottle bracket.
      5) L5-20R, locking type, 20 A, single OR duplex, as directed.

G. Medical Nitrogen Pressure Control Panels
1. Description: Steel box and support brackets for recessed roughing-in with stainless-steel or anodized-aluminum cover plate with printed operating instructions. Include manifold assembly consisting of inlet supply valve, inlet supply pressure gage, line-pressure control regulator, outlet supply pressure gage, D.I.S.S. service connection, and piping outlet for remote service connection.
   b. Line-Pressure Control Regulator: Self-relieving diaphragm type with precision manual adjustment.
   c. Pressure Gages: 0- to 300-psig (0- to 2070-kPa) range.
   e. Before final assembly, provide temporary dust shield and U-tube for testing.
   f. Label cover plate "Nitrogen Pressure Control."

H. Ceiling Columns
1. General Requirements for Ceiling Columns: Ceiling-mounting units with medical gas service connections as specified in "Medical Gas Service Connections" Article and electrical service connections as specified in "Electrical Service Connections" Article, as directed. Include labels indicating services, and the following:
   a. Ceiling-Mounting Plate: Manufacturer's standard plate or roughing-in assembly.
b. Exposed Surfaces: Minimum 0.0375-inch- (0.95-mm-) thick stainless steel with NAAMM AMP 503, No. 4 directional polish.

c. Servicing: Include access panels or means of removing shroud.

d. Blank cover plates for cutouts not having service connections.

e. ASTM B 819, NPS 3/8 (DN 10) copper-tube extensions for connection to medical gas systems.

f. Service Connections: Type and number indicated.

g. Dust Covers: For medical gas service connection.

2. Rigid Ceiling Columns: 44-inch- (1120-mm-) long, rectangular fixed column section with 2 OR 4, as directed, double intravenous medication hooks. Include 0.078-inch- (2.0-mm-) thick, stainless-steel bottom plate with the following service connections:

a. Instrument Air: One D.I.S.S. No. 1160 pressure outlet(s).

b. Medical Air: One quick-coupler OR D.I.S.S. No. 1160, as directed, pressure outlet(s).

c. Medical Carbon Dioxide: One quick-coupler OR D.I.S.S. No. 1080, as directed, pressure outlet(s).

d. Medical Helium: One D.I.S.S. No. 1060, pressure outlet(s).

e. Medical Nitrogen: One D.I.S.S. No. 1120 pressure outlet(s).

f. Medical Nitrous Oxide: One quick-coupler OR D.I.S.S. No. 1040, as directed, pressure outlet(s).

g. Medical Oxygen: Two quick-coupler OR D.I.S.S. No. 1240, as directed, pressure outlets.

h. Medical Vacuum: Two quick-coupler OR D.I.S.S. No. 1220, as directed, suction inlets.

i. Vacuum Bottle Brackets: Two.

j. WAGD Evacuation: One quick-coupler OR D.I.S.S. No. 2220, as directed, suction inlet(s).

k. Power: 2 OR 4, as directed, L5-20R, locking-type, 20-A, single receptacles.

l. Patient Equipment: 2 OR 4, as directed, ground-jack, single-pole, 30-A receptacles.

3. Retractable Ceiling Columns: Manually adjustable using release and lock handles capable of locking column in all positions from fully retracted to fully extended: 15-inch- (380-mm-) long, rectangular counterbalanced telescoping section with 2 OR 4, as directed, double intravenous medication hooks; and 36-inch- (915-mm-) long, fixed column section. Include 0.078-inch- (2.0-mm-) thick, stainless-steel bottom plate with the following service connections:

a. Instrument Air: One D.I.S.S. No. 1160 pressure outlet(s).

b. Medical Air: One quick-coupler OR D.I.S.S. No. 1160, as directed, pressure outlet(s).

c. Medical Carbon Dioxide: One quick-coupler OR D.I.S.S. No. 1080, as directed, pressure outlet(s).

d. Medical Helium: One D.I.S.S. No. 1060, pressure outlet(s).

e. Medical Nitrogen: One D.I.S.S. No. 1120 pressure outlet(s).

f. Medical Nitrous Oxide: One quick-coupler OR D.I.S.S. No. 1040, as directed, pressure outlet(s).

g. Medical Oxygen: Two quick-coupler OR D.I.S.S. No. 1240, as directed, pressure outlets.

h. Medical Vacuum: Two quick-coupler OR D.I.S.S. No. 1220, as directed, suction inlets.

i. Vacuum Bottle Brackets: Two.

j. WAGD Evacuation: One quick-coupler OR D.I.S.S. No. 2220, as directed, suction inlet(s).

k. Power: 2 OR 4, as directed, L5-20R, locking-type, 20-A, single receptacles.

l. Patient Equipment: 2 OR 4, as directed, ground-jack, single-pole, 30-A receptacles.

I. Ceiling Hose Assemblies

1. Ceiling Hose Assemblies, General: Ceiling-mounting units with medical gas service connections as specified in “Medical Gas Service Connections” Article and electrical service connections as specified in “Electrical Service Connections” Article, as directed. Include labels indicating services, and the following:

a. Ceiling-Mounting Plate: Manufacturer’s standard plate or roughing-in assembly.

b. Exposed Surfaces: Minimum 0.0375-inch- (0.95-mm-) thick stainless steel with NAAMM AMP 503, No. 4 directional polish.

c. Servicing: Include access panels or means of removing shroud.

d. Blank cover plates for cutouts not having service connections.

e. ASTM B 819, NPS 3/8 (DN 10) copper-tube extensions for connection to medical gas systems.
f. Service Connections: Type and number indicated.
g. Dust Covers: For medical gas service connection.

2. Hose-Reel Service Assemblies: Individual, concealed, retractable hose-reel units with stainless-steel face plates, steel mounting boxes, factory- or field-fabricated mounting brackets, and color-coded service hoses with adjustable stops and service connections matching hoses. Include 15 feet (4.5 m) minimum of conductive, CR, 1/4- or 5/16-inch- (6.4- or 7.9-mm-) ID, medical gas hoses rated for 200-psig (1380-kPa) minimum working pressure, and the following service connections:
   b. Medical Air Hose: Quick-coupler OR D.I.S.S. No. 1160, as directed, pressure outlet.
   c. Medical Carbon Dioxide Hose: Quick-coupler OR D.I.S.S. No. 1080, as directed, pressure outlet.
   d. Medical Nitrogen Hose: D.I.S.S. No. 1120 pressure outlet.
   e. Medical Nitrous Oxide Hose: Quick-coupler OR D.I.S.S. No. 1040, as directed, pressure outlet.
   f. Medical Oxygen Hose: Quick-coupler OR D.I.S.S. No. 1240, as directed, pressure outlet.
   g. Medical Vacuum Hose: Quick-coupler OR D.I.S.S. No. 1220, as directed, suction inlet.
   h. WAGD Evacuation Hose: Quick-coupler OR D.I.S.S. No. 2220, as directed, suction inlet.
   i. Power: L5-20R, locking-type, 20-A, single, power receptacle.

3. Fixed Hose Service Assemblies: Individual, concealed hose connection with stainless-steel face plates, steel mounting boxes, factory- or field-fabricated mounting brackets, and color-coded service hoses with retractor device and service connections matching hoses. Include 72 inches (1830 mm) of conductive, CR, 1/4- or 5/16-inch- (6.4- or 7.9-mm-) ID, medical gas hoses rated for 200-psig (1380-kPa) minimum working pressure, and the following service hose connections:
   b. Medical Air Hose: Quick-coupler OR D.I.S.S. No. 1160, as directed, pressure outlet.
   c. Medical Carbon Dioxide Hose: Quick-coupler OR D.I.S.S. No. 1080, as directed, pressure outlet.
   d. Medical Nitrogen Hose: D.I.S.S. No. 1120 pressure outlet.
   e. Medical Nitrous Oxide Hose: Quick-coupler OR D.I.S.S. No. 1040, as directed, pressure outlet.
   f. Medical Oxygen Hose: Quick-coupler OR D.I.S.S. No. 1240, as directed, pressure outlet.
   g. Medical Vacuum Hose: Quick-coupler OR D.I.S.S. No. 1220, as directed, suction inlet.
   h. WAGD Evacuation Hose: Quick-coupler OR D.I.S.S. No. 2220, as directed, suction inlet.
   i. Power: L5-20R, locking-type, 20-A, single, power receptacle.

J. Gas Manifolds
   1. Simplex Specialty Gas Manifolds:
      a. Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, line-pressure regulator, shutoff valves, and safety valve.
      b. Manifold and Header: Nonferrous-metal header for number of cylinders indicated. Units include design for 2000-psig (13.8-MPa) minimum inlet pressure. Include cylinder bank header with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.
      c. <Insert specialty gas> Manifold: For <Insert number cylinders> capacity at 55-psig (380-kPa) line pressure, with electric heater or orifice design that will prevent freezing during high demand.
      d. Specialty Gas Cylinders: Will be furnished by the Owner OR Number and type of medical gas cylinders required for complete manifold systems, as directed.
      e. Label manifold control unit with permanent label identifying specialty gas type and system operating pressure.
      f. Mounting: Wall with mounting brackets for manifold control cabinet and header OR Floor with support legs for manifold control cabinet, as directed.

   2. Duplex Specialty Gas Manifolds:
      a. Central Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, line-pressure regulator, shutoff valves, and safety valve.
b. Manifold and Headers: Duplex, nonferrous-metal header for number of cylinders indicated, divided into two equal banks. Units include design for 2000-psig (13.8-MPa) minimum inlet pressure. Include cylinder bank headers with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.

c. Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line-pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder bank header.

d. <Insert specialty gas> Manifold: For <Insert number cylinders> capacity at 55-psig (380-kPa) line pressure, with electric heater or orifice design that will prevent freezing during high demand.

e. Specialty Gas Cylinders: Will be furnished by the Owner OR Number and type of medical gas cylinders required for complete manifold systems, as directed.

f. Label manifold control unit with permanent label identifying specialty gas type and system operating pressure.

g. Mounting: Wall with mounting brackets for manifold control cabinet and headers OR Floor with support legs for manifold control cabinet, as directed.

3. Medical Gas Manifolds: Comply with NFPA 99, Ch. 5, for high-pressure medical gas cylinders.

a. Central Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, pressure changeover switch, line-pressure regulator, shutoff valves, and safety valve.

b. Manifold and Headers: Duplex, nonferrous-metal header for number of cylinders indicated, divided into two equal banks. Units include design for 2000-psig (13.8-MPa) minimum inlet pressure, except nitrous oxide manifolds may be designed for 800 psig (5520 kPa) and carbon dioxide manifolds may be designed for 1500 psig (10.35 MPa). Include cylinder bank headers with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.

c. Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line-pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder bank header.

d. Medical Carbon Dioxide Manifolds: For 2 cylinders and 250-cfh (1.97-L/s) OR 4 cylinders and 500-cfh (3.94-L/s), as directed, capacity at 55-psig (380-kPa) line pressure.

e. Medical Helium Manifolds: For 2 cylinders and 250-cfh (1.97-L/s) OR 4 cylinders and 500-cfh (3.94-L/s), as directed, capacity at 55-psig (380-kPa) line pressure.

f. Medical Nitrous Oxide Manifolds: For 8 cylinders and 1333-cfh (10.5-L/s) OR 12 cylinders and 2000-cfh (15.7-L/s), as directed, capacity at 55-psig (380-kPa) line pressure, with electric heater or orifice design that will prevent freezing during high demand.

g. Medical Nitrogen Manifolds: For 8 cylinders and 2000-cfh (15.7-L/s) OR 12 cylinders and 3000-cfh (23.6-L/s), as directed, capacity at 180-psig (1240-kPa) OR higher than 200-psig (1380-kPa), as directed, line pressure.

h. Medical Oxygen Manifolds: For 12 cylinders and 1500-cfh (11.8-L/s) OR 20 cylinders 2500-cfh (19.7-L/s), as directed, capacity at 55-psig (380-kPa), as directed, line pressure.

i. Medical Gas Cylinders: Will be furnished by the Owner OR Number and type of medical gas cylinders required for complete manifold systems, as directed.

j. Label manifold control unit with permanent label identifying medical gas type and system operating pressure.

k. Mounting: Wall with mounting brackets for manifold control cabinet and headers OR Floor with support legs for manifold control cabinet, as directed.

K. Bulk Gas Storage Tanks

1. Bulk Specialty Gas Storage Tanks:

2. Bulk Medical Gas Storage Tanks:

a. Bulk Medical Gas Storage Tank Systems: Bulk storage tank with connections for alarm system, continuous supply, and reserve supply that will operate only during emergencies, complying with NFPA 99, "Health Care Facilities."
b. Controls: Include actuating switch for alarm system connection and means for automatic actuating of reserve supply.

c. Bulk Medical Gas Storage Tanks: Vertical mounting, double-wall construction with inner vessel fabricated according to ASME Boiler and Pressure Vessel Code for unfired pressure vessels and suitable for medical gas service. Include insulation and vacuum seal between walls. Fabricate outer shell from carbon steel with factory-applied manufacturer's standard protective paint finish suitable for exterior installation. Include the following features, specialties, and components:

1) Safety Valves: ASME construction with pressure setting to correspond to tank working pressure and as required for component or system being protected.
2) Pressure Gages: For tank pressure and facility service line pressure.
3) Contents Gage: High- and low-level indicator with electric signal circuit connection.
4) Drain Valves: For piping, inner vessel, and outer shell.
5) Fill Assembly: Fill connection, piping, valves, relief devices, and controls.
6) Facility Service Assembly: Piping, valves, relief devices, vaporizer, shutoff valve, pressure regulator, line shutoff valve or check valve, and reserve supply connection for connection to building service piping.
7) Include permanent label showing medical gas type, storage tank capacity, tank pressure rating, vaporizer capacity, and operating instructions.
8) Liquid Oxygen Storage Tank: Nickel-steel or stainless-steel inner vessel with 250-psig (1725-kPa) minimum working pressure. Include electric OR steam OR ambient vaporizer, as directed.
9) Liquid Nitrous Oxide Storage Tank: Steel-alloy inner vessel with 300-psig (2070-kPa) minimum working pressure. Include electric OR steam, as directed, vaporizer.

d. Oxygen Reserve Supply: Manifold header for high-pressure cylinders, fabricated from copper-tube or brass pipe and fittings and suitable for pressures up to 4000 psig (27.6 MPa). Include header inlet connections complying with CGA V-1, with individual inlet check valves, header shutoff valve, header pressure regulator, line shutoff valve or check valve, pressure gage, and inlet connections for number of cylinders indicated.

e. Nitrous Oxide Reserve Supply: Manifold header for high-pressure cylinders, fabricated from copper-tube or brass pipe and fittings and suitable for pressures up to 4000 psig (27.6 MPa). Include header inlet connections complying with CGA V-1, with individual inlet check valves, header shutoff valve, header pressure regulator, line shutoff valve or check valve, pressure gage, inlet connections for number of cylinders indicated, and electric heater.

L. Medical Gas Piping Alarm Systems

1. Panels for medical gas piping systems may be combined in single panels with medical compressed-air and medical vacuum piping systems.

2. Components: Designed for continuous service and to operate on power supplied from 120 OR 240 OR 277, as directed,-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.

3. Pressure Switches or Pressure Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.

a. Low-Pressure Operating Range: 0- to 100-psig (0- to 690-kPa).

b. High-Pressure Operating Range: Up to 250-psig (1725-kPa).

4. General Requirements for Medical Gas Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.

a. Mounting: Exposed, surface OR Recessed, as directed, installation.

b. Enclosures: Fabricated from minimum 0.047-inch- (1.2-mm-) thick steel or minimum 0.05-inch- (1.27-mm-) thick aluminum, with knockouts for electrical and piping connections.

5. Master Alarm Panels: With separate trouble alarm signals, pressure gages, and indicators for medical gas piping systems.

a. Include alarm signals when the following conditions exist:

1) Medical Carbon Dioxide: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.

2) Medical Helium: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.
3) Medical Nitrogen: Pressure drops below 145 psig (1000 kPa) or rises above 200 psig (1380 kPa) and changeover is made to alternate bank.
4) Medical Nitrous Oxide (for bulk oxygen storage tank system with cylinder reserve): Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa), changeover is made to reserve, reserve is in use, and reserve level is low.
5) Medical Nitrous Oxide (for nitrous oxide manifold system): Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.
6) Medical Oxygen (for bulk oxygen storage tank system with cylinder reserve): Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa), changeover is made to reserve, reserve is in use, reserve level is low, and reserve pressure is low.
7) Medical Oxygen (for oxygen manifold system): Pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.

6. Anesthetizing-Area Alarm Panels: Separate trouble alarm signals; pressure gages; and indicators for medical gas piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Carbon Dioxide: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
      2) Medical Helium: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
      3) Medical Nitrous Oxide: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
      4) Medical Nitrogen: Pressure drops below 145 psig (1000 kPa) or rises above 200 psig (1380 kPa).
      5) Medical Oxygen: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).

7. Area Alarm Panels: Separate trouble alarm signals; pressure and vacuum gages; and indicators for medical gas piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Oxygen: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).

8. Dental Area Alarm Panels: Separate trouble alarm signals; pressure and vacuum gages; and indicators for medical gas piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Nitrogen: Pressure drops below 145 psig (1000 kPa) or rises above 200 psig (1380 kPa) and changeover is made to alternate bank.
      2) Medical Nitrous Oxide (for bulk nitrous oxide storage tank system with cylinder reserve): Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa), changeover is made to reserve, reserve is in use, and reserve level is low.
      3) Medical Nitrous Oxide (for nitrous oxide manifold system): Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.
      4) Medical Oxygen (for bulk oxygen storage tank system with cylinder reserve): Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa), changeover is made to reserve, reserve is in use, reserve level is low, and reserve pressure is low.
      5) Medical Oxygen (for nitrous oxide manifold system): Pressure downstream from main shutoff valve drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa) and changeover is made to alternate bank.

9. Medical Laboratory Area Alarm Panels: Separate trouble alarm signals; pressure and vacuum gages; and indicators for medical gas piping systems.
   a. Include alarm signals when the following conditions exist:
      1) Medical Carbon Dioxide: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
2) Medical Helium: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).
3) Medical Oxygen: Pressure drops below 40 psig (275 kPa) or rises above 60 psig (415 kPa).

M. Computer Interface Cabinet
1. Description: Wall-mounting, welded-steel, control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical gas system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing 20, as directed, alarm signals.

N. Gas Cylinder Storage Racks
1. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders as indicated or provide equivalent manufactured wall racks.
2. Freestanding Storage Racks: Fabricate racks as indicated or provide equivalent manufactured storage racks.

O. Sleeves
1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
2. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.

P. Escutcheons
1. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to closely fit around pipe and tube and OD that completely covers opening.
   a. Finish: Polished chrome-plated OR Rough brass, as directed.
   a. Finish: Polished chrome-plated OR Rough brass, as directed.
5. One-Piece, Stamped-Steel Escutcheons: With set screw OR spring clips, as directed, and chrome-plated finish.
6. Split-Plate, Stamped-Steel Escutcheons: With concealed OR exposed-rivet, as directed, hinge, set screw OR spring clips, as directed, and chrome-plated finish.
7. One-Piece, Floor-Plate Escutcheons: Cast iron.
8. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

Q. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   a. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

R. Nitrogen
1. Description: Comply with USP 28 - NF 23 for oil-free dry nitrogen.

1.3 EXECUTION

A. Earthwork
1. Comply with requirements in Division 31 Section “Earth Moving” for excavating, trenching, and backfilling and for underground warning tapes.
B. Piping Applications
1. Nonhealthcare, Specialty Gas Piping: Type L, copper medical gas tube; wrought-copper fittings; and brazed OR press-type fittings and pressure-sealed, as directed, joints.
2. Nonhealthcare, Specialty Gas Piping NPS 2-1/2 (DN 65) and Smaller: Type K OR Type L, as directed, copper medical gas tube; wrought-copper fittings; and brazed OR press-type fittings and pressure-sealed, as directed, joints.
3. Nonhealthcare, Specialty Gas Piping NPS 3 (DN 80) and Larger: Type K, copper tube; wrought-copper fittings; and brazed OR press-type fittings and pressure-sealed, as directed, joints.
4. Medical Gas Piping: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
5. Medical Gas Piping Except Nitrogen: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
6. Medical Nitrogen Piping: Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
7. Medical Nitrogen Piping NPS 2-1/2 (DN 65) and Smaller: Type K OR Type L, as directed, copper medical gas tube; wrought-copper fittings; and brazed joints.
8. Medical Nitrogen Piping NPS 3 (DN 80) and Larger: Type K, copper tube; wrought-copper fittings; and brazed joints.

C. Piping Installation
1. Drawing plans, schematics, and diagrams indicate general location and arrangement of gas piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
2. Comply with ASSE Standard #6010 for installation of medical gas piping.
3. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
6. Install piping adjacent to equipment and specialties to allow service and maintenance.
7. Install nipples, unions, and special fittings, and valves with pressure ratings same as or higher than system pressure rating used in applications below unless otherwise indicated.
8. Install piping to permit valve servicing.
9. Install piping free of sags and bends.
10. Install fittings for changes in direction and branch connections.
11. Install medical gas piping to medical gas service connections specified in this Section, to medical gas service connections in equipment specified in this Section, and to equipment specified in other Sections requiring medical gas service.
12. Install exterior, buried medical gas piping in protective conduit fabricated with PVC pipe and fittings. Do not extend conduit through foundation wall.
13. Install seismic restraints on gas piping. Seismic-restraint devices are specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".
15. Connect gas piping to gas sources and to gas outlets and equipment requiring gas service.
16. Install unions, in copper tubing adjacent to each valve and at final connection to each piece of equipment and specialty.

D. Valve Installation
1. Install shutoff valve at each connection to gas laboratory and healthcare equipment and specialties.
2. Install check valves to maintain correct direction of gas flow from laboratory and healthcare gas supplies.
3. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.

4. Install zone valves and gages in valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.

5. Install pressure regulators on gas piping where reduced pressure is required.

6. Install emergency oxygen connection with pressure relief valve and full-size discharge piping to outside, with check valve downstream from pressure relief valve and with ball valve and check valve in supply main from bulk oxygen storage tank.

E. Joint Construction
1. Ream ends of PVC pipes and remove burrs.
2. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
3. Threaded Joints: Apply appropriate tape to external pipe threads.
5. Pressure-Sealed Joints: Join copper tube and press-type fittings with tools recommended by fitting manufacturer.
6. Memory-Metal Coupling Joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
7. Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.

F. Gas Service Component Installation
1. Assemble patient service console with service connections. Install with supplies concealed, in walls. Attach console box or mounting bracket to substrate.
2. Install nitrogen pressure-control panels in walls. Attach to substrate.
3. Assemble ceiling columns and install anchored to substrate. Provide structural steel, hanger rods, anchors, and fasteners in addition to components furnished with specialties necessary to fabricate supports.
4. Assemble ceiling assemblies and install anchored to substrate. Provide structural steel, hanger rods, anchors, and fasteners in addition to components furnished with specialties necessary to fabricate supports.
5. Install gas manifolds on concrete base, as directed, anchored to substrate.
6. Install gas cylinders and connect to manifold piping.
7. Install gas manifolds with seismic restraints as indicated.
8. Install bulk gas storage tanks and reserve supply tanks level on concrete bases. Set tanks and connect gas piping to tanks according to applicable requirements in NFPA 50 for bulk oxygen storage systems, as directed. Install tanks level and plumb, firmly anchored to concrete bases; maintain NFPA 50 and tank manufacturer's recommended clearances. Orient tanks so controls and devices are accessible for servicing.
9. Install bulk gas storage tanks and reserve supply tanks with seismic restraints.

G. Medical Gas Piping Alarm System Installation
1. Install medical gas alarm system components in locations required by and according to NFPA 99.
2. Install medical gas area and master alarm panels where indicated.
3. Install computer interface cabinet with connection to medical gas piping alarm system and facility computer.

H. Sleeve Installation
1. Sleeves are not required for core-drilled holes.
2. Permanent sleeves are not required for holes formed by removable PE sleeves.
3. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs using galvanized-steel pipe OR galvanized-steel sheet OR stack sleeve fittings OR PVC pipe, as directed.
a. Wall Penetrations: Cut sleeves to length for mounting flush with both surfaces.
b. Floor Penetrations: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

OR
Install sleeves in new walls and slabs as new walls and slabs are constructed.

4. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
   a. PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
   b. Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum board partitions.
   c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
      1) Seal space outside of sleeve fittings with grout.

5. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping".

I. Escutcheon Installation
   1. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
      a. New Piping:
         1) Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
         2) Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR stamped steel with set screw OR stamped steel with set screw or spring clips OR stamped steel with spring clips, as directed.
         3) Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish OR One piece or split casting, cast brass with polished chrome-plated finish OR Split casting, cast brass with polished chrome-plated finish OR One piece, stamped steel with set screw OR One piece or split plate, stamped steel with set screw OR Split plate, stamped steel with set screw, as directed.
         4) Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish OR cast brass with rough-brass finish OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.
         5) Bare Piping in Equipment Rooms: One piece, cast brass OR stamped steel with set screw OR stamped steel with spring clips OR stamped steel with set screw or spring clips, as directed.
         6) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.
      b. Existing Piping:
         1) Chrome-Plated Piping: Split casting, cast brass with chrome-plated finish.
         2) Insulated Piping: Split plate, stamped steel with concealed OR exposed-rivet, as directed, hinge and spring clips.
         3) Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and spring clips, as directed.
         4) Bare Piping at Ceiling Penetrations in Finished Spaces: Split casting, cast brass with chrome-plated finish OR plate, stamped steel with concealed hinge and set screw, as directed.
         5) Bare Piping in Unfinished Service Spaces: Split casting, cast brass with polished chrome-plated finish OR casting, cast brass with rough-brass finish OR plate, stamped steel with concealed hinge and set screw or spring clips OR plate, stamped steel with concealed or exposed-rivet hinge and set screw or spring clips OR plate, stamped steel with exposed-rivet hinge and set screw or spring clips, as directed.
6) Bare Piping in Equipment Rooms: Split casting, cast brass OR plate, stamped steel with set screw or spring clips, as directed.
7) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting floor plate.

J. Hanger And Support Installation
1. Comply with requirements in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment" for seismic-restraint devices.
2. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for pipe hanger and support devices.
3. Vertical Piping: MSS Type 8 or 42, clamps.
4. Individual, Straight, Horizontal Piping Runs:
   a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel, clevis hangers.
   b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable, roller hangers.
5. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze. Comply with requirements in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment" for trapeze hangers.
6. Base of Vertical Piping: MSS Type 52, spring hangers.
7. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
8. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
9. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   a. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
   b. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
   c. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
   d. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
   e. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
   f. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
   g. NPS 2 (DN 50): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
   h. NPS 2-1/2 (DN 65): 13 feet (4 m) with 1/2-inch (13-mm) rod.
   i. NPS 3 (DN 80): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
   j. NPS 3-1/2 (DN 90): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
   k. NPS 4 (DN 100): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
   l. NPS 5 (DN 125): 18 feet (5.5 m) with 1/2-inch (13-mm) rod.
   m. NPS 6 (DN 150): 20 feet (6 m) with 5/8-inch (16-mm) rod.
   n. NPS 8 (DN 200): 23 feet (7 m) with 3/4-inch (19-mm) rod.
10. Install supports for vertical copper tubing every 10 feet (3 m).

K. Labeling And Identification
1. Install identifying labels and devices for specialty gas piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification For Plumbing Piping And Equipment".
2. Install identifying labels and devices for healthcare medical gas piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
   a. Carbon Dioxide: Black or white letters on gray background.
   b. Helium: White letters on brown background.
   c. Nitrogen: White letters on black background.
   d. Nitrous Oxide: White letters on blue background.
   e. Oxygen: White letters on green background or green letters on white background.

L. Field Quality Control For Laboratory Facility Specialty Gas
1. Perform field tests and inspections of specialty gas piping for nonhealthcare laboratory facilities and prepare test reports.
2. Tests and Inspections:
   a. Piping Leak Tests for Specialty Gas Piping: Test new and modified parts of existing piping. Cap and fill specialty gas piping with oil-free, dry nitrogen to pressure of 50 psig (345 kPa) above system operating pressure, but not less than 150 psig (1035 kPa). Isolate test
source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.

b. Repair leaks and retest until no leaks exist.

c. Inspect specialty gas regulators for proper operation.

M. Field Quality Control For Healthcare Facility Medical Gas

1. Perform tests and inspections of medical gas piping systems in healthcare facilities and prepare test reports.

2. Tests and Inspections:
   a. Medical Gas Piping Testing Coordination: Perform tests, inspections, verifications, and certification of medical gas piping systems concurrently with tests, inspections, and certification of medical compressed-air piping and medical vacuum piping systems.
   b. Preparation: Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
      1) Initial blow down.
      2) Initial pressure test.
      3) Cross-connection test.
      4) Piping purge test.
      5) Standing pressure test for positive pressure medical gas piping.
      6) Standing pressure test for vacuum systems.
      7) Repair leaks and retest until no leaks exist.
   c. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical gas piping systems and perform the following tests and inspections:
      1) Standing pressure test.
      2) Individual-pressurization OR Pressure-differential, as directed, cross-connection test.
      3) Valve test.
      4) Master and area alarm tests.
      5) Piping purge test.
      6) Piping particulate test.
      7) Piping purity test.
      8) Final tie-in test.
      9) Operational pressure test.
      10) Medical gas concentration test.
      11) Medical air purity test.
      12) Verify correct labeling of equipment and components.
      13) Verify the following source equipment:
          a) Medical gas supply sources.
   d. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
      1) Inspections performed.
      2) Procedures, materials, and gases used.
      3) Test methods used.
      4) Results of tests.

3. Remove and replace components that do not pass tests and inspections and retest as specified above.

SECTION 22 11 19 00 - PIPED UTILITIES BASIC MATERIALS AND METHODS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for piped utilities - basic materials and methods. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Piping joining materials.
   b. Transition fittings.
   c. Dielectric fittings.
   d. Sleeves.
   e. Identification devices.
   f. Grout.
   g. Flowable fill.
   h. Piped utility demolition.
   i. Piping system common requirements.
   j. Equipment installation common requirements.
   k. Painting.
   l. Concrete bases.
   m. Metal supports and anchorages.

C. Definitions
1. Exposed Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions.
2. Concealed Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
4. CPVC: Chlorinated polyvinyl chloride plastic.
5. PE: Polyethylene plastic.
6. PVC: Polyvinyl chloride plastic.

D. Submittals
1. Product Data: For the following:
   a. Dielectric fittings.
   b. Identification devices.
2. Welding certificates.

