10. Tempered Float Glass for Cabinet Doors: ASTM C 1048, Kind FT, Condition A, Type I, Class 1 (clear) OR 2 or 3 (tinted), as directed. Quality-Q3, with exposed edges seamed before tempering, 6 mm thick, unless otherwise indicated.
   a. Tint Color: Blue-green OR Bronze OR Green OR Gray, as directed.
11. Mirror Glass for Cabinet Doors: ASTM C 1503, Mirror Select OR Glazing, as directed. Quality-Q3, 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed, thick.
12. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Division 08 Section "Decorative Glass Glazing".
13. Tempered Float Glass for Cabinet Shelves: ASTM C 1048, Kind FT, Condition A, Type I, Class 1 (clear) OR 2 or 3 (tinted), as directed. Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
   a. Tint Color: Blue-green OR Bronze OR Green OR Gray, as directed.

B. Fire-Retardant-Treated Materials
1. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this Article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified.
   a. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
   b. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
   c. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
2. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWPA C20 (lumber) and AWPA C27 (plywood). Use the following treatment type:
b. Interior Type A: Low-hygroscopic formulation.
c. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-
test-response characteristics, using a woodworking plant certified by testing and inspecting
agency.
d. Mill lumber before treatment and implement special procedures during treatment and
drying processes that prevent lumber from warping and developing discolorations from
drying sticks or other causes, marring, and other defects affecting appearance of treated
woodwork.
e. Kiln-dry materials before and after treatment to levels required for untreated materials.

3. Fire-Retardant Particleboard: Panels made from softwood particles and fire-retardant chemicals
mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and
smoke-developed index of 25 or less per ASTM E 84.

4. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2,
made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time
of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of
200 or less per ASTM E 84.

C. Cabinet Hardware And Accessories
1. General: Provide cabinet hardware and accessory materials associated with architectural
cabinets, except for items specified in Division 08 Section "Door Hardware".
2. Butt Hinges: 2-3/4-inch (70-mm), 5-knuckle steel hinges made from 0.095-inch- (2.4-mm-) thick
metal, and as follows:
   a. Semiconcealed Hinges for Flush Doors: BHMA A156.9, B01361.
   b. Semiconcealed Hinges for Overlay Doors: BHMA A156.9, B01521.
3. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 100 OR 135 OR 170,
as directed, degrees of opening, self-closing.
5. Wire Pulls: Back mounted, solid metal OR plastic, as directed, 4 inches (100 mm) long, 5/16
inch (8 mm) in diameter OR 5 inches (127 mm) long, 2-1/2 inches (63.5 mm) deep, and 5/16 inch
(8 mm) in diameter, as directed.
6. Catches: Magnetic catches, BHMA A156.9, B03141 OR Push-in magnetic catches,
BHMA A156.9, B03131 OR Roller catches, BHMA A156.9, B03071 OR Ball friction catches,
BHMA A156.9, B03013, as directed.
7. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081 OR
BHMA A156.9, B04102; with shelf brackets, B04112, as directed.
8. Shelf Rests: BHMA A156.9, B04013; metal OR plastic OR metal, two-pin type with shelf hold-
down clip, as directed.
9. Drawer Slides: BHMA A156.9, B05091.
   a. Standard Duty (Grade 1, Grade 2, and Grade 3): Side mounted and extending under
      bottom edge of drawer; full-extension OR partial-extension, as directed, type; zinc-plated
      steel OR epoxy-coated steel, as directed, with polymer rollers.
   b. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension OR full-
      overtravel-extension, as directed, type; zinc-plated steel ball-bearing slides.
   c. Box Drawer Slides: Grade 1 OR Grade 1HD-100, as directed; for drawers not more than
      6 inches (150 mm) high and 24 inches (600 mm) wide.
   d. File Drawer Slides: Grade 1HD-100 OR Grade 1HD-200, as directed; for drawers more
      than 6 inches (150 mm) high or 24 inches (600 mm) wide.
   e. Pencil Drawer Slides: Grade 2 OR Grade 1, as directed; for drawers not more than 3
      inches (75 mm) high and 24 inches (600 mm) wide.
   f. Keyboard Slides: Grade 1 OR Grade 1HD-100, as directed; for computer keyboard
      shelves.
   g. Trash Bin Slides: Grade 1HD-100 OR Grade 1HD-200, as directed; for trash bins not
      more than 20 inches (500 mm) high and 16 inches (400 mm) wide.
10. Plastic OR Aluminum, as directed, Slides for Sliding Glass Doors: BHMA A156.9, B07063.
12. Drawer Locks: BHMA A156.11, E07041.
13. Grommets for Cable Passage through Countertops: 1-1/4-inch (32-mm) OR 2-inch (51-mm), as directed, OD, brown OR black, as directed, molded-plastic grommets and matching plastic caps with slot for wire passage.

14. Paper Slots: 12 inches (305 mm) OR 17 inches (432 mm), as directed, long by 1-3/4 inches (45 mm) wide by 1 inch (25 mm) deep; brown OR black, as directed, molded-plastic, paper-slot liner with 1/4-inch (6.4-mm) lip.

15. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
   a. Dark, Oxidized, Satin Bronze, Oil Rubbed: BHMA 613 for bronze base; BHMA 640 for steel base; match the Owner's sample.
   b. Bright Brass, Clear Coated: BHMA 605 for brass base; BHMA 632 for steel base.
   c. Satin Brass, Blackened, Bright Relieved, Clear Coated: BHMA 610 for brass base; BHMA 636 for steel base.
   d. Satin Chromium Plated: BHMA 626 for brass or bronze base; BHMA 652 for steel base.
   e. Bright Chromium Plated: BHMA 625 for brass or bronze base; BHMA 651 for steel base.
   f. Satin Stainless Steel: BHMA 630.

16. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

D. Miscellaneous Materials

1. Furring, Blocking, Shims, and Hanging Strips:
   a. Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.
   OR
   Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.

2. Rough Carriages for Stairs:
   a. Select Structural OR No. 1 OR No. 2, as directed, grade and any of the following species, kiln dried to 15 percent maximum moisture content:
      1) Douglas fir-larch.
      2) Douglas fir-south.
      3) Douglas fir-larch (north).
      4) Hem-fir.
      5) Hem-fir (north).
      6) Southern pine.
      7) Spruce-pine-fir (south).
      8) Spruce-pine-fir.
   OR
   Laminated veneer lumber, made with an exterior-type adhesive complying with ASTM D 2559, and with the following allowable design values as determined according to ASTM D 5456:
      1) Extreme Fiber Stress in Bending, Edgewise: 2850 psi (19.7 MPa) OR 2600 psi (17.9 MPa) OR 2500 psi (17.2 MPa), as directed, for 12-inch nominal- (286-mm actual-) depth members.
      2) Modulus of Elasticity, Edgewise: 2,000,000 psi (13 800 MPa) OR 1,800,000 psi (12 400 MPa), as directed.

3. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

4. Handrail Brackets: Cast OR Extruded OR Stamped, as directed, from malleable iron OR aluminum OR bronze OR stainless steel, as directed, with wall flange drilled for exposed anchor OR and tapped for concealed hanger bolt, as directed, and with support arm for screwing to underside of rail. Sized to provide 1-1/2-inch (38-mm) clearance between handrail and wall.

5. Handrail/Bumper Rail Brackets: Pairs of extruded-aluminum channels; one for fastening to back of rail and one for fastening to face of wall. They are then assembled in overlapping fashion and fastened together top and bottom with self-tapping screws. Sized to provide 1-1/2-inch (38-mm) clearance between handrail and wall.

6. Adhesives, General: Do not use adhesives that contain urea formaldehyde.
7. VOC Limits for Installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
   a. Wood Glues: 30 g/L
   b. Contact Adhesive: 250 g/L.

8. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement OR Contact cement OR PVA OR Urea formaldehyde OR Resorcinol, as directed.
   a. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

E. Fabrication, General
1. Interior Woodwork Grade: Unless otherwise indicated, provide Premium OR Custom OR Economy, as directed.-grade interior woodwork complying with referenced quality standard.
2. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
3. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
4. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
   a. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4 Inch (19 mm) Thick or Less: 1/16 inch (1.5 mm).
   c. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch (1.5 mm).
5. Complete fabrication, including assembly, finishing, as directed, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
6. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
   a. Seal edges of openings in countertops with a coat of varnish.
7. Install glass to comply with applicable requirements in Division 08 Section “Glazing” and in GANA’s “Glazing Manual.” For glass in wood frames, secure glass with removable stops.

F. Interior Standing and Running Trim:
1. For transparent-finished trim items wider than available lumber, use veneered construction. Do not glue for width.
2. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.
3. Assemble casings in plant except where limitations of access to place of installation require field assembly.

G. Interior Frames and Jambs
1. Products fabricated from particleboard or medium-density fiberboard with veneered, exposed surfaces.

H. Fire-Rated Interior Frames and Jambs
1. Products fabricated from fire-retardant particleboard or fire-retardant medium-density fiberboard with veneered, exposed surfaces and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
   a. Fire Rating: 20 minutes.

I. Stairwork and Rails:
1. Treads: Transparent OR Opaque, as directed, finish.
2. Risers: Transparent OR Opaque, as directed, finish.
3. Stringers: Transparent OR Opaque, as directed, finish.
4. Balusters: Transparent OR Opaque, as directed, finish.
5. Handrails: Transparent OR Opaque, as directed, finish.
6. Scotia, Cove, and Other Moldings: Transparent OR Opaque, as directed, finish.

J. Flush Wood Paneling and Wainscots:
1. Lumber Trim and Edges: At fabricator's option, trim and edges indicated as solid wood (except moldings) may be either lumber or veneered construction compatible with grain and color of veneered panels.
2. Matching of Adjacent Veneer Leaves: Book OR Slip OR Random, as directed, match.
3. Veneer Matching within Panel Face: Running OR Balance OR Center-balance, as directed, match.
4. Panel-Matching Method (Economy Grade): No matching between panels is required. Select and arrange panels for similarity of grain pattern and color between adjacent panels.
5. Panel-Matching Method (Custom or Premium Grade): In each separate area, use premanufactured sets used full width OR premanufactured sets selectively reduced in width OR sequence-matched, uniform-size sets, as directed.
6. Fire-Retardant-Treated Paneling: Provide panels consisting of wood veneer and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have flame-spread index of 75 OR 25, as directed, or less and smoke-developed index of 450 or less per ASTM E 84.

K. Interior Ornamental Work
1. Interior ornamental work includes the following:
   a. Balustrades.
   b. Columns.
   c. Grilles.
   d. Mantels.
   e. Pediment heads.
   f. Pilasters.

L. Wood Cabinets for Transparent Finish:
1. AWI Type of Cabinet Construction: Flush overlay OR Reveal overlay OR Reveal overlay on face frame OR Flush inset OR Flush inset with face frame OR As indicated, as directed.
2. WI Construction Style: Style A, Frameless OR B, Face Frame, as directed.
3. WI Construction Type: Type I, multiple self-supporting units rigidly joined together OR II, single-length sections to fit access openings, as directed.
4. WI Door and Drawer Front Style: Flush overlay OR Reveal overlay OR Lipped OR Flush, as directed.
5. Reveal Dimension: 1/2 inch (13 mm) OR As indicated, as directed.
6. Grain Direction: Vertically for drawer fronts, doors, and fixed panels OR Horizontally for drawer fronts, doors, and fixed panels OR As indicated, as directed.
7. Matching of Veneer Leaves: Book OR Slip OR Random, as directed, match.
8. Veneer Matching within Panel Face: Running OR Balance OR Center-balance, as directed, match.
9. Semiexposed Surfaces Other Than Drawer Bodies: Same species and cut indicated for exposed surfaces OR Thermost decorative panels OR Compatible species to that indicated for exposed surfaces, stained to match, as directed.
10. Drawer Sides and Backs: Solid-hardwood lumber, same species indicated for exposed surfaces OR Solid-hardwood lumber, stained to match species indicated for exposed surfaces OR Solid hardwood lumber OR Thermost decorative panels, as directed.
11. Drawer Bottoms: Hardwood plywood OR Thermost decorative panels, as directed.
12. Provide dust panels of 1/4-inch (6.4-mm) plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

M. Wood Cabinets for Opaque Finish:
1. AWI Type of Cabinet Construction: Flush overlay OR Reveal overlay OR Reveal overlay on face frame OR Flush inset OR Flush inset with face frame OR As indicated, as directed.
2. WI Construction Style: Style A, Frameless OR B, Face Frame, as directed.
3. WI Construction Type: Type I, multiple self-supporting units rigidly joined together OR II, single-length sections to fit access openings, as directed.
4. WI Door and Drawer Front Style: Flush overlay OR Reveal overlay OR Lipped OR Flush, as directed.
5. Reveal Dimension: 1/2 inch (13 mm) OR As indicated, as directed.
7. Panel Product for Exposed Surfaces: Medium-density fiberboard OR overlay, as directed.
8. Semireexposed Surfaces Other Than Drawer Bodies: Match materials indicated for exposed surfaces OR Thermoset decorative panels, as directed.
9. Drawer Sides and Backs: Solid-hardwood lumber OR Thermoset decorative panels, as directed.
10. Drawer Bottoms: Hardwood plywood OR Thermoset decorative panels, as directed.
11. Provide dust panels of 1/4-inch (6.4-mm) plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

N. Plastic-Laminate Cabinets:
1. AWI Type of Cabinet Construction: Flush overlay OR Reveal overlay OR Reveal overlay on face frame OR Flush inset OR Flush inset with face frame OR As indicated, as directed.
2. WI Construction Style: Style A, Frameless OR B, Face Frame, as directed.
3. WI Construction Type: Type I, multiple self-supporting units rigidly joined together OR II, single-length sections to fit access openings, as directed.
4. WI Door and Drawer Front Style: Flush overlay OR Reveal overlay OR Lipped OR Flush, as directed.
5. Reveal Dimension: 1/2 inch (13 mm) OR As indicated, as directed.
6. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate as follows:
   a. Horizontal Surfaces Other Than Tops: Grade HGS OR HGL, as directed.
   b. Postformed Surfaces: Grade HGP, as directed.
   c. Vertical Surfaces: Grade HGS OR VGS, as directed.
   d. Edges: Grade HGS OR Grade VGS OR PVC tape, 0.018-inch (0.460-mm) minimum thickness, matching laminate in color, pattern, and finish OR PVC T-mold matching laminate in color, pattern, and finish OR PVC edge banding, 0.12 inch (3 mm) thick, matching laminate in color, pattern, and finish, as directed.
7. Materials for Semireexposed Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, Grade VGS OR High-pressure decorative laminate, Grade CLS OR Thermoset decorative panels, as directed.
8. Drawer Sides and Backs: Solid-hardwood lumber OR Thermoset decorative panels, as directed.
9. Drawer Bottoms: Hardwood plywood OR Thermoset decorative panels, as directed.
10. Colors, Patterns, and Finishes: As indicated by manufacturer's designations OR Match sample, as directed.
11. Colors, Patterns, and Finishes: As selected by the Owner from laminate manufacturer's full range of solid colors OR wood grains OR patterns, as directed, gloss OR matte, as directed, finish.
12. Provide dust panels of 1/4-inch (6.4-mm) plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

O. Wood Countertops
1. Type of Top:
   a. Solid wood for transparent finish, edge glued, with crown direction reversed in adjacent boards, to produce widths indicated. Select boards for similarity of color and grain and arrange boards for optimum match between adjacent boards.
   OR
   Solid laminated for transparent finish. Narrow strips of lumber glued together with crown direction reversed in adjacent strips. Arrange strips for random mix of color and grain.
   OR
   Panel product for transparent finish (wood veneer laminated over core).
1) Core Material: Particleboard or medium-density fiberboard OR Particleboard OR Medium-density fiberboard made with exterior glue OR Medium-density fiberboard made with exterior glue OR Exterior-grade plywood OR Fire-retardant particleboard, as directed.

P. Plastic-Laminate Countertops:
1. High-Pressure Decorative Laminate Grade: HGS OR HGP, as directed.
2. Colors, Patterns, and Finishes: As selected by the Owner from laminate manufacturer's full range of solid colors OR wood grains OR patterns, as directed, gloss OR matte, as directed, finish.
3. Edge Treatment: Same as laminate cladding on horizontal surfaces OR Lumber edge for transparent finish matching wood species and cut on cabinet surfaces OR As indicated, as directed.
4. Core Material at Sinks: Particleboard made with exterior glue OR Medium-density fiberboard made with exterior glue or exterior-grade plywood, as directed.

Q. Solid-Surfacing-Material Countertops:
1. Solid-Surfacing-Material Thickness: 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed.
2. Colors, Patterns, and Finishes: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
3. Fabricate tops in one piece with shop-applied backsplashes OR loose backsplashes for field application, as directed. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.
4. Install integral sink bowls in countertops in shop.

R. Laminated-Plastic Laboratory Tops
1. High-Pressure Decorative Laminate: Grade HGS OR Grade HGP OR Chemical-resistant, Grade HGP, as directed.
2. Colors and Patterns: Provide materials and products that result in colors and patterns of exposed laminate surfaces complying with the following requirements:
3. Core Material: Particleboard OR Particleboard made with exterior glue OR Fire-retardant particleboard OR Rotary-cut lauan or closed-grain hardwood plywood OR Exterior-grade rotary-cut lauan or closed-grain hardwood plywood, as directed.

S. Closet And Utility Shelving
1. Shelf Material: 3/4-inch (19-mm) solid lumber OR veneer-faced panel product with solid-lumber edge OR veneer-faced panel product with veneer edge banding OR thermoset decorative panel with solid-lumber edge OR thermoset decorative panel with PVC or polyester edge banding OR medium-density fiberboard with solid-lumber edge OR particleboard with solid-lumber edge OR medium-density fiberboard with radiused edge OR particleboard with radiused and filled edge, as directed.
2. Cleats: 3/4-inch (19-mm) solid lumber OR thermoset decorative panel OR panel product, as directed.
3. Wood Species: Match species indicated for other types of transparent-finished architectural woodwork located in same area of building, unless otherwise indicated OR Match species indicated for door to closet where shelving is located OR Any closed-grain hardwood OR Eastern white pine, sugar pine, or western white pine, as directed.

T. Shop Finishing
1. Grade: Provide finishes of same grades as items to be finished.
2. General: Finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
3. General: Shop finish transparent-finished interior architectural woodwork at fabrication shop as specified in this Section. Refer to Division 07 for finishing opaque-finished architectural woodwork.
4. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to Division 07 for finishing architectural woodwork not indicated to be shop finished.
5. **Shop Priming:** Shop apply the prime coat including backpriming, if any, for transparent-finished items specified to be field finished. Refer to Division 07 for material and application requirements.

6. **Preparation for Finishing:** Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.
   a. **Backpriming:** Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require backpriming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.

U. **Transparent Finish:**
   1. **Grade:** Premium OR Custom OR Economy, as directed.
   2. **AWI Finish System:** Acrylic lacquer OR Conversion varnish OR Catalyzed vinyl, as directed.
   3. **WI Finish System:** 2, water-reducible acrylic lacquer OR 3b., catalyzed vinyl lacquer OR 4, conversion varnish, as directed.
   4. **Staining:** None required OR Match approved sample, as directed.
   5. **Wash Coat for Stained Finish:** Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
   6. **Open Finish for Open-Grain Woods:** Do not apply filler to open-grain woods.
   7. **Filled Finish for Open-Grain Woods:** After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
      a. **Apply wash-coat sealer after staining and before filling.**
   8. **Sheen:** Flat, 15-30 OR Satin, 31-45 OR Semigloss, 46-60 OR Gloss, 61-100, as directed gloss units measured on 60-degree gloss meter per ASTM D 523.

V. **Opaque Finish:**
   1. **Grade:** Premium OR Custom OR Economy, as directed.
   2. **AWI Finish System:** Conversion varnish OR Catalyzed vinyl, as directed.
   3. **WI Finish System:** 3b., catalyzed vinyl lacquer OR 4, conversion varnish OR 7a., synthetic enamel, as directed.
   4. **Color:** As indicated by manufacturer’s designations OR Match sample OR As selected from manufacturer’s full range, as directed.
   5. **Sheen:** Flat, 15-30 OR Satin, 31-45 OR Semigloss, 46-60 OR Gloss, 61-100, as directed, gloss units measured on 60-degree gloss meter per ASTM D 523.

1.3 **EXECUTION**

A. **Preparation**
   1. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
   2. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

B. **Installation**
   1. **Grade:** Install woodwork to comply with requirements for the same grade specified in Part 1.2 for fabrication of type of woodwork involved.
   2. **Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 1.2, to extent that it was not completed in the shop.**
   3. **Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm).**
   4. **Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.**
   5. **Fire-Retardant-Treated Wood:** Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer’s written instructions, including those for adhesives used to install woodwork.
6. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

7. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 36 inches (900 mm) OR 60 inches (1500 mm) OR 96 inches (2400 mm), as directed, long, except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.
   a. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base if finished.
   b. Install wall railings on indicated metal brackets securely fastened to wall framing.
   c. Install standing and running trim with no more than variation from a straight line than 1/8 inch in 96 inches (3 mm in 2400 mm).

8. Paneling: Anchor paneling to supporting substrate with concealed panel-hanger clips OR splined connection strips, as directed. Do not use face fastening, unless covered by trim OR otherwise indicated.
   a. Install flush paneling with no more than 1/16 inch in 96-inch (1.5 mm in 2400-mm) vertical cup or bow and 1/8 inch in 96-inch (3 mm in 2400-mm) horizontal variation from a true plane.

9. Stairs: Securely anchor carriages to supporting substrates. Install stairs with treads and risers no more than 1/8 inch (3 mm) from indicated position.

10. Railings:
   a. General: Install rails with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) variation from a straight line.
   b. Stair Rails: Glue and dowel or pin balusters to treads and railings, and railings to newel posts.
   c. Wall Rails: Support rails on indicated metal brackets securely fastened to wall framing.

11. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
   a. Install cabinets with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
   b. Maintain veneer sequence matching of cabinets with transparent finish.
   c. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches (400 mm) o.c. with No. 10 wafer-head screws sized for 1-inch (25-mm) penetration into wood framing, blocking, or hanging strips OR No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish OR toggle bolts through metal backing or metal framing behind wall finish, as directed.

12. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
   a. Align adjacent solid-surfacing-material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
   b. Install countertops with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
   c. Secure backsplashes to tops with concealed metal brackets at 16 inches (400 mm) o.c. and to walls with adhesive.
   d. Calk space between backsplash and wall with sealant specified in Division 07 Section "Joint Sealants".

13. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

14. Refer to Division 07 for final finishing of installed architectural woodwork not indicated to be shop finished.

C. Adjusting And Cleaning

1. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
2. Clean, lubricate, and adjust hardware.
3. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

SECTION 06 42 19 00 - PANELING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for paneling. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Board paneling.
   b. Flush wood paneling.
   c. Plastic-laminate-clad flush paneling.
   d. Stile and rail wood paneling.

C. Definitions
1. Paneling includes wood furring, blocking, and shims for installing paneling, unless concealed within other construction before paneling installation.

D. Submittals
1. Product Data: For each type of product indicated, including finishing materials and processes.
   a. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
   a. For paneling produced from premanufactured sets, show finished panel sizes, set numbers, sequence numbers within sets, and method of cutting panels to produce indicated sizes.
   b. For paneling veneered in fabrication shop, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
   c. Apply WI-certified compliance label to first page of Shop Drawings, as directed.
3. Samples:
   a. Lumber and panel products for transparent finish, for each species and cut, finished on one side and one edge.
   b. Veneer leaves representative of and selected from flitches to be used for transparent-finished paneling.
   c. Veneer-faced panel products with or for transparent finish, for each species and cut. Include at least one face-veneer seam and finish as specified.
   d. Lumber and panel products with shop-applied opaque finish, for each finish system and color, with 1/2 of exposed surface finished.
   e. Plastic laminates, 8 by 10 inches (200 by 250 mm), for each type, color, pattern, and surface finish, with 1 sample applied to core material.
   f. Corner pieces for stile and rail paneling, 18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep.
4. LEED Submittals:
   a. Product Data for Credit EQ 4.1: For installation adhesives, including printed statement of VOC content.
   b. Product Data for Credit EQ 4.4: For composite-wood products and fabrication adhesives, documentation indicating that products contain no urea formaldehyde.
   c. Product Data for Credit(s) MR 4.1 and MR 4.2, as directed: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
1) Include statement indicating costs for each product having recycled content.

   d. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.

1) Include statement indicating costs for each certified wood product.

5. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates OR WIC-certified compliance certificates, as directed.

E. Quality Assurance

1. Installer Qualifications: Fabricator of products.
   a. Provide AWI Quality Certification Program labels and certificates for woodwork, including installation.
   b. Provide WIC-certified compliance labels and certificates for woodwork, including installation.
3. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
4. Forest Certification: Provide paneling produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
5. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling

1. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

G. Project Conditions

1. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.2 PRODUCTS

A. Materials

1. General: Provide materials that comply with requirements of AWI's OR WIC's, as directed, quality standard for quality grade specified, unless otherwise indicated.
2. Wood Products: Comply with the following:
   a. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
   b. Particleboard: ANSI A208.1, Grade M-2 OR M-2-Exterior Glue, as directed.
   c. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
   d. Softwood Plywood: DOC PS 1, Medium Density Overlay.
   e. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no urea formaldehyde.
3. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.

4. Adhesives: Do not use adhesives that contain urea formaldehyde.

5. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement OR Contact cement OR PVA OR Urea formaldehyde OR Resorcinol, as directed.
   a. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

6. VOC Limits for installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):  
   a. Wood Glues: 30 g/L.
   b. Panel Adhesives: 50 g/L.
   c. Contact Adhesive: 80 g/L.
   d. Special Purpose Contact Adhesive (contact adhesive that is used to bond melamine covered board, metal, unsupported vinyl, Teflon, ultra-high molecular weight polyethylene, rubber or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.

B. Fire-Retardant-Treated Materials
1. General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and that comply with requirements in this Article and with fire-test-response characteristics specified.
   a. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
   b. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
   c. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.

2. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWPA C20 (lumber) and AWPA C27 (plywood). Use the following treatment type:  
   b. Interior Type A: Low-hygroscopic formulation.
   c. Mill lumber after treatment, within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking plant certified by testing and inspecting agency.
   d. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
   e. Kiln-dry materials before and after treatment to levels required for untreated materials.

3. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.

4. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.

C. Installation Materials
1. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, fire-retardant-treated, as directed, kiln-dried to less than 15 percent moisture content.

2. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.
D. Fabrication, General
1. Paneling Grade: Provide Premium OR Custom OR Economy, as directed, grade paneling complying with referenced quality standard.
2. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
3. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
4. Arrange paneling in shop or other suitable space in proposed sequence for examination by the Owner. Mark units with temporary sequence numbers to indicate position in proposed layout.
   a. Lay out one elevation at a time if approved by the Owner.
   b. Notify the Owner seven days in advance of the date and time when layout will be available for viewing.
   c. Provide lighting of similar type and level as that of final installation for viewing layout, unless otherwise approved by the Owner.
   d. Rearrange paneling as directed by the Owner until layout is approved.
   e. Do not trim end units and other nonmodular size units to less than modular size until after the Owner's approval of layout. Indicate trimming by masking edges of units with nonmarking material.
   f. Obtain the Owner's approval of layout before start of assembly. Mark units and Shop Drawings with assembly sequence numbers based on approved layout.
5. Complete fabrication, including assembly and finishing, as directed, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
6. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

E. Board Paneling For Transparent Finish
1. Grade: Provide Premium OR Custom OR Economy, as directed.
2. Wood Species and Cut: Hickory, quarter sawn OR Red gum, plain sawn OR Western white pine, plain sawn OR Cypress, plain sawn, as directed.
3. Pattern: 1-by-6, vee joint, tongue and groove, 5-1/16-inch (129-mm) coverage OR 1-by-8, pickwick paneling (WWPA Pattern WP-2), 6-3/4-inch (172-mm) coverage OR 1-by-4, beaded ceiling, 3-3/16-inch (81-mm) coverage OR As indicated, as directed.
4. Shop fabricate board paneling in lengths to provide pieces that are uninterrupted by joints OR random-lengths, as directed. Machine edges of boards to provide joint profiles indicated.
5. Preassemble board paneling into largest units that can be delivered into installation areas using permanent or temporary backing members as indicated. To maximum extent possible, fabricate units in sizes determined by field measurements of existing conditions and that will avoid fitting in the field; make provision for separate scribing pieces to be fitted to adjoining finished surfaces. Provide shop-prepared detachable pieces for forming joints with other units at Project site and with other types of architectural woodwork.

F. Board Paneling For Opaque Finish
1. Grade: Provide Premium OR Custom OR Economy, as directed.
2. Wood Species: Eastern white pine, sugar pine, or western white pine OR Any closed-grain hardwood, as directed.
3. Pattern: 1-by-6, vee joint, tongue and groove, 5-1/16-inch (129-mm) coverage OR 1-by-8, pickwick paneling (WWPA Pattern WP-2), 6-3/4-inch (172-mm) coverage OR 1-by-4, beaded ceiling, 3-3/16-inch (81-mm) coverage OR As indicated, as directed.
4. Shop fabricate board paneling in lengths to provide pieces that are uninterrupted by joints OR random-lengths, as directed. Machine edges of boards to provide joint profiles indicated.
5. Preassemble board paneling into largest units that can be delivered into installation areas using permanent or temporary backing members as indicated. To maximum extent possible, fabricate
units in sizes determined by field measurements of existing conditions and that will avoid fitting in the field; make provision for separate scribing pieces to be fitted to adjoining finished surfaces. Provide shop-prepared detachable pieces for forming joints with other units at Project site and with other types of architectural woodwork.

G. Flush Wood Paneling For Transparent Finish
1. Grade: Provide Premium OR Custom OR Economy, as directed.
2. Wood Species and Cut: White oak, rift sliced OR Cherry, plain sliced OR Butternut, plain sliced OR Avodire, quarter sliced, as directed.
   a. Lumber Trim and Edges: At paneling fabricator’s option, trim and edges indicated as solid wood (except moldings) may be either lumber or veneered construction of same species and cut as panel faces and compatible with grain and color of panel faces.
3. Matching of Adjacent Veneer Leaves: Book OR Slip OR Random, as directed match.
4. Matching within Panel Face: Running OR Balance OR Center-balance, as directed, match.
5. Panel-Matching Method:
   a. No matching is required between panels. Select and arrange panels for similarity of grain pattern and color between adjacent panels.
      OR
   Premanufactured sets used full width OR Premanufactured sets selectively reduced in width OR Sequence-matched, uniform-size sets OR Blueprint-matched panels and components, as directed, within each separate area.
6. Vertical Panel-Matching Method: Continuous match; veneer leaves of upper panels are continuations of veneer leaves of lower panels OR Vertical book match; veneer leaves are individually book matched from lower panels to upper panels OR Vertical slip match; veneer leaves are individually slip matched from lower panels to upper panels OR Panel vertical book match; panels are book matched from lower panels to upper panels OR Panel vertical slip match; panels are slip matched from lower panels to upper panels, as directed.
7. Panel Core Construction: Hardwood veneer-core plywood OR Particleboard or medium-density fiberboard OR Fire-retardant particleboard or fire-retardant, medium-density fiberboard, as directed.
8. Exposed Panel Edges: Solid wood or wood veneer matching faces OR Legs of metal channels forming reveals OR Bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels, as directed.
9. Panel Reveals: Matte black plastic laminate OR Bronze sheet OR Stainless-steel sheet OR Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick OR Stainless-steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick, as directed.
10. Fire-Retardant-Treated Paneling: Provide panels consisting of wood-veneer and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of 75 OR 25, as directed, or less and a smoke-developed index of 450 or less per ASTM E 84.
   a. Provide paneling of 3/4-inch (19-mm) minimum thickness.

H. Plastic-Laminate-Clad Flush Paneling
1. Grade: Provide Premium OR Custom OR Economy, as directed.
2. Plastic-Laminate Cladding: High-pressure decorative laminate, in the following grades:
   a. Faces: Grade HGS OR VGS OR SGF OR HGF OR VGF, as directed.
   b. Backs: Grade BKH OR BKV OR BKL, as directed.
   c. Exposed Edges: Same as faces or Grade VGS.
3. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed surfaces complying with the following requirements:
   a. As indicated by manufacturer’s designations.
   b. Match the Owner’s samples.
   c. As selected by the Owner from laminate manufacturer’s full range in the following categories:
      1) Solid colors, gloss OR matte, as directed, finish.
      2) Solid colors with core same color as surface, gloss OR matte, as directed, finish.
      3) Wood grains, gloss OR matte, as directed, finish.
      4) Patterns, gloss OR matte, as directed, finish.
4. Panel Core Construction: Particleboard or medium-density fiberboard OR Fire-retardant particleboard or fire-retardant, medium-density fiberboard, as directed.

5. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of 75 OR 25, as directed, or less and a smoke-developed index of 450 or less per ASTM E 84.
   a. Provide paneling of 3/4-inch (19-mm) minimum thickness.

I. Stile And Rail Wood Paneling For Transparent Finish
   1. Grade: Premium OR Custom OR Economy, as directed.
   2. Wood Species: White oak, rift sawn/sliced OR Figured English ash, quarter sawn/sliced OR Butternut, plain sawn/sliced OR Figured red gum, plain-sawn/sliced panels, quarter-sawn/sliced stiles and rails, as directed.
   3. Stiles and Rails: At fabricator's option, stiles and rails may be either lumber or veneered construction with edges banded or with lumber moldings, as indicated, to conceal core and veneer joints.
   4. Panels: Flat panels OR Raised panels with veneered faces and solid lumber rims OR Raised panels with veneered faces extending across rims OR Raised panels made from edge-glued solid lumber, as directed.
   5. Insert Panels:
      a. Blueprint matched in a horizontal sequence for adjacent panels and doors, with continuous vertical matching between adjacent panels. Book and balance OR Book, balance, and center, as directed, match face-veneer leaves within each panel. OR
      Cut panels from premanufactured, sequence-matched sets of book-matched veneered panels. Cut panels with an even OR even or odd, as directed, number of veneer leaves centered in each panel and with each of the remainders at least half as wide as the full veneer leaves, as directed. Cut panels with continuous matching between vertically adjacent panels; veneer leaves of upper panels are continuations of veneer leaves of panels below them. OR
      Book and balance match face veneers within panels. No matching is required between adjacent panels; select and arrange panels for similarity of grain pattern and color between adjacent panels.
   6. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
      a. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.

J. Stile And Rail Wood Paneling For Opaque Finish
   1. Grade: Premium OR Custom OR Economy, as directed.
   2. Wood Species: Any closed-grain hardwood OR Eastern white pine, ponderosa pine, sugar pine, or western white pine, as directed.
   3. Stiles and Rails: Either solid lumber or particleboard, shop filled on face, with veneered or lumber-bodied edges, as paneling fabricator's option.
   4. Flat Insert Panels: Medium-density fiberboard or particleboard with shop-filled face.
   5. Raised Insert Panels: Medium-density overlaid softwood plywood (Exterior) APA MDO EXT, machined to profile indicated and shop filled on exposed machined surfaces OR Medium-density fiberboard, machined to profile indicated, as directed.
   6. Provide fire-retardant treatment of stile and rail paneling as indicated below. For components of paneling fabricated from solid lumber, mill pieces before treatment.
      a. For stiles and rails, use fire-retardant-treated lumber or fire-retardant medium-density fiberboard.
b. For built-up stiles and rails, use fire-retardant particleboard with fire-retardant lumber edge-bands or fire-retardant medium-density fiberboard.

c. For insert panels, use fire-retardant medium-density fiberboard.

OR

For insert panels, use fire-retardant particleboard with closed-grain hardwood veneer on face and back.

7. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.

a. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.

K. Shop Finishing

1. Grade: Provide finishes of same grades as paneling to be finished.

2. General:
   a. Finish paneling at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

   OR

   Shop finish transparent-finished paneling at fabrication shop as specified in this Section. Refer to Division 07 for finishing of opaque-finished paneling.

   OR

   Drawings indicate paneling that is required to be shop finished. Finish such paneling at fabrication shop as specified in this Section. Refer to Division 07 for finishing paneling not indicated to be shop finished.

3. Shop Priming: Shop apply the prime coat including backpriming, if any, for transparent-finished paneling specified to be field finished. Refer to Division 07 for material and application requirements.

4. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.
   a. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling. Concealed surfaces of plastic-laminate-clad paneling do not require backpriming when surfaced with plastic laminate.

5. Transparent Finish:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. AWI Finish System: TR-0, synthetic penetrating oil OR TR-3, cellulose acetate butyrate or water-reducible acrylic lacquer OR TR-4, conversion varnish OR TR-5, catalyzed vinyl lacquer, as directed.
   c. WIC Finish System: 2, water-reducible acrylic lacquer OR 3b., catalyzed vinyl lacquer OR 4, conversion varnish OR 6, penetrating oil, as directed.
   d. Staining: None required OR Match approved sample for color OR Match the Owner's sample, as directed.
   e. Wash Coat for Stained Finish: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
   f. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
   g. Filled Finish for Open-Grain Woods: After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
   1) Apply wash-coat sealer after staining and before filling.
   h. Sheen: Flat, 15-30 OR Satin, 31-45 OR Semigloss, 46-60 OR Gloss, 61-100, as directed, gloss units measured on 60-degree gloss meter per ASTM D 523.

6. Opaque Finish: Comply with requirements indicated below for grade, finish system, color, effect, and sheen, with sheen measured on 60-degree gloss meter per ASTM D 523.
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. AWI Finish System: OP-4, conversion varnish OR OP-5, catalyzed vinyl, as directed.
   c. WIC Finish System: 3b., catalyzed vinyl lacquer OR 4, conversion varnish OR 7a., synthetic enamel, as directed.
d. Color: As indicated by manufacturer’s designations OR Match sample OR As selected from manufacturer’s full range, as directed.

e. Sheen: Flat, 10-25 OR Satin, 30-50 OR Semigloss, 55-75 OR Gloss, 80-100, as directed, gloss units.

1.3 EXECUTION

A. Preparation
1. Before installation, condition paneling to average prevailing humidity conditions in installation areas.
2. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

B. Installation
1. Grade: Install paneling to comply with requirements for same grade specified in Part 1.2 for fabrication of type of paneling involved.
2. Install paneling level, plumb, true, and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm). Install with no more than 1/16 inch in 96-inch (1.6 mm in 2400-mm) vertical cup or bow and 1/8 inch in 96-inch (3 mm in 2400-mm) horizontal variation from a true plane.
   a. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding 1/32 inch (0.8 mm) OR 1/16 inch (1.5 mm), as directed.
3. Scribe and cut paneling to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
4. Anchor paneling to supporting substrate with concealed panel-hanger clips OR splined connection strips OR blind nailing, as directed. Do not use face fastening unless covered by trim OR otherwise indicated, as directed.
5. Complete finishing work specified in this Section to extent not completed at shop or before installation of paneling. Fill nail holes with matching filler where exposed. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
6. Refer to Division 07 for final finishing of installed paneling.

C. Adjusting And Cleaning
1. Repair damaged and defective paneling, where possible, to eliminate functional and visual defects; where not possible to repair, replace paneling. Adjust for uniform appearance.
2. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 42 19 00
SECTION 06 42 19 00a - PLASTIC PANELING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for plastic paneling. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes glass-fiber reinforced plastic (FRP) wall paneling and trim accessories.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content and chemical components.
   b. Product Data for Credit EQ 4.4: For laminating adhesive and composite wood products used in factory-laminated plastic panels, indicating that product contains no urea formaldehyde.
3. Samples: For plastic paneling and trim accessories.

D. Quality Assurance
1. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Flame-Spread Index: 25 OR 200, as directed, or less.
   b. Smoke-Developed Index: 450 or less.
   c. Testing Agency: Acceptable to authorities having jurisdiction OR FM Approvals OR UL, as directed.

1.2 PRODUCTS

A. Plastic Sheet Paneling
   a. Nominal Thickness: Not less than 0.075 inch (1.9 mm) OR 0.09 inch (2.3 mm) OR 0.12 inch (3.0 mm), as directed.
   b. Surface Finish: Smooth OR Molded pebble texture OR Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile OR As selected by the Owner from manufacturer's full range, as directed.
   c. Color: White OR As selected by the Owner from manufacturer's full range, as directed.

B. Factory-Laminated Plastic Panels
1. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319, laminated to plywood OR oriented strand board OR fire-retardant particleboard OR gypsum board OR high-impact gypsum board OR moisture- and mold-resistant gypsum board, as directed.
   a. Glass-Fiber Reinforced Plastic Panel Nominal Thickness: Not less than 0.03 inch (0.76 mm) OR 0.05 inch (1.3 mm) OR 0.075 inch (1.9 mm) OR 0.09 inch (2.3 mm), as directed.
   b. Surface Finish: Smooth OR Molded pebble texture OR Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile OR As selected by the Owner from manufacturer's full range, as directed.
   c. Color: White OR As selected by the Owner from manufacturer's full range, as directed.
d. Plywood: DOC PS 1, Exterior B-C, 1/4 inch (6.4 mm) OR 3/8 inch (9.5 mm) OR 1/2 inch (12.7 mm) OR 5/8 inch (15.9 mm) OR 3/4 inch (19.1 mm), as directed, thick.

e. Oriented Strand Board: DOC PS 2, 1/4 inch (6.4 mm) OR 3/8 inch (9.5 mm) OR 1/2 inch (12.7 mm) OR 3/4 inch (19.1 mm), as directed, thick.

f. Fire-Retardant Particleboard: Product complying with ANSI A208.1, Grade M-S, except for modulus of rupture; with flame-spread index of 25 or less per ASTM E 84; and 3/8 inch (9.5 mm) OR 1/2 inch (12.7 mm), as directed, thick.

g. Gypsum Board: ASTM C 1396/C 1396M, Regular, 1/2 inch (12.7 mm) OR Type X, 5/8 inch (15.9 mm), as directed.

h. High-Impact Gypsum Board: ASTM C 1396/C 1396M, 5/8 inch (15.9 mm), with Type X core, and 0.010-inch (0.254-mm) OR 0.020-inch (0.508-mm) OR 0.030-inch (0.762-mm) OR 0.081-inch (2.057-mm), as directed, plastic film laminated to back side for greater resistance to through penetration (impact resistance).

i. Moisture- and Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M or ASTM C 1178/C 1178M, 5/8 inch (15.9 mm), Type X, with moisture- and mold-resistant core and surfaces.

j. Laminating Adhesive: Manufacturers standard adhesive that does not contain urea formaldehyde.

C. Accessories

1. Trim Accessories: Manufacturer's standard one-piece OR two-piece, snap-on, as directed, vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
   a. Color: White OR Match panels OR As selected by the Owner from manufacturer's full range, as directed.

2. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.

3. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.

4. Adhesive: As recommended by plastic paneling manufacturer.
   a. VOC Content: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

5. Sealant: Single-component, mildew-resistant, neutral-curing silicone OR Single-component, mildew-resistant, acid-curing silicone OR Latex, as directed, sealant recommended by plastic paneling manufacturer and complying with requirements in Division 07 Section "Joint Sealants".
   a. VOC Content: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1.3 EXECUTION

A. Preparation

1. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.

2. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.

3. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.

4. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.

5. Lay out paneling before installing. Locate panel joints where indicated OR to provide equal panels at ends of walls not less than half the width of full panels OR so that trimmed panels at corners are not less than 12 inches (300 mm) wide, as directed.
   a. Mark plumb lines on substrate at trim accessory OR panel joint, as directed, locations for accurate installation.
   b. Locate trim accessories OR panel joints, as directed, to allow clearance at panel edges according to manufacturer's written instructions.
B. Installation

1. Install plastic paneling according to manufacturer's written instructions.
   OR
   Install panels in a full spread of adhesive.
   OR
   Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
   a. Drill oversized fastener holes in panels and center fasteners in holes.
   b. Apply sealant to fastener holes before installing fasteners.

2. Install factory-laminated panels using concealed mounting splines in panel joints.
3. Install trim accessories with adhesive and nails or staples. Do not fasten through panels.
4. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
5. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
6. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
7. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

SECTION 06 46 29 00 - EXTERIOR ARCHITECTURAL WOODWORK

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for exterior architectural woodwork. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Exterior standing and running trim.
   b. Exterior frames and jambs.
   c. Exterior shutters.
   d. Exterior ornamental work.
   e. Shop priming exterior woodwork.
   f. Shop finishing exterior woodwork.

C. Submittals
1. Product Data: For each type of product and process indicated and incorporated into items of exterior architectural woodwork during fabrication, finishing, and installation.
   a. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
   b. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
3. Samples: For lumber for exterior wood stain finish and lumber and panel products for shop-applied opaque finish, for each finish system and color, with one-half of exposed surface finished.
4. LEED Submittal:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for each certified wood product.
5. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates OR WI-certified compliance certificates, as directed.

D. Quality Assurance
   a. Provide AWI Quality Certification Program labels and certificates indicating that woodwork, including installation.
   b. Provide WI-certified compliance labels and certificates indicating that woodwork, including installation.
2. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
3. Forest Certification: Provide exterior architectural woodwork produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
1.2 PRODUCTS

A. Materials
   1. General: Provide materials that comply with requirements of AWI's OR WI's, as directed, quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.
   2. Wood Products: Comply with the following:
      b. Softwood Plywood: DOC PS 1, Exterior OR Medium Density Overlay, as directed.

B. Wood-Preservative-Treated Materials
   1. Preservative Treatment by Nonpressure Process: Comply with AWPA N1 using the following preservative for woodwork items indicated to receive water-repellent preservative treatment:
      a. Water-Repellent Preservative: Formulation made specifically for dip treatment of woodwork items and containing 3-iodo-2-propynyl butyl carbamate (IPBC) complying with AWPA P8 as its active ingredient.
      b. Water-Repellent Preservative/Insecticide: Formulation made specifically for dip treatment of woodwork items and containing 3-iodo-2-propynyl butyl carbamate (IPBC) as its active ingredient, combined with an insecticide containing chlorpyrifos as its active ingredient, both complying with AWPA P8.
   2. Preservative Treatment by Pressure Process: AWPA C2 (lumber) and AWPA C9 (plywood) and the following:
      a. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
      b. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.
      c. Mark each treated item with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee Board of Review.
   3. Extent of Treatment: Treat blocking and nailers by pressure process and treat other exterior architectural woodwork either by pressure or nonpressure process.
      a. Items fabricated from the following wood species need not be treated:
         1) Redwood OR All-heart redwood, as directed.
         2) Western red cedar OR All-heart western red cedar, as directed.
         3) Teak.
         4) African mahogany.

C. Fire-Retardant-Treated Materials
   1. General: Where fire-retardant-treated materials are indicated, provide materials that comply with performance requirements of AWPA C20 (lumber) and AWPA C27 (plywood), exterior type.
      a. Fire-Retardant Chemicals: Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
      b. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
      c. Kiln-dry materials before and after treatment to levels required for untreated materials.
      d. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
      e. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.

D. Installation Materials
1. Blocking, Shims, and Nailers: Softwood or hardwood lumber, pressure-preservative treated OR fire-retardant treated, as directed, kiln dried to less than 15 percent moisture content.

2. Nails: Aluminum OR Hot-dip galvanized OR Stainless steel, as directed.

3. Screws: Aluminum OR Bronze OR Hot-dip galvanized OR Stainless steel, as directed.
   a. Provide self-drilling screws for metal framing supports, as recommended by metal-framing manufacturer.

4. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts, unless otherwise indicated. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

E. Fabrication
   1. Wood Moisture Content: 9 to 15 OR 10 to 15 OR 7 to 12, as directed, percent.
   2. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
      a. Edges of Solid-Wood (Lumber) Members 3/4 Inch (19 mm) Thick or Less: 1/16 inch (1.6 mm).
   3. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
   4. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Smooth edges of cutouts and seal with a water-resistant coating suitable for exterior applications.
   5. Woodwork for Transparent Finish:
      a. Grade: Premium OR Custom OR Economy, as directed.
      b. Wood Species: Teak OR African mahogany OR White oak OR All-heart redwood OR Western red cedar OR Eastern white pine, as directed.
   6. Woodwork for Opaque Finish:
      a. Grade: Premium OR Custom OR Economy, as directed.
      b. Wood Species: All-heart redwood OR Western red cedar OR Ponderosa pine OR Eastern white pine, sugar pine, or western white pine OR Any closed-grain hardwood, as directed.
   7. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.
   8. Shop Priming: Shop prime woodwork for paint finish with one coat of wood primer specified in Division 07.
      a. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.
   9. Shop Finishing: Entire finish of exterior architectural woodwork is specified in this Section. To greatest extent possible, finish architectural woodwork at fabrication shop. Defer only final touchup and cleaning until after installation.
      a. Grade: Same grade as item to be finished OR Premium OR Custom OR Economy, as directed.
      b. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.
      c. AWI Finish System: Conversion varnish OR Catalyzed polyurethane, as directed.
      d. WI Finish System: 4, conversion varnish OR 5, catalyzed polyurethane OR 7a., synthetic enamel, OR as directed.
      e. Sheen: Satin 31-45 OR Semigloss 46-60 OR Gloss 61-100, as directed, gloss units measured on 60-degree gloss meter per ASTM D 523.
1. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
2. Deliver concrete inserts and similar anchoring devices to be built into substrates well in advance of time substrates are to be built.
3. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

B. Installation
1. Quality Standard: Install woodwork to comply with same grade specified in Part 1.2 for type of woodwork involved.
2. Install woodwork true and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm).
3. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.
4. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer’s written instructions, including those for adhesives used to install woodwork.
5. Preservative-Treated Wood: Where cut or drilled in field, treat cut ends and drilled holes according to AWPA M4.
6. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk concealed fasteners and blind nailing. Use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork.
7. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 36 inches (900 mm) long, except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.
   a. Install standing and running trim with no more variation from a straight line than 1/8 inch in 96 inches (3 mm in 2400 mm).
8. Complete finishing work specified in this Section to extent not completed at shop or before installation of woodwork. Fill nail and screw holes with matching filler where exposed.
9. Refer to Division 07 for final finishing of installed architectural woodwork.

C. Adjusting And Cleaning
1. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; replace woodwork where not possible to repair. Adjust joinery for uniform appearance.
2. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

SECTION 06 51 13 00 - PLASTIC LUMBER

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses
1. For both residential and municipal applications, high-density polyethylene (HDPE) products are well suited for decking, porch flooring, docks, piers, furnishings, fencing, and lawn and garden items. HDPE products are cost-effective alternatives for ground contact and animal contact, wet, and environmentally harsh conditions.

C. Submittals
1. Product Data and Certificates: For each product indicated.
   a. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
   a. Show details full size.
   b. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
   c. Apply WI Certified Compliance Program label to first page of Shop Drawings.
3. Samples for initial selection for high-pressure decorative laminates.
4. Samples for verification for plastic laminates, 8 by 10 inches (200 by 250 mm) OR 12 by 12 inches (300 by 300 mm), as directed, for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
5. Qualification Data: For Installer OR Fabricator, as directed.
6. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates OR WI Certified Compliance Program certificates, as directed.
7. Evaluation Reports: For fire-retardant-treated materials from ICC-ES.

D. Limitations
1. Plastic lumber has less rigidity (modulus of elasticity) and greater elongation than wood lumber. Therefore, it is not recommended for use as a true structural member. Examples of applications that are inappropriate would be load-bearing walls, deck framing, and floor joists. It is recommended that an engineering study be performed prior to use of HDPE products if the application involves structural requirements. For commercial applications where the system design calls for concentrated loads, structural plastic lumber should be considered.
2. When utilizing HDPE products for decking or flooring, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

E. Quality Assurance
1. Plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber and hygrothermal testing.
2. Plastic lumber shall pass testing by UL and meet flammability standards established by ASTM.

1.2 PRODUCTS

A. Materials
1. High-density polyethylene (HDPE), UV-inhibited pigment systems, foaming compounds, and selected process additives, shall be derived from post-consumer bottle waste, such as milk and detergent bottles, then compounded into a rigid board stock material, with the resulting finished product containing minimum 75% recycled plastic by weight.

2. Plastic lumber shall have exceptional resistance to corrosive substances, oil and fuels, insects, fungi, salt spray, and other environmental stresses. They shall not absorb moisture; nor shall they rot, splinter, or crack.

3. HDPE products shall be manufactured in standard dimensional lumber sizes, and shapes.

4. Color of plastic lumber shall be selected from manufacturer’s standard colors.

1.3 EXECUTION

A. Installation

1. HDPE products shall have the capability of being fabricated and installed with the same tools used to work wood lumber. The product shall cut and drill very cleanly, as there is no grain to split or chip. It shall not be necessary to pre-drill the plastic lumber when fastening. Stainless steel or coated decking nails and screws are recommended for use with HDPE products. Screws offer the best form of attachment; however, nails and staples may also be utilized in some applications.

2. The use of full length boards is suggested to avoid unattractive butt-to-butt joints.

3. HDPE products offer multiple deck board attachment options to accommodate expansion and contraction concerns in different climatic conditions and to address specific installation parameters. These options include:
   a. Tongue and groove deck board attachment with toe screwing options.
   b. Direct screw attachment with feature strip options.
   c. Floating attachment with clip options.
   d. Floating attachment with groove & groove options.

B. Maintenance

1. HDPE products are unaffected by most corrosive substances and will not absorb moisture. To maintain the original finish, clean the lumber with soap and water. No sealing or painting is required; as a general rule, paint will not adhere to HDPE products.

2. Clean graffiti from the plastic lumber with the use of a conventional all-purpose cleaner or petroleum-based cleaner.

3. If the skin or surface layer of an HDPE product becomes marred or blemished, sand off the top skin. The surface can also be buffed to eliminate abrasions.

END OF SECTION 06 51 13 00
SECTION 06 51 13 00a - COMPOSITE PLASTIC LUMBER

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of composite plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses
1. Composite plastic lumber or boards are well designed for deck, porch, boardwalk, dock, and similar applications. These boards may also be used for many lumber applications, where a non-load bearing member is required. This material is particularly well suited for outdoor uses due to its durability characteristics. Composite boards have many beneficial properties for decking applications, including:
   a. Low moisture absorption.
   b. No rotting, splitting or splintering.
   c. Inherent termite and UV resistance.
   d. Excellent dimensional stability and wet/dry traction.
   e. No toxic compounds (CCA) to leach into soil or groundwater.
   f. Workability and appearance of natural lumber products.

C. Submittals
1. Product Data and Certificates: For each product indicated.
   a. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
   a. Show details full size.
   b. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
   c. Apply WI Certified Compliance Program label to first page of Shop Drawings.
3. Samples for initial selection for high-pressure decorative laminates.
4. Samples for verification for plastic laminates, 8 by 10 inches (200 by 250 mm) OR 12 by 12 inches (300 by 300 mm), as directed, for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
5. Qualification Data: For Installer OR Fabricator, as directed.
6. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates OR WI Certified Compliance Program certificates, as directed.
7. Evaluation Reports: For fire-retardant-treated materials from ICC-ES.

D. Limitations
1. Composite plastic lumber has less rigidity (modulus of elasticity) than wood lumber and is more flexible. Therefore, this material should not be employed as a structural component unless an engineering study indicates that its use is appropriate. These boards are not intended to be used as joists, beams, studs, columns or stringers.
2. When utilizing composite plastic lumber products for decking, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

E. Quality Assurance
1. Composite plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber.
2. Plastic lumber shall meet flammability standards established by ASTM.
F. Handling
   1. This material is more flexible and more dense than wood, which should be considered when handling boards.
   2. Storing boards on uneven or unsupported surfaces may lead to deformation of the material. Therefore, always store boards on a flat surface, or support with dunnage on centers of 24" or less.

1.2 PRODUCTS
   A. Materials
      1. Composite plastic lumber products shall be composed of approximately 65% recycled wood/natural fiber and 35% recycled plastic, with selected process additives. The plastic raw material utilized in this product is recycled plastic. It shall be processed to a uniform feedstock, compounded with recovered fibers and extruded into a rigid board product.
      2. Colors and sizes of composite plastic lumber shall be selected from manufacturer’s standard.

1.3 EXECUTION
   A. Installation
      1. Composite plastic lumber products shall have the capability of being fabricated and installed with the same tools used to work wood lumber. The product shall cut and drill very cleanly, as there is no grain to split or chip. For best results, use carbide-tipped blades and bits.
      2. For optimum water drainage, allow a gap of 3/16" to 1/4" between boards.
      3. Both nails and screws may be used to attach USPL composite boards; stainless steel or coated screw type fasteners are recommended.
      4. #8, 2 1/2" stainless steel or ceramic-coated deck screws are recommended for 5/4x6 boards, and #10, 3" stainless steel or ceramic-coated deck screws are recommended for 2x6 boards for best results.
      5. In cold weather, consider pre-drilling screw holes. Do not use fasteners within 3/4" of the edge of a board. Pneumatic nail guns work with this material.

   B. Maintenance
      1. Composite boards will weather to a lighter hue during the first few months; fading may take much longer in shaded areas.
      2. To clean dirt and most stains from the deck boards, use common deck cleaners available in hardware stores, home centers and lumberyards. Oil stains from grills and foods may require the use of a degreasing cleaner or light sanding to remove the stain. Mold and mildew are common on many exterior surfaces, and they may form on composite plastic lumber. Use common deck washes that contain sodium hypochlorite for best cleaning results.

END OF SECTION 06 51 13 00a
SECTION 06 51 13 00b - STRUCTURAL PLASTIC LUMBER

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of structural plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses
1. Structural plastic lumber products are used in a variety of commercial and marine applications and are often the product of choice for exterior applications where resistance to salt and fresh water, marine borers, and other environmentally harsh conditions is required. Due to the unique composition of structural plastic lumber, the product can be used for a number of structural members in commercial and shoreline timberwork.
2. It is well suited for:
   a. Dock and deck planks
   b. Wale timbers
   c. Sheet piling
   d. Camels
   e. Pilings
   f. Fenders
   g. Channel markers
   h. Posts, beams, and joists

C. Submittals
1. Product Data and Certificates: For each product indicated.
   a. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
   a. Show details full size.
   b. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
   c. Apply WI Certified Compliance Program label to first page of Shop Drawings.
3. Samples for initial selection for high-pressure decorative laminates.
4. Samples for verification for plastic laminates, 8 by 10 inches (200 by 250 mm) OR 12 by 12 inches (300 by 300 mm), as directed, for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
5. Qualification Data: For Installer OR Fabricator, as directed.
6. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates OR WI Certified Compliance Program certificates, as directed.
7. Evaluation Reports: For fire-retardant-treated materials from ICC-ES.

D. Limitations
1. This type of plastic lumber product has a significantly higher modulus of elasticity (MOE) than conventional forms of plastic lumber. However, the MOE of structural plastic lumber is lower than wood timber in good condition; therefore, it is important to evaluate the suitability of this product for specific uses. It is recommended that an engineering study be performed prior to use of structural plastic lumber products for structural applications. Building code regulations vary by region, so all users should consult local building and safety codes prior to installation for specific requirements.

E. Quality Assurance
1. Structural plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber and hygrothermal testing.
2. Plastic lumber shall meet flammability standards established by ASTM.

1.2 PRODUCTS

A. Materials
1. Structural plastic lumber shall be a high-performance construction material consisting of a patented formula of recycled plastic, fiberglass, and selected additives. The plastic raw material utilized in structural plastic lumber is derived from post-consumer bottle waste such as milk and detergent bottles. This material is compounded into a consistent, reinforced plastic timber product using reactive compatibilizers, creating a strong and stable plastic/fiber matrix.
2. Colors, sizes, and shapes of structural plastic lumber shall be selected from manufacturer's standard.

1.3 EXECUTION

A. Installation
1. Structural plastic lumber can be fabricated and installed with the same tools used to work wood lumber. The product will cut and drill very cleanly, as there is no grain to split or chip, or knots to bind tools and bend fasteners. It is reinforced with glass fibers, and precautions should be taken when fabricating this product. Maintain adequate ventilation when generating fabrication dust, and personal respiratory protection such as dust masks should be employed during fabrication, as well as safety glasses or goggles.
2. Pilings and sheet piling products can be driven with piledriving equipment such as vibratory hammers, land-based or barge-mounted drop hammers, or waterjets. For sheet piling installations, backfill soils should always be analyzed to determine that the proper amount of force would be exerted on the sheet piling system. For shoreline timberwork applications, structural plastic lumber is used with conventional hardware such as stainless or galvanized bolts, tie rods, nuts, washers, and anchor systems.
3. When utilizing structural plastic lumber products for decking, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

B. Maintenance
1. Structural plastic lumber products are unaffected by most corrosive substances and will not absorb moisture. To maintain the original finish, clean the lumber with soap and water. No sealing or painting is required; as a general rule, paint will not adhere well to these products.
2. Clean graffiti from the plastic lumber with the use of a conventional all-purpose cleaner or petroleum-based cleaner. If the skin or surface layer of plastic lumber becomes marred or blemished, sand off the top skin. The surface can also be buffed to eliminate abrasions.

SECTION 06 74 13 00 - PULTRUDED FIBERGLASS INDUSTRIAL GRATING

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for pultruded fiberglass industrial grating. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
   1. Shop drawings of all fabricated gratings and accessories in accordance with the provisions of this Section.
   2. Manufacturer's shop drawings clearly showing material sizes, styles, dimensions, catalog numbers, complete details for fabrication and installation of components including, but not limited to, location, lengths, types and sizes of fasteners, clip angles, member sizes, and connection details.
   3. Manufacturer's published literature including structural design data, structural properties data, grating load/deflection tables, corrosion resistance tables, certificates of compliance, test reports as applicable, concrete anchor systems and their allowable load tables, and design calculations for systems not sized or designed in the contract documents.
   4. Sample pieces of each item specified herein for acceptance as to quality and color. Sample pieces shall be manufactured by the method to be used in the work.

C. Quality Assurance
   1. All items to be provided under this Section shall be furnished only by manufacturers having experience in the design and manufacture of similar products and systems. If requested, experience shall be demonstrated by a record of at least five (5) previous, separate, similar successful installations in the last five (5) years.

D. Product Delivery And Storage
   1. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.
   2. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Store items in an enclosed area and free from contact with soil and water. Store adhesives, resins and their catalysts and hardeners in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21 to 29 degrees Celsius) until they are required.

1.2 PRODUCTS

A. General
   1. All FRP items furnished under this Section shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions as specified or required.
   2. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.
   3. Resins shall be vinyl ester or isophthalic with chemical formulations as necessary to provide the corrosion resistance, strength and other physical properties as required.
4. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.

5. All pultruded structural shapes shall be further protected from ultraviolet (UV) light with 1) integral UV inhibitors in the resin and 2) a synthetic surfacing veil to help produce a resin rich surface.

6. All FRP products shall have a tested flame spread rating of 15 or less per ASTM E-84 Tunnel Test. Gratings shall also have a tested burn time of less than 30 seconds and an extent of burn rate of less than or equal to 10 millimeters per ASTM D-635.

7. All grating clips shall be manufactured of Type 316SS (stainless steel).

B. Pultruded Grating

1. Manufacture: Grating components shall be high strength and high stiffness pultruded elements having a maximum of 70% and a minimum of 60% glass content (by weight) of continuous roving and continuous strand mat fiberglass reinforcements. The finished surface of the product shall be provided with a surfacing veil to provide a resin rich surface which improves corrosion resistance and resistance to ultraviolet degradation. Bearing bars shall be interlocked and epoxied in place with a two piece cross rod system to provide a mechanical and chemical lock.

2. Non-slip surfacing: Grating shall be provided with a quartz grit bonded and baked to the top surface of the finished grating product.

3. Fire rating: Grating shall be fire retardant with a tested flame spread rating of 15 or less when tested in accordance with ASTM E 84. Manufacturer may be required to provide certification of ASTM E84 test on grating panels from an independent testing laboratory. Certification shall be dated within the past two years. Test data shall be from full scale testing of actual production grating, of the same type and material supplied on the project. Test data performed only on the base resin shall not be acceptable.

4. Resin system: The resin system used in the manufacture of the grating shall be VEFR, vinyl ester or ISOFR, isophthalic. Manufacturer may be required to submit corrosion data from tests performed on actual grating products in standard chemical environments. Corrosion resistance data of the base resin from the manufacturer is not a true indicator of grating corrosion resistance and shall not be accepted.

5. Color: Gray or Yellow.

6. Depth: 2" deep load bars with a tolerance of plus or minus 1/32".

7. Mesh Configuration: 2" load bar spacing, 6" tie bar spacing on centers.

8. Load/Deflection: Grating shall meet manufacturer’s published safe recommended loadings with deflection not to exceed the following:
   a. Uniform distributed load over a 66" span: 50 pounds per square foot, with a maximum deflection of 0.13".

9. Substitutions: Other products of equal strength, stiffness, corrosion resistance and overall quality may be submitted with the proper supporting data to the engineer for approval.

C. Grating Fabrication

1. Measurements: Grating supplied shall meet the minimum dimensional requirements as shown or specified. The Contractor shall provide and/or verify measurements in field for work fabricated to fit field conditions as required by grating manufacturer to complete the work.
   a. Determine correct size and locations of required holes or cutouts from field dimensions before grating fabrication.

2. Layout: Each grating section shall be readily removable, except where indicated on drawings. Manufacturer to provide openings and holes where located on the contract drawings. Grating supports shall be provided at openings in the grating by contractor where necessary to meet load/deflection requirements specified herein. Grating openings which fit around protrusions (pipes, cables, machinery, etc.) shall be discontinuous at approximately the centerline of opening so each section of grating is readily removable. Gratings shall be fabricated free from warps, twists, or other defects which affect appearance and serviceability.

3. Sealing: All shop fabricated grating cuts shall be coated with vinyl ester resin to provide maximum corrosion resistance. All field fabricated grating cuts shall be coated similarly by the contractor in accordance with the manufacturer’s instructions.
4. Hardware: Type 316 stainless steel hold-down clips shall be provided and spaced at a maximum of four feet apart with a minimum of four per piece of grating, or as recommended by the manufacturer.

1.3 EXECUTION

A. Inspection

1. Shop inspection is authorized as required by the Owner and shall be at Owner's expense. The fabricator shall give ample notice to Contractor prior to the beginning of any fabrication work so that inspection may be provided.

2. The grating shall be as free, as commercially possible, from visual defects such as foreign inclusions, delamination, blisters, resin burns, air bubbles and pits.

B. Installation

1. Contractor shall install gratings in accordance with manufacturer’s assembly drawings. Lock grating panels securely in place with hold-down fasteners as specified herein. Field cut and drill fiberglass reinforced plastic products with carbide or diamond tipped bits and blades. Seal cut or drilled surfaces in accordance with manufacturer's instructions. Follow manufacturer's instructions when cutting or drilling fiberglass products or using resin products; provide adequate ventilation.

SECTION 06 82 00 00 - PULTRUDED FIBERGLASS STRUCTURAL SHAPES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of pultruded fiberglass structural shapes. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Demolition and removal of materials shall be as required to support the work.

B. Submittals
   1. Shop drawings of all fabricated structural systems and accessories.
   2. Manufacturer’s shop drawings clearly showing material sizes, types, styles, part or catalog numbers, complete details for the fabrication of and erection of components including, but not limited to, location, lengths, type and sizes of fasteners, clip angles, member sizes, and connection details.
   3. Manufacturer’s published literature including structural design data, structural properties data, corrosion resistance tables, certificates of compliance, test reports as applicable, and design calculations for systems not sized or designed in the contract documents, sealed by a Professional Engineer.
   4. Sample pieces of each item specified herein for acceptance as to quality and color. Sample pieces shall be manufactured by the method to be used in the work.

C. Quality Assurance
   1. All items to be provided under this Section shall be furnished only by manufacturers having experience in the design and manufacture of similar products and systems. If requested, experience shall be demonstrated by a record of at least five (5) previous, separate, similar successful installations in the last five (5) years.

D. Product Delivery and Storage
   1. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.
   2. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Store items in an enclosed area and free from contact with soil and water. Store adhesives, resins and their catalysts and hardeners in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21 to 29 degrees Celsius) until they are required.

1.2 PRODUCTS

A. Materials
   1. All structural shapes shall be manufactured by the pultrusion process with a glass content minimum of 45%, maximum of 55% by weight for maximum sunlight and chemical resistance. The structural shapes shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions as specified in the Contract Documents.
   2. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.
   3. Resins shall be ISO, non-fire retardant isophthalic polyester; ISOFR, fire retardant isophthalic polyester or VEFR, vinyl ester, with chemical formulation necessary to provide the corrosion resistance, strength and other physical properties as required.
4. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.

5. All pultruded structural shapes shall be further protected from ultraviolet (UV) attack with 1) integral UV inhibitors in the resin and 2) a synthetic surfacing veil to help produce a resin rich surface.

6. All FRP products shall have a tested flame spread rating of 25 or less per ASTM E-84 Tunnel Test.

B. Pultruded structural shapes shall have the minimum longitudinal mechanical properties listed below:

1.3 EXECUTION

A. Fabrication

1. Measurements: Structural Shapes supplied shall meet the minimum dimensional requirements as shown or specified. The Contractor shall provide and/or verify measurements in field for work fabricated to fit field conditions as required by manufacturer to complete the work. Determine correct size and locations of required holes or coping from field dimensions before structural shape fabrication.

2. Sealing: All shop fabricated cuts or drilling shall be coated with vinyl ester resin to provide maximum corrosion resistance. All field fabricated cuts or drilling shall be coated similarly by the contractor in accordance with the manufacturer's instructions.

3. Hardware: Type 316 stainless steel connection hardware shall be provided.

B. Inspection

1. Shop inspection shall be authorized as required by the Owner and shall be at Owner's expense. The fabricator shall give ample notice to Contractor prior to the beginning of any fabrication work so that inspection may be provided.

2. The structural shapes shall be as free, as commercially possible, from visual defects such as foreign inclusions, delamination, blisters, resin burns, air bubbles and pits.

END OF SECTION 06 82 00 00
SECTION 07 01 50 81 - BUILT-UP COAL-TAR ROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for built-up coal-tar roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Built-up coal-tar roofing.
      b. Vapor retarder.
      c. Roof insulation.
   2. Section includes the installation of insulation strips in ribs of acoustical roof deck. Insulation strips are furnished under Division 05 Section "Steel Decking".

C. Definitions
   2. Bitumen: A generic term for either asphalt or coal-tar pitch.
   3. Hot Coal-Tar Pitch: Coal-tar pitch heated to its equiviscous temperature, the temperature at which its viscosity is 25 centipoise for either mopping or mechanical application, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.
   4. Hot Roofing Asphalt: Roofing asphalt heated to its equiviscous temperature, the temperature at which its viscosity is 125 centipoise for mop-applied roofing asphalt and 75 centipoise for mechanical spreader-applied roofing asphalt, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.

D. Performance Requirements
   1. General Performance: Installed built-up roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Built-up roofing and base flashings shall remain watertight.
   2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by built-up roofing manufacturer based on testing and field experience.
   3. Roofing System Design (if built-up roofing system is to be designed to withstand uplift pressure established by ASCE/SEI 7): Provide built-up roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
      a. Corner Uplift Pressure: as directed by the Owner.
      b. Perimeter Uplift Pressure: as directed by the Owner.
      c. Field-of-Roof Uplift Pressure: as directed by the Owner.
   4. FM Approvals Listing (if Project is FM Global insured or if FM Approvals requirements will set a minimum quality standard): Provide built-up roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a built-up roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
      a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
      b. Hail Resistance Rating: MH OR SH, as directed.
5. Energy Performance (if required for LEED-NC Credit SS 7.2): Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.

6. Energy Performance (for roofs that must comply with the DOE’s ENERGY STAR requirements): Provide roofing system that is listed on the DOE’s ENERGYSTAR “Roof Products Qualified Product List” for low-slope roof products.

7. Energy Performance (for roofs that must comply with California Energy Commission’s CEC-Title 24): Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For built-up roofing. Include plans, elevations, sections, details, and attachments to other work.
   a. Base flashings and built-up terminations.
   b. Tapered insulation, including slopes.
   c. Crickets, saddles, and tapered edge strips, including slopes.
   d. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
4. Samples: For the following products:
   a. Built-up roofing materials, including base sheet, ply sheet and flashing sheet, of color specified.
   b. Roof insulation.
   c. 3 lb (1.5 kg) of aggregate surfacing material in gradation and color indicated.
   d. Walkway pads.
   e. Six insulation fasteners of each type, length, and finish.
5. Qualification Data: For qualified Installer and manufacturer.
6. Manufacturer Certificates: Signed by roofing manufacturer certifying that built-up roofing complies with requirements specified in “Performance Requirements” Article.
   a. Submit evidence of compliance with performance requirements.
7. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of built-up roofing.
8. Research/Evaluation Reports: For components of built-up roofing, from the ICC-ES OR other applicable model code organization, as directed.
9. Maintenance Data: For built-up roofing to include in maintenance manuals.
10. Warranties: Sample of special warranties.

F. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is UL listed OR FM Approvals approved, as directed, for built-up roofing identical to that used for this Project.
2. Installer Qualifications (if Project is FM Global insured and if a certified roofing installer is required): A qualified firm that is approved, authorized, or licensed by built-up roofing manufacturer to install manufacturer’s product and that is eligible to receive manufacturer’s special warranty.
3. Source Limitations (if required to comply with FM Approvals, UL, or another building code, or to comply with provisions of manufacturer’s special warranty): Obtain components including roof insulation and fasteners for built-up roofing from same manufacturer as built-up roofing or approved by built-up roofing manufacturer.
4. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical built-up roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
5. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer’s name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer’s written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed according to manufacturer’s written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer’s standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of built-up roofing that fail in materials or workmanship within specified warranty period.
   a. Special warranty includes built-up roofing membrane, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, and other components of built-up roofing.
   b. Warranty Period: 10 OR 15 OR 20 OR 25 OR 30, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Base-Sheet Materials
1. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).

2. Base Sheet: ASTM D 4601, Type I OR II, as directed, nonperforated, asphalt-impregnated and coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
   OR
   Base Sheet: ASTM D 4897, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and coated, glass-fiber base sheet with coarse granular surfacing or embossed venting channels on bottom surface.
   OR
   Base Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

B. Roofing Membrane Plies
   OR
   Ply Sheet: ASTM D 4990, Type I, coal-tar-impregnated, glass-fiber felt and the physical properties of ASTM D 2178, Type IV OR VI, as directed.

C. Base Flashing Sheet Materials

2. Granule-Surfaced Flashing Sheet: ASTM D 6164, Grade G, Type I or II, polyester-reinforced, SBS-modified asphalt sheet; granular surfaced base flashing; suitable for application method specified, and as follows:
   a. Granule Color: White OR Gray OR Tan, as directed.

4. Fabric Termination: Roofing manufacturer's standard polyester cloth, suitable for application and for reinforcing top seal of base flashing.

D. Bitumen Materials
2. Coal-Tar Pitch: ASTM D 450, Type I.
3. Roofing Asphalt: ASTM D 312, Type III OR IV OR III or IV as recommended by built-up roofing manufacturer for application, as directed. OR Roofing Asphalt: ASTM D 6152, SEBS modified.

E. Auxiliary Built-Up Roofing Materials
1. General: Auxiliary materials recommended by built-up roofing manufacturer for intended use and compatible with built-up roofing.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesives: 80 g/L.
      6) Other Adhesives: 250 g/L.
      7) Nonmembrane Roof Sealants: 300 g/L.
      8) Sealant Primers for Nonporous Substrates: 250 g/L.
      9) Sealant Primers for Porous Substrates: 775 g/L.
2. Cold-Applied Adhesive: Roofing manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with built-up base flashings.
4. SBS-Modified Asphalt Flashing Cement: Roofing manufacturer's standard, asbestos free, of consistency required for application.
6. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening built-up roofing components to substrate, tested by manufacturer for required pullout strength, and acceptable to roofing manufacturer.
7. Metal Flashing Sheet: Metal flashing sheet is specified in Division 07 Section “Sheet Metal Flashing And Trim”.
8. Metal Termination Bars: Roofing manufacturer's standard predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
9. Roof Coatings: ASTM D 2824, Type I, nonfibered OR III, fibered, asbestos-free, as directed, aluminum-pigmented asphaltic coating.
   OR
   Roof Coatings: ASTM D 6083, acrylic elastomer emulsion coating, formulated for use on bituminous roof surfaces.
   a. Color: White OR Gray OR Buff, as directed.

10. Aggregate Surfacing: ASTM D 1863, No. 6 or No. 67, clean, dry, opaque, water-worn gravel or crushed stone, free of sharp edges OR crushed slag, free of sharp edges, as directed.

11. Walkway Pads: Mineral-granule-surfaced, reinforced asphaltic composition OR Polymer-modified, reconstituted solid-rubber, surface-textured, as directed, slip-resisting pads, manufactured as a traffic pad for foot traffic and acceptable to built-up roofing manufacturer, 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, thick, minimum.

12. Miscellaneous Accessories: Provide miscellaneous accessories recommended by built-up roofing manufacturer.

F. Substrate Boards
1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
   Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

G. Vapor Retarder
1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
   OR
   Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.

2. Laminated Sheet: Kraft paper/polyethylene laminate, two layers, reinforced with woven fiberglass yarn, laminated and edge reinforced, with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.

3. Self-Adhering Sheet Vapor Retarder: ASTM D 1970, minimum of 40-mil- (1.0-mm-) thick, polyethylene film laminated to layer of rubberized asphalt adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold-applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
   OR
   Self-Adhering Sheet Vapor Retarder: 30- to 40-mil- (0.76- to 1.0-mm-) thick, polyethylene film laminated to layer of butyl rubber adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold-applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

H. Roof Insulation
1. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.
2. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.

3. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other surface.
   a. Type IV, cellulose-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.

4. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulose fibers, binders, and waterproofing agents with top surface seal coated.

5. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 1, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

6. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.

7. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/8 inch per 12 inches (1:96) OR 1/4 inch per 12 inches (1:48), as directed, unless otherwise indicated.

8. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

I. Insulation Accessories
1. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatible with built-up roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate and acceptable to roofing manufacturer.

3. Modified Asphalitic Insulation Adhesive: Insulation manufacturer's recommended modified asphaltic, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.

4. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

5. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

   OR
   Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

7. Wood Nailer Strips: Comply with requirements in Division 6 Section "Rough Carpentry" OR "Miscellaneous Carpentry", as directed.

   OR
   Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

9. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
   Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

10. Substrate Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass fiber.
1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
   a. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
   b. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
   c. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 5 Section "Steel Deck."
   d. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.
   e. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
   f. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
      1) Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if test sample foams or can be easily and cleanly stripped after cooling.
   g. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing manufacturer's written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
3. Prime surface of concrete deck with asphalt OR coal-tar, as directed, primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
4. Install insulation strips in ribs of acoustical roof decks according to acoustical roof deck manufacturer's written instructions.

C. Substrate Board Installation
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals’ "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
      OR
      Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to built-up roofing manufacturers' written instructions.

D. Vapor-Retarder Installation
1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape OR adhesive, as directed.
2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
      OR
      Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
3. **Self-Adhering Sheet Vapor Retarder:** Prime substrate if required by manufacturer. Install self-adhering sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.

4. **Built-up Vapor Retarder:** Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

5. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into built-up roofing system.

E. **Insulation Installation**

1. Comply with built-up roofing manufacturer's written instructions for installing roof insulation.

2. Install one lapped base sheet course and mechanically fasten to substrate according to built-up roofing manufacturer's written instructions.

3. **Nailer Strips:** Mechanically fasten 4-inch nominal- (89-mm actual-) width wood nailer strips of same thickness as insulation perpendicular to sloped roof deck, spaced 16 feet (4.88 m) apart for roof slopes greater than 1/4 inch per 12 inches (1:48) OR 1/2 inch per 12 inches (1:24), as directed.

4. **Insulation Cant Strips:** Install and secure preformed 45-degree insulation cant strips at junctures of built-up roofing with vertical surfaces or angle changes greater than 45 degrees.

5. Install tapered insulation under area of roofing to conform to slopes indicated.

6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

7. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite board insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

8. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

9. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

10. **Adhered Insulation:** Install each layer of insulation and adhere to substrate as follows:
   a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
   b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

   OR
   Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

   OR
   Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

11. **Mechanically Fastened Insulation:** Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   b. If number of fasteners will be based on ASCE/SEI 7’s uplift pressure, fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
12. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten first layer of insulation according to requirements in FM Approvals’ “RoofNav” for specified Windstorm Resistance Classification.
   b. If fastening is calculated from ASCE/SEI 7's uplift pressure, fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   c. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
      OR
      Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
      OR
      Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

13. If cover boards will be field installed over roof insulation and immediately below built-up roofing, install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed. Tape joints if required by roofing manufacturer.
   a. Fasten cover boards according to requirements in FM Approvals' “RoofNav” for specified Windstorm Resistance Classification.
   OR
   Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
   b. Apply hot roofing asphalt to underside and immediately bond cover board to substrate.

F. Built-Up Roofing Installation, General
1. If referencing NRCA's roof assembly identification matrix system, install roofing membrane according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing."
   a. Install roofing system BU-3 OR 4 OR 5, as directed, -N OR I OR C, as directed, -A-A, according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" and requirements in this Section.
2. For roofing that exceeds requirements of NRCA's roof assemblies, install built-up roofing membrane according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing" and as follows:
   a. Deck Type: N (nailable) OR I (insulated) OR C (concrete or nonnailable), as directed.
   b. Base Sheet: 1 OR 1, installed over sheathing paper, as directed.
   c. Number of Organic Felt Ply Sheets: 2 OR 3 OR 4, as directed.
   d. Number of Glass Fiber Ply Sheets: 1, top ply OR 2 OR 3 OR 4, as directed.
   e. Surfacing Type: A (aggregate).
3. Start installation of built-up roofing in presence of manufacturer's technical personnel.
4. Where roof slope exceeds 1/4 inch per 12 inches (1:48) OR 1/2 inch per 12 inches (1:24), as directed, install built-up roofing sheets parallel with slope.
   a. Backnail built-up roofing sheets to nailer strips OR substrate, as directed, according to roofing manufacturer's written instructions.
5. Cooperate with testing agencies engaged or required to perform services for installing roofing system.
6. Coordinate installation of built-up roofing so insulation and other components of built-up roofing not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
   a. Provide tie-offs at end of each day's work to cover exposed built-up roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.
   b. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.
c. Remove and discard temporary seals before beginning work on adjoining roofing.

7. Bitumen Heating: Do not raise bitumen temperature above equiviscous temperature range more than one hour before time of application. Do not exceed bitumen manufacturer's recommended temperature limits during bitumen heating. Do not heat bitumen within 25 deg F (14 deg C) of flash point. Discard bitumen maintained for more than 4 hours at a temperature exceeding 325 deg F (163 deg C) for coal-tar pitch or finished blowing temperature for roofing asphalt, as directed.
   a. Mopping Weights: For interply and other moppings, unless otherwise indicated, apply solid moppings of hot coal-tar pitch between ply sheets at a minimum rate of 20 lb/100 sq. ft. (1 kg/sq. m).

8. SEBS-Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing manufacturer's written instructions.

9. Substrate-Joint Penetrations: Prevent bitumen and adhesives from penetrating substrate joints, entering building, or damaging built-up roofing components or adjacent building construction.

G. Roofing Membrane Installation

1. If sheathing paper is required over wood decks by built-up roofing manufacturer, loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.

2. Install lapped base sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
   a. Mechanically fasten to substrate, for nailable substrate.
   OR
   Spot- or strip-mop to substrate with hot roofing asphalt.
   OR
   Adhere to substrate in a solid mopping of hot roofing asphalt OR uniform coating of cold-applied adhesive, as directed, for nonnailable or insulated substrates.

3. Monolithic Membrane: Install two OR three OR four, as directed, ply sheets starting at low point of roofing system. Align ply sheets without stretching. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane. Shingle in direction to shed water. Extend ply sheets over and terminate beyond cants. Embed each ply sheet in a solid mopping of hot coal-tar pitch to form a uniform membrane without ply sheets touching.

   OR

Composite Membrane: Install two OR three OR four, as directed, organic felt ply sheets starting at low point of roofing system. Align organic felt ply sheets without stretching. Shingle side laps of organic felt ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane. Shingle in direction to shed water.
   a. Install finish layer of one lapped coal-tar, glass-fiber ply sheet course over shingled organic felt ply sheets, starting at low point of built-up roofing. Offset laps from laps of preceding ply sheets and align coal-tar, glass-fiber ply sheet without stretching. Lap in direction to shed water.
   b. Extend ply sheets over and terminate beyond cants.
   c. Embed each ply sheet in a solid mopping of hot coal-tar pitch applied at rate required by built-up roofing manufacturer, to form a uniform membrane without ply sheets touching.

4. If delayed flood coating and aggregate surfacing of coal-tar, glass-fiber membrane or finish layer are permitted, glaze-coat roofing membrane surface with hot coal-tar pitch applied at a rate of 10 to 15 lb/100 sq. ft. (0.5 to 0.75 kg/sq. m) if aggregate surfacing is not applied immediately.

5. Aggregate Surfacing: If surfacing roofing membrane with aggregate, promptly after installing and testing roofing membrane, base flashing, and stripping, flood-coat roof surface with 70 lb/100 sq. ft. (3.5 kg/sq. m) of hot coal-tar pitch. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
   a. Aggregate Weight: 400 lb/100 sq. ft. (20 kg/sq. m) for gravel or crushed stone or 300 lb/100 sq. ft. (15 kg/sq. m) for slag.
   b. Sweep loose aggregate from roof surface and apply another flood coat of not less than 85 lb/100 sq. ft. (4.15 kg/sq. m) of hot coal-tar pitch. While flood coat is hot and fluid, apply a
uniform course of aggregate at the following rate. Sweep away loose aggregate and fully embed aggregate by lightly rolling into finished roof surface.

1) Aggregate Weight: 300 lb/100 sq. ft. (15 kg/sq. m) for gravel or crushed stone 200 lb/100 sq. ft. (10 kg/sq. m) for slag, average.

6. Walkway Pads: Install walkway pads using units of size indicated or, if not indicated, of manufacturer's standard size according to walkway pad manufacturer's written instructions.
   a. Sweep away loose aggregate surfacing and set walkway pads in additional flood coat of hot coal-tar pitch.

H. Flashing And Stripping Installation
1. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to built-up roofing manufacturer's written instructions and as follows:
   a. Prime substrates with asphalt primer if required by built-up roofing manufacturer.
   b. Backer Sheet Application: Install single backer sheet and adhere to substrate in a solid mopping of hot roofing asphalt OR asphalt roofing cement OR SBS-modified asphalt roofing cement OR cold-applied adhesive, as directed.

   OR
   Backer Sheet Application: Install two OR three, as directed, backer sheets and adhere to substrate in a solid mopping of hot roofing asphalt OR asphalt roofing cement, as directed.
   c. Flashing Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C). Apply hot roofing asphalt to back of flashing sheet if recommended by roofing manufacturer.

   OR
   Flashing Sheet Application: Adhere flashing sheet to substrate in SBS-modified asphalt roofing cement OR asphalt roofing cement, as directed.

2. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above built-up roofing and 4 inches (100 mm) onto field of built-up roofing.
3. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
   a. Securely fasten top termination of base flashing with continuous metal termination bar anchored into substrate.
   b. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement, as directed.
4. Apply roof coatings to smooth base flashings according to manufacturer's written instructions, by spray, roller, or other suitable application method.
5. Install stripping, according to roofing system manufacturer's written instructions, where metal flanges and edgings are set on built-up roofing.
   a. Flashing-Sheet Stripping: Install flashing-sheet stripping in a cold-applied adhesive or in a solid mopping of hot coal-tar pitch and extend onto roofing membrane.

   OR
   Built-up Stripping: Install stripping of not less than two roofing membrane ply sheets, setting each ply in a continuous coal-tar roofing cement or in a solid mopping of hot coal-tar pitch, and extend onto roofing membrane 4 inches (100 mm) and 6 inches (150 mm), respectively.
6. Roof Drains: Set 30-by-30-inch (760-by-760-mm) metal flashing in bed of asphalt roofing cement on completed built-up roofing. Cover metal flashing with built-up roofing cap-sheet stripping and extend a minimum of 4 inches (100 mm) OR 6 inches (150 mm), as directed, beyond edge of metal flashing onto field of built-up roofing. Clamp built-up roofing, metal flashing, and stripping into roof-drain clamping ring.
   a. Flashing-Sheet Stripping: Install flashing-sheet stripping in cold-applied adhesive or in a solid mopping of hot coal-tar pitch and extend onto roofing membrane.

   OR
   Built-up Stripping: Install stripping of not less than 2 roofing membrane ply sheets, setting each ply in a continuous coating of coal-tar roofing cement or in a solid mopping of hot coal-tar pitch, and extend onto roofing membrane 4 inches (100 mm) and 6 inches (150 mm), respectively.
I. Field Quality Control
   1. Testing Agency: Perform roof tests and inspections, observe flood tests, and prepare test reports.
   2. Test Cuts: Test specimens will be removed to evaluate problems observed during quality-assurance inspections of built-up roofing as follows:
      a. Approximate quantities of components within built-up roofing will be determined according to ASTM D 3617.
      b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing."
      c. Repair areas where test cuts were made according to built-up roofing manufacturer's written instructions.
   3. Flood Testing: Flood test each roofing membrane area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
      a. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
      b. Flood each area for 24 OR 48 OR 72, as directed, hours.
      c. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
   4. Repair or remove and replace components of roofing system where test results or inspections indicate that they do not comply with specified requirements.
      a. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

J. Protecting And Cleaning
   1. Protect built-up roofing from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner.
   2. Correct deficiencies in or remove built-up roofing that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.
   3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 01 50 81
SECTION 07 01 50 81a - MEMBRANE REROOFING PREPARATION

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for preparation for re-roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Roof tear-off.
      b. Partial roof tear-off.
      c. Temporary roofing membrane.
      d. Roof re-cover preparation.
      e. Removal of base flashings.

C. Materials Ownership
   1. Except for items or materials indicated to be reused, reinstalled, or otherwise indicated to remain the Owner's property, demolished materials shall become Contractor's property and shall be removed from Project site.

D. Definitions
   1. Roofing Terminology: Refer to ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.
   2. Existing Membrane Roofing System: Built-up asphalt, Built-up coal-tar, EPDM, CSPE, PVC, TPO, APP-modified bituminous, or SBS-modified bituminous roofing membrane, roof insulation, surfacing, and components and accessories between deck and roofing membrane.
   3. Roof Re-Cover Preparation: Existing roofing membrane that is to remain and be prepared for reuse.
   4. Roof Tear-Off: Removal of existing membrane roofing system from deck.
   5. Partial Roof Tear-Off: Removal of a portion of existing membrane roofing system from deck or removal of selected components and accessories from existing membrane roofing system.
   6. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and reinstalled.
   7. Existing to Remain: Existing items of construction that are not indicated to be removed.

E. Submittals
   1. Product Data: For each type of product indicated.
   2. Temporary Roofing: Include Product Data and description of temporary roofing system. If temporary roof will remain in place, submit surface preparation requirements needed to receive permanent roof, and submit a letter from roofing membrane manufacturer stating acceptance of the temporary membrane and that its inclusion will not adversely affect the roofing system's resistance to fire and wind or its FM Global rating, as directed.
   3. Coal tar roofs can't be mixed with asphalt roofs. Test materials in accordance with the American Society for Testing and Materials (ASTM).
   4. Fastener pull-out test report.
   5. Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including exterior and interior finish surfaces that might be misconstrued as having been damaged by reroofing operations. Submit before Work begins.
   6. Landfill Records: Indicate receipt and acceptance of hazardous wastes, such as asbestos-containing material, by a landfill facility licensed to accept hazardous wastes.
   7. Qualification Data: For Installer including certificate that Installer is licensed to perform asbestos abatement and is approved by warrantor of existing roofing system.
F. Quality Assurance
1. Installer Qualifications: Installer of new membrane roofing system, licensed to perform asbestos abatement in the State or jurisdiction where Project is located, as directed, and approved by warrantor of existing roofing system to work on existing roofing, as directed.

G. Project Conditions
1. the Owner will occupy portions of building immediately below reroofing area. Conduct reroofing so the Owner's operations will not be disrupted. Provide the Owner with not less than 72 hours' notice of activities that may affect the Owner's operations.
   a. Coordinate work activities daily with the Owner so the Owner can place protective dust or water leakage covers over sensitive equipment or furnishings, shut down HVAC and fire-alarm or -detection equipment if needed, and evacuate occupants from below the work area.
   b. Before working over structurally impaired areas of deck, notify the Owner to evacuate occupants from below the affected area. Verify that occupants below the work area have been evacuated before proceeding with work over the impaired deck area.
2. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.
3. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.
4. Conditions existing at time of inspection for bidding will be maintained by the Owner as far as practical.
   a. A roof moisture survey of existing membrane roofing system is available for Contractor's reference.
   b. The results of an analysis of test cores from existing membrane roofing system are available for Contractor's reference.
   c. Construction Drawings and Project Manual for existing roofing system are provided for Contractor's reference. Contractor is responsible for conclusions derived from existing documents.
5. Limit construction loads on roof, as directed by the Owner. Rooftop equipment wheel loads and for uniformly distributed loads.
6. Weather Limitations: Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.
7. Hazardous Materials: It is not expected that hazardous materials such as asbestos-containing materials will be encountered in the Work.
   a. Hazardous materials will be removed by the Owner before start of the Work. Existing roof will be left no less watertight than before removal.
   b. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify the Owner. Hazardous materials will be removed by the Owner under a separate contract.

OR
Hazardous Materials: Present in building to be reroofed. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
   a. Hazardous material remediation is specified elsewhere in the Contract Documents.
   b. Do not disturb hazardous materials or items suspected of containing hazardous materials except according to procedures specified elsewhere in the Contract Documents.
   c. Coordinate with hazardous material remediation subcontractor to prevent water from entering existing roofing system or building.

H. Warranty
1. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during reroofing, by methods and with materials so as not to void existing roofing system warranty. Notify warrantor before proceeding.
   a. Notify warrantor of existing roofing system on completion of reroofing, and obtain documentation verifying that existing roofing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

1.2 PRODUCTS

A. Infill Materials
   1. Use infill materials matching existing membrane roofing system materials unless otherwise indicated.
      a. Infill materials are specified in a Division 07.

B. Temporary Roofing Materials
   1. Design and selection of materials for temporary roofing are responsibilities of Contractor.
   2. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
   6. Roofing Asphalt: ASTM D 312, Type III or IV.

C. Recover Boards
   1. Recover Board: ASTM C 208, Type II, Grade 1 OR 2, as directed, cellulosic-fiber insulation board; 1/2 inch (13 mm) thick.
      OR
      Recover Board: Fan-folded, unfaced, extruded-polystyrene board insulation; 3/16-inch (5-mm)
      OR 1/4-inch (6-mm) OR 3/8-inch (10-mm), as directed, nominal thickness.
      OR
      Recover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate; 1/4 inch
      (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick.
      OR
      Recover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum
      substrate; 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as
      directed, thick.
      OR
      Recover Board: ASTM C 728, perlite board; 1/2 inch (13 mm) OR 3/4 inch (19 mm) OR 1 inch
      (25 mm), as directed, thick.
   2. Fasteners: Factory-coated steel fasteners, No. 12 or 14, and metal or plastic plates listed in FM
      Approval's "Approval Guide," designed for fastening recover boards to deck.

D. Auxiliary Reroofing Materials
   1. General: Auxiliary reroofing preparation materials recommended by roofing system manufacturer
      for intended use and compatible with components of existing and new membrane roofing system.
   2. Base Sheet Fasteners: Capped head, factory-coated steel fasteners, listed in FM Approval's
      "Approval Guide."
   3. Metal Flashing Sheet: Metal flashing sheet is specified in Division 07 Section "Sheet Metal
      Flashing And Trim".

1.3 EXECUTION

A. Preparation
   1. Protect existing membrane roofing system that is indicated not to be reroofed.
a. Loosely lay 1-inch- (25-mm-) minimum thick, molded expanded polystyrene (MEPS) insulation over the roofing membrane in areas indicated. Loosely lay 15/32-inch (12-mm) plywood or OSB panels over MEPS. Extend MEPS past edges of plywood or OSB panels a minimum of 1 inch (25 mm).
b. Limit traffic and material storage to areas of existing roofing membrane that have been protected.
c. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.

2. Coordinate with the Owner to shut down air-intake equipment in the vicinity of the Work. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.

3. During removal operations, have sufficient and suitable materials on-site to facilitate rapid installation of temporary protection in the event of unexpected rain.

4. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday. Prevent debris from entering or blocking roof drains and conductors. Use roof-drain plugs specifically designed for this purpose. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.
   a. If roof drains are temporarily blocked or unserviceable due to roofing system removal or partial installation of new membrane roofing system, provide alternative drainage method to remove water and eliminate ponding. Do not permit water to enter into or under existing membrane roofing system components that are to remain.

5. Verify that rooftop utilities and service piping have been shut off before beginning the Work.

B. Roof Tear-Off
   1. General: Notify the Owner each day of extent of roof tear-off proposed for that day and obtain authorization to proceed.
   2. Remove aggregate ballast from roofing membrane. Store aggregate ballast for reuse, as directed.
   3. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing using a power broom.
   4. Remove pavers and accessories from roofing membrane. Store and protect pavers and accessories for reuse, as directed. Discard cracked pavers, as directed.
   5. Remove protection mat and extruded-polystyrene insulation from protected roofing membrane.
      a. Discard extruded-polystyrene insulation that is wet and exceeds 8 lb/cu. ft. (128 kg/cu. m).
      b. Store extruded-polystyrene insulation for reuse and protect from physical damage.
   6. Roof Tear-Off: Remove existing roofing membrane and other membrane roofing system components down to the deck.
      a. Remove cover boards OR roof insulation OR substrate boards, as directed.
      b. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.
      c. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.
      d. Remove fasteners from deck or cut fasteners off slightly above deck surface, as directed.
   7. Partial Roof Tear-Off: Where indicated, remove existing roofing membrane and other membrane roofing system components down to the deck.
      a. Remove cover boards OR roof insulation OR substrate boards, as directed.
      b. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.
      c. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.
      d. Remove fasteners from deck or cut fasteners off slightly above deck surface, as directed.

OR

Partial Roof Tear-Off: Remove existing roofing membrane and immediately check for presence of moisture by visually observing cover boards OR roof insulation OR substrate boards, as directed, that will remain.
   a. Coordinate with the Owner's inspector to schedule times for tests and inspections immediately after membrane removal.
b. With an electrical capacitance moisture-detection meter, spot check cover boards OR roof insulation OR substrate boards, as directed, that will remain.

c. Remove wet or damp boards and roof insulation. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents, as directed.

d. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.

e. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.

f. Remove fasteners from deck or cut fasteners off slightly above deck surface, as directed.

C. Deck Preparation

1. Inspect deck after tear-off OR partial tear-off, as directed, of membrane roofing system.

2. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263 or by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if moisture condenses under the plastic sheet or if asphalt test sample foams or can be easily and cleanly stripped after cooling.

3. If broken or loose fasteners that secure deck panels to one another or to structure are observed or if deck appears or feels inadequately attached, immediately notify the Owner. Do not proceed with installation until directed by the Owner.

4. If deck surface is not suitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify the Owner. Do not proceed with installation until directed by the Owner.

5. Provide additional deck securement as indicated on Drawings.

6. Replace deck as indicated on Drawings. Replacement deck is specified in Division 31 OR Division 03 OR Division 21 Section(s) “Fire-suppression Standpipes”.

D. Infill Materials Installation

1. Immediately after removal of selected portions of existing membrane roofing system, and inspection and repair, if needed, of deck, fill in the tear-off areas to match existing membrane roofing system construction.

a. Installation of infill materials is specified in Division 07.

b. Install new roofing membrane patch over roof infill area. If new roofing membrane is installed the same day tear-off is made, roofing membrane patch is not required.

E. Temporary Roofing Membrane

1. Install approved temporary roofing membrane over area to be reroofed. OR

Install temporary roofing membrane over area to be reroofed. Install two glass-fiber felts OR Mechanically fasten base sheet and install a glass-fiber felt, as directed, lapping each sheet 19 inches (483 mm) over preceding sheet. Embed glass-fiber felt in a solid mopping of hot roofing asphalt applied within equiviscous temperature range. Glaze-coat completed surface with hot roofing asphalt.

2. Remove temporary roofing membrane before installing new roofing membrane. OR

Prepare the temporary roof to receive new roofing membrane according to approved temporary roofing membrane proposal OR by patching and repairing temporary roofing membrane, as directed. Restore temporary roofing membrane to watertight condition. Obtain approval for temporary roof substrate from roofing membrane manufacturer and the Owner before installing new roof.

F. Roof Re-Cover Preparation

1. Remove blisters, ridges, buckles, mechanically attached roofing membrane fastener buttons projecting above the membrane, as directed, and other substrate irregularities from existing roofing membrane that inhibit new recover boards from conforming to substrate.

a. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.

b. Scarify the surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new recover boards.
c. Broom clean existing substrate.
d. Coordinate with the Owner’s inspector to schedule times for tests and inspections before proceeding with installation of recover boards.
e. Verify that existing substrate is dry before proceeding with installation of recover boards. Spot check substrates with an electrical capacitance moisture-detection meter.
f. Remove materials that are wet or damp. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.

2. Remove blisters, ridges, buckles, mechanically attached roofing membrane fastener buttons projecting above the membrane, as directed, and other substrate irregularities from existing roofing membrane that inhibit new recover boards OR roofing membrane, as directed, from conforming to substrate.
   a. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.
   b. Scarify the surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new recover boards OR roofing membrane, as directed.
   c. Broom clean existing substrate.
   d. Coordinate with the Owner’s inspector to schedule times for tests and inspections.
   e. Verify that existing substrate is dry before proceeding with installation. Spot check substrates with an electrical capacitance moisture-detection meter.
   f. Remove materials that are wet and damp. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.

3. Remove blisters and areas of membrane not fully adhered.
   OR
   Remove mechanically attached roofing membrane fastener buttons projecting above the membrane and other, as directed, substrate irregularities that inhibit new recover boards from conforming to substrate.
   a. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.
   b. Clean substrate of contaminants such as dirt, debris, oil, and grease that can affect adhesion of coated foamed roofing.
   c. Power vacuum the existing roof surface. If recommended by foam manufacturer, prime dried surface at recommended rate with recommended primer.
   d. Scarify the surface of coated polyurethane roofing as necessary to achieve a suitable substrate for new roofing.
   e. Provide additional uplift securement for existing roofing system with new screws and plates applied to each roof zone at the following densities:
      1) Field of roof, one fastener for each.
      2) Corners of roof, one fastener for each.
      3) Perimeters of roof, one fastener for each. Width of perimeter zone of roof as directed by the Owner.
   f. Verify that surface is dry by pressing litmus paper to surface areas most likely to retain moisture, such as shaded areas and low spots. If paper changes color, surface is too wet to apply foam.
   g. Build up isolated low spots on existing roofing membrane with sprayed foam specified in Division 07 Section "Coated Foamed Roofing" to prevent ponding.

G. Existing Base Flashings
   1. Remove existing base flashings around parapets, curbs, walls, and penetrations.
      a. Clean substrates of contaminants such as asphalt, sheet materials, dirt, and debris.
   2. Do not damage metal counterflashings that are to remain. Replace metal counterflashings damaged during removal with counterflashings of same metal, weight or thickness, and finish OR specified in Division 07 Section "Sheet Metal Flashing And Trim" OR specified in Division 07 Section "Roof Specialties", as directed.
   3. Inspect parapet sheathing for deterioration and damage. If parapet sheathing has deteriorated, immediately notify the Owner.
4. Remove existing parapet sheathing and replace with new pressure-preservative OR exterior fire-retardant, as directed, treated plywood sheathing, 19/32 inch (15 mm) thick. If parapet framing has deteriorated, immediately notify the Owner.
   a. Plywood parapet sheathing is specified in Division 06 Section(s) "Rough Carpentry" OR "Miscellaneous Rough Carpentry", as directed.

H. Fastener Pull-Out Testing
   1. Perform OR Retain independent testing and inspecting agency to conduct, as directed, fastener pull-out tests according to SPRI FX-1, and submit test report to the Owner OR roofing membrane manufacturer, as directed, before installing new membrane roofing system.
      a. Obtain the Owner's OR roofing membrane manufacturer's, as directed, approval to proceed with specified fastening pattern. The Owner OR Roofing membrane manufacturer, as directed, may furnish revised fastening pattern commensurate with pull-out test results.

I. Recover Board Installation
   1. Install recover boards over roof insulation OR roofing membrane, as directed, with long joints in continuous straight lines and end joints staggered between rows. Loosely butt recover boards together and fasten to deck, as directed.
      a. Tape joints of recover boards if required by roofing membrane manufacturer.
      b. Fasten recover boards to resist wind-uplift pressure at corners, perimeter, and field of roof specified in Division 07 Section "Built-up Asphalt Roofing".
      c. Install additional fasteners near board corners and edges as necessary to conform boards to substrate and to adjacent boards.

J. Disposal
   1. Collect demolished materials and place in containers. Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.
      a. Storage or sale of demolished items or materials on-site is not permitted.
   2. Transport and legally dispose of demolished materials off the Owner's property.

SECTION 07 05 13 00 - CSPE MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for chlorosulfonate-polyethylene (CSPE) roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Adhered CSPE membrane roofing system.
   b. Mechanically fastened CSPE membrane roofing system.
   c. Loosely laid and ballasted CSPE membrane roofing system.
   d. Vapor retarder.
   e. Roof insulation.
2. Section includes the installation of acoustical roof deck rib insulation strips furnished under Division 05 Section “Steel Decking”.

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA’s “The NRCA Roofing and Waterproofing Manual” for definition of terms related to roofing work in this Section.

D. Performance Requirements
1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
3. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
4. FM Approvals Listing, as directed: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals’ “RoofNav” for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120 OR Class 1A-135 OR Class 1A-150 OR Class 1A-165, as directed.
   b. Hail Resistance: MH OR SH, as directed.
5. Energy Performance: Provide roofing system with initial Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
6. Energy Performance: Provide roofing system that is listed on the DOE’s ENERGY STAR “Roof Products Qualified Product List” for low OR steep, as directed, roof products.
7. Energy Performance (for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
a. Product Test Reports for Credit SS 7.2: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirement.

b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.

3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.

4. Samples: For each product included in the roofing system.

5. Research/evaluation reports.

6. Field quality-control reports.

7. Maintenance data.

8. Warranties: Sample of special warranties.

F. Quality Assurance

1. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

2. Source Limitations: Obtain components for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.

3. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.

4. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

5. Preinstallation Roofing Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions

1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

I. Warranty

1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. CSPE Membrane Roofing
1. CSPE: ASTM D 5019, Type 1, Grade 2, 45-mil- (1.1-mm-) thick, reinforced, flexible uncured sheet formed from CSPE, and as follows:
   a. Exposed Face Color: White OR Blue OR Light gray OR Tan, as directed.

B. Auxiliary Membrane Roofing Materials
1. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesive: 80 g/L.
      6) Single-Ply Roof Membrane Sealants: 450 g/L.
      7) Nonmembrane Roof Sealants: 300 g/L.
      8) Sealant Primers for Nonporous Substrates: 250 g/L.
      9) Sealant Primers for Porous Substrates: 775 g/L.
      10) Other Adhesives and Sealants: 250 g/L.

2. Sheet Flashing: 45-mil- (1.1-mm-) thick, reinforced and 55-mil- (1.4-mm-) thick, non-reinforced CSPE as recommended by roofing system manufacturer for intended use.

3. Bonding Adhesive: Manufacturer's standard, water based, as directed.

4. Slip Sheet: Manufacturer's standard, of thickness required for application.

5. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.

6. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.

7. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

C. Substrate Boards
1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
   Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

D. Vapor Retarder
1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
b. Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.

2. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.

E. Roof Insulation

1. General: Preformed roof insulation boards manufactured or approved by CSPE membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.

3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.

4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
   OR
   Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.

5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class 1, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.

6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
   a. Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.

7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.

8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.

10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

F. Insulation Accessories

1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards, as directed, to substrate, and acceptable to roofing system manufacturer.

3. Modified Asphaltric Insulation Adhesive: Insulation manufacturer's recommended modified asphalt, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.

4. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
5. Full-Spread Applied Insulation Adhesive: Insulation manufacturer’s recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

6. Cover Board: ASTM C 208, Type II, Grade 2, cellulose-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
   Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Cover Board: ASTM C 1278/C 1278M, cellulose-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

7. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

G. Asphalt Materials
1. Roofing Asphalt: ASTM D 312, Type III or Type IV OR ASTM D 6152, SEBS modified, as directed.

H. Aggregate Ballast (for loosely laid and aggregate-ballasted installations)
1. Aggregate Ballast: Provide aggregate ballast that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation, of the following type and size:
   a. Aggregate Type: Smooth, washed, riverbed gravel or other acceptable smooth-faced stone OR Crushed gravel or crushed stone, as directed.
   b. Size: ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
      OR
      Size: ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).
      OR
      Size: ASTM D 448, Size 3, ranging in size from 1 to 2 inches (25 to 50 mm).

I. Roof Pavers
1. Lightweight Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doveled, or otherwise profiled; and as follows:
   a. Size: 8 by 16 inches (200 by 400 mm) OR 12 by 12 inches (300 by 300 mm) OR 12 by 16-1/2 inches (300 by 420 mm) OR 12 by 18 inches (300 by 450 mm), as directed.
   b. Weight: At least 10 lb/sq. ft. (50 kg/sq. m) but not exceeding 18 lb/sq. ft. (90 kg/sq. m).
   c. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer’s full range.

2. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer’s full range.

J. Walkways
1. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads OR rolls, as directed, approximately 3/16 inch (5 mm) thick, and acceptable to membrane roofing system manufacturer.

2. Walkway Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer's full range.

1.3 EXECUTION

A. Preparation
   1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
   2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
   3. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
   4. Install acoustical roof deck rib insulation strips, specified in Division 05 Section "Steel Decking", according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

B. Substrate Board
   1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
      a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
      OR
      Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

C. Vapor-Retarder Installation
   1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
      a. Continuously seal side and end laps with tape OR adhesive, as directed.
   2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
      a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
      OR
      Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
   3. Built-Up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat
completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
4. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

D. Insulation Installation
1. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
2. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
3. Install tapered insulation under area of roofing to conform to slopes indicated.
4. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
5. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
7. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
   a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
   b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   c. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
      OR
      Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
8. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
      OR
      Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
9. Mechanically Fastened and Adhered Insulation: Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
      OR
      Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   b. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
      OR
      Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
      OR
      Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
10. Loosely Laid Insulation: Loosely lay insulation units over substrate.
11. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed.  
   a. Fasten cover boards according to requirements in FM Approvals’ “RoofNav” for specified Windstorm Resistance Classification.  
      OR  
   Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.  
12. Install slip sheet over insulation OR cover board, as directed, and immediately beneath membrane roofing.  

E. Adhered Membrane Roofing Installation  
1. Adhere membrane OR fabric-backed membrane, as directed, roofing over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.  
2. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.  
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.  
4. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.  
5. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roofing.  
6. Apply membrane roofing with side laps shingled with slope of roof deck where possible.  
7. Seams: Clean seam areas, overlap membrane roofing, and weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation. Complete welding of seams within 24 hours of exposing CSPE sheet or before curing of CSPE sheet has begun. Weld seams as follows:  
   a. Weld Method: Hot air OR Solvent, as directed.  
   b. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.  
   c. Verify field strength of seams a minimum of twice daily and repair seam sample areas.  
   d. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.  
8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.  
9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.  

F. Mechanically Fastened Membrane Roofing Installation  
1. Mechanically fasten membrane roofing over area to receive roofing and install according to roofing system manufacturer's written instructions.  
   a. For in-splice attachment, install membranes roofing with long dimension perpendicular to steel roof deck flutes.  
2. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.  
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.  
4. Mechanically fasten or adhere membrane roofing securely at terminations, penetrations, and perimeter of roofing.  
5. Apply membrane roofing with side laps shingled with slope of roof deck where possible.  
6. In-Seam Attachment: Secure one edge of CSPE sheet using fastening plates or metal battens centered within membrane seam and mechanically fasten CSPE sheet to roof deck.  
7. Seams: Clean seam areas, overlap membrane roofing, and weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation. Complete welding of seams within 24 hours of exposing CSPE sheet or before curing of CSPE sheet has begun. Weld seams as follows:  
   a. Weld Method: Hot air OR Solvent, as directed.
b. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.

c. Verify field strength of seams a minimum of twice daily and repair seam sample areas.

d. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.

G. Loosely Laid And Ballasted Membrane Roofing Installation

1. Loosely lay membrane roofing over area to receive roofing and install according to roofing system manufacturer's written instructions.

a. Comply with requirements in SPRI RP-4 for System 1 OR System 2 OR System 3, as directed.

2. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.

3. Accurately align membrane roofing, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

4. Mechanically fasten or adhere perimeter of membrane roofing according to requirements in SPRI RP-4.

OR

Mechanically fasten OR adhere, as directed, membrane roofing at corners, perimeters, and transitions according to requirements in SPRI RP-4.

a. At corners and perimeters, omit aggregate ballast leaving membrane roofing exposed.

b. At corners and perimeters, adhere a second layer of membrane roofing.

5. Apply membrane roofing with side laps shingled with slope of deck where possible.

6. Seams: Clean seam areas, overlap membrane roofing, and weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation. Complete welding of seams within 24 hours of exposing CSPE sheet or before curing of CSPE sheet has begun. Weld seams as follows:

a. Weld Method: Hot air OR Solvent, as directed.

b. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.

c. Verify field strength of seams a minimum of twice daily and repair seam sample areas.

d. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

7. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

8. Install membrane roofing and auxiliary materials to tie in to existing roofing.

9. Install protection mat over membrane roofing, overlapping a minimum of 6 inches (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches (300 mm).

10. Aggregate Ballast: Apply uniformly over membrane roofing at the rate required by membrane roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to membrane roofing system. Lay ballast as membrane roofing is installed, leaving membrane roofing ballasted at the end of the workday.

a. Ballast Weight: Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m).

OR

Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m), at corners and perimeter; Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m), elsewhere.

OR

Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m).

11. Roof-Paver Ballast: Install lightweight OR heavyweight, as directed, roof-paver ballast according to manufacturer's written instructions.

OR

Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer's written instructions on roof corners and perimeter.

a. Install Size 4 aggregate ballast elsewhere on roofing at a minimum rate of 10 lb/sq. ft. (50 kg/sq. m).
OR
Install Size 2 aggregate ballast elsewhere on roofing at a minimum rate of 13 lb/sq. ft. (65 kg/sq. m).

H. Base Flashing Installation
1. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
2. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.
3. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
4. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation. Complete welding of seams within 24 hours of exposing CSPE sheet or before curing of CSPE sheet has begun.
5. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars, as directed.

I. Walkway Installation
1. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.
2. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave 3 inches (75 mm) of space between adjacent roof pavers.

J. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform inspections.
2. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
3. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
4. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

K. Protecting And Cleaning
1. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Owner.
2. Correct deficiencies in or remove membrane roofing system that does not comply with requirements, repair substrates and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.
3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 05 13 00
SECTION 07 05 13 00a - APP-MODIFIED BITUMINOUS MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for atactic-polypropylene (APP) modified bituminous membrane roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Atactic-polypropylene (APP) modified bituminous membrane roofing.
   b. Hybrid roofing system that combines built-up ply sheets with APP-modified bituminous membrane.
   c. Vapor retarder.
   d. Roof insulation.
2. Section includes the installation of insulation strips in ribs of acoustical roof deck. Insulation strips are furnished under Division 05 Section "Steel Decking".

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA’s "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.
2. Hot Roofing Asphalt: Roofing asphalt heated to its equiviscous temperature, the temperature at which its viscosity is 125 centipoise for mop-applied roofing asphalt and 75 centipoise for mechanical spreader-applied roofing asphalt, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.

D. Performance Requirements
1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
3. Roofing System Design: If membrane roofing system is to be designed to withstand uplift pressure established by ASCE/SEI 7, provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
   a. Corner Uplift Pressure: as directed by the Owner.
   b. Perimeter Uplift Pressure: as directed by the Owner.
   c. Field-of-Roof Uplift Pressure: as directed by the Owner.
4. FM Approvals Listing: If Project is FM Global insured or if FM Approvals requirements will set a minimum quality standard, provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals’ “RoofNav” for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
   b. Hail Resistance Rating: MH OR SH, as directed.
5. Energy Performance (if required for LEED-NC Credit SS 7.2): Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
   OR
Energy Performance (for roofs that must comply with DOE's ENERGY STAR requirements): Provide roofing system that is listed on DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.

OR

Energy Performance (for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial Solar Reflectance not less than 0.70 and Thermal Emittance not less than 0.75 when tested according to Cool Roof Rating Council's CRRC-1.

E. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
   a. Base flashings and membrane terminations.
   b. Tapered insulation, including slopes.
   c. Crickets, saddles, and tapered edge strips, including slopes.
   d. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
4. Samples: For the following products:
   b. Roof insulation.
   c. Walkway pads or rolls.
   d. Six insulation fasteners of each type, length, and finish.
5. Qualification Data: For qualified Installer, manufacturer and testing agency.
6. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of complying with performance requirements.
7. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.
8. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES OR applicable model code organization, as directed.
9. Maintenance Data: For roofing system to include in maintenance manuals.
10. Warranties: Sample of special warranties.

F. Quality Assurance

1. Manufacturer Qualifications: A qualified manufacturer that is UL listed OR FM Approvals approved, as directed, for membrane roofing system identical to that used for this Project.
2. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
3. Source Limitations: Obtain components including roof insulation and fasteners for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.
4. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
5. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
   a. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, and other components of membrane roofing system.
   b. Warranty Period: 10 OR 15 OR 20 OR 25 OR 30, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. APP-Modified Asphalt-Sheet Materials
1. Roofing Membrane Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
2. Smooth-Surfaced Roofing Membrane Cap Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
   OR
   Granule-Surfaced Roofing Membrane Cap Sheet: ASTM D 6222, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Material: Mineral ceramic coated OR slate, as directed.
   b. Granule Color: White OR Gray OR Tan, as directed.

B. Base-Sheet Materials
1. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
2. Base Sheet: ASTM D 4601, Type II, SBS-modified, asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.
   a. Weight: 25 lb/100 sq. ft. (1.2 kg/sq. m) OR 40 lb/100 sq. ft. (1.95 kg/sq. m) OR 50 lb/100 sq. ft. (2.4 kg/sq. m) OR 60 lb/100 sq. ft. (2.9 kg/sq. m) OR 75 lb/100 sq. ft. (3.7 kg/sq. m), as directed, minimum.
07 - Thermal And Moisture Protection

APP-Modified Bituminous Membrane Roofing

August 2021

DASNY, Downstate

Base Sheet: ASTM D 4601, Type I OR Type II, as directed, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

OR

Base Sheet: ASTM D 4897, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and -coated, glass-fiber base sheet with coarse granular surfacing or embossed venting channels on bottom surface.

OR

Base Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

C. Base-Ply Sheet Materials
1. Glass-Fiber Base-Ply Sheet: ASTM D 2178, Type IV OR Type VI, as directed, asphalt-impregnated, glass-fiber felt.

D. Base Flashing Sheet Materials
1. Backer Sheet: ASTM D 4601, Type I OR Type II, a directed, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

OR

Backer Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

OR

Backer Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

2. Smooth-Surfaced Flashing Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

OR

Granule-Surfaced Flashing Sheet: ASTM D 6222, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Color: White OR Gray OR Tan, as directed.

3. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668, Type I.

E. Auxiliary Roofing Membrane Materials
1. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing membrane.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesive: 80 g/L.
      6) Other Adhesives: 250 g/L.
      7) Nonmembrane Roof Sealants: 300 g/L.
      8) Sealant Primers for Nonporous Substrates: 250 g/L.
      9) Sealant Primers for Porous Substrates: 775 g/L.

3. Roofing Asphalt:  ASTM D 312, Type III OR Type IV OR Type III or IV as recommended by roofing system manufacturer for application, as directed.
OR
Roofing Asphalt:  ASTM D 6152, SEBS modified.
4. Cold-Applied Adhesive:  Roofing system manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with roofing membrane and base flashings.
5. Asphalt Roofing Cement:  ASTM D 4586, asbestos free, of consistency required by roofing system manufacturer for application.
6. Mastic Sealant:  Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.
7. Fasteners:  Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing membrane components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.
8. Metal Flashing Sheet:  As specified in Division 07 Section "Sheet Metal Flashing And Trim".
9. Roofing Granules:  Ceramic-coated OR Slate, as directed, roofing granules, No. 11 screen size with 100 percent passing No. 8 (2.36-mm) sieve and 98 percent of mass retained on No. 40 (0.425-mm) sieve, color to match roofing membrane.
10. Miscellaneous Accessories:  Provide those recommended by roofing system manufacturer.

F. Substrate Boards
1. Substrate Board:  ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
   Substrate Board:  ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Substrate Board:  ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board:  ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.
2. Fasteners:  Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

G. Vapor Retarder
1. Polyethylene Film:  ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
a. Tape:  Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
   OR
   Adhesive:  Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.
2. Laminated Sheet:  Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn, with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.
3. Self-Adhering Sheet Vapor Retarder:  ASTM D 1970, minimum of 40-mil- (1.0-mm-) thick, polyethylene film laminated to layer of rubberized asphalt adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing.  Provide primer when recommended by vapor-retarder manufacturer.
   OR
   Self-Adhering Sheet Vapor Retarder:  30- to 40-mil- (0.76- to 1.0-mm-) thick, polyethylene film laminated to layer of butyl rubber adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing.  Provide primer when recommended by vapor-retarder manufacturer.
H. Roof Insulation

1. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.

3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.

4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
   OR  Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.

5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.

6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board, as indicated below by type, on one major surface and felt or glass-fiber mat facer on the other surface.
   a. Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass-mat-faced gypsum board facer, 1/4 inch (6 mm) thick.

7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.

8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.

10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

I. Insulation Accessories

1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards, as directed, to substrate, and acceptable to roofing system manufacturer.

3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphaltic, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.
   OR  Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one-component or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
   OR  Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

   OR  Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
5. Wood Nailer Strips: Comply with requirements in Division 06 Section(s) "Rough Carpentry" OR "Miscellaneous Rough Carpentry", as directed.
6. Tapered Edge Strips: ASTM C 728, perlite insulation board. OR Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
7. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick. OR Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick. OR Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed. OR Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
8. Substrate Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass-fiber joint tape.

J. Coating Materials
1. Roof Coating: ASTM D 1227, Type II, Class 1, mineral-colloid-emulsified, fibered OR Class 2, chemically emulsified, filled or fibered, as directed, asphalt emulsion, asbestos free. OR Roof Coating: ASTM D 1227, Type III, Class 1, mineral-colloid-emulsified OR Class 2, chemically emulsified, as directed, asphalt emulsion, nonfibered.
3. Roof Coating: ASTM D 2824, Type I, nonfibered OR Type III, fibered, asbestos-free, as directed, aluminum-pigmented asphaltic coating.
4. Roof Coating: Acrylic elastomer emulsion coating, formulated for use on bituminous roof surfaces and complying with ASTM D 6083.
   a. Color: White OR Gray OR Buff, as directed.

K. Walkways
1. Walkway Pads: Reinforced asphaltic composition pads with slip-resisting mineral-granule surface OR Polymer-modified, reconstituted rubber pads with slip-resisting textured surface, as directed, manufactured as a traffic pad for foot traffic and acceptable to roofing system manufacturer, 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, thick, minimum. OR Walkway Backer Strips: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
2. Walkway Cap Sheet Strips: ASTM D 6222, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Material: Mineral ceramic coated OR slate, as directed.
   b. Granule Color: White OR Gray OR Tan, as directed.
**07 - Thermal And Moisture Protection**

---

d. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.

e. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
   1) Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if test sample foams or can be easily and cleanly stripped after cooling.

f. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.

g. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.

4. Install insulation strips in ribs of acoustical roof deck according to acoustical roof deck manufacturer's written instructions.

C. Substrate Board Installation

1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
   OR
   Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

D. Vapor-Retarder Installation

1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape OR adhesive, as directed.

2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
   OR
   Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.

3. Self-Adhering Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.

4. Built-up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
5. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

E. Insulation Installation
1. Comply with roofing system manufacturer's written instructions for installing roof insulation.
2. If mechanically fastening base sheet to substrate before adhering first layer of insulation, install one lapped base-sheet course and mechanically fasten to substrate according to roofing system manufacturer's written instructions.
3. Nailer Strips: Mechanically fasten 4-inch nominal- (89-mm actual-) width wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:
   a. 16 feet (4.88 m) apart for roof slopes steeper than 1 inch per 12 inches (1:12) but less than 3 inches per 12 inches (3:12).
   b. 48 inches (1220 mm) apart for roof slopes steeper than 3 inches per 12 inches (3:12).
4. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing membrane system with vertical surfaces or angle changes more than 45 degrees.
5. Install tapered insulation under area of roofing to conform to slopes indicated.
6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
7. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or more, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
8. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
9. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.
10. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
    a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
    b. Set each layer of insulation in a solid mopping of hot roofing asphalt applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
       OR
       Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
       OR
       Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
11. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
    a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
    b. If number of fasteners will be based on ASCE/SEI 7's uplift pressure or SPRI's factored-design uplift pressure, fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
12. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
    a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
    b. If fastening is calculated from ASCE/SEI 7's uplift pressure or SPRI's factored-design uplift pressure, fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
1) Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

OR

Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

OR

Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

c. If cover boards will be field installed over roof insulation and immediately below roofing membrane, install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints a minimum of 6 inches (150 mm) in each direction from joints of insulation below. Loosely butt cover boards together and fasten to roof deck, as directed. Tape joints if required by roofing system manufacturer.

1) Fasten cover boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.

OR

Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

2) Apply hot roofing asphalt to underside, and immediately bond cover board to substrate.

F. Roofing Membrane Installation, General

1. If referencing NRCA's roof assembly identification matrix system, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

a. Install roofing system MBA OR MBAH, as directed,-3 OR 4, as directed,-N OR I OR C, as directed,-T OR L, as directed,-S OR M, as directed, according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" and to requirements in this Section.

b. Fasten cover boards in presence of roofing system manufacturer's technical personnel.

2. For roof system that exceeds requirements of NRCA's roof assemblies, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing" and as follows:

a. Deck Type: N (nailable) OR I (insulated) OR C (concrete or nonnailable), as directed.

b. Adhering Method: T (torched) OR L (cold-applied adhesive), as directed.

c. Base Sheet: One OR One, installed over sheathing paper, as directed.

d. Number of Glass-Fiber Base-Ply Sheets: One OR Two, as directed.

e. Number of APP-Modified Asphalt Sheets: One OR Two, as directed.

f. Surfacing Type: S (smooth) OR M (mineral-granule-surfaced cap sheet), as directed.

3. Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.

4. Where roof slope exceeds 1/2 inch per 12 inches (1:24) OR 3/4 inch per 12 inches (1:18), as directed, install roofing membrane sheets parallel with slope.

a. Backnail roofing membrane sheets to nailer strips OR substrate, as directed, according to roofing system manufacturer's written instructions.

5. Cooperate with testing agencies engaged or required to perform services for installing roofing system.

6. Coordinate installation of roofing system so insulation and other components of the roofing membrane system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

a. At end of each day's work, provide tie-offs to cover exposed roofing membrane sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.

b. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.

c. Remove and discard temporary seals before beginning work on adjoining roofing.
7. Asphalt Heating: Do not raise roofing asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed roofing asphalt manufacturer's recommended temperature limits during roofing asphalt heating. Do not heat roofing asphalt within 25 deg F (14 deg C) of flash point. Discard roofing asphalt maintained at a temperature exceeding finished blowing temperature for more than four hours. **OR**

Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing system manufacturer's written instructions.

8. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

G. Base-Sheet Installation
1. If sheathing paper is required over wood decks by roofing system manufacturer, loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
2. Install lapped base-sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
   a. Mechanically fasten to substrate, for nailable substrate. **OR**
   b. Spot- or strip-mop to substrate with hot roofing asphalt. **OR**
   c. Adhere to substrate in a solid mopping of hot roofing asphalt or uniform coating of cold-applied adhesive, as directed, for nonnailable or insulated substrates.

H. Base-Ply Sheet Installation
1. Install glass-fiber base-ply sheets according to roofing system manufacturer's written instructions starting at low point of roofing system. Align glass-fiber base-ply sheets without stretching. Extend sheets over and terminate beyond cants.
   a. Shingle side laps of glass-fiber base-ply sheets uniformly to ensure that required number of glass-fiber base-ply sheets covers substrate at any point. Shingle in direction to shed water.
   b. Embed each glass-fiber base-ply sheet in a continuous void-free mopping of hot roofing asphalt to form a uniform membrane without glass-fiber base-ply sheets touching.

I. APP-Modified Bituminous Membrane Installation
1. Install modified bituminous roofing membrane cap sheet OR sheet and cap sheet, as directed, according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, installing as follows:
   a. Adhere to substrate in cold-applied adhesive. **OR**
   b. Torch apply to substrate.
   c. Unroll roofing membrane sheets and allow them to relax for minimum time period required by manufacturer. **2. Laps:** Accurately align roofing membrane sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.
      a. Repair tears and voids in laps and lapped seams not completely sealed.
      b. Apply roofing granules to cover exuded bead at laps while bead is hot.
   d. Install roofing membrane sheets so side and end laps shed water.

J. Flashing And Stripping Installation
1. Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof; secure to substrates according to roofing system manufacturer's written instructions, and as follows:
   a. Prime substrates with asphalt primer if required by roofing system manufacturer. **OR**
   b. Backer Sheet Application: Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over roofing membrane at cants in cold-applied adhesive, as directed. **OR**
Backer Sheet Application: Adhere backer sheet to substrate in a solid mopping of hot roofing asphalt OR cold-applied adhesive at rate required by roofing system manufacturer, as directed.
c. Flashing Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.
OR
Flashing Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing system manufacturer.
OR
Flashing Sheet Application: Torch apply flashing sheet to substrate.
2. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above roofing membrane and 4 inches (100 mm) onto field of roofing membrane.
3. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
a. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement, as directed.
4. Install roofing membrane cap-sheet stripping where metal flanges and edgings are set on roofing membrane according to roofing system manufacturer's written instructions.
5. Roof Drains: Set 30-by-30-inch- (760-by-760-mm-) square metal flashing in bed of roofing-manufacturer-approved asphaltic adhesive on completed roofing membrane. Cover metal flashing with roofing membrane cap-sheet stripping and extend a minimum of 4 inches (100 mm) OR 6 inches (150 mm), as directed, beyond edge of metal flashing onto field of roofing membrane. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.
a. Install stripping according to roofing system manufacturer's written instructions.

K. Coating Installation
1. Apply coating to roofing membrane OR roofing membrane and base flashings, as directed, according to manufacturer's written instructions, by spray, roller, or other suitable application method to provide a dry film thickness of not less than 20 mils (0.5 mm), as directed.

L. Walkway Installation
1. Walkway Pads: Install walkway pads in cold-applied adhesive, using units of size indicated or, if not indicated, of manufacturer's standard size according to walkway pad manufacturer's written instructions.
2. Walkway Strips: Install walkway cap sheet OR backer and cap sheet, as directed, strips over roofing membrane using same application method as used for roofing membrane cap sheet.

M. Field Quality Control
1. Testing Agency: Perform tests and inspections and to prepare test reports.
2. Test Cuts: Test specimens will be removed to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:
a. Approximate quantities of components within roofing membrane will be determined according to ASTM D 3617.
b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
c. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.
3. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
a. Notify the Owner 48 hours in advance of date and time of inspection.
4. Roofing system will be considered defective if it does not pass tests and inspections.
a. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

N. Protecting And Cleaning
1. Protect roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner.

2. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.

3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 05 13 00a
SECTION 07 05 13 00b - SBS-MODIFIED BITUMINOUS MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for styrene-butadiene-styrene (SBS) modified bituminous membrane roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Styrene-butadiene-styrene (SBS) modified bituminous membrane roofing.
      b. Hybrid roofing system that combines built-up ply sheets with SBS-modified bituminous membrane roofing.
      c. Vapor retarder.
      d. Roof insulation.
   2. Section includes the installation of insulation strips in ribs of acoustical roof deck. Insulation strips are furnished under Division 05 Section "Steel Decking".

C. Definitions
   1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.
   2. Hot Roofing Asphalt: Roofing asphalt heated to its equiviscous temperature, the temperature at which its viscosity is 125 centipoise for mop-applied roofing asphalt and 75 centipoise for mechanical spreader-applied roofing asphalt, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.

D. Performance Requirements
   1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
   2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
   3. Roofing System Design: If membrane roofing system is to be designed to withstand uplift pressure established by ASCE/SEI 7, provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
      a. Corner Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>
      b. Perimeter Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>
      c. Field-of-Roof Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>
   4. FM Approvals Listing: If Project is FM Global insured or if FM Approvals requirements will set a minimum quality standard, provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
      a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
      b. Hail Resistance Rating: MH OR SH, as directed.
   5. Energy Performance (if required for LEED-NC Credit SS 7.2): Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
6. Energy Performance (for roofs that must comply with DOE's ENERGY STAR requirements): Provide roofing system that is listed on DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.

7. Energy Performance (for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial Solar Reflectance not less than 0.70 and Thermal Emittance not less than 0.75 when tested according to Cool Roof Rating Council's CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
   a. Base flashings and membrane terminations.
   b. Tapered insulation, including slopes.
   c. Crickets, saddles, and tapered edge strips, including slopes.
   d. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
4. Samples: For the following products:
   b. Roof insulation.
   c. 3 lb (1.5 kg) of aggregate surfacing material in gradation and color indicated.
   d. Walkway pads or rolls.
   e. Six insulation fasteners of each type, length, and finish.
5. Qualification Data: For qualified Installer, manufacturer and testing agency.
6. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of complying with performance requirements.
7. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.
8. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES OR applicable model code organization, as directed.
9. Maintenance Data: For roofing system to include in maintenance manuals.
10. Warranties: Sample of special warranties.

F. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is UL listed OR FM Approvals approved, as directed, for membrane roofing system identical to that used for this Project.
2. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
3. Source Limitations: Obtain components including roof insulation and fasteners for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.
4. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
5. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
   a. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, and other components of membrane roofing system.
   b. Warranty Period: 10 OR 15 OR 20 OR 25 OR 30, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. SBS-Modified Asphalt-Sheet Materials
1. Roofing Membrane Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

2. Smooth-Surfaced Roofing Membrane Cap Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

3. Metal-Foil-Surfaced Roofing Membrane Cap Sheet: ASTM D 6298, metal-foil surfaced SBS-modified asphalt sheet (reinforced with glass fibers); suitable for application method specified, and as follows:
   a. Foil Surfacing: Aluminum OR Copper OR Stainless steel OR Aluminum, fluoropolymer-coated finish, of color and gloss selected from manufacturer's full range, as directed.
1. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
2. Base Sheet: ASTM D 4601, Type II, SBS-modified, asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.
   a. Weight: 25 lb/100 sq. ft. (1.2 kg/sq. m) OR 40 lb/100 sq. ft. (1.95 kg/sq. m) OR 50 lb/100 sq. ft. (2.4 kg/sq. m) OR 60 lb/100 sq. ft. (2.9 kg/sq. m) OR 75 lb/100 sq. ft. (3.7 kg/sq. m), as directed, minimum.

   OR

   Base Sheet: ASTM D 4601, Type I OR Type II, as directed, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

   OR

   Base Sheet: ASTM D 4897, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and -coated, glass-fiber base sheet with coarse granular surfacing or embossed venting channels on bottom surface.

   OR

   Base Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

C. Base-Ply Sheet Materials
1. Glass-Fiber Base-Ply Sheet: ASTM D 2178, Type IV OR Type VI, as directed, asphalt-impregnated, glass-fiber felt.

D. Base Flashing Sheet Materials
1. Backer Sheet: ASTM D 4601, Type I OR Type II, as directed, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

   OR

   Backer Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

   OR

   Backer Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

2. Granule-Surfaced Flashing Sheet: ASTM D 6164, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Color: White OR Gray OR Tan, as directed.

   OR

   Metal-Foil-Surfaced Flashing Sheet: ASTM D 6298, metal-foil surfaced SBS-modified asphalt sheet (reinforced with glass fibers); suitable for application method specified, and as follows:
   a. Foil Surfacing: Aluminum OR Copper OR Stainless steel OR Aluminum, fluoropolymer-coated finish, of color and gloss selected from manufacturer's full range, as directed.

3. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668, Type I.

E. Auxiliary Roofing Membrane Materials
1. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing membrane.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
3) Multipurpose Construction Adhesives: 70 g/L.
4) Fiberglass Adhesives: 80 g/L.
5) Contact Adhesive: 80 g/L.
6) Other Adhesives: 250 g/L.
7) Nonmembrane Roof Sealants: 300 g/L.
8) Sealant Primers for Nonporous Substrates: 250 g/L.
9) Sealant Primers for Porous Substrates: 775 g/L.

3. Roofing Asphalt: ASTM D 312, Type III OR Type IV OR Type III or IV as recommended by roofing system manufacturer for application, as directed.
OR
Roofing Asphalt: ASTM D 6152, SEBS modified.
4. Cold-Applied Adhesive: Roofing system manufacturer’s standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with roofing membrane and base flashings.
5. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required by roofing system manufacturer for application.
6. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.
7. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing membrane components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.
8. Metal Flashing Sheet: As specified in Division 07 Section “Sheet Metal Flashing And Trim”.
9. Roofing Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 (2.36-mm) sieve and 98 percent of mass retained on No. 40 (0.425-mm) sieve, color to match roofing membrane.
10. Aggregate Surfacing: ASTM D 1863, No. 6 or No. 67, clean, dry, opaque, water-worn gravel or crushed stone, free of sharp edges OR crushed slag, free of sharp edges, as directed.
11. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

F. Substrate Boards
1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
   Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.
2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

G. Vapor Retarder
1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
      OR
      Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.
2. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn, with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer’s standard adhesive, as directed.
3. Self-Adhering Sheet Vapor Retarder: ASTM D 1970, minimum of 40-mil- (1.0-mm-) thick, polyethylene film laminated to layer of rubberized asphalt adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

OR

Self-Adhering Sheet Vapor Retarder: 30- to 40-mil- (0.76- to 1.0-mm-) thick, polyethylene film laminated to layer of butyl rubber adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

H. Roof Insulation

1. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.

3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.

4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
   OR
   Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.

5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.

6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board, as indicated below by type, on one major surface and felt or glass-fiber mat facer on the other surface.
   a. Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass-mat-faced gypsum board facer, 1/4 inch (6 mm) thick.

7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.

8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.

10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

I. Insulation Accessories

1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphaltic, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.
OR
Bead-Applied Insulation Adhesive: Insulation manufacturer’s recommended bead-applied, low-rise, one-component or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

OR
Full-Spread Applied Insulation Adhesive: Insulation manufacturer’s recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

OR
Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

5. Wood Nailer Strips: Comply with requirements in Division 06 Section(s) “Rough Carpentry” OR "Miscellaneous Rough Carpentry", as directed.

OR
Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

7. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.

OR
Cover Board: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board, 3/8 inch (10 mm) thick.

OR
Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.

OR
Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

8. Substrate Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass-fiber joint tape.

J. Walkways

1. Walkway Pads: Reinforced asphaltic composition pads with slip-resisting mineral-granule surface

OR
Polymer-modified, reconstituted rubber pads with slip-resisting textured surface, as directed, manufactured as a traffic pad for foot traffic and acceptable to roofing system manufacturer, 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, thick, minimum.

2. Walkway Cap Sheet Strips: ASTM D 6164, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:

a. Granule Color: White OR Gray OR Tan, as directed.

1.3 EXECUTION

A. Examination

1. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:

a. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.

b. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

c. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 5 Section "Steel Deck."

d. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.

e. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
1) Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day’s work and at start of each roof area or plane. Do not proceed with roofing work if test sample foams or can be easily and cleanly stripped after cooling.

   f. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.

   g. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
   1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

   2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

   3. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.

   4. Install insulation strips in ribs of acoustical roof decks according to acoustical roof deck manufacturer's written instructions.

C. Substrate Board Installation
   1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.

      a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.

         OR

         Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

D. Vapor-Retarder Installation
   1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.

      a. Continuously seal side and end laps with tape OR adhesive, as directed.

   2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:

      a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.

         OR

         Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.

   3. Self-Adhering Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.

   4. Built-up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

   5. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

E. Insulation Installation
   1. Comply with roofing system manufacturer's written instructions for installing roof insulation.
2. Install one lapped base-sheet course and mechanically fasten to substrate according to roofing system manufacturer's written instructions.

3. Nailer Strips: Mechanically fasten 4-inch nominal- (89-mm actual-) width wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:
   a. 16 feet (4.88 m) apart for roof slopes steeper than 1 inch per 12 inches (1:12) but less than 3 inches per 12 inches (3:12).
   b. 48 inches (1220 mm) apart for roof slopes steeper than 3 inches per 12 inches (3:12).

4. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing membrane system with vertical surfaces or angle changes more than 45 degrees.

5. Install tapered insulation under area of roofing to conform to slopes indicated.

6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

7. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or more, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

8. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

9. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

10. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
    a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
    b. Set each layer of insulation in a solid mopping of hot roofing asphalt applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
    OR
    Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
    OR
    Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

11. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
    a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
    b. If number of fasteners will be based on ASCE/SEI 7's uplift pressure or SPRI's factored design uplift pressure, fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.

12. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

13. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.

14. If fastening is calculated from ASCE/SEI 7's uplift pressure or SPRI's factored design uplift pressure, fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
    a. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
    OR
    Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
OR
Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

F. If cover boards will be field installed over roof insulation and immediately below roofing membrane, install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints a minimum of 6 inches (150 mm) in each direction from joints of insulation below. Loosely butt cover boards together and fasten to roof deck, as directed. Tape joints if required by roofing system manufacturer.
   a. Fasten cover boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   OR
   b. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
   c. Apply hot roofing asphalt to underside, and immediately bond cover board to substrate.

G. Roofing Membrane Installation, General
1. If referencing NRCA's roof assembly identification matrix system, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
   a. Install roofing system MBS OR MBSH, as directed, OR 3 OR 4, as directed, OR N OR I OR C, as directed, OR M OR L, as directed, OR M OR F, as directed, according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" and to requirements in this Section.
2. For roof system that exceeds requirements of NRCA's roof assemblies, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing" and as follows:
   a. Deck Type: N (nailable) OR I (insulated) OR C (concrete or nonnailable), as directed.
   b. Adhering Method: T (torched) OR M (mopped) OR L (cold-applied adhesive), as directed.
   c. Base Sheet: One OR One, installed over sheathing paper, as directed.
   d. Number of Glass-Fiber Base-Ply Sheets: One OR Two, as directed.
   e. Number of SBS-Modified Asphalt Shingles: One OR Two, as directed.
   f. Surfacing Type: A (aggregate) OR M (mineral-granule-surfaced cap sheet) OR F (foil-surfaced cap sheet), as directed.
3. Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.
4. Where roof slope exceeds 1/2 inch per 12 inches (1:24) OR 3/4 inch per 12 inches (1:18), as directed, install roofing membrane sheets parallel with slope.
   a. Backnail roofing membrane sheets to nailer strips OR substrate, as directed, according to roofing system manufacturer's written instructions.
5. Cooperate with testing agencies engaged or required to perform services for installing roofing system.
6. Coordinate installation of roofing system so insulation and other components of the roofing membrane system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
   a. At end of each day's work, provide tie-offs to cover exposed roofing membrane sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
   b. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.
   c. Remove and discard temporary seals before beginning work on adjoining roofing.
7. Asphalt Heating: Do not raise roofing asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed roofing asphalt manufacturer's recommended temperature limits during roofing asphalt heating. Do not heat roofing asphalt within 25 deg F (14 deg C) of flash point. Discard roofing asphalt maintained at a temperature exceeding finished blowing temperature for more than four hours.
Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing system manufacturer’s written instructions.

8. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

H. Base-Sheet Installation
1. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
2. Install lapped base-sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
   a. Mechanically fasten to substrate, for nailable substrate.
      OR
      Spot- or strip-mop to substrate with hot roofing asphalt.
      OR
      Adhere to substrate in a solid mopping of hot roofing asphalt OR uniform coating of cold-applied adhesive, *as directed*, for nonnailable or insulated substrates.

I. Base-Ply Sheet Installation
1. Install glass-fiber base-ply sheets according to roofing system manufacturer’s written instructions starting at low point of roofing system. Align glass-fiber base-ply sheets without stretching. Extend sheets over and terminate beyond cants.
   a. Shingle side laps of glass-fiber base-ply sheets uniformly to ensure that required number of glass-fiber base-ply sheets covers substrate at any point. Shingle in direction to shed water.
   b. Embed each glass-fiber base-ply sheet in a continuous void-free mopping of hot roofing asphalt to form a uniform membrane without glass-fiber base-ply sheets touching.