E. Quality Assurance
1. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. Steel Piping Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   a. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
3. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

F. Delivery, Storage, And Handling
1. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
2. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.2 PRODUCTS

A. Piping Joining Materials
1. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness, unless otherwise indicated.
      1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
   b. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
3. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
5. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
7. Solvent Cements for Joining Plastic Piping:
   a. ABS Piping: ASTM D 2235.
   b. CPVC Piping: ASTM F 493.
   c. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
   d. PVC to ABS Piping Transition: ASTM D 3138.
8. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

B. Transition Fittings
1. Transition Fittings, General: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
2. Transition Couplings NPS 1-1/2 (DN 40) and Smaller:
   a. Underground Piping: Manufactured piping coupling or specified piping system fitting.
   b. Aboveground Piping: Specified piping system fitting.
3. AWWA Transition Couplings NPS 2 (DN 50) and Larger:
   a. Description: AWWA C219, metal sleeve-type coupling for underground pressure piping.
4. Plastic-to-Metal Transition Fittings:
   a. Description: CPVC and PVC one-piece fitting with manufacturer’s Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint or threaded end.
5. Plastic-to-Metal Transition Unions:
   a. Description: MSS SP-107, CPVC and PVC four-part union. Include brass or stainless-steel threaded end, solvent-cement-joint or threaded plastic end, rubber O-ring, and union nut.
6. Flexible Transition Couplings for Underground Nonpressure Drainage Piping:
   a. Description: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

C. Dielectric Fittings
1. **Dielectric Fittings, General:** Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

2. **Dielectric Unions:**
   a. **Description:** Factory fabricated, union, NPS 2 (DN 50) and smaller.
      1) **Pressure Rating:** 150 psig (1035 kPa) minimum **OR** 250 psig (1725 kPa), **as directed**, at 180 deg F (82 deg C).
      2) **End Connections:** Solder-joint copper alloy and threaded ferrous; threaded ferrous.

3. **Dielectric Flanges:**
   a. **Description:** Factory-fabricated, bolted, companion-flange assembly, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and larger.
      1) **Pressure Rating:** 150 psig (1035 kPa) minimum **OR** 175 psig (1200 kPa) minimum **OR** 300 psig (2070 kPa), **as directed**.
      2) **End Connections:** Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

4. **Dielectric-Flange Kits:**
   a. **Description:** Nonconducting materials for field assembly of companion flanges, NPS 2-1/2 (DN 65) and larger.
      1) **Pressure Rating:** 150 psig (1035 kPa) minimum.
      2) **Gasket:** Neoprene or phenolic.
      3) **Bolt Sleeves:** Phenolic or polyethylene.
      4) **Washers:** Phenolic with steel backing washers.

5. **Dielectric Couplings:**
   a. **Description:** Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining, NPS 3 (DN 80) and smaller.
      1) **Pressure Rating:** 300 psig (2070 kPa) at 225 deg F (107 deg C).
      2) **End Connections:** Threaded.

6. **Dielectric Nipples:**
   a. **Description:** Electroplated steel nipple with inert and noncorrosive, thermoplastic lining.
      1) **Pressure Rating:** 300 psig (2070 kPa) at 225 deg F (107 deg C).
      2) **End Connections:** Threaded or grooved.

D. **Sleeves**
   1. Mechanical sleeve seals for pipe penetrations are specified in Division 22 Section "Common Work Results For Plumbing".
   2. **Galvanized-Steel Sheet Sleeves:** 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
   3. **Steel Pipe Sleeves:** ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized, plain ends.
   4. **Cast-Iron Sleeves:** Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
   5. **Molded PVC Sleeves:** Permanent, with nailing flange for attaching to wooden forms.
   6. **PVC Pipe Sleeves:** ASTM D 1785, Schedule 40.
   7. **Molded PE Sleeves:** Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

E. **Identification Devices**
   1. **Equipment Nameplates:** Metal permanently fastened to equipment with data engraved or stamped.
      a. **Data:** Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and essential data.
      b. **Location:** Accessible and visible.
   2. **Stencils:** Standard stencils prepared with letter sizes complying with recommendations in ASME A13.1. Minimum letter height is 1-1/4 inches (30 mm) for ducts, and 3/4 inch (20 mm) for access door signs and similar operational instructions.
      a. **Material:** Fiberboard **OR** Brass, **as directed**.
      b. **Stencil Paint:** Exterior, oil-based, alkyd-gloss black enamel, unless otherwise indicated. Paint may be in pressurized spray-can form.
c. Identification Paint: Exterior, oil-based, alkyd enamel in colors according to ASME A13.1, unless otherwise indicated.

3. Snap-on Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid, snap-on type. Include color-coding according to ASME A13.1, unless otherwise indicated.

4. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive-vinyl type with permanent adhesive.

5. Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): Full-band pipe markers, extending 360 degrees around pipe at each location.

6. Pipes with OD, Including Insulation, 6 Inches (150 mm) and Larger: Either full-band or strip-type pipe markers, at least three times letter height and of length required for label.

7. Lettering: Manufacturer's standard preprinted captions as selected by the Owner.

8. Lettering: Use piping system terms and abbreviate only as necessary for each application length.
   a. Arrows: Either integrally with piping system service lettering to accommodate both directions of flow, or as separate unit on each pipe marker to indicate direction of flow.

9. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive vinyl tape, at least 3 mils (0.08 mm) thick.
   a. Width: 1-1/2 inches (40 mm) on pipes with OD, including insulation, less than 6 inches (150 mm); 2-1/2 inches (65 mm) for larger pipes.
   b. Color: Comply with ASME A13.1, unless otherwise indicated.

10. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) sequenced numbers. Include 5/32-inch (4-mm) hole for fastener.
    a. Material: 0.032-inch- (0.8-mm-) thick, polished brass OR aluminum, as directed.
    b. Material: 0.0375-inch- (1-mm-) thick stainless steel.
    c. Material: 3/32-inch- (2.4-mm-) thick plastic laminate with 2 black surfaces and a white inner layer.
    d. Material: Valve manufacturer's standard solid plastic.
    e. Size: 1-1/2 inches (40 mm) in diameter, unless otherwise indicated.
    f. Shape: As indicated for each piping system.

11. Valve Tag Fasteners: Brass, wire-link or beaded chain; or brass S-hooks.

12. Engraved Plastic-Laminate Signs: ASTM D 709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white melamine subcore, unless otherwise indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening.
    a. Engraving: Engraver's standard letter style, of sizes and with terms to match equipment identification.
    b. Thickness: 1/16 inch (1.6 mm), for units up to 20 sq. in. (130 sq. cm) or 8 inches (200 mm) in length, and 1/8 inch (3 mm) for larger units.
    c. Fasteners: Self-tapping, stainless-steel screws or contact-type permanent adhesive.

13. Plastic Equipment Markers: Manufacturer's standard laminated plastic, in the following color codes:
    a. Green: Cooling equipment and components.
    b. Yellow: Heating equipment and components.
    d. Blue: Equipment and components that do not meet criteria above.
    f. Terminology: Match schedules as closely as possible. Include the following:
       1) Name and plan number.
       2) Equipment service.
       3) Design capacity.
       4) Other design parameters such as pressure drop, entering and leaving conditions, and speed.
    g. Size: 2-1/2 by 4 inches (65 by 100 mm) for control devices, dampers, and valves; 4-1/2 by 6 inches (115 by 150 mm) for equipment.

14. Plasticized Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with mat finish suitable for writing.
    a. Size: 3-1/4 by 5-5/8 inches (83 by 143 mm).
b. Fasteners: Brass grommets and wire.
c. Nomenclature: Large-size primary caption such as DANGER, CAUTION, or DO NOT OPERATE.

15. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in piped utility identification with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of piped utility systems and equipment.
   a. Multiple Systems: Identify individual system number and service if multiple systems of same name are indicated.

F. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   a. Characteristics: Post hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

G. Flowable Fill
1. Description: Low-strength-concrete, flowable-slurry mix.
   a. Cement: ASTM C 150, Type I, portland.
   b. Density: 115- to 145-lb/cu. ft. (1840- to 2325-kg/cu. m).
   c. Aggregates: ASTM C 33, natural sand, fine and crushed gravel or stone, coarse
      OR
   d. Water: Comply with ASTM C 94/C 94M.
   e. Strength: 100 to 200 psig (690 to 1380 kPa) at 28 days.

1.3 EXECUTION

A. Piped Utility Demolition
1. Refer to Division 01 Section(s) "Cutting And Patching" AND Division 02 Section(s) "Selective Structure Demolition" for general demolition requirements and procedures.
2. Disconnect, demolish, and remove piped utility systems, equipment, and components indicated to be removed.
   a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
   b. Piping to Be Abandoned in Place: Drain piping. Fill abandoned piping with flowable fill, and cap or plug piping with same or compatible piping material.
   c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
   d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make operational.
   e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Owner.
3. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

B. Dielectric Fitting Applications
1. Dry Piping Systems: Connect piping of dissimilar metals with the following:
   a. NPS 2 (DN 50) and Smaller: Dielectric unions.
   b. NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Dielectric flanges or dielectric flange kits.
2. Wet Piping Systems: Connect piping of dissimilar metals with the following:
   a. NPS 2 (DN 50) and Smaller: Dielectric couplings OR dielectric nipples, as directed.
   b. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Dielectric nipples.
   c. NPS 2-1/2 to NPS 8 (DN 65 to DN 200): Dielectric nipples or dielectric flange kits.
   d. NPS 10 and NPS 12 (DN 250 and DN 300): Dielectric flange kits.
C. Piping Installation
1. Install piping according to the following requirements and Division 33 specifying piping systems.
2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on the Coordination Drawings.
3. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
4. Install piping to permit valve servicing.
5. Install piping at indicated slopes.
6. Install piping free of sags and bends.
7. Install fittings for changes in direction and branch connections.
8. Select system components with pressure rating equal to or greater than system operating pressure.
9. Sleeves are not required for core-drilled holes, unless directed otherwise.
10. Permanent sleeves are not required for holes formed by removable PE sleeves, unless directed otherwise.
11. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
   a. Cut sleeves to length for mounting flush with both surfaces.
      1) Exception: Extend sleeves installed in floors of equipment areas or other wet areas 2 inches (50 mm) above finished floor level.
   b. Install sleeves in new walls and slabs as new walls and slabs are constructed.
      1) PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
      2) Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum-board partitions.
12. Verify final equipment locations for roughing-in.
13. Refer to equipment specifications in other Sections for roughing-in requirements.

D. Piping Joint Construction
1. Join pipe and fittings according to the following requirements and Division 33 specifying piping systems.
2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
4. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
6. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
7. Grooved Joints: Assemble joints with grooved-end pipe coupling with coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
8. Soldered Joints: Apply ASTM B 813 water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B 32.
10. Pressure-Sealed Joints: Assemble joints for plain-end copper tube and mechanical pressure seal fitting with proprietary crimping tool according to fitting manufacturer's written instructions.
11. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
b. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 appendixes.
c. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
d. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
e. PVC Nonpressure Piping: Join according to ASTM D 2855.
f. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D 3138 Appendix.
12. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.
   a. Plain-End PE Pipe and Fittings: Use butt fusion.
   b. Plain-End PE Pipe and Socket Fittings: Use socket fusion.
15. Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

E. Piping Connections
1. Make connections according to the following, unless otherwise indicated:
   a. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
   b. Install flanges, in piping NPS 2 1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
   c. Install dielectric fittings at connections of dissimilar metal pipes.

F. Equipment Installation
1. Install equipment level and plumb, unless otherwise indicated.
2. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference with other installations. Extend grease fittings to an accessible location.
3. Install equipment to allow right of way to piping systems installed at required slope.

G. Painting
1. Painting of piped utility systems, equipment, and components is specified in Division 09.
2. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

H. Identification
1. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.
   b. Plastic markers, with application systems. Install on insulation segment if required for hot noninsulated piping.
   c. Locate pipe markers on exposed piping according to the following:
      1) Near each valve and control device.
      2) Near each branch, excluding short takeoffs for equipment and terminal units. Mark each pipe at branch if flow pattern is not obvious.
      3) Near locations where pipes pass through walls or floors or enter inaccessible enclosures.
      4) At manholes and similar access points that permit view of concealed piping.
      5) Near major equipment items and other points of origination and termination.
2. Equipment: Install engraved plastic-laminate sign or equipment marker on or near each major item of equipment.
   a. Lettering Size: Minimum 1/4 inch (6.4 mm) high for name of unit if viewing distance is less than 24 inches (610 mm), 1/2 inch (13 mm) high for distances up to 72 inches (1800 mm), and proportionately larger lettering for greater distances. Provide secondary lettering two-thirds to three-fourths of size of principal lettering.
b. Text of Signs: Provide name of identified unit. Include text to distinguish among multiple units, inform user of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

3. Adjusting: Relocate identifying devices that become visually blocked by work of this or other Divisions.

I. Concrete Bases
1. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   a. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
   b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of base.
   c. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   d. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   e. Install anchor bolts to elevations required for proper attachment to supported equipment.
   f. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   g. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-place Concrete".

J. Erection Of Metal Supports And Anchorages
1. Refer to Division 05 Section "Metal Fabrications" for structural steel.
2. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor piped utility materials and equipment.
3. Field Welding: Comply with AWS D1.1/D1.1M.

K. Grouting
1. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.
2. Clean surfaces that will come into contact with grout.
3. Provide forms as required for placement of grout.
4. Avoid air entrapment during placement of grout.
5. Place grout, completely filling equipment bases.
6. Place grout on concrete bases and provide smooth bearing surface for equipment.
7. Place grout around anchors.
8. Cure placed grout.

END OF SECTION 22 11 19 00
SECTION 22 11 19 00a - ELECTRONIC AIR CLEANERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for electronic air cleaners. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Electronic air cleaners.
   b. Side-service housings.
   c. Front- and rear-access filter frames.
   d. Filter gages.

C. Submittals
1. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
2. LEED Submittal:
   a. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - “Systems and Equipment.”
3. Shop Drawings: For each electronic air cleaner. Include plans, elevations, sections, details, and attachments to other work.
   a. Show filter assembly, dimensions, materials, and methods of assembly of components.
   b. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
   c. Wiring Diagrams: For power, signal, and control wiring.
4. Field quality-control reports.
5. Operation and Maintenance Data: For each type of filter and housing to include in emergency, operation, and maintenance manuals.

D. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. ASHRAE Compliance:
   a. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," and Section 7 - "Construction and Startup."
   b. Comply with ASHRAE 52.1 for arrestance and with ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.
3. Comply with NFPA 90A and NFPA 90B.
4. Comply with ARI 850.
5. Comply with UL 867.

1.2 PRODUCTS

A. Electronic Air Cleaners
1. Description: Factory-fabricated electronic air cleaner operating by electrostatic precipitation principles.
2. Prefilter Media: Four OR Six, as directed, alternate layers of galvanized-steel OR aluminum OR stainless-steel, as directed, flat and herringbone-crimp screen.
3. Prefilter: Comply with requirements in Division 23 Section "Particulate Air Filtration" for flat OR pleated OR ring, as directed, panel. Size and airflow capacity shall match those of electronic air cleaners.
   a. Depth: 1 inch (25 mm) OR 2 inches (50 mm) OR 4 inches (100 mm), as directed.
   b. Filter Unit Class: UL 900, Class 1 OR Class 2, as directed.
   c. Arrestance: 85 percent when tested according to ASHRAE 52.1.
   d. MERV: 8 when tested according to ASHRAE 52.2.
4. Final Filter: Comply with requirements in Division 23 Section "Particulate Air Filtration" for supported bag OR unsupported bag OR rigid-cell box OR V-bank cell OR self-supported pocket, as directed. Size and airflow capacity shall match those of gas-phase filters.
   a. Depth: 12 inches (300 mm) OR 18 inches (450 mm) OR 24 inches (600 mm), as directed.
   b. Filter Unit Class: UL 900, Class 1 OR Class 2, as directed.
   c. Arrestance: 85 percent when tested according to ASHRAE 52.1.
   d. MERV: 13 when tested according to ASHRAE 52.2.
5. Collection Cells: Aluminum, independently supported and nested.
   a. Ionizing Section: Alternately spaced grounded struts and charged ionizing wires.
   b. Collecting Section: Alternately grounded and charged plates, with insulators located out of airstream.
6. Power Pack: Self-contained, prewired rectifying unit to convert 120 OR 208/240 OR 480, as directed, V ac, single-phase, 60 Hz power to approximately 12,000-V dc for ionizer and 6000-V dc for collector; include overload protection, on-off switch, pilot light showing operating status, and access door interlock.
7. Safety Accessories: Manual-reset safety switches and warning lights for filter plenum access doors, signal lights and safety switching upstream and downstream from unit within duct, and enameled high-voltage warning signs.
8. Collection Section Cleaning System:
   a. Detergent Reservoir Tank: 30 gal. (110 L) OR 55 gal. (200 L), as directed, with pump, motor, solenoid valve, level sensor, backflow preventer, wye-strainer, and ball valve.
   b. Detergent.
   c. Dispensing System: Motor-driven oscillating copper manifolds with brass spray nozzles on each side of the collector.
9. Mist Eliminators: Upstream OR Upstream and downstream OR Downstream, as directed.
10. Controls: Programmable logic controller in remotely mounted NEMA 250, Type 12 enclosure; with integral time clock and manual override.
    a. Contacts for enable-disable control by building automation system.
11. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Fan Section
1. Fan: Forward curved, belt driven.
2. Motor:
   a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements For Hvac Equipment".
   b. Type: Permanent-split capacitor with SCR for speed adjustment OR Electronically commutated motor, as directed.
   c. Fan-Motor Assembly Isolation: Rubber isolators.
   d. Enclosure: Totally enclosed, fan cooled, and explosion proof OR dust-ignition proof, as directed.
   e. Enclosure Materials: Cast iron OR Cast aluminum OR Rolled steel, as directed.
   g. Unusual Service Conditions:
   1) Ambient Temperature: <Insert deg F (deg C)>.
   2) Altitude: <Insert feet (m)> above sea level.
   3) High humidity.
   h. Efficiency: Premium efficient.
   i. NEMA Design: <Insert designation>. 

Electronic Air Cleaners
August 2021
22 11 19 00a - 2
DASNY, Downstate
j. Service Factor: <Insert value>.

k. Motor Speed: Single speed OR Multispeed, as directed.
   1) Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.

C. Cabinet
   1. Description: 16-gage galvanized steel with epoxy powder finish for suspended, wall, frame, or duct mounting.

D. Side-Service Housings
   1. Description: Factory-assembled, side-service housings, with bottom drain, as directed, constructed of galvanized steel OR aluminum, as directed, and configured for stacking, with flanges to connect to duct or casing system.
   2. Access Doors: Hinged with continuous OR Continuous, as directed, gaskets on perimeter and positive-locking devices.
   3. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.
   4. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

E. Front- And Rear-Access Filter Frames
   1. Framing System: Galvanized-steel OR Aluminum, as directed, framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and prepunched for assembly into modules with bottom drain, as directed, and configured for stacking. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.
   2. Prefilters: Incorporate a separate track with spring clips, as directed, removable from front or back, as directed.
   3. Final Filters: Integral tracks to accommodate particulate OR gas-phase, as directed, disposable filters.
   4. Sealing: Factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.
   5. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

F. Filter Gages
   1. Diaphragm type, with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
      a. Diameter: 4-1/2 inches (115 mm) OR 2 inches (50 mm), as directed.
      b. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).
      c. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1-Inchwg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa).
      d. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa).
      e. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa).
      f. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa).
   2. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale, logarithmic-curve tube gage, with integral leveling indicator, graduated to read from 0- to 3.0-inch wg (0 to 750 Pa), and accurate within 3 percent of full-scale range.
   3. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

1.3 EXECUTION

A. Installation
1. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
2. Install filters in position to prevent passage of unfiltered air.
3. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
4. Operate electronic air cleaners for 24 hours as part of startup before filters are put into operation.
5. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.
6. Install and connect water-supply and drainage piping.
7. Coordinate filter installations with duct and air-handling-unit installations.

B. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections: Test for leakage of unfiltered air while system is operating.
3. Air filter will be considered defective if it does not pass tests and inspections.
4. Prepare test and inspection reports.

C. Cleaning
1. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new prefilter and final-filter media.

SECTION 22 11 23 13 - WATER DISTRIBUTION PUMPS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for domestic water pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. In-line, sealless centrifugal pumps.
      b. Horizontally mounted, in-line, separately coupled centrifugal pumps.
      c. Horizontally mounted, in-line, close-coupled centrifugal pumps.
      d. Vertically mounted, in-line, close-coupled centrifugal pumps.

C. Definitions
   1. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

D. Submittals
   1. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   2. Operation and Maintenance Data: For domestic water pumps to include in operation and maintenance manuals.

E. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. UL Compliance: Comply with UL 778 for motor-operated water pumps.

F. Delivery, Storage, And Handling
   1. Retain shipping flange protective covers and protective coatings during storage.
   2. Protect bearings and couplings against damage.
   3. Comply with pump manufacturer's written rigging instructions for handling.

G. Coordination
   1. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.2 PRODUCTS

A. In-Line, Sealless Centrifugal Pumps
   1. Description: Factory-assembled and -tested, in-line, close-coupled, canned-motor, sealless, overhung-impeller centrifugal pumps.
   2. Pump Construction:
      a. Pump and Motor Assembly: Hermetically sealed, replaceable-cartridge type with motor and impeller on common shaft and designed for installation with pump and motor shaft horizontal.
      b. Casing: Bronze, with threaded or companion-flange connections.
      c. Impeller: Plastic.
      d. Motor: Single speed, unless otherwise indicated.
B. Horizontally Mounted, In-Line, Separately Coupled Centrifugal Pumps
   1. Description: Factory-assembled and -tested, in-line, single-stage, separately coupled, overhung-
      impeller centrifugal pumps designed for installation with pump and motor shafts mounted
      horizontal.
   2. Pump Construction:
      a. Casing: Radially split with threaded companion-flange connections for pumps with NPS 2
         (DN 50) pipe connections and flanged connections for pumps with NPS 2-1/2 (DN 65) pipe
         connections.
      b. Impeller: Statically and dynamically balanced, closed, and keyed to shaft.
      c. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
      d. Coupling: Flexible.
      e. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and
         rubber bellows and gasket.
      f. Bearings: Oil-lubricated; bronze-journal or ball type.
      g. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.
   3. Motor: Single speed, with grease-lubricated ball bearings; and resiliently OR rigidly, as directed,
      mounted to pump casing.

C. Horizontally Mounted, In-Line, Close-Coupled Centrifugal Pumps
   1. Description: Factory-assembled and -tested, in-line, single-stage, close-coupled, overhung-
      impeller centrifugal pumps designed for installation with pump and motor shaft mounted
      horizontal.
   2. Pump Construction:
      a. Casing: Radially split with threaded companion-flange connections for pumps with NPS 2
         (DN 50) pipe connections and flanged connections for pumps with NPS 2-1/2 (DN 65) pipe
         connections.
      b. Impeller: Statically and dynamically balanced, closed, and keyed to shaft.
      c. Shaft and Shaft Sleeve: Steel shaft with deflector, with copper-alloy shaft sleeve. Include
         water slinger on shaft between motor and seal.
      d. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and
         rubber bellows and gasket.
      e. Bearings: Oil-lubricated; bronze-journal or ball type.
      f. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.
   3. Motor: Single speed, with grease-lubricated ball bearings; and resiliently or rigidly mounted to
      pump casing.

D. Vertically Mounted, In-Line, Close-Coupled Centrifugal Pumps
   1. Description: Factory-assembled and -tested, in-line, single-stage, close-coupled, overhung-
      impeller centrifugal pumps designed for installation with pump and motor shaft mounted vertical.
   2. Pump Construction:
      a. Casing: Radially split, cast iron, with wear rings and threaded companion-flange
         connections for pumps with NPS 2 (DN 50) pipe connections and flanged connections for
         pumps with NPS 2-1/2 (DN 65) pipe connections. Include pump manufacturer's base
         attachment for mounting pump on concrete base, as directed.
      b. Impeller: Statically and dynamically balanced, closed, and keyed to shaft.
      c. Shaft and Shaft Sleeve: Stainless-steel or steel OR Stainless-steel, as directed, shaft,
         with copper-alloy shaft sleeve.
      d. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and
         rubber bellows and gasket. Include water slinger on shaft between motor and seal.
      e. Bearings: Oil-lubricated; bronze-journal or ball type.
      f. Shaft Coupling: Flexible or rigid type if pump is provided with coupling.
   3. Motor: Single speed, with grease-lubricated ball bearings; and rigidly mounted to pump casing.

E. Motors
   1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency
      requirements for motors specified in Division 22 Section "Common Motor Requirements For
      Plumbing Equipment".
a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 22.

F. Controls
1. Pressure Switches: Electric, adjustable for control of water-supply pump.
   a. Type: Water-immersion pressure sensor, for installation in piping.
   b. Enclosure: NEMA 250, Type 4X.
   c. Operation of Pump: On or off.
   d. Transformer: Provide if required.
   e. Power Requirement: 24 V, ac OR 120 V, ac, as directed.
   f. Settings: Start pump at <Insert pressure> and stop pump at <Insert pressure>.
2. Thermostats: Electric, adjustable for control of hot-water circulation pump.
   a. Type: Water-immersion temperature sensor, for installation in piping.
   b. Range: 50 to 125 deg F (10 to 52 deg C) OR 65 to 200 deg F (18 to 93 deg C) OR 100 to 240 deg F (38 to 116 deg C), as directed.
   c. Enclosure: NEMA 250, Type 4X.
   d. Operation of Pump: On or off.
   e. Transformer: Provide if required.
   f. Power Requirement: 24 V, ac OR 120 V, ac, as directed.
   g. Settings: Start pump at 105 deg F (41 deg C), OR 110 deg F (43 deg C), OR 115 deg F (46 deg C), as directed, and stop pump at 120 deg F (49 deg C), OR 125 deg F (52 deg C), as directed.
3. Timers: Electric, for control of hot-water circulation pump.
   a. Type: Programmable, seven-day clock with manual override on-off switch.
   b. Enclosure: NEMA 250, Type 1, suitable for wall mounting.
   c. Operation of Pump: On or off.
   d. Transformer: Provide if required.
   e. Power Requirement: 24 V, ac OR 120 V, ac, as directed.
   f. Programmable Sequence of Operation: Up to two on-off cycles each day for seven days.
4. Time-Delay Relays: Electric, for control of hot-water circulation pump between water heater and connected hot-water storage tank.
   a. Type: Adjustable time-delay relay.
   b. Range: Up to five minutes.
   c. Setting: Five minutes.
   d. Enclosure: NEMA 250, Type 4X.
   e. Operation of Pump: On or off.
   f. Transformer: Provide if required.
   g. Power Requirement: 24 V, ac OR 120 V, ac, as directed.
   h. Programmable Sequence of Operation: Limit pump operation to periods of burner operation plus maximum five minutes after the burner stops.

1.3 EXECUTION

A. Examination
1. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

B. Pump Installation
1. Comply with HI 1.4.
2. Install in-line, sealless centrifugal pumps with shaft horizontal unless otherwise indicated.
3. Install horizontally mounted, in-line, separately coupled and close-coupled centrifugal pumps with shaft(s) horizontal.
4. Install vertically mounted, in-line, close-coupled centrifugal pumps with shaft vertical.
5. Pump Mounting: Install vertically mounted, in-line, close-coupled centrifugal pumps with cast-iron base mounted on concrete base using elastomeric pads OR elastomeric mounts OR restrained
spring isolators, as directed. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-place Concrete".
   a. Minimum Deflection: 1/4 inch (6 mm) OR 1 inch (25 mm), as directed.
   b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
   c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   e. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install continuous-thread hanger rods and spring hangers OR spring hangers with vertical-limit stop, as directed, of size required to support pump weight.
   a. Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment". Fabricate brackets or supports as required.
   b. Comply with requirements for hangers and supports specified in Division 22 Section "Hangers And Supports For Plumbing Piping And Equipment".
7. Install pressure switches in water supply piping.
8. Install thermostats in hot-water return piping.
9. Install timers on wall in engineer's office, as directed.
10. Install time-delay relays in piping between water heaters and hot-water storage tanks.

C. Connections
1. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping". Drawings indicate general arrangement of piping, fittings, and specialties.
2. Install piping adjacent to pumps to allow service and maintenance.
3. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
   a. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
      1) Horizontally mounted, in-line, separately coupled centrifugal pumps.
      2) Horizontally mounted, in-line, close-coupled centrifugal pumps.
      3) Vertically mounted, in-line, close-coupled centrifugal pumps.
      4) Comply with requirements for flexible connectors specified in Division 22 Section "Domestic Water Piping".
   b. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Division 22 Section "General-duty Valves For Plumbing Piping" and comply with requirements for strainers specified in Division 22 Section "Domestic Water Piping Specialties".
   c. Install pressure gage and snubber, as directed, at suction of each pump and pressure gage and snubber, as directed, at discharge of each pump. Install at integral pressure-gage tappings where provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Division 22 Section "Meters And Gages For Plumbing Piping".
4. Comply with Division 22 for electrical connections, and wiring methods.
5. Connect pressure switches, thermostats, time-delay relays, and timers to pumps that they control.
6. Interlock pump between water heater and hot-water storage tank with water heater burner and time-delay relay.

D. Identification
1. Comply with requirements for identification specified in Division 22 Section "Identification For Plumbing Piping And Equipment" for identification of pumps.

E. Startup Service
1. Engage a factory-authorized service representative to perform OR Perform, as directed, startup service.
a. Complete installation and startup checks according to manufacturer's written instructions.
b. Check piping connections for tightness.
c. Clean strainers on suction piping.
d. Set pressure switches, thermostats, timers, and time-delay relays for automatic starting and stopping operation of pumps.
e. Perform the following startup checks for each pump before starting:
   1) Verify bearing lubrication.
   2) Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
   3) Verify that pump is rotating in the correct direction.
f. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
g. Start motor.
h. Open discharge valve slowly.
i. Adjust temperature settings on thermostats.
j. Adjust timer settings.

F. Adjusting
   1. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
   2. Adjust initial temperature set points.
   3. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION 22 11 23 13
SECTION 22 11 23 13a - PACKAGED BOOSTER PUMPS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for packaged booster pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Simplex, constant-speed booster pumps.
   b. Multiplex, constant-speed booster pumps.
   c. Simplex, variable-speed booster pumps.
   d. Multiplex, variable-speed booster pumps.

C. Definitions
1. VFC: Variable-frequency controller(s).

D. Performance Requirements
1. Seismic Performance: Booster pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   a. The term "withstand" means "the booster pump will remain in place without separation of any parts from the booster pump when subjected to the seismic forces specified and the booster pump will be fully operational after the seismic event."

E. Submittals
1. Product Data: For each type of product indicated. Include construction details, material descriptions, and dimensions of individual components and profiles OR include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories, as directed.
2. Shop Drawings: For booster pumps. Include plans, elevations, sections, details, and attachments to other work.
   a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: For power, signal, and control wiring.
3. Seismic Qualification Certificates: For booster pumps, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
4. Operation and Maintenance Data: For booster pumps to include in emergency, operation, and maintenance manuals.

F. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. ASME Compliance: Comply with ASME B31.9 for piping.
3. UL Compliance for Packaged Pumping Systems:
   a. UL 508, "Industrial Control Equipment."
   b. UL 508A, "Industrial Control Panels."
4. Booster pumps shall be listed and labeled as packaged pumping systems by testing agency acceptable to authorities having jurisdiction.

G. Delivery, Storage, And Handling
1. Retain protective coatings and flange’s protective covers during storage.

H. Coordination
1. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.2 PRODUCTS

A. Simplex, Constant-Speed Booster Pumps
1. Description: Factory-assembled and -tested, fluid-handling system for domestic water, with pump, piping, valves, specialties, and controls, and mounted on base.
2. Pump:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, close-coupled, single-stage, overhung-impeller, centrifugal pump.
   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.
   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, s directed; statically and dynamically balanced and keyed to shaft.
   d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve and deflector.
   e. Seal: Mechanical.
   f. Orientation: Mounted horizontally or vertically.
3. Motor: Single speed, with grease-lubricated or pre-greased, permanently shielded, ball-type bearings, and directly mounted to pump casing. Select motor that will not overload through full range of pump performance curve.
4. Piping: Copper tube and copper fittings OR Stainless-steel pipe and fittings OR Stainless-steel pipe and fitting headers and copper tube and copper fittings between headers and pump OR Galvanized-steel pipe and cast-iron fittings, as directed.
5. Valves:
   a. Shutoff Valves NPS 2 (DN 50) and smaller: Gate valve or two-piece, full-port ball valve, in pump suction and discharge piping.
   b. Shutoff Valves NPS 2-1/2 (DN 65) and Larger: Gate valve or lug-type butterfly valve, in pump suction and discharge piping.
   c. Check Valve NPS 2 (DN 50) and smaller: Silent or swing type in pump discharge piping.
   d. Check Valve NPS 2-1/2 (DN 65) and Larger: Silent type in pump discharge piping.
   e. Control Valve: Adjustable, automatic, pilot-operated or direct-acting, pressure-reducing type in pump discharge piping.
   f. Control Valve: Combination adjustable, automatic, pilot-operated or direct-acting pressure-reducing-and-check type in pump discharge piping.
   g. Thermal-Relief Valve: Temperature-and-pressure relief type in pump discharge piping.
6. Dielectric Fittings: With insulating material isolating joined dissimilar metals.
7. Hydropneumatic Tank: Precharged, ASME-construction, as directed, diaphragm or bladder tank made of materials complying with NSF 61.
8. Control Panel: Factory installed and connected as an integral part of booster pump; automatic for single-pump, constant-speed operation, with load control and protection functions.
   a. Control Logic: Electromechanical system with switches, relays OR Solid-state system with transducers, programmable microprocessor, as directed, and other devices in the controller.
1) Control Voltage: 24 OR 120, as directed, V ac, with integral control-power transformer.

c. Motor Controller: NEMA ICS 2, solid-state, reduced-voltage type.
   1) Control Voltage: 24 OR 120, as directed, V ac, with integral control-power transformer.

d. Enclosure: NEMA 250, Type 1 OR Type 3R OR Type 4 OR Type 12, as directed.

e. Motor Overload Protection: Overload relay in each phase.

f. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.

g. Pump Operation: Current- or pressure- sensing method.
   1) Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.

h. Instrumentation: Suction and discharge pressure gages.

i. Light: Running light for pump.

j. Thermal-bleed cutoff.

k. Low-suction-pressure OR Water-storage-tank, low-level, as directed, cutout.

l. High-suction-pressure cutout.

m. Low-discharge-pressure cutout.

n. High-discharge-pressure cutout.

o. Building Automation System Interface: Provide auxiliary contacts for interface to BACnet OR LonWorks, as directed, building automation system. Building automation systems are specified in Division 23 Section "Instrumentation And Control For Hvac". Include the following:
   1) On-off status of pump.
   2) Alarm status.

B. Multiplex, Constant-Speed Booster Pumps

1. Description: Factory-assembled and -tested, fluid-handling system for domestic water, with pumps, piping, valves, specialties, and controls, and mounted on base.

2. Pumps:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, close-coupled, single-stage, overhung-impeller, centrifugal pump.

   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.

   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.

   d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve and deflector.

   e. Seal: Mechanical.

   f. Orientation: Mounted horizontally or vertically.

   OR

Pumps:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, frame-mounted, separately coupled, single-stage, overhung-impeller, centrifugal pump. Include back-pullout design, as directed.

   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.

   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.

   d. Shaft and Shaft Sleeve: Stainless-steel or steel, as directed, shaft, with copper-alloy shaft sleeve and deflector.

   e. Seal: Mechanical.

   f. Bearing: Grease-lubricated or pre-greased, permanently shielded ball type.

   g. Coupling: Flexible, with metal guard.

OR

Pumps:
   a. Type: In line, single stage as defined in HI 1.1-1.2 and HI 1.3 for in-line, single-stage, close-coupled, overhung-impeller, centrifugal pump.

   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.

   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.
d. Shaft and Shaft Sleeve: Stainless-steel or steel, as directed, shaft, with copper-alloy shaft sleeve.
e. Seal: Mechanical.
f. Bearing: Grease-lubricated or pre-greased, permanently shielded ball type.

**OR**

Pumps:

a. Type: Vertical, multistage as defined in HI 1.1-1.2 and HI 1.3 for in-line, multistage, separately coupled, overhung-impeller, centrifugal pump.
b. Casing: Cast-iron or steel base and stainless-steel chamber.
c. Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.
d. Shaft: Stainless steel.
e. Seal: Mechanical.

**OR**

Pumps:

a. Type: Vertical, can, as defined in HI 2.1-2.2 and HI 2.3 for in-line, barrel or can, lineshaft, vertical pump.
b. Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.
c. Bowls: Epoxy-coated cast iron OR Cast iron, as directed.
d. Shaft: Stainless steel.
e. Seals: Mechanical and stuffing-box types.

3. Motors: Single speed, with grease-lubricated or pre-greased, permanently shielded, ball-type bearings. Select motors that will not overload through full range of pump performance curve.

4. Piping: Copper tube and copper fittings OR Stainless-steel pipe and fittings OR Stainless-steel pipe and fitting headers and copper tube and copper fittings between headers and pump OR Galvanized-steel pipe and cast-iron fittings, as directed.

5. Valves:

a. Shutoff Valves NPS 2 (DN 50) and smaller: Gate valve or two-piece, full-port ball valve, in each pump's suction and discharge piping.
b. Shutoff Valves NPS 2-1/2 (DN 65) and Larger: Gate valve or lug-type butterfly valve, in each pump's suction and discharge piping and in inlet and outlet headers, as directed.
c. Check Valves NPS 2 (DN 50) and smaller: Silent or swing type in each pump's discharge piping.
d. Check Valves NPS 2-1/2 (DN 65) and Larger: Silent type in each pump's discharge piping.
e. Control Valves: Adjustable, automatic, pilot-operated or direct-acting, pressure-reducing type in each pump's discharge piping.
f. Control Valves: Combination adjustable, automatic, pilot-operated or direct-acting pressure-reducing-and-check type in each pump's discharge piping.
g. Thermal-Relief Valve: Temperature-and-pressure relief type in pump's discharge header piping.

6. Dielectric Fittings: With insulating material isolating joined dissimilar metals.

7. Control Panel: Factory installed and connected as an integral part of booster pump; automatic for multiple-pump, constant-speed operation, with load control and protection functions.

a. Control Logic: Electromechanical system with switches, relays OR Solid-state system with transducers, programmable microprocessor, as directed, and other devices in the controller.
   1) Control Voltage: 24 OR 120, as directed,-V ac, with integral control-power transformer.
c. Motor Controller: NEMA ICS 2, solid-state, reduced-voltage type.
   1) Control Voltage: 24 OR 120, as directed,-V ac, with integral control-power transformer.
d. Enclosure: NEMA 250, Type 1 OR Type 3R OR Type 4 OR Type 12, as directed.
e. Motor Overload Protection: Overload relay in each phase.
f. Starting Devices: Hand-off-automatic selector switch for each pump in cover of control panel, plus pilot device for automatic control.
   1) Duplex, Automatic, Alternating Starter: Switches lead pump to lag main pump and to two-pump operation.
   2) Triplex, Sequence (Lead-Lag-Lag) Starter: Switches lead pump to one lag main pump and to three-pump operation.

g. Pump Operation and Sequencing: Current- or pressure-sensing method.
   1) Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.

h. Instrumentation: Suction and discharge pressure gages.

i. Lights: Running light for each pump.

j. Alarm Signal Device: Sounds alarm when backup pumps are operating.
   1) Time Delay: Controls alarm operation; adjustable from 1 to 300 seconds, with automatic OR manual, as directed, reset.

k. Thermal-bleed cutoff.

l. Low-suction-pressure OR Water-storage-tank, low-level, as directed, cutout.

m. High-suction-pressure cutout.

n. Low-discharge-pressure cutout.

o. High-discharge-pressure cutout.

p. Building Automation System Interface: Provide auxiliary contacts for interface to BACnet OR LonWorks, as directed, building automation system. Building automation systems are specified in Division 23 Section "Instrumentation And Control For Hvac". Include the following:
   1) On-off status of each pump.
   2) Alarm status.

C. Simplex, Variable-Speed Booster Pumps

1. Description: Factory-assembled and -tested, fluid-handling system for domestic water, with pump, piping, valves, specialties, and controls, and mounted on base.

2. Pump:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, close-coupled, single-stage, overhung-impeller, centrifugal pump.
   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.
   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.
   d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve and deflector.
   e. Seal: Mechanical.
   f. Orientation: Mounted horizontally or vertically.

3. Motor: Single speed, with grease-lubricated or pre-greased, permanently shielded, ball-type bearings, and directly mounted to pump casing. Select motor that will not overload through full range of pump performance curve.

4. Piping: Copper tube and copper fittings OR Stainless-steel pipe and fittings OR Stainless-steel pipe and fitting headers and copper tube and copper fittings between headers and pump OR Galvanized-steel pipe and cast-iron fittings, as directed.

5. Valves:
   a. Shutoff Valves NPS 2 (DN 50) and Smaller: Gate valve or two-piece, full-port ball valve, in pump suction and discharge piping.
   b. Shutoff Valves NPS 2-1/2 (DN 65) and Larger: Gate valve or lug-type butterfly valve, in pump suction and discharge piping.
   c. Check Valve NPS 2 (DN 50) and Smaller: Silent or swing type in pump discharge piping.
   d. Check Valve NPS 2-1/2 (DN 65) and Larger: Silent type in pump discharge piping.
   e. Thermal-Relief Valve: Temperature-and-pressure relief type in pump discharge piping.

6. Dielectric Fittings: With insulating material isolating joined dissimilar metals.

7. Hydropneumatic Tank: Precharged, ASME-construction, as directed, diaphragm or bladder tank made of materials complying with NSF 61.

8. Control Panel: Factory installed and connected as an integral part of booster pump; automatic for single-pump, variable-speed operation, with load control and protection functions.
a. Control Logic: Solid-state system with transducers, programmable microprocessor, VFC, and other devices in the controller.

b. Motor Controller: NEMA ICS 2, variable-frequency, solid-state type.
   1) Control Voltage: 24 OR 120, as directed, V ac, with integral control-power transformer.

c. Enclosure: NEMA 250, Type 1 OR Type 3R OR Type 4 OR Type 12, as directed.

d. Motor Overload Protection: Overload relay in each phase.

e. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.

   1) Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.

g. VFC: Voltage-source, pulse-width, modulating-frequency converter; installed in control panel.

h. Manual Bypass: Magnetic contactor arranged to transfer to constant-speed operation upon VFC failure.

i. Instrumentation: Suction and discharge pressure gages.

j. Light: Running light for pump.

k. Thermal-bleed cutoff.

l. Low-suction-pressure OR Water-storage-tank, low-level, as directed, cutout.

m. High-suction-pressure cutout.

n. Low-discharge-pressure cutout.

o. High-discharge-pressure cutout.

p. Building Automation System Interface: Provide auxiliary contacts for interface to BACnet OR LonWorks, as directed, building automation system. Building automation systems are specified in Division 23 Section "Instrumentation And Control For Hvac". Include the following:
   1) On-off status of each pump.
   2) Alarm status.

D. Multiplex, Variable-Speed Booster Pumps

1. Description: Factory-assembled and-tested, fluid-handling system for domestic water, with pumps, piping, valves, specialties, and controls, and mounted on base.

2. Pumps:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, close-coupled, single-stage, overhung-impeller, centrifugal pump.
   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.
   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.
   d. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve and deflector.
   e. Seal: Mechanical.
   f. Orientation: Mounted horizontally or vertically.

3. Pumps:
   a. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, frame-mounted, separately coupled, single-stage, overhung-impeller, centrifugal pump. Include back-pullout design, as directed.
   b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.
   c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and dynamically balanced and keyed to shaft.
   d. Shaft and Shaft Sleeve: Stainless-steel or steel, as directed, shaft, with copper-alloy shaft sleeve and deflector.
   e. Seal: Mechanical.
   f. Bearing: Grease-lubricated or pre-greased, permanently shielded ball type.
   g. Coupling: Flexible, with metal guard.

4. Pumps:
   a. Type: In line, single stage as defined in HI 1.1-1.2 and HI 1.3 for in-line, single-stage, close-coupled, overhung-impeller, centrifugal pump.
b. Casing: Radially split; bronze OR cast iron OR stainless steel, as directed.
c. Impeller: Closed, ASTM B 584 cast bronze OR stainless steel, as directed; statically and
dynamically balanced and keyed to shaft.
d. Shaft and Shaft Sleeve: Stainless-steel or steel, as directed, shaft, with copper-alloy shaft
e. Seal: Mechanical.
f. Bearing: Grease-lubricated or pre-greased, permanently shielded ball type.

5. Pumps:
   a. Type: Vertical, multistage as defined in HI 1.1-1.2 and HI 1.3 for in-line, multistage,
      separately coupled, overhung-impeller, centrifugal pump.
   b. Casing: Cast-iron or steel base and stainless-steel chamber.
   c. Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.
   d. Shaft: Stainless steel.
   e. Seal: Mechanical.

6. Pumps:
   a. Type: Vertical, can, as defined in HI 2.1-2.2 and HI 2.3 for in-line, barrel or can, lineshaft,
      vertical pump.
   b. Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.
   c. Bowls: Epoxy-coated cast iron OR cast iron, as directed.
   d. Shaft: Stainless steel.
   e. Seals: Mechanical and stuffing-box types.

7. Motors: Single speed, with grease-lubricated or pre-greased, permanently shielded, ball-type
   bearings. Select motors that will not overload through full range of pump performance curve.

8. Piping: Copper tube and copper fittings OR Stainless-steel pipe and fittings OR Stainless-steel
   pipe and fitting headers and copper tube and copper fittings between headers and pump OR
   Galvanized-steel pipe and cast-iron fittings, as directed.

9. Valves:
   a. Shutoff Valves NPS 2 (DN 50) and Smaller: Gate valve or two-piece, full-port ball valve, in
      each pump's suction and discharge piping.
   b. Shutoff Valves NPS 2-1/2 (DN 65) and Larger: Gate valve or lug-type butterfly valve, in
      each pump's suction and discharge piping and in inlet and outlet headers, as directed.
   c. Check Valves NPS 2 (DN 50) and Smaller: Silent or swing type in each pump's discharge
      piping.
   d. Check Valves NPS 2-1/2 (DN 65) and Larger: Silent type in each pump's discharge piping.
   e. Thermal-Relief Valve: Temperature-and-pressure relief type in pump's discharge header
      piping.

10. Dielectric Fittings: With insulating material isolating joined dissimilar metals.
11. Control Panel: Factory installed and connected as an integral part of booster pump; automatic for
    multiple-pump, variable-speed operation, with load control and protection functions.
    a. Control Logic: Solid-state system with transducers, programmable microprocessor, VFC,
       and other devices in controller. Install VFC for pump motors larger than 25 hp in separate
       panel; same type as motor control panel enclosure.
    b. Motor Controller: NEMA ICS 2, variable-frequency, solid-state type.
       1) Control Voltage: 24 OR 120, as directed, -V ac, with integral control-power
          transformer.
    c. Enclosure: NEMA 250, Type 1 OR Type 3R OR Type 4 OR Type 12, as directed.
    d. Motor Overload Protection: Overload relay in each phase.
    e. Starting Devices: Hand-off-automatic selector switch for each pump in cover of control
       panel, plus pilot device for automatic control.
       1) Duplex, Automatic, Alternating Starter: Switches lead pump to lag main pump and
to two-pump operation.
       2) Triplex, Sequence (Lead-Lag-Lag) Starter: Switches lead pump to one lag main
       pump and to three-pump operation.
    f. Pump Operation and Sequencing: Pressure-sensing method or flow-sensing method OR
       Pressure-sensing method for lead pump and flow-sensing method for lag pumps, as
directed.
1) Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.

g. VFC: Voltage-source, pulse-width, modulating-frequency converter for each OR lead, as directed, pump.

h. Manual Bypass: Magnetic contactor arranged to transfer to constant-speed operation upon VFC failure.

i. Instrumentation: Suction and discharge pressure gages.

j. Lights: Running light for each pump.

k. Alarm Signal Device: Sounds alarm when backup pumps are operating.

1) Time Delay: Controls alarm operation; adjustable from 1 to 300 seconds, with automatic OR manual, as directed, reset.

l. Thermal-bleed cutoff.

m. Low-suction-pressure OR Water-storage-tank, low-level, as directed, cutout.

n. High-suction-pressure cutout.

o. Low-discharge-pressure cutout.

p. High-discharge-pressure cutout.

q. Building Automation System Interface: Provide auxiliary contacts for interface to BACnet OR LonWorks, as directed, building automation system. Building automation systems are specified in Division 23 Section "Instrumentation And Control For Hvac". Include the following:

1) On-off status of each pump.
2) Alarm status.

E. Motors

1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors.

a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in NFPA 70.

1.3 EXECUTION

A. Examination

1. Examine roughing-in for booster pumps to verify actual locations of piping connections before booster-pump installation.

B. Installation

1. Equipment Mounting: Install booster pumps on concrete base using elastomeric pads OR elastomeric mounts OR restrained spring isolators, as directed. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-place Concrete", as directed.

a. Minimum Deflection: 1/4 inch (6 mm) OR 1 inch (25 mm), as directed.

b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.

c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

e. Install anchor bolts to elevations required for proper attachment to supported equipment.

2. Equipment Mounting: Install booster pumps using elastomeric pads OR elastomeric mounts OR restrained spring isolators, as directed. Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment".

a. Minimum Deflection: 1/4 inch (6 mm) OR 1 inch (25 mm), as directed.

3. Support connected domestic-water piping so weight of piping is not supported by booster pumps.
C. Connections
1. Comply with requirements for piping specified in Division 22 Section “Domestic Water Piping”. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Connect domestic-water piping to booster pumps. Install suction and discharge pipe equal to or greater than size of system suction and discharge headers OR piping, as directed.
   a. Install shutoff valves on piping connections to booster-pump suction and discharge headers OR piping, as directed. Install ball, butterfly, or gate valves same size as suction and discharge headers OR piping, as directed. Comply with requirements for general-duty valves specified in Division 22 Section “General-duty Valves For Plumbing Piping”.
   b. Install union, flanged, or grooved-joint connections on suction and discharge headers OR piping, as directed, at connection to domestic-water piping. Comply with requirements for unions and flanges specified in Division 22 Section “Domestic Water Piping”.
   c. Install valved bypass, same size as and between piping, at connections to booster-pump suction and discharge headers OR piping, as directed. Comply with requirements for domestic-water piping specified in Division 22 Section “Domestic Water Piping”.
   d. Install flexible connectors, same size as piping, on piping connections to booster-pump suction and discharge headers OR piping, as directed. Comply with requirements for flexible connectors specified in Division 22 Section “Domestic Water Piping”.
   e. Install piping adjacent to booster pumps to allow service and maintenance.

D. Identification
1. Identify system components. Comply with requirements for identification specified in Division 22 Section “Identification For Plumbing Piping And Equipment”.

E. Field Quality Control
1. Perform tests and inspections.
2. Tests and Inspections:
   a. Perform visual and mechanical inspection.
   b. Leak Test: After installation, charge booster pump and test for leaks. Repair leaks and retest until no leaks exist.
   c. Operational Test: After electrical circuitry has been energized, start booster pumps to confirm proper motor rotation and booster-pump operation.
   d. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Pumps and controls will be considered defective if they do not pass tests and inspections.
4. Prepare test and inspection reports.

F. Startup Service
1. Perform startup service.
   a. Complete installation and startup checks according to manufacturer's written instructions.

G. Adjusting
1. Adjust booster pumps to function smoothly, and lubricate as recommended by manufacturer.
2. Adjust pressure set points.
3. Occupancy Adjustments: When requested within 12 months of date of Final Completion, provide on-site assistance in adjusting booster pump to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

H. Demonstration
1. Train Owner's maintenance personnel to adjust, operate, and maintain booster pumps.

END OF SECTION 22 11 23 13a
SECTION 22 11 23 23 - WATER SUPPLY WELLS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for water supply wells. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Cable-tool, Rotary drilled, Reverse-rotary drilled, and Driven water supply wells.

C. Definitions
2. PA: Polyamide (nylon) plastic.
3. PE: Polyethylene plastic.
4. PP: Polypropylene plastic.
5. PVC: Polyvinyl chloride plastic.

D. Submittals
1. Product Data: Submit certified performance curves and rated capacities of selected well pumps and furnished specialties for each type and size of well pump indicated.
2. Shop Drawings: Show layout and connections for well pumps.
3. Field quality-control reports.
4. Operation and maintenance data.

E. Quality Assurance
1. Well Driller Qualifications: An experienced water supply well driller licensed in the jurisdiction where Project is located.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
3. Comply with AWWA A100 for water supply wells.

F. Project Conditions
1. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
   a. Notify the Owner no fewer than seven days in advance of proposed interruption of water service.
   b. Do not proceed with interruption of water service without the Owner’s written permission.
2. Well Drilling Water: Provide temporary water and piping for drilling purposes. Provide necessary piping for water supply.

1.2 PRODUCTS

A. Well Casings
1. Steel Casing: AWWA C200, single ply, steel pipe with threaded ends and threaded couplings for threaded joints.
2. ABS Casing: ASTM F 480, ABS, Schedule 40 OR 80, as directed, bell-and-spigot pipe and couplings for solvent-cemented joints.

3. PVC Casing: ASTM F 480 and NSF 14, as directed, PVC, Schedule 40 OR 80, as directed, bell-and-spigot pipe and couplings for solvent-cemented joints. Include NSF listing mark "NSF wc," as directed.

4. Pitless Adapter: Fitting, of shape required to fit onto casing, with waterproof seals.

5. Pitless Unit: Factory-assembled equipment that includes pitless adapter.

6. Well Seals: Casing cap, with holes for piping and cables, that fits into top of casing and is removable, waterproof, and vermin proof.

B. Grout
1. Cement: ASTM C 150, Type II.
2. Aggregates: ASTM C 33, fine and coarse grades.

C. Water Well Screens
1. Screen Material: Fabricated of ASTM A 666, Type 304 stainless steel, welded; with continuous-slot, V-shaped openings that widen inwardly OR tube; with slotted or perforated surface and designed for well-screen applications, as directed.
   a. Screen Couplings: Butt-type, stainless-steel coupling rings.
   b. Screen Fittings: Screen, with necessary fittings, closes bottom and makes tight seal between top of screen and well casing.
   c. Maximum Entering Velocity: 0.1 fps (0.03 m/s).

D. Pack Materials
1. Coarse, uniformly graded filter sand, maximum 1/8 inch (3 mm) in diameter.
2. Fine gravel, maximum 1/4 inch (6 mm) in diameter.

E. Jet-Type Well Pumps
1. Description: Shallow OR Deep, as directed, well-designed, jet well pump; self-priming; centrifugal pump capable of continuous operation; with the following features:
   a. Housing: Cast iron.
   b. Impeller: Single stage OR Multistage, as directed, centrifugal; fabricated of corrosion-resistant materials.
   c. Seals: Mechanical.
   d. Shaft: Stainless steel.
   e. Motor: Manufacturer's standard, NEMA MG 1 motor, panel, and accessories.
   f. Motor Controls: Electronic; variable speed.
   g. Check valve, ejector, and pressure-control valve.
2. Pump Accessories:
   a. Compression Tanks: Comply with requirements in Division 22 Section "Facility Indoor Potable-water Storage Tanks" OR Precharged butyl rubber diaphragm, steel shell, fused polymeric lining, and 100-psig (690-kPa) working pressure, as directed.
   b. Pressure Switches: For pump control; for installation in piping.
   d. Water Piping: ASTM D 2239, SIDR Numbers 5.3, 7, or 9 PE pipe; made with PE compound number required to give pressure rating not less than 160 psig (1100 kPa) OR 200 psig (1380 kPa), as directed. Include NSF listing mark "NSF pw."
      1) Fittings for PE Pipe: ASTM D 2609, made of PA, PP, or PVC with serrated, male insert ends matching inside of pipe. Include bands or crimp rings.

F. Line-Shaft Well Pumps
1. Description: Line-shaft, water OR oil, as directed, lubricated, vertical-turbine well pump complying with HI 2.1-2.2 and HI 2.3; with the following features:
   a. Impeller Material: Stainless steel OR Carbon steel OR Bronze, as directed.
b. Motor: Full-voltage starting, vertical hollow- or solid-shaft, squirrel-cage induction type complying with ANSI C50.10.
c. Pump Base: Cast iron or fabricated steel.
d. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel threaded couplings.

G. Submersible Well Pumps
1. Description: Submersible, vertical-turbine well pump complying with HI 2.1-2.2 and HI 2.3; with the following features:
   a. Impeller Material: Stainless steel OR Silicon bronze, as directed.
   b. Motor: Capable of continuous operation under water, with protected submersible power cable.
   d. Discharge Piping: ASTM D 2239, SIDR Numbers 5.3, 7, or 9 PE pipe; made with PE compound number required to give pressure rating not less than 160 psig (1100 kPa) OR 200 psig (1380 kPa), as directed. Include NSF listing mark “NSF pw.”
1) Insert Fittings for PE Pipe: ASTM D 2609, made of PA, PP, or PVC with serrated, male insert ends matching inside of pipe. Include bands or crimp rings.

H. Motors
1. General requirements for motors are specified in Division 22 Section "Common Motor Requirements For Plumbing Equipment".
   a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   b. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 22.

1.3 EXECUTION

A. Preparation
1. Pilot-Hole Data: Review pilot-hole test analysis furnished by the Owner.
2. Neighborhood Well Data: Review operating and test analyses.

B. Installation
1. Construct well using cable-tool OR rotary drilling OR reverse-rotary drilling OR driven, as directed, method.
2. Take samples of substrata formation at 10-foot (3-m) intervals and at changes in formation throughout entire depth of each water supply well. Carefully preserve samples on-site in glass jars properly labeled for identification.
3. If selecting rotary drilled or reverse-rotary drilled method, excavate for mud pit or provide aboveground structure, acceptable to authorities having jurisdiction, to allow settlement of cuttings and circulation of drill fluids back to well without discharging to on-site waterways.
4. Enlarge pilot hole and install permanent casing, screen, and grout. Install first section of casing with hardened steel driving shoe of an OD slightly larger than casing couplings if threaded couplings are used.
5. Set casing and liners round, plumb, and true to line.
6. Join casing pipe as follows:
   a. Ream ends of pipe and remove burrs.
   b. Remove scale, slag, dirt, and debris from inside and outside casing before installation.
   c. Cut bevel in ends of steel casing pipe and make threaded joints.
   d. Clean and make solvent-cemented joints for ABS and PVC casings.
7. If rotary drilled or reverse-rotary drilled well, mix grout in proportions of 1 cu. ft. (0.03 cu. m) or a 94-lb (42.6-kg) sack of cement with 5 to 6 gal. (19 to 23 L) of water. Bentonite clay may be added in amounts of 3 to 5 lb/cu. ft. (1.4 to 2.3 kg/0.03 cu. m) for a 94-lb (42.6-kg) sack of cement. If bentonite clay is added, water may be increased to 6.5 gal./cu. ft. (25 L/0.03 cu. m) of cement.
8. If rotary drilled or reverse-rotary drilled well, place grout continuously, from bottom to top surface, to ensure filling of annular space in one operation. Do not perform other operations in well within 72 hours after grouting of casing. When quick-setting cement is used, this period may be reduced to 24 hours.

9. Provide permanent casing with temporary well cap. Install with top of casing 36 inches (910 mm) above finished grade, as directed.

10. Develop wells to maximum yield per foot (meter) of drawdown.
   a. Extract maximum practical quantity of sand, drill fluid, and other fine materials from water-bearing formation.
   b. Avoid settlement and disturbance of strata above water-bearing formation.
   c. Do not disturb sealing around well casings.
   d. Continue developing wells until water contains no more than 2 ppm of sand by weight when pumped at maximum testing rate.

11. Install jet well pumps with ejector in or attached to pump housing. Place check valve on suction line to prevent drainage of compression tank.

12. Install jet well pumps and pressure and suction lines. Install ejector where pressure and suction lines connect above well screen. Install check valve in suction line, or install foot valve below ejector, to prevent drainage of compression tank.

13. Install line-shaft OR submersible, as directed, well pumps according to HI 2.1-2.4 and provide access for periodic maintenance.
   a. Before lowering permanent pump into well, lower a dummy pump that is slightly longer and wider than permanent pump to determine that permanent pump can be installed. Correct alignment problems.
   b. Before lowering permanent pump into well, start pump to verify correct rotation.
   c. Securely tighten discharge piping joints.
   d. Locate line-shaft well pump near well bottom; locate motor above grade. Install driver plate to correctly align motor and pump.
   e. Connect motor to submersible pump and locate near well bottom.
      1) Connect power cable while connection points are dry and undamaged.
      2) Do not damage power cable during installation; use cable clamps that do not have sharp edges.
      3) Install water-sealed surface plate that will support pump and piping.

C. Connections
1. Piping installation requirements are specified in Division 22 Section "Facility Water Distribution Piping". Drawings indicate general arrangement of piping, fittings, and specialties.
   a. Connect piping between well pump and water piping.
   b. Connect water distribution system in trench to well pipe at pitless adapter OR unit, as directed.
   c. Connect building water distribution to well pipe inside well house.
2. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
3. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

D. Well Abandonment
1. Comply with AWWA A100 when abandoning water supply wells. Fill and seal holes and casings and restore ground surface to finished grade.
   OR
   Follow well-abandonment procedures of authorities having jurisdiction. Restore ground surface to finished grade.

E. Field Quality Control
1. Plumbness and Alignment Testing: Comply with AWWA A100.
2. Furnish samples of water-bearing formation to testing laboratory and well-screen manufacturer for mechanical sieve analysis.
3. Prepare reports on static level of ground water, level of water for various pumping rates, and depth to water-bearing strata.