J. SBS-Modified Bituminous Membrane Installation
1. Install modified bituminous roofing membrane cap sheet OR sheet and cap sheet, *as directed*, according to roofing manufacturer’s written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, installing as follows:
   a. Adhere to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C).
      OR
      Adhere to substrate in cold-applied adhesive.
      OR
      Torch apply to substrate.
   b. Unroll roofing membrane sheets and allow them to relax for minimum time period required by manufacturer.

2. Laps: Accurately align roofing membrane sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.
   a. Repair tears and voids in laps and lapped seams not completely sealed.
   b. Apply roofing granules to cover exuded bead at laps while bead is hot.

3. Install roofing membrane sheets so side and end laps shed water.
4. Aggregate Surfacing: Promptly after installing and testing roofing membrane, base flashing, and stripping, flood-coat roof surface with 60 lb/100 sq. ft. (3 kg/sq. m) of hot roofing asphalt. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
   a. Aggregate Weight: 400 lb/100 sq. ft. (20 kg/sq. m) for gravel or crushed stone or 300 lb/100 sq. ft. (15 kg/sq. m) for slag.

K. Flashing And Stripping Installation
1. Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof; secure to substrates according to roofing system manufacturer’s written instructions, and as follows:
   a. Prime substrates with asphalt primer if required by roofing system manufacturer.
b. Backer Sheet Application: Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over roofing membrane at cants in a solid mopping of hot roofing asphalt OR cold-applied adhesive, as directed.

OR

Backer Sheet Application: Adhere backer sheet to substrate in a solid mopping of hot roofing asphalt OR cold-applied adhesive at rate required by roofing system manufacturer, as directed.

c. Flashing Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C). Apply hot roofing asphalt to back of flashing sheet if recommended by roofing system manufacturer.

OR

Flashng Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.

OR

Flashng Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing system manufacturer.

OR

Flashng Sheet Application: Torch apply flashing sheet to substrate.

2. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above roofing membrane and 4 inches (100 mm) onto field of roofing membrane.

3. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

a. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement, as directed.

4. Install roofing membrane cap-sheet stripping where metal flanges and edgings are set on membrane roofing according to roofing system manufacturer's written instructions.

5. Roof Drains: Set 30-by-30-inch- (760-by-760-mm-) square metal flashing in bed of asphalt roofing cement on completed roofing membrane. Cover metal flashing with roofing membrane cap-sheet stripping and extend a minimum of 4 inches (100 mm) OR 6 inches (150 mm), as directed, beyond edge of metal flashing onto field of roofing membrane. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.

a. Install stripping according to roofing system manufacturer's written instructions.

L. Walkway Installation

1. Walkway Pads: Install walkway pads using units of size indicated or, if not indicated, of manufacturer's standard size according to walkway pad manufacturer's written instructions.

a. Set walkway pads in cold-applied adhesive.

OR

Set walkway pads in additional pour coat of hot roofing asphalt after aggregate surfacing of modified bituminous roofing membrane.

2. Walkway Cap Sheet Strips: Install walkway cap sheet strips over roofing membrane using same application method as used for roofing membrane cap sheet. Install walkway cap sheet strips before flood coat and aggregate surface is applied, as directed.

M. Field Quality Control

1. Testing Agency: Perform tests and inspections and to prepare test reports.

2. Test Cuts: Test specimens will be removed to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:

a. Approximate quantities of components within roofing membrane will be determined according to ASTM D 3617.

b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

a. Approximate quantities of components within roofing membrane will be determined according to ASTM D 3617.

b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

3. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

a. Notify the Owner 48 hours in advance of date and time of inspection.
4. Roofing system will be considered defective if it does not pass tests and inspections.
   a. Additional testing and inspecting, at Contractor's expense, will be performed to determine if
      replaced or additional work complies with specified requirements.

N. Protecting And Cleaning
1. Protect roofing system from damage and wear during remainder of construction period. When
   remaining construction will not affect or endanger roofing, inspect roofing for deterioration and
damage, describing its nature and extent in a written report, with copies to the Owner.
2. Correct deficiencies in or remove roofing system that does not comply with requirements, repair
   substrates, and repair or reinstall roofing system to a condition free of damage and deterioration
   at time of Final Completion and according to warranty requirements.
3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures
   recommended by manufacturer of affected construction.

SECTION 07 11 13 00 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. This specification covers the furnishing and installation of materials for bituminous dampproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 SUMMARY

A. Section Includes:
   1. Hot-applied asphalt dampproofing.
   2. Cold-applied, cut-back-asphalt dampproofing.
   3. Cold-applied, emulsified-asphalt dampproofing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.2: For dampproofing, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit IEQ 4: For dampproofing, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.4 FIELD CONDITIONS

A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit dampproofing to be performed according to manufacturers' written instructions.

B. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has cured.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations: Obtain primary dampproofing materials and primers from single source from single manufacturer. Provide protection course, molded-sheet drainage panels and auxiliary materials recommended in writing by manufacturer of primary materials.
B. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction unless otherwise required.

2.2 HOT-APPLIED ASPHALT DAMPROOFING
A. Hot-Applied Asphalt: ASTM D 449, Type II OR Type III, as directed.
B. VOC Content: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
C. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services’ "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

2.3 COLD-APPLIED, CUT-BACK-ASPHALT DAMPROOFING
A. Trowel Coats: ASTM D 4586, Type I, Class 1, fibered.
B. Brush and Spray Coats: ASTM D 4479, Type I, fibered or nonfibered.
C. VOC Content: 250 OR 300, as directed, g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
D. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services’ "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

2.4 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPROOFING
A. Trowel Coats: ASTM D 1227, Type II, Class 1.
B. Fibered Brush and Spray Coats: ASTM D 1227, Type II, Class 1.
C. Brush and Spray Coats: ASTM D 1227, Type III, Class 1.
D. VOC Content: Zero OR 30 g/L or less, as directed.
E. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services’ "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

2.5 AUXILIARY MATERIALS
A. General: Furnish auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with bituminous dampproofing.
C. Emulsified-Asphalt Primer: ASTM D 1227, Type III, Class 1, except diluted with water as recommended in writing by manufacturer.
1. Primer shall comply with the testing and product requirements of the California Department of Health Services’ "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Asphalt-Coated Glass Fabric: ASTM D 1668, Type I.

E. Patching Compound: Epoxy or latex-modified repair mortar OR Asbestos-free fibered mastic, as directed, of type recommended in writing by dampproofing manufacturer.

F. Protection Course: ASTM D 6506, 1/8-inch- (3-mm-) thick, semirigid sheets of fiberglass or mineral-reinforced-asphalactic core, pressure laminated between two asphalt-saturated fibrous liners.

G. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced on one side or both sides with plastic film, nominal thickness 1/4 inch (6 mm), with a compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.

H. Protection Course: Extruded-polystyrene board insulation, unfaced, ASTM C 578, Type X, 1/2 inch (13 mm) thick.

I. Protection Course: Smooth-surfaced roll roofing complying with ASTM D 6380, Class S, Type III.

2.6 MOLDED-SHEET DRAINAGE PANELS

A. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."

B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side of the core; and with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions with Applicator present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of bituminous dampproofing work.

1. Test for surface moisture according to ASTM D 4263.

B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.

B. Clean substrates of projections and substances detrimental to the dampproofing work; fill voids, seal joints, and remove bond breakers if any, as recommended in writing by prime material manufacturer.
C. Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections; cover with asphalt-coated glass fabric.

3.3 APPLICATION, GENERAL

A. Comply with manufacturer’s written instructions for dampproofing application, cure time between coats, and drying time before backfilling unless more stringent requirements are indicated.

1. Apply dampproofing to provide continuous plane of protection.
2. Apply additional coats if recommended in writing by manufacturer or to achieve a smooth surface and uninterrupted coverage.

B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of 6 inches (150 mm) over outside face of footing.

1. Extend dampproofing 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where shown as "reinforced," by embedding an 8-inch- (200-mm-) wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.

C. Where dampproofing exterior face of inner wythe of exterior masonry cavity walls, lap dampproofing at least 1/4 inch (6 mm) onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.

1. Extend dampproofing over outer face of structural members and concrete slabs that interrupt inner wythe.
2. Lap dampproofing at least 1/4 inch (6 mm) onto shelf angles supporting veneer.

D. Where dampproofing interior face of above-grade, exterior concrete and masonry single-wythe masonry walls, continue dampproofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by dampproofing wall before constructing intersecting walls.

3.4 HOT-APPLIED ASPHALT DAMPPROOFING

A. Do not apply hot asphalt when substrate condition causes foaming.

B. Kettle Temperature: Comply with dampproofing-material manufacturer’s written instructions, and keep at least 25 deg F (14 deg C) below the flash point.

C. Prime masonry and other porous substrates.

D. Apply a uniform coat of hot asphalt by mopping or spraying at not less than 20 lb or 2.5 gal./100 sq. ft. (1 kg or 1 L/sq. m).

1. Apply a second coat to below-grade foundation walls and where first application has failed to produce a smooth surface and uninterrupted coverage. Apply second coat at the rate specified for first coat.
3.5 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

A. Concrete Foundations and Parged Masonry Foundation Walls: Apply two brush or spray coats at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat or one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m).

B. Unparged Masonry Foundation Walls: Apply primer and two brush or spray coats at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat or primer and one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m).

C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).

D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).

E. Concrete Backup for Brick Veneer Assemblies, Stone Veneer Assemblies and Dimension Stone Cladding: Apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

F. Masonry Backup for Brick Veneer Assemblies, Stone Veneer Assemblies and Dimension Stone Cladding: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

H. Interior Face of Exterior Concrete Walls: Where above grade and indicated to be furred and finished, apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.6 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

A. Concrete Foundations and Parged Masonry Foundation Walls: Apply two brush or spray coats at not less than 1.5 gal./100 sq. ft. (0.6 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat one fibered brush or spray coat at not less than 3 gal./100 sq. ft. (1.2 L/sq. m) or one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m).

B. Unparged Masonry Foundation Walls: Apply primer and two brush or spray coats at not less than 1.5 gal./100 sq. ft. (0.6 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat primer one fibered brush or spray coat at not less than 3 gal./100 sq. ft. (1.2 L/sq. m) or primer and one trowel coat at not less than 5 gal./100 sq. ft. (2 L/sq. m).

C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).

D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).

E. Concrete Backup for Brick Veneer Assemblies, Stone Veneer Assemblies and Dimension Stone Cladding: Apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

F. Masonry Backup for Brick Veneer Assemblies, Stone Veneer Assemblies and Dimension Stone Cladding: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

H. Interior Face of Exterior Concrete Walls: Where above grade and indicated to be furred and finished, apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
I. Interior Face of Single-Wythe Exterior Masonry Walls: Where above grade and indicated to be furred and finished, apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.7 INSTALLATION OF PROTECTION COURSE

A. Where indicated, install protection course over completed-and-cured dampproofing. Comply with dampproofing-material and protection-course manufacturers' written instructions for attaching protection course.

1. Support protection course over cured coating with spot application of adhesive type recommended in writing by protection-board manufacturer.

2. Install protection course on same day OR within 24 hours, as directed, of installation of dampproofing (while coating is tacky) to ensure adhesion.

3.8 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate dampproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

1. Install protection course before installing drainage panels.

3.9 CLEANING

A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

1. **GENERAL**

   A. **Description Of Work:**
   1. This specification covers the furnishing and installation of materials for bituminous waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

   B. **Submittals**
   1. **Product Data:** For each type of product indicated. Include recommendations for method of application, primer, number of coats, coverage or thickness, and protection course.

   C. **Delivery, Storage And Handling**
   1. Waterproofing materials shall be delivered to the project site in the original sealed containers bearing the name of the manufacturer, contents and brand name. Asphalt shall be protected from freezing in a weathertight enclosure. Reinforcement fabrics shall be protected from moisture damage and moisture absorption in a weathertight enclosure or shall be stored off the ground on pallets, and covered on top and all sides with breathable-type canvas tarpaulins. Plastic sheets cause condensation buildup and therefore shall not be used to cover waterproofing materials. Damaged or deteriorated materials shall be removed from project site.

   D. **Project Conditions**
   1. **Weather Limitations:** Proceed with installation only when existing and forecasted weather conditions permit waterproofing to be performed according to manufacturers' written instructions.
   2. **Ventilation:** Provide adequate ventilation during application of waterproofing in enclosed spaces. Maintain ventilation until waterproofing has cured.

1.2 **PRODUCTS**

   A. **Asphalt Waterproofing**
   1. **Primer:** Primer for hot-applied asphalt waterproofing shall conform to ASTM D41, asbestos-free, non-fibred, manufactured with highly ductile soft asphalts and selected hydrocarbons.
   2. **Above-Grade Hot-Applied Asphalt:** For above-grade applications where asphalt will not be exposed to temperatures exceeding 122 degrees F (50 degrees C), hot-applied asphalt for membrane waterproofing system shall conform to ASTM D449, Type II. For above-grade applications where asphalt will be exposed to sunlight and temperatures exceeding 122 degrees F (50 degrees C), hot-applied asphalt shall conform to ASTM D449, Type III.
   3. **Below-Grade Hot-Applied Asphalt:** Hot-applied asphalt for below-grade applications shall conform to ASTM D449, Type I, asbestos-free, manufactured from crude petroleum, suitable for use with membrane waterproofing systems.
   4. **Reinforcement Fabrics**
   a. **Cotton Fabrics:** Cotton fabrics shall be woven entirely of cotton conforming with ASTM D173, thoroughly and uniformly saturated with asphalt.
   b. **Woven Burlap Fabrics:** Woven burlap fabrics shall be composed of 100 percent jute fiber and two cotton threads at each selvage conforming with ASTM D1327, thoroughly and uniformly saturated with asphalt. The fabric mesh shall not be completely closed or sealed by the process of saturation. Sufficient porosity shall be maintained to allow successive mopings of the plying asphalt to seep through. The surface shall not be coated or covered with talc or any other substances that will interfere with the adhesion between fabric and plying asphalt. The fabric surface shall be uniformly smooth and free of irregularities, folds and knots. The finished woven burlap fabrics shall be free of ragged edges, untrue edges, breaks or cracks, and other visible external defects.
c. Glass Fabrics: Glass fabrics shall conform to ASTM D1668 Type I, asphalt-treated woven glass waterproofing fabrics coated with asphalt.

d. Flashing Cement: Flashing cement shall conform to ASTM D4586, Type I, trowel grade, asbestos free, manufactured from asphalts characterized as adhesive, healing and ductile.

B. Insulation Boards

1. Insulation boards shall conform to ASTM C208 cellulosic fiber boards, construction grade, 1/2 inch (13 mm) thick, fibrous-felted homogeneous panel. Insulation boards shall be manufactured from ligno-cellulosic fibers (wood or cane) by a felting or molding process, asphalt-saturated or coated, with a density of 10 to 31 psf (49 to 151 kg/square meter). Surfaces of insulation boards shall be free of cracks, lumps, excessive departure from planeness, or other defects that adversely affect performance.

1.3 EXECUTION

A. Surface Preparation

1. Surfaces scheduled for bituminous waterproofing shall be prepared in accordance with waterproofing manufacturer's recommendations. Surface preparation shall be approved prior to waterproofing application.

2. Protection of Surrounding Areas: Before starting the waterproofing work, the surrounding areas and surfaces shall be protected from spillage and migration of asphalt onto other work. Drains and conductors shall be protected from clogging with asphalt.

3. Masonry Surfaces: Surfaces shall be free of oil, grease, dirt, laitance, loose material, frost, debris and other contaminants. Mortar joints shall be flush and free of extraneous mortar and chipped or broken masonry.

4. Concrete Surfaces: Surfaces shall be properly cured, free of form release agents, oil, grease, dirt, laitance, loose material, frost, debris and other contaminants. Form ties shall be cut flush with surface. Sharp protrusions and form match lines shall be removed. Holes, voids, spalled areas and cracks which can damage waterproofing materials shall be repaired. Rough surfaces shall be parged with a well-adhering coat of cement mortar.

5. Metal Surfaces: Surfaces shall be dry and be free of rust, scale, loose paint, oil, grease, dirt, frost and debris.

B. Hot-Applied Asphalt Waterproofing

1. Asphalt waterproofing shall be applied when the ambient temperature is 40 degrees F (4 degrees C) or above. Heating kettles and tanks shall be provided with automatic thermostatic control capable of maintaining asphalt temperature. Controls shall be calibrated and maintained in working order for duration of work. At time of application, asphalt shall not be heated above the equiviscous temperature (EVT) recommended by manufacturer. Immediately before use, temperature shall be measured with a portable thermometer at the point of application. EVT and flashpoint temperatures of asphalt in kettle shall be conspicuously posted on kettle. Asphalt with a temperature not conforming to the manufacturer's recommendations shall be returned to the kettle. Asphalt overheated by more than 50 degrees F (10 degrees C) for more than 1 hour shall be removed from site.

2. Below-Grade Wall Waterproofing: Waterproofing for foundation walls shall consist of a 1-ply OR 2-ply OR 3-ply OR 4-ply OR 5-ply, as directed, hot-applied asphalt membrane system. Fabrics shall be installed using the "shingle" method. Joints shall be caulked prior to primer applications. Primer shall be applied at a rate of 1/2 gallon per 100 square feet (0.2 L/square meter). Fabrics shall be overlapped at ends and staggered a minimum 10 inch (250 mm) for 1-ply OR 19 inch (480 mm) for 2-ply OR 24 inch (610 mm) for 3-ply OR 27 inch (685 mm) for 4-ply OR 30 inch (750 mm) for 5-ply, as directed, system. End-to-end taping is not acceptable. Each fabric shall be firmly embedded into a solid uniform coating of hot asphalt at a rate of 20 pounds per 100 square feet (0.98 kg/square meter) by pressing with broom. Fabrics shall not touch fabrics. Hot asphalt shall penetrate each fabric to provide the required adhesion. Asphalt between fabrics shall not be excessive to prevent slippage. Waterproofing system consisting of two or more fabrics shall be
3. **Floor Waterproofing:** Primer shall be applied at a rate of 1/2 gallon per 100 square feet (0.2 L/square meter). Primer shall not be left in puddles. Primer shall be dry to the touch before application of asphalt. Where slab abuts walls, first reinforcing fabric shall extend 6 inches (150 mm) minimum on slab and 8 inches (200 mm) on wall. At vertical corners, first fabric shall extend minimum 5 inches (125 mm) from corner on each side. Second fabric shall lap the first fabric 2 inches (50 mm) minimum. At floor drains, and elsewhere as indicated, the fabric shall extend into a clamping device, set in a heavy coating of flashing cement, and securely clamped.

C. **Flood Testing**
   1. Prior to concealment, waterproofed floors over occupied spaces shall be tested for watertightness. Drains shall be plugged and floors shall be submerged with 3 inches (75 mm) of clean water. Water shall be permitted to stand for a minimum of 24 hours. If leaks occur, water shall be drained and repairs made. Upon completion of repairs, floors shall be flooded with 3 inches (75 mm) of clean water and flood testing shall be repeated for minimum of 24 hours from the time each leak is repaired. Waterproofing system shall be completely watertight, and shall be approved in writing before covering up with other materials. Additional coats of asphalt are not an acceptable method for repairing leaks.

D. **Clean-Up**
   1. Surfaces of other work which are stained with waterproofing materials shall be cleaned with a cleaner recommended by waterproofing manufacturer.

E. **Protection Of Completed Work**
   1. **Floor Waterproofing:** The completed waterproofing work shall be protected from damage during and after construction. Protective covering shall be placed immediately before proceeding with the work which will conceal the waterproofing.
   2. **Wall Waterproofing:** Waterproofing against which backfill is to be placed shall be protected with a single layer of insulation board. Insulation boards shall be pressed into the final mopping while the asphalt is still hot, with edges of boards placed into moderate contact and joints staggered. For two-layer installation, joints in second layer shall be staggered over joints in first layer. Where surfaced insulation board is used, the surfaced side shall face outward. Boards shall be carefully and neatly fitted around projections, and shall cover the entire surface of the waterproofing materials. Waterproofing system not covered with protection board shall be protected to prevent damage from subsequent building operations. Installed boards shall not remain exposed at the end of a work day.

SECTION 07 13 53 00 - SELF-ADHERING SHEET WATERPROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for self-adhering sheet waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Modified bituminous sheet waterproofing.
   c. Modified bituminous deck paving sheet waterproofing.
   d. Modified bituminous composite panel waterproofing.
   e. Adhesive-coated HDPE sheet waterproofing.
   f. Molded-sheet drainage panels.
   g. Insulation.
   h. Plaza deck pavers and paver pedestals.

C. Submittals
1. Product Data: Include manufacturer’s written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
2. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
3. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for waterproofing.
4. Special warranties.
5. LEED Submittals:
   a. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
   b. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
      1) Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
   c. Samples: For each exposed product and for each color and texture specified, including the following products:
      1) 8-by-8-inch (200-by-200-mm) square of waterproofing and flashing sheet.
      2) 8-by-8-inch (200-by-200-mm) square of insulation.
      3) 4-by-4-inch (100-by-100-mm) square of drainage panel.
      4) Plaza-deck paver, 4-by-4-inch (100-by-100-mm) square OR full sized, as directed, in each color and texture required.
      5) Paver pedestal assembly.

D. Quality Assurance
1. Installer Qualifications: A firm that is approved or licensed by OR acceptable to, as directed, waterproofing manufacturer for installation of waterproofing required for this Project.
2. Preinstallation Conference: Conduct conference at Project site.
a. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

E. Delivery, Storage, And Handling
1. Deliver liquid materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.
3. Remove and replace liquid materials that cannot be applied within their stated shelf life.
4. Store rolls according to manufacturer's written instructions.
5. Protect stored materials from direct sunlight.

F. Project Conditions
1. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

G. Warranty
1. Special Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to replace waterproofing material that does not comply with requirements or that fails to remain watertight within specified warranty period.
   a. Warranty Period: Three OR Five, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Modified Bituminous Sheet Waterproofing
1. Modified Bituminous Sheet: Not less than 60-mil- (1.5-mm-) thick, self-adhering sheet consisting of 56 mils (1.4 mm) of rubberized asphalt laminated to a 4-mil- (0.10-mm-) thick, polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction.
   a. Physical Properties:
      1) Tensile Strength: 250 psi (1.7 MPa) minimum; ASTM D 412, Die C, modified.
      2) Ultimate Elongation: 300 percent minimum; ASTM D 412, Die C, modified.
      3) Low-Temperature Flexibility: Pass at minus 20 deg F (minus 29 deg C); ASTM D 1970.
      4) Crack Cycling: Unaffected after 100 cycles of 1/8-inch (3-mm) movement; ASTM C 836.
      5) Puncture Resistance: 40 lbf (180 N) minimum; ASTM E 154.
      6) Hydrostatic-Head Resistance: 150 feet (45 m) minimum; ASTM D 5385.
      7) Water Absorption: 0.15 percent weight-gain maximum after 48-hour immersion at 70 deg F (21 deg C); ASTM D 570.
      8) Vapor Permeance: 0.05 perms (2.9 ng/Pa x s x sq. m); ASTM E 96, Water Method.

2. Modified Bituminous Sheet, Fabric Reinforced: 60-mil- (1.5-mm-) thick, self-adhering sheet consisting of rubberized-asphalt membrane embedded in spun-bonded polyester or fiberglass nonwoven fabric reinforcement laminated to a 0.50-mil- (0.01-mm-) thick polyester film with release liner on adhesive side.
   a. Physical Properties:
      1) Pliability: No cracks when bent 180 degrees over a 1-inch (25-mm) mandrel at minus 5 deg F (minus 25 deg C); ASTM D 416.
      2) Hydrostatic-Head Resistance: 150 feet (45 m) minimum.
      3) Vapor Permeance: 0.05 perms (2.9 ng/Pa x s x sq. m); ASTM E 96, Water Method.
B. Modified Bituminous Deck Paving Sheet Waterproofing
   1. Modified Bituminous Deck Paving Sheet: Provide one of the products described below, as directed:
      a. 65-mil- (1.6-mm-) thick, self-adhering sheets consisting of 53 to 56 mils (1.3 to 1.4 mm) of rubberized asphalt laminated to a heat-resisting, 9- to 12-mil- (0.2- to 0.3-mm-) thick, woven polypropylene geotextile reinforcement with release liner on adhesive side.
      b. 70-mil- (1.8-mm-) thick, self-adhering sheets consisting of rubberized asphalt embedded in inert fabric reinforcement laminated to a reflective geotextile protective topping with release liner on adhesive side.
      c. 60-mil- (1.5-mm-) thick, self-adhering sheets consisting of rubberized asphalt embedded in nonwoven OR woven, as directed, fiberglass fabric reinforcement laminated to a 0.50-mil-(0.01-mm-) thick polyester mat with release liner on adhesive side.
      d. Physical Properties:
         1) Tensile Strength, Membrane: 50 lbf/in (8.75 kN/m) minimum; ASTM D 882.
         2) Pliability: Unaffected when bent 180 degrees over a 1/4-inch (6.4-mm) mandrel at minus 15 deg F (minus 26 deg C); ASTM D 146.

C. Modified Bituminous Composite Panel Waterproofing
   1. Modified Bituminous Composite Panel: 90-mil- (2.2-mm-) thick, multilaminated panel consisting of a protection course bonded to an asphalt saturated carrier sheet bonded to a rubberized asphalt waterproofing self-adhering membrane with release liner.

D. Adhesive-Coated HDPE Sheet Waterproofing
   1. Adhesive-Coated HDPE Sheet for Vertical Applications: 32-mil- (0.8-mm-) thick, uniform, flexible sheets consisting of 16-mil- (0.4-mm-) thick, HDPE sheet coated with a pressure-sensitive rubber adhesive, a protective adhesive coating, and a release liner with the following physical properties:
      a. Tensile Strength, Film: 4000 psi (27.6 MPa) minimum; ASTM D 412.
      b. Low-Temperature Flexibility: Pass at minus 10 deg F (minus 23 deg C); ASTM D 1970.
      c. Peel Adhesion to Concrete: 5 lbf/in. (875 N/m); ASTM D 903, modified.
      d. Lap Adhesion: 2.5 lbf/in. (440 N/m); ASTM D 1876, modified.
      e. Hydrostatic-Head Resistance: 231 feet (70 m); ASTM D 5385, modified.
      f. Vapor Permeance: 0.01 perms (0.6 ng/Pa x s x sq. m); ASTM E 96, Water Method.
      g. Water Absorption: 0.5 percent; ASTM D 570.
   2. Adhesive-Coated HDPE Sheet for Horizontal Applications: 46-mil- (1.2-mm-) thick, uniform, flexible sheets consisting of 30-mil- (0.76-mm-) thick, HDPE sheet coated with a pressure-sensitive rubber adhesive, a protective adhesive coating, a detackifying surface treatment, an uncoated self-adhering side lap strip, and a release liner with the following physical properties:
      a. Tensile Strength, Film: 4000 psi (27.6 MPa) minimum; ASTM D 412.
      b. Low-Temperature Flexibility: Pass at minus 10 deg F (minus 23 deg C); ASTM D 1970.
      c. Peel Adhesion to Concrete: 5 lbf/in. (875 N/m); ASTM D 903, modified.
      d. Lap Adhesion: 2.5 lbf/in. (440 N/m); ASTM D 1876, modified.
      e. Hydrostatic-Head Resistance: 231 feet (70 m); ASTM D 5385, modified.
      f. Vapor Permeance: 0.01 perms (0.6 ng/Pa x s x sq. m); ASTM E 96, Water Method.
      g. Water Absorption: 0.5 percent; ASTM D 570.

E. Auxiliary Materials
   1. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
      a. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
   2. Primer: Liquid waterborne OR solvent-borne, as directed, primer recommended for substrate by manufacturer of sheet waterproofing material.
   3. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by manufacturer of sheet waterproofing material.
   4. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, trowel grade or low viscosity.
   5. Substrate Patching Membrane: Low-viscosity, two-component, asphalt-modified coating.

7. Mastic, Adhesives, and Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.
   a. Detail Tape: Two-sided, pressure-sensitive, self-adhering reinforced tape, 4-1/2 inches (114 mm) wide, with a tack-free protective adhesive coating on one side and release film on self-adhering side.
   b. Detail Strips: 62.5-mil- (1.58-mm-) thick, felt-reinforced self-adhesive strip, 9 inches (229 mm) wide, with release film on adhesive side.

8. Metal Termination Bars: Aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick, predrilled at 9-inch (229-mm) centers.

9. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
   a. Thickness: 1/8 inch (3 mm), nominal, for vertical applications; 1/4 inch (6 mm), nominal, elsewhere.
   b. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for type of protection course.

10. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced one side or both sides with plastic film, nominal thickness 1/4 inch (6 mm), with compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.

11. Protection Course: Unfaced, fan-folded, extruded-polystyrene board insulation, nominal thickness 1/4 inch (6 mm) with compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621.

12. Protection Course: Extruded-polystyrene board insulation, unfaced, ASTM C 578, Type X, 1/2 inch (13 mm) thick.

13. Protection Course: Molded-polystyrene board insulation, ASTM C 578, Type I, 0.90-lb/cu. ft. (15-kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.

F. Molded-Sheet Drainage Panels
1. Molded-Sheet Drainage Panel: Comply with Division 33 Section "Subdrainage".
2. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).
3. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm per ft. (35 L/min. per m).

G. Insulation
1. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, square or shiplap edged.
   a. Type IV, 25-psi (173-kPa) minimum compressive strength.
   b. Type VI, 40-psi (276-kPa) minimum compressive strength.
   c. Type VII, 60-psi (414-kPa) minimum compressive strength.
   d. Type V, 100-psi (690-kPa) minimum compressive strength.
2. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) or Type VI, 40-psi (276-kPa) minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with 1 side having grooved drainage channels.
3. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) or Type VI, 40-psi (276-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with 1 side having grooved drainage channels faced with nonwoven geotextile filter fabric.
4. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) OR Type VII, 60-psi (414-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with 1 side having ribbed drainage channels.

5. Geotextile-Faced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VII, 60-psi (414-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with 1 side having grooved drainage channels faced with manufacturer's standard, nonwoven geotextile filter fabric.

H. Plaza Deck Pavers
   1. Plaza Deck Pavers: Brick OR Concrete OR Asphalt-Block, as directed, pavers specified in Division 32 Section “Unit Paving”.
   2. Plaza Deck Pavers: Granite OR Limestone OR Marble OR Quartz-Based Stone OR Slate, as directed, pavers specified in Division 09 Section “Stone Flooring”.
   3. Plaza Deck Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, manufactured for use as plaza deck pavers; minimum compressive strength 7500 psi (52 mpa) or 6500 psi (45 mpa), as directed, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.
      a. Thickness: 1-5/8 inches (41 mm) OR 1-3/4 inches (45 mm) OR 2 inches (51 mm) OR 2-3/8 inches (60 mm), as directed.
      b. Face Size: 8-7/8 inches (225 mm) square OR 9 inches (229 mm) square OR 9 by 18 inches (229 by 457 mm) OR 12 inches (305 mm) square OR 12 by 24 inches (305 by 610 mm) OR 18 inches (457 mm) square OR 24 inches (610 mm) square OR As indicated, as directed.
      c. Color: As indicated by manufacturer's designations OR Match sample OR As selected from manufacturer's full range, as directed.
   4. Setting Bed: Provide aggregate OR mortar OR bituminous, as directed, setting-bed materials specified in Division 32 Section “Unit Paving”.
   5. Paver Pedestals: Paver manufacturer's standard SBR rubber, HDPE, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable, as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm) OR 1/8 to 3/16 inch (3 to 5 mm), as directed.
      a. Concrete Fill: ACI 301, compressive strength of 5000 psi (34 MPa) at 28 days and air content of 6 percent.

1.3 EXECUTION

A. Surface Preparation
   1. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
   2. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
   3. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
   4. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
   5. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
      a. Install sheet strips and center over treated construction and contraction joints and cracks exceeding a width of 1/16 inch (1.6 mm) or 1/8 inch (3 mm) for modified bituminous deck paving waterproofing.
   6. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips.
      a. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.
   7. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
a. Install membrane strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of liquid membrane on horizontal inside corners and as follows:
   1) At footing-to-wall intersections, extend liquid membrane each direction from corner or install membrane strip centered over corner.
   2) At plaza deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.

8. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D 6135.

B. Modified Bituminous Sheet Waterproofing Application
1. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and according to recommendations in ASTM D 6135.
2. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
3. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
   a. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F (16 deg C).
4. Two-Ply Application: Install sheets to form a membrane with lap widths not less than 50 percent of sheet widths to provide a minimum of 2 thicknesses of sheet membrane over areas to receive waterproofing.
5. Horizontal Application: Apply sheets from low point to high point of decks to ensure that side laps shed water.
6. Apply continuous sheets over sheet strips bridging substrate cracks, construction, and contraction joints.
7. Seal exposed edges of sheets at terminations not concealed by metal counterflashings or ending in reglets with mastic.
8. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing.
9. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches (150 mm) beyond repaired areas in all directions.
10. Install protection course with butted joints over waterproofing membrane immediately.
   a. Molded-sheet drainage panels OR Insulation drainage panels OR Board insulation, as directed, may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer and installed immediately.
11. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

C. Modified Bituminous Deck Paving Sheet Waterproofing Application
1. Install modified bituminous deck paving sheets according to waterproofing manufacturer's written instructions.
2. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
3. Apply and firmly adhere sheets over areas to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and 6-inch (150-mm) end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
4. Apply sheet waterproofing from low point to high point of decks to ensure that side laps shed water.
5. Apply continuous sheets over sheet strips bridging substrate cracks, construction, and contraction joints.
7. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing.
8. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches (150 mm) beyond repaired areas in all directions.

9. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

D. Modified Bituminous Composite Panel Waterproofing Application
1. Install modified bituminous composite panels according to waterproofing manufacturer's written instructions.
2. Apply primer to substrate at required rate and allow to dry. Limit priming to areas that will be covered by waterproofing in same day. Reprime areas exposed for more than 24 hours.
3. Install and firmly adhere composite panels over area to receive waterproofing. Accurately align and butt vertical and horizontal joints.
4. Seal vertical and horizontal butt joints and exposed top, side, and bottom edges at composite panel waterproofing terminations with detail strips.
5. Correct deficiencies in or remove composite panel waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair detail strips.

E. Adhesive-Coated HDPE Sheet Waterproofing Application
1. Install adhesive-coated HDPE sheets according to manufacturer's written instructions.
2. Place and secure molded-sheet drainage panels over substrate. Lap edges and ends of geotextile to maintain continuity.
3. Vertical Applications: Install adhesive-coated HDPE sheet with HDPE face against substrate. Accurately align sheets and maintain uniform 3-inch- (75-mm-) minimum lap widths and end laps. Overlap and seal seams and stagger and tape end laps to ensure watertight installation. Mechanically fasten to substrate.
   a. Securely fasten top termination of membrane with continuous metal termination bar anchored into substrate and cover with detailing tape.
4. Horizontal Applications: Install adhesive-coated HDPE sheet with HDPE face against substrate. Accurately align sheets and maintain uniform 3-inch- (75-mm-) minimum lap widths and end laps. Overlap and seal seams. Overlap, stagger, and seal end laps with detail tape to ensure watertight installation.
5. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.
6. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
7. Install sheet waterproofing and auxiliary materials to produce a continuous watertight tie into adjacent waterproofing.
8. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending 6 inches (150 mm) beyond repaired areas in all directions. Apply a patch of sheet waterproofing and firmly secure with detail tape.
9. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

F. Molded-Sheet Drainage Panel Installation
1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or mechanical fasteners that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
   a. For vertical applications, install board insulation OR protection course, as directed, before installing drainage panels.

G. Insulation Installation
1. Install one or more layers of board insulation to achieve required thickness and insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
2. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.
3. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

H. Plaza Deck Paver Installation
1. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in Division 32 Section(s) "Unit Paving" OR Division 09 Section(s) "Stone Flooring", as directed.
2. Install concrete pavers in locations indicated according to manufacturer's written instructions.
3. Accurately install fixed OR adjustable, as directed, height paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope with shims.
   a. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
4. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
   a. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
5. Install pavers to not vary more than 1/16 inch (1.6 mm) in elevation between adjacent pavers or more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.
6. Maintain tolerances of paving installation within 1/4 inch in 10 feet (1:48) of surface plane in any direction.

I. Field Quality Control
1. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
   a. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (51 mm) of clearance from top of sheet flashings.
   b. Flood each area for 24 OR 48 OR 72, as directed, hours.
   c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
2. Engage an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.

J. Protection And Cleaning
1. Do not permit foot or vehicular traffic on unprotected membrane.
2. Protect waterproofing from damage and wear during remainder of construction period.
3. Protect installed board insulation OR insulation drainage panels, as directed, from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
4. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 13 53 00
SECTION 07 13 53 00a - ELASTOMERIC SHEET WATERPROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for elastomeric sheet waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Butyl rubber sheet waterproofing.
   b. EPDM rubber sheet waterproofing.
   c. Molded-sheet drainage panels.
   d. Insulation.
   e. Plaza deck pavers and paver pedestals.

C. Submittals
1. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
2. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
3. Product test reports.
4. Special warranties.

D. Quality Assurance
1. Installer Qualifications: A firm that is approved or licensed by OR acceptable to, as directed, waterproofing manufacturer for installation of units required for this Project.
2. Preinstallation Conference: Conduct conference at Project site.
   a. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

E. Delivery, Storage, And Handling
1. Deliver liquid materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.
3. Remove and replace liquid materials that cannot be applied within their stated shelf life.
4. Store rolls according to manufacturer's written instructions.
5. Protect stored materials from direct sunlight.

F. Project Conditions
1. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

G. Warranty
1. Special Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to replace waterproofing material that does not comply with requirements or that fails to remain watertight within 10 OR 20, as directed, years from date of Final Completion.
1.2 PRODUCTS

A. Sheet Waterproofing
1. Butyl Rubber Sheet: ASTM D 6134, Type II, 60-mil- (1.5-mm-) OR 90-mil- (2.3-mm-) OR 120-mil- (3.0-mm-), as directed, thick flexible sheet, unreinforced, formed from isobutylene-isoprene rubber.
2. EPDM Rubber Sheet: ASTM D 6134, Type I, 60-mil- (1.5-mm-) thick flexible sheet, unreinforced, formed from EPDM.

B. Auxiliary Materials
1. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
   a. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
2. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing or 60-mil- (1.5-mm-) thick, uncured EPDM as required by manufacturer.
3. Exposed Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, cured or uncured, as required by manufacturer.
   a. Butyl Gum Tape: 30-mil- (0.76-mm-) thick-by-6-1/4-inch- (160-mm-) wide, uncured butyl with polyethylene release film.
8. Water Cutoff Mastic: Butyl mastic sealant.
9. Waterproofing and Sheet Flashing Accessories: Provide sealants, pourable sealers, cone and vent flashings, inside and outside corner flashings, termination reglets, and other accessories recommended by waterproofing manufacturer for intended use.
10. Metal Termination Bars: Manufacturer's standard aluminum bars, approximately 1 inch (25 mm) wide, prepunched, with zinc-alloy-body fasteners and stainless-steel pins.
11. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
   a. Thickness: 1/8 inch (3 mm), nominal, for vertical applications; 1/4 inch (6 mm), nominal, elsewhere.
   b. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for type of protection course.
12. Protection Course:
   a. Faced, fan folded, with a core of extruded-polystyrene board insulation sandwiched between 2 sheets of plastic film, nominal thickness 1/4 inch (6 mm), with compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.
   b. Unfaced, fan-folded, extruded-polystyrene board insulation, nominal thickness 1/4 inch (6 mm) with compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621.
   c. Extruded-polystyrene board insulation, unfaced, ASTM C 578, Type X, 1/2 inch (13 mm) thick.
   d. Molded-polystyrene board insulation, ASTM C 578, Type I, 0.90-lb/cu. ft. (15-kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.

C. Molded-Sheet Drainage Panels
1. Molded-Sheet Drainage Panel: Comply with Division 33 Section "Subdrainage".
2. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).
3. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm per ft. (35 L/min. per m).

D. Insulation
1. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, square or shiplap edged.
   a. Type IV, 25-psi (173-kPa) minimum compressive strength.
   b. Type VI, 40-psi (276-kPa) minimum compressive strength.
   c. Type VII, 60-psi (414-kPa) minimum compressive strength.
   d. Type V, 100-psi (690-kPa) minimum compressive strength.
2. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) or Type VI, 40-psi (276-kPa) minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with 1 side having grooved drainage channels.
3. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) or Type VI, 40-psi (276-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with 1 side having grooved drainage channels faced with nonwoven geotextile filter fabric.
4. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) OR Type VII, 60-psi (414-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with 1 side having ribbed drainage channels.
5. Geotextile-Faced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VII, 60-psi (414-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with 1 side having grooved drainage channels faced with manufacturer’s standard, nonwoven geotextile filter fabric.

E. Plaza Deck Pavers
1. Plaza Deck Pavers: Brick OR Concrete OR Asphalt-block, as directed, pavers specified in Division 32 Section “Unit Paving”.
2. Plaza Deck Pavers: Granite OR Limestone OR Marble OR Quartz-based stone OR Slate, as directed, pavers specified in Division 09 Section “Stone Flooring”.
3. Plaza Deck Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, manufactured for use as plaza deck pavers; minimum compressive strength 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.
   a. Color: As selected from manufacturer’s full range.
4. Setting Bed: Provide aggregate OR mortar OR bituminous, as directed, setting-bed materials specified in Division 32 Section “Unit Paving”.
5. Paver Pedestals: Paver manufacturer’s standard SBR rubber, HDPE, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable, as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm) OR 1/8 to 3/16 inch (3 to 5 mm), as directed.
   a. Concrete Fill: ACI 301, compressive strength of 5000 psi (34 MPa) at 28 days and air content of 6 percent.

1.3 EXECUTION

A. Surface Preparation
1. Clean, prepare, and treat substrates according to manufacturer’s written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
2. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
3. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

4. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

5. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.

6. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

B. Fully Adhered Sheet Installation
1. Install fully adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions and recommendations in ASTM D 5843.

2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.

3. Apply bonding adhesive to substrates at required rate and allow to partially dry.

4. Apply bonding adhesive to sheets and firmly adhere sheets to substrates. Do not apply bonding adhesive to splice area of sheet.

5. Install fully adhered sheets and auxiliary materials to tie into existing waterproofing.

6. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

7. Horizontal Application: Apply sheets with side laps shingled with slope of deck where possible. 
   a. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.

C. Partially Adhered Sheet Installation
1. Install partially adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions.

2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.

3. Apply bonding adhesive to the following areas of substrates and to each sheet at required rate and allow to partially dry:
   a. Upper 25 percent of length of each sheet and 18 inches (457 mm) around perimeter of each sheet.

4. Firmly adhere sheets to substrate. Do not apply bonding adhesive to splice area of sheet.

5. Install partially adhered sheets and auxiliary materials to tie into existing waterproofing.

6. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

D. Compartmented, Loosely Laid Sheet Installation
1. Install compartmented, loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.

2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.

3. Apply continuous beads of water cutoff mastic, of size recommended by waterproofing manufacturer, to substrates in a 60-by-60-inch (1500-by-1500-mm) grid pattern before installing sheet.

4. Apply sheets with side laps shingled with slope of deck where possible.

5. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.

6. Install compartmented, loosely laid sheets and auxiliary materials to tie into existing waterproofing.

7. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.
E. Seam Installation
   1. Cement Splice: Clean splice areas, apply splicing cement and in-seam sealant, and firmly roll side and end laps of overlapping sheets according to manufacturer's written instructions to produce a splice not less than 6 inches (150 mm) wide and to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet terminations.
   2. Cement and Tape Splice: Clean splice areas, apply splicing cement and butyl gum tape, and firmly roll side and end laps of overlapping sheets according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet terminations.

F. Sheet Flashing Installation
   1. Install sheet flashings and preformed flashing accessories and adhere to substrates according to waterproofing manufacturer's written instructions.
   2. Form wall flashings using exposed sheet flashing.
   3. Extend deck sheet waterproofing to form wall flashings.
      a. Flash penetrations and field-formed inside and outside corners with uncured sheet flashing.
      b. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
   4. Cover expansion joints and discontinuous deck-to-wall or deck-to-deck joints by extending deck sheet waterproofing over joints.
   5. Terminate and seal top of sheet flashings with mechanically anchored termination bars.

G. Protection Course Installation
   1. Install protection course over waterproofing membrane according to manufacturer's written instructions and before beginning subsequent construction operations. Minimize exposure of membrane.
      a. Molded-sheet drainage panels OR Insulation drainage panels OR Board insulation, as directed, may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer.

H. Molded-Sheet Drainage Panel Installation
   1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or mechanical fasteners that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
      a. For vertical applications, install board insulation OR protection course, as directed, before installing drainage panels.

I. Insulation Installation
   1. Install one or more layers of board insulation to achieve required thickness and insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
   2. On vertical surfaces, place and secure insulation units according to manufacturer's written instructions.
   3. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

J. Plaza Deck Paver Installation
   1. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in Division 32 Section(s) "Unit Paving" OR Division 09 Section(s) "Stone Flooring", as directed.
   2. Install concrete pavers in locations indicated according to manufacturer's written instructions.
   3. Accurately install fixed OR adjustable, as directed, height paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope with shims.
      a. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
4. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
   a. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
5. Install pavers to not vary more than 1/16 inch (1.6 mm) in elevation between adjacent pavers or more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.
6. Maintain tolerances of paving installation within 1/4 inch in 10 feet (1:48) of surface plane in any direction.

K. Protection And Cleaning
1. Do not permit foot or vehicular traffic on unprotected membrane.
2. Protect waterproofing from damage and wear during remainder of construction period.
3. Protect installed board insulation OR insulation drainage panels, as directed, from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
4. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 13 53 00a
SECTION 07 14 13 00 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for hot fluid-applied rubberized asphalt waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   b. Molded-sheet drainage panels.
   c. Insulation.
   d. Plaza deck pavers.

C. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining waterproofing, and other termination conditions.
   a. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
3. Product test reports.
4. Sample warranties

D. Quality Assurance
1. Installer Qualifications: A firm that is approved or licensed by OR acceptable to, as directed, manufacturer for installation of waterproofing required for this Project and is eligible to receive special warranties specified.
2. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling
1. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
2. Remove and replace liquid materials that cannot be applied within their stated shelf life.
3. Protect stored materials from direct sunlight.

F. Project Conditions
1. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below 0 deg F (minus 18 deg C).
   a. Do not apply waterproofing in snow, rain, fog, or mist.
2. Maintain adequate ventilation during application and curing of waterproofing materials.

G. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace waterproofing and sheet flashings that do not comply with requirements or that fail to remain watertight within five OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Waterproofing Membrane
1. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

B. Flashing Sheet Materials
1. Elastomeric Flashing Sheet: 50-mil- (1.3-mm-) minimum, uncured sheet neoprene as follows:
   a. Tensile Strength: 1400 psi (9.6 MPa) minimum; ASTM D 412, Die C.
   b. Elongation: 300 percent minimum; ASTM D 412.
   c. Tear Resistance: 125 psi (860 kPa) minimum; ASTM D 624, Die C.
   d. Brittleness: Does not break at minus 30 deg F (34 deg C); ASTM D 2137.

C. Auxiliary Materials
1. Primer: ASTM D 41, asphaltic primer.
2. Elastomeric Sheet: 50-mil- (1.3-mm-) minimum, uncured sheet neoprene as follows:
   a. Tensile Strength: 1400 psi (9.6 MPa) minimum; ASTM D 412, Die C.
   b. Elongation: 300 percent minimum; ASTM D 412.
   c. Tear Resistance: 125 psi (860 kPa) minimum; ASTM D 624, Die C.
   d. Brittleness: Does not break at minus 30 deg F (34 deg C); ASTM D 2137.

3. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum termination bars; approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
4. Sealants and Accessories: Manufacturer's recommended sealants and accessories.
6. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and nominal thickness of 1/8 inch (3 mm) OR 1/4 inch (6 mm), as directed.
7. Protection Course: Manufacturer's standard, 80- to 90-mil- (2.0- to 2.3-mm-) thick, fiberglass-reinforced rubberized asphalt or modified bituminous sheet.

D. Molded-Sheet Drainage Panels
1. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve, laminated to one side with OR without, as directed, a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm/ft. (112 to 188 L/min. per m).
2. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43-mm) sieve, laminated to one side with OR without, as directed, a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm/ft. (35 L/min. per m).

E. Insulation
1. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, square OR shiplap, as directed, edged.
   a. Type IV, 25-psi (173-kPa) minimum compressive strength.
   b. Type VI, 40-psi (276-kPa) minimum compressive strength.
   c. Type VII, 60-psi (414-kPa) minimum compressive strength.
   d. Type V, 100-psi (690-kPa) minimum compressive strength.
2. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) OR Type VI, 40-psi (276-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
3. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) OR Type VI, 40-psi (276-kPa), as directed, minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven, geotextile filter fabric.
4. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) OR Type VII, 60-psi (414-kPa), as
directed, minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.

5. Geotextile-Faced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C578, Type VII, 60-psi (414-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven, geotextile filter fabric.

F. Plaza Deck Pavers
1. Plaza Deck Pavers:
   a. Brick OR Concrete OR Asphalt-block, as directed, pavers specified in Division 32 Section "Unit Paving".
   OR
   Granite OR Limestone OR Marble OR Quartz-based stone OR Slate, as directed, pavers specified in Division 09 Section "Stone Flooring".
   OR
   Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, manufactured for use as plaza deck pavers; minimum compressive strength 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, ASTM C140; absorption not greater than 5 percent, ASTM C140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C67.
   1) Thickness: 1-5/8 inches (41 mm) OR 1-3/4 inches (45 mm) OR 2 inches (51 mm) OR 2-3/8 inches (60 mm), as directed.
   2) Face Size: 8-7/8 inches (225 mm) square OR 9 inches (229 mm) square OR 9 by 18 inches (229 by 457 mm) OR 12 inches (305 mm) square OR 12 by 24 inches (305 by 610 mm) OR 18 inches (457 mm) square OR 24 inches (610 mm) square, as directed.
   3) Color: As selected from manufacturer's full range.

2. Setting Bed: Provide aggregate OR mortar OR bituminous, as directed, setting-bed materials specified in Division 32 Section "Unit Paving".

3. Paver Supports: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable, as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm), as directed.
   a. Concrete Fill: ACI 301, compressive strength of 5000 psi (34 MPa) at 28 days, and air content of 6 percent.

1.3 EXECUTION

A. Preparation
1. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
2. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
3. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
4. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
   a. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.
5. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

B. Joints, Cracks, And Terminations
1. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
   a. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
   b. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches (150 mm) on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch (3 mm) thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
   c. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches (150 mm) on each side of nonmoving joints and cracks not exceeding 1/8 inch (3 mm) thick, and beyond roof drains and penetrations.
      1) Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.
2. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches (150 mm) on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

C. Flashing Installation
1. Install elastomeric flashing sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
2. Prime substrate with asphalt primer.
3. Install elastomeric flashing sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.
4. Extend elastomeric flashing sheet up walls or parapets a minimum of 8 inches (200 mm) above plaza deck pavers and 6 inches (150 mm) onto deck to be waterproofed.
5. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of roofing.

D. Membrane Application
1. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.
2. Heat and apply rubberized asphalt according to manufacturer's written instructions.
   a. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
3. Start application with manufacturer's authorized representative present.
4. Unreinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to form a uniform, unreinforced, seamless membrane, 180-mil (4.5-mm) minimum thickness OR 180-mil (4.5-mm) average thickness, but not less than 125 mil (3.2 mm) thick, as directed.
5. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils (2.3 mm); embed reinforcing fabric, overlapping sheets 2 inches (50 mm); spread another 125-mil- (3.2-mm-) thick layer to provide a uniform, reinforced, seamless membrane 215 mils (5.5 mm) thick.
6. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
7. Cover waterproofing with protection course with overlapped joints before membrane is subject to backfilling OR construction or vehicular traffic, as directed.

E. Molded-Sheet Drainage Panel Installation
1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
   a. For vertical applications, install board insulation OR protection course, as directed, before installing drainage panels.

F. Insulation Installation
1. Install one or more layers of board insulation to achieve required thickness and insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
2. On vertical surfaces, set insulation units into rubberized asphalt according to manufacturer's written instructions.
3. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

G. Plaza Deck Paver Installation
   1. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in Division 32 Section(s) "Unit Paving" OR Division 09 Section(s) "Stone Flooring", as directed.
   2. Install concrete pavers in locations indicated according to manufacturer's written instructions.
   3. Accurately install fixed-height OR adjustable-height, as directed, paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope with shims.
      a. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
   4. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
      a. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
   5. Install pavers to not vary more than 1/16 inch (1.6 mm) in elevation between adjacent pavers or more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.
   6. Maintain tolerances of paving installation within 1/4 inch in 10 feet (1:48) of surface plane in any direction.

H. Cleaning And Protection
   1. Protect waterproofing from damage and wear during remainder of construction period.
   2. Protect installed board insulation OR insulation drainage panels, as directed, from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
   3. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 13 00
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 07 14 16 00 - COLD FLUID-APPLIED WATERPROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for cold fluid-applied waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      b. Two-component polyurethane waterproofing.
      c. Polyester waterproofing.
      d. Latex-rubber waterproofing.
      e. Molded-sheet drainage panels.
      f. Insulation.
      g. Plaza deck pavers.

C. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
   3. Product test reports.

D. Quality Assurance
   1. Installer Qualifications: A firm that is approved or licensed by OR acceptable to, as directed, waterproofing manufacturer for installation of waterproofing required for this Project.
   2. Preinstallation Conference: Conduct conference at Project site.
      a. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and flashings, installation procedures, testing and inspection procedures, and protection and repairs.

E. Delivery, Storage, And Handling
   1. Deliver liquid materials to Project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, shelf life, and directions for storing and mixing with other components.
   2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
   3. Remove and replace liquid materials that cannot be applied within their stated shelf life.
   4. Protect stored materials from direct sunlight.

F. Project Conditions
   1. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.

G. Warranty
   1. Special Manufacturer's Warranty: Manufacturer's standard form in which waterproofing manufacturer and Installer agree to repair or replace waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
a. Warranty Period: Five years from date of Final Completion.

1.2 PRODUCTS

A. Single-Component Polyurethane Waterproofing
   1. Single-Component, Modified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
   2. Single-Component, Reinforced, Modified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.

B. Two-Component Polyurethane Waterproofing
   1. Two-Component, Modified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
   2. Two-Component, Unmodified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
   3. Two-Component, Reinforced, Unmodified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.

C. Polyester Waterproofing
   1. Two-Component, Reinforced, Unsaturated Polyester Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.

D. Latex-Rubber Waterproofing
   1. Two-Component, Unreinforced, Latex-Rubber Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
   2. Two-Component, Reinforced, Latex-Rubber Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.

E. Auxiliary Materials
   1. General: Provide auxiliary materials recommended by manufacturer to be compatible with one another and with waterproofing, as demonstrated by waterproofing manufacturer, based on testing and field experience.
   2. Primer: Manufacturer's standard, factory-formulated polyurethane or epoxy primer.
   3. Sheet Flashing: 50-mil- (1.3-mm-) minimum, nonstaining, uncured sheet neoprene.
      a. Adhesive: Manufacturer's recommended contact adhesive.
   4. Membrane-Reinforcing Fabric: Nonwoven, needle-punched white polyester fabric, 6-oz./sq. yd. (200-g/sq. m) OR 5-oz./sq. yd. (169-g/sq. m) OR 3.2-oz./sq. yd. (109-g/sq. m) OR manufacturer's standard, as directed, weight.
   5. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.
   6. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing, complying with ASTM C 920 Type M, Class 25; Grade NS for sloping and vertical applications or Grade P for deck applications; Use NT exposure; and as recommended by manufacturer for substrate and joint conditions.
      a. Backer Rod: Closed-cell polyethylene foam.

F. Protection Course
   1. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
      a. Thickness: 1/8 inch (3 mm), nominal, for vertical applications; 1/4 inch (6 mm), nominal, elsewhere.
      b. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for type of protection course.
2. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced one or both side(s) with plastic film, nominal thickness of 1/4 inch (6 mm), with compressive strength not less than 8 psi (55 kPa) per ASTM D 1621 and maximum water absorption by volume of 0.6 percent per ASTM C 272.

3. Protection Course: Unfaced, fan-folded, rigid, extruded-polystyrene board insulation; nominal thickness of 1/4 inch (6 mm) with compressive strength of not less than 8 psi (55 kPa) per ASTM D 1621.

4. Protection Course: Fan folded, with a core of molded-polystyrene board insulation faced both sides with plastic film, nominal thickness of 1/4 inch (6 mm) OR 3/8 inch (9.5 mm) OR 1/2 inch (13 mm), as directed, with compressive strength not less than 12 psi (83 kPa) per ASTM D 1621 and water absorption by volume of less than 1 percent per ASTM C 272.

5. Protection Course: Unfaced, extruded-polystyrene board insulation; ASTM C 578, Type X, 1/2 inch (13 mm) thick.

6. Protection Course: Molded-polystyrene board insulation, ASTM C 578, Type I, 0.90-lb/cu. ft. (15-kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.

G. Molded-Sheet Drainage Panels

1. Molded-Sheet Drainage Panel: Comply with Division 33 Section "Subdrainage".

2. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).

3. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43-mm) sieve, laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm per ft. (35 L/min. per m).

H. Insulation

1. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, square or shiplap edged.
   a. Type IV, 25-psi (173-kPa) minimum compressive strength.
   b. Type VI, 40-psi (276-kPa) minimum compressive strength.
   c. Type VII, 60-psi (414-kPa) minimum compressive strength.
   d. Type V, 100-psi (690-kPa) minimum compressive strength.

2. Unfaced, Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) OR Type VI, 40-psi (276-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

3. Geotextile-Faced, Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi (173-kPa) OR Type VI, 40-psi (276-kPa), as directed, minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven-geotextile filter fabric.

4. Unfaced, Plaza Deck, Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) OR Type VII, 60-psi (414-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.

5. Geotextile-Faced, Plaza Deck, Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VII, 60-psi (414-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with manufacturer's standard, nonwoven-geotextile filter fabric.

I. Plaza Deck Pavers

1. Plaza Deck Pavers: Brick OR Concrete OR Asphalt-block, as directed, pavers specified in Division 32 Section "Unit Paving".

2. Plaza Deck Pavers: Granite OR Limestone OR Marble OR Quartz-based stone OR Slate, as directed, pavers specified in Division 09 Section "Stone Flooring").
3. Plaza Deck Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, manufactured for use as plaza deck pavers; minimum compressive strength of 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.
   a. Thickness: 1-5/8 inches (41 mm) OR 1-3/4 inches (45 mm) OR 2 inches (51 mm) OR 2-3/8 inches (60 mm), as directed.
   b. Face Size: 8-7/8 inches (225 mm) square OR 9 inches (229 mm) square OR 9-by-18 inches (229-by-457 mm) OR 12 inches (305 mm) square OR 12-by-24 inches (305-by-610 mm) OR 18 inches (457 mm) square OR 24 inches (610 mm) square OR As indicated, as directed.
   c. Color: As indicated by manufacturer's designations OR Match sample OR As selected from manufacturer's full range, as directed.
4. Setting Bed: Provide aggregate OR mortar OR bituminous, as directed, setting-bed materials specified in Division 32 Section "Unit Paving".
5. Paver Pedestals: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable, as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm) OR 1/8 to 3/16 inch (3 to 5 mm), as directed.
   a. Concrete Fill: ACI 301, compressive strength of 5000 psi (34 MPa) at 28 days and air content of 6 percent.

1.3 EXECUTION

A. Surface Preparation
   1. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for waterproofing application.
   2. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
   3. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
   4. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
      a. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.
   5. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

B. Preparation At Terminations And Penetrations
   1. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves according to ASTM C 898 OR ASTM C 1471, as directed, and manufacturer's written instructions.
   2. Prime substrate unless otherwise instructed by waterproofing manufacturer.
   3. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.
      a. Provide sealant cants around penetrations and at inside corners of deck-to-wall butt joints when recommended by waterproofing manufacturer.

C. Joint And Crack Treatment
   1. Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 898 OR ASTM C 1471, as directed, and waterproofing manufacturer's written instructions. Remove dust and dirt from joints and cracks, complying with ASTM D 4258, before coating surfaces.
b. Apply bond breaker between sealant and preparation strip.
c. Prime substrate and apply a single thickness of preparation strip extending a minimum of 3 inches (75 mm) along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.

2. Install sheet flashing and bond to deck and wall substrates where indicated or required according to waterproofing manufacturer's written instructions.
   a. Extend sheet flashings onto perpendicular surfaces and other work penetrating substrate according to ASTM C 898.

D. Waterproofing Application
1. Apply waterproofing according to ASTM C 898 OR ASTM C 1471, as directed, and manufacturer's written instructions.
2. Start installing waterproofing in presence of manufacturer's technical representative.
3. Apply primer over prepared substrate.
4. Unreinforced Waterproofing Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.
   a. Apply one or more coats of waterproofing to obtain a seamless membrane free of entrapped gases, with an average dry film thickness of 60 mils (1.5 mm) and a minimum dry film thickness of 50 mils (1.3 mm) at any point OR 120 mils (3 mm), as directed.
   b. Apply waterproofing to prepared wall terminations and vertical surfaces.
   c. Verify wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).
5. Reinforced Waterproofing Applications: Mix materials and apply waterproofing by roller, notched squeegee, trowel, or other suitable application method.
   a. Apply first coat of waterproofing, embed membrane-reinforcing fabric, and apply second coat of waterproofing to completely saturate reinforcing fabric and to obtain a seamless reinforced membrane free of entrapped gases, with an average dry film total thickness of 70 mils (1.8 mm) OR 80 mils (2 mm) OR 120 mils (3 mm) as directed.
   b. Apply reinforced waterproofing to prepared wall terminations and vertical surfaces.
   c. Verify wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).

6. Install protection course with butted joints over nominally cured membrane before starting subsequent construction operations.
   a. Molded-sheet drainage panels OR Insulation drainage panels OR Board insulation, as directed, may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer.

E. Molded-Sheet Drainage Panel Installation
1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or mechanical fasteners that do not penetrate waterproofing. Lap edges and ends of geotextile fabric to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
   a. For vertical applications, install board insulation OR protection course, as directed, before installing drainage panels.

F. Insulation Installation
1. Install one or more layers of board insulation to achieve required thickness OR insulation drainage panels, as directed, over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
2. On vertical surfaces, set insulation units in adhesive applied according to manufacturer's written instructions. Use type of adhesive recommended in writing by insulation manufacturer.
3. On horizontal surfaces, place insulation units unadhered according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

G. Plaza Deck Paver Installation
1. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in Division 32 Section(s) "Unit Paving" OR Division 09 Section(s) "Stone Flooring", as directed.
2. Install concrete pavers, in locations indicated, according to manufacturer’s written instructions.

3. Accurately install fixed or adjustable, as directed, height paver pedestals in locations and to elevations required. Adjust for final level and slope with shims.
   a. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.

4. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
   a. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.

5. Install pavers to not vary more than 1/16 inch (1.6 mm) in elevation between adjacent pavers or more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.

6. Maintain tolerances of paving installation within 1/4 inch in 10 feet (1:48) of surface plane in any direction.

H. Field Quality Control
1. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
   a. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of sheet flashings.
   b. Flood each area for 24 OR 48 OR 72, as directed, hours.
   c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.

2. Engage an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.

I. Curing, Protection, And Cleaning
1. Cure waterproofing according to manufacturer’s written recommendations, taking care to prevent contamination and damage during application stages and curing.
   a. Do not permit foot or vehicular traffic on unprotected membrane.

2. Protect waterproofing from damage and wear during remainder of construction period.

3. Protect installed board insulation or insulation drainage panels, as directed, from damage due to ultraviolet light, harmful weather exposures, physical abuse, and other causes. Immediately after installation, provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction.

4. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for modified cement waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section includes polymer-modified cement waterproofing for positive or negative-side application to concrete, concrete unit masonry, and clay masonry.

C. Submittals
   1. Product Data: For each type of product indicated. Include construction details, material descriptions and installation instructions for polymer-modified cement waterproofing.
   2. Samples: For each type of polymer-modified cement waterproofing indicated.
   3. Qualification Data: For Applicator.
   4. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
   5. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for each type of polymer-modified cement waterproofing.
   6. Field quality-control reports.

D. Quality Assurance
   1. Applicator Qualifications: A firm experienced in applying polymer-modified cement waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and that employs workers trained and approved by manufacturer.
   2. Preinstallation Conference: Conduct conference at Project site.

E. Project Conditions
   1. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit polymer-modified cement waterproofing to be performed according to manufacturer's written instructions.
   2. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
   3. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.2 PRODUCTS

A. Field-Mixed, Polymer-Modified Cement Waterproofing
   1. Admixture for Field Mixing: Manufacturer's standard polymer admixture for mixing with portland cement and sand to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists positive-side OR negative-side, as directed, hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
      a. Water Permeability: Maximum zero for water at 30 feet (9 m) when tested according to CE CRD-C 48.
b. Compressive Strength: Minimum 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.
c. Flexural Strength: Minimum 710 psi (4.8 MPa) at 28 days when tested according to ASTM C 348.
d. Bond Strength: Minimum 220 psi (1.5 MPa) at 14 days when tested according to ASTM C 321.

B. Prepackaged, Polymer-Modified Cement Waterproofing
1. Negative-Side, Polymer-Modified Cement Waterproofing: Manufacturer’s proprietary blend of dry cementitious and other ingredients for mixing with potable water OR polymer admixture, as directed, to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists negative-side hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
   a. Water Permeability: Maximum zero for water at 30 feet (9 m) when tested according to CE CRD-C 48.
   b. Compressive Strength: Minimum 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.
   c. Flexural Strength: Minimum 710 psi (4.8 MPa) at 28 days when tested according to ASTM C 348.
   d. Bond Strength: Minimum 220 psi (1.5 MPa) at 14 days when tested according to ASTM C 321.
   e. Color: White OR Gray OR As selected from full range OR As indicated in a color schedule, as directed.
2. Positive-Side, Polymer-Modified Cement Waterproofing: Manufacturer’s proprietary blend of dry cementitious and other ingredients for mixing with potable water or polymer admixture to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists positive-side hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
   a. Water Permeability: Maximum zero for water at 30 feet (9 m) when tested according to CE CRD-C 48.
   b. Compressive Strength: Minimum 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.
   c. Flexural Strength: Minimum 710 psi (4.8 MPa) at 28 days when tested according to ASTM C 348.
   d. Bond Strength: Minimum 220 psi (1.5 MPa) at 14 days when tested according to ASTM C 321.
   e. Color: White OR Gray OR As selected from full range OR As indicated in a color schedule, as directed.

C. Accessory Materials
1. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
2. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
3. Portland Cement: ASTM C 150, Type I.
5. Trowel-Coat Sand: ASTM C 33, fine aggregate.
6. Polymer Admixture for Protective Topping: Polymer bonding agent and admixture designed to improve adhesion to prepared substrates and to not create a vapor barrier.
D. Mixes

1. Field-Mixed, Polymer-Modified Cement Waterproofing: Add polymer admixture to portland cement and sand according to manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency.

**OR**

Prepackaged, Polymer-Modified Cement Waterproofing: Add prepackaged dry ingredients to mixing liquid according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

2. Protective Topping: Measure, batch, and mix portland cement and sand in the proportion of 1:3 and water gaged with a polymer admixture. Blend together with mechanical mixer to required consistency.

1.3 EXECUTION

A. Examination

1. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
2. Proceed with application only after unsatisfactory conditions have been corrected.
3. Notify the Owner in writing of active leaks or defects that would affect system performance.

B. Preparation

1. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to confine spraying operation and to ensure adequate ambient temperatures and ventilation conditions for application.
2. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
3. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.
4. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
   a. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately 1 inch (25.4 mm) deep. Fill reveal with patching compound flush with surface.
5. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
   a. Clean concrete surfaces according to ASTM D 4258.
      1) Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
      2) Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
   b. Clean concrete unit masonry surfaces according to ASTM D 4261.
      1) Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
      2) Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of 1/16 inch (1.6 mm).
   c. Clean clay masonry surfaces according to ASTM D 5703.
   d. Concrete Joints: Clean reveals according to waterproofing manufacturer's written instructions.

C. Application

1. General: Comply with waterproofing manufacturer's written instructions for application and curing.
   a. Saturate surface with water for several hours prior to application with water and maintain damp condition until applying waterproofing. Remove standing water.
b. Apply waterproofing to surfaces indicated on Drawings.
c. Number of Coats: Number required for specified water permeability OR Two OR Three, as directed.

1) Coating Thickness: Maximum application thickness of 47 mils (1.2 mm) per coat for total thickness as required for specified water permeability OR of 100 mils (2.5 mm), as directed.

2) Apply first coat as a slurry with brush or roller, and apply subsequent coats with brush, roller, spray, or trowel.

3) Vigorously work first coat onto the substrate, forcing the material into surface voids. Apply each subsequent coat into full contact with previous coat.

4) Allow manufacturer's recommended time between coats. Dampen surface between coats.

2. Final Coat Finish: Smooth troweled OR Brushed OR Textured, as directed.

3. Curing: Air-cure waterproofing for not less than five days immediately after application and prior to being placed in service.

4. Curing: Moist-cure waterproofing for not less than three days immediately after application has set, followed by air drying prior to being placed in service unless otherwise recommended in writing by manufacturer.

5. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:

a. Onto columns integral with treated walls.

b. Onto interior nontreated walls intersecting exterior treated walls, for a distance of 24 inches (600 mm) for cast-in-place concrete and 48 inches (1200 mm) for masonry.

c. Onto exterior walls and onto both exterior and interior columns, for a height of 12 inches (300 mm), where floors, but not walls, are treated.

d. Onto every substrate in areas indicated for treatment, including pipe trenches, pipe chases, pits, sumps, and similar offsets and features.

6. Protective Floor Topping: Apply 1-inch- (25.4-mm-) thick, protective topping over floor surfaces.

D. Field Quality Control

1. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.

END OF SECTION 07 16 13 00
SECTION 07 16 16 00 - CRYSTALLINE WATERPROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for crystalline waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section includes crystalline waterproofing for positive or negative-side application to concrete and concrete unit masonry.

C. Submittals
   1. Product Data: For each type of product indicated. Include construction details, material descriptions and installation instructions for crystalline waterproofing.
   2. Qualification Data: For Applicator.
   3. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
   4. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for crystalline waterproofing.
   5. Field quality-control reports.

D. Quality Assurance
   1. Applicator Qualifications: A firm experienced in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and that employs workers trained and approved by manufacturer.
   2. Preinstallation Conference: Conduct conference at Project site.

E. Project Conditions
   1. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit crystalline waterproofing to be performed according to manufacturer's written instructions.
   2. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
   3. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.2 PRODUCTS

A. Waterproofing Materials
   1. Crystalline Waterproofing: Prepackaged, gray-colored OR white-colored, as directed, proprietary blend of portland cement, specially treated sand, and active chemicals that, when mixed with water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; that has VOC content complying with limits of authorities having jurisdiction; with properties meeting or exceeding the criteria specified below.
      a. Water Permeability: Maximum zero for water at 30 feet (9 m) when tested according to CE CRD-C 48.
b. Compressive Strength: Minimum 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.

B. Accessory Materials
1. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
2. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
3. Portland Cement: ASTM C 150, Type I.
5. Polymer Admixture for Protective Topping: Polymer bonding agent and admixture designed to improve adhesion to prepared substrates and not to create a vapor barrier.

C. Mixes
1. Crystalline Waterproofing: Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.
2. Protective Topping: Measure, batch, and mix portland cement and sand in the proportion of 1:3 and water gaged with a polymer admixture. Blend together with mechanical mixer to required consistency.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
2. Proceed with application only after unsatisfactory conditions have been corrected.
3. Notify the Owner in writing of active leaks or defects that would affect system performance.

B. Preparation
1. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to confine spraying operation and to ensure adequate ambient temperatures and ventilation conditions for application.
2. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
3. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.
4. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
   a. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately 1 inch (25.4 mm) deep. Fill reveal with patching compound flush with surface.
5. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
   a. Clean concrete surfaces according to ASTM D 4258.
      1) Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
      2) Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
b. Clean concrete unit masonry surfaces according to ASTM D 4261.
   1) Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
   2) Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of 1/16 inch (1.6 mm).

c. Concrete Joints: Clean reveals according to waterproofing manufacturer’s written instructions.

C. Application
   1. General: Comply with waterproofing manufacturer’s written instructions for application and curing.
      a. Saturate surface with water for several hours prior to application and maintain damp condition until applying waterproofing. Remove standing water.
      b. Apply waterproofing to surfaces indicated on Drawings.
      c. Number of Coats: Number required for specified water permeability OR Two OR Three, as directed.
      d. Application Method: Brush OR Spray, as directed. Apply to ensure that each coat fills voids and is in full contact with substrate or previous coat.
      e. Dampen surface between coats.
   2. Final Coat Finish: Smooth OR Brushed OR Spray Textured, as directed.
   3. Curing: Moist-cure waterproofing for three, as directed, days immediately after final coat has set, followed by air drying, unless otherwise recommended in writing by manufacturer.
   4. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
      a. Onto columns integral with treated walls.
         1) Onto interior nontreated walls intersecting exterior treated walls, for a distance of 24 inches (600 mm) for cast-in-place concrete and 48 inches (1200 mm) for masonry.
         2) Onto exterior walls and onto both exterior and interior columns, for a height of 12 inches (300 mm), where floors, but not walls, are treated.
         3) Onto every substrate in areas indicated for treatment, including pipe trenches, pipe chases, pits, sumps, and similar offsets and features.
   5. Protective Topping: Apply 1-inch- (25.4-mm-) thick, protective topping over floor surfaces.

D. Field Quality Control
   1. Inspection: Engage manufacturer’s representative to inspect completed application and provide a written report that application complies with manufacturer’s written instructions.

END OF SECTION 07 16 16 00
SECTION 07 16 19 00 - METAL-OXIDE WATERPROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for metal-oxide waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section includes metal-oxide waterproofing for positive or negative-side application to concrete, concrete unit masonry, and clay masonry.

C. Submittals
   1. Product Data: For each type of product indicated. Include construction details, material descriptions and installation instructions for metal-oxide waterproofing.
   2. Qualification Data: For Applicator.
   3. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
   4. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for metal-oxide waterproofing.
   5. Field quality-control reports.

D. Quality Assurance
   1. Applicator Qualifications: A firm experienced in applying metal-oxide waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and that employs workers trained and approved by manufacturer.
   2. Preinstallation Conference: Conduct conference at Project site.

E. Project Conditions
   1. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit metal-oxide waterproofing to be performed according to manufacturer's written instructions.
   2. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
   3. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.2 PRODUCTS

A. Waterproofing Materials
   1. Metal-Oxide Waterproofing Compound: A product specifically formulated for waterproofing concrete and masonry substrates; containing pulverized iron and a chemical oxidizing agent to cause the iron particles to rust and grow in size in the presence of water; with VOC content complying with limits of authorities having jurisdiction.

B. Accessory Materials
   1. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs,
reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

2. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

3. Portland Cement: ASTM C 150, Type I.

C. Mixes
1. Metal-Oxide Coats: Add metal-oxide waterproofing compound to portland cement, sand, and water according to manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency for each coat.
2. Protection Coat: Field mix protection coat consisting of portland cement and sand as recommended by same manufacturer as metal-oxide waterproofing according to manufacturer's written instructions for application over waterproofing. Measure, batch, and mix materials with potable water. Blend together with mechanical mixer to required consistency.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
2. Proceed with application only after unsatisfactory conditions have been corrected.
3. Notify the Owner in writing of active leaks or defects that would affect system performance.

B. Preparation
1. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to confine spraying operation and to ensure adequate ambient temperatures and ventilation conditions for application.
2. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
3. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.
4. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
   a. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately 1 inch (25.4 mm) deep. Fill reveal with patching compound flush with surface.
5. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
   a. Clean concrete surfaces according to ASTM D 4258.
      1) Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
      2) Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
   b. Clean concrete unit masonry surfaces according to ASTM D 4261.
      1) Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
2) Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of 1/16 inch (1.6 mm).

   c. Clean clay masonry surfaces according to ASTM D 5703.
   d. Concrete Joints: Clean reveals according to waterproofing manufacturer's written instructions.

C. Application

1. General: Comply with waterproofing manufacturer's written instructions for application and curing.
   a. Saturate surface for several hours prior to application with water and maintain damp condition until applying waterproofing. Remove standing water.
   b. Apply waterproofing to surfaces indicated on Drawings.
   c. Number of Metal-Oxide Coats: Number required for specified water permeability OR Two OR Three, as directed.
   d. Application Method: Brush apply the waterproofing, vigorously working first coat onto the substrate and forcing the material into surface voids. Brush each subsequent coat into full contact with previous coat.
   e. Dampen surface between coats.
   f. Allow each coat to set for 24 hours between coats.
   g. Protection Coat: Apply to a thickness of 1/8 inch (3 mm) OR 1/4 inch (6 mm), as directed, for walls and 1 inch (25 mm) for floors.

2. Final Coat Finish: Smooth OR Brushed OR Textured, as directed.

3. Curing: Moist-cure waterproofing for three days immediately after final coat has set, followed by air drying prior to being placed in service, unless otherwise recommended in writing by manufacturer.

4. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
   a. Onto columns integral with treated walls.
   b. Onto interior nontreated walls intersecting exterior treated walls, for a distance of 24 inches (600 mm) for cast-in-place concrete and 48 inches (1200 mm) for masonry.
   c. Onto exterior walls and onto both exterior and interior columns, for a height of 12 inches (300 mm), where floors, but not walls, are treated.
   d. Onto every substrate in areas indicated for treatment, including pipe trenches, pipe chases, pits, sumps, and similar offsets and features.

D. Field Quality Control

1. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.

END OF SECTION 07 16 19 00
SECTION 07 17 13 00 - BENTONITE WATERPROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for bentonite waterproofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Bentonite waterproofing.
   b. Molded-sheet drainage panels.
   c. Insulation.

C. Submittals
1. Product Data: For each type of product indicated. Include product specifications and manufacturer's written installation instructions.
2. Shop Drawings: Show installation details for interface with other work.
3. Samples: For each of the following products, in sizes indicated:
   a. Waterproofing: 6 inches (150 mm) square.
   b. Drainage Panels: 6 inches (150 mm) square.
   c. Insulation: 6 inches (150 mm) square.
4. Material Certificates: For each type of bentonite waterproofing, from manufacturer.
5. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency OR a qualified testing agency, as directed, for bentonite waterproofing.
6. Field quality-control reports.
7. Warranty: Sample of special warranty.

D. Quality Assurance
1. Source Limitations: Obtain bentonite waterproofing system from single source from single manufacturer. Obtain accessory products used with bentonite waterproofing from sources acceptable to bentonite waterproofing manufacturer.
2. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling
1. Deliver materials to Project site in manufacturer's original unopened and undamaged containers.
2. Store materials in a dry, well-ventilated space.
3. Remove and replace bentonite materials that have been prematurely exposed to moisture.

F. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit bentonite waterproofing to be installed according to manufacturers' written instructions and warranty requirements.
   a. Do not apply waterproofing materials to surfaces where ice or frost is visible. Do not apply bentonite waterproofing materials in areas with standing water.
   b. Placing bentonite clay products in panel or composite form on damp surfaces is allowed if approved in writing by manufacturer.

G. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer and Installer agree(s) to repair or replace components of bentonite waterproofing system that fail in materials or workmanship within specified warranty period.
1.2 PRODUCTS

A. Geotextile/Bentonite Sheets

1. Geotextile/Bentonite Waterproofing: Minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of bentonite clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.
   a. Grab Tensile Strength: 95 lbf (422 N) according to ASTM D 4632.

2. Contaminant-Resistant Geotextile/Bentonite Waterproofing: Minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of bentonite clay granules specially formulated for use in saltwater or contaminated ground water, between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.
   a. Grab Tensile Strength: 95 lbf (422 N) according to ASTM D 4632.

3. Geotextile-Geomembrane/Bentonite Waterproofing: Minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of bentonite clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together; and the woven fabric coated with a low-permeable polypropylene geomembrane.
   a. Grab Tensile Strength: 95 lbf (422 N) according to ASTM D 4632.

4. Composite Geotextile-HDPE/Bentonite Membrane: Minimum of 1.1 lb/sq. ft. (5.4 kg/sq. m) of bentonite clay granules bonded to nonwoven geotextile polypropylene fabric, with HDPE bonded to surface of nonwoven fabric.
   a. Grab Tensile Strength: 120 lbf (534 N) according to ASTM D 4632.
   b. Puncture Resistance: 140 lbf (620 N) according to ASTM D 4833.
   c. Vapor Permeance: 0.03 perms according to ASTM E 96.

5. Contaminant-Resistant Composite Geotextile-HDPE/Bentonite Membrane: Minimum of 1.1 lb/sq. ft. (5.4 kg/sq. m) of bentonite clay granules specially formulated for use in saltwater or contaminated ground water, bonded to nonwoven geotextile polypropylene fabric, with HDPE bonded to surface of nonwoven fabric.
   a. Grab Tensile Strength: 120 lbf (534 N) according to ASTM D 4632.
   b. Puncture Resistance: 140 lbf (620 N) according to ASTM D 4833.
   c. Vapor Permeance: 0.03 perms according to ASTM E 96.

B. Composite HDPE/Bentonite Membrane

1. Composite HDPE/Bentonite Membrane: Minimum 90-mil- (2.3-mm-) thick membrane consisting of a 12-mil- (0.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay granules 78 mils (1.9 mm) thick.
   a. Puncture Resistance: 169 lbf (752 N) according to ASTM E 154.
   b. Vapor Permeance: 0.03 perms according to ASTM E 96.

2. Composite HDPE/Bentonite Membrane with Protective Facing: Minimum 170-mil- (4.3-mm-) thick membrane consisting of HDPE geomembrane liner bonded to a layer of bentonite clay granules and with a spun polypropylene facing.
   a. Puncture Resistance: 169 lbf (752 N) according to ASTM E 154.
   b. Vapor Permeance: 0.03 perms according to ASTM E 96.

3. Composite HDPE/Bentonite-Polymer Membrane: Minimum 200-mil- (5-mm-) thick membrane consisting of HDPE geomembrane liner bonded to a layer of bentonite-polymer clay granules.
   a. Puncture Resistance: 75 lbf (334 N) according to ASTM D 4833.
   b. Vapor Permeance: 0.005 perms according to ASTM E 96.

4. Composite Gastight HDPE/Bentonite Membrane: Minimum 150-mil- (3.8-mm-) thick membrane consisting of a 60-mil- (1.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay.
   a. Puncture Resistance: 169 lbf (752 N) according to ASTM E 154.
   b. Vapor Permeance: 0.03 perms according to ASTM E 96.

5. Composite Saline/Alkaline HDPE/Bentonite Membrane: Minimum 150-mil- (3.8-mm-) thick membrane consisting of a 60-mil- (1.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay granules.

---

a. Warranty Period: Five years from date of Final Completion.
a. Puncture Resistance: 169 lbf (752 N) according to ASTM E 154.
b. Vapor Permeance: 0.03 perms according to ASTM E 96.

C. Composite Geotextile-HDPE/Bentonite Membrane
1. Geotextile/Bentonite-Polymer Waterproofing: Minimum 250-mil- (6.4-mm-) thick membrane of bentonite-polymer clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.
   a. Puncture Resistance: 75 lbf (334 N) according to ASTM D 4833.
   b. Vapor Permeance: 0.005 perms according to ASTM E 96.

D. Bentonite Panels
1. Standard Panels: 3/16-inch- (5-mm-) thick, corrugated kraft-paper panels with a minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of bentonite confined in corrugations of boards.
2. Coated Panels: 3/16-inch- (5-mm-) thick, corrugated kraft-paper panels specially coated to resist premature hydration due to incidental moisture; filled with a minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of bentonite.
3. Contaminant-Resistant Panels: 3/16-inch- (5-mm-) thick, corrugated kraft-paper panels with a minimum of 1.0 lb/sq. ft. (5 kg/sq. m) of contaminant-resistant granular bentonite specially formulated for use in contaminated ground-water conditions; confined in corrugations of boards.

E. Installation Accessories
1. Granular Bentonite: Sodium bentonite clay containing a minimum of 90 percent montmorillonite (hydrated aluminum silicate), with a minimum of 90 percent passing a No. 20 (0.85-mm) sieve.
2. Bentonite Mastic: Trowelable consistency, bentonite compound, specifically formulated for application at joints and penetrations.
3. Granular Bentonite Tubes: Manufacturer's standard 2-inch- (50-mm-) diameter, water-soluble tube containing approximately 1.5 lb/ft. (2.2 kg/m) of bentonite; hermetically sealed; designed specifically for placing on wall footings at line of joint with exterior base of wall.
4. Termination Bar: Extruded-aluminum or formed-stainless-steel bars with upper flange to receive sealant.
5. Plastic Protection Sheet: Polyethylene sheeting complying with ASTM D 4397; thickness recommended by waterproofing manufacturer to suit application but at least 6 mils (0.15 mm) thick.
6. Cement Grout Patching Material: Manufacturer's recommended grout mix compatible with substrate being patched.
7. Masonry Fasteners: Case-hardened nails or hardened-steel, powder-actuated fasteners. Depending on manufacturer's written requirements, provide 1/2- or 1-inch- (13- or 25-mm-) diameter washers under fastener heads.
8. Sealants: As recommended in writing by waterproofing manufacturer. Comply with requirements specified in Division 7 Section "Joint Sealants."
9. Tapes: Waterproofing manufacturer's recommended tape for joints between sheets, membranes, or panels.
10. Adhesive: Water-based adhesive used to secure waterproofing to both vertical and horizontal surfaces.
11. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners, and as follows:
   a. Thickness: 1/8 inch (3 mm), nominal, for vertical applications; 1/4 inch (6 mm), nominal, elsewhere.
13. Molded-Sheet Drainage Panel: Comply with Division 33 Section "Subdrainage."
14. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side with OR without, as directed, a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per foot (112 to 188 L/min. per m).
15. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not
16. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, square OR shiplap, as directed, edged.
   a. Type VI, 40-psi (276-kPa) minimum compressive strength.
   b. Type VII, 60-psi (414-kPa) minimum compressive strength.
   c. Type V, 100-psi (690-kPa) minimum compressive strength.

17. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

18. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.

19. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, 40-psi (276-kPa) OR Type VII, 60-psi (414-kPa), as directed, minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate preparations affecting performance of bentonite waterproofing.
2. Verify that substrate is complete and that work that will penetrate waterproofing is complete and rigidly installed.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Coordinate work in the vicinity of waterproofing to ensure proper conditions for installing the waterproofing system and to prevent damage to waterproofing after installation.
2. Formed Concrete Surfaces: Remove fins and projections. Fill voids, rock pockets, form-tie holes, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
3. Horizontal Concrete Surfaces: Remove debris, standing water, oily substances, mud, and similar substances that could impair the bonding ability of concrete or the effectiveness of waterproofing. Fill voids, cracks greater than 1/8 inch (3 mm), honeycomb areas, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
4. Excavation Support and Protection System: If water is seeping, use plastic protection sheets or other suitable means to prevent wetting the bentonite waterproofing. Fill minor gaps and spaces 1/8 inch (3 mm) wide or wider with wood, metal, concrete, or other appropriate filling material. Cover or fill large voids and crevices with cement mortar according to manufacturer's written instructions.

C. Installation, General
1. Install waterproofing and accessories according to manufacturer's written instructions.
   a. Apply granular bentonite around penetrations in horizontal surfaces and changes in plane according to manufacturer's details in preparation for granular bentonite tubes and mastic.
   b. Apply granular bentonite tubes, bentonite mastic, or both at changes of plane, construction joints in substrate, projections, and penetrations.
2. Apply granular bentonite tubes continuously on footing against base of wall to be waterproofed according to manufacturer's written instructions.
3. Protect waterproofing from damage and wetting before and during subsequent construction operations. Repair punctures, tears, and cuts according to manufacturer's written instructions.
4. Install protection course before backfilling or placing overburden when recommended by waterproofing manufacturer.

D. Geotextile/Bentonite Sheet Installation
1. General: Install a continuous layer of waterproofing sheets directly against concrete to be waterproofed. Lap ends and edges a minimum of 4 inches (100 mm) on horizontal and vertical substrates. Stagger end joints between sheets a minimum of 24 inches (600 mm). Fasten seams by stapling to adjacent sheet or nailing to substrate.
2. Below Structural Slabs-on-Grade: Place waterproofing sheets on compacted substrate with ends and edges lapped and stapled.
   a. Install a layer of waterproofing sheets under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms.
3. Concrete Walls: Starting at bottom of wall, apply waterproofing sheets horizontally with primary backing side against wall. Secure with masonry fasteners spaced according to manufacturer's written instructions. Extend to bottom of footing, grade beam, or wall, and secure.
   a. Termination at Grade: Extend waterproofing sheets to within 2 inches (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
   OR
   Termination at Grade: Fasten top edge of waterproofing sheets to wall and protect top edge with sheet metal counterflashing. Cover waterproofing with a lapped course of plastic protection sheets if backfilling does not proceed immediately.
4. Excavation Support and Protection (Permanent Shoring): Encase tieback rods, nuts, and plates, using bentonite mastic and waterproofing sheets, according to waterproofing manufacturer's written instructions for each configuration.
   a. Install a layer of waterproofing sheets, with ends and edges lapped and nailed to shoring. Cover waterproofing with plastic protection sheets if backfilling does not proceed immediately.
   b. Inspect and repair waterproofing after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.

E. Composite HDPE/Bentonite Membrane Installation
1. General: Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of 3 inches (75 mm). Stagger end joints between membranes. Seal joints with permanent seam tape.
2. Below Structural Slabs-on-Grade: Apply waterproofing membrane with HDPE side down and staple ends and edges.
   a. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms.
   b. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
3. Slabs: Starting at lowest point, install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of 2 inches (50 mm).
4. Vertical Concrete or Masonry Walls: Apply mastic around penetrations and form continuous 2-inch (50-mm) cant at intersection of footings and walls with mastic.
   a. Starting at lowest point, install a layer of waterproofing membrane horizontally, extending a minimum of 6 inches (150 mm) onto the footing. Lap membrane ends and edges a minimum of 2 inches (50 mm).
   b. Secure membrane to wall with adhesive or washer-headed fasteners, and tape terminations of membrane at grade.
5. Excavation Support and Protection: Cut, clean, and treat tiebacks and similar projections. Encase tieback rods, nuts, and plates. If water is present, cover shoring and lagging with plastic protection sheets.
   a. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and nailed to shoring.
6. **Horizontal Roofs, Plazas, and between Slabs**: Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and taped a minimum of 3 inches (75 mm).
   a. Prime concrete substrates. Primer may be omitted on concrete surfaces that comply with requirements for dryness, surface texture, and freedom from imperfections.
   b. Install bentonite side of membrane against the material to be waterproofed.
   c. Terminations at Vertical Surfaces: Provide a fillet or cant at intersection of horizontal and vertical substrates. Extend waterproofing membrane to top of curb or to a minimum of 6 inches (150 mm) above plane of waterproofing; secure with manufacturer's recommended tape.
   d. Cover waterproofing with a plastic slip-sheet.

F. **Composite Geotextile-HDPE/Bentonite Membrane Installation**
1. **General**: Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of 3 inches (75 mm). Stagger end joints between membranes. Seal joints with permanent seam tape.
2. **Below Structural Slabs-on-Grade**: Apply waterproofing membrane with HDPE side down and staple ends and edges.
   a. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms.
   b. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
3. **Concrete Walls**: Starting at bottom of wall, apply waterproofing membrane with HDPE side facing Installer; overlap sheets 3 inches (75 mm). Secure with powder-actuated fasteners or case-hardened nails. Extend to bottom of footing, grade beam, or wall, and secure.
   a. **Termination at Grade**: Extend waterproofing membrane to within 2 inches (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.

4. **Excavation Support and Protection (Permanent Shoring)**: Cut, clean, and treat tiebacks and similar projections. Encase tieback rods, nuts, and plates. If water is present, cover shoring and lagging with plastic protection sheets; remove plastic sheets before placing concrete.
   a. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and mechanically secured to shoring.
   b. Inspect and repair waterproofing membrane after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.
5. **Horizontal Slabs, Roofs, and Plazas**: Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and taped a minimum of 3 inches (75 mm).
   a. Clean overlap area and apply waterproof tape, rolling the exposed edge to seal to sheet below.
   b. Turn edges up and seal to vertical surfaces.
   c. Cover waterproofing with a plastic slip-sheet.

G. **Bentonite Panel Installation**
1. **General**: Install a continuous layer of bentonite waterproofing panels with ends and edges lapped a minimum of 1-1/2 inches (38 mm) unless otherwise indicated. Stagger joints in adjoining panel rows.
   a. Install a double layer of waterproofing panels, with ends and edges butted instead of lapped and with second layer of joints staggered over first. Staple panels together to hold them in place.
2. **Concrete Walls**: Starting at bottom of wall, apply waterproofing panels with ends and edges lapped and with vertical joints staggered. Secure with fasteners or adhesive recommended in writing by manufacturer. Extend to bottom of footing, grade beam, or wall.
   a. **Horizontal-to-Vertical Transitions**: Install granular bentonite tubes immediately before backfilling and compact backfill over the joint.
   b. **Termination at Grade**: Extend waterproofing panels to within 2 inches (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
OR
Termination at Grade: Fasten top edge of waterproofing panels to wall and protect top edge with sheet metal counterflashing.
c. Cover waterproofing panels with a lapped course of plastic protection sheets; remove plastic sheets before backfilling.

H. Molded-Sheet Drainage Panel Installation
1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate. Use adhesives or mechanical fasteners that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
a. For vertical applications, install board insulation OR protection course, as directed, before installing drainage panels.

I. Insulation Installation
1. Install one or more layers of board insulation to achieve required thickness and insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
2. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.
3. On horizontal surfaces, loosely lay insulation units. Stagger end joints and tightly abut insulation units.

J. Field Quality Control
1. Inspection: Arrange for manufacturer's representative to inspect completed waterproofing installation before covering with other construction and provide written report that installation complies with manufacturer's written instructions.
a. Remove and replace applications of bentonite waterproofing where inspection indicates that it does not comply with specified requirements.
2. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
a. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) but not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of membrane flashings.
b. Flood each area for 24 OR 48, as directed, hours.
c. After flood testing, repair leaks, repeat flood test, and make further repairs until waterproofing installation is watertight.
3. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

END OF SECTION 07 17 13 00
SECTION 07 19 13 00 - WATER REPELLENTS

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for water repellents. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes penetrating and film-forming water-repellent coatings for the following vertical and horizontal surfaces:
   a. Concrete (unpainted).
   b. Cast stone.
   c. Brick masonry.
   d. Concrete unit masonry (unpainted and unglazed).
   e. Portland cement plaster (stucco).
   f. Stonework.

C. Performance Requirements
1. Performance Testing: Provide water repellents that comply with test-performance requirements indicated, as evidenced by reports of tests performed by manufacturer OR based on Project-specific preconstruction testing, as directed, by a qualified independent testing agency on manufacturer's standard products applied to substrates simulating those on Project using same application methods to be used for Project.
   a. Engage testing agency to perform preconstruction tests on laboratory mockups.
   b. Select sizes and configurations of assemblies to adequately demonstrate capability of water repellents to comply with performance requirements.
   c. Notify the Owner seven days in advance of the dates and times when assemblies will be constructed.
2. Absorption: Minimum 80 OR 90, as directed, percent reduction of absorption after 24 hours in comparison of treated and untreated specimens.
   c. Concrete Unit Masonry: ASTM C 140.
   d. Hardened Concrete: ASTM C 642.
3. Water-Vapor Transmission: Maximum 10 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, per ASTM E 96.
4. Permeability: Minimum 80 percent water-vapor transmission in comparison of treated and untreated specimens, per ASTM D 1653.
5. Water Penetration and Leakage through Masonry: Maximum 90 percent reduction in leakage rate in comparison of treated and untreated specimens, per ASTM E 514.
6. Durability: Maximum 5 percent loss of water repellency after 2500 hours of weathering in comparison to specimens before weathering, per ASTM G 154.
   a. Reduction of Water Absorption: 80 percent.
   b. Reduction in Chloride Content: 80 percent.