4. Performance Testing: Conduct final pumping tests after wells have been constructed, cleaned, and tested for plumbness and alignment.
   a. Provide discharge piping to conduct water to locations where disposal will not create a nuisance or endanger adjacent property. Comply with requirements of authorities having jurisdiction.
   b. Measure elevation to water level in wells.
   c. Perform two bailer or air-ejection tests to determine expected yield. Test at depths with sufficient quantity of water to satisfy desired yields.
   d. Test Pump: Variable capacity test pump with capacity equal to maximum expected yields at pressure equal to drawdown in wells, plus losses in pump columns and discharge pipes.
   e. Start and adjust test pumps and equipment to required pumping rates.
   f. Record readings of water levels in wells and pumping rates at 30-minute maximum intervals throughout 24-hour minimum period.
   g. Record maximum yields when drawdown is 60 inches (1500 mm) above top of suction screens after designated times.
   h. Operate pumping units continuously for eight hours after maximum drawdown is reached.
   i. Record returning water levels in wells and plot curves of well recovery rates.
   j. Remove sand, stones, and other foreign materials that may become deposited in wells after completing final tests.

5. Water Analysis Testing:
   a. Engage a qualified testing agency to make bacteriological, physical, and chemical analyses of water from each finished well and report the results. Make analyses according to requirements of authorities having jurisdiction.

   OR

   Analyze water sample from each finished well for bacteriological, physical, and chemical quality and report the results. Make analyses according to requirements of authorities having jurisdiction.

F. Cleaning
1. Disinfect water supply wells according to AWWA A100 and AWWA C654 before testing well pumps.

   OR

   Follow water supply well disinfection procedures required by authorities having jurisdiction before testing well pumps.

G. Protection
1. Water Quality Protection: Prevent well contamination, including undesirable physical and chemical characteristics.
2. Ensure that mud pit will not leak or overflow into streams or wetlands. When well is accepted, remove mud and solids in mud pit from Project site and restore site to finished grade.
3. Provide casings, seals, sterilizing agents, and other materials to eliminate contamination; shut off contaminated water.
4. Exercise care to prevent breakdown or collapse of strata overlaying that from which water is to be drawn.
5. Protect water supply wells to prevent tampering and introducing foreign matter. Retain temporary well cap until installation is complete.
SECTION 22 11 23 23a - HYDRONIC PUMPS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for hydronic pumps. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   - Close-coupled, in-line centrifugal pumps.
   - Close-coupled, end-suction centrifugal pumps.
   - Separately coupled, horizontal, in-line centrifugal pumps.
   - Separately coupled, vertical, in-line centrifugal pumps.
   - Separately coupled, base-mounted, end-suction centrifugal pumps.
   - Separately coupled, base-mounted, double-suction centrifugal pumps.
   - Separately coupled, vertical-mounted, double-suction centrifugal pumps.
   - Separately coupled, vertical-mounted, turbine centrifugal pumps.
   - Automatic condensate pump units.

C. Definitions
2. EPT: Ethylene propylene terpolymer.

D. Submittals
1. Product Data: Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump’s operating point on curves.
2. Shop Drawings: Show pump layout and connections. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
   - Wiring Diagrams: Power, signal, and control wiring.
3. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

E. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
2. UL Compliance: Comply with UL 778 for motor-operated water pumps.

F. Delivery, Storage, And Handling
1. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
2. Store pumps in dry location.
3. Retain protective covers for flanges and protective coatings during storage.
4. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
5. Comply with pump manufacturer's written rigging instructions.

1.2 PRODUCTS

A. Close-Coupled, In-Line Centrifugal Pumps
1. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, inline pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa) OR 250-psig (1720-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C) OR 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with replaceable bronze wear rings, as directed, threaded gage tappings at inlet and outlet, and threaded companion-flange OR union end, as directed, connections.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
   c. Pump Shaft: Steel, with copper-alloy shaft sleeve OR Stainless steel, as directed.
   d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket. Include water slinger on shaft between motor and seal.
   e. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   f. Pump Bearings: Permanently lubricated ball bearings OR Oil lubricated; bronze-journal or thrust type, as directed.

3. Motor: Single speed, with permanently lubricated OR grease-lubricated, as directed, ball bearings, unless otherwise indicated; and rigidly mounted to pump casing. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

B. Close-Coupled, End-Suction Centrifugal Pumps
1. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa), as directed, minimum working pressure and a continuous water temperature of 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with replaceable bronze wear rings, as directed, drain plug at bottom and air vent at top of volute, threaded gage tappings at inlet and outlet, and threaded companion-flange OR flanged, as directed, connections.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
   c. Pump Shaft: Steel, with copper-alloy shaft sleeve OR Stainless steel, as directed.
   d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket. Include water slinger on shaft between motor and seal.
   e. Pump Bearings: Permanently lubricated ball bearings OR Oil lubricated; bronze-journal or thrust type, as directed.
   f. Motor: Single speed, with permanently lubricated OR grease-lubricated, as directed, ball bearings, unless otherwise indicated; and rigidly mounted to pump casing with integral pump support. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

C. Separately Coupled, Horizontal, In-Line Centrifugal Pumps
1. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa), as directed, minimum working pressure and a continuous water temperature of 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet, and threaded companion-flange OR union end, as directed, connections.
b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. Trim impeller to match specified performance.

c. Pump Shaft: Steel, with copper-alloy shaft sleeve OR Stainless steel, as directed.

d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket. Include water slinger on shaft between motor and seal.

e. Pump Bearings: Permanently lubricated ball bearings OR Oil lubricated; bronze-journal or thrust type, as directed.

3. Shaft Coupling: Molded rubber insert with interlocking spider OR Interlocking frame with interconnecting springs, as directed, capable of absorbing vibration.

4. Motor: Single speed, with permanently lubricated ball OR oil-lubricated sleeve, as directed, bearings, unless otherwise indicated; and resiliently OR rigidly, as directed, mounted to pump casing. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

D. Separately Coupled, Vertical, In-Line Centrifugal Pumps

1. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted vertically. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa) OR 250-psig (1720-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C) OR 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with replaceable bronze wear rings, as directed, threaded gage tappings at inlet and outlet, and threaded companion-flange OR union end, as directed, connections.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
   c. Pump Shaft: Steel, with copper-alloy shaft sleeve OR Stainless steel, as directed.
   d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket. Include water slinger on shaft between motor and seal.
   e. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   f. Pump Bearings: Permanently lubricated ball bearings OR Oil lubricated; bronze-journal or thrust type, as directed.

4. Motor: Single speed, with permanently lubricated OR grease-lubricated, as directed, ball bearings, unless otherwise indicated; rigidly mounted to pump casing with lifting eye and supporting lugs in motor enclosure. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

E. Separately Coupled, Base-Mounted, End-Suction Centrifugal Pumps

1. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa) OR 250-psig (1720-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C) OR 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with replaceable bronze wear rings, as directed, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and threaded companion-flange OR flanged, connections. Provide integral mount on volute to support the casing, and attached piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft, as directed.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
   c. Pump Shaft: Steel, with copper-alloy shaft sleeve OR Stainless steel, as directed.
d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket.
e. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
f. Pump Bearings: Grease-lubricated ball bearings contained in cast-iron housing with grease fittings.

3. Shaft Coupling: Molded rubber insert and interlocking spider capable of absorbing vibration. Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor OR EPDM coupling sleeve for variable-speed applications, as directed.

4. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

5. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

6. Motor: Single speed, with permanently lubricated OR grease-lubricated, as directed, ball bearings, unless otherwise indicated; secured to mounting frame, with adjustable alignment. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

F. Separately Coupled, Base-Mounted, Double-Suction Centrifugal Pumps
1. Description: Factory-assembled and -tested, centrifugal, impeller-between-bearings, separately coupled, double-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa) OR 250-psig (1720-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C) OR 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially OR Horizontally, as directed, split, cast iron, with replaceable bronze wear rings, as directed, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and ASME B16.1, Class 125 OR 250, as directed, flanges. Casing supports shall allow removal and replacement of impeller without disconnecting piping, as directed.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. Trim impeller to match specified performance.
   d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket.
   e. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   f. Pump Bearings: Grease-lubricated ball bearings contained in cast-iron housing with grease fittings.

3. Shaft Coupling: Molded rubber insert and interlocking spider capable of absorbing vibration. Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor OR EPDM coupling sleeve for variable-speed applications, as directed.

4. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

5. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

6. Motor: Single speed, with grease-lubricated ball bearings, unless otherwise indicated; secured to mounting frame, with adjustable alignment. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

G. Separately Coupled, Vertical-Mounted, Double-Suction Centrifugal Pumps
1. Description: Factory-assembled and -tested, centrifugal, impeller-between-bearings, separately coupled, double-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted vertically. Rate pump for 125-psig (860-kPa) OR 175-psig
(1204-kPa) OR 250-psig (1720-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C) OR 225 deg F (107 deg C) OR 250 deg F (121 deg C), as directed.

2. Pump Construction:
   a. Casing: Radially split, cast iron, with replaceable bronze wear rings, as directed, threaded gage tappings at inlet and outlet, drain plug at bottom of volute, mounting support, and ASME B16.1, Class 125 OR 250, as directed, flanges.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. Trim impeller to match specified performance.
   d. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N OR EPT, as directed, bellows and gasket.
   e. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
   f. Pump Bearings: Grease-lubricated ball bearings contained in cast-iron housing with grease fittings.

3. Shaft Coupling: Molded rubber insert and interlocking spider capable of absorbing vibration.

4. Motor: Single speed, with grease-lubricated ball bearings, unless otherwise indicated; secured to casing. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

H. Separately Coupled, Vertical-Mounted, Turbine Centrifugal Pumps

1. Description: Factory-assembled and -tested, single-stage OR multistage, as directed, centrifugal, impeller-between-bearings, end-suction pump as defined in HI 2.1-2.2 and HI 2.3; designed for installation with pump and motor shafts mounted vertically and projecting into a sump. Rate pump for 125-psig (860-kPa) OR 175-psig (1204-kPa), as directed, minimum working pressure and a continuous water temperature of 200 deg F (93 deg C).

2. Pump Construction:
   a. Pump Bowl: Cast iron, with replaceable bronze wear ring, as directed, cone OR basket, as directed, strainer, and suction bell. Water passages of intermediate bowls shall be coated with porcelain enamel, as directed.
   b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. Trim impeller to match specified performance.
   c. Pump Shaft: Carbon OR Stainless, as directed, steel sized per AWWA E-101.
   d. Pump Bearings: Water-lubricated bronze and rubber sleeve bearings contained in cast-iron housing.
   e. Pump Column: ASTM A 53/A 53M, Grade B steel pipe.
   f. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Seal shall be replaceable without removing the motor or disturbing the piping.
   g. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.

4. Discharge Head: ASME B16.1, Class 125 OR 250, as directed, discharge flange with threaded gage tapping. Top of discharge head shall have a registered fit to accurately locate the driver.

5. Drive Ratchet: Nonreversing ratchet.

6. Hollow Shaft Motor: Single speed, with grease-lubricated ball bearings, unless otherwise indicated; secured to discharge head. Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

I. Automatic Condensate Pump Units

1. Description: Packaged units with corrosion-resistant pump, plastic tank with cover, and automatic controls. Include factory- or field-installed check valve and a 72-inch- (1800-mm-) minimum, electrical power cord with plug.

J. Pump Specialty Fittings

1. Suction Diffuser: Angle pattern, 175-psig (1204-kPa) OR 300-psig (2060-kPa), as directed, pressure rating, cast OR ductile, as directed, iron body and end cap, pump-inlet fitting; with
bronze startup and bronze or stainless-steel permanent strainers; bronze or stainless-steel straightening vanes; drain plug; and factory-fabricated support.

2. Triple-Duty Valve: Angle or straight pattern, 175-psig (1204-kPa) OR 300-psig (2060-kPa), as directed, pressure rating, cast OR ductile, as directed, iron body, pump-discharge fitting; with drain plug and bronze-fitted shutoff, balancing, and check valve features. Brass gage ports with integral check valve, and orifice for flow measurement.

1.3 EXECUTION

A. Concrete Bases
1. Install concrete bases of dimensions indicated for pumps and controllers. Refer to Division 23 Section "Common Work Results For Hvac"
   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
   b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   d. Install anchor bolts to elevations required for proper attachment to supported equipment.
2. Cast-in-place concrete materials and placement requirements are specified in Division 31.

B. Pump Installation
1. Comply with HI 1.4 OR HI 2.4, as directed.
2. Install pumps with access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
3. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
4. Install continuous-thread hanger rods and elastomeric hangers OR spring hangers OR spring hangers with vertical-limit stop, as directed, of sufficient size to support pump weight. Vibration isolation devices are specified in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment". Fabricate brackets or supports as required. Hanger and support materials are specified in Division 23 Section "Hangers And Supports For Hvac Piping And Equipment".
5. Suspend vertically mounted, in-line centrifugal pumps independent of piping. Install pumps with motor and pump shafts vertical. Use continuous-thread hanger rods and elastomeric hangers OR spring hangers OR spring hangers with vertical-limit stop, as directed, of sufficient size to support pump weight. Vibration isolation devices are specified in Division 21 Section(s) "Vibration And Seismic Controls For Fire-suppression Piping And Equipment" AND Division 23 Section(s) "Vibration And Seismic Controls For Hvac Piping And Equipment". Hanger and support materials are specified in Division 22 Section(s) "Hangers And Supports For Plumbing Piping And Equipment" AND Division 23 Section(s) "Hangers And Supports For Hvac Piping And Equipment".
6. Set base-mounted pumps on concrete foundation. Disconnect coupling before setting. Do not reconnect couplings until alignment procedure is complete.
   a. Support pump baseplate on rectangular metal blocks and shims, or on metal wedges with small taper, at points near foundation bolts to provide a gap of 3/4 to 1-1/2 inches (19 to 38 mm) between pump base and foundation for grouting.
   b. Adjust metal supports or wedges until pump and driver shafts are level. Check coupling faces and suction and discharge flanges of pump to verify that they are level and plumb.
7. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

C. Alignment
1. Align pump and motor shafts and piping connections after setting on foundation, grout has been set and foundation bolts have been tightened, and piping connections have been made.
2. Comply with pump and coupling manufacturers' written instructions.
3. Adjust pump and motor shafts for angular and offset alignment by methods specified in HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation" OR HI 2.1-2.5, "Vertical Pumps for Nomenclature, Definitions, Application and Operation", as directed.
4. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

D. Connections
1. Piping installation requirements are specified in other Division 21. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Install piping adjacent to machine to allow service and maintenance.
3. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
4. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
5. Install check valve and throttling OR triple-duty, as directed, valve on discharge side of pumps.
6. Install Y-type strainer OR suction diffuser, as directed, and shutoff valve on suction side of pumps.
7. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
8. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.
9. Install check valve and gate or ball valve on each condensate pump unit discharge.
10. Install electrical connections for power, controls, and devices.
11. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
12. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

SECTION 22 12 23 13 - ELECTRIC, DOMESTIC WATER HEATERS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for electric, water heaters. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following electric water heaters:
      a. Household, small-capacity electric water heaters.
      b. Household, storage electric water heaters.
      c. Household, collector-to-tank, solar-electric water heaters.
      e. Flow-control, instantaneous electric water heaters.
      f. Thermostat-control, instantaneous electric water heaters.
      g. Light-commercial electric water heaters.
      h. Commercial electric booster heaters.
      i. Commercial, storage electric water heaters.
      j. Compression tanks.
      k. Water heater accessories.

C. Submittals
   1. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.
   2. LEED Submittal:
      a. Product Data for Prerequisite EA 2: Documentation indicating that units comply with ASHRAE/IESNA 90.1, Section 7 - “Service Water Heating.”
   3. Shop Drawings: Diagram power, signal, and control wiring.
   4. Manufacturer Seismic Qualification Certification: Submit certification that commercial water heaters, accessories, and components will withstand seismic forces defined in Division 22 Section “Vibration And Seismic Controls For Plumbing Piping And Equipment”.
   5. Field quality-control test reports.
   6. Operation and maintenance data.
   7. Warranty: Special warranty specified in this Section.

D. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
   2. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
   3. ASME Compliance: Where indicated, fabricate and label commercial water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   4. Comply with NSF 61, “Drinking Water System Components - Health Effects; Sections 1 through 9,” for all components that will be in contact with potable water.

E. Warranty
   1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric water heaters that fail in materials or workmanship within specified warranty period.
      a. Failures include, but are not limited to, the following:
         1) Structural failures including storage tank and supports.
         2) Faulty operation of controls.
3) Deterioration of metals, metal finishes, and other materials beyond normal use.

b. Warranty Period(s): From date of Final Completion:
1) Household Electric Water Heaters:
   a) Storage Tank: Five OR Six OR 10, as directed, years.
   b) Controls and Other Components: Two OR Three, as directed, years.
2) Instantaneous Electric Water Heaters: One OR Two OR Five, as directed, year(s).
3) Light-Commercial Electric Water Heaters:
   a) Storage Tank: Three OR Five, as directed, years.
   b) Controls and Other Components: Two OR Three, as directed, years.
4) Commercial Electric Water Heaters:
   a) Storage Tank: Three OR Five, as directed, years.
   b) Controls and Other Components: Three OR Five, as directed, years.
5) Compression Tanks: One year.

1.2 PRODUCTS

A. Household Electric Water Heaters
   a. Storage-Tank Construction: Corrosion-resistant metal or steel with corrosion-resistant coating, as directed.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
   b. Factory-Installed Storage-Tank Appurtenances:
      1) Drain Valve: ASSE 1005, if tank has drain outlet. Provide hose-end drain valve in piping for water heaters without drain outlet. Hose-end drain valves are specified in Division 22 Section "Domestic Water Piping Specialties".
      2) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      3) Jacket: Steel with enameled finish.
      5) Temperature Control: Adjustable thermostat.
      6) Safety Control: High-temperature-limit cutoff device or system.
      7) Power Supply Cord: 24 to 72 inches (610 to 1830 mm) with plug.
      8) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 for combination temperature and pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
   a. Storage-Tank Construction: Steel.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
   b. Factory-Installed Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      5) Jacket: Steel with enameled finish.
         a) Standard: Cylindrical shape.
         b) Tabletop: Rectangular shape, with flat-top work surface and raised back.
      6) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
7) Heating Elements: Two; electric, screw-in immersion type with 12 kW or less total, and wired for nonsimultaneous operation, unless otherwise indicated.
8) Temperature Control: Adjustable thermostat for each element.
9) Safety Control: High-temperature-limit cutoff device or system.
10) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 for combination temperature and pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

   a. Storage-Tank Construction: Steel.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
   b. Factory-Installed Storage-Tank Appurtenances:
      1) Sensor electrical connections and tank stud for sensor.
      2) Anode Rod: Replaceable magnesium.
      3) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      4) Drain Valve: ASSE 1005.
      5) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      6) Jacket: Steel with enameled finish.
      7) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
      8) Heating Element: One; electric, screw-in immersion type with 6 kW or less.
      9) Temperature Control: Adjustable thermostat for each element.
     10) Safety Control: High-temperature-limit cutoff device or system.
     11) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 for combination temperature and pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

   a. Storage-Tank Construction: Steel.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
   b. Factory-Installed Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      5) Jacket: Steel with enameled finish.
      6) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
      7) Heat Exchanger: Corrosion-resistant-metal immersion coil.
      8) Heating Element: One; electric, screw-in immersion type with 6 kW or less.
      9) Temperature Control: Adjustable thermostat for each element.
     10) Safety Control: High-temperature-limit cutoff device or system.
     11) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 for combination temperature and pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

B. Instantaneous Electric Water Heaters
1. Flow-Control, Instantaneous Electric Water Heaters: Comply with UL 499 for tankless electric (water heater) heating appliance.
   a. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
      1) Connections: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Heating Element: Resistance heating system.
      4) Temperature Control: Flow-control fitting.
      5) Safety Control: High-temperature-limit cutoff device or system.
      6) Jacket: Aluminum or steel with enameled finish or plastic.
   b. Support: Bracket for wall mounting.

2. Thermostat-Control, Instantaneous Electric Water Heaters: Comply with UL 499 for tankless electric (water heater) heating appliance.
   a. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
      1) Connections: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Heating Element: Resistance heating system.
      4) Temperature Control: Thermostat.
      5) Safety Control: High-temperature-limit cutoff device or system.
      6) Jacket: Aluminum or steel with enameled finish or plastic.
   b. Support: Bracket for wall mounting.

C. Light-Commercial Electric Water Heaters
   1. Description: Comply with UL 174 for household, storage electric water heaters.
      a. Storage-Tank Construction: Steel, vertical arrangement.
         1) Tappings: ASME B1.20.1 pipe thread.
         2) Pressure Rating: 150 psig (1035 kPa).
         3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
      b. Factory-Installed Storage-Tank Appurtenances:
         1) Anode Rod: Replaceable magnesium.
         2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
         3) Drain Valve: ASSE 1005.
         4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
         5) Jacket: Steel with enameled finish.
         6) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
         7) Heating Elements: Two; electric, screw-in immersion type; wired for simultaneous operation, unless otherwise indicated.
         8) Temperature Control: Adjustable thermostat for each element.
         9) Safety Control: High-temperature-limit cutoff device or system.
         10) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 for combination temperature and pressure relief valves. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
      c. Special Requirements: NSF 5 construction with legs for off-floor installation.

D. Commercial Electric Water Heaters
      a. Storage-Tank Construction: Corrosion-resistant metal OR Steel, as directed.
         1) Tappings: ASME B1.20.1 pipe thread.
         2) Pressure Rating: 150 psig (1035 kPa).
         3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
      b. Factory-Installed Storage-Tank Appurtenances:
1) Anode Rod: Replaceable magnesium.
2) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
3) Insulation: Comply with ASHRAE/IESNA 90.1.
4) Jacket: Rectangular shaped, with stainless-steel front panel, unless otherwise indicated.
5) Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
   a) Option: Booster heaters with 9 kW or less total may have 2 or 3 elements.
   b) Staging: Input not exceeding 18 kW per step.
6) Temperature Control: Adjustable thermostat, to setting of at least 180 deg F (82 deg C).
7) Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
8) Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3, combination temperature and pressure relief valve. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
9) Gages: Combination temperature and pressure type or separate thermometer and pressure gage.

c. Special Requirements: NSF 5 construction with brackets for undercounter OR legs for floor, as directed, installation.

2. Commercial, Storage Electric Water Heaters: Comply with UL 1453 requirements for storage-tank-type water heaters.
a. Storage-Tank Construction: ASME-code OR Non-ASME-code, as directed, steel horizontal OR vertical, as directed, arrangement.
   1) Tappings: Factory fabricated of materials compatible with tank and piping connections. Attach tappings to tank before testing.
      a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
      b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
   2) Pressure Rating: 150 psig (1035 kPa).
   3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

b. Factory-Installed Storage-Tank Appurtenances:
   1) Anode Rod: Replaceable magnesium.
   2) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
   3) Insulation: Comply with ASHRAE/IESNA 90.1.
   4) Jacket: Steel with enameled finish.
   5) Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
      a) Staging: Input not exceeding 18 kW per step.
   6) Temperature Control: Adjustable thermostat.
   7) Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
   8) Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Special Requirements: NSF 5 construction.
d. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

E. Compression Tanks
1. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
   a. Construction:
1) **Tappings:** Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1, pipe thread.

2) **Interior Finish:** Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

3) **Air-Charging Valve:** Factory installed.

**F. Water Heater Accessories**

1. **Combination Temperature and Pressure Relief Valves:** ASME rated and stamped and complying with ASME PTC 25.3. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.

2. **Pressure Relief Valves:** ASME rated and stamped and complying with ASME PTC 25.3. Include pressure setting less than water heater working-pressure rating.

3. **Water Heater Stand and Drain-Pan Units:** High-density-polyethylene-plastic, 18-inch- (457-mm-) high, enclosed-base stand complying with IAPMO PS 103 and IAS No. 2. Include integral or separate drain pan with raised edge and NPS 1 (DN 25) drain outlet with ASME B1.20.1 pipe thread.

4. **Water Heater Stands:** Water heater manufacturer's factory-fabricated steel stand for floor mounting and capable of supporting water heater and water. Include dimension that will support bottom of water heater a minimum of 18 inches (457 mm) above the floor.

5. **Water Heater Mounting Brackets:** Water heater manufacturer's factory-fabricated steel bracket for wall mounting and capable of supporting water heater and water.

6. **Drain Pans:** Corrosion-resistant metal with raised edge. Include dimensions not less than base of water heater and include drain outlet not less than NPS 3/4 (DN 20).

7. **Piping Manifold Kits:** Water heater manufacturer's factory-fabricated inlet and outlet piping arrangement for multiple-unit installation. Include piping and valves for field assembly that are capable of isolating each water heater and of providing balanced flow through each water heater.

8. **Piping-Type Heat Traps:** Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.

9. **Water Regulators:** ASSE 1003, water-pressure reducing valve. Set at 25-psig- (172.5-kPa-) maximum outlet pressure, unless otherwise indicated.

10. **Shock Absorbers:** ASSE 1010 or PDI WH 201, Size A water hammer arrester.

**G. Source Quality Control**

1. Test and inspect water heater storage tanks, specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.

2. Hydrostatically test commercial, as directed, water heater storage tanks before shipment to minimum of one and one-half times pressure rating.

3. Prepare test reports.

### EXECUTION

**A. Water Heater Installation**

1. Install commercial water heaters on concrete bases.
   a. Exception: Omit concrete bases for commercial water heaters if installation on stand, bracket, suspended platform, or direct on floor is indicated.
   b. Concrete base construction requirements are specified in Division 22 Section "Common Work Results For Plumbing”.

2. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

4. Install combination temperature and pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater
relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

5. Install combination temperature and pressure relief valves in water piping for water heaters without storage. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

6. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Refer to Division 22 Section "Domestic Water Piping Specialties" for hose-end drain valves.

7. Install thermometer on outlet piping of water heaters. Refer to Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.

8. Install thermometers on inlet and outlet piping of household, collector-to-tank, solar-electric water heaters. Refer to Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.

9. Install pressure gage(s) on inlet and outlet of commercial electric water-heater piping. Refer to Division 22 Section "Meters And Gages For Plumbing Piping" for pressure gages.

10. Assemble and install inlet and outlet piping manifold kits for multiple water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each water heater. Include shutoff valve, thermometer in each water heater inlet and outlet, and throttling valve in each water heater outlet. Refer to Division 22 Section "General-duty Valves For Plumbing Piping" for general-duty valves and to Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.

11. Install water regulator, with integral bypass relief valve, in booster-heater inlet piping and water hammer arrester in booster-heater outlet piping.

12. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.

13. Fill water heaters with water.

14. Charge compression tanks with air.

B. Connections
1. Piping installation requirements are specified in other Division 14. Drawings indicate general arrangement of piping, fittings, and specialties.

2. Install piping adjacent to water heaters to allow service and maintenance. Arrange piping for easy removal of water heaters.

3. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".

4. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

2. Perform the following field tests and inspections and prepare test reports:
   a. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
   b. Operational Test: After electrical circuitry has been energized, confirm proper operation.
   c. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3. Remove and replace water heaters that do not pass tests and inspections and retest as specified above.

D. Demonstration
1. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial and instantaneous electric water heaters.

END OF SECTION 22 12 23 13
SECTION 22 12 23 13a - FUEL-FIRED, DOMESTIC WATER HEATERS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for fuel-fired water heaters. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following fuel-fired water heaters:
      a. Household, atmospheric, storage, gas water heaters.
      b. Household, direct-vent, storage, gas water heaters.
      c. Household, power-vent, storage, gas water heaters.
      d. Instantaneous, tankless, gas water heaters.
      e. Commercial, atmospheric, storage, gas water heaters.
      f. Commercial, power-burner, storage, gas water heaters.
      g. Commercial, power-vent, storage, gas water heaters.
      h. Commercial, high-efficiency, gas water heaters.
      i. Commercial, coil-type, finned-tube, gas water heaters.
      j. Commercial, grid-type, finned-tube, gas water heaters.
      k. Household, oil-fired water heaters.
      l. Commercial, oil-fired water heaters.
      m. Large-capacity, oil-fired water heaters.
      n. Dual-fuel, gas and oil-fired water heaters.
      o. Compression tanks.
      p. Water heater accessories.

C. Definitions
   1. LP Gas: Liquefied-petroleum fuel gas.

D. Submittals
   1. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.
   2. LEED Submittal:
      a. Product Data for Prerequisite EA 2: Documentation indicating that units comply with ASHRAE/IESNA 90.1, Section 7 - "Service Water Heating."
   3. Shop Drawings: Diagram power, signal, and control wiring.
   4. Manufacturer Seismic Qualification Certification: Submit certification that commercial water heaters, accessories, and components will withstand seismic forces defined in Division 22 Section "Vibration And Seismic Controls For Plumbing Piping And Equipment". Include the following:
      5. Field quality-control test reports.
      6. Operation and maintenance data.
      7. Warranty: Special warranty specified in this Section.

E. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
   2. ASHRAE/IESNA 90.1Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
   3. ASME Compliance:
a. Where ASME-code construction is indicated, fabricate and label commercial water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

b. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.

4. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with potable water.

F. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-fired water heaters that fail in materials or workmanship within specified warranty period.

   a. Failures include, but are not limited to, the following:
      1) Structural failures including storage tank and supports.
      2) Faulty operation of controls.
      3) Deterioration of metals, metal finishes, and other materials beyond normal use.

   b. Warranty Period(s): From date of Final Completion:
      1) Household, Gas Water Heaters:
         a) Storage Tank: Five OR Six OR 10, as directed, years.
         b) Controls and Other Components: Two OR Three, as directed, years.
      2) Instantaneous, Gas Water Heaters:
         a) Heat Exchanger: Five years.
         b) Controls and Other Components: Three years.
      3) Commercial, Gas Water Heaters:
         a) Storage Tank: Three OR Five, as directed, years.
         b) Controls and Other Components: Three OR Five, as directed, years.
      4) Oil-Fired Water Heaters:
         a) Storage Tank: Three OR Five, as directed, years.
         b) Burner and Controls: One OR Two OR Three, as directed, year(s).
         c) Other Components: Three OR Five, as directed, years.
      5) Dual-Fuel Water Heaters:
         a) Storage Tank: Three OR Five, as directed, years.
         b) Burner and Controls: One OR Two OR Three, as directed, year(s).
         c) Other Components: Three OR Five, as directed, years.
      6) Compression Tanks: One year.

1.2 PRODUCTS

A. Household, Gas Water Heaters

   a. Storage-Tank Construction: Steel.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

   b. Factory-Installed, Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      5) Jacket: Steel with enameled finish.
      6) Burner: For use with atmospheric water heaters and for natural-gas OR LP-gas, as directed, fuel.
      8) Temperature Control: Adjustable thermostat.
      9) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
10) Combination Temperature and Pressure Relief Valve: ANSI Z21.22/CSA 4.4. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

d. Automatic Damper: ANSI Z21.66, electrically operated OR mechanically activated OR thermally activated, as directed, automatic-vent-damper device with size matching draft hood.

a. Storage-Tank Construction: Steel.