D. Submittals
1. Product Data: For each type of product indicated.
2. Product test reports.

E. Quality Assurance
1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
F. Warranty
1. Special Warranty: Manufacturer’s standard form in which manufacturer and Applicator agree(s) to repair or replace materials that fail to maintain water repellency specified in Part 1.1 “Performance Requirements” Article within specified warranty period.
   a. Warranty Period: Two OR Five, as directed, years from date of Final Completion.

1.2 PRODUCTS
A. Penetrating Water Repellents
1. Silane, Penetrating Water Repellent: Clear, monomeric compound containing 20 percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
2. Silane, Penetrating Water Repellent: Clear, monomeric compound containing 20 percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 5 lb/gal. (600 g/L) or less of VOCs.
3. Silane, Penetrating Water Repellent: Pigmented, monomeric compound containing 20 percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 5 lb/gal. (600 g/L) or less of VOCs.
4. Silane, Penetrating Water Repellent: Clear, monomeric compound containing 20 percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with more than 5 lb/gal. (600 g/L) of VOCs.
5. Siloxane, Penetrating Water Repellent: Clear, oligomerous alkylalkoxysiloxanes containing 10 percent or more solids; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
6. Siloxane, Penetrating Water Repellent: Clear, oligomerous alkylalkoxysiloxanes containing 10 percent or more solids; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with 5 lb/gal. (600 g/L) or less of VOCs.
7. Siloxane, Penetrating Water Repellent: Clear, oligomerous alkylalkoxysiloxanes containing 10 percent or more solids; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with more than 5 lb/gal. (600 g/L) of VOCs.
8. Silane/Siloxane-Blend, Penetrating Water Repellent: Clear, silane and siloxane blends with 3.3 lb/gal. (400 g/L) or less of VOCs.
9. Silane/Siloxane-Blend, Penetrating Water Repellent: Clear, silane and siloxane blends with 5 lb/gal. (600 g/L) or less of VOCs.
10. Proprietary-Blend, Penetrating Water Repellent: Clear, consisting of 1 or several different resins (silanes or siloxanes), polymers, stearates, or oils plus other compounds or products of components; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
11. Proprietary-Blend, Penetrating Water Repellent: Clear, consisting of 1 or several different resins (silanes or siloxanes), polymers, stearates, or oils plus other compounds or products of components; and with 5 lb/gal. (600 g/L) or less of VOCs.

B. Film-Forming Water Repellents
1. Silicone Sealer, Film-Forming Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; with a solvent- or water-based solution containing not less than 3 and up to 5 percent solids by weight; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
2. Silicone-Sealer, Film-Forming Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; with a solvent- or water-based solution containing not less than 3 and up to 5 percent solids by weight; and with 5 lb/gal. (600 g/L) or less of VOCs.
3. Proprietary-Blend, Film-Forming Water Repellent: Clear, consisting of 1 or several different resins, acrylics, polymers, stearates, or oils plus other compounds or products of components; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
4. Proprietary-Blend, Film-Forming Water Repellent: Clear, consisting of 1 or several different resins, acrylics, polymers, stearates, or oils plus other compounds or products of components; and with 5 lb/gal. (600 g/L) or less of VOCs.
5. Siliconate, Film-Forming Water Repellent: Clear, with 3.3 lb/gal. (400 g/L) or less of VOCs.
6. Acrylic, Film-Forming Water Repellent: Clear OR Pigmented, as directed, breathing coating of acrylic resins; with a water-based, solvent-based, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 3.3 lb/gal. (400 g/L) or less of VOCs.
   a. Colors: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

7. Acrylic, Film-Forming Water Repellent: Pigmented, with 5 lb/gal. (600 g/L) or less of VOCs.
   a. Colors: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

1.3 EXECUTION

A. Preparation
   1. Clean substrate of substances that might interfere with penetration or performance of water repellents. Test for moisture content, according to water-repellent manufacturer's written instructions, to ensure that surface is dry enough.
      a. Cast-in-Place Concrete: Remove oil, curing compounds, laitance, and other substances that could prevent adhesion or penetration of water repellents.
      b. Clay Brick Masonry: Clean clay brick masonry per ASTM D 5703.
   2. Test for pH level, according to water-repellent manufacturer's written instructions, to ensure chemical bond to silicate minerals.
   3. Protect adjoining work, including sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live plants and grass.
   4. Coordination with Sealants: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.
      a. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those used in the work.
   5. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Application
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.
   2. Apply a heavy-saturation spray coating of water repellent on surfaces indicated for treatment using low-pressure spray equipment. Comply with manufacturer's written instructions for using airless spraying procedure, unless otherwise indicated.
      a. Precast Concrete: At Contractor's option, first application of water repellent on precast concrete units may be completed before installing units. Mask sealant-bond surfaces to prevent water repellent from migrating onto joint surfaces.
   3. Apply a second saturation spray coating, as directed, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

C. Cleaning
   1. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Repair damage caused by water-repellent application. Comply with manufacturer's written cleaning instructions.

SECTI ON 07 21 13 13 - MODIFIED BITUMOUS PROTECTED MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for modified bituminous protected membrane roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes APP-modified and SBS-modified bituminous protected membrane roofing.

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.
2. Hot Roofing Asphalt: Roofing asphalt heated to its equiviscous temperature, the temperature at which its viscosity is 125 centipoise for mop-applied roofing asphalt and 75 centipoise for mechanical spreader-applied roofing asphalt, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.

D. Performance Requirements
1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
3. Roofing System Design: If membrane roofing system is to be designed to withstand uplift pressure established by ASCE/SEI 7, provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
   a. Corner Uplift Pressure: as directed by the Owner.
   b. Perimeter Uplift Pressure: as directed by the Owner.
   c. Field-of-Roof Uplift Pressure: as directed by the Owner.
4. FM Approvals Listing: If Project is FM Global insured or if FM Approvals requirements will set a minimum quality standard, provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
   b. Hail Resistance Rating: MH OR SH, as directed.
5. Energy Performance (if required for LEED-NC Credit SS 7.2): Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
   OR
   Energy Performance (for roofs that must comply with the DOE's ENERGY STAR requirements): Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.
   OR
   Energy Performance (for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial Solar Reflectance not less than 0.70 and Thermal Emittance not less than 0.75 when tested according to CRRC-1.
E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
   a. Base flashings and membrane terminations.
   b. Tapered insulation, including slopes.
   c. Crickets, saddles, and tapered edge strips, including slopes.
4. Samples: For the following products:
   b. Roof insulation.
   c. 10 lb (4.5 kg) of aggregate ballast in gradation and color indicated.
   d. Roof paver, full sized, in each color and texture required.
5. Qualification Data: For qualified Installer and manufacturer.
6. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of compliance with performance requirements.
7. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.
8. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES or applicable model code organization.
9. Maintenance Data: For roofing system to include in maintenance manuals.
10. Warranties: Sample of special warranties.

F. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is UL listed OR FM Approvals approved, as directed, for membrane roofing system identical to that used for this Project.
2. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
3. Source Limitations: Obtain components including roof insulation and fasteners for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.
4. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
5. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer’s written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer’s standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
   a. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, and other components of membrane roofing system.
   b. Warranty Period: 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. APP-Modified Asphalt-Sheet Materials
1. Roofing Membrane Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

2. Smooth-Surfaced Roofing Membrane Cap Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

OR

Granule-Surfaced Roofing Membrane Cap Sheet: ASTM D 6222, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified.

B. SBS-Modified Asphalt-Sheet Materials
1. Roofing Membrane Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

2. Smooth-Surfaced Roofing Membrane Cap Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.

OR

Granule-Surface Roofing Membrane Cap Sheet: ASTM D 6164, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified.

OR
Metal-Foil-Surfaced Roofing Membrane Cap Sheet: ASTM D 6298, metal-foil surfaced SBS-modified asphalt sheet (reinforced with glass fibers); suitable for application method specified, and as follows:
   a. Foil Surfacing: Aluminum OR Copper OR Stainless steel, as directed.

C. Base-Sheet Materials
   1. Base Sheet: ASTM D 4601, Type II, SBS-modified asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.
      a. Weight: 25 lb/100 sq. ft. (1.2 kg/sq. m) OR 40 lb/100 sq. ft. (1.95 kg/sq. m) OR 50 lb/100 sq. ft. (2.4 kg/sq. m) OR 60 lb/100 sq. ft. (2.9 kg/sq. m) OR 75 lb/100 sq. ft. (3.7 kg/sq. m), as directed.
      OR
      Base Sheet: ASTM D 4601, Type I OR Type II, as directed, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
      OR
      Base Sheet: ASTM D 4897, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and -coated, glass-fiber base sheet with coarse granular surfacing or embossed venting channels on bottom surface.
      OR
      Base Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

D. Base-Ply Sheet Materials
   1. Glass-Fiber Base-Ply Sheet: ASTM D 2178, Type IV OR Type VI, as directed, asphalt-impregnated, glass-fiber felt.

E. Base Flashing Sheet Materials
   1. Backer Sheet: ASTM D 4601, Type I OR Type II, as directed, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
      OR
      Backer Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.
      OR
      Backer Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
      OR
      Backer Sheet: ASTM D 6164, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
   2. Smooth-Surfaced Flashing Sheet: ASTM D 6222, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade S, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; smooth surfaced; suitable for application method specified.
   3. Granule-Surfaced Flashing Sheet (for use with APP-modified roofing membranes): ASTM D 6222, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6223, Grade G, Type I or II, APP-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:
      a. Granule Color: White OR Gray OR Tan, as directed.
   4. Granule-Surfaced Flashing Sheet (for use with SBS-modified roofing membranes): ASTM D 6164, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric) OR ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6162, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers) OR ASTM D 6161, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with polyester fabric), as directed. 

DASNY, Downstate
with a combination of polyester fabric and glass fibers), as directed; granular surfaced; suitable for application method specified, and as follows:

a. Granule Color: White OR Gray OR Tan, as directed.

5. Metal-Foil-Surfaced Flashing Sheet: ASTM D 6298, metal-foil surfaced SBS-modified asphalt sheet (reinforced with glass fibers); suitable for application method specified, and as follows:

a. Foil Surfacing: Aluminum OR Copper OR Stainless steel OR Aluminum, fluoropolymer coated finish, of color and gloss selected from manufacturer’s full range, as directed.

6. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668, Type I.

F. Auxiliary Roofing Membrane Materials

1. General: Auxiliary materials recommended by roofing manufacturer for intended use and compatible with roofing membrane.

a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

   1) Plastic Foam Adhesives: 50 g/L.
   2) Multipurpose Construction Adhesives: 70 g/L.
   3) Fiberglass Adhesives: 80 g/L.
   4) Contact Adhesives: 80 g/L.
   5) Other Adhesives: 250 g/L.
   6) Nonmembrane Roof Sealants: 300 g/L.
   7) Sealant Primers for Nonporous Substrates: 250 g/L.
   8) Sealant Primers for Porous Substrates: 775 g/L.

3. Roofing Asphalt: ASTM D 312, Type III OR Type IV OR Type III or IV as recommended by roofing manufacturer for application, as directed.

   OR

   Roofing Asphalt: ASTM D 6152, SEBS modified.

4. Cold-Applied Adhesive: Roofing manufacturer’s standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with roofing membrane and base flashings.

5. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required by roofing manufacturer for application.

6. Mastic Sealant: Polyisobutylene, plain or modified bitumen, nonhardening, nonmigrating, nonskinning, and nondrying.

7. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing membrane components to substrate, tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

   OR

   Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulose-fiber insulation board.

9. Metal Flashing Sheet: As specified in Division 7 Section "Sheet Metal Flashing and Trim.”

10. Roofing Granules: Ceramic-coated OR Slate, as directed, roofing granules, No. 11 screen size with 100 percent passing No. 8 (2.36-mm) sieve and 98 percent of mass retained on No. 40 (0.425-mm) sieve, color to match roofing membrane.

11. Separator Sheet: Polyethylene sheet, 4 mils (0.1 mm) thick, minimum.

12. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

G. Coating Materials

1. Roof Coating: ASTM D 1227, Type II, Class 1, mineral-colloid-emulsified, fibered OR Class 2, chemically emulsified, filled or fibered, as directed, asphalt emulsion, asbestos free.

   OR

   Roof Coating: ASTM D 1227, Type III, Class 1, mineral-colloid-emulsified OR Class 2, chemically emulsified, as directed, asphalt emulsion, nonfibered.
OR
Roof Coating:  ASTM D 2824, Type I, nonfibered OR Type III, fibered, asbestos-free, as directed, aluminum-pigmented asphaltic coating.

OR
Roof Coating: Acrylic elastomer emulsion coating, formulated for use on bituminous roof surfaces and complying with ASTM D 6083.

a. Color: White OR Gray OR Buff, as directed.

H. Roof Insulation
1. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation:  ASTM C 578, Type VI, 1.8 lb/cu. ft. (29 kg/cu. m) OR Type VII, 2.2 lb/cu. ft. (35 kg/cu. m), as directed, with two or four edges rabbeted.

3. Mortar-Faced, Extruded-Polystyrene Board Insulation:  ASTM C 578, Type VI, 1.8-lb/cu. ft. (29-kg/cu. m) minimum density, with tongue-and-groove edges on long dimension, and latex-modified cement mortar topping, 3/8 inch (9 mm) thick, 4.5 lb/sq. ft. (19.5 kg/sq. m) OR 15/16 inch (23 mm) thick, 11 lb/sq. ft. (53.7 kg/sq. m), as directed.

I. Insulation Accessories
1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

3. Metal Securement System: Perimeter securement flashing and strapping fabricated from stainless steel, a minimum of 0.031 inch (0.8 mm) thick. Provide fasteners as recommended by mortar-faced insulation manufacturer.

J. Ballast
1. Aggregate Ballast: Washed, crushed stone or smooth stone that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation; of the following size:
   a. Size: ASTM D 448, Size 5, ranging in size from 1/2 to 1 inch (13 to 25 mm).
   b. Size: ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
   c. Size: ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).

2. Interlocking Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled. Size and weight shall be as directed.
   a. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
   b. Colors and Textures: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

3. Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 24 by 24 inches (600 by 600 mm). Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: Weight shall be as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum; ASTM C 140.
   d. Colors and Textures: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   e. Paver Supports: Integral corner pedestals.

OR
Paver Supports: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable,
as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm) OR 1/8 to 3/16 inch (3 to 5 mm), as directed.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
   a. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
   b. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations.
   c. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
   d. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
      1) Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if test sample foams or can be easily and cleanly stripped after cooling.
   e. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
3. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.

C. Roofing Membrane Installation, General
1. If referencing NRCA's roof assembly identification matrix system, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
   a. Install roofing system MBA OR S, as directed, OR M OR L, as directed, according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" and requirements in this Section.
2. For roof system that exceeds requirements of NRCA's roof assemblies, install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing" and as follows:
   a. Membrane: A (APP) OR S (SBS), as directed.
   b. Deck Type: C (concrete or nonnailable).
   c. Adhering Method: T (torched) OR M (mopped) OR L (cold-applied adhesive), as directed.
   d. Base Sheet: One.
   e. Number of Glass-Fiber Base-Ply Sheets: One.
   f. Number of Modified Asphalt Sheets: Two.
   g. Surfacing Type: P (protected).
3. Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.
4. Where roof slope exceeds 1/2 inch per 12 inches (1:24) OR 3/4 inch per 12 inches (1:18), as directed, install roofing membrane sheets parallel with slope.
   a. Backnail roofing membrane sheets to nailer strips according to roofing system manufacturer's written instructions.
5. Cooperate with testing agencies engaged or required to perform services for installing roofing system.

6. Coordinate installing roofing system so components of the roofing membrane system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
   a. Provide tie-offs at end of each day’s work to cover exposed roofing membrane sheets with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.
   b. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.
   c. Remove and discard temporary seals before beginning work on adjoining roofing.

7. Asphalt Heating: Do not raise roofing asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed roofing asphalt manufacturer’s recommended temperature limits during roofing asphalt heating. Do not heat roofing asphalt within 25 deg F (14 deg C) of flash point. Discard roofing asphalt maintained at a temperature exceeding finished blowing temperature for more than four hours.
   OR
   Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing system manufacturer’s written instructions.

8. Substrate-Joint Penetrations: Prevent roofing asphalt from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

D. Base-Sheet Installation
1. Install lapped base sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
   a. Spot- or strip-mop to substrate with hot roofing asphalt.
   OR
   Adhere to substrate in a solid mopping of hot roofing asphalt OR uniform coating of cold-applied adhesive, as directed.

E. Base-Ply Sheet Installation
1. Install glass-fiber base-ply sheets according to roofing system manufacturer’s written instructions starting at low point of roofing system. Align glass-fiber base-ply sheets without stretching. Extend glass-fiber base-ply sheets over and terminate beyond cants. Embed each glass-fiber base-ply sheet in a continuous void-free mopping of hot roofing asphalt, to form a uniform membrane without glass-fiber base-ply sheets touching.

F. Modified Bituminous Membrane Installation
1. Install modified bituminous roofing membrane sheet and cap sheet according to roofing manufacturer’s written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants.
   a. Unroll roofing membrane sheets and allow them to relax for minimum time period required by manufacturer.

2. Laps: Accurately align roofing membrane sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.
   a. Repair tears and voids in laps and lapped seams not completely sealed.
   b. Apply roofing granules to cover exuded bead at laps while bead is hot.

3. Install roofing membrane sheets so side and end laps shed water.

G. Flashing And Stripping Installation
1. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to roofing system manufacturer’s written instructions and as follows:
   a. Prime substrates with asphalt primer if required by roofing system manufacturer.
   b. Backer Sheet Application: Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over roofing membrane at cants in a solid mopping of hot roofing asphalt OR cold-applied adhesive, as directed.
OR
Backer Sheet Application: Adhere backer sheet to substrate in a solid mopping of hot roofing asphalt OR cold-applied adhesive at rate required by roofing system manufacturer, as directed.

c. Flashing Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.

OR
Flashing Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing system manufacturer.

OR
Flashing Sheet Application: Torch apply flashing sheet to substrate.

OR
Flashing Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt to back of flashing sheet if recommended by roofing system manufacturer.

2. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above roofing membrane and 4 inches (100 mm) onto field of roofing membrane.

3. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
   a. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement, as directed.

4. Install roofing membrane cap-sheet stripping where metal flanges and edgings are set on membrane roofing according to roofing system manufacturer's written instructions.

5. Root Drains: Set 30-by-30-inch (760-by-760-mm) metal flashing in bed of roofing-manufacturer-approved asphaltic adhesive on completed roofing membrane. Cover metal flashing with roofing membrane cap-sheet stripping and extend a minimum of 4 inches (100 mm) OR 6 inches (150 mm), as directed, beyond edge of metal flashing onto field of roofing membrane. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.
   a. Install stripping according to roofing system manufacturer's written instructions.

H. Coating Installation
1. Apply coatings to base flashings according to manufacturer's written instructions, by spray, roller, or other suitable application method.

I. Insulation Installation
1. Loosely lay separator sheet over cooled roofing membrane, with minimum 2-inch (50-mm) side laps and 4-inch (150-mm) end laps.
2. Loosely lay board insulation units over roofing membrane, with long joints of insulation in continuous straight lines and with end joints staggered between rows. Abut edges and ends between units.
3. Install one or more layers of insulation to achieve required thickness over roofing membrane. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
   a. Where overall insulation thickness is 2 inches (50 mm) or more, install required thickness in two or more layers with joints of each succeeding layer staggered over joints of previous layer a minimum of 6 inches (150 mm) in each direction.
4. Install geotextile fabric over insulation, overlapping edges and ends at least 12 inches (300 mm). Do not lap ends of fabric sheets within 72 inches (1800 mm) of roof perimeter. Extend fabric 2 to 3 inches (50 to 75 mm) above ballast at perimeter and penetrations. Apply additional layer of fabric around penetrations to prevent aggregate from getting between penetration and insulation. Do not cover drains or restrict water flow to drains.

J. Ballast Installation
1. To roofed area, apply aggregate ballast uniformly over geotextile fabric at rate required by insulation manufacturer, but not less than the following, carefully spreading aggregate to not damage roofing membrane and base flashings. Install roof-paver ballast according to insulation manufacturer's written instructions, as directed. Apply ballast as insulation is installed, leaving roofing membrane insulated and ballasted at end of workday.
   a. Ballast (Dow’s “Standard Design”): 15 lb/sq. ft. (75 kg/sq. m) OR 20 lb/sq. ft. (100 kg/sq. m), as directed, Size 5 aggregate within 102 inches (2600 mm) of roof perimeter
and corners and 24 inches (600 mm) of roof penetrations; 10 lb/sq. ft. (50 kg/sq. m), Size 5 aggregate elsewhere.

1) If partially replacing aggregate ballast with roof pavers, install one row of roof pavers in lieu of aggregate ballast at roof perimeter, corners, and penetrations.

b. Ballast (for Dow's "Design #1"): 15 lb/sq. ft. (75 kg/sq. m) OR 20 lb/sq. ft. (100 kg/sq. m), as directed, Size 4 aggregate within 102 inches (2600 mm) of roof perimeter and corners and 24 inches (600 mm) of roof penetrations; 12 lb/sq. ft. (60 kg/sq. m), Size 4 aggregate elsewhere.

c. Ballast (for Dow's "Design #1") (if combining aggregate ballast with roof pavers): 12 lb/sq. ft. (60 kg/sq. m), Size 4 aggregate to field of roof; install two rows of roof pavers at roof perimeter, corners, and penetrations according to insulation manufacturer's written instructions.

d. Ballast (for Dow's "Design #2") (for aggregate ballast with roof pavers at corners): 15 lb/sq. ft. (75 kg/sq. m) OR 20 lb/sq. ft. (100 kg/sq. m), as directed, Size 2 aggregate within 102 inches (2600 mm) of roof perimeter and 24 inches (600 mm) of roof penetrations; 13 lb/sq. ft. (65 kg/sq. m), Size 2 aggregate to field of roof; and install three rows of roof pavers at corners of roof according to insulation manufacturer's written instructions. Mechanically fasten securement strapping to center of first perimeter corner row of roof pavers.

e. Ballast (for Dow's "Design #2") (if combining aggregate ballast with roof pavers at roof perimeters, corners, and penetrations): 13 lb/sq. ft. (65 kg/sq. m), Size 2 aggregate to field of roof and install three rows of concrete pavers at roof perimeter, corners, and penetrations according to insulation manufacturer's written instructions. Mechanically fasten securement strapping to center of first two perimeter and perimeter corner rows of roof pavers.

2. Walkway Pavers: Install walkways formed from one row OR two rows, as directed, of roof pavers, loosely laid and butted.

K. Roof-Paver Installation

1. Interlocking Roof Pavers: Install interlocking roof pavers over roofed area according to manufacturer's written instructions.

2. For Dow's Technote 508 "Standard Design" and "Design #1", install roof pavers over roofed area according to insulation manufacturer's written instructions.

3. For Dow's Technote 508 "Standard Design" and "Design #2", install roof pavers over roofed area according to insulation manufacturer's written instructions. Mechanically fasten roof-paver metal straps to center of first perimeter and first perimeter corner row of roof pavers.

4. For Dow's Technote 508 "Standard Design" and "Design #3", install roof pavers over roofed area according to insulation manufacturer's written instructions. Mechanically fasten roof-paver metal straps to center of first two perimeters and first two perimeter corner rows of roof pavers.

5. Install roof pavers on pedestals set according to pedestal manufacturer's written instructions.

L. Mortar-Faced Board Insulation Installation

1. Install mortar-faced board insulation loosely laid, according to manufacturer's written instructions, with tongue-and-groove joints nested. Stagger end joints of adjoining rows and abut insulation.

   a. Mechanically fasten metal securement strapping at penetrations and at perimeter edges of mortar-faced board insulation.

   b. Over mortar-faced board insulation, install roof pavers on roof perimeter and corners according to manufacturer's written instructions.

2. Install one row OR two rows, as directed, of 24-inch-, (600-mm-) wide roof pavers to roof perimeter, corners, and penetrations according to mortar-faced board insulation manufacturer's written instructions.
M. Field Quality Control
   1. Testing Agency: Perform tests and inspections and to prepare reports.
   2. Test Cuts: Test specimens will be removed to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:
      a. Approximate quantities of components within roofing membrane will be determined according to ASTM D 3617.
      b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 in ARMA/NRCA’s “Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing.”
      c. Repair areas where test cuts were made according to roofing system manufacturer’s written instructions.
   3. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
      a. Notify the Owner and Owner 48 hours in advance of date and time of inspection.
   4. Roofing system will be considered defective if it does not pass tests and inspections.
      a. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

N. Protecting And Cleaning
   1. Protect roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner and Owner.
   2. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.
   3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

SECTION 07 21 16 00 - BUILDING INSULATION

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for building insulation. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Perimeter insulation under slabs-on-grade.
      b. Perimeter wall insulation (supporting backfill).
      c. Cavity-wall insulation.
      d. Concealed building insulation.
      e. Exposed building insulation.
      f. Loose-fill building insulation.
      g. Self-supported, spray-applied cellulosic insulation.
      h. Radiant barriers.
      i. Vapor retarders.
      j. Sound attenuation insulation.

C. Definitions
   1. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers; produced in boards and blanket with latter formed into batts (flat-cut lengths) or rolls.

D. Performance Requirements
   1. Plenum Rating: Provide glass-fiber OR slag-wool-fiber/rock-wool-fiber, as directed, insulation where indicated in ceiling plenums whose test performance is rated as follows for use in plenums as determined by testing identical products per "Erosion Test" and "Mold Growth and Humidity Test" described in UL 181, or on comparable tests from another standard acceptable to authorities having jurisdiction.
      a. Erosion Test Results: Insulation shows no visible evidence of cracking, flaking, peeling, or delamination of interior surface of duct assembly, after testing for 4 hours at 2500-fpm (13-m/s) air velocity.
      b. Mold Growth and Humidity Test Results: Insulation shows no evidence of mold growth, delamination, or other deterioration due to the effects of high humidity, after inoculation with Chaetomium globosium on all surfaces and storing for 60 days at 100 percent relative humidity in the dark.

E. Submittals
   1. Product Data: For each type of product indicated.
   2. Samples: Full-size units for each type of exposed insulation indicated.
   3. LEED Submittal:
      a. Product Data for Credit MR 4.1 and MR 4.2, as directed: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
      1) Include statement indicating costs for each product having recycled content.
   4. Product test reports.
   5. Research/Evaluation Reports: For foam-plastic insulation.

F. Quality Assurance
   1. Fire-Test-Response Characteristics: Provide insulation and related materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method
indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

G. Delivery, Storage, And Handling
1. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
2. Protect plastic insulation as follows:
   a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
   b. Protect against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.2 PRODUCTS

A. Foam-Plastic Board Insulation
1. Extruded-Polystyrene Board Insulation: ASTM C 578, of type and density indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively:
   a. Type IV, 1.60 lb/cu. ft. (26 kg/cu. m), unless otherwise indicated.
   b. Type X, 1.30 lb/cu. ft. (21 kg/cu. m).
   c. Type VI, 1.80 lb/cu. ft. (29 kg/cu. m).
   d. Type VII, 2.20 lb/cu. ft. (35 kg/cu. m).
   e. Type V, 3.00 lb/cu. ft. (48 kg/cu. m).
2. Extruded-Polystyrene Drainage Panels: ASTM C 578, of type and density indicated below and fabricated with one side having a matrix of drainage and edge channels:
   a. Type IV, 1.60 lb/cu. ft. (26 kg/cu. m).
   b. Type VI, 1.80 lb/cu. ft. (29 kg/cu. m).
   c. Type VII, 2.20 lb/cu. ft. (35 kg/cu. m).
3. Fabric-Faced, Extruded-Polystyrene Drainage Panels: ASTM C 578, Type VI, with a density of 1.80 lb/cu. ft. (29 kg/cu. m), faced with insulation manufacturer's standard nonwoven filtration fabric and fabricated with 1 side having a matrix of drainage and edge channels.
4. Molded-Polystyrene Board Insulation: ASTM C 578, of type and density indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively:
   a. Type I, 0.90 lb/cu. ft. (15 kg/cu. m).
   b. Type VIII, 1.15 lb/cu. ft. (18 kg/cu. m).
   c. Type II, 1.35 lb/cu. ft. (22 kg/cu. m).
5. Foil-Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I, Class 1 OR 2, as directed, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed on unfaced core on thicknesses up to 4 inches (101 mm).

B. Cellular-Glass Insulation
1. Cellular-Glass Insulation: ASTM C 552 Type I (flat block) OR IV (board) faced on both sides with manufacturer's special kraft-paper sheets laminated to glass block with asphalt, as directed, with unfaced insulation passing ASTM E 136 for combustion characteristics.

C. Glass-Fiber Board Insulation
1. Unfaced, Flexible Glass-Fiber Board Insulation: ASTM C 612, Type IA; ASTM C 553, Types I, II, and III; or ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25
and 50, respectively, passing ASTM E 136 for combustion characteristics; and of the following nominal density and thermal resistivity:

a. Nominal density of 1.0 lb/cu. ft. (16 kg/cu. m), thermal resistivity of 3.7 deg F x h x sq. ft./Btu x in. at 75 deg F (25.7 K x m/W at 24 deg C).

b. Nominal density of not less than 1.5 lb/cu. ft. (24 kg/cu. m) nor more than 1.7 lb/cu. ft. (27 kg/cu. m), thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).

2. Foil-Faced, Flexible Glass-Fiber Board Insulation: ASTM C 612, Type IA or ASTM C 553, Types I, II, and III; faced on 1 side with foil-scrim-kraft vapor retarder; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; and of the following nominal density and thermal resistivity:

a. Nominal density of 1.0 lb/cu. ft. (16 kg/cu. m), thermal resistivity of 3.7 deg F x h x sq. ft./Btu x in. at 75 deg F (25.7 K x m/W at 24 deg C).

b. Nominal density of not less than 1.5 lb/cu. ft. (24 kg/cu. m) nor more than 1.7 lb/cu. ft. (27 kg/cu. m), thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).

3. Unfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics; and of the following nominal density and thermal resistivity:

a. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

b. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

c. Nominal density of 4.25 lb/cu. ft. (68 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

d. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of 4.4 deg F x h x sq. ft./Btu x in. at 75 deg F (30.5 K x m/W at 24 deg C).

4. Foil-Faced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; faced on 1 side with foil-scrim-kraft or foil-scrim-polyethylene vapor retarder, with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; and of the following nominal density and thermal resistivity:

a. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

b. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

c. Nominal density of 4.25 lb/cu. ft. (68 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

d. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of not less than 4.34 deg F x h x sq. ft./Btu x in. at 75 deg F (30.1 K x m/W at 24 deg C).

5. Glass-Mat-Faced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; faced on 1 side with black glass-fiber mat or black polymer finish; maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; and of the following nominal density and thermal resistivity:

a. Nominal density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 4.2 deg F x h x sq. ft./Btu x in. at 75 deg F (29.1 K x m/W at 24 deg C).

b. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

c. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

d. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of 4.5 deg F x h x sq. ft./Btu x in. at 75 deg F (31.2 K x m/W at 24 deg C).

D. Slag-Wool-Fiber/Rock-Wool-Fiber Board Insulation

1. Unfaced, Slag-Wool-Fiber/Rock-Wool-Fiber Board Insulation: ASTM C 612, maximum flame-spread and smoke-developed indexes of 15 and 0, respectively; passing ASTM E 136 for combustion characteristics; and of the following nominal density and thermal resistivity:

a. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
b. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), Type II, thermal resistivity of 4.16 deg F x h x sq. ft./Btu x in. at 75 deg F (28.8 K x m/W at 24 deg C).

c. Nominal density of 8 lb/cu. ft. (128 kg/cu. m), Type III, thermal resistivity of 4.35 deg F x h x sq. ft./Btu x in. at 75 deg F (30.2 K x m/W at 24 deg C).

d. Fiber Color: Regular color, unless otherwise indicated.

e. Fiber Color: Darkened, where indicated.

2. Foil-Faced, Slag-Wool-Fiber/Rock-Wool-Fiber Board Insulation: ASTM C 612; faced on 1 side with foil-scrim or foil-scrim-polyethylene vapor retarder; with maximum flame-spread and smoke-developed indexes of 25 and 5, respectively; and of the following nominal density and thermal resistivity:

a. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).

b. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), Type II, thermal resistivity of 4.16 deg F x h x sq. ft./Btu x in. at 75 deg F (28.8 K x m/W at 24 deg C).

c. Nominal density of 8 lb/cu. ft. (128 kg/cu. m), Type III, thermal resistivity of 4.35 deg F x h x sq. ft./Btu x in. at 75 deg F (30.2 K x m/W at 24 deg C).

E. Glass-Fiber Blanket Insulation

1. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

2. Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (blankets with reflective membrane facing), Class A (membrane-faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil-scrim-kraft, foil-scrim, or foil-scrim-polyethylene OR polypropylene-scrim-kraft, as directed, vapor-retarder membrane on 1 face.

3. Where glass-fiber blanket insulation is indicated by the following thicknesses, provide blankets in batt or roll form with thermal resistances indicated:

a. 3-1/2 inches (89 mm) thick with a thermal resistance of 11 deg F x h x sq. ft./Btu at 75 deg F (1.9 K x sq. m/W at 24 deg C) OR 13 deg F x h x sq. ft./Btu at 75 deg F (2.3 K x sq. m/W at 24 deg C), as directed.

b. 3-5/8 inches (92 mm) thick with a thermal resistance of 11 deg F x h x sq. ft./Btu at 75 deg F (1.9 K x sq. m/W at 24 deg C).

c. 4 inches (101 mm) thick with a thermal resistance of 16 deg F x h x sq. ft./Btu at 75 deg F (2.8 K x sq. m/W at 24 deg C).

e. 9-1/2 inches (241 mm) OR 10 inches (254 mm) OR 10-1/4 inches (260 mm), as directed, thick with a thermal resistance of 30 deg F x h x sq. ft./Btu at 75 deg F (5.2 K x sq. m/W at 24 deg C).

F. Slag-Wool-Fiber/Rock-Wool-Fiber Blanket Insulation

1. Unfaced, Slag-Wool-Fiber/Rock-Wool-Fiber Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

2. Faced, Slag-Wool-Fiber/Rock-Wool-Fiber Blanket Insulation: ASTM C 665, Type III (blankets with reflective membrane facing), Class A (membrane-faced surface with a flame spread of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil-scrim-kraft, foil-scrim, or foil-scrim-polyethylene vapor-retarder membrane on 1 face.

3. Where slag-wool-fiber/rock-wool-fiber blanket insulation is indicated by the following thicknesses, provide blankets in batt form with thermal resistances indicated:

a. 1-1/2 inches (38 mm) thick with a thermal resistance of 6 deg F x h x sq. ft./Btu at 75 deg F (1 K x sq. m/W at 24 deg C).

b. 3-1/2 inches (89 mm) thick with a thermal resistance of 13 deg F x h x sq. ft./Btu at 75 deg F (2.3 K x sq. m/W at 24 deg C).

c. 4 inches (101 mm) thick with a thermal resistance of 16 deg F x h x sq. ft./Btu at 75 deg F (2.8 K x sq. m/W at 24 deg C).
d. 5-1/4 inches (133 mm) thick with a thermal resistance of 19 deg F x h x sq. ft./Btu at 75 deg F (3.3 K x sq. m/W at 24 deg C).
e. 6 inches (152 mm) thick with a thermal resistance of 22 deg F x h x sq. ft./Btu at 75 deg F (3.9 K x sq. m/W at 24 deg C).

G. Loose-Fill Insulation
1. Cellulosic-Fiber Loose-Fill Insulation: ASTM C 739, chemically treated for flame-resistance, processing, and handling characteristics.
2. Glass-Fiber Loose-Fill Insulation: ASTM C 764, Type I for pneumatic application or Type II for poured application; with maximum flame-spread and smoke-developed indexes of 5.

H. Spray-Applied Cellulosic Insulation
1. Self-Supported, Spray-Applied Cellulosic Insulation: ASTM C 1149, Type I (materials applied with liquid adhesive; suitable for either exposed or enclosed applications), OR Type II (materials containing a dry adhesive activated by water during installation; intended only for enclosed or covered applications), OR Type III (materials containing an adhesive mixed with water during application; intended for application on attic floors), as directed, chemically treated for flame-resistance, processing, and handling characteristics.

I. Radiant Barriers
1. Interior Radiation Control Coating: ASTM C 1321. Silver-colored, not thickness-dependent, low-emissivity solvent-based OR water-based, as directed, coating, formulated for adherence to substrates indicated and with a surface emittance value of 0.25 or less as measured per ASTM C 1371.
2. Sheet Radiant Barriers: ASTM C 1313 and as follows:
   a. Sheet Construction: Foil on one side of substrate OR Foil on both sides of substrate OR Vacuum metallizing on substrate, as directed.
   b. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of 5 and 10, respectively.
   c. Water-Vapor Transmission: 1 perm, maximum OR 5 perms or greater, as directed.

J. Vapor Retarders
1. Polyethylene Vapor Retarders: ASTM D 4397, 6 mils (0.15 mm) thick, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
2. Reinforced-Polyethylene Vapor Retarders: 2 outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than 25 lb/1000 sq. ft. (12 kg/100 sq. m), with maximum permeance rating of 0.0507 perm (2.9 ng/Pa x s x sq. m).
3. Fire-Retardant, Reinforced-Polyethylene Vapor Retarders: 2 outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nonwoven grid of nylon cord or polyester scrim and weighing not less than 22 lb/1000 sq. ft. (10 kg/100 sq. m), with maximum permeance rating of 0.1317 perm (7.56 ng/Pa x s x sq. m) and with flame-spread and smoke-developed indexes of not more than 5 and 60, respectively.
4. Foil-Polymer-Film Vapor Retarders: 2 layers of 0.5-mil- (0.013-mm-) thick polyester film laminated to an inner layer of 1-mil- (0.025-mm-) thick aluminum foil, with maximum water-vapor transmission rate in flat condition of 0.0 g/h x sq. m and with maximum flame-spread and smoke-developed indexes of 5.
5. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
8. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and with demonstrated capability to bond vapor retarders securely to substrates indicated.

K. Auxiliary Insulating Materials
1. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by insulation manufacturers for sealing joints and penetrations in vapor-retarder facings.
2. Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates indicated without damaging insulation and substrates.

3. Asphalt Coating for Cellular-Glass Block Insulation: Cutback asphalt or asphalt emulsion of type recommended by manufacturer of cellular-glass block insulation.

4. Eave Ventilation Troughs: Preformed, rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide cross ventilation between insulated attic spaces and vented eaves.

L. Insulation Fasteners

1. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of thickness indicated securely in position indicated with self-locking washer in place; and complying with the following requirements:
   a. Plate: Perforated galvanized carbon-steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
   b. Spindle: Copper-coated, low carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation indicated.

2. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of thickness indicated securely in position indicated with self-locking washer in place; and complying with the following requirements:
   a. Angle: Formed from 0.030-inch- (0.762-mm-) thick, perforated, galvanized carbon-steel sheet with each leg 2 inches (50 mm) square.
   b. Spindle: Copper-coated, low carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation indicated.

3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches (38 mm) square or in diameter.
   a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
      1) Crawlspace.
      2) Ceiling plenums.
      3) Attic spaces.
      4) Where indicated.

4. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of 1 inch (25 mm) OR 2 inches (50 mm) OR 3 inches (76 mm), as directed, between face of insulation and substrate to which anchor is attached.

5. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

1.3 EXECUTION

A. Preparation

1. Clean substrates of substances harmful to insulation or vapor retarders, including removing projections capable of puncturing vapor retarders or of interfering with insulation attachment.

B. Installation, General

1. Comply with insulation manufacturer's written instructions applicable to products and application indicated.

2. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed at any time to ice, rain, and snow.

3. Extend insulation in thickness indicated to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

4. Water-Piping Coordination: If water piping is located within insulated exterior walls, coordinate location of piping to ensure that it is placed on warm side of insulation and insulation encapsulates piping.
5. For preformed insulating units, provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

C. Installation Of Perimeter And Under-Slab Insulation
1. On vertical surfaces, set insulation units in adhesive applied according to manufacturer's written instructions. Use adhesive recommended by insulation manufacturer.
   a. If not otherwise indicated, extend insulation a minimum of 24 inches (610 mm) below exterior grade line.
2. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
3. Protect below-grade insulation on vertical surfaces from damage during backfilling by applying protection course with joints butted. Set in adhesive according to insulation manufacturer's written instructions.
4. Protect top surface of horizontal insulation from damage during concrete work by applying protection course with joints butted.

D. Installation Of Cavity-Wall Insulation
1. On units of foam-plastic board insulation, install pads of adhesive spaced approximately 24 inches (610 mm) o.c. both ways on inside face, and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates indicated.
   a. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Division 04 Section "Unit Masonry".
2. Install units of cellular-glass insulation with closely fitting joints using method indicated:
   a. Gob Method: Apply 4 gobs of adhesive per unit and set units firmly against inside wythe of masonry or other construction as shown. Apply gobs at each corner; spread gobs to form pads 4 inches (101 mm) in diameter by 1/4 inch (6 mm) thick.
   b. Serrated-Trowel Method: Apply adhesive to entire surface of each cellular-glass insulation unit with serrated trowel complying with insulation manufacturer's written instructions.
   c. Coat edges of insulation units with full bed of adhesive to seal joints between insulation and between insulation and adjoining construction.
   d. Coat exterior face (cold face) of installed cellular-glass block insulation course with asphalt coating.

E. Installation Of General Building Insulation
1. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
2. Seal joints between foam-plastic insulation units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.
3. Set vapor-retarder-faced units with vapor retarder to warm-in-winter side OR in location indicated, as directed, of construction, unless otherwise indicated.
   a. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.
4. Install mineral-fiber insulation in cavities formed by framing members according to the following requirements:
   a. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.
   b. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
   c. Maintain 3-inch (76-mm) clearance of insulation around recessed lighting fixtures.
   d. Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
e. For metal-framed wall cavities where cavity heights exceed 96 inches (2438 mm), support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.

f. For wood-framed construction, install mineral-fiber blankets according to ASTM C 1320 and as follows:
   1) With faced blankets having stapling flanges, secure insulation by inset, stapling flanges to sides of framing members.
   OR
   With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.

5. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
   a. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer’s written instructions. Space anchors according to insulation manufacturer’s written instructions for insulation type, thickness, and application indicated.
   b. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.
   c. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.
   d. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

6. Install board insulation in curtain-wall construction where indicated on Drawings according to curtain-wall manufacturer's written instructions.
   a. Retain insulation in place by metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.
   b. Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

7. Place loose-fill insulation into spaces indicated, by pouring OR by machine blowing, as directed, to comply with ASTM C 1015. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively.
   a. For cellulosic-fiber loose-fill insulation, comply with the Cellulose Insulation Manufacturers Association’s Special Report #3, “Standard Practice for Installing Cellulose Insulation.”

8. Apply self-supported, spray-applied cellulose insulation according to manufacturer’s written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make it flush with face of studs by using method recommended by insulation manufacturer.

9. Stuff glass-fiber loose-fill insulation into miscellaneous voids and cavity spaces where shown. Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft. (40 kg/cu. m).

F. Installation Of Insulation In Ceilings For Sound Attenuation

1. Install 3-inch- (76-mm-) thick, unfaced glass-fiber OR slag-wool-fiber/rock-wool-fiber, as directed, blanket insulation over suspended ceilings at partitions in a width that extends insulation 48 inches (1219 mm) on either side of partition.
   OR
   Install 1-1/2-inch- (38-mm-) thick, unfaced glass-fiber OR slag-wool-fiber/rock-wool-fiber, as directed, blanket insulation over suspended ceilings so that insulation extends over entire ceiling.

G. Installation Of Radiant Barriers

1. Install interior radiation control coating system according to ASTM C 1321.
2. Install sheet radiant barriers in locations indicated according to ASTM C 1158.
H. Installation Of Vapor Retarders
   1. General: Extend vapor retarder to extremities of areas to be protected from vapor transmission. Secure in place with adhesives or other anchorage system as indicated. Extend vapor retarder to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
   2. Seal vertical joints in vapor retarders over framing by lapping not less than two wall studs. Fasten vapor retarders to wood framing at top, end, and bottom edges; at perimeter of wall openings; and at lap joints. Space fasteners 16 inches (400 mm) o.c.
   3. Before installing vapor retarder, apply urethane sealant to flanges of metal framing including runner tracks, metal studs, and framing around door and window openings. Seal overlapping joints in vapor retarders with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Seal butt joints with vapor-retarder tape. Locate all joints over framing members or other solid substrates.
   4. Firmly attach vapor retarders to metal framing and solid substrates with vapor-retarder fasteners as recommended by vapor-retarder manufacturer.
   5. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarder.
   6. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarder.

I. Protection
   1. Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

SECTION 07 24 13 00 - POLYMER-BASED EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for polymer-based exterior insulation and finish systems (EIFS). Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Exterior insulation and finish system (EIFS) applied over concrete, masonry, exterior cement board, gypsum sheathing, and plywood sheathing.
      b. Prefabricated panels consisting of EIFS applied over exterior cement board and gypsum sheathing on metal framing.
   2. Products furnished, but not installed under this Section, include anchors and other attachment devices to be cast in concrete and embedded in masonry assemblies.

C. System Description
   1. Class PB EIFS: A non-load-bearing, exterior wall cladding system that consists of an insulation board attached adhesively, mechanically, or both to the substrate; an integrally reinforced base coat; and a textured protective finish coat.

D. Performance Requirements
   1. EIFS Performance: Comply with the following:
      a. Bond Integrity: Free from bond failure within EIFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.
      b. Weathertightness: Resistant to water penetration from exterior into EIFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of EIFS and assemblies behind it, including substrates, supporting wall construction, and interior finish.
   2. Class PB EIFS: Provide EIFS having physical properties and structural performance that comply with the following:
      a. Abrasion Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to 528 quarts (500 L) of sand when tested per ASTM D 968, Method A.
      b. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
      c. Accelerated Weathering: Five samples per ICC-ES AC219 showing no cracking, checking, crazing, erosion, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G 153 or ASTM G 154 OR ASTM G 153 or ASTM G 155, as directed.
      d. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after 60 cycles per EIMA 101.01 OR 10 cycles per ICC-ES AC219, as directed.
      e. Mildew Resistance of Finish Coat: Sample applied to 2-by-2-inch (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D 3273 and evaluated according to ASTM D 3274.
      f. Salt-Spray Resistance: No deleterious affects when tested according to ICC-ES AC219.
g. Tensile Adhesion: No failure in the EIFS, adhesive, base coat, or finish coat when tested per EIMA 101.03 OR ICC-ES AC219, as directed.

h. Water Penetration: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded-polystyrene board interface of the test specimen after 15 minutes at 6.24 lbf/sq. ft. (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.

i. Water Resistance: Three samples, each consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.

k. Impact Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the following:
   1) Standard Impact Resistance: 25 to 49 inch-lb (2.8 to 5.6 J).
   2) Medium Impact Resistance: 50 to 89 inch-lb (5.7 to 10.1 J).
   3) High Impact Resistance: 90 to 150 inch-lb (10.2 to 17 J).

3. Performance of Prefabricated Panels: Prefabricated panels shall be designed as follows and withstand the structural performance indicated for Class PB EIFS and thermal movement limits indicated below without failure due to defective manufacture, fabrication, installation, or other defects in construction.
   a. Delegated Design: Design prefabricated panels, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   b. Structural Performance: EIFS shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to SEI/ASCE 7.
      1) Wind Loads: Uniform pressure as indicated on Drawings.
   c. Deflection Limits: Design prefabricated panels to withstand design loads without deflections greater than 1/240.
   d. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
      1) Temperature Change (Range): 100 deg F (55 deg C).

E. Submittals
1. Product Data: For each type and component of EIFS indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, including printed statement of VOC content.
3. Shop Drawings: For EIFS. Include plans, elevations, sections, details of components, details of penetration and termination, flashing details, joint locations and configurations, lifting points for prefabricated panels, fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
4. Panel Schedule: For prefabricated panel fabrication.
5. Samples: For each exposed product and for each color and texture specified.
6. Delegated-Design Submittal: For prefabricated panels indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
7. Material or product certificates.
8. Product test reports.
9. Compatibility and Adhesion Test Reports: For joint sealants from sealant manufacturer indicating the following:
   a. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   b. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
10. Field quality-control reports and special inspection reports.
11. Evaluation reports
12. Maintenance data.