1) Tappings: ASME B1.20.1 pipe thread.
2) Pressure Rating: 150 psig (1035 kPa).
3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

b. Factory-Installed, Storage-Tank Appurtenances:

1) Anode Rod: Replaceable magnesium.
2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
3) Drain Valve: ASSE 1005.
4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
5) Jacket: Steel with enameled finish.
6) Burner: For use with direct-vent water heaters and for natural-gas OR LP-gas, as directed, fuel.
8) Temperature Control: Adjustable thermostat.
9) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
10) Combination Temperature and Pressure Relief Valve: ANSI Z21.22/CSA 4.4. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

c. Direct-Vent System: Through-wall OR Through-roof, as directed, coaxial- or double-channel, vent assembly with water heater manufacturers' outside intake/exhaust screen.

a. Storage-Tank Construction: Steel.

1) Tappings: ASME B1.20.1 pipe thread.
2) Pressure Rating: 150 psig (1035 kPa).
3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

b. Factory-Installed, Storage-Tank Appurtenances:

1) Anode Rod: Replaceable magnesium.
2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
3) Drain Valve: ASSE 1005.
4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
5) Jacket: Steel with enameled finish.
6) Burner: For use with power-vent water heaters and for natural-gas OR LP-gas, as directed, fuel.
8) Temperature Control: Adjustable thermostat.
9) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
10) Combination Temperature and Pressure Relief Valve: ANSI Z21.22/CSA 4.4. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.

B. Instantaneous, Gas Water Heaters

1. Description: Comply with ANSI Z21.10.3/CSA 4.3, except storage is not required.

a. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
1) Tappings: ASME B1.20.1 pipe thread.
2) Pressure Rating: 150 psig (1035 kPa).
3) Heat Exchanger: Copper tubing.
4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
5) Burner: For use with tankless water heaters and for natural-gas OR LP-gas, as directed, fuel.
6) Automatic Ignition: Manufacturer's proprietary system for automatic, gas ignition.
7) Temperature Control: Adjustable thermostat.
8) Jacket: Metal with enameled finish or plastic.

b. Support: Bracket for wall mounting.

C. Commercial, Gas Water Heaters
   a. Storage-Tank Construction: ASME-code OR Non-ASME-code, as directed, steel with 150-psig (1035-kPa) working-pressure rating.
      1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
         a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
         b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
      2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
      3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
   b. Factory-Installed, Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
      5) Jacket: Steel with enameled finish.
      6) Burner: For use with atmospheric water heaters and for natural-gas OR LP-gas, as directed, fuel.
      8) Temperature Control: Adjustable thermostat.
      9) Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
      10) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
   c. Special Requirements: NSF 5 construction.
   e. Automatic Damper: ANSI Z21.66, electrically operated OR mechanically activated OR thermally activated, as directed, automatic-vent-damper device with size matching draft hood.
   f. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.
   a. Storage-Tank Construction: ASME-code OR Non-ASME-code, as directed, steel with 150-psig (1035-kPa) working-pressure rating.
      1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
         a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.

b. Factory-Installed, Storage-Tank Appurtenances:

1) Anode Rod: Replaceable magnesium.
2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
4) Insulation: Comply with ASHRAE/IESNA 90.1. Surrounded entire storage tank except connections and controls.
5) Jacket: Steel with enameled finish.
6) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Burner: Comply with UL 795 for power-burner water heaters and for natural-gas OR LP-gas, as directed, fuel.

4) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
5) Jacket: Steel with enameled finish.
6) Burner: For use with power-vent water heaters and for natural-gas OR LP-gas, as directed, fuel.
8) Temperature Control: Adjustable thermostat.
9) Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
10) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valve with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating.
input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Special Requirements: NSF 5 construction.

d. Power-Vent System: Exhaust fan, interlocked with burner.

e. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

a. Description: Manufacturer’s proprietary design to provide at least 84 OR 85 OR 88 OR 95, as directed, percent combustion efficiency at optimum operating conditions. Following features and attributes may be modified or omitted if water heater otherwise complies with requirements for performance.

b. Storage-Tank Construction: ASME-code steel with 150-psig (1035-kPa) minimum working-pressure rating.

1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.

   a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
   b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.

c. Factory-Installed, Storage-Tank Appurtenances:

1) Anode Rod: Replaceable magnesium.

2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.

3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.

4) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.

5) Jacket: Steel with enameled finish.

6) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

a. Description: Packaged unit with boiler, storage tank, pump, piping, and controls.

b. Boiler Construction: ASME code with 160-psig (1100-kPa) working-pressure rating for hot-water-boiler-type water heater.

1) Heat Exchanger: Helix or spiral, finned-copper-tube coils with bronze headers.

2) Connections: Factory fabricated of materials compatible with boiler. Attach to boiler before testing.

   a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
   b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

c. Boiler Appurtenances:
1) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire boiler except connections and controls.

2) Jacket: Steel with enameled finish.

3) Burner: For use with coil-type, finned-tube water heaters and for natural-gas OR LP-gas, as directed, fuel.

4) Temperature Control: Adjustable, storage tank temperature-control fitting and flow switch, interlocked with circulator and burner.

5) Safety Control: Automatic, high-temperature-limit cutoff device or system.

d. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

e. Support: Steel base or skids.

g. Automatic Damper: ANSI Z21.66, electrically operated OR mechanically activated OR thermally activated, as directed, automatic-vent-damper device with size matching draft hood.

h. Hot-Water Storage Tank: Connected with piping to circulating pump and water heater.

1) Construction: According to ASME Boiler and Pressure Vessel Code: Section VIII, steel with 150-psig (1035-kPa) OR 125-psig (860-kPa), as directed, working-pressure rating.

2) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.

a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.

b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

4) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.

5) Jacket: Steel with enameled finish.

7) Drain Valve: Corrosion-resistant metal complying with ASSE 1005, factory installed.

8) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

i. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, 125-psig (860-kPa) minimum working-pressure rating, and 225 deg F (107 deg C) continuous-water-temperature rating.

j. Piping: Copper tubing; copper, solder-joint fittings; and brazed or flanged joints.

k. Mounting: Water heater, tank, and accessories factory mounted on skids.

a. Description: Packaged unit with boiler, storage tank, pump, piping, and controls.

b. Boiler Construction: ASME code with 160-psig (1100-kPa) working-pressure rating for hot-water-boiler-type water heater.

1) Heat Exchanger: Horizontal, straight, finned-copper tubes with bronze headers.

2) Connections: Factory fabricated of materials compatible with boiler. Attach to boiler before testing.

a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.

b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.

c. Boiler Appurtenances:

1) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire boiler except connections and controls.
2) Jacket: Steel with enameled finish.
3) Burner: For use with grid-type, finned-tube water heaters and for natural-gas OR LP-gas, as directed, fuel.
4) Temperature Control: Adjustable, storage tank temperature-control fitting and flow switch, interlocked with circulator and burner.
5) Safety Control: Automatic, high-temperature-limit cutoff device or system.
d. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.
e. Support: Steel base or skids.
g. Automatic Damper: ANSI Z21.66, electrically operated OR mechanically activated OR thermally activated, as directed, automatic-vent-damper device with size matching draft hood.
h. Hot-Water Storage Tank: Connected with piping to circulating pump and water heater.
   1) Construction: According to ASME Boiler and Pressure Vessel Code: Section VIII, steel with 150-psig (1035-kPa) OR 125-psig (860-kPa), as directed, working-pressure rating.
   2) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
      a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
      b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
   3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
   4) Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
   5) Jacket: Steel with enameled finish.
   7) Drain Valve: Corrosion-resistant metal complying with ASSE 1005, factory installed.
   8) Combination Temperature and Pressure Relief Valves: ANSI Z21.22/CSA 4.4. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
   i. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, 125-psig (860-kPa) minimum working-pressure rating, and 225 deg F (107 deg C) continuous-water-temperature rating.
j. Piping: Copper tubing; copper, solder-joint fittings; and brazed or flanged joints.
k. Mounting: Water heater, tank, and accessories factory mounted on skids.

D. Oil-Fired Water Heaters

   a. Storage-Tank Construction: Steel.
      1) Tappings: ASME B1.20.1 pipe thread.
      2) Pressure Rating: 150 psig (1035 kPa).
      3) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
   b. Factory-Installed, Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      5) Jacket: Steel with enameled finish.
      6) Temperature Control: Adjustable thermostat.
      7) Heat Trap Fittings: Inlet type in cold-water inlet and outlet type in hot-water outlet.
8) Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Oil Burner: Comply with UL 296 for use with No. 2 fuel oil.
d. Draft Regulator: Barometric type or adjustable-damper device.

2. Commercial, Oil-Fired Water Heaters: Comply with UL 732 for storage water heaters.
a. Storage-Tank Construction: ASME-code OR Non-ASME-code, as directed, steel with 150-psig (1035-kPa) minimum working-pressure rating.
   1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
      a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
      b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
   2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
   3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.

b. Factory-Installed, Storage-Tank Appurtenances:
   1) Anode Rod: Replaceable magnesium.
   2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
   3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
   4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
   5) Jacket: Steel with enameled finish.
   6) Temperature Control: Automatic, high-temperature-limit cutoff device or system.
   7) Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Oil Burners: Comply with UL 296 for use with No. 2 fuel oil.
d. Safety Control: Automatic, high-temperature-limit cutoff device or system.
e. Draft Regulator: Barometric type or adjustable-damper device.
f. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

3. Large-Capacity, Oil-Fired Water Heaters: Comply with UL 732 for storage water heaters except when capacity is greater than 120 gal. (454 L).
a. Storage-Tank Construction: ASME-code steel with 150-psig (1035-kPa) minimum working-pressure rating.
   1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
      a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
      b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
   2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
   3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.

b. Factory-Installed, Storage-Tank Appurtenances:
   1) Anode Rod: Replaceable magnesium.
   2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
   3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
   4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
5) Jacket: Steel with enameled finish.
6) Temperature Control: Adjustable thermostat.
7) Safety Control: Automatic, high-temperature-limit cutoff device or system.
8) Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

c. Oil Burner: Comply with UL 296 for use with No. 2 fuel oil.
d. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
e. Draft Regulator: Barometric type or adjustable-damper device.
f. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

E. Dual-Fuel Water Heaters
1. Description: Comply with ANSI Z21.10.3/CSA 4.3 or UL 732 requirements appropriate for dual-fuel, gas and oil-fired water heaters.
   a. Storage-Tank Construction: ASME-code steel with 150-psig (1035-kPa) minimum working-pressure rating.
      1) Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
         a) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
         b) NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
      2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
      3) Lining: Cement OR Glass OR Nickel plate OR Phenolic coating OR Sheet copper, as directed, complying with NSF 61 barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
   b. Factory-Installed, Storage-Tank Appurtenances:
      1) Anode Rod: Replaceable magnesium.
      2) Dip Tube: Provide unless cold-water inlet is near bottom of tank.
      3) Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
      4) Insulation: Comply with ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.
      5) Jacket: Steel with enameled finish.
      6) Temperature Control: Adjustable thermostat.
      7) Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
   c. Dual-Fuel Burners: Combination gas-oil burner assembly, complying with appropriate requirements of UL 795; or comply with UL 296 for oil burners for No. 2 fuel oil and UL 795 for natural-gas OR LP-gas, as directed, fuel.
   d. Safety Control: Automatic, high-temperature-limit cutoff device or system.
   f. Building Automation System Interface: Normally closed dry contacts for enabling and disabling water heater.

F. Compression Tanks
1. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed, butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
   a. Construction:
1) Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
2) Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
3) Air-Charging Valve: Factory installed.

G. Water Heater Accessories
2. Gas Pressure Regulators: ANSI Z21.18, appliance type. Include pressure rating, capacity, and pressure differential required between gas supply and water heater.
4. Combination Temperature and Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select each relief valve with sensing element that extends into storage tank.
   b. Oil-Fired Water Heaters: ASME rated and stamped and complying with ASME PTC 25.3.
5. Pressure Relief Valves: Include pressure setting less than working-pressure rating of water heater.
   b. Oil-Fired Water Heaters: ASME rated and stamped and complying with ASME PTC 25.3.
6. Water Heater Stand and Drain Pan Units: High-density-polyethylene-plastic, 18-inch- (457-mm-) high, enclosed-base stand complying with IAPMO PS 103 and IAS No. 2. Include integral or separate drain pan with raised edge and NPS 1 (DN 25) drain outlet with ASME B1.20.1 pipe thread.
7. Water Heater Stands: Water heater manufacturer's factory-fabricated steel stand for floor mounting and capable of supporting water heater and water. Provide dimension that will support bottom of water heater a minimum of 18 inches (457 mm) above the floor.
8. Water Heater Mounting Brackets: Water heater manufacturer’s factory-fabricated steel bracket for wall mounting and capable of supporting water heater and water.
9. Drain Pans: Corrosion-resistant metal with raised edge. Provide dimensions not less than base of water heater and include drain outlet not less than NPS 3/4 (DN 20).
10. Piping Manifold Kits: Water heater manufacturer's factory-fabricated inlet and outlet piping arrangement for multiple-unit installation. Include piping and valves for field assembly that is capable of isolating each water heater and of providing balanced flow through each water heater.
11. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2, as directed.

H. Source Quality Control
1. Test and inspect water heater storage tanks, specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
2. Hydrostatically test commercial water heater storage tanks before shipment to minimum of one and one-half times pressure rating.
3. Prepare test reports.

1.3 EXECUTION

A. Water Heater Installation
1. Install commercial water heaters on concrete bases.
   a. Exception: Omit concrete bases for commercial water heaters if installation on stand, bracket, suspended platform, or direct on floor is indicated.
   b. Concrete base construction requirements are specified in Division 22 Section "Common Work Results For Plumbing".
2. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer’s recommended clearances. Arrange units so controls and devices needing service are accessible.
3. Install seismic restraints for commercial water heaters. Anchor to substrate.
4. Install gas water heaters according to NFPA 54.
5. Install gas shutoff valves on gas supplies to gas water heaters without shutoff valves.
6. Install gas pressure regulators on gas supplies to gas water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
7. Install automatic gas valves on gas supplies to gas water heaters, if required for operation of safety control.
8. Install oil-fired water heaters according to NFPA 31.
9. Install combination temperature and pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater, relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
10. Install combination temperature and pressure relief valves in water piping for water heaters without storage. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
11. Install water heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Refer to Division 22 Section "Domestic Water Piping Specialties" for hose-end drain valves.
12. Install thermometer on outlet piping of water heaters. Refer to Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.
13. Install pressure gage(s) on inlet and outlet piping of commercial, fuel-fired water heater piping. Refer to Division 22 Section "Meters And Gages For Plumbing Piping" for pressure gages.
14. Assemble and install inlet and outlet piping manifold kits for multiple water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each water heater. Include shutoff valve and thermometer in each water heater inlet and outlet, and throttling valve in each water heater outlet. Refer to Division 22 Section "General-duty Valves For Plumbing Piping" for general-duty valves and to Division 22 Section "Meters And Gages For Plumbing Piping" for thermometers.
15. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.
16. Fill water heaters with water.
17. Charge compression tanks with air.

B. Connections
1. Piping installation requirements are specified in other Division 14. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Install piping adjacent to water heaters to allow service and maintenance. Arrange piping for easy removal of water heaters.
3. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
4. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
2. Perform the following field tests and inspections and prepare test reports:
   a. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
   b. Operational Test: After electrical circuitry has been energized, confirm proper operation.
   c. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Remove and replace water heaters that do not pass tests and inspections and retest as specified above.

D. Demonstration
1. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain instantaneous and commercial water heaters.

END OF SECTION 22 12 23 13a
SECTION 22 12 23 26 - UNDERGROUND STORAGE TANKS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of underground storage tanks. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Intent of Work
1. It is the intent of this specification to ensure that the work, as completed, shall meet or exceed all applicable codes, ordinances, rules and regulations of every authority having jurisdiction in the area.
2. The installation shall include all necessary equipment, controls, valves and fittings, excavation, backfill as described or called for on the plans. In some cases, the Contractor shall prepare the plans. In any case, the Contractor shall obtain all permits at its expense.
3. The Contractor shall install equipment in accordance with manufacturer's recommendations. Where drawings (if any) and specification conflict with manufacturer's recommendations, it shall be the Contractor's responsibility to bring this to the attention of the Owner before installation.
4. The overall intent shall be that the Contractor shall provide everything required to make a complete and operational job in every respect.

C. Codes And Standards
1. Reference is to the latest edition of the code or standard unless otherwise noted. Comply with the latest EPA requirements.
2. The codes and standards referred to are the minimum standards. Where the requirements of these specifications and the accompanying drawings (if any) exceed those of the codes and standards, the drawings and specifications shall supersede.
3. The installation shall conform to provisions of the NFPA requirement with latest amendments.
4. The entire installation including all equipment shall conform to The Occupational and Safety Health Act of 1970, and all EPA regulations.

D. Visit To Site: Bidders are advised to visit the site and carefully examine the existing conditions before submitting bids, as no allowance will be made for lack of knowledge of existing conditions where such conditions may reasonably be determined by observation.

E. Permits
1. Obtain all permits required for the installation of this work and pay all fees in connection therewith. Permits and fees involved in removal of any item from the site shall be included.
2. Provide copies of inspection and testing certificates from all agencies and authorities having jurisdiction.

F. Layout Basis
1. The layout, which must be stamped by an Engineer registered in the State in which the Project is located, is based upon the use of particular items of equipment, identified by manufacturer's make and model number. Dimensions, arrangements, efficiency and service connections required for these particular items have been considered in making the layout. Contractor shall submit any deviations proposed with its bid.
2. The Contractor may use the equipment of any manufacturer listed as approved for substitution provided they have the proper connections, capacities, efficiency and dimensions. Variances from the requirements stated herein shall be sustainable reasons for disapproval of the submitted equipment. All costs arising from variances in substituted items shall be paid for by the Contractor.
3. Equivalent products by other manufacturers must be submitted to the Owner for prior approval at least ten (10) days prior to bid date.

G. Submittals
1. All submittals shall bear a stamp or notation indicating that the Contractor has reviewed the submittals for compliance with drawings, governing authorities and specifications.
2. All submittals shall bear sufficient notations to clearly indicate the specific make, model number, accessories, capacities, options, and specification paragraph numbers.
3. All submittals shall indicate complete compliance with all performance and specification requirements as herein specified and/or indicated or shall specifically list any exceptions. Exceptions shall be subject to approval by the Owner.
4. The review (by the Owner) of equipment does not relieve the Contractor of the responsibility for compliance with the contract documents or authorities as specified.
5. Contractor shall coordinate electrical characteristics of equipment with electrical specifications and the available power characteristics.
6. Materials requiring shop drawing submittals shall not be installed prior to shop drawings being reviewed by the Owner. The Contractor agrees that failure to conform to the above may result in removal of all installed materials that have been disapproved from the project. Installation of specified equipment will be mandatory. Removal of disapproved equipment shall be at the sole expense of the Contractor.
7. Submit the following for review via shop drawings (to be approved or disapproved):
   a. Xerxes or approved equal, double wall (do not unload manually). Size and capacity.
   b. Bury depth.
   c. Bed and backfill (not over 7'-0" traffic and no traffic).
   d. Double walls when continuous vacuum pump and monitor are used require a maximum burial depth of three (3) feet from tank top to grade.
   e. When not subjected to traffic loads, use 24" backfill or 12" minimum backfill plus 4" re-bar reinforced concrete on top.
   f. When subjected to traffic loads, use 36" backfill or 18" minimum backfill plus 6" of re-bar reinforced concrete.
   g. If tank is 12'-0" in diameter (actually, 7'-11" is manufactured for large gallonage) then, no traffic shall be provided with 42" minimum cover, or 38" backfill plus 4" re-bar reinforced concrete. With traffic, use 38" backfill plus 6" of asphalt or 6" of re-bar reinforced concrete.
   h. Monitoring fittings, fiberglass reservoir, vapor sensor 4" tank fittings, tank fill tube insert, venting, stage two vapor recovery system, manway and manway extensions, manway risers, site monitoring wells, barricades, installation check list, hydrostatic tank monitoring.
   i. Job site safety precautions.
   j. Reservoir fiberglass sensor.
   k. Reservoir leak detection.
   l. Electronic control panels, sensor circuit, transmission contact switch power source circuit, alarm bell, alarm bell silence button, control panel false alarms, etc.
   m. Piping sump bottom, usually 28 3/8" x 30".
   n. Flex connectors to piping.
   o. Unions, nipples, manway cover, FRP fitting, opening for stage II vapor recovery line if required.
   p. 3" pipe sump fitting.
   q. When using piping sump sensor equal to Owens Corning fiberglass model PSS, submit system including electrical power supply and signal wiring.
   r. Control panel equal to Owens Corning fiberglass model SB-0011B (single circuit) or SB-0014B (4 circuit) as applicable.
   s. Fiberglass pipe and fittings equal to "Ameron" type Dualoy 3000/L pressure rated and with chemically resistant epoxy resin for the service intended. The Dualoy 3000/L shall be a secondary containment system. No other product piping will be acceptable.

H. Guarantee
1. Contractor shall guarantee that if any materials or workmanship covered by these specifications proves defective within one (1) year, such defects shall be corrected by the Contractor at once without charge to the Owner.

1.2 PRODUCTS:

A. Single-Wall Fiberglass Underground Storage Tanks
   1. The tank shall comply with the following governing standards:
      a. Underwriters Laboratories, Inc. (UL) Standard 1316. A UL certification plate shall be attached to each tank.
      c. ANSI/AWWA D120-02 Thermosetting Fiberglass-Reinforced Plastic Tanks.
      d. Military Specification No. MIL-T-52777(A)
   2. The Contractor shall provide and install the "fiberglass" underground storage tanks. Tanks shall be as manufactured by Xerxes Corporation, Minneapolis, MN or approved equal as judged by the Owner. Follow manufacturer’s instructions for installation and testing.
   3. Loading Conditions: Tank shall meet the following design criteria:
      a. Internal Load: Tank shall be designed to withstand a 5-psig air-pressure test with 5:1 safety factor. When tank is designed for on-site testing, contractor shall individually test tank for leakage prior to installation. Maximum test pressure is 5 psig (3 psig for a 12-foot diameter tank).
      b. Vacuum Test: Tanks 10-foot diameter and smaller shall be designed to withstand a vacuum test to 11.5 inches of mercury.
      c. Surface Loads: Tank shall withstand surface H-20 axle loads when properly installed according to tank manufacturer’s current Installation Manual and Operating Guidelines.
      d. External Hydrostatic Pressure: Tank shall be capable of being buried in ground with 7 feet of overburden over the top of the tank, the hole fully flooded and a safety factor of 5:1 against general buckling.
      e. Tank shall support accessory equipment- such as internal pump platforms, drop/fill tubes, submersible pumps and ladders- when installed according to tank manufacturer’s current Installation Manual and Operating Guidelines.
   4. Product Storage:
      a. Tank shall be capable of storing water products with specific gravity up to 1.1.
      b. Tank shall be vented to atmospheric pressure.
      c. Tank shall be capable of storing products identified in the manufacturer’s current standard limited warranty.
   5. Materials:
      a. Tank shall be manufactured with 100% resin and glass-fiber reinforcement No sand fillers.
      b. The laminate materials used in the internal coating system of a portable water tank shall conform to the requirements of NSF Standard 61.
      c. Tank Dimensions: as directed by the Owner.
   6. Manways (Required for Potable Water Tanks): Shall be flanged and 22-inch I.D. OR 30-inch I.D (for larger tanks), as directed, complete with gasket, bolting hardware and cover. Optional manway extensions shall be FRP.

B. Double-Wall Fiberglass Underground Storage Tanks
   1. The Contractor shall provide and install the "fiberglass" underground storage tanks of the specified volume and diameter.
   2. The tank shall be of fiberglass. Tank laminates shall be constructed of 100% resin and fiberglass reinforcements without sand fillers. Ribs are to be integrally cast into tank body. Tanks shall bear the listing mark of Underwriters’ Laboratories, Inc. Tank shall have an annular space between the primary and secondary shell walls to allow for free flow and containment of all leaked product from primary tank. This space shall be filled at the factory with a brine solution for hydrostatic monitoring. Tanks shall be as manufactured by Xerxes Corporation, Minneapolis, MN or approved equal as judged by the Owner.
   3. The tank shall comply with the following governing standards:
      a. ASTM Standard Document No. 4021-81
b. Underwriters’ Laboratories, Inc. (UL.) File #MH-9061 (N) for underground storage of flammable liquids. A UL certification plate shall be attached to each tank.

c. Military Specification No. MIL-T-52777(A)

d. Factory Mutual Systems approval J.I. IG4AO.AF

e. National Sanitation Foundation, Standard 14

4. The tank shall be capable of the following loading conditions:
   a. Internal load: Tank shall withstand 5 psi air pressure test with 5 to 1 safety factor. Contractor shall test prior to installation as this is to test for leakage. Maximum test pressure is 5 psi.
   b. Vacuum Test: Every tank shall be tested to 11.5 inches (primary tank) and 9.5 inches (secondary tank) mercury vacuum by the tank manufacturer to assure structural integrity.
   c. Surface Loads: Tank shall withstand surface H-20 axle load when properly installed according to current manufacturer’s installation instruction (32,000 lbs.).
   d. External hydrostatic pressure: Tank shall withstand 7’ of overburden with the hole fully flooded with 7:1 safety factor against buckling.

5. Provide glass fiber-reinforced plastic straps for the tank shown. Provide number and location of straps as specified by the manufacturer. Each strap shall be capable of withstanding the buoyancy load of 25,000 lbs. for 8’ tank diameter. Straps shall be standard as supplied by the tank manufacturer. A concrete pad or concrete deadman must be used with anchor straps as recommended by tank manufacturer.

6. The Contractor shall provide fiberglass piping sump with fittings as indicated. The piping sump shall be manufactured by Xerxes Corporation or approved equal and supplied with tanks.
   a. The piping sump shall be installed so that it is suitable for monitoring the double-wall piping system and containment of its product. Piping sump shall be located on tanks 22” minimum manway.

7. All tank fittings shall be standard (proofed tight) as supplied by the tank manufacturer. The tank shall have an opening for each of the following:
   a. Fill/Manual Gauging
   b. Vent/Overfill/Stage One Vapor Recovery
   c. Pump (pressure system) or supply and return (suction system)
   d. In tank gauging automatic inventory control
   e. Others as shown or required by the operating agency

8. The tank shall have a factory filled brine interstitial and reservoir for continuous monitoring of both inner and outer walls.

9. Tank to be installed per manufacturer installation instructions which will be inspected as it progresses.

C. Spill Protection
   1. Universal model 70CD, or approved equal, spill containment shall be used as containment basin for spills during filling. A manual valve, if so required, shall be used to return any spilled product back to tank.

D. Overfill Prevention
   1. Universal model 37, or approved equal, float valve is to be used for overfill prevention. The automatic shut off device must stop the flow of product being delivered when tank is 90% full. Access must be provided.

E. Stage One Vapor Recovery
   1. Stage one vapor recovery is incorporated into the access assembly of the overfill prevention access way. See drawing for details. (Less than 10,000 gales per month through flow)

F. Stage Two Vapor Recover
   1. Piping for stage two vapor recovery will be installed for future use. Required for gasoline motor fuel only. (More than 10,000 gales per month through flow)
G. Tank Trim
   1. Surface manholes shall have all cast iron rim and minimum 10" galvanized steel skirt. Tank trim shall have Universal Valve.

H. Submersible Turbine Pump Specifications
   1. General Pump Specifications: The pump shall be designed to pump gasoline, diesel, kerosene and jet fuel. The entire pumping assembly shall have UL listing and shall meet all requirements of UL79. The pump discharge head and manifold assembly shall be manufactured from ASTM A 48 Class 30 grey iron. The pump shall be available in 1/3, 3/4, and 1-1/2 hp sizes and shall be manufactured to the proper length as determined by the tank diameter, type of tank, and bury depth. The pump motor shall have a thermal over current overload protector with automatic reset. The pump motor assembly shall be clearly marked with pertinent information including Model, Horsepower, Voltage, Phase, and Manufacturer. The pump motor shall be a permanent split phase capacitor type, and shall incorporate a 15 mfd capacitor. The pumping unit shall not incorporate any flexible diaphragms and all sealing shall be accomplished with "o" ring or UL recognized fiber gaskets. The pump shall have a removable intake screen with openings no greater than 3/32 inch. The pump shall be manufactured by FE Petro, Inc., McFarland, WI. or approved equal as judged by the Owner.

   2. Installation and Maintenance Specifications: The pump shall have a two-wire field connection and an easy access ground wire terminal, and shall incorporate a wire seal plug which will accommodate three wires. The pump shall incorporate a port for line pressure testing that shall be sealed with a 1/4 NPT pipe plug. The pump unit shall have a fully extractable head in order to permit removal of the pump motor assembly without disturbing the discharge piping or the electrical wiring. The product in the pipelines shall be held in place by a line check valve that shall have a minimum sealing of 170 lbs when the pump is not running. The line check valve shall be independent of the removable head and shall be easily accessible. The removal of the extractable portion of the pump shall not disturb product in the pipelines downstream of the check valve. During the removal of the extractable portion of the pump, product contained in the discharge manifold of the pump shall drain automatically into the storage tank. The pump motor shall be interchangeable by horsepower with different manufacturers' product.

   3. Operation Specifications: The pump shall have an air/vapor elimination system that returns air or vapors to the underground storage tank through a tube discharging near the top of the pump motor assembly. The pump unit shall contain a built-in expansion relief valve that relieves pressure above pumping pressure but below 50 psi. The pump motor shall utilize the product being pumped for lubrication of the motor bearings and for cooling the stator, and this fluid shall discharge into the underground storage tank at the top of the motor. The pump shall have siphon capability built into the pump as standard.

I. Piping System
   1. All piping fittings and adhesives shall be UL listed made of fiberglass double wall. Pipe shall be in compliance with ASTM D 2996 and classified by designation code RTRP-11AF-3111. Pipe shall be filament wind of continuous glass filament. Pipe must have a minimum bend radius of 50 feet on 2" primary (80 feet on 3" secondary) to allow settling of tank. Pipe shall have maximum tensile loads of 1160 lbs, compressive loads 2210 lbs at 75 degrees Fahrenheit on 2" primary. 3" pipe shall have tensile load of 2020 lbs at 75 degrees and compressive loads of 3850 lbs. Pipe to be factory proof tested at 1000 psig-2", 700 psig-3". Pipe shall be Smith Fiberglass Red thread II, or approved equal as judged by the Owner.

   2. Vent piping shall not have secondary containment. Vent shall not be sloped less than 1/4" per foot downward to tank.

   3. Product piping shall have secondary containment. Product piping shall not be sloped less than 1/8" per foot downward toward tank.