F. Quality Assurance
1. Installer Qualifications: An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers.
2. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with system components.
3. Fire-Test-Response Characteristics: Provide EIFS and system components with the following fire-test-response characteristics as determined by testing identical EIFS and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
   c. Full-Scale Diversified Fire Test: Per ASTM E 108 modified for testing vertical walls.
   d. Intermediate-Scale Multistory Fire Test: Per NFPA 285 OR IBC Standard, as directed.
   e. Radiant Heat Exposure: No ignition of EIFS when tested according to NFPA 268.
   f. Potential Heat: Acceptable level when tested according to NFPA 259.
   g. Surface-Burning Characteristics: Provide insulation board, adhesives, base coats, and finish coats with flame-spread index of 25 or less and smoke-developed index of 450 or less, per ASTM E 84 OR IBC Standard, as directed.

G. Delivery, Storage, And Handling
1. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
2. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
   a. Stack insulation board flat and off the ground.
   b. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Project Conditions
1. Weather Limitations: Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply EIFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.2 PRODUCTS

A. Materials
1. Compatibility: Provide adhesive, fasteners, board insulation, reinforcing meshes, base- and
finish-coat systems, sealants, and accessories that are compatible with one another and with
substrates and approved for use by EIFS manufacturer for Project.

2. Prefabricated Panels: Comply with requirements in Division 05 Section “Cold-formed Metal
Framing” for metal framing and with requirements in Division 06 Section “Sheathing” for gypsum
sheathing and weather-resistant sheathing paper.

3. Exterior Cement Board: Not less than 5/16-inch- (8-mm-) OR 7/16-inch- (11-mm-), as directed,
thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.
   a. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an
      organic-polymer coating or other corrosion-protective coating having a salt-spray
      resistance of more than 500 hours per ASTM B 117.
      1) Size and Length: As recommended by sheathing manufacturer for type and
         thickness of sheathing board to be attached.

4. Primer/Sealer: EIFS manufacturer's standard substrate conditioner with VOC content of 250 g/L
or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), designed to seal
substrates from moisture penetration and to improve the bond between substrate of type
indicated and adhesive used for application of insulation.

5. Flexible-Membrane Flashing: Cold-applied, fully self-adhering, self-healing, rubberized-asphalt
and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or
product recommended in writing by EIFS manufacturer.

6. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use;
compatible with substrate; with VOC content of 50 g/L or less when calculated according to
40 CFR 59, Subpart D (EPA Method 24); and complying with one of the following:
   a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, and
      polymer-based adhesive specified for base coat.
   b. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers
      specified for base coat.
   c. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation
to substrates of type indicated, as recommended by EIFS manufacturer.

7. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C 578, Type I; EIFS
manufacturer's requirements; and EIMA's "EIMA Guideline Specification for Expanded
Polystyrene (EPS) Insulation Board" for most stringent requirements for material performance
and qualities of insulation, including dimensions and permissible variations, and the following:
   a. Aging: Before cutting and shipping, age insulation in block form by air drying for not less
      than six weeks or by another method approved by EIMA that produces equivalent results.
   b. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, per
      ASTM E 84.
   c. Dimensions: Provide insulation boards not more than 24 by 48 inches (610 by 1219 mm)
      and in thickness indicated, but not more than 4 inches (102 mm) thick or less than
      thickness allowed by ASTM C 1397.
   d. Foam Shapes: Provide with profiles and dimensions indicated on Drawings.

8. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for
compatibility with other EIFS materials, complying with ASTM D 578 and the following:
   a. Standard-Impact Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
   b. Intermediate-Impact Reinforcing Mesh: Not less than 10 oz./sq. yd. (339 g/sq. m) OR 12.0
      oz./sq. yd. (407 g/sq. m), as directed.
   c. High-Impact Reinforcing Mesh: Not less than 15 oz./sq. yd. (509 g/sq. m).
   d. Heavy-Duty Reinforcing Mesh: Not less than 20 oz./sq. yd. (678 g/sq. m).
   e. Strip Reinforcing Mesh: Not less than 3.75 oz./sq. yd. (127 g/sq. m).
   f. Detail Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
   g. Corner Reinforcing Mesh: Not less than 7.2 oz./sq. yd. (244 g/sq. m).

9. Base-Coat Materials: EIFS manufacturer's standard mixture complying with one of the following:
   a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or
      natural color; and manufacturer's standard polymer-emulsion adhesive designed for use
      with portland cement.
b. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.

c. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.

d. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.

10. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24) complying with one of the following:

a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.

b. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.

12. Finish-Coat Materials: EIFS manufacturer's standard acrylic-based coating OR standard acrylic-based coating with enhanced mildew resistance OR siliconized acrylic-based coating, as directed, complying with the following:

a. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.

b. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.

1) Aggregate: Marble chips of size and color as selected by the Owner from manufacturer's full range.

c. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.

d. Colors: As selected by the Owner from manufacturer's full range.

14. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; selected for properties of pullout, tensile, and shear strength required to resist design loads of application indicated; capable of pulling fastener head below surface of insulation board; and of the following description:

a. For attachment to steel studs from 0.033 to 0.112 inch (0.84 to 2.84 mm) in thickness, provide steel drill screws complying with ASTM C 954.

b. For attachment to light-gage steel framing members not less than 0.0179 inch (0.45 mm) in thickness, provide steel drill screws complying with ASTM C 1002.

c. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C 1002, Type W.

15. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D 1784, manufacturer's standard Cell Class for use intended, and ASTM C 1063.

a. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.

b. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.

c. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.

d. Window Sill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
e. Parapet Cap Flashing: Type for both flashing and covering parapet top with design complying with ASTM C 1397.

B. Elastomeric Sealants
1. Elastomeric Sealant Products: Provide EIFS manufacturer's listed and recommended chemically curing, elastomeric sealant that is compatible with joint fillers, joint substrates, and other related materials, and complies with requirements for products and testing indicated in ASTM C 1481 and with requirements in Division 07 Section "Joint Sealants" for products corresponding to description indicated below:
   a. Multicomponent, nonsag urethane sealant.
   b. Single-component, nonsag, neutral-curing silicone sealant.
   c. Provide sealants, used inside the weatherproofing system, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Preformed Foam Sealant Products: Provide sealant compatible with adjacent materials and complying with requirements in Division 07 Section "Joint Sealants".
3. Sealant Color: As selected by the Owner from manufacturer's full range.

C. Mixing
1. General: Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

D. Panel Fabrication
1. Panel Framing: Fabricate panel framing to comply with requirements in Division 05 Section "Cold-formed Metal Framing".
   a. Connect panel framing by welding unless otherwise indicated.
   b. Connections: Provide connections capable of adjustment, complying with erection tolerance requirements, to anchor panels to structure.
2. Exterior Cement Board: Install on metal framing to comply with requirements in "Exterior Cement-Board Installation" Article.
3. EIFS Application: Apply EIFS to sheathed metal-framed panels to comply with requirements in "Trim Installation," "Insulation Installation," "Base-Coat Installation," and "Finish-Coat Installation" articles and as follows:
   a. Wrap base coat and reinforcing mesh at edges of panels and extend coverage not less than 4 inches (100 mm) over backs of panels unless otherwise indicated.
   b. Wrap base coat and reinforcing mesh at edges of panels and extend coverage not less than full thickness to cover edges of metal framing unless otherwise indicated.
   c. Continue finish coat around corners at edges of panels, unless otherwise indicated, and extend to location indicated for sealant application. Do not extend finish coat over surfaces where sealant will be applied.
   d. Continue finish coat around corners at edges of panels and extend over edges to cover base coat unless otherwise indicated.
4. Panel Fabrication Tolerances: Comply with the following:
   a. Overall Height and Width: Plus or minus 1/8 inch (3.2 mm).
   b. Cumulative Height and Width over Length of Building: Not more than 3/8 inch (9.6 mm).
   c. Openings within One Unit: Plus or minus 1/8 inch (3.2 mm) for window and door frames.
   d. Out of Square: Plus or minus 1/8 inch (3.2 mm).
   e. Locations of Reveals and Architectural Features: Plus or minus 1/8 inch (3.2 mm).
   f. Thickness: Plus or minus 1/16 inch (1.6 mm).
   g. Flatness: Not more than 1/8 inch in 8 feet (3.2 mm in 2.4 m) across face of panel.
1.3 EXECUTION

A. Preparation
1. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
2. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind EIFS and deterioration of substrates.
3. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.
   a. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by EIFS manufacturer.

B. Exterior Cement-Board Installation
1. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install board with steel drill screws spaced no more than 8 inches (203 mm) o.c. along framing with perimeter fasteners at least 3/8 inch (9.6 mm) but less than 5/8 inch (15.9 mm) from edges of boards.

C. EIFS Installation, General
1. Comply with ASTM C 1397 and EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.

D. Substrate Protection Application
1. Primer/Sealer: Apply over gypsum sheathing substrates to protect substrates from degradation and where required by EIFS manufacturer for improving adhesion of insulation to substrate.
2. Waterproof Adhesive/Base Coat: Apply over sloped surfaces OR window sills OR parapets OR where indicated on Drawings, as directed, to protect substrates from degradation.
3. Flexible-Membrane Flashing: Install over weather-resistant barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where indicated by EIFS manufacturer's written instructions to protect wall assembly from degradation. Prime substrates, if required, and install flashing to comply with EIFS manufacturer's written instructions and details.

E. Trim Installation
1. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, at window sills, and elsewhere as indicated, according to EIFS manufacturer's written instructions. Coordinate with installation of insulation.
   a. Drip Screed/Track: Use at bottom edges of EIFS unless otherwise indicated.
   b. Window Sill Flashing: Use at windows unless otherwise indicated.
   c. Expansion Joint: Use where indicated on Drawings.
   d. Casing Bead: Use at other locations.
   e. Parapet Cap Flashing: Use where indicated on Drawings.

F. Insulation Installation
1. Board Insulation: Adhesively OR Mechanically OR Adhesively and mechanically, as directed, attach insulation to substrate in compliance with ASTM C 1397, EIFS manufacturer's written instructions, and the following:
   a. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to sheathing unless EIFS manufacturer's written instructions specify using primer/sealer with ribbon-and-dab method. Apply adhesive to a thickness of not less than 1/4 inch (6.4 mm) for factory mixed and not less than 3/8 inch (9.6 mm) for field mixed, measured from surface of insulation before placement.
b. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.

c. Allow adhered insulation to remain undisturbed for period recommended by EIFS manufacturer, but not less than 24 hours, before installing mechanical fasteners, beginning rasping and sanding insulation, or applying base coat and reinforcing mesh.

d. Mechanically attach insulation to substrate by method complying with EIFS manufacturer's written instructions. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
   1) Steel Framing: 5/16 inch (8 mm).
   2) Wood Framing: 1 inch (25 mm).
   3) Concrete and Masonry: 1 inch (25 mm).

e. Apply insulation over dry substrates in courses with long edges of boards oriented horizontally.

f. Begin first course of insulation from a level base line and work upward.

g. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.

h. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than 12 inches (300 mm) wide or 6 inches (150 mm) high. Offset joints not less than 6 inches (150 mm) from corners of window and door openings and not less than 4 inches (100 mm) from aesthetic reveals.
   1) Adhesive Attachment: Offset joints of insulation not less than 6 inches (150 mm) from horizontal and 4 inches (100 mm) from vertical joints in sheathing.
   2) Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.

i. Interlock ends at internal and external corners.

j. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than 1/16 inch (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.

k. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.

l. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than 1/32 inch (0.8 mm) OR 1/16 inch (1.6 mm), as directed, from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than 1/16 inch (1.6 mm).

m. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than 3/4 inch (19 mm).

n. Install foam shapes and attach to sheathing OR structure, as directed.

o. Interrupt insulation for expansion joints where indicated.

p. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.

q. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.

r. After installing insulation and before applying reinforcing mesh, fully wrap board edges with strip reinforcing mesh. Cover edges of board and extend encapsulating mesh not less than 2-1/2 inches (64 mm) over front and back face unless otherwise indicated on Drawings.

s. Treat exposed edges of insulation as follows:
   1) Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
2) Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.

3) At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.

t. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and EIFS protective-coating lamina.

2. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:

a. At expansion joints in substrates behind EIFS.
b. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
c. At floor lines in multilevel wood-framed construction.
d. Where wall height or building shape changes.
e. Where EIFS manufacturer requires joints in long continuous elevations.
f. Where panels abut one another.

G. Base-Coat Installation

1. Base Coat: Apply to exposed surfaces of insulation and foam shapes in minimum thickness recommended in writing by EIFS manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.

2. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within 8 inches (204 mm) of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.

a. Standard-impact reinforcing mesh unless otherwise indicated.
b. Intermediate-impact reinforcing mesh where indicated.
c. High-impact reinforcing mesh where indicated.
d. Heavy-duty reinforcing mesh where indicated.

3. Double-Layer Reinforcing Mesh Application: Where indicated, apply second base coat and second layer of standard-impact OR intermediate-impact, as directed, reinforcing mesh, overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.

4. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending 4 inches (100 mm) beyond perimeter. Apply additional 9-by-12-inch (230-by-300-mm) strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply 8-inch- (200-mm-) wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than 4 inches (100 mm) on each side of corners.

a. At aesthetic reveals, apply strip reinforcing mesh not less than 8 inches (200 mm) wide.
b. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.

5. Foam Shapes: Fully embed reinforcing mesh in base coat.

6. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.

H. Finish-Coat Installation

1. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.

2. Finish Coat: Apply over dry primed base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.

a. Texture: As selected by the Owner from manufacturer's full range.
b. Embed aggregate in finish coat according to EIFS manufacturer's written instructions to produce a uniform applied-aggregate finish of color and texture matching approved sample.
3. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

I. Installation Of Prefabricated Panels
   1. General: Install panels according to Shop Drawings. Install by welding metal framing to structural-steel frame OR by welding to steel-weld plates anchored in concrete, as directed, to comply with requirements in Division 05 Section "Cold-formed Metal Framing" unless otherwise indicated.
      a. Lift panels only as indicated on Shop Drawings.
      b. Do not warp or stress panels by forcing alignment.
      c. Adjust connections to align panels and maintain correct and uniform joint widths.
      d. Install bracing as panels are erected. Weld securely to panel framing and to structure.
   2. Erection Tolerances: Install panels level, plumb, and true to line with no variation in plane or alignment exceeding 1/16 inch (1.6 mm) and no variation in position exceeding 1/8 inch (3.2 mm).
      a. Maintain clearance between panels required for installing joint sealants.

J. Installation Of Joint Sealants
   1. Prepare joints and apply sealants, of type and at locations indicated, to comply with applicable requirements in Division 07 Section "Joint Sealants" and in ASTM C 1481.
      a. Apply joint sealants after base coat has cured but before applying finish coat.
      b. Clean surfaces to receive sealants to comply with indicated requirements and EIFS manufacturer's written instructions.
      c. Apply primer recommended in writing by sealant manufacturer for surfaces to be sealed.
      d. Install sealant backing to control depth and configuration of sealant joint and to prevent sealant from adhering to back of joint.
      e. Apply masking tape to protect areas adjacent to sealant joints. Remove tape immediately after tooling joints, without disturbing joint seal.
      f. Recess sealant sufficiently from surface of EIFS so an additional sealant application, including cylindrical sealant backing, can be installed without protruding beyond EIFS surface.

K. Field Quality Control
   1. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
      a. According to ICC-ES AC24 OR ICC-ES AC219, as directed.
   2. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
   3. EIFS Tests and Inspections: For the following:
      a. According to ICC-ES AC24 OR ICC-ES AC219, as directed.
   4. Prefabricated Panels: Test and inspect field welds.
   5. Remove and replace EIFS where test results indicate that EIFS do not comply with specified requirements.
   6. Prepare test and inspection reports.

L. Cleaning And Protection
   1. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

END OF SECTION 07 24 13 00
SECTION 07 24 13 00a - WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for water drainage exterior insulation and finish system (EIFS). Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes water-drainage exterior insulation and finish system (EIFS) applied over water-resistive coating over sheathing, weather-resistant sheathing paper over sheathing, weather-resistant sheathing paper over exterior cement board, and exterior cement board over weather-resistant sheathing paper.

C. System Description
1. Class PB EIFS: A non-load-bearing, exterior wall cladding system that consists of an insulation board attached adhesively, mechanically, or both to the substrate; an integrally reinforced base coat; and a textured protective finish coat.
2. Water-Drainage EIFS: EIFS with a means that allows water entering into an EIFS assembly to drain to the exterior.

D. Performance Requirements
1. EIFS Performance: Comply with the following:
   a. Bond Integrity: Free from bond failure within EIFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.
   b. Weathertightness: Resistant to water penetration from exterior into water-drainage EIFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of EIFS and assemblies behind it, including substrates, supporting wall construction, and interior finish, and including a means that allows water entering into an EIFS assembly to drain to the exterior.

2. Class PB EIFS: Provide EIFS having physical properties and structural performance that comply with the following:
   a. Abrasion Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to 528 quarts (500 L) of sand when tested per ASTM D 968, Method A.
   b. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
   c. Accelerated Weathering: Five samples per ICC-ES AC235 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G 153 or ASTM G 154 OR ASTM G 155, as directed.
   d. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after 60 cycles per EIMA 101.01 OR 10 cycles per ICC-ES AC235, as directed.
   e. Mildew Resistance of Finish Coat: Sample applied to 2-by-2-inch (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D 3273 and evaluated according to ASTM D 3274.
f. Salt-Spray Resistance: No deleterious affects when tested according to ICC-ES AC235.

g. Tensile Adhesion: No failure in the EIFS, adhesive, base coat, or finish coat when tested per EIMA 101.03 OR ICC-ES AC235, as directed.

h. Water Penetration: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded polystyrene board interface of the test specimen after 15 minutes at 6.24 lbf/sq. ft. (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.

i. Water Resistance: Three samples, each consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.

j. Impact Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the following:
   1) Standard Impact Resistance: 25 to 49 inch-lb (2.8 to 5.6 J).
   2) Medium Impact Resistance: 50 to 89 inch-lb (5.7 to 10.1 J).
   3) High Impact Resistance: 90 to 150 inch-lb (10.2 to 17 J).

E. Submittals
1. Product Data: For each type and component of EIFS indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, including printed statement of VOC content.
3. Shop Drawings: For EIFS. Include plans, elevations, sections, details of components, details of penetration and termination, flashing details, joint locations and configurations, fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
4. Samples: For each exposed product and for each color and texture specified.
5. Material or product certificates.
6. Product test reports.
7. Compatibility and Adhesion Test Reports: For joint sealants from sealant manufacturer indicating the following:
   a. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   b. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
8. Field quality-control reports and special inspection reports.
9. Evaluation reports
10. Maintenance data.

F. Quality Assurance
1. Installer Qualifications: An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers.
2. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with system components.
3. Fire-Test-Response Characteristics: Provide EIFS and system components with the following fire-test-response characteristics as determined by testing identical EIFS and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
c. Full-Scale Diversified Fire Test: Per ASTM E 108 modified for testing vertical walls.
d. Intermediate-Scale Multistory Fire Test: Per FPA 285 OR IBC Standard, as directed.
e. Radiant Heat Exposure: No ignition of EIFS when tested according to NFPA 268.
f. Potential Heat: Acceptable level when tested according to NFPA 259.
g. Surface-Burning Characteristics: Provide insulation board, adhesives, base coats, and finish coats with flame-spread index of 25 or less and smoke-developed index of 450 or less, per ASTM E 84 OR IBC Standard, as directed.

G. Delivery, Storage, And Handling
1. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
2. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
   a. Stack insulation board flat and off the ground.
   b. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Project Conditions
1. Weather Limitations: Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply EIFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.2 PRODUCTS

A. Materials
1. Compatibility: Provide water-resistive coating, adhesive, fasteners, board insulation, reinforcing meshes, base- and finish-coat systems, sealants, and accessories that are compatible with one another and with substrates and approved for use by EIFS manufacturer for Project.
2. Exterior Cement Board: Not less than 5/16-inch- (8-mm-) OR 7/16-inch- (11-mm-), as directed thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.
   a. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an organic-polymer coating or other corrosion-protective coating having a salt-spray resistance of more than 500 hours per ASTM B 117.
      1) Size and Length: As recommended by sheathing manufacturer for type and thickness of sheathing board to be attached.
   2. Water-Resistive Coatings: EIFS manufacturer's standard formulation and accessories for use as water/weather-resistive barriers, compatible with substrate, and complying with physical and performance criteria of ICC-ES AC209 OR ICC-ES AC212, as directed.
      a. Sheathing Joint Tape OR Compound and Tape, as directed: Type recommended by EIFS manufacturer for sealing joints between and penetrations through sheathing.
      b. VOC Content of Coatings Used as Insulation Adhesive: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      c. VOC Content of Coatings Used as Primer/Sealer: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), designed to seal substrates from moisture penetration and to improve the bond between substrate of type indicated and adhesive used for application of insulation.
5. Flexible-Membrane Flashing: Cold-applied, fully self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.

6. Drainage Mat: Three-dimensional, nonwoven, entangled filament, nylon or plastic OR Woven or fused, self-furring, PVC mesh lath, as directed, mat designed to drain incidental moisture by gravity; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate.

7. Spacers: Closed-cell polyethylene OR Woven or fused, self-furring, PVC mesh lath, as directed furring strips; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate.

8. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; compatible with substrate; with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24); and complying with one of the following:
   a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, and polymer-based adhesive specified for base coat.
   b. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers specified for base coat.
   c. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.

9. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C 578, Type I; EIFS manufacturer's requirements; and EIMA's "EIMA Guideline Specification for Expanded Polystyrene (EPS) Insulation Board" for most stringent requirements for material performance and qualities of insulation, including dimensions and permissible variations, and the following:
   a. Aging: Before cutting and shipping, age insulation in block form by air drying for not less than six weeks or by another method approved by EIMA that produces equivalent results.
   b. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, per ASTM E 84.
   c. Dimensions: Provide insulation boards not more than 24 by 48 inches (610 by 1219 mm) and in thickness indicated but not more than 4 inches (102 mm) thick or less than thickness allowed by ASTM C 1397.
   d. Channeled Board Insulation: EIFS manufacturer's standard factory-fabricated profile with linear, vertical drainage channels, slots, or waves on the back side of board.
   e. Board Insulation Closure Blocks: EIFS manufacturer's standard density, size, and configuration.
   f. Foam Shapes: Provide with profiles and dimensions indicated on Drawings.

10. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than 120 lbf/in. (21 dN/cm) per ASTM E 2098 OR EIMA 105.01, as directed: complying with ASTM D 578 and the following:
   a. Standard-Impact Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
   b. Intermediate-Impact Reinforcing Mesh: Not less than 10 oz./sq. yd. (339 g/sq. m) OR 12.0 oz./sq. yd. (407 g/sq. m), as directed.
   c. High-Impact Reinforcing Mesh: Not less than 15 oz./sq. yd. (509 g/sq. m).
   d. Heavy-Duty Reinforcing Mesh: Not less than 20 oz./sq. yd. (678 g/sq. m).
   e. Strip Reinforcing Mesh: Not less than 3.75 oz./sq. yd. (127 g/sq. m).
   f. Detail Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
   g. Corner Reinforcing Mesh: Not less than 7.2 oz./sq. yd. (244 g/sq. m).

11. Base-Coat Materials: EIFS manufacturer's standard mixture complying with one of the following requirements:
   a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
   b. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
c. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
d. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.

12. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), complying with one of the following:
a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
b. Job-mixed formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.

14. Finish-Coat Materials: EIFS manufacturer's standard acrylic-based coating OR standard acrylic-based coating with enhanced mildew resistance OR siliconized acrylic-based coating, as directed, complying with the following:
a. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
b. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
1) Aggregate: Marble chips of size and as selected by the Owner from manufacturer's full range.
c. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
d. Colors: As selected by the Owner from manufacturer's full range.

15. Water: Potable.

16. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; selected for properties of pullout, tensile, and shear strength required to resist design loads of application indicated; capable of pulling fastener head below surface of insulation board; and of the following description:
a. For attachment to steel studs from 0.033 to 0.112 inch (0.84 to 2.84 mm) in thickness, provide steel drill screws complying with ASTM C 954.
b. For attachment to light-gage steel framing members not less than 0.0179 inch (0.45 mm) in thickness, provide steel drill screws complying with ASTM C 1002.
c. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C 1002, Type W.
d. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
e. For attachment, provide manufacturer's standard fasteners suitable for substrate.

17. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D 1784, manufacturer's standard Cell Class for use intended, and ASTM C 1063.
a. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
b. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
c. Weep Screed/Track: Prefabricated, one-piece type for attachment behind insulation with perforated face leg extended to form a drip and weep holes in track bottom, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg; designed to drain incidental moisture that gets into wall construction to the exterior at terminations of EIFS with drainage.
d. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.
e. Window Sill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
f. Parapet Cap Flashing: Type for both flashing and covering parapet top with design complying with ASTM C 1397.

B. Elastomeric Sealants
1. Elastomeric Sealant Products: Provide EIFS manufacturer's listed and recommended chemically curing, elastomeric sealant that is compatible with joint fillers, joint substrates, and other related materials, and complies with requirements for products and testing indicated in ASTM C 1481 and with requirements in Division 07 Section "Joint Sealants" for products corresponding to description indicated below:
   a. Multicomponent, nonsag urethane sealant.
   b. Single-component, nonsag, neutral-curing silicone sealant.
   c. Provide sealants, for use inside the weatherproofing system, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Preformed Foam Sealant Products: Provide sealant compatible with adjacent materials and complying with requirements in Division 07 Section "Joint Sealants".
3. Sealant Color: As selected by the Owner from manufacturer's full range.

C. Mixing
1. General: Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

1.3 EXECUTION
A. Preparation
1. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
2. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of EIFS and deterioration of substrates.
3. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.

B. Exterior Cement-Board Installation
1. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install board with steel drill screws spaced no more than 8 inches (203 mm) o.c. along framing with perimeter fasteners at least 3/8 inch (9.6 mm) but less than 5/8 inch (15.9 mm) from edges of boards.

C. EIFS Installation, General
1. Comply with EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.

D. Substrate Protection Application
1. Primer/Sealer: Apply over gypsum sheathing substrates to protect substrates from degradation and where required by EIFS manufacturer for improving adhesion of insulation to substrate.
2. Water-Resistive Coatings: Apply over substrates to protect substrates from degradation and to provide water-/weather-resistive barrier.
   a. Tape and seal joints, exposed edges, terminations, and inside and outside corners of sheathing unless otherwise indicated by EIFS manufacturer's written instructions.

3. Waterproof Adhesive/Base Coat: Apply over sloped surfaces OR window sills OR parapets OR where indicated on Drawings, as directed, to protect substrates from degradation.

4. Flexible-Membrane Flashing: Install over weather-resistive barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where indicated by EIFS manufacturer's written instructions to protect wall assembly from degradation. Prime substrates, if required, and install flashing to comply with EIFS manufacturer's written instructions and details.

E. Trim Installation
   1. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, at window sills, and elsewhere as indicated, according to EIFS manufacturer's written instructions. Coordinate with installation of insulation.
      a. Weep Screed/Track: Use at bottom termination edges, at window and door heads, and at floor line expansion joints of water-drainage EIFS unless otherwise indicated.
      b. Window Sill Flashing: Use at windows unless otherwise indicated.
      c. Expansion Joint: Use where indicated on Drawings.
      d. Casing Bead: Use at other locations.
      e. Parapet Cap Flashing: Use where indicated on Drawings.

F. Drainage Mat Installation
   1. Drainage Mat: Apply wrinkle free, continuously, with edges butted OR overlapped, as directed, and adhesively secured OR mechanically secured with fasteners, as directed, over water-/weather-resistive barrier according to manufacturer's written instructions.

G. Insulation Installation
   1. Board Insulation: Adhesively OR Mechanically OR Adhesively and mechanically, as directed, attach insulation to substrate in compliance with ASTM C 1397, EIFS manufacturer's written instructions, and the following:
      a. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to sheathing unless EIFS manufacturer's written instructions specify using primer/sealer with ribbon-and-dab method. Apply adhesive to a thickness of not less than 1/4 inch (6.4 mm) for factory mixed and not less than 3/8 inch (9.6 mm) for field mixed, measured from surface of insulation before placement.
      b. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of drainage mat with adhesive once insulation is adhered to drainage mat.
      c. Apply adhesive to ridges on back of insulation by notched-trowel method in a manner that results in full adhesive contact over the entire surface of ridges, leaving channels free of adhesive once insulation is adhered to substrate.
      d. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
      e. Allow adhered insulation to remain undisturbed for period recommended by EIFS manufacturer, but not less than 24 hours, before installing mechanical fasteners, beginning rasping and sanding insulation, or applying base coat and reinforcing mesh.
      f. Mechanically attach insulation to substrate by method complying with EIFS manufacturer's written instructions. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
         1) Steel Framing: 5/16 inch (8 mm).
         2) Wood Framing: 1 inch (25 mm).
         3) Concrete and Masonry: 1 inch (25 mm).
      g. Apply insulation over drainage mat and dry substrates in courses with long edges of boards oriented horizontally.
h. Begin first course of insulation from a level base line and work upward.

i. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.

j. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than 12 inches (300 mm) wide or 6 inches (150 mm) high. Offset joints not less than 6 inches (150 mm) from corners of window and door openings and not less than 4 inches (100 mm) from aesthetic reveals.
   1) Adhesive Attachment: Offset joints of insulation not less than 6 inches (150 mm) from horizontal and 4 inches (100 mm) from vertical joints in sheathing.
   2) Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.

k. Place insulation with adhesive strips and channels, slots, or waves aligned in the vertical position for drainage. Align drainage channels, slots, or waves with channels, slots, or waves in insulation boards above and below.

l. Interlock ends at internal and external corners.

m. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than 1/16 inch (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.

n. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.

o. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than 1/32 inch (0.8 mm) OR 1/16 inch (1.6 mm), as directed, from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than 1/16 inch (1.6 mm).

p. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than 3/4 inch (19 mm).

q. Install foam shapes and attach to sheathing OR structure, as directed.

r. Interrupt insulation for expansion joints where indicated.

s. Install insulation closure blocks using ribbon-and-dab method to create air zones where indicated.

t. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.

u. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.

v. After installing insulation and before applying field-applied reinforcing mesh, fully wrap board edges. Cover edges of board and extend encapsulating mesh not less than 2-1/2 inches (64 mm) over front and back face unless otherwise indicated on Drawings.

w. Treat exposed edges of insulation as follows:
   1) Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
   2) Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
   3) At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.

x. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and water-/weather-resistant barrier.

2. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:

   a. At expansion joints in substrates behind EIFS.
b. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
c. At floor lines in multilevel wood-framed construction.
d. Where wall height or building shape changes.
e. Where EIFS manufacturer requires joints in long continuous elevations.

H. Base-Coat Installation
1. Base Coat: Apply to exposed surfaces of insulation and foam shapes in minimum thickness recommended in writing by EIFS manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.
2. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within 8 inches (204 mm) of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
   a. Standard-impact reinforcing mesh unless otherwise indicated.
   b. Intermediate-impact reinforcing mesh where indicated.
   c. High-impact reinforcing mesh where indicated.
   d. Heavy-duty reinforcing mesh where indicated.
3. Double-Layer Reinforcing Mesh Application: Where indicated, apply second base coat and second layer of standard-impact OR intermediate-impact, as directed, reinforcing mesh, overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.
4. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending 4 inches (100 mm) beyond perimeter. Apply additional 9-by-12-inch (230-by-300-mm) strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply 8-inch (200-mm-) wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than 4 inches (100 mm) on each side of corners.
   a. At aesthetic reveals, apply strip reinforcing mesh not less than 8 inches (200 mm) wide.
   b. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.
5. Foam Shapes: Fully embed reinforcing mesh in base coat.
6. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.

I. Finish-Coat Installation
1. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.
2. Finish Coat: Apply over dry primed base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
   a. Texture: As selected by the Owner from manufacturer's full range.
   b. Embed aggregate in finish coat according to EIFS manufacturer's written instructions to produce a uniform applied-aggregate finish of color and texture matching approved sample.
3. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

J. Installation Of Joint Sealants
1. Prepare joints and apply sealants, of type and at locations indicated, to comply with applicable requirements in Division 07 Section "Joint Sealants" and in ASTM C 1481.
   a. Apply joint sealants after base coat has cured but before applying finish coat.
   b. Clean surfaces to receive sealants to comply with indicated requirements and EIFS manufacturer's written instructions.
   c. Apply primer recommended in writing by sealant manufacturer for surfaces to be sealed.
d. Install sealant backing to control depth and configuration of sealant joint and to prevent sealant from adhering to back of joint.

e. Apply masking tape to protect areas adjacent to sealant joints. Remove tape immediately after tooling joints, without disturbing joint seal.

f. Recess sealant sufficiently from surface of EIFS so an additional sealant application, including cylindrical sealant backing, can be installed without protruding beyond EIFS surface.

K. Field Quality Control
1. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
   a. According to ICC-ES AC24 OR ICC-ES AC235, as directed.

2. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

3. EIFS Tests and Inspections: For the following:
   a. According to ICC-ES AC24 OR ICC-ES AC235, as directed.

4. Remove and replace EIFS where test results indicate that EIFS do not comply with specified requirements.

5. Prepare test and inspection reports.

L. Cleaning And Protection
1. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

SECTION 07 31 13 13 - ASPHALT SHINGLES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for asphalt shingles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Asphalt shingles.
   b. Underlayment.

C. Definition
1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

D. Submittals
1. Product Data: For each type of product indicated.
2. Samples: For each exposed product and for each color and blend specified.
3. Product test reports.
4. Research/evaluation reports.
5. Maintenance data.

E. Quality Assurance
1. Fire-Resistance Characteristics: Where indicated, provide asphalt shingles and related roofing materials identical to those of assemblies tested for fire resistance per test method below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
   a. Exterior Fire-Test Exposure: Class A OR Class C, as directed; ASTM E 108 or UL 790, for application and roof slopes indicated.
2. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling
1. Store roofing materials in a dry, well-ventilated, weathertight location according to asphalt shingle manufacturer's written instructions. Store underlayment rolls on end on pallets or other raised surfaces. Do not double stack rolls.
   a. Handle, store, and place roofing materials in a manner to avoid significant or permanent damage to roof deck or structural supporting members.
2. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.

G. Warranty
1. Special Warranty: Standard form in which manufacturer agrees to repair or replace asphalt shingles that fail in materials or workmanship within specified warranty period.
   a. Material Warranty Period: 25 OR 30 OR 35 OR 40, as directed, years from date of Final Completion, prorated, with first three OR five OR 12, as directed, years nonprorated.
   b. Wind-Speed Warranty Period: Asphalt shingles will resist blow-off or damage caused by wind speeds up to 60 mph (27 m/s) OR 75 mph (33 m/s) OR 80 mph (36 m/s) OR 100 mph (45 m/s), as directed, for five OR 10, as directed, years from date of Final Completion.
   c. Algae-Discoloration Warranty Period: Asphalt shingles will not discolor five OR 10, as directed, years from date of Final Completion.
d. Workmanship Warranty Period: 10 OR 12, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Glass-Fiber-Reinforced Asphalt Shingles

   a. Butt Edge: Straight OR Notched OR Crenelated, as directed, cut.
   b. Strip Size: Manufacturer's standard.
   c. Algae Resistance: Granules treated to resist algae discoloration.
   d. Color and Blends: As selected by the Owner from manufacturer's full range.

2. Laminated-Strip, SBS-Modified Asphalt Shingles: ASTM D 3462, laminated, multi-ply overlay construction, glass-fiber reinforced, mineral-granule surfaced, and self-sealing; complying with UL 2218, Class IV.
   a. Butt Edge: Straight OR Notched OR Crenelated, as directed, cut.
   b. Strip Size: Manufacturer's standard.
   c. Algae Resistance: Granules treated to resist algae discoloration.
   d. Color and Blends: As selected by the Owner from manufacturer's full range.

   a. Tab Arrangement: Three tabs, regularly spaced OR Four tabs, regularly spaced OR Five tabs, randomly spaced, as directed.
   b. Cutout Shape: Square OR Tapered, as directed.
   c. Butt Edge: Straight OR Stagger, as directed, cut.
   d. Strip Size: Manufacturer's standard.
   e. Algae Resistance: Granules treated to resist algae discoloration.
   f. Color and Blends: As selected by the Owner from manufacturer's full range.

4. Three-Tab-Strip, SBS-Modified Asphalt Shingles: ASTM D 3462, glass-fiber reinforced, mineral-granule surfaced, and self-sealing; complying with UL 2218, Class IV.
   a. Strip Size: Manufacturer's standard.
   b. Algae Resistance: Granules treated to resist algae discoloration.
   c. Color and Blends: As selected by the Owner from manufacturer's full range.

   a. Butt Edge: Stagger OR Straight, as directed, cut.
   b. Strip Size: Manufacturer's standard.
   c. Algae Resistance: Granules treated to resist algae discoloration.
   d. Color and Blends: As selected by the Owner from manufacturer's full range.

6. Hip and Ridge Shingles: Manufacturer's standard units to match asphalt shingles OR Site-fabricated units cut from asphalt shingle strips. Trim each side of lapped portion of unit to taper approximately 1 inch (25 mm), as directed.

B. Organic-Felt-Reinforced Asphalt Shingles

   a. Butt Edge: Straight OR Notched OR Crenelated, as directed, cut.
   b. Strip Size: Manufacturer's standard.
   c. Algae Resistance: Granules treated to resist algae discoloration.
   d. Color and Blends: As selected by the Owner from manufacturer's full range.

   a. Tab Arrangement: Three tabs, regularly spaced OR Four tabs, regularly spaced OR Six tabs, regularly spaced, scalloped edge, as directed.
   b. Strip Size: Manufacturer's standard.
c. Algae Resistance: Granules treated to resist algae discoloration.
d. Color and Blends: As selected by the Owner from manufacturer's full range.

   a. Butt Edge: Stagger OR Straight, as directed, cut.
   b. Strip Size: Manufacturer's standard.
   c. Color and Blends: As selected by the Owner from manufacturer's full range.

4. Hip and Ridge Shingles: Manufacturer's standard units to match asphalt shingles OR Site-fabricated units cut from asphalt shingle strips. Trim each side of lapped portion of unit to taper approximately 1 inch (25 mm), as directed.

C. Underlayment Materials
1. Felt: ASTM D 226 OR ASTM D 4869, as directed, Type I OR Type II, as directed, asphalt-saturated organic felts, nonperforated.
2. Self-Adhering Sheet Underlayment, Granular Surfaced: ASTM D 1970, minimum of 55-mil- (1.4-mm-) thick sheet; glass-fiber-mat-reinforced, SBS-modified asphalt; mineral-granule surfaced; with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.
4. Self-Adhering Sheet Underlayment, High Temperature: Minimum of 30- to 40-mil- (0.76- to 1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.
   b. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
5. Granular-Surfaced Valley Lining: ASTM D 6380, Class M, organic-felt-based OR ASTM D 3909, mineral-granular-surfaced, glass-felt-based, as directed, asphalt roll roofing; 36 inches (914 mm) wide.

D. Ridge Vents
1. Rigid Ridge Vent: Manufacturer's standard, rigid section high-density polypropylene or other UV-stabilized plastic ridge vent with nonwoven geotextile filter strips and external deflector baffles; for use under ridge shingles.
2. Flexible Ridge Vent: Manufacturer's standard, compression-resisting, three-dimensional, open-nylon or polyester-mat filter bonded to a nonwoven, nonwicking, geotextile fabric cover.

E. Accessories
2. Roofing Nails: ASTM F 1667; aluminum, stainless-steel, copper, or hot-dip galvanized-steel wire shingle nails, minimum 0.120-inch- (3-mm-) diameter, barbed OR smooth, as directed, shank, sharp-pointed, with a minimum 3/8-inch- (9.5-mm-) diameter flat head and of sufficient length to penetrate 3/4 inch (19 mm) into solid wood decking or extend at least 1/8 inch (3 mm) through OSB or plywood sheathing.
   a. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
3. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.

F. Metal Flashing And Trim
1. General: Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Sheet Metal: Copper OR Stainless steel OR Zinc-tin alloy-coated stainless steel OR Zinc-tin alloy-coated steel OR Zinc-tin alloy-coated copper OR Anodized aluminum OR Aluminum, mill finished, as directed.
2. Fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of the item.
   a. Apron Flashings: Fabricate with lower flange a minimum of 4 inches (100 mm) OR 5 inches (125 mm), as directed, over and 4 inches (100 mm) beyond each side of downslope asphalt shingles and 6 inches (150 mm) up the vertical surface.
   b. Step Flashings: Fabricate with a headlap of 2 inches (50 mm) and a minimum extension of 4 inches (100 mm) OR 5 inches (125 mm), as directed, over the underlying asphalt shingle and up the vertical surface.
   c. Cricket OR Backer, as directed, Flashings: Fabricate with concealed flange extending a minimum of 18 inches (450 mm) OR 24 inches (600 mm), as directed, beneath upslope asphalt shingles and 6 inches (150 mm) beyond each side of chimney OR skylight, as directed, and 6 inches (150 mm) above the roof plane.
   d. Open-Valley Flashings: Fabricate in lengths not exceeding 10 feet (3 m) with 1-inch- (25-mm-) high, inverted-V profile at center of valley and equal flange widths of 10 inches (250 mm) OR 12 inches (300 mm), as directed.
   e. Drip Edges: Fabricate in lengths not exceeding 10 feet (3 m) with 2-inch (50-mm) roof-deck flange and 1-1/2-inch (38-mm) fascia flange with 3/8-inch (9.6-mm) drip at lower edge.

3. Vent Pipe Flashings: ASTM B 749, Type L51121, at least 1/16 inch (1.6 mm) thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof, and extending at least 4 inches (100 mm) from pipe onto roof.

1.3 EXECUTION

A. Underlayment Installation
   1. General: Comply with underlayment manufacturer's written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
   2. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.
      a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water. Lap ends of felt not less than 6 inches (150 mm) over self-adhering sheet underlayment.
      b. Install fasteners at no more than 36 inch (900 mm) o.c. where the basic wind speed is equal to or greater than 110 mph (176 km/h).
   3. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (150 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.
      a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.
      b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.
      c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against sidewalls, curbs, chimneys, and other roof projections.
      d. Install fasteners at no more than 36 inch (900 mm) o.c. where the basic wind speed is equal to or greater than 110 mph (176 km/h).
   4. Self-Adhering Sheet Underlayment: Install, wrinkle free, on roof deck. Comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at
locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses. Roll laps with roller. Cover underlayment within seven days.

a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
b. Eaves: Extend from edges of eaves 24 inches (600 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
c. Rakes: Extend from edges of rake 24 inches (600 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
d. Valleys: Extend from lowest to highest point 18 inches (450 mm) on each side.
e. Hips: Extend 18 inches (450 mm) on each side.
f. Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot.
g. Sidewalls: Extend beyond sidewall 18 inches (450 mm), and return vertically against sidewall not less than 4 inches (100 mm).
h. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend beyond penetrating element 18 inches (450 mm), and return vertically against penetrating element not less than 4 inches (100 mm).
i. Roof Slope Transitions: Extend 18 inches (450 mm) on each roof slope.

5. Concealed, Woven OR Closed-Cut, Valley Lining: Comply with NRCA’s recommendations. Install a 36-inch- (914-mm-) wide felt underlayment centered in valley. Fasten to roof deck with felt underlayment OR roofing, as directed, nails.
   a. Lap roof-deck felt underlayment over valley felt underlayment at least 6 inches (150 mm).

6. Metal-Flashed, Open-Valley Underlayment: Install two layers of 36-inch- (914-mm-) wide felt underlayment centered in valley. Stagger end laps between layers at least 72 inches (1830 mm). Lap ends of each layer at least 12 inches (300 mm) in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck with roofing nails.
   a. Lap roof-deck felt underlayment over first layer of valley felt underlayment at least 6 inches (150 mm).

7. Granular-Surfaced, Open-Valley Lining: Comply with NRCA’s recommendations. Install a 36-inch- (914-mm-) wide felt underlayment centered in valley. Fasten to roof deck with felt underlayment OR roofing, as directed, nails.
   a. Lap roof-deck felt underlayment over valley felt underlayment at least 6 inches (150 mm).
   b. Install an 18-inch- (450-mm-) wide strip of valley lining centered in valley, with granular-surface face down. Install a second 36-inch- (914-mm-) wide strip of valley lining centered in valley, with granular-surface face up. Lap ends of each strip at least 12 inches (300 mm) in direction to shed water, and seal with asphalt roofing cement. Stagger end laps between succeeding strips at least 72 inches (1830 mm). Fasten each strip to roof deck with roofing nails.

B. Metal Flashing Installation
1. General: Install metal flashings and other sheet metal to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Install metal flashings according to recommendations in ARMA’s "Residential Asphalt Roofing Manual" and asphalt shingle recommendations in NRCA’s "The NRCA Roofing and Waterproofing Manual."

2. Apron Flashings: Extend lower flange over and beyond each side of downslope asphalt shingles and up the vertical surface.

3. Step Flashings: Install with a headlap of 2 inches (50 mm) and extend over the underlying asphalt shingle and up the vertical surface. Fasten to roof deck only.

4. Cricket OR Backer, as directed, Flashings: Install against the roof-penetrating element extending concealed flange beneath upslope asphalt shingles and beyond each side.

5. Open-Valley Flashings: Install centered in valleys, lapping ends at least 8 inches (200 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
a. Secure hemmed flange edges into metal cleats spaced 12 inches (300 mm) apart and fastened to roof deck.

b. Adhere 9-inch- (225-mm-) wide strip of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.

6. Rake Drip Edges: Install rake drip edge flashings over underlayment and fasten to roof deck.

7. Eave Drip Edges: Install eave drip edge flashings below underlayment and fasten to roof sheathing.

8. Pipe Flashings: Form flashing around pipe penetrations and asphalt shingles. Fasten and seal to asphalt shingles as recommended by manufacturer.

C. Asphalt Shingle Installation

2. Install starter strip along lowest roof edge, consisting of an asphalt shingle strip with tabs removed OR at least 7 inches (175 mm) wide, as directed, with self-sealing strip face up at roof edge.
   a. Extend asphalt shingles 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, over fasciae at eaves and rakes.
   b. Install starter strip along rake edge.

3. For Three-Tab- And Other Multitab-Strip Asphalt Shingles: Install first and remaining courses of asphalt shingles stair-stepping diagonally across roof deck with 4-inch (100-mm) OR 5-inch (125-mm) OR 6-inch (150-mm) OR 1/2-tab OR 1/3-tab OR manufacturer's recommended, as directed, offset pattern at succeeding courses, maintaining uniform exposure.

4. For Laminated-Strip And No-Cutout-Strip Asphalt Shingles: Install first and remaining courses of asphalt shingles stair-stepping diagonally across roof deck with manufacturer’s recommended offset pattern at succeeding courses, maintaining uniform exposure.

5. Install asphalt shingles by single-strip column or racking method, maintaining uniform exposure. Install full-length first course followed by cut second course, repeating alternating pattern in succeeding courses.

6. Fasten asphalt shingle strips with a minimum of four OR five OR six, as directed, roofing nails located according to manufacturer’s written instructions.
   a. Where roof slope exceeds 20:12, seal asphalt shingles with asphalt roofing cement spots after fastening with additional roofing nails.
   b. Where roof slope is less than 4:12, seal asphalt shingles with asphalt roofing cement spots.
   c. When ambient temperature during installation is below 50 deg F (10 deg C), seal asphalt shingles with asphalt roofing cement spots.

7. Woven Valleys: Extend succeeding asphalt shingle courses from both sides of valley 12 inches (300 mm) beyond center of valley, weaving intersecting shingle-strip courses over each other. Use one-piece shingle strips without joints in valley.
   a. Do not nail asphalt shingles within 6 inches (150 mm) of valley center.

8. Closed-Cut Valleys: Extend asphalt shingle strips from one side of valley 12 inches (300 mm) beyond center of valley. Use one-piece shingle strips without joints in valley. Fasten with extra nail in upper end of shingle. Install asphalt shingle courses from other side of valley and cut back to a straight line 2 inches (50 mm) short of valley centerline. Trim upper concealed corners of cut-back shingle strips.
   a. Do not nail asphalt shingles within 6 inches (150 mm) of valley center.
   b. Set trimmed, concealed-corner asphalt shingles in a 3-inch- (75-mm-) wide bed of asphalt roofing cement.