   4. All piping must slope back toward tank.

   5. All piping must be installed as per manufacturer installation instructions. the Owner shall monitor each installation daily.

J. Leak Detection
   1. Tank shall have a Pullulert FD241RRA, or approved equal, float probe mounted on the brine filled hydrostatic reservoir. The system shall monitor both the inner and outer walls of the tank.
a. Alarm Conditions:
   1) Hydrocarbons in hydrostatic reservoir
   2) A loss of fluid in reservoir

2. Piping shall have a Pollulert FD241RRA, or approved equal, float probe mounted in the piping sump. System shall monitor the piping sump compartment that has to be designed to catch any leaked product from the primary piping system. This probe shall distinguish the difference between water and hydrocarbons and alarm on any one or both conditions.

3. Remote monitoring piping sumps shall be installed only if piping can not be sloped toward tank. The Contractor shall use as many remote monitoring piping sumps as needed to assure that all sections of piping are monitored. All monitoring sumps shall have a Pollulert FD241RRA or approved equal probe for leak detection.

4. Control panel shall have probe status for wet, dry, or hydrocarbon. Alarm conditions are to be selectable. Control panel must have installed relay or provision for installing relays for remote alarms. Control panel shall have both visual and audible alarm. System shall have a two year warranty from date of manufacture. Ground water probes shall be adjustable 1/8” to 2” for product detection. Probes shall be wired by a single cable run. Systems must be UL listed for Class 1, Division 1, Group D locations and meet all existing EPA regulations. Leakage detection shall be Pollulert systems or approved equal.

5. Submersible pump shall have a mechanical in-line leak detector with a free floating check valve. Leak detector shall be vaporless LD2000 or approved equal.

K. In Tank Gauging System
1. Gauging system shall provide inventory management designed to continuously monitor underground storage tanks. System must provide information on inventory, delivery of fuel, and product through-put. System must measure fuel levels, water level and fuel temperature. This is to ensure proper compensated level readings. System shall have five temperature sensors, two floats, one for product level, one for water interface. System shall have a 48 character LCD display and internal thermal printer. System shall utilize a magnetostrictive probe and have visual, audible alarm with automatic printout. The system shall be designed to have 16 input on/off devices, RS232 port full duplex with adjustable baud rate. Tank gauging system shall be Pollulert system or approved equal.

L. Test For Pipe
1. Test of the piping system shall be made per manufacturer’s recommendations.
2. Furnish the Owner with a certificate stating that all piping has been tested as specified and has been shown to be tight.
3. The piping systems may be tested in sections if necessary, but a final test may be required of the entire piping system at the completion of the system. The final test shall be made while pipe is exposed to view where possible.
4. Both primary and secondary pipe must be tested.

M. Test For Tank
1. Pre-installation: All Xerxes or approved equal tanks shall be tested prior to shipment, but it is required that all tanks be tested by the Contractor prior to installation. After installation and before final backfilling to grade, the tank must be retested to assure that no damage occurred during installation.
2. Hose/Valve Assembly: In order to test the tank, the hose/valve assembly must be connected from the reservoir to a service fitting. The hose/valve assembly will already be connected from the reservoir to a service fitting when the tank is shipped. If the hose/valve assembly is not connected when the tank is delivered, contact the Customer Service Representative at the Xerxes or other plant nearest you, before attempting to test the tank.
3. Primary (Internal) Tank Test: Prior to installation, check to see that all service and monitor fittings are plugged and tightened, except the service fitting with a temporary plastic plug. Close the valve on the hose/valve assembly. Remove the temporary plastic plug and connect the pressure source to the service fitting. Pressure test the primary (internal) tank to 5 psig for 60 minutes.
4. Secondary (External) Tank Test:
a. **CAUTION**: Never pressurize the secondary tank or (annular space) without connecting it to the primary tank. The secondary tank and primary tank will be properly connected if the hose/valve assembly is in place as shipped. Failure to have the secondary tank and primary tank properly connected could potentially result in tank failure and personal injury, and will void all warranties.

b. While the primary tank is still under pressure, open the valve on the hose/valve assembly until the pressure stabilizes. Once the pressure has stabilized, either add or subtract air pressure to stabilize the pressure at 5 psig. Observe the tank for any liquid on the exterior surface and check the gauge at the pressure source for any drop in pressure.

c. After completing the test, relieve the pressure at the source.

N. **Product Dispenser**

1. A fiberglass containment box shall be installed with each product dispenser. Containment box shall be as manufactured by Petro Fiberglass or approved equal. Double wall pipe shall terminate inside containment box. A flex connector as manufactured by Dana Everflex or approved equal shall be used to connect product pipe to the shear valve within the containment box. The shear valve shall be air tested at the factory and shall not lose its seal when its top is removed for service. Shear valve shall be Universal model 521 or approved equal. Each product dispensing hose shall be equipped with a re-connectable breakaway featuring a pressure balancing chamber to prevent nuisance breaks and shall disconnect at 200 lbs. A hose coupling shall separate the breakaway and hose swivel. The nozzle shall have a means of automatically stopping flow if the nozzle is not at the proper dispensing angle. Nozzle shall be of die-cast construction UL listed and have a flow equalizer to maintain 10 GPM flow. Breakaway, hose coupling, hose swivel, and nozzle shall be as manufactured by Husky or approved equal. Dispenser shall be compatible with vapor recovery systems.

SECTION 22 13 19 13 - HIGH-EFFICIENCY PARTICULATE FILTRATION

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for high-efficiency particulate filtration. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. HEPA rigid-cell box filters.
      b. HEPA V-bank cell filters.
      c. HEPA filter diffusers.
      d. HEPA filter fan modules.
      e. ULPA filters.
      f. 95 percent DOP filters.
      g. Front- and rear-access filter frames.
      h. Side-service housings.
      i. Filter gages.

C. Submittals
   1. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
   2. LEED Submittals:
      a. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with applicable requirements in ASHRAE 62.1, Section 5, “Systems and Equipment.”
   3. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.
      a. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
      b. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
      c. Wiring Diagrams: For power, signal, and control wiring.
   4. Field quality-control reports.
   5. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

D. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended use.
   2. ASHRAE Compliance:
      a. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
   3. Comply with IEST-RP-CC001.3.
   6. Comply with NFPA 90A and NFPA 90B.

E. Coordination
1.2 PRODUCTS

A. HEPA Rigid-Cell Box Filters
1. Description: Factory-fabricated, disposable, packaged air filters with media perpendicular to airflow and with holding frames.
2. Filter Unit Class: UL 900, Class 1 OR Class 2, as directed.
3. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.
   a. Internal Separators: None OR Aluminum in media folds, as directed.
   b. Gasket Material: None OR Neoprene OR Blue gel, as directed.
   c. Gasket Location: None OR Upstream OR Upstream and Downstream OR Downstream, as directed.
   d. Faceguard Material: Aluminum OR Stainless steel, as directed.
   e. Faceguard Location: None OR Upstream OR Upstream and Downstream OR Downstream, as directed.
4. Filter-Media Frames:
   a. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
   b. Materials: Stainless steel OR Fire-retardant plywood OR Fabricated aluminum OR Fire-retardant particleboard OR Galvanized sheet OR Non-fire-retardant particleboard, as directed.
   c. Style: Box OR Double-turned flange OR Deep channel OR Double-turned flange, one side, as directed.
5. Mounting Frames: Welded galvanized steel with gaskets and fasteners; suitable for bolting together into built-up filter banks.

B. HEPA V-Bank Cell Filters
1. Description: Factory-fabricated, disposable, packaged air filters with media at an angle to airflow and with holding frames.
2. Filter Unit Class: UL 900, Class 1 OR Class 2, as directed.
3. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.
   a. Internal Separators: None OR Aluminum in media folds, as directed.
   b. Gasket Material: None OR Neoprene OR Blue gel, as directed.
   c. Gasket Location: None OR Upstream OR Upstream and Downstream OR Downstream, as directed.
   d. Faceguard Material: Aluminum OR Stainless steel, as directed.
   e. Faceguard Location: None OR Upstream OR Upstream and Downstream OR Downstream, as directed.
4. Filter-Media Frames:
   a. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
   b. Materials: Stainless steel OR Fire-retardant plywood OR Fabricated aluminum OR Fire-retardant particleboard OR Galvanized sheet OR Non-fire-retardant particleboard, as directed.
   c. Style: Box OR Double-turned flange OR Deep channel OR Double-turned flange, one side, as directed.
5. Mounting Frames: Welded galvanized steel with gaskets and fasteners; suitable for bolting together into built-up filter banks.

C. HEPA Filter Diffusers
1. Description: Factory-fabricated, individually ducted, HEPA filter-holding ceiling modules.
2. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with glass filament separators.
b. Media to Frame Side Bond: Polyurethane foam OR Silicone OR Neoprene adhesive OR Fiberglass-mat packing OR Thermosetting sealant OR Knife edge in fluid-filled channel, as directed.

c. Application: Class 100 OR Class 10 OR Class 1, as directed, clean room.

3. Casing:
   a. Configuration: Ducted inlet OR Plenum inlet OR Plenum inlet with prefilter, as directed.
   b. Module Material: Extruded aluminum, 16 gage with mill finish.
   c. Suspension: Ceiling grid.

4. Accessories:
   a. Diffusion damper.
   b. Diffusion-damper adjustment port.
   c. Filter test port.

D. HEPA Filter Fan Modules
1. Description: Factory-fabricated, HEPA filter ceiling module with fan.
2. Casing:
   a. Configuration: Ducted inlet OR Plenum inlet OR Plenum inlet with prefilter, as directed.
   b. Module Material: Extruded aluminum, 16 gage with mill finish.
   c. Suspension: Ceiling grid OR Independent, as directed.

3. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with aluminum separators OR vinyl-coated aluminum separators OR separators of ribbons of filter media, as directed.
   a. Frame Material: 3/4-inch- (19-mm-) thick, fire-retardant plywood OR 3/4-inch- (19-mm-) thick, fire-retardant particleboard OR 3/4-inch- (19-mm-) thick plywood OR 3/4-inch- (19-mm-) thick particleboard OR Galvanized steel OR Aluminized steel OR Cadmium-plated steel OR Stainless steel OR Aluminum, as directed.
   b. Media to Frame Side Bond: Polyurethane foam OR Silicone OR Neoprene adhesive OR Fiberglass-mat packing OR Thermosetting sealant OR Knife edge in fluid-filled channel, as directed.
   c. Face Gasket: Neoprene expanded rubber OR Ceramic fiber OR Silicone, as directed.
   d. Faceguard: Plastic OR Stainless steel, as directed.

5. Control: Variable speed.
6. Motor:
   a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements For Hvac Equipment".
   b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 22.
   c. Type: Permanent-split capacitor with SCR for speed adjustment OR Electronically commutated motor, as directed.
   d. Fan-Motor Assembly Isolation: Rubber isolators.
   e. Enclosure: Open dripproof OR Totally enclosed, fan cooled OR Totally enclosed, air over OR Open, externally ventilated OR Totally enclosed, nonventilated OR Severe duty OR Explosion proof OR Dust-ignition-proof machine, as directed.
   f. Enclosure Materials: Cast iron OR Cast aluminum OR Rolled steel, as directed.
   g. Motor Bearings: <Insert special requirements>.
   h. Unusual Service Conditions:
      1) Ambient Temperature: <Insert deg F (deg C)>.
      2) Altitude: <Insert feet (m)> above sea level.
      3) High humidity.
   i. Efficiency: Premium efficient.
   j. NEMA Design: <Insert designation>.
   k. Service Factor: <Insert value>.
   l. Motor Speed: Single speed OR Multispeed, as directed.

1) Speed Control: Infinitely adjustable with pneumatic-electric and electronic controls.

E. ULPA Filters
1. Description: Factory-fabricated, ULPA filters with holding casing.
2. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with aluminum separators OR vinyl-coated aluminum separators OR separators of ribbons of filter media, as directed.
3. Frame Material: 3/4-inch- (19-mm-) thick, fire-retardant plywood OR 3/4-inch- (19-mm-) thick, fire-retardant particleboard OR 3/4-inch- (19-mm-) thick plywood OR 3/4-inch- (19-mm-) thick particleboard OR Galvanized steel OR Aluminized steel OR Cadmium-plated steel OR Stainless steel OR Aluminum, as directed.
4. Media to Frame Side Bond: Polyurethane foam OR Silicone OR Neoprene adhesive OR Fiberglass-mat packing OR Thermosetting sealant OR Knife-edge in fluid-filled channel, as directed.
5. Face Gasket: Neoprene expanded rubber OR Ceramic fiber OR Silicone, as directed.
6. Mounting Frames: Construct downstream corners of holding device with cushion pads to protect media. Provide bolted filter-sealing mechanism to mount and continuously seal each individual filter.

F. 95 Percent DOP Filters
1. Description: Factory-fabricated, 95 percent DOP filters with holding casing.
2. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with aluminum separators OR vinyl-coated aluminum separators OR separators of ribbons of filter media, as directed.
3. Frame Material: 3/4-inch- (19-mm-) thick, fire-retardant plywood OR 3/4-inch- (19-mm-) thick, fire-retardant particleboard OR 3/4-inch- (19-mm-) thick plywood OR 3/4-inch- (19-mm-) thick particleboard OR Galvanized steel OR Aluminized steel OR Cadmium-plated steel OR Stainless steel OR Aluminum, as directed.
4. Frame Style: Box single header OR Double header OR Double turned flange OR 3/4-inch- (19-mm-) deep channel, as directed.
5. Media to Frame Side Bond: Polyurethane foam OR Silicone OR Neoprene adhesive OR Fiberglass-mat packing OR Thermosetting sealant OR Knife edge in fluid-filled channel, as directed.
6. Face Guard Material: Galvanized OR Aluminum, as directed, mesh.
7. Face Guard Location: Upstream OR Upstream and Downstream OR Downstream, as directed.
8. Gasket Material: Neoprene expanded rubber OR Ceramic fiber OR Silicone, as directed.
9. Gasket Location: Upstream OR Upstream and Downstream OR Downstream, as directed.
10. Mounting Frames: Construct downstream corners of holding device with cushion pads to protect media. Provide bolted filter-sealing mechanism to mount and continuously seal each individual filter.

G. Front- And Rear-Access Filter Frames
1. Framing System: Aluminum framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.
2. Prefilters: Incorporate a separate track, removable from front or back.
3. Sealing: Factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.
4. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

H. Side-Service Housings
1. Description: Factory-assembled, side-service housings, constructed of 0.064-inch- (1.6-mm-) thick, galvanized steel OR stainless steel OR double-wall casing with 1-inch (25-mm) insulation, as directed, to hold filters. Side servicing is through gasketed access doors on one side, and housings are capable of connection to other housings. Equip housings with metal slide channel tracks with clamping mechanisms to hold filters, and the following:
   a. Pressure tap and fitting.
   b. DOP/freon test ports.
c. Decontamination ports.
d. Isolation dampers.
e. Lifting lugs.

2. Prefilters: Integral tracks to accommodate 2-, 4-, and 6-inch- (50-, 100-, and 150-mm-) thick, disposable filters.

3. Access Doors: Continuous gaskets on perimeter and positive-locking swivel, as directed, devices. Provide ribbed bagging rim behind access door and PVC bags for bag-in, bag-out arrangement, as directed. Arrange so filter cartridges can be loaded from an access door for each tier and section of the following:
   a. Combination prefilter and HEPA filter.
      OR
      Prefilter.
      OR
      HEPA filter.
   b. Upstream and downstream test section.

4. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

5. Accessories:
   a. Filter change-out trays.
   b. Document-storage pocket.
   c. Filter removal rod.

6. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

I. Filter Gages

1. Diaphragm type with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
   a. Diameter: 4-1/2 inches (115 mm) OR 2 inches (50 mm), as directed.
   b. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg (125 Pa) or Less: 0- to 0.5-inch wg (0 to 125 Pa).
   c. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1.0-Inch wg (125 to 250 Pa) or Less: 0- to 1.0-inch wg (0 to 250 Pa).
   d. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg (250 to 500 Pa) or Less: 0- to 2.0-inch wg (0 to 500 Pa).
   e. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: 0- to 3.0-inch wg (0 to 750 Pa).
   f. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: 0- to 4.0-inch wg (0 to 1000 Pa).

2. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale, logarithmic-curve tube gage with integral leveling gage; graduated to read from 0- to 3.0-inch wg (0 to 750 Pa) and accurate within 3 percent of full-scale range.

3. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

1.3 EXECUTION

A. Installation

1. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.

2. Install filters in position to prevent passage of unfiltered air.

3. Install filter gage for each filter bank.

4. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters that were used during construction and testing with new, clean filters.

5. Install filter-gage static-pressure tips upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.

6. Coordinate filter installations with duct and air-handling unit installations.
B. Field Quality Control
   1. Perform tests and inspections.
   2. Tests and Inspections:
      a. Operate automatic roll filters to demonstrate compliance with requirements.
      b. Test for leakage of unfiltered air while system is operating.
      c. HEPA Filters: Pressurize housing to a minimum of 3.0-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter with soapy water to check for air leaks.
      d. HEPA Filters: Pressurize housing to a minimum of 3.0-inch wg (750 Pa) or to designed operating pressure, whichever is higher; and test housing joints, door seals, and sealing edges of filter for air leaks according to pressure-decay method in ASME N510.
   3. Air filter will be considered defective if it does not pass tests and inspections.
   4. Prepare test and inspection reports.

C. Cleaning
   1. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new filter media.

END OF SECTION 22 13 19 13
SECTION 22 13 19 26 - INTERCEPTORS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for interceptors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Grease interceptors.
   b. Oil interceptors.
   c. Sand interceptors.

C. Definitions
1. FRP: Fiberglass-reinforced plastic.
2. PP: Polypropylene plastic.

D. Submittals
1. Product Data: For each type of metal and plastic interceptor indicated. Include materials of fabrication, dimensions, rated capacities, retention capacities, operating characteristics, size and location of each pipe connection, furnished specialties, and accessories.
2. Shop Drawings: For each type and size of precast-concrete interceptor indicated.
   a. Include materials of construction, dimensions, rated capacities, retention capacities, location and size of each pipe connection, furnished specialties, and accessories.
3. Coordination Drawings: Interceptors, drawn to scale, on which the following items are shown and coordinated with each other, based on input from Installers of the items involved:
   a. Interceptors.
   b. Piping connections. Include size, location, and elevation of each.
   c. Interface with underground structures and utility services.

E. Project Conditions
1. Interruption of Existing Sewer Services: Do not interrupt services to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sewer services according to requirements indicated:
   a. Notify the Owner no fewer than seven days in advance of proposed interruption of service.
   b. Do not proceed with interruption of sewer services without the Owner's written permission.

1.2 PRODUCTS

A. Grease Interceptors
   a. Include rubber-gasketed joints, vent connections (if required), manholes, compartments or baffles, and piping or openings to retain grease and to permit wastewater flow, unless directed otherwise.
   b. Structural Design Loads:
      4) Walkway Load: Comply with ASTM C 890, A-03.
   c. Resilient Pipe Connectors (if required): ASTM C 923 (ASTM C 923M), cast or fitted into interceptor walls, for each pipe connection.
d. Steps: Individual FRP steps or FRP ladder OR Individual FRP steps, FRP ladder, or ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP OR ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP, as directed, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of interceptor to finished grade is less than 60 inches (1500 mm).

e. Grade Rings (if required): Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover.

f. Manhole Frames and Covers: Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (100-mm-) minimum width flange and 26-inch- (660-mm-) diameter cover.
   1) Ductile Iron: ASTM A 536, Grade 60-40-18, unless otherwise indicated.
   2) Gray Iron: ASTM A 48, Class 35, unless otherwise indicated.
   3) Include indented top design with lettering cast into cover, using wording equivalent to “INTERCEPTOR,” or “OIL INTERCEPTOR,” or “SANITARY SEWER.”

B. Oil Interceptors

1. Oil Interceptors: Precast concrete comply with ASTM C 913.
   a. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain grease and to permit wastewater flow.

   b. Structural Design Loads:
      4) Walkway Load: Comply with ASTM C 890, A-03.

   c. Resilient Pipe Connectors (if required): ASTM C 923 (ASTM C 923M), cast or fitted into interceptor walls, for each pipe connection.

   d. Steps: Individual FRP steps or FRP ladder OR Individual FRP steps, FRP ladder, or ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP OR ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP, as directed, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of interceptor to finished grade is less than 60 inches (1500 mm).

   e. Grade Rings (if required): Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover.

   f. Manhole Frames and Covers: Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (100-mm-) minimum width flange and 26-inch- (660-mm-) diameter cover.
      1) Ductile Iron: ASTM A 536, Grade 60-40-18, unless otherwise indicated.
      2) Gray Iron: ASTM A 48, Class 35, unless otherwise indicated.
      3) Include indented top design with lettering cast into cover, using wording equivalent to “INTERCEPTOR,” or “OIL INTERCEPTOR,” or “SANITARY SEWER.”

   g. Waste-oil storage tank and piping are specified in Division 23 Section "Facility Fuel-oil Piping".

2. Oil Interceptors: Factory-fabricated, cast-iron or steel body; with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
   a. Inlet, Outlet, Vent, and Waste-Oil Outlet Piping Connections: Hub, hubless, or threaded, unless otherwise indicated.

   b. Extension (if required): Cast-iron or steel shroud, full size of interceptor, extending from top of interceptor to grade.

   c. Cover: Cast iron or steel, with steel reinforcement to provide ASTM C 890, A-03, walkway load, as directed.

   d. Comply with requirements in Division 23 Section "Facility Fuel-oil Piping" for waste-oil storage tank and piping.
3. Oil Interceptors: Plastic body; with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
   a. Inlet, Outlet, Vent, and Waste-Oil Outlet Piping Connections: Hub, hubless, or threaded, unless otherwise indicated.
   b. Extension (if required): Plastic shroud, full size of interceptor, extending from top of interceptor to grade.
   c. Cover: Plastic with steel reinforcement to provide ASTM C 890, A-03, walkway load, as directed.
   d. Waste-oil storage tank and piping are specified in Division 23 Section "Facility Fuel-oil Piping".

C. Sand Interceptors
1. Description: Factory-fabricated, cast-iron or steel body and inlet grate; with settlement chamber and removable basket or strainer.
2. Outlet Piping Connection: Hub, hubless, or threaded, unless otherwise indicated.
3. Grate: Cast iron or steel with reinforcement to provide ASTM C 890, A-03, walkway load, as directed.

D. Precast-Concrete Manhole Risers
1. Precast-Concrete Manhole Risers: ASTM C 478 (ASTM C 478M) OR ASTM C 913, as directed, with rubber-gasket joints.
   a. Structural Design Loads:
      4) Walkway Load: Comply with ASTM C 890, A-03.
   b. Length: From top of underground concrete structure to grade.
   c. Riser Sections: 3-inch (75-mm) minimum thickness and 36-inch (915-mm) diameter.
   d. Top Section: Eccentric cone, unless otherwise indicated. Include top of cone to match grade ring size.
   e. Gaskets: ASTM C 443 (ASTM C 443M), rubber.
   f. Steps: Individual FRP steps or FRP ladder OR Individual FRP steps, FRP ladder, or ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP OR ASTM A 615/A 615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D 4101, PP, as directed, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals.
2. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, diameter matching manhole frame and cover, and height as required to adjust the manhole frame and cover to indicated elevation and slope.
3. Manhole Frames and Covers (if required): Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (100-mm-) minimum width flange and 26-inch- (660-mm-) diameter cover.
   a. Ductile Iron: ASTM A 536, Grade 60-40-18, unless otherwise indicated.
   c. Include indented top design with lettering cast into cover, using wording equivalent to the following:
      1) Grease Interceptors in Sanitary Sewerage System: "INTERCEPTOR" OR "GREASE INTERCEPTOR" OR "SANITARY SEWER", as directed.
      2) Oil Interceptors in Sanitary Sewerage System: "INTERCEPTOR" OR "OIL INTERCEPTOR" OR "SANITARY SEWER", as directed.

1.3 EXECUTION

A. Earthwork
1. Excavating, trenching, and backfilling are specified in Division 31 Section "Earth Moving".
B. Installation
1. Install precast-concrete interceptors according to ASTM C 891. Set level and plumb.
2. Install manhole risers from top of underground concrete interceptors to manholes and gratings at finished grade.
3. Set tops of manhole frames and covers flush with finished surface in pavements. Set tops 3 inches (75 mm) above finish surface elsewhere, unless otherwise indicated.
4. Set tops of grating frames and grates flush with finished surface.
5. Set metal and plastic interceptors level and plumb.
6. Set tops of metal interceptor covers flush with finished surface in pavements. Set tops 3 inches (75 mm) above finish surface elsewhere, unless otherwise indicated.
7. Install piping and oil storage tanks according to Division 23 Section "Facility Fuel-oil Piping".

C. Connections
1. Piping installation requirements are specified in other Division 22. Drawings indicate general arrangement of piping, fittings, and specialties.
2. Make piping connections between interceptors and piping systems.

D. Identification
1. Identification materials and installation are specified in Division 31 Section "Earth Moving". Arrange for installation of green warning tapes directly over piping and at outside edges of underground interceptors.
   a. Use warning tapes or detectable warning tape over ferrous piping.
   b. Use detectable warning tape over nonferrous piping and over edges of underground structures.

END OF SECTION 22 13 19 26
SECTION 22 13 19 33 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of general-duty valves for plumbing piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Bronze angle valves.
   b. Brass ball valves.
   c. Bronze ball valves.
   d. Iron ball valves.
   e. Iron, single-flange butterfly valves.
   f. Iron, grooved-end butterfly valves.
   g. Bronze lift check valves.
   h. Bronze swing check valves.
   i. Iron swing check valves.
   j. Iron swing check valves with closure control.
   k. Iron, grooved-end swing check valves.
   l. Iron, center-guided check valves.
   m. Iron, plate-type check valves.
   n. Bronze gate valves.
   o. Iron gate valves.
   p. Bronze globe valves.
   q. Iron globe valves.
   r. Lubricated plug valves.
   s. Chainwheels.

C. Definitions
1. CWP: Cold working pressure.
2. EPDM: Ethylene propylene copolymer rubber.
3. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
4. NRS: Nonrising stem.
5. OS&Y: Outside screw and yoke.
6. RS: Rising stem.
7. SWP: Steam working pressure.

D. Submittals
1. Product Data: For each type of valve indicated.

E. Quality Assurance
1. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
2. ASME Compliance:
   a. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
   b. ASME B31.1 for power piping valves.
   c. ASME B31.9 for building services piping valves.
3. NSF Compliance: NSF 61 for valve materials for potable-water service.

F. Delivery, Storage, And Handling
1. Prepare valves for shipping as follows:
a. Protect internal parts against rust and corrosion.

b. Protect threads, flange faces, grooves, and weld ends.

c. Set angle, gate, and globe valves closed to prevent rattling.

d. Set ball and plug valves open to minimize exposure of functional surfaces.

e. Set butterfly valves closed or slightly open.

f. Block check valves in either closed or open position.

2. Use the following precautions during storage:

a. Maintain valve end protection.

b. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

3. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.2 PRODUCTS

A. General Requirements For Valves

1. Refer to valve schedule articles for applications of valves.

2. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

3. Valve Sizes: Same as upstream piping unless otherwise indicated.

4. Valve Actuator Types:

   a. Gear Actuator: For quarter-turn valves NPS 8 (DN 200) and larger.

   b. Handwheel: For valves other than quarter-turn types.

   c. Handlever: For quarter-turn valves NPS 6 (DN 150) and smaller except plug valves, as directed.

   d. Wrench: For plug valves with square heads. Furnish the Owner with 1 wrench for every 5 OR 10, plug valves, for each size square plug-valve head.

   e. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

5. Valves in Insulated Piping: With 2-inch (50-mm) stem extensions and the following features:

   a. Gate Valves: With rising stem.

   b. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

6. Valve-End Connections:

   a. Flanged: With flanges according to ASME B16.1 for iron valves.

   b. Grooved: With grooves according to AWWA C606.

   c. Solder Joint: With sockets according to ASME B16.18.

   d. Threaded: With threads according to ASME B1.20.1.

B. Bronze Angle Valves

1. Class 125, Bronze Angle Valves with Bronze Disc:

   a. Description:

      1) Standard: MSS SP-80, Type 1.

      2) CWP Rating: 200 psig (1380 kPa).

      4) Ends: Threaded.

      5) Stem and Disc: Bronze.

      6) Packing: Asbestos free.

      7) Handwheel: Malleable iron, bronze, or aluminum, as directed.

2. Class 125, Bronze Angle Valves with Nonmetallic Disc:

   a. Description:

      1) Standard: MSS SP-80, Type 2.

      2) CWP Rating: 200 psig (1380 kPa).
3. Class 150, Bronze Angle Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem and Disc: Bronze.
      6) Packing: Asbestos free.
      7) Handwheel: Malleable iron, bronze, or aluminum, as directed.

4. Class 150, Bronze Angle Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

C. Brass Ball Valves
1. One-Piece, Reduced-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) CWP Rating: 400 psig (2760 kPa).
      3) Body Design: One piece.
      4) Body Material: Forged brass.
      5) Ends: Threaded.
      6) Seats: PTFE or TFE.
      7) Stem: Brass.
      8) Ball: Chrome-plated brass.
      9) Port: Reduced.

2. Two-Piece, Full-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Brass.
      9) Ball: Chrome-plated brass.
      10) Port: Full.

3. Two-Piece, Full-Port, Brass Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
7) Seats: PTFE or TFE.
8) Stem: Stainless steel.
9) Ball: Stainless steel, vented.
10) Port: Full.

4. Two-Piece, Regular-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Brass.
      9) Ball: Chrome-plated brass.
     10) Port: Regular.

5. Two-Piece, Regular-Port, Brass Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Brass or bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Stainless steel.
      9) Ball: Stainless steel, vented.
     10) Port: Regular.

6. Three-Piece, Full-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Brass.
      9) Ball: Chrome-plated brass.
     10) Port: Full.

7. Three-Piece, Full-Port, Brass Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Stainless steel.
      9) Ball: Stainless steel, vented.
     10) Port: Full.

D. Bronze Ball Valves
   1. One-Piece, Reduced-Port, Bronze Ball Valves with Bronze Trim:
      a. Description:
         1) Standard: MSS SP-110.
2) CWP Rating: 400 psig (2760 kPa).
3) Body Design: One piece.
4) Body Material: Bronze.
5) Ends: Threaded.
6) Seats: PTFE or TFE.
7) Stem: Bronze.
8) Ball: Chrome-plated brass.
9) Port: Reduced.

2. One-Piece, Reduced-Port, Bronze Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) CWP Rating: 600 psig (4140 kPa).
      3) Body Design: One piece.
      4) Body Material: Bronze.
      5) Ends: Threaded.
      6) Seats: PTFE or TFE.
      7) Stem: Stainless steel.
      8) Ball: Stainless steel, vented.
      9) Port: Reduced.

3. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Bronze.
      9) Ball: Chrome-plated brass.
      10) Port: Full.

4. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Stainless steel.
      9) Ball: Stainless steel, vented.
      10) Port: Full.

5. Two-Piece, Regular-Port, Bronze Ball Valves with Bronze Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Bronze.
      9) Ball: Chrome-plated brass.
      10) Port: Regular.

6. Two-Piece, Regular-Port, Bronze Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
2) SWP Rating: 150 psig (1035 kPa).
3) CWP Rating: 600 psig (4140 kPa).
4) Body Design: Two piece.
5) Body Material: Bronze.
6) Ends: Threaded.
7) Seats: PTFE or TFE.
8) Stem: Stainless steel.
9) Ball: Stainless steel, vented.
10) Port: Regular.

7. Three-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Bronze.
      9) Ball: Chrome-plated brass.
     10) Port: Full.

8. Three-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Stainless steel.
      9) Ball: Stainless steel, vented.
     10) Port: Full.

E. Iron Ball Valves
1. Class 125, Iron Ball Valves:
   a. Description:
      1) Standard: MSS SP-72.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Split body.
      4) Body Material: ASTM A 126, gray iron.
      5) Ends: Flanged.
      6) Seats: PTFE or TFE.
      7) Stem: Stainless steel.
      8) Ball: Stainless steel.
      9) Port: Full.

F. Iron, Single-Flange Butterfly Valves
1. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
      6) Stem: One- or two-piece stainless steel.
7) Disc: Aluminum bronze.

2. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Aluminum-Bronze Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Aluminum bronze.

3. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Nickel-plated or -coated, as directed, ductile iron.

4. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Ductile-Iron Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Nickel-plated or -coated, as directed, ductile iron.

5. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Stainless-Steel Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Stainless steel.

6. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Stainless-Steel Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Stainless steel.

G. Iron, Grooved-End Butterfly Valves
1. 175 CWP, Iron, Grooved-End Butterfly Valves:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 175 psig (1200 kPa).
      3) Body Material: Coated, ductile iron.
4) Stem: Two-piece stainless steel.
5) Disc: Coated, ductile iron.
6) Seal: EPDM.

2. 300 CWP, Iron, Grooved-End Butterfly Valves:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) NPS 8 (DN 200) and Smaller CWP Rating: 300 psig (2070 kPa).
      3) NPS 10 (DN 250) and Larger CWP Rating: 200 psig (1380 kPa).
      4) Body Material: Coated, ductile iron.
      5) Stem: Two-piece stainless steel.
      6) Disc: Coated, ductile iron.
      7) Seal: EPDM.

H. Bronze Lift Check Valves
1. Class 125, Lift Check Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Vertical flow.
      5) Ends: Threaded.
      6) Disc: Bronze.
2. Class 125, Lift Check Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Vertical flow.
      5) Ends: Threaded.
      6) Disc: NBR, PTFE, or TFE.

I. Bronze Swing Check Valves
1. Class 125, Bronze Swing Check Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 3.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Horizontal flow.
      5) Ends: Threaded.
      6) Disc: Bronze.
2. Class 125, Bronze Swing Check Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 4.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Horizontal flow.
      5) Ends: Threaded.
      6) Disc: PTFE or TFE.
3. Class 150, Bronze Swing Check Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 3.
      2) CWP Rating: 300 psig (2070 kPa).
      3) Body Design: Horizontal flow.
      5) Ends: Threaded.
      6) Disc: Bronze.
4. Class 150, Bronze Swing Check Valves with Nonmetallic Disc:
a. **Description:**
   1) **Standard:** MSS SP-80, Type 4.
   2) **CWP Rating:** 300 psig (2070 kPa).
   3) **Body Design:** Horizontal flow.
   4) **Body Material:** ASTM B 62, bronze.
   5) **Ends:** Threaded.
   6) **Disc:** PTFE or TFE.

**J. Iron Swing Check Valves**

1. **Class 125, Iron Swing Check Valves with Metal Seats:**
   a. **Description:**
      1) **Standard:** MSS SP-71, Type I.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Design:** Clear or full waterway.
      4) **Body Material:** ASTM A 126, gray iron with bolted bonnet.
      5) **Ends:** Flanged.
      6) **Trim:** Bronze.
      7) **Gasket:** Asbestos free.

2. **Class 125, Iron Swing Check Valves with Nonmetallic-to-Metal Seats:**
   a. **Description:**
      1) **Standard:** MSS SP-71, Type I.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Design:** Clear or full waterway.
      4) **Body Material:** ASTM A 126, gray iron with bolted bonnet.
      5) **Ends:** Flanged.
      6) **Trim:** Composition.
      7) **Seat Ring:** Bronze.
      8) **Disc Holder:** Bronze.
      9) **Disc:** PTFE or TFE.
      10) **Gasket:** Asbestos free.

3. **Class 250, Iron Swing Check Valves with Metal Seats:**
   a. **Description:**
      1) **Standard:** MSS SP-71, Type I.
      2) **CWP Rating:** 500 psig (3450 kPa).
      3) **Body Design:** Clear or full waterway.
      4) **Body Material:** ASTM A 126, gray iron with bolted bonnet.
      5) **Ends:** Flanged.
      6) **Trim:** Bronze.
      7) **Gasket:** Asbestos free.

**K. Iron Swing Check Valves With Closure Control**

1. **Class 125, Iron Swing Check Valves with Lever- and Spring-Closure Control:**
   a. **Description:**
      1) **Standard:** MSS SP-71, Type I.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Design:** Clear or full waterway.
      4) **Body Material:** ASTM A 126, gray iron with bolted bonnet.
      5) **Ends:** Flanged.
      6) **Trim:** Bronze.
      7) **Gasket:** Asbestos free.
      8) **Closure Control:** Factory-installed, exterior lever and spring.

2. **Class 125, Iron Swing Check Valves with Lever- and Weight-Closure Control:**
   a. **Description:**
      1) **Standard:** MSS SP-71, Type I.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Design:** Clear or full waterway.
      4) **Body Material:** ASTM A 126, gray iron with bolted bonnet.
      5) **Ends:** Flanged.
6) Trim: Bronze.
7) Gasket: Asbestos free.
8) Closure Control: Factory-installed, exterior lever and weight.

L. Iron, Grooved-End Swing Check Valves
   1. 300 CWP, Iron, Grooved-End Swing Check Valves:
      a. Description:
         1) CWP Rating: 300 psig (2070 kPa).
         2) Body Material: ASTM A 536, ductile iron.
         3) Seal: EPDM.
         4) Disc: Spring-operated, ductile iron or stainless steel.

M. Iron, Center-Guided Check Valves
   1. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 200 psig (1380 kPa).
         3) Body Material: ASTM A 126, gray iron.
         4) Style: Compact wafer.
         5) Seat: Bronze.
   2. Class 125, Iron, Globe, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 200 psig (1380 kPa).
         3) Body Material: ASTM A 126, gray iron.
         4) Style: Globe, spring loaded.
         5) Ends: Flanged.
         6) Seat: Bronze.
   3. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 300 psig (2070 kPa).
         3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
         4) Style: Compact wafer.
         5) Seat: Bronze.
   4. Class 150, Iron, Globe, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 300 psig (2070 kPa).
         3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
         4) Style: Globe, spring loaded.
         5) Ends: Flanged.
         6) Seat: Bronze.
   5. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 400 psig (2760 kPa).
         3) Body Material: ASTM A 126, gray iron.
         4) Style: Compact wafer, spring loaded.
         5) Seat: Bronze.
   6. Class 250, Iron, Globe, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) CWP Rating: 400 psig (2760 kPa).
         3) Body Material: ASTM A 126, gray iron.
         4) Style: Globe, spring loaded.
         5) Ends: Flanged.
6) Seat: Bronze.

7. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      4) Style: Compact wafer, spring loaded.
      5) Seat: Bronze.

8. Class 300, Iron, Globe, Center-Guided Check Valves with Metal Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      4) Style: Globe, spring loaded.
      5) Ends: Flanged.
      6) Seat: Bronze.

9. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 126, gray iron.
      4) Style: Compact wafer.
      5) Seat: EPDM OR NBR, as directed.

10. Class 125, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) CWP Rating: 200 psig (1380 kPa).
       3) Body Material: ASTM A 126, gray iron.
       4) Style: Globe, spring loaded.
       5) Ends: Flanged.
       6) Seat: EPDM OR NBR, as directed.

11. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) CWP Rating: 300 psig (2070 kPa).
       3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       4) Style: Compact wafer.
       5) Seat: EPDM OR NBR, as directed.

12. Class 150, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) CWP Rating: 300 psig (2070 kPa).
       3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       4) Style: Globe, spring loaded.
       5) Ends: Flanged.
       6) Seat: EPDM OR NBR, as directed.

13. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) CWP Rating: 400 psig (2760 kPa).
       3) Body Material: ASTM A 126, gray iron.
       4) Style: Compact wafer, spring loaded.
       5) Seat: EPDM OR NBR, as directed.

14. Class 250, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) CWP Rating: 400 psig (2760 kPa).
       3) Body Material: ASTM A 126, gray iron.
4) Style: Globe, spring loaded.
5) Ends: Flanged.
6) Seat: EPDM OR NBR, as directed.

15. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      4) Style: Compact wafer, spring loaded.
      5) Seat: EPDM OR NBR, as directed.

16. Class 300, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      4) Style: Globe, spring loaded.
      5) Ends: Flanged.
      6) Seat: EPDM OR NBR, as directed.

N. Iron, Plate-Type Check Valves
1. Class 125, Iron, Dual-Plate Check Valves with Metal Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 126, gray iron.
      5) Seat: Bronze.
2. Class 150, Iron, Dual-Plate Check Valves with Metal Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 300 psig (2070 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      5) Seat: Bronze.
3. Class 250, Iron, Dual-Plate Check Valves with Metal Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 400 psig (2760 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 126, gray iron.
      5) Seat: Bronze.
4. Class 300, Iron, Dual-Plate Check Valves with Metal Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      5) Seat: Bronze.
5. Class 125, Iron, Single-Plate Check Valves with Resilient Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Wafer, spring-loaded plate.
      4) Body Material: ASTM A 126, gray iron.
      5) Seat: EPDM OR NBR, as directed.
6. Class 125, Iron, Dual-Plate Check Valves with Resilient Seat:
   a. Description:
1) Standard: API 594.
2) CWP Rating: 200 psig (1380 kPa).
3) Body Design: Wafer, spring-loaded plates.
4) Body Material: ASTM A 126, gray iron.
5) Seat: EPDM OR NBR, as directed.

7. Class 150, Iron, Dual-Plate Check Valves with Resilient Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 300 psig (2070 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      5) Seat: EPDM OR NBR, as directed.

8. Class 250, Iron, Wafer, Single-Plate Check Valves with Resilient Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 400 psig (2760 kPa).
      3) Body Design: Wafer, spring-loaded plate.
      4) Body Material: ASTM A 126, gray iron.
      5) Seat: EPDM OR NBR, as directed.

9. Class 250, Iron, Dual-Plate Check Valves with Resilient Seat:
   a. Description:
      1) Standard: API 594.
      2) CWP Rating: 400 psig (2760 kPa).
      3) Body Design: Wafer, spring-loaded plates.
      4) Body Material: ASTM A 126, gray iron.
      5) Seat: EPDM OR NBR, as directed.

10. Class 300, Iron, Dual-Plate Check Valves with Resilient Seat:
    a. Description:
       1) Standard: API 594.
       2) CWP Rating: 500 psig (3450 kPa).
       3) Body Design: Wafer, spring-loaded plates.
       4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       5) Seat: EPDM OR NBR, as directed.

O. Bronze Gate Valves
1. Class 125, NRS Bronze Gate Valves:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem: Bronze.
      6) Disc: Solid wedge; bronze.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

2. Class 125, RS Bronze Gate Valves:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem: Bronze.
      6) Disc: Solid wedge; bronze.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

3. Class 150, NRS Bronze Gate Valves:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
22 - Plumbing

General-Duty Valves for Plumbing Piping

August 2021

2) CWP Rating: 300 psig (2070 kPa).
4) Ends: Threaded.
5) Stem: Bronze.
6) Disc: Solid wedge; bronze.
7) Packing: Asbestos free.
8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

4. Class 150, RS Bronze Gate Valves:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem: Bronze.
      6) Disc: Solid wedge; bronze.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

P. Iron Gate Valves

1. Class 125, NRS, Iron Gate Valves:
   a. Description:
      1) Standard: MSS SP-70, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Disc: Solid wedge.
      7) Packing and Gasket: Asbestos free.

2. Class 125, OS&Y, Iron Gate Valves:
   a. Description:
      1) Standard: MSS SP-70, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Disc: Solid wedge.
      7) Packing and Gasket: Asbestos free.

3. Class 250, NRS, Iron Gate Valves:
   a. Description:
      1) Standard: MSS SP-70, Type I.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Disc: Solid wedge.
      7) Packing and Gasket: Asbestos free.

4. Class 250, OS&Y, Iron Gate Valves:
   a. Description:
      1) Standard: MSS SP-70, Type I.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Disc: Solid wedge.
      7) Packing and Gasket: Asbestos free.

Q. Bronze Globe Valves
1. Class 125, Bronze Globe Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem and Disc: Bronze.
      6) Packing: Asbestos free.
      7) Handwheel: Malleable iron, bronze, or aluminum, as directed.

2. Class 125, Bronze Globe Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

3. Class 150, Bronze Globe Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

R. Iron Globe Valves
1. Class 125, Iron Globe Valves:
   a. Description:
      1) Standard: MSS SP-85, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Packing and Gasket: Asbestos free.

2. Class 250, Iron Globe Valves:
   a. Description:
      1) Standard: MSS SP-85, Type I.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Packing and Gasket: Asbestos free.

S. Lubricated Plug Valves
1. Class 125, Regular-Gland, Lubricated Plug Valves with Threaded Ends:
   a. Description:
      1) Standard: MSS SP-78, Type II.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
      4) Pattern: Regular or short OR Venturi, as directed.
      5) Plug: Cast iron or bronze with sealant groove.

2. Class 125, Regular-Gland, Lubricated Plug Valves with Flanged Ends:
General-Duty Valves for Plumbing Piping

22 - Plumbing

a. Description:
   1) Standard: MSS SP-78, Type II.
   2) CWP Rating: 200 psig (1380 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

3. Class 125, Cylindrical, Lubricated Plug Valves with Threaded Ends:
a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) CWP Rating: 200 psig (1380 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

4. Class 125, Cylindrical, Lubricated Plug Valves with Flanged Ends:
a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) CWP Rating: 200 psig (1380 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

5. Class 250, Regular-Gland, Lubricated Plug Valves with Threaded Ends:
a. Description:
   1) Standard: MSS SP-78, Type II.
   2) CWP Rating: 400 psig (2760 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

6. Class 250, Regular-Gland, Lubricated Plug Valves with Flanged Ends:
a. Description:
   1) Standard: MSS SP-78, Type II.
   2) CWP Rating: 400 psig (2760 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

7. Class 250, Cylindrical, Lubricated Plug Valves with Threaded Ends:
a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) CWP Rating: 400 psig (2760 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

8. Class 250, Cylindrical, Lubricated Plug Valves with Flanged Ends:
a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) CWP Rating: 400 psig (2760 kPa).
   3) Body Material: ASTM A 48/A 48M or ASTM A 126, Grade 40 cast iron with lubrication-sealing system.
   4) Pattern: Regular or short OR Venturi, as directed.
   5) Plug: Cast iron or bronze with sealant groove.

T. Chainwheels
1. **Description**: Valve actuation assembly with sprocket rim, brackets, and chain.
   a. **Brackets**: Type, number, size, and fasteners required to mount actuator on valve.
   b. **Attachment**: For connection to ball OR butterfly OR plug, as directed, valve stems.
   c. **Sprocket Rim with Chain Guides**: Ductile iron OR Cast iron OR Aluminum OR Bronze, as directed, of type and size required for valve. Include zinc coating, as directed.
   d. **Chain**: Hot-dip, galvanized steel OR Brass OR Stainless steel, as directed, of size required to fit sprocket rim.

### 1.3 EXECUTION

#### A. Valve Installation
1. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
2. Locate valves for easy access and provide separate support where necessary.
3. Install valves in horizontal piping with stem at or above center of pipe.
4. Install valves in position to allow full stem movement.
5. Install chainwheels on operators for ball OR butterfly OR gate OR globe OR plug, as directed, valves NPS 4 (DN 100) and larger and more than 96 inches (2400 mm) above floor. Extend chains to 60 inches (1520 mm) above finished floor.
6. Install check valves for proper direction of flow and as follows:
   a. **Swing Check Valves**: In horizontal position with hinge pin level.
   b. **Center-Guided and Plate-Type Check Valves**: In horizontal or vertical position, between flanges.
   c. **Lift Check Valves**: With stem upright and plumb.

#### B. Adjusting
1. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

#### C. General Requirements For Valve Applications
1. If valve applications are not indicated, use the following:
   a. **Shutoff Service**: Ball OR butterfly OR gate OR plug, as directed, valves.
   b. **Butterfly Valve Dead-End Service**: Single-flange (lug) type.
   c. **Throttling Service**: Globe OR angle OR ball OR butterfly, as directed, valves.
   d. **Pump-Discharge Check Valves**:
      1) NPS 2 (DN 50) and Smaller: Bronze swing check valves with bronze OR nonmetallic, as directed, disc.
      2) NPS 2-1/2 (DN 65) and Larger for Domestic Water: Iron swing check valves with lever and weight or with spring or iron, center-guided, metal OR resilient, as directed, seat check valves.
      3) NPS 2-1/2 (DN 65) and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.
2. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
3. Select valves, except wafer types, with the following end connections:
   a. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
   b. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
   c. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
   d. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
   e. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
   f. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
   g. For Grooved-End Copper Tubing and Steel Piping: Valve ends may be grooved.
D. Low-Pressure, Compressed-Air Valve Schedule (150 psig (1035 kPa) Or Less)
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
   b. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
   c. Bronze Lift Check Valves: Class 125, bronze OR nonmetallic, as directed, disc.
   d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   c. Iron, Grooved-End Butterfly Valves: 175 OR 300, as directed, CWP.
   d. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
   e. Iron, Grooved-End Swing Check Valves: 300 CWP.
   f. Iron, Center-Guided Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed, compact-wafer OR globe, as directed, metal OR resilient, as directed, seat.
   g. Iron, Plate-Type Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed; single OR dual, as directed, plate; metal OR resilient, as directed, seat.
   h. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.

E. High-Pressure, Compressed-Air Valve Schedule (150 to 200 psig (1035 to 1380 kPa))
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
   b. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
   c. Bronze Lift Check Valves: Class 125, bronze OR nonmetallic, as directed, disc.
   d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   c. Iron, Grooved-End Butterfly Valves: 175 OR 300, as directed, CWP.
   d. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
   e. Iron, Grooved-End Swing Check Valves: 300 CWP.
   f. Iron, Center-Guided Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed, compact-wafer OR globe, as directed, metal OR resilient, as directed, seat.
   g. Iron, Plate-Type Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed; single OR dual, as directed, plate; metal OR resilient, as directed, seat.
   h. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.

F. Domestic, Hot- And Cold-Water Valve Schedule
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
b. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
c. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
f. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
b. Iron Ball Valves: Class 150.
c. Iron, Single-Flange Butterfly Valves: 200 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
d. Iron, Grooved-End Butterfly Valves: 175 OR 300, as directed, CWP.
e. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
f. Iron Swing Check Valves with Closure Control: Class 125, lever and spring OR weight, as directed.
g. Iron, Grooved-End Swing Check Valves: 300 CWP.
h. Iron, Center-Guided Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed, compact-wafer OR globe, as directed, metal OR resilient, as directed, seat.
i. Iron, Plate-Type Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed; single OR dual, as directed, plate; metal OR resilient, as directed, seat.
j. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.
k. Iron Globe Valves: Class 125 OR Class 250, as directed.

G. Sanitary-Waste And Storm-Drainage Valve Schedule
1. Pipe NPS 2 (DN 50) and Smaller:
a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
b. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic OR stainless-steel, as directed, disc.
c. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
f. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
b. Iron Ball Valves: Class 150.
c. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
d. Iron Swing Check Valves with Closure Control: Class 125, lever and spring OR weight, as directed.
e. Iron, Grooved-End Swing Check Valves: 300 CWP.
f. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.
g. Iron Globe Valves: Class 125 OR Class 250, as directed.
h. Lubricated Plug Valves: Class 125 OR Class 250, as directed, regular gland OR cylindrical, as directed, threaded OR flanged, as directed.
END OF SECTION 22 13 19 33
SECTION 22 13 19 33a - GENERAL-DUTY VALVES FOR HVAC PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of general-duty valves for HVAC piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Bronze angle valves.
   b. Brass ball valves.
   c. Bronze ball valves.
   d. Iron ball valves.
   e. Iron, single-flange butterfly valves.
   f. Iron, grooved-end butterfly valves.
   g. High-performance butterfly valves.
   h. Bronze lift check valves.
   i. Bronze swing check valves.
   j. Iron swing check valves.
   k. Iron swing check valves with closure control.
   l. Iron, grooved-end swing-check valves.
   m. Iron, center-guided check valves.
   n. Iron, plate-type check valves.
   o. Bronze gate valves.
   q. Bronze globe valves.
   r. Iron globe valves.
   s. Lubricated plug valves.
   t. Eccentric plug valves.
   u. Chainwheels.

C. Definitions
1. CWP: Cold working pressure.
2. EPDM: Ethylene propylene copolymer rubber.
3. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
4. NRS: Nonrising stem.
5. OS&Y: Outside screw and yoke.
6. RS: Rising stem.
7. SWP: Steam working pressure.

D. Submittals
1. Product Data: For each type of valve indicated.

E. Quality Assurance
1. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
2. ASME Compliance:
   a. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
   b. ASME B31.1 for power piping valves.
   c. ASME B31.9 for building services piping valves.

F. Delivery, Storage, And Handling
1. Prepare valves for shipping as follows:
   a. Protect internal parts against rust and corrosion.
   b. Protect threads, flange faces, grooves, and weld ends.
   c. Set angle, gate, and globe valves closed to prevent rattling.
   d. Set ball and plug valves open to minimize exposure of functional surfaces.
   e. Set butterfly valves closed or slightly open.
   f. Block check valves in either closed or open position.

2. Use the following precautions during storage:
   a. Maintain valve end protection.
   b. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

3. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.2 PRODUCTS

A. General Requirements For Valves
   1. Refer to HVAC valve schedule articles for applications of valves.
   2. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
   3. Valve Sizes: Same as upstream piping unless otherwise indicated.
   4. Valve Actuator Types:
      a. Gear Actuator: For quarter-turn valves NPS 8 (DN 200) and larger.
      b. Handwheel: For valves other than quarter-turn types.
      c. Handlever: For quarter-turn valves NPS 6 (DN 150) and smaller except plug valves, as directed.
      d. Wrench: For plug valves with square heads. Furnish the Owner with 1 wrench for every 5 OR 10, as directed, plug valves, for each size square plug-valve head.
      e. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.
   5. Valves in Insulated Piping: With 2-inch (50-mm) stem extensions and the following features:
      a. Gate Valves: With rising stem.
      b. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
   6. Valve-End Connections:
      a. Flanged: With flanges according to ASME B16.1 for iron valves.
      b. Grooved: With grooves according to AWWA C606.
      c. Solder Joint: With sockets according to ASME B16.18.
      d.Threaded: With threads according to ASME B1.20.1.

B. Bronze Angle Valves
   1. Class 125, Bronze Angle Valves with Bronze Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 1.
         2) CWP Rating: 200 psig (1380 kPa).
         4) Ends: Threaded.
         5) Stem and Disc: Bronze.
         6) Packing: Asbestos free.
         7) Handwheel: Malleable iron, bronze, or aluminum, as directed.
   2. Class 125, Bronze Angle Valves with Nonmetallic Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 2.
2) CWP Rating: 200 psig (1380 kPa).
4) Ends: Threaded.
5) Stem: Bronze.
6) Disc: PTFE or TFE.
7) Packing: Asbestos free.
8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

3. Class 150, Bronze Angle Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem and Disc: Bronze.
      6) Packing: Asbestos free.
      7) Handwheel: Malleable iron, bronze, or aluminum, as directed.

4. Class 150, Bronze Angle Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

C. Brass Ball Valves
1. One-Piece, Reduced-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) CWP Rating: 400 psig (2760 kPa).
      3) Body Design: One piece.
      4) Body Material: Forged brass.
      5) Ends: Threaded.
      6) Seats: PTFE or TFE.
      7) Stem: Brass.
      8) Ball: Chrome-plated brass.
      9) Port: Reduced.

2. Two-Piece, Full-Port, Brass Ball Valves with Brass Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Forged brass.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Brass.
      9) Ball: Chrome-plated brass.
     10) Port: Full.

3. Two-Piece, Full-Port, Brass Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Two piece.
      5) Body Material: Forged brass.
General-Duty Valves for HVAC Piping

D. Bronze Ball Valves
   1. One-Piece, Reduced-Port, Bronze Ball Valves with Bronze Trim:
      a. Description:
1) Standard: MSS SP-110.
2) CWP Rating: 400 psig (2760 kPa).
3) Body Design: One piece.
4) Body Material: Bronze.
5) Ends: Threaded.
6) Seats: PTFE or TFE.
7) Stem: Bronze.
8) Ball: Chrome-plated brass.
9) Port: Reduced.

2. One-Piece, Reduced-Port, Bronze Ball Valves with Stainless-Steel Trim:
a. Description:
   1) Standard: MSS SP-110.
   2) CWP Rating: 600 psig (4140 kPa).
   3) Body Design: One piece.
   4) Body Material: Bronze.
   5) Ends: Threaded.
   6) Seats: PTFE or TFE.
   7) Stem: Stainless steel.
   8) Ball: Stainless steel, vented.
   9) Port: Reduced.

3. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
a. Description:
   1) Standard: MSS SP-110.
   2) SWP Rating: 150 psig (1035 kPa).
   3) CWP Rating: 600 psig (4140 kPa).
   4) Body Design: Two piece.
   5) Body Material: Bronze.
   6) Ends: Threaded.
   7) Seats: PTFE or TFE.
   8) Stem: Bronze.
   9) Ball: Chrome-plated brass.
   10) Port: Full.

4. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
a. Description:
   1) Standard: MSS SP-110.
   2) SWP Rating: 150 psig (1035 kPa).
   3) CWP Rating: 600 psig (4140 kPa).
   4) Body Design: Two piece.
   5) Body Material: Bronze.
   6) Ends: Threaded.
   7) Seats: PTFE or TFE.
   8) Stem: Stainless steel.
   9) Ball: Stainless steel, vented.
   10) Port: Full.

5. Two-Piece, Regular-Port, Bronze Ball Valves with Bronze Trim:
a. Description:
   1) Standard: MSS SP-110.
   2) SWP Rating: 150 psig (1035 kPa).
   3) CWP Rating: 600 psig (4140 kPa).
   4) Body Design: Two piece.
   5) Body Material: Bronze.
   6) Ends: Threaded.
   7) Seats: PTFE or TFE.
   8) Stem: Bronze.
   9) Ball: Chrome-plated brass.
   10) Port: Regular.

6. Two-Piece, Regular-Port, Bronze Ball Valves with Stainless-Steel Trim:
a. Description:
1) Standard: MSS SP-110.
2) SWP Rating: 150 psig (1035 kPa).
3) CWP Rating: 600 psig (4140 kPa).
4) Body Design: Two piece.
5) Body Material: Bronze.
6) Ends: Threaded.
7) Seats: PTFE or TFE.
8) Stem: Stainless steel.
9) Ball: Stainless steel, vented.
10) Port: Regular.

7. Three-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Bronze.
      9) Ball: Chrome-plated brass.
     10) Port: Full.

8. Three-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
   a. Description:
      1) Standard: MSS SP-110.
      2) SWP Rating: 150 psig (1035 kPa).
      3) CWP Rating: 600 psig (4140 kPa).
      4) Body Design: Three piece.
      5) Body Material: Bronze.
      6) Ends: Threaded.
      7) Seats: PTFE or TFE.
      8) Stem: Stainless steel.
      9) Ball: Stainless steel, vented.
     10) Port: Full.

E. Iron Ball Valves
1. Class 125, Iron Ball Valves:
   a. Description:
      1) Standard: MSS SP-72.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Split body.
      4) Body Material: ASTM A 126, gray iron.
      5) Ends: Flanged.
      6) Seats: PTFE or TFE.
      7) Stem: Stainless steel.
     8) Ball: Stainless steel.
     9) Port: Full.

F. Iron, Single-Flange Butterfly Valves
1. 150 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
6) Stem: One- or two-piece stainless steel.
7) Disc: Aluminum bronze.

2. 150 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Aluminum-Bronze Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Aluminum bronze.

3. 150 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Nickel-plated or -coated, as directed, ductile iron.

4. 150 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Ductile-Iron Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Nickel-plated or -coated, as directed, ductile iron.

5. 150 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Stainless-Steel Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: EPDM.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Stainless steel.

6. 150 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Stainless-Steel Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 150 psig (1035 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      5) Seat: NBR.
      6) Stem: One- or two-piece stainless steel.
      7) Disc: Stainless steel.

7. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
5) Seat: EPDM.
6) Stem: One- or two-piece stainless steel.
7) Disc: Aluminum bronze.

8. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Aluminum-Bronze Disc:
   a. Description:
   1) Standard: MSS SP-67, Type I.
   2) CWP Rating: 200 psig (1380 kPa).
   3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
   4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
   5) Seat: NBR.
   6) Stem: One- or two-piece stainless steel.
   7) Disc: Aluminum bronze.

9. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:
   a. Description:
   1) Standard: MSS SP-67, Type I.
   2) CWP Rating: 200 psig (1380 kPa).
   3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
   4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
   5) Seat: EPDM.
   6) Stem: One- or two-piece stainless steel.
   7) Disc: Nickel-plated or -coated, as directed, ductile iron.

10. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Ductile-Iron Disc:
    a. Description:
    1) Standard: MSS SP-67, Type I.
    2) CWP Rating: 200 psig (1380 kPa).
    3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
    4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
    5) Seat: NBR.
    6) Stem: One- or two-piece stainless steel.
    7) Disc: Nickel-plated or -coated, as directed, ductile iron.

11. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Stainless-Steel Disc:
    a. Description:
    1) Standard: MSS SP-67, Type I.
    2) CWP Rating: 200 psig (1380 kPa).
    3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
    4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
    5) Seat: EPDM.
    6) Stem: One- or two-piece stainless steel.
    7) Disc: Stainless steel.

12. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Stainless-Steel Disc:
    a. Description:
    1) Standard: MSS SP-67, Type I.
    2) CWP Rating: 200 psig (1380 kPa).
    3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
    4) Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
    5) Seat: NBR.
    6) Stem: One- or two-piece stainless steel.
    7) Disc: Stainless steel.

G. Iron, Grooved-End Butterfly Valves
1. 175 CWP, Iron, Grooved-End Butterfly Valves:
General-Duty Valves for HVAC Piping

A. Description:
1) Standard: MSS SP-67, Type I.
2) CWP Rating: 175 psig (1200 kPa).
3) Body Material: Coated, ductile iron.
4) Stem: Two-piece stainless steel.
5) Disc: Coated, ductile iron.
6) Seal: EPDM.

2. 300 CWP, Iron, Grooved-End Butterfly Valves:
   a. Description:
      1) Standard: MSS SP-67, Type I.
      2) NPS 8 (DN 50) and Smaller CWP Rating: 300 psig (2070 kPa).
      3) NPS 10 (DN 250) and Larger CWP Rating: 200 psig (1380 kPa).
      4) Body Material: Coated, ductile iron.
      5) Stem: Two-piece stainless steel.
      6) Disc: Coated, ductile iron.
      7) Seal: EPDM.

H. High-Performance Butterfly Valves
1. Class 150, Single-Flange, High-Performance Butterfly Valves:
   a. Description:
      1) Standard: MSS SP-68.
      2) CWP Rating: 285 psig (1965 kPa) at 100 deg F (38 deg C).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: Carbon steel, cast iron, ductile iron, or stainless steel.
      5) Seat: Reinforced PTFE or metal.
      6) Stem: Stainless steel; offset from seat plane.
      7) Disc: Carbon steel.
      8) Service: Bidirectional.

2. Class 300, Single-Flange, High-Performance Butterfly Valves:
   a. Description:
      1) Standard: MSS SP-68.
      2) CWP Rating: 720 psig (4965 kPa) at 100 deg F (38 deg C).
      3) Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      4) Body Material: Carbon steel, cast iron, or ductile iron.
      5) Seat: Reinforced PTFE or metal.
      6) Stem: Stainless steel; offset from seat plane.
      7) Disc: Carbon steel.
      8) Service: Bidirectional.

I. Bronze Lift Check Valves
1. Class 125, Lift Check Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Vertical flow.
      5) Ends: Threaded.
      6) Disc: Bronze.

2. Class 125, Lift Check Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Design: Vertical flow.
      5) Ends: Threaded.
      6) Disc: NBR, PTFE, or TFE.
J. Bronze Swing Check Valves
   1. Class 125, Bronze Swing Check Valves with Bronze Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 3.
         2) CWP Rating: 200 psig (1380 kPa).
         3) Body Design: Horizontal flow.
         5) Ends: Threaded.
         6) Disc: Bronze.
   2. Class 125, Bronze Swing Check Valves with Nonmetallic Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 4.
         2) CWP Rating: 200 psig (1380 kPa).
         3) Body Design: Horizontal flow.
         5) Ends: Threaded.
         6) Disc: PTFE or TFE.
   3. Class 150, Bronze Swing Check Valves with Bronze Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 3.
         2) CWP Rating: 300 psig (2070 kPa).
         3) Body Design: Horizontal flow.
         5) Ends: Threaded.
         6) Disc: Bronze.
   4. Class 150, Bronze Swing Check Valves with Nonmetallic Disc:
      a. Description:
         1) Standard: MSS SP-80, Type 4.
         2) CWP Rating: 300 psig (2070 kPa).
         3) Body Design: Horizontal flow.
         5) Ends: Threaded.
         6) Disc: PTFE or TFE.

K. Iron Swing Check Valves
   1. Class 125, Iron Swing Check Valves with Metal Seats:
      a. Description:
         1) Standard: MSS SP-71, Type I.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
         4) Body Design: Clear or full waterway.
         5) Body Material: ASTM A 126, gray iron with bolted bonnet.
         6) Ends: Flanged.
         7) Trim: Bronze.
         8) Gasket: Asbestos free.
   2. Class 125, Iron Swing Check Valves with Nonmetallic-to-Metal Seats:
      a. Description:
         1) Standard: MSS SP-71, Type I.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
         4) Body Design: Clear or full waterway.
         5) Body Material: ASTM A 126, gray iron with bolted bonnet.
         6) Ends: Flanged.
         7) Trim: Composition.
         8) Seat Ring: Bronze.
         9) Disc Holder: Bronze.
        10) Disc: PTFE or TFE.
11) Gasket: Asbestos free.

3. Class 250, Iron Swing Check Valves with Metal Seats:
   a. Description:
      1) Standard: MSS SP-71, Type I.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
      4) Body Design: Clear or full waterway.
      5) Body Material: ASTM A 126, gray iron with bolted bonnet.
      6) Ends: Flanged.
      7) Trim: Bronze.
      8) Gasket: Asbestos free.

L. Iron Swing Check Valves With Closure Control
   1. Class 125, Iron Swing Check Valves with Lever- and Spring-Closure Control:
      a. Description:
         1) Standard: MSS SP-71, Type I.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
         4) Body Design: Clear or full waterway.
         5) Body Material: ASTM A 126, gray iron with bolted bonnet.
         6) Ends: Flanged.
         7) Trim: Bronze.
         8) Gasket: Asbestos free.
         9) Closure Control: Factory-installed, exterior lever and spring.

   2. Class 125, Iron Swing Check Valves with Lever and Weight-Closure Control:
      a. Description:
         1) Standard: MSS SP-71, Type I.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
         4) Body Design: Clear or full waterway.
         5) Body Material: ASTM A 126, gray iron with bolted bonnet.
         6) Ends: Flanged.
         7) Trim: Bronze.
         8) Gasket: Asbestos free.
         9) Closure Control: Factory-installed, exterior lever and weight.

M. Iron, Grooved-End Swing Check Valves
   1. 300 CWP, Iron, Grooved-End Swing Check Valves:
      a. Description:
         1) CWP Rating: 300 psig (2070 kPa).
         2) Body Material: ASTM A 536, ductile iron.
         3) Seal: EPDM.
         4) Disc: Spring operated, ductile iron or stainless steel.

N. Iron, Center-Guided Check Valves
   1. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
         4) Body Material: ASTM A 126, gray iron.
         5) Style: Compact wafer.
         6) Seat: Bronze.

   2. Class 125, Iron, Globe, Center-Guided Check Valves with Metal Seat:
      a. Description:
         1) Standard: MSS SP-125.
         2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
         3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
4) Body Material: ASTM A 126, gray iron.
5) Style: Globe, spring loaded.
6) Ends: Flanged.
7) Seat: Bronze.

3. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
   4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
   5) Style: Compact wafer.
   6) Seat: Bronze.

4. Class 150, Iron, Globe, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
   4) Body Material: ASTM A 126, gray iron.
   5) Style: Globe, spring loaded.
   6) Ends: Flanged.
   7) Seat: Bronze.

5. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 126, gray iron.
   5) Style: Compact wafer, spring loaded.
   6) Seat: Bronze.

6. Class 250, Iron, Globe, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 126, gray iron.
   5) Style: Globe, spring loaded.
   6) Ends: Flanged.
   7) Seat: Bronze.

7. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
   4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
   5) Style: Compact wafer, spring loaded.
   6) Seat: Bronze.

8. Class 300, Iron, Globe, Center-Guided Check Valves with Metal Seat:
a. Description:
   1) Standard: MSS SP-125.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
   4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
   5) Style: Globe, spring loaded.
   6) Ends: Flanged.
   7) Seat: Bronze.

9. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
a. Description:
1) Standard: MSS SP-125.
2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
4) Body Material: ASTM A 126, gray iron.
5) Style: Compact wafer.
6) Seat: EPDM OR BR, as directed.

10. Class 125, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
   a. Description:
      1) Standard: MSS SP-125.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
      4) Body Material: ASTM A 126, gray iron.
      5) Style: Globe, spring loaded.
      6) Ends: Flanged.
      7) Seat: EPDM OR NBR, as directed.

11. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
       3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
       4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       5) Style: Compact wafer.
       6) Seat: EPDM OR NBR, as directed.

12. Class 150, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
       3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
       4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       5) Style: Globe, spring loaded.
       6) Ends: Flanged.
       7) Seat: EPDM OR NBR, as directed.

13. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
       3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
       4) Body Material: ASTM A 126, gray iron.
       5) Style: Compact wafer, spring loaded.
       6) Seat: EPDM OR NBR, as directed.

14. Class 250, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
       3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
       4) Body Material: ASTM A 126, gray iron.
       5) Style: Globe, spring loaded.
       6) Ends: Flanged.
       7) Seat: EPDM OR NBR, as directed.

15. Class 300, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat:
    a. Description:
       1) Standard: MSS SP-125.
       2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
       3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
       4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
       5) Style: Compact wafer, spring loaded.
       6) Seat: EPDM OR NBR, as directed.

16. Class 300, Iron, Globe, Center-Guided Check Valves with Resilient Seat:
22 - Plumbing

General-Duty Valves for HVAC Piping

August 2021

1. **Class 125, Iron, Dual-Plate Check Valves with Metal Seat:**
   a. Description:
      1) Standard: MSS SP-125.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 400 psig (2760 kPa).
      4) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      5) Style: Globe, spring loaded.
      6) Ends: Flanged.
      7) Seat: EPDM OR NBR, as directed.

2. **Class 150, Iron, Dual-Plate Check Valves with Metal Seat:**
   a. Description:
      1) Standard: API 594.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
      4) Body Design: Wafer, spring-loaded plates.
      5) Body Material: ASTM A 126, gray iron.
      6) Seat: Bronze.

3. **Class 250, Iron, Dual-Plate Check Valves with Metal Seat:**
   a. Description:
      1) Standard: API 594.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 300 psig (2070 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 250 psig (1725 kPa).
      4) Body Design: Wafer, spring-loaded plates.
      5) Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
      6) Seat: Bronze.

4. **Class 300, Iron, Dual-Plate Check Valves with Metal Seat:**
   a. Description:
      1) Standard: API 594.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
      4) Body Design: Wafer, spring-loaded plates.
      5) Body Material: ASTM A 126, gray iron.
      6) Seat: Bronze.

5. **Class 125, Iron, Single-Plate Check Valves with Resilient Seat:**
   a. Description:
      1) Standard: API 594.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
      4) Body Design: Wafer, spring-loaded plate.
      5) Body Material: ASTM A 126, gray iron.
      6) Seat: EPDM OR NBR, as directed.

6. **Class 125, Iron, Dual-Plate Check Valves with Resilient Seat:**
   a. Description:
      1) Standard: API 594.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
      4) Body Design: Wafer, spring-loaded plates.
      5) Body Material: ASTM A 126, gray iron.
6) **Seat:** EPDM OR NBR, as directed.

7. **Class 150, Iron, Dual-Plate Check Valves with Resilient Seat:**
   a. **Description:**
      1) **Standard:** API 594.
      2) **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating:** 300 psig (2070 kPa).
      3) **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating:** 250 psig (1725 kPa).
      4) **Body Design:** Wafer, spring-loaded plates.
      5) **Body Material:** ASTM A 395/A 395M or ASTM A 536, ductile iron.
      6) **Seat:** EPDM OR NBR, as directed.

8. **Class 250, Iron, Wafer, Single-Plate Check Valves with Resilient Seat:**
   a. **Description:**
      1) **Standard:** API 594.
      2) **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating:** 400 psig (2760 kPa).
      3) **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating:** 300 psig (2070 kPa).
      4) **Body Design:** Wafer, spring-loaded plate.
      5) **Body Material:** ASTM A 126, gray iron.
      6) **Seat:** EPDM OR NBR, as directed.

9. **Class 250, Iron, Dual-Plate Check Valves with Resilient Seat:**
   a. **Description:**
      1) **Standard:** API 594.
      2) **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating:** 400 psig (2760 kPa).
      3) **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating:** 300 psig (2070 kPa).
      4) **Body Design:** Wafer, spring-loaded plates.
      5) **Body Material:** ASTM A 126, gray iron.
      6) **Seat:** EPDM OR NBR, as directed.

10. **Class 300, Iron, Dual-Plate Check Valves with Resilient Seat:**
    a. **Description:**
       1) **Standard:** API 594.
       2) **NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating:** 500 psig (3450 kPa).
       3) **NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating:** 400 psig (2760 kPa).
       4) **Body Design:** Wafer, spring-loaded plates.
       5) **Body Material:** ASTM A 395/A 395M or ASTM A 536, ductile iron.
       6) **Seat:** EPDM OR NBR, as directed.

P. **Bronze Gate Valves**

1. **Class 125, NRS Bronze Gate Valves:**
   a. **Description:**
      1) **Standard:** MSS SP-80, Type 1.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Material:** ASTM B 62, bronze with integral seat and screw-in bonnet.
      4) **Ends:** Threaded or solder joint, as directed.
      5) **Stem:** Bronze.
      6) **Disc:** Solid wedge; bronze.
      7) **Packing:** Asbestos free.
      8) **Handwheel:** Malleable iron, bronze, or aluminum, as directed.

2. **Class 125, RS Bronze Gate Valves:**
   a. **Description:**
      1) **Standard:** MSS SP-80, Type 2.
      2) **CWP Rating:** 200 psig (1380 kPa).
      3) **Body Material:** ASTM B 62, bronze with integral seat and screw-in bonnet.
      4) **Ends:** Threaded or solder joint, as directed.
      5) **Stem:** Bronze.
      6) **Disc:** Solid wedge; bronze.
      7) **Packing:** Asbestos free.
      8) **Handwheel:** Malleable iron, bronze, or aluminum, as directed.

3. **Class 150, NRS Bronze Gate Valves:**
   a. **Description:**
      1) **Standard:** MSS SP-80, Type 1.
2. Class 125, NRS, Iron Gate Valves:
   a. Description:
   1) Standard: MSS SP-70, Type I.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
   4) Body Material: ASTM A 126, gray iron with bolted bonnet.
   5) Ends: Flanged.
   6) Trim: Bronze.
   7) Disc: Solid wedge.
   8) Packing and Gasket: Asbestos free.

3. Class 250, NRS, Iron Gate Valves:
   a. Description:
   1) Standard: MSS SP-70, Type I.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 126, gray iron with bolted bonnet.
   5) Ends: Flanged.
   6) Trim: Bronze.
   7) Disc: Solid wedge.
   8) Packing and Gasket: Asbestos free.

4. Class 250, OS&Y, Iron Gate Valves:
   a. Description:
   1) Standard: MSS SP-70, Type I.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 500 psig (3450 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 126, gray iron with bolted bonnet.
   5) Ends: Flanged.
   6) Trim: Bronze.

Q. Iron Gate Valves

1. Class 125, NRS, Iron Gate Valves:
   a. Description:
   1) Standard: MSS SP-70, Type I.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
   4) Body Material: ASTM A 126, gray iron with bolted bonnet.
   5) Ends: Flanged.
   6) Trim: Bronze.
   7) Disc: Solid wedge.
   8) Packing and Gasket: Asbestos free.
7) Disc: Solid wedge.
8) Packing and Gasket: Asbestos free.

R. Bronze Globe Valves
1. Class 125, Bronze Globe Valves with Bronze Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 1.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem and Disc: Bronze.
      6) Packing: Asbestos free.
      7) Handwheel: Malleable iron, bronze, or aluminum, as directed.

2. Class 125, Bronze Globe Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 200 psig (1380 kPa).
      4) Ends: Threaded or solder joint, as directed.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

3. Class 150, Bronze Globe Valves with Nonmetallic Disc:
   a. Description:
      1) Standard: MSS SP-80, Type 2.
      2) CWP Rating: 300 psig (2070 kPa).
      4) Ends: Threaded.
      5) Stem: Bronze.
      6) Disc: PTFE or TFE.
      7) Packing: Asbestos free.
      8) Handwheel: Malleable iron, bronze, or aluminum, as directed.

S. Iron Globe Valves
1. Class 125, Iron Globe Valves:
   a. Description:
      1) Standard: MSS SP-85, Type I.
      2) CWP Rating: 200 psig (1380 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Packing and Gasket: Asbestos free.

2. Class 250, Iron Globe Valves:
   a. Description:
      1) Standard: MSS SP-85, Type I.
      2) CWP Rating: 500 psig (3450 kPa).
      3) Body Material: ASTM A 126, gray iron with bolted bonnet.
      4) Ends: Flanged.
      5) Trim: Bronze.
      6) Packing and Gasket: Asbestos free.

T. Lubricated Plug Valves
1. Class 125, Regular-Gland, Lubricated Plug Valves with Threaded Ends:
   a. Description:
      1) Standard: MSS SP-78, Type II.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
5) Pattern: Regular or short OR Venturi, as directed.
6) Plug: Cast iron or bronze with sealant groove.

2. Class 125, Regular-Gland, Lubricated Plug Valves with Flanged Ends:
   a. Description:
   1) Standard: MSS SP-78, Type II.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
   6) Plug: Cast iron or bronze with sealant groove.

3. Class 125, Cylindrical, Lubricated Plug Valves with Threaded Ends:
   a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
   6) Plug: Cast iron or bronze with sealant groove.

4. Class 125, Cylindrical, Lubricated Plug Valves with Flanged Ends:
   a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 200 psig (1380 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 150 psig (1035 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
   6) Plug: Cast iron or bronze with sealant groove.

5. Class 250, Regular-Gland, Lubricated Plug Valves with Threaded Ends:
   a. Description:
   1) Standard: MSS SP-78, Type II.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
   6) Plug: Cast iron or bronze with sealant groove.

6. Class 250, Regular-Gland, Lubricated Plug Valves with Flanged Ends:
   a. Description:
   1) Standard: MSS SP-78, Type II.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
   6) Plug: Cast iron or bronze with sealant groove.

7. Class 250, Cylindrical, Lubricated Plug Valves with Threaded Ends:
   a. Description:
   1) Standard: MSS SP-78, Type IV.
   2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
   3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
   4) Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
   5) Pattern: Regular or short OR Venturi, as directed.
6) Plug: Cast iron or bronze with sealant groove.

8. Class 250, Cylindrical, Lubricated Plug Valves with Flanged Ends:
   a. Description:
      1) Standard: MSS SP-78, Type IV.
      2) NPS 2-1/2 to NPS 12 (DN 65 to DN 300), CWP Rating: 400 psig (2760 kPa).
      3) NPS 14 to NPS 24 (DN 350 to DN 600), CWP Rating: 300 psig (2070 kPa).
      4) Body Material: ASTM A 48/A 48M or ASTM A 126, Grade 40 cast iron with lubrication-sealing system.
      5) Pattern: Regular or short OR Venturi, as directed.
      6) Plug: Cast iron or bronze with sealant groove.

U. Eccentric Plug Valves
1. 175 CWP, Eccentric Plug Valves with Resilient Seating.
   a. Description:
      1) Standard: MSS SP-108.
      2) CWP Rating: 175 psig (1200 kPa) minimum.
      3) Body and Plug: ASTM A 48/A 48M, gray iron; ASTM A 126, gray iron; or ASTM A 536, ductile iron.
      4) Bearings: Oil-impregnated bronze or stainless steel.
      5) Ends: Flanged.
      6) Stem-Seal Packing: Asbestos free.
      7) Plug, Resilient-Seating Material: Suitable for potable-water service unless otherwise indicated.

V. Chainwheels
1. Description: Valve actuation assembly with sprocket rim, brackets, and chain.
   a. Brackets: Type, number, size, and fasteners required to mount actuator on valve.
   b. Attachment: For connection to ball OR butterfly OR plug, as directed, valve stems.
   c. Sprocket Rim with Chain Guides: Ductile iron OR Cast iron OR Aluminum OR Bronze, as directed, of type and size required for valve. Include zinc coating, as directed.
   d. Chain: Hot-dip, galvanized steel OR Brass OR Stainless steel, as directed, of size required to fit sprocket rim.

1.3 EXECUTION

A. Valve Installation
1. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
2. Locate valves for easy access and provide separate support where necessary.
3. Install valves in horizontal piping with stem at or above center of pipe.
4. Install valves in position to allow full stem movement.
5. Install chainwheels on operators for ball OR butterfly OR gate OR globe OR plug, as directed, valves NPS 4 (DN 100) and larger and more than 96 inches (2400 mm) above floor. Extend chains to 60 inches (1520 mm) above finished floor.
6. Install check valves for proper direction of flow and as follows:
   a. Swing Check Valves: In horizontal position with hinge pin level.
   b. Center-Guided and Plate-Type Check Valves: In horizontal or vertical position, between flanges.
   c. Lift Check Valves: With stem upright and plumb.

B. Adjusting
1. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

C. General Requirements For Valve Applications
1. If valve applications are not indicated, use the following:
General-Duty Valves for HVAC Piping

DASNY, Downstate

August 2021

1. Shutoff Service: Ball, butterfly OR gate OR plug, as directed, valves.
3. Throttling Service except Steam: Globe OR angle OR ball OR butterfly, as directed, valves.
4. Throttling Service, Steam: Globe OR angle OR butterfly, as directed, valves.
5. Pump-Discharge Check Valves:
   a. NPS 2 (DN 50) and Smaller: Bronze swing check valves with bronze OR nonmetallic, as directed, disc.
   b. NPS 2-1/2 (DN 65) and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, metal OR resilient, as directed, seat check valves.
6. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
7. Select valves, except wafer types, with the following end connections:
   a. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
   b. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
   c. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
   d. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
   e. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
   f. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
   g. For Grooved-End Copper Tubing and Steel Piping except Steam and Steam Condensate Piping: Valve ends may be grooved.

D. Chilled-Water Valve Schedule
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
   b. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   c. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
   d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed, bronze.
   f. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   b. Iron Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150.
   c. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
   d. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
   e. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 175 OR 300, as directed, CWP.
   f. High-Performance Butterfly Valves: Class 150 OR Class 300, as directed, single flange.
   g. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
F. Heating-Water Valve Schedule

1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
   b. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   c. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
   d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
   e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
   f. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   b. Iron Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150.
   c. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
   d. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
   e. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 175 OR 300, as directed, CWP.
   f. High-Performance Butterfly Valves: Class 150 OR Class 300, as directed, single flange.
   g. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
   h. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125, lever and spring OR weight, as directed.
   i. Iron, Grooved-End Check Valves, NPS 3 to NPS 12 (DN 80 to DN 300): 300 CWP.
   j. Iron, Center-Guided Check Valves, NPS 2-1/2 to NPS 24 (DN 65 to DN 600): Class 125 OR Class 150 OR Class 250 OR Class 300, as directed, metal OR resilient, as directed, seat.
   k. Iron, Plate-Type Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed; single OR dual, as directed, plate; metal OR resilient, as directed, seat.
   l. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.
   m. Iron Globe Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125 OR Class 250, as directed.
   n. Lubricated Plug Valves: Class 125 OR Class 250, as directed, regular gland OR cylindrical, as directed, threaded OR flanged, as directed.
a. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
b. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
c. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
d. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
e. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
f. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
b. Iron Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150.
c. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 200 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
d. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24 (DN 350 to DN 600): 150 CWP, EPDM OR NBR, as directed, seat, aluminum-bronze OR ductile-iron OR stainless-steel, as directed, disc.
e. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): 175 OR 300, as directed, CWP.
f. High-Performance Butterfly Valves: Class 150 OR Class 300, as directed, single flange.
g. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
h. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125, lever and spring OR weight, as directed.
i. Iron, Grooved-End Check Valves, NPS 3 to NPS 12 (DN 80 to DN 300): 300 CWP.
j. Iron, Center-Guided Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed, compact-wafer OR globe, as directed, metal OR resilient, as directed, seat.
k. Iron, Plate-Type Check Valves: Class 125 OR Class 150 OR Class 250 OR Class 300, as directed; single OR dual, as directed, plate; metal OR resilient, as directed, seat.
l. Iron Gate Valves: Class 125 OR Class 250, as directed, NRS OR OS&Y, as directed.
m. Iron Globe Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125 OR Class 250, as directed.

G. Low-Pressure Steam Valve Schedule (15 psig (104 kPa) Or Less)

1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze Angle Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
b. Ball Valves: One OR Two OR Three, as directed, piece, full OR regular OR reduced, as directed, port, brass OR bronze, as directed, with brass OR bronze OR stainless-steel, as directed, trim.
c. Bronze Swing Check Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.
d. Bronze Gate Valves: Class 125 OR Class 150, as directed, NRS OR RS, as directed.
e. Bronze Globe Valves: Class 125 OR Class 150, as directed, bronze OR nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
b. Iron Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150.
c. High-Performance Butterfly Valves: Class 150 OR Class 300, as directed, single flange.
d. Iron Swing Check Valves: Class 125 OR Class 250, as directed, metal OR nonmetallic-to-metal, as directed, seats.
e. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125, lever and spring or weight, as directed.
f. Iron Gate Valves: Class 125 or Class 250, as directed, NRS or OS&Y, as directed.
g. Iron Globe Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125 or Class 250, as directed.

H. High-Pressure Steam Valve Schedule (More Than 15 psig (104 kPa))
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze Angle Valves: Class 125 or Class 150, as directed, bronze or nonmetallic, as directed, disc.
   b. Ball Valves: One or Two or Three, as directed, piece, full or regular or reduced, as directed, port, brass or bronze, as directed, with brass or bronze or stainless-steel, as directed, trim.
   c. Bronze Swing Check Valves: Class 125 or Class 150, as directed, bronze or nonmetallic, as directed, disc.
   d. Bronze Gate Valves: Class 125 or Class 150, as directed, NRS or RS, as directed, bronze.
   e. Globe Valves: Class 125 or 150, as directed, bronze, bronze or nonmetallic, as directed, disc.

2. Pipe Sizes NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   b. Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150, iron.
   c. High-Performance Butterfly Valves: Class 150 or Class 300, as directed, single flange.
   d. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125, lever and spring or weight, as directed.
   e. Iron Gate Valves: Class 125 or Class 250, as directed, NRS or OS&Y, as directed.
   g. Iron Globe Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125 or Class 250, as directed.

I. Steam-Condensate Valve Schedule
1. Pipe NPS 2 (DN 50) and Smaller:
   a. Bronze Angle Valves: Class 125 or Class 150, as directed, bronze or nonmetallic, as directed, disc.
   b. Ball Valves: One or Two or Three, as directed, piece, full or regular or reduced, as directed, port, brass or bronze, as directed, with brass or bronze or stainless-steel, as directed, trim.
   c. Bronze Swing Check Valves: Class 125 or Class 150, as directed, bronze or nonmetallic, as directed, disc.
   d. Bronze Gate Valves: Class 125 or Class 150, as directed, NRS or RS, as directed.
   e. Bronze Globe Valves: Class 125 or Class 150, as directed, bronze, bronze or nonmetallic, as directed, disc.

2. Pipe NPS 2-1/2 (DN 65) and Larger:
   a. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
   b. Iron Ball Valves, NPS 2-1/2 to NPS 10 (DN 65 to DN 250): Class 150.
   c. High-Performance Butterfly Valves: Class 150 or Class 300, as directed, single flange.
   d. Iron Swing Check Valves: Class 125 or Class 250, as directed, metal or nonmetallic-to-metal, as directed, seats.
   e. Iron Swing Check Valves with Closure Control: Class 125, lever and spring or weight, as directed.
   f. Iron Gate Valves: Class 125 or Class 250, as directed, NRS or OS&Y, as directed.
   g. Iron Globe Valves, NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Class 125 or Class 250, as directed.
   h. Lubricated Plug Valves: Class 125 or Class 250, as directed, regular gland or cylindrical, as directed, threaded or flanged, as directed.

SECTION 22 13 29 13 - PACKAGED SEWAGE PUMPING STATIONS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for packaged sewage pumping stations. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes dry-well, packaged pumping stations with dry-well or vacuum-primed sewage pumps.
2. This Section includes wet-well, packaged pumping stations with submersible or submersible grinder or wet-well-mounting sewage pumps.

C. Performance Requirements
1. Pressure Rating of Sewage Pumps and Discharge Piping Components: At least equal to sewage pump discharge pressure, but not less than 125 psig (860 kPa).
2. Pressure Rating of Other Piping Components: At least equal to system operating pressure.

D. Submittals
1. Product Data: Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories.
2. Shop Drawings: Show fabrication and installation details for each packaged pumping station. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Product Certificates: For sewage pumps, signed by product manufacturer.
4. Manufacturer Seismic Qualification Certification
5. Field quality-control test reports.
6. Maintenance Data: For packaged pumping stations to include in maintenance manuals.

E. Quality Assurance
1. Installer Qualifications: Manufacturer’s authorized representative who is trained and approved for installation of units required for this Project.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Project Conditions
1. Interruption of Existing Sanitary Sewer Service: Do not interrupt sanitary sewer service to facilities occupied by the Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sanitary sewer service according to requirements indicated:
   a. Notify the Owner no fewer than two days in advance of proposed interruption of sanitary sewer service.
   b. Do not proceed with interruption of sanitary sewer service without the Owner’s written permission.
1.2 PRODUCTS

A. Dry-Well, Packaged Sewage Pumping Stations

1. Dry-Well, Packaged Sewage Pumping Stations with Dry-Well Sewage Pumps:
   a. Description: Factory fabricated, assembled, and tested with wet well for comminutor and collection of sanitary sewage and with dry equipment chamber for sewage pumps, controls, and accessories.
      1) Orientation: Shell underground with dry equipment chamber underground with top flush with grade OR partially recessed underground OR above grade OR underground with entrance tube to grade, as directed.
      2) Shell: Factory fabricated from structural-steel plate OR fiberglass, as directed.
      3) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than 36 inches (914 mm) in diameter.
      4) Cathodic Protection: as directed by the Owner, exterior magnesium anode(s).
      5) Comminutor: Full size of sewage inlet pipe.
      6) Sewage Pumps: Two OR Three, as directed, dry-well-type, nonclog sewage pumps with controls and piping. Include ASTM A 48/A 48M, Class 25, nonclog, cast-iron impeller capable of passing solids of 3-inch (76-mm) minimum diameter; mechanical or stuffing-box seals; and pedestal-mounted motor.

2. Dry-Well, Packaged Sewage Pumping Stations with Vacuum-Primed Sewage Pumps:
   a. Description: Factory fabricated, assembled, and tested with wet well for comminutor and collection of sanitary sewage and with dry equipment chamber for sewage pumps, vacuum pumps, controls, and accessories.
      1) Orientation: Shell underground with dry equipment chamber underground with top flush with grade OR partially recessed underground OR above grade OR underground with entrance tube to grade, as directed.
      2) Shell: Factory fabricated from structural-steel plate OR fiberglass, as directed.
      3) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than 36 inches (914 mm) in diameter.
      4) Cathodic Protection: as directed by the Owner, exterior magnesium anode(s).
      5) Comminutor: Full size of sewage inlet pipe.
      6) Sewage Pumps: Two OR Three, as directed, dry-chamber-mounting, vacuum-primed, nonclog sewage pumps located in dry compartment above wet pit, with controls and piping. Include ASTM A 48/A 48M, Class 25, nonclog, cast-iron impeller capable of passing solids of 3-inch (76-mm) minimum diameter; mechanical or stuffing-box seals; pedestal-mounted motor; and suction piping extending to bottom of wet pit.