9. Open Valleys: Cut and fit asphalt shingles at open valleys, trimming upper concealed corners of shingle strips. Maintain uniform width of exposed open valley OR widen exposed portion of open valley 1/8 inch in 12 inches (1:96), as directed, from highest to lowest point.
   a. Set valley edge of asphalt shingles in a 3-inch- (75-mm-) wide bed of asphalt roofing cement.
   b. Do not nail asphalt shingles to metal open-valley flashings.
10. Ridge Vents: Install continuous ridge vents over asphalt shingles according to manufacturer's written instructions. Fasten with roofing nails of sufficient length to penetrate sheathing.

11. Ridge and Hip Cap Shingles: Maintain same exposure of cap shingles as roofing shingle exposure. Lap cap shingles at ridges to shed water away from direction of prevailing winds. Fasten with roofing nails of sufficient length to penetrate sheathing.
   a. Fasten ridge cap asphalt shingles to cover ridge vent without obstructing airflow.
SECTION 07 31 16 00 - METAL SHINGLES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for metal shingles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Metal-shingle panels.
   b. Individual metal shingles.
   c. Underlayment.
   d. Ridge vents.
   e. Snow guards.

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

D. Performance Requirements
1. General Performance: Metal shingles shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
2. Wind-Uplift Resistance: Provide metal-shingle assemblies that comply with the following wind-uplift requirements.
   a. Class: 15 OR 30 OR 60 OR 90, as directed, when tested according to UL 580.
   b. Uplift Resistance: 75 lbf/sq. ft. (3.6 kPa) OR 120 lbf/sq. ft. (5.75 kPa) OR 165 lbf/sq. ft. (7.9 kPa), as directed, when tested according to UL 1897.
3. Impact Resistance: Class 3 OR Class 4, as directed, when tested according to UL 2218.
4. Energy Performance, Solar Reflectance (for LEED-NC Credit SS 7.2): Provide shingles with Solar Reflectance Index not less than 29 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
5. Energy Performance, ENERGY STAR: Provide roofing system that is listed on the DOE's "Roof Products Qualified Product List" for steep-slope roof products.
6. Recycled Content: Provide metal shingles with recycled content so that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 50 percent by weight.

E. Submittals
1. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For metal shingles, documentation indicating compliance with Solar Reflectance Index requirement.
   b. Product Data for Credit(s) MR 4.1 and MR 4.2, as directed: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
3. Shop Drawings: For metal shingles. Show roof plans and wall elevations, as directed; sections at hips, gables, ridges, valleys, and eaves; details of metal shingles, flashing, trim, and accessories; and attachments to other work.
4. Samples: Full-size components of each type of metal shingle indicated, including visible accessories.
5. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency or performed by a qualified testing agency, for metal shingles, demonstrating compliance with requirements specified in "Performance Requirements" Article.

F. Quality Assurance
1. Source Limitations: Obtain metal shingles from single source from single manufacturer.
2. Fire-Test Exposure Rating: Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical products per test method UL 790 or ASTM E 108 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

G. Delivery, Storage, And Handling
1. Do not store metal-shingle materials in contact with other materials that might cause staining, denting, or other surface damage. Store metal-shingle materials away from uncured concrete and masonry.
2. Protect strippable protective covering on metal shingles from exposure to sunlight and high humidity, except to the extent necessary for the period of metal-shingle installation.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be performed according to manufacturer's written instructions and warranty requirements.
   a. Install self-adhering sheet underlayment within the range of ambient and substrate temperatures recommended by manufacturer.

I. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal shingles and accessories that fail in materials within specified warranty period.
   a. Failures include, but are not limited to, the following:
      1) Structural failures including wind uplift.
      2) Water penetration and hail perforation.
      3) Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   b. Materials-Only Warranty Period: 15 OR 25 OR 50, as directed, years from date of Final Completion.
2. Special Project Warranty: Roofing Installer's Warranty, signed by roofing Installer, covering Work of this Section, in which Installer agrees to repair or replace components of roofing that fail in materials or workmanship within the following warranty period:
   a. Warranty Period: Two OR Five, as directed, years from date of Final Completion.
3. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal shingles that show evidence of deterioration of factory-applied finishes within specified warranty period.
   a. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
      1) Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      2) Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   b. Warranty Period: 10 OR 20, as directed, years from date of Final Completion.
1.2 PRODUCTS

A. Sheet Metal Materials

1. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
   b. High-Performance Organic Coating (Coil-Coated Finishes): Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      1) Two-Coat Fluoro polymer: AAMA 620. System consisting of primer and fluoro polymer color topcoat containing not less than 70 percent PVDF resin by weight.
      2) Three-Coat Fluoro polymer: AAMA 620. System consisting of primer, fluoro polymer color coat, and clear fluoro polymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
      3) Concealed Surface: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat and with a minimum total dry film thickness of 0.5 mil (0.013 mm).

2. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 37 (Class AZM150 coating designation, Grade 255); structural quality.
   b. Granular-Coating Finish: Entire upper surface of shingle, including flange edges, coated with ceramic-colored quartz granules or crushed stone chips bonded to shingle with a resin adhesive and sealed with a clear overglaze.

3. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
   a. Mill Finish: Zinc-coated (galvanized) steel sheet without additional coating OR with manufacturer's standard mill-phosphatized finish, as directed.
   b. High-Performance Organic Coating, (Coil-Coated Finishes): Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      1) Two-Coat Fluoro polymer: AAMA 621. System consisting of primer and fluoro polymer color topcoat containing not less than 70 percent PVDF resin by weight.
      2) Three-Coat Fluoro polymer: AAMA 621. System consisting of primer, fluoro polymer color coat, and clear fluoro polymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.

4. Copper Sheet: ASTM B 370; Temper H00, cold rolled, unless Temper 060 is required for forming.
   b. Pre-Patinated Finish: Dark brown OR Verdigris, as directed, pre-patinated according to ASTM B 882.

5. Zinc-Alloy Sheet: Alloy of 99.995 percent pure electrolytic high-grade zinc with alloy additives of copper (0.08 to 0.20 percent), titanium (0.07 to 0.12 percent), and aluminum (0.015 percent) OR Zinc alloy consisting of 99 percent pure zinc with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015 percent aluminum, as directed; with manufacturer's standard factory-applied, flexible, protective back coating.
   b. Preweathered Finish: Factory-applied preweathering to uniform color.

B. Metal Shingles

1. Aluminum Shingles: Factory-formed, interlocking shingle panels OR individual shingles, as directed.
   a. Shingle Panels: Stamped panels resembling multiple shakes OR shingles OR Spanish tiles OR flat tiles OR scalloped tiles, as directed.
      1) Material: Formed aluminum, 0.020 inch (0.51 mm) thick OR 0.032 inch (0.81 mm) thick OR thickness as needed to meet performance requirements, as directed.
2) Reinforcement: Manufacturer's standard insert material in units to increase rigidity.
3) Exposure: 48 by 12 inches (1219 by 305 mm).
4) Finish: Mill OR High-performance organic coating.
5) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

b. Individual Shingles: Rectangular OR Diamond, as directed, shingle units.
   1) Material: Formed aluminum, 0.020 inch (0.51 mm) thick OR 0.032 inch (0.81 mm) thick OR thickness as needed to meet performance requirements, as directed.
   2) Reinforcement: Manufacturer's standard insert material in units to increase rigidity.
   3) Exposure: 14 by 14 inches (356 by 356 mm).
   4) Finish: Mill OR High-performance organic coating, as directed.
   5) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

2. Steel Shingles: Factory-formed, interlocking shingle panels OR individual shingles, as directed.
   a. Shingle Panels: Stamped panels resembling multiple shakes OR shingles OR Spanish tiles OR flat tiles OR scalloped tiles, as directed.
      1) Material: Aluminum-zinc alloy-coated OR Zinc-coated (galvanized), as directed, steel sheet, nominal 0.022 inch (0.56 mm) thick OR 0.028 inch (0.71 mm) thick OR thickness as needed to meet performance requirements, as directed.
      2) Exposure: 47-1/4 by 15-13/16 inches (1200 by 402 mm).
      3) Finish: Mill OR Granular coating OR High-performance organic coating, as directed.
      4) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   b. Individual Shingles: Rectangular OR Diamond, as directed, shingle units.
      1) Material: Copper sheet, 12 oz./sq. ft. (0.41 mm thick) OR 16 oz./sq. ft. (0.55 mm-thick) OR weight (thickness) as needed to meet performance requirements, as directed.
      2) Exposure: 33-1/4 by 10 inches (845 by 254 mm).
      3) Finish: Mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.

3. Copper Shingles: Factory-formed, interlocking shingle panels OR individual shingles, as directed.
   a. Shingle Panels: Stamped panels resembling multiple shakes OR shingles, as directed.
      1) Material: Copper sheet, 12 oz./sq. ft. (0.41 mm thick) OR 16 oz./sq. ft. (0.55 mm thick) OR weight (thickness) as needed to meet performance requirements, as directed.
      2) Exposure: 33-1/4 by 10 inches (845 by 254 mm).
      3) Finish: Mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.
   b. Individual Shingles: Rectangular OR Diamond, as directed, shingle units.
      1) Material: Copper sheet, 12 oz./sq. ft. (0.41 mm thick) OR 16 oz./sq. ft. (0.55 mm-thick) OR weight (thickness) as needed to meet performance requirements, as directed.
      2) Exposure: 9-1/2 by 7-1/4 inches (241 by 184 mm).
      3) Finish: Mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.

4. Zinc Shingles: Factory-formed, interlocking shingle panels OR individual shingles, as directed.
   a. Shingle Panels: Stamped panels resembling multiple shakes OR shingles, as directed.
      1) Material: Zinc-alloy sheet, 0.027 inch (0.70 mm) thick OR thickness as needed to meet performance requirements, as directed.
      2) Exposure: 47-1/4 by 15-13/16 inches (1200 by 402 mm), as directed.
      3) Finish: Bright rolled OR Preweathered gray OR Preweathered black, as directed.
   b. Individual Shingles: Rectangular OR Diamond, as directed, shingle units.
      1) Material: Zinc-alloy sheet, 0.027 inch (0.70 mm) thick OR thickness as needed to meet performance requirements, as directed.
      2) Exposure: 14 by 14 inches (356 by 356 mm).
3) Finish: Bright rolled OR Preweathered gray OR Preweathered black, as directed.

C. Underlayment
1. Felt Underlayment: ASTM D 226 or ASTM D 4869, Type I OR Type II, as directed, asphalt-saturated organic felt, nonperforated.
2. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, a minimum of 40-mil-(1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.
3. Self-Adhering Sheet Underlayment, High Temperature: A minimum of 30- to 40-mil- (0.76- to 1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment and when recommended by underlayment manufacturer.
   b. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
4. Slip Sheet: Building paper, 3-lb/100 sq. ft. (0.16-kg/sq. m) minimum, rosin sized.

D. Accessories
1. General: Provide materials and types of fasteners, protective coatings, separators, sealants, and other accessory items as required for a complete roofing system and as recommended by metal-shingle manufacturer unless otherwise indicated.
2. Sheet Metal Flashing and Trim: Metal-shingle manufacturer's flashing and trim components matching shingle material, color, and finish unless otherwise indicated or recommended in writing by metal-shingle manufacturer. Fabricate to sizes and configurations shown or required. Unless otherwise indicated, fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA's "Architectural Sheet Metal Manual."
3. Ridge Vents: Metal-shingle manufacturer's continuous vented ridge caps matching material and finish of metal shingles with insect screen or insect-resisting geotextile filter strips and with external deflector baffles; for use with specified metal shingles.
   a. Minimum Net Free Area: As required to satisfy Project requirements.
   b. Accessories: Splices, end caps, and other accessories matching metal and finish.
4. Snow Guards: Stop-type OR Bar-type, as directed, prefabricated aluminum OR copper OR cast-bronze OR zinc OR stainless-steel, as directed, units, designed to be installed without penetrating metal shingles.
   a. Attachment: Designed to be attached to surface of metal shingles using construction adhesive, silicone or polyurethane sealant, or adhesive tape OR mechanically anchored through predrilled holes concealed by the metal shingles, as directed.
   b. Finish: Matching the metal shingles.
5. Wood Battens: Pressure-preservative-treated wood complying with requirements in Division 6 Section "Rough Carpentry" OR "Miscellaneous Carpentry", as directed.
   a. Contoured Rigid Foam: Manufacturers standard rigid foam formed to match underside contour of metal shingles.
6. Metal Battens: Hat channels formed from zinc-coated (galvanized) steel sheet; ASTM A 653/A 653M, G90 (Z275) coating designation, not less than 0.025-inch (0.64-mm) nominal thickness, and complying with requirements in Division 5 Section Cold-Formed Metal Framing."
9. Sealant: ASTM C 920, one-part elastomeric polymer joint sealant as recommended by metal-shingle manufacturer for installation indicated; of type, grade, class, and use classifications required to seal joints in metal shingles and remain watertight. Where sealant will be exposed, provide in color matching shingle.
10. Sheet Metal Fasteners: Noncorrosive screws, nails, and anchors designed to withstand design loads as recommended in writing by metal-shingle manufacturer.
a. Exposed Fasteners: Heads matching color of metal shingles using plastic caps or factory-applied coating. Provide metal-backed neoprene or EPDM washers under heads of exposed fasteners bearing on weather side of shingles.
b. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
c. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
d. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
e. Fasteners for Aluminum-Zinc Alloy-Coated OR Zinc-Coated, as directed, Steel Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
f. Fasteners for Copper Sheet: Copper, hardware bronze, or Series 300 stainless steel.
g. Fasteners for Zinc Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
11. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.
a. Where nails are in contact with metal shingles or flashing, use nails made from same metal as metal shingles.
12. Wood Batten Nails: ASTM F 1667; common or box, steel wire, flat head, and smooth shank; hot-dip galvanized.

E. General Finish Requirements
1. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION
A. Examination
1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   a. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking, that tops of fasteners are flush with surface, and that installation is within flatness tolerances.
   b. Verify that substrate is sound, dry to the maximum moisture content recommended by metal-shingle manufacturer, smooth, clean, sloped for drainage, and completely anchored and that provision has been made for flashings and penetrations through metal shingles.
   c. Verify that vent stacks and other penetrations through metal shingles have been installed and are securely fastened.
2. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
3. Proceed with installation only after unsatisfactory conditions have been corrected.
B. Underlayment Installation
1. General: Comply with metal-shingle and underlayment manufacturers’ written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
2. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment nails.
   a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in
direction to shed water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

3. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment nails.

   a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.
   b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.
   c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against sidewalls, curbs, chimneys, and other roof projections.

4. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between courses. Roll laps with roller. Cover underlayment within seven days.

   a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
   b. Eaves: Extend from edges of eaves 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   c. Rakes: Extend from edges of rakes 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   d. Valleys: Extend from lowest to highest point 18 inches (455 mm) on each side.
   e. Hips: Extend 18 inches (455 mm) on each side.
   f. Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot.
   g. Sidewalls: Extend 18 inches (455 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (100 mm).
   h. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (455 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (100 mm).
   i. Roof-Slope Transitions: Extend 18 inches (455 mm) on each roof slope.

5. Metal-Flashed, Open-Valley Underlayment: Install one layer of 36-inch- (914-mm-) wide felt underlayment or self-adhering sheet underlayment centered in valley and running the full length of valley in addition to the underlayment required for metal shingles. Stagger end laps between layers and lap ends of each layer at least 12 inches (305 mm) in direction to shed water.

   a. Solidly cement valley felt underlayment with asphalt roofing cement to the underlayment required for metal shingles.

6. Apply slip sheet with adhesive or tape before installing metal flashing and shingles.

C. Metal-Shingle Installation

1. General: Install metal shingles according to manufacturer's written instructions applicable to products and applications indicated; install level, plumb, and true to line.

2. Felt Interlayment: Install 18-inch- (455-mm-) wide strip of felt underlayment over top portion of first and each succeeding course. Stagger fasten to roof deck with felt underlayment nails.

4. Apply sealant between shingles, flashing, trim, and exposed fasteners to achieve a weathertight system.

5. Interlock and overlap shingles and stagger end joints from OR align joints of tile-form, as directed, shingle courses above and below.

6. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by manufacturer of metal shingles or of the metals in contact.

   a. Do not use graphite pencils to mark metal surfaces.
D. Accessory Installation
1. General: Install accessories according to manufacturers’ written instructions unless more stringent requirements are indicated.
2. Metal Flashings and Trim: Install metal flashings and trim according to recommendations in NRCA’s “The NRCA Roofing and Waterproofing Manual” unless more stringent requirements are indicated.
3. Ridge Vents: Install ridge vents with end closures at locations indicated.
4. Stop-Type Snow Guards: Install rows of snow guards at locations indicated. Space rows apart horizontally, beginning from gutter. Space snow guards apart in each row, offsetting by half this dimension between succeeding rows.
5. Bar-Type Snow Guards: Install rows of snow guards at locations indicated. Space rows apart horizontally, beginning from gutter.
6. Battens: Install battens according to metal-shingle manufacturer’s written instructions and as needed to meet performance requirements.
   a. Wood Battens: Install nominal 2-by-2-inch (38-by-38-mm) wood battens horizontally over installed underlayment with ends separated by 1/2 inch (13 mm), at spacing required by metal-shingle manufacturer, and securely fasten to roof deck with wood batten nails.
   b. Metal Battens: Install 1-1/2-inch (38-mm) metal battens horizontally over installed underlayment with ends separated by 1/2 inch (13 mm), at spacing required by metal-shingle manufacturer, and securely fasten to roof deck with sheet metal fasteners.
   c. Intermediate Battens: Install nominal 1-inch- (19-mm-) thick wood battens with double strip of contoured rigid foam horizontally with ends separated by 1/2 inch (13 mm), at spacing required by metal-shingle manufacturer to uniformly support underside of metal shingles between main battens, and securely fasten to roof deck with wood batten nails.
7. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by manufacturer of metal shingles or of the metals in contact.

E. Erection Tolerances
1. Installation Tolerances: Shim and align metal shingles within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

OR

Installation Tolerances: Shim and align metal shingles within installed tolerances specified in MCA’s “Guide Specification for Residential Metal Roofing.”

F. Adjusting And Cleaning
1. Remove and replace damaged or deformed metal shingles or metal shingles that do not comply with specified requirements. Replace shingles with damaged or deteriorated finishes and other components of the Work that cannot be successfully repaired by finish touchup or similar minor repair procedures.
2. Remove temporary protective coverings and strippable films as metal shingles are installed unless otherwise indicated in manufacturer’s written installation instructions.
3. On completion of installation, clean exposed surfaces of metal shingles according to manufacturer’s written instructions, and touch up minor nicks and abrasions in finish. Remove excess sealants. Maintain metal shingles in a clean condition during construction.
4. Remove excess metal shingles and debris from Project site.

SECTION 07 31 26 00 - SLATE SHINGLES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for slate shingles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Slate shingles.
   b. Underlayment.
   c. Snow guards.

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

D. Submittals
1. Product Data: For each type of product indicated.
2. Samples
   a. Slate Shingle: Full size, of each color, size, texture, and shape.
   b. Ridge Cap OR Vent, as directed: 12-inch- (305-mm-) long Sample.
   c. Fasteners: Three fasteners of each type, length, and finish.
   d. Exposed Valley Lining: 12 inches (305 mm) square.
   e. Snow Guard: Full-size unit OR Base, bracket, and 12-inch- (300-mm-) long rail, as directed.
3. Warranty: Sample of special warranty.

E. Quality Assurance
1. Source Limitations: Obtain each color of slate shingle from single quarry capable of producing slate of consistent quality in appearance and physical properties.
2. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling
1. Store underlayment rolls on end, on pallets or other raised surfaces. Do not double stack rolls.
   a. Handle, store, and place roofing materials in a manner to avoid significant or permanent damage to roof deck or structural supporting members.
2. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.

G. Warranty
1. Special Warranty: Standard form in which roofing Installer agrees to repair or replace slate roofing that fails in materials or workmanship within two OR five, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Slate Shingles
1. Slate Shingles: ASTM C 406, Grade S1 OR Grade S2, as directed; hard, dense, and sound; chamfered edges, with nail holes machine punched or drilled and countersunk. No broken or
cracked slates, no broken exposed corners, and no broken corners on covered ends that could sacrifice nailing strength or laying of a watertight roof.

a. Thickness: Nominal 3/16 inch (5 mm) OR 3/16 to 1/4 inch (5 to 6 mm) OR 1/4 to 3/8 inch (6 to 10 mm) OR 3/8 to 1/2 inch (10 to 13 mm), as directed.

b. Surface Texture: Smooth OR Rough, as directed.

c. Size: 24 inches (610 mm) long by 14 inches (355 mm) OR 12 inches (305 mm) OR random widths, but not less than one-half-length, as directed, wide.

d. Size: 22 inches (560 mm) long by 14 inches (355 mm) OR 12 inches (305 mm) OR 11 inches (280 mm) OR random widths, but not less than one-half-length, as directed, wide.

e. Size: 20 inches (510 mm) long by 14 inches (355 mm) OR 12 inches (305 mm) OR 11 inches (280 mm) OR 10 inches (255 mm) OR random widths, but not less than one-half-length, as directed, wide.

f. Size: 18 inches (455 mm) long by 14 inches (355 mm) OR 12 inches (305 mm) OR 11 inches (280 mm) OR 10 inches (255 mm) OR 9 inches (230 mm) OR random widths, but not less than one-half-length, as directed, wide.

g. Size: 16 inches (405 mm) long by 14 inches (355 mm) OR 12 inches (305 mm) OR 11 inches (280 mm) OR 10 inches (255 mm) OR 9 inches (230 mm) OR 8 inches (205 mm) OR random widths, but not less than one-half-length, as directed, wide.

h. Size: 14 inches (355 mm) long by 12 inches (305 mm) OR 11 inches (280 mm) OR 10 inches (255 mm) OR 9 inches (230 mm) OR 8 inches (205 mm) OR 7 inches (180 mm) OR random widths, but not less than one-half-length, as directed, wide.

i. Size: 12 inches (305 mm) long by 12 inches (305 mm) OR 10 inches (255 mm) OR 9 inches (230 mm) OR 8 inches (205 mm) OR 7 inches (180 mm) OR 6 inches (152 mm) OR random widths, but not less than one-half-length, as directed, wide.

j. Size: 10 inches (255 mm) by 10 inches (255 mm) OR 9 inches (230 mm) OR 8 inches (205 mm) OR 7 inches (180 mm) OR 6 inches (152 mm) OR random widths, but not less than one-half-length, as directed, wide.

k. Nail Holes: Two OR Four, as directed, per shingle.

l. Butt Shape: Standard square cut.

m. Cut Butt Shape: Standard square cut and pointed OR deep bevel OR shallow bevel OR deep scallop OR shallow scallop OR round, as directed.

n. Color: Black OR Gray OR Purple OR Green OR Blue black OR Blue gray OR Mottled purple and green OR Red OR Match samples OR As selected from manufacturer's full range, as directed.

o. Weather-Exposure Color Change: Unfading OR Weathering, as directed.

2. Starter Slate: Slate shingles with chamfered nail holes front-side punched.

a. Length: Exposure of slate shingle plus head lap.

3. Ridge Slate: Slate shingles fabricated with vertical OR horizontal, as directed, grain orientation.

B. Underlayment Materials

1. Felt Underlayment: ASTM D 226, Type I OR Type II, as directed, asphalt-saturated organic felt, unperforated.

3. Self-Adhering Sheet Underlayment, Granular Surfaced: ASTM D 1970, minimum of 55-mil- (1.4-mm-) thick sheet; glass-fiber-mat-reinforced, SBS-modified asphalt; mineral-granule surfaced; with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

4. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, minimum of 40-mil- (1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

5. Self-Adhering Sheet Underlayment, High Temperature: Minimum of 30- to 40-mil- (0.76- to 1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

b. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.

C. Snow Guards
1. Snow-Guard Pads: Fabricated copper OR cast-bronze OR zinc OR stainless-steel OR aluminum, as directed, units, designed to be installed without penetrating slate shingles, and complete with predrilled holes or hooks for anchoring.
2. Snow-Guard Rails: Units fabricated from metal baseplate anchored to adjustable OR fixed, as directed, bracket and equipped with two OR three, as directed, bars.
   a. Brackets and Baseplate: Aluminum OR Bronze or brass OR Stainless steel, as directed.
   b. Bars: Aluminum, mill finished OR Aluminum, clear anodized OR Stainless steel, mill finished, as directed.

D. Accessories
2. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
3. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane OR polysulfide OR silicone, as directed, polymer sealant; of type, grade, class, and use classifications required to seal joints in slate-shingle roofing and remain watertight.
4. Slating Nails: ASTM F 1667, copper, OR aluminum-alloy, OR stainless-steel, OR cut-brass, as directed, smooth shanked, wire nails; 0.135-inch (3.4-mm) minimum thickness; sharp pointed; with 3/8-inch- (10-mm-) minimum diameter flat head; of sufficient length to penetrate a minimum of 3/4 inch (19 mm) into sheathing.
   a. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
5. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire nails with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.
6. Wood Nailer Strips and Eave Cants: Comply with requirements in Division 06 Section(s) "Rough Carpentry" OR "Miscellaneous Rough Carpentry", as directed.
7. Ridge Cap OR Vent, as directed: Custom-fabricated metal covers with noncorrosive components complete with internal anchoring lag screws, compression plates, and snap-on caps and slate retention channels, as directed.
   a. Type: Cap, nonventilating OR Vent, with ventilating mesh providing net-free area of 18 sq. in./ft. (380 sq. cm/m) OR Vent, with ventilating mesh providing net-free area of 18 sq. in./ft. (380 sq. cm/m) and external baffles, as directed.
   b. Metal Components: Copper, 20-oz./sq. ft.- (0.7-mm-) thick sheet OR Aluminum, 0.050-inch- (1.3-mm-) thick sheet, with manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin on exposed surfaces, as directed.
   c. Accessories: Splices, end caps, and other accessories of matching metal and finish.
8. Track- and Clip-Attachment System: Custom-fabricated slate-shingle attachment system designed for use with notched-slate shingles consisting of extruded-aluminum, OR formed stainless-steel, as directed, perforated Z-track, screws, and spring clips for anchoring slate to roof deck.

E. Metal Flashing And Trim
1. General: Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Sheet Metal: Copper OR Stainless steel OR Zinc-tin alloy-coated stainless steel OR Zinc-tin alloy-coated steel OR Zinc-tin alloy-coated copper OR Anodized aluminum OR Aluminum, mill finished, as directed.
2. Fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA's "Architectural Sheet Metal Manual."
   a. Apron Flashings: Fabricate with lower flange extending a minimum of 4 inches (100 mm) OR 6 inches (152 mm), as directed, over and 4 inches (100 mm) beyond each side of downslope slate shingles and 6 inches (152 mm) up the vertical surface.
b. Step Flashings: Fabricate with a head lap of 3 inches (75 mm) and a minimum extension of 4 inches (100 mm) OR 5 inches (127 mm), as directed, both horizontally and vertically.

c. Cricket OR Backer, as directed. Flashings: Fabricate with concealed flange extending a minimum of 18 inches (455 mm) OR 24 inches (610 mm), as directed, beneath upslope slate shingles and 6 inches (152 mm) beyond each side of chimney OR skylight, as directed, and 6 inches (152 mm) above the roof plane.

d. Hip Flashings: Fabricate to length of slate shingle and to extend 3 inches (75 mm), as directed, beyond joint of hip shingle with adjoining roof shingle.

e. Open-Valley Flashings: Fabricate in lengths not exceeding 10 feet (3 m) with 1-inch- (25-mm-) high, inverted-V profile at center of valley and equal flange widths of 10 inches (255 mm) OR 12 inches (305 mm), as directed.

f. Closed-Valley Flashings: Fabricate in lengths not exceeding 10 feet (3 m) and equal flange widths of 10 inches (255 mm) OR 12 inches (305 mm), as directed.

g. Drip Edges: Fabricate in lengths not exceeding 10 feet (3 m) with 2-inch (50-mm) roof-deck flange and 1-1/2-inch (38-mm) fascia flange with 3/8-inch (10-mm) drip at lower edge.

3. Vent-Pipe Flashings: ASTM B 749, Type L51121, at least 1/16 inch (1.6 mm) thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof and extending at least 4 inches (100 mm) from pipe onto roof.

1.3 EXECUTION

A. Underlayment Installation

1. General: Comply with underlayment manufacturer's written installation instructions applicable to products and applications indicated unless more stringent requirements apply.

2. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment nails.
   a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

3. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm) over self-adhering sheet underlayment.
   a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.
   b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.
   c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against sidewalls, curbs, chimneys, and other roof projections.

4. Self-Adhering Sheet Underlayment: Install, wrinkle free, on roof deck. Comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (600 mm) between courses. Roll laps with roller. Cover underlayment within seven days.
   a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
   b. Eaves: Extend from edges of eaves 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   c. Rakes: Extend from edges of rakes 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
d. Valleys: Extend from lowest to highest point 18 inches (455 mm) on each side.

B. Metal Flashing Installation
1. General: Install metal flashings and other sheet metal to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Install metal flashings according to recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."

2. Apron Flashings: Extend lower flange over and beyond each side of downslope slate shingles and up the vertical surface.
3. Step Flashings: Install with a head lap of 3 inches (75 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying slate shingle. Fasten to roof deck only.
4. Cricket OR Backer, as directed, Flashings: Install against the roof-penetrating element, extending concealed flange beneath upslope slate shingles and beyond each side.
5. Hip Flashings: Install centrally over hip with lower edge of flashing concealed by butt of overlying slate shingle. Fasten to roof deck.
6. Open OR Closed, as directed,-Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (205 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
   a. Secure hemmed flange edges into metal cleats spaced 12 inches (305 mm) apart and fastened to roof deck.
   b. Adhere 9-inch- (230-mm-) wide strips of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.
7. Rake Drip Edges: Install over underlayment and fasten to roof deck.
8. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.
9. Pipe Flashings: Form flashing around pipe penetrations and slate shingles. Fasten and seal to slate shingles.

C. Slate-Shingle Installation
1. General: Beginning at eaves, install slate shingles according to manufacturer's written instructions and to details and recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."
   a. Install wood nailer strip cant at eave edges.
   b. Install shingle starter course chamfered face down.

2. Install first and succeeding shingle courses with chamfered face up. Install full-width first course at rake edge.
   a. Offset joints of uniform-width slate shingles by half the shingle width in succeeding courses.
   b. Offset joints of random-width slate shingles a minimum of 3 inches (75 mm) in succeeding courses.
3. Maintain a 3-inch- (75-mm-) OR 4-inch- (100-mm-), as directed, minimum head lap between succeeding shingle courses.
4. Maintain uniform exposure of shingle courses between eaves and ridge OR midway between eaves and ridge and increase head lap of succeeding shingle courses to ensure uniform exposure on remaining shingle courses, as directed.
5. Extend shingle starter course and first course 1 inch (25 mm) OR 2 inches (50 mm), as directed, over fasciae at eaves.
6. Extend shingle starter course and succeeding courses 1 inch (25 mm) over fasciae at rakes.
7. Cut and fit slate neatly around roof vents, pipes, ventilators, and other projections through roof.
8. Hang slate with two OR four, as directed, slating nails for each shingle with nail heads lightly touching slate. Do not drive nails home drawing slates downward or leave nail head protruding enough to interfere with overlapping shingle above.
   a. For vented ridge, terminate slate shingles leaving uniform air space on each side of ridge apex.
9. Ridges: Install ridge slate in saddle OR strip saddle OR combing, as directed, configuration.
   a. Install and anchor wood nailer strips of thicknesses to match abutting courses of slate shingles, terminating nailer strip 3 to 4 inches (75 to 100 mm) from the eave. Cover with felt underlayment strip, extending to underlying slate but concealed by ridge slate.
   b. Lay ridge slate in bed of asphalt roofing cement OR butyl sealant, as directed.
   c. Anchor ridge slate to supporting wood nailer strip with two OR four, as directed, nails for each slate shingle without nails penetrating underlying slate.
   d. Extend combing slate over leeward ridge slate by 1/8 to 1/4 inch (3 to 6 mm). Seal ridge joint with elastomeric sealant.
   e. Cover heads of exposed nails at final ridge shingle with asphalt roofing cement OR butyl sealant, as directed.
10. Hips: Install and anchor slate hips in saddle OR mitered OR fantail, as directed, configuration.
    a. Install and anchor wood nailer strips of thickness to match abutting courses of slate shingles. Cover nailer strip with felt underlayment strip, extending on to underlying slate but concealed by hip slate. Anchor hip slate to nailer strip with two nails located in upper third of hip-slate length.
    b. Notch starter shingle and first shingle course at hip to fit around nailer strips so no wood is exposed at ridge eave.
    c. Lay hip slate in bed of asphalt roofing cement OR butyl sealant, as directed.
    d. Seal hip centerline joint with elastomeric sealant.
11. Open Valleys: Cut slate shingles to form straight lines at open valleys, trimming upper concealed corners of shingles. Maintain uniform gap at centerline of valley of 1/2 to 3/4 inch (13 to 19 mm) OR 3/4 to 1 inch (19 to 25 mm), as directed.
    a. Do not nail shingles to valley metal flashings.
12. Closed Valleys: Cut slate shingles to form straight lines at closed valleys, trimming upper concealed corners of shingles. Maintain uniform gap at centerline of valley of 1/2 to 3/4 inch (13 to 19 mm) OR 3/4 to 1 inch (19 to 25 mm), as directed.
    a. Do not nail shingles to valley metal flashings.

D. Snow-Guard Installation
1. Snow-Guard Pads: Install rows of snow-guard pads at locations indicated according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter. Space snow guards apart in each row, offsetting by half this dimension between succeeding rows.
2. Snow-Guard Rails: Install rows of snow-guard rails at locations indicated according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter.

E. Accessories Installation
1. Ridge Caps OR Vents, as directed: Install units according to manufacturer's written instructions.
    a. Install slate shingles into retention channels, butting adjacent shingles.

F. Adjusting And Cleaning
1. Remove and replace damaged or broken slate shingles.
2. Remove excess slate and debris from Project site.
END OF SECTION 07 31 26 00
SECTION 07 31 29 13 - WOOD SHINGLES AND SHAKES

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for wood shingles and
      shakes. Products shall be as follows or as directed by the Owner. Installation procedures shall
      be in accordance with the product manufacturer's recommendations. Demolition and removal of
      materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Wood roof shingles and shakes.
      b. Wood wall shingles and shakes.
      c. Wood-shingle-clad panels.
      d. Underlayment.

C. Definitions
   1. CSSB: Cedar Shake & Shingle Bureau.
   2. Roofing Terminology: See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and
      Waterproofing Manual" for definitions of terms related to roofing work in this Section.

D. Submittals
   1. Product Data: For each type of product indicated.
   2. LEED Submittal:
      a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood shingles and
         shakes comply with forest certification requirements. Include evidence that manufacturer
         is certified for chain of custody by an FSC-accredited certification body. Include statement
         indicating costs for each certified wood product.
   3. Samples: For each type of wood shingle, shake, ridge and hip unit, and ridge vent indicated.
   4. Research/Evaluation Reports: For wood shingles and shakes, from the ICC, as directed.
   5. Maintenance Data: For wood shingles and shakes to include in maintenance manuals.

E. Quality Assurance
   1. Grading Agency Qualifications: An independent testing and inspecting agency recognized by
      authorities having jurisdiction as qualified to label wood shingles and shakes for compliance with
      referenced grading rules.
   2. Forest Certification: Provide shingles and shakes produced from wood obtained from forests
      certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC
      Principles and Criteria for Forest Stewardship."
   3. Fire-Resistance Characteristics: Where indicated, provide wood shingles and shakes and related
      roofing materials identical to those of assemblies tested for fire resistance per test method below
      by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
      Identify products with appropriate markings of applicable testing agency.
      a. Exterior Fire-Test Exposure: Class B OR Class C, as directed; UL 790 or ASTM E 108
         with ASTM D 2898, for application and roof slopes indicated.

F. Delivery, Storage, And Handling
   1. Store underlayment rolls on end, on pallets or other raised surfaces. Do not double stack rolls.
      a. Handle, store, and place roofing materials in a manner to avoid significant or permanent
         damage to roof deck or structural supporting members.
   2. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when
      roofing work is not in progress.
G. Warranty
1. Special Warranty: CSSB's standard form in which CSSB agrees to repair or replace wood shingles and shakes that fail in materials within specified warranty period. Material failures include manufacturing defects that result in leaks.
   a. Materials-Only Warranty Period: 20 OR 25, as directed, years for shingles and shakes, and 20 years for manufactured ridge and hip units, from date of Final Completion.

1.2 PRODUCTS

A. Roof Shingles
   a. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   b. Grade: No. 1, with starter courses of No. 1 OR No. 2 OR No. 3, as directed.
   c. Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick OR 24 inches (610 mm) long; 0.50 inch (13 mm) thick, as directed, at butt.

2. Ridge and Hip, as directed, Units: Manufactured OR Site-fabricated, as directed, units of same thickness as roof shingle, 7 inches (180 mm) wide; beveled, alternately overlapped, and nailed.
   a. Grade: No. 1.
   b. Length: 16 inches (405 mm) OR 18 inches (455 mm), as directed.

3. Fancy-Butt Roof Shingles: Clear heartwood red cedar, No. 1 grade, with butt shape indicated.
   a. Butt Shape: Diagonal OR Half Cove OR Diamond OR Round OR Hexagonal OR Octagonal OR Arrow OR Square OR Fish Scale, as directed.
   b. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   c. Size: 16 inches (405 mm) long; 5 inches (127 mm) wide OR 18 inches (455 mm) long; 5 inches (127 mm) wide, as directed, by manufacturer's standard thickness.

B. Roof Shakes
1. Cedar Roof Shakes: Handsplit and resawn western red cedar shakes; split face and sawn back.
   b. Grade: Premium, OR No. 1, as directed, with starter courses of Premium OR No. 1, as directed.
   c. Length: 18 inches (455 mm), OR 24 inches (610 mm), as directed, with 15-inch- (380-mm-) long starter course.
   d. Thickness: 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, at butt.

2. Cedar Roof Shakes: Tapersawn western red cedar shakes; sawn both sides.
   b. Grade: Premium, OR No. 1, as directed, with starter courses of Premium OR No. 1 OR No. 2, as directed.
   c. Length: 18 inches (455 mm), OR 24 inches (610 mm), as directed, with 15-inch- (380-mm-) long starter course.
   d. Thickness: 5/8 inch (16 mm) OR 3/4 inch (19 mm), as directed, at butt.

3. Cedar Roof Shakes: Tapersplit western red cedar shakes; handsplit.
   b. Grade: Premium, with premium starter courses.
   c. Length: 24 inches (610 mm), with 15-inch- (380-mm-) long starter course.
   d. Thickness: 1/2 inch (13 mm) at butt.

4. Cedar Roof Shakes: Straightsplit western red cedar shakes; machine split or handsplit.
   b. Grade: Premium, with premium starter courses.
   c. Length: 18 inches (455 mm) OR 24 inches (610 mm), as directed, with 15-inch- (380-mm-) long starter course.
   d. Thickness: 3/8 to 1/2 inch (10 to 13 mm) at butt.

5. Ridge and Hip, as directed, Units: Manufactured OR Site-fabricated, as directed, units of same grade as shake, 9 inches (230 mm) wide; beveled, alternately overlapped, and nailed.
   a. Type: Handsplit and resawn OR Tapersawn, as directed.
b. Length: 18 inches (455 mm) OR 24 inches (610 mm), as directed.
c. Thickness: 5/8 inch (16 mm) OR 3/4 inch (19 mm), as directed, at butt.

C. Wall Shingles
   a. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   b. Grade: No. 1 OR No. 2 OR No. 3, as directed.
   c. Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick OR 24 inches (610 mm) long; 0.50 inch (13 mm) thick, as directed, at butt.
   d. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
   e. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

2. Cedar Wall Shingles: Rebutted and rejoined, smooth-sawn OR sanded, as directed, western red cedar shingles.
   a. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   b. Grade: No. 1 OR No. 2, as directed.
   c. Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick OR 24 inches (610 mm) long; 0.50 inch (13 mm) thick, as directed, at butt.
   d. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
   e. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

   a. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   b. Grade: No. 1.
   c. Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick OR 24 inches (610 mm) long; 0.50 inch (13 mm) thick, as directed, at butt.
   d. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
   e. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

4. Fancy-Butt Wall Shingles: Clear heartwood red cedar, No. 1 grade, with butt shape indicated.
   a. Butt Shape: Diagonal OR Half Cove OR Diamond OR Round OR Hexagonal OR Octagonal OR Arrow OR Square OR Fish Scale, as directed.
   b. Grading Standards: CSSB's "Grading Rules for Certigrade Red Cedar Shingles."
   c. Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick OR 24 inches (610 mm) long; 0.50 inch (13 mm) thick, as directed, at butt.
   d. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
   e. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

5. Cedar Wall Shingle Finish: Unfinished OR Semitransparent penetrating stain, oil based, factory applied OR Semisolid penetrating stain, oil based, factory applied OR Oil-based primer, stain blocking, factory applied, as directed.

D. Wall Shakes
1. Cedar Wall Shakes: Handsplit and resawn western red cedar shakes; split face and sawn back.
   b. Outer Course Grade: Premium OR No. 1, as directed.
   c. Starter Course OR Undercourse, as directed, Grade: No. 1 OR Standard, as directed.
   d. Length: 18 inches (455 mm) OR 24 inches (610 mm), as directed.
   e. Thickness: 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, at butt.

2. Cedar Wall Shakes: Tapersawn western red cedar shakes; sawn both sides.
   b. Outer Course Grade: Premium OR No. 1 OR No. 2, as directed.
   c. Starter Course OR Undercourse, as directed, Grade: No. 1 OR No. 2 OR No. 3, as directed.
   d. Length: 18 inches (455 mm) OR 24 inches (610 mm), as directed.
   e. Thickness: 5/8 inch (16 mm) OR 3/4 inch (19 mm), as directed, at butt.

b. Grade: Premium.
c. Length: 24 inches (610 mm).
d. Thickness: 1/2 inch (13 mm) at butt.
e. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
f. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

4. Cedar Wall Shakes: Straightsplit western red cedar shakes; machine split or handsplit.
b. Grade: Premium.
c. Length: 18 inches (455 mm) OR 24 inches (610 mm), as directed.
d. Thickness: 3/8 to 1/2 inch (10 to 13 mm) at butt.
e. Undercourse Shingle Grade: No. 3 OR Undercoursing, as directed.
f. Undercourse Shingle Size: 16 inches (405 mm) long; 0.40 inch (10 mm) thick OR 18 inches (455 mm) long; 0.45 inch (11 mm) thick, as directed, at butt.

5. Cedar Wall Shake Finish: Unfinished OR Semitransparent penetrating stain, oil based, factory applied OR Semisolid penetrating stain, oil based, factory applied OR Oil-based primer, stain blocking, factory applied, as directed.

E. Wood-Shingle-Clad Panels
1. Cedar Shingle Panels: Clear, vertical-grain, western red cedar shingles bonded with exterior-type adhesives to 5/16-inch- (8-mm-) thick, 96-inch- (2400-mm-) long, DOC PS 1 Exterior C-D plywood panels.
   a. Number of Courses per Panel: One OR Two OR Three OR Four, as directed.
   b. Butt Style: Straight line OR Staggered, as directed.
   c. Fancy-Butt Style: Diagonal OR Half Cove OR Diamond OR Round OR Hexagonal OR Octagonal OR Arrow OR Square OR Fish Scale, as directed.
   d. Exposure: 4-1/2 inches (115 mm) OR 5 inches (127 mm) OR 7 inches (180 mm), as directed, per course.

2. Prefabricated Corners: Flush OR Flush, with staggered ends OR Add-on, as directed, type.

F. Wood Treatments
1. Fire-Retardant Treatment: Exterior-type pressure treatment complying with AWPA C1, as directed.
2. Pressure-Preservative Treatment: AWPA C34, chromated copper arsenate (CCA) pressure treatment; a minimum of 0.40 lb/cu. ft. (6.4 kg/cu. m).
3. Identification: Attach a label to each bundle of wood shingles or shakes; identify manufacturer, references to model-code approval, type of product, grade, dimensions, and approved grading agency.
   a. Include chemical treatment, method of application, purpose of treatment, and warranties available.

G. Underlayment Materials
1. Felt Underlayment: ASTM D 226 OR ASTM D 4869, as directed, Type I OR Type II, as directed, asphalt-saturated organic felt.
2. Felt Interlayment: ASTM D 226 OR ASTM D 4869, as directed, Type I OR Type II, as directed, asphalt-saturated organic felt.
3. Self-Adhering Sheet Underlayment, Granular Surfaced: ASTM D 1970, a minimum of 55-mil- (1.4-mm-) thick sheet; glass-fiber-mat-reinforced, SBS-modified asphalt; mineral-granule surfaced; with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.
4. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, a minimum of 40-mil- (1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

H. Ridge Vents
1. Rigid Ridge Vent: Manufacturer’s standard rigid section, high-density polypropylene or other UV-stabilized plastic ridge vent with nonwoven geotextile filter strips and external deflector baffles, as directed; for use under ridge shingles and shakes.

2. Flexible Ridge Vent: Manufacturer’s standard, compression-resisting, three-dimensional, open-nylon or polyester-mat filter bonded to a nonwoven, nonwicking, geotextile fabric cover, as directed; for use under roof shingles and shakes.

I. Accessories
2. Drainage Mat: Manufacturer’s standard, compression-resisting, three-dimensional, nonwoven, entangled filament, nylon mat designed to permit air movement and drain incidental moisture by gravity.
3. Roofing Nails: ASTM F 1667, aluminum OR stainless-steel OR hot-dip galvanized-steel, as directed, wire nails, sharp pointed, and of sufficient length to penetrate a minimum of 3/4 inch (19 mm) into sheathing.
   a. Use box OR shingle, as directed, type nails for wood shingles.
   b. Use box-type nails for wood shakes.
   c. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
4. Roofing Staples: Type 304 or Type 316, stainless-steel staples, 0.05-inch (1.3-mm) thick, with a minimum of 7/16-inch (11-mm) crown width, of sufficient length to penetrate a minimum of 3/4 inch (19 mm) into sheathing.
5. Felt Underlayment and Interlayment, as directed, Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire nails; with 1-inch- (25-mm-) minimum diameter, low-profile capped heads or disc caps.
6. Wood Lath Strip: Western red cedar, clear heartwood, a minimum of 1-1/2 inches (38 mm) wide.

J. Metal Flashing And Trim
1. General: Comply with requirements in Division 07 Section “Sheet Metal Flashing And Trim”
   a. Sheet Metal: Copper OR Stainless steel OR Zinc-tin alloy-coated stainless steel OR Zinc-tin alloy-coated steel OR Zinc-tin alloy-coated copper OR Anodized aluminum OR Aluminum, mill finished, as directed.
2. Fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA’s "Architectural Sheet Metal Manual."
   a. Apron Flashings: Fabricate with lower flange extending a minimum of 4 inches (100 mm) OR 6 inches (152 mm), as directed, over and 4 inches (100 mm) beyond each side of downslope wood roofing and 6 inches (152 mm) up the vertical surface.
   b. Step Flashings: Fabricate with a head lap of 3 inches (75 mm) and a minimum extension of 4 inches (100 mm) OR 5 inches (127 mm), as directed, both horizontally and vertically.
   c. Cricket OR Backer, as directed, Flashings: Fabricate with concealed flange extending a minimum of 18 inches (455 mm) OR 24 inches (610 mm), as directed, beneath upslope wood roofing and 6 inches (152 mm) beyond each side of chimney OR skylight, as directed, and 6 inches (152 mm) above the roof plane.
   d. Open-Valley Flashings: Fabricate in lengths not exceeding 10 feet (3 m) with 1-inch- (25-mm-) high, inverted-V profile at center of valley and equal flange widths of 10 inches (255 mm) OR 12 inches (305 mm), as directed.
   e. Drip Edges: Fabricate in lengths not exceeding 10 feet (3 m) with 2-inch (50-mm) roof-deck flange and 1-1/2-inch (38-mm) fascia flange with 3/8-inch (10-mm) drip at lower edge.
3. Vent-Pipe Flashings: ASTM B 749, Type L51121, at least 1/16 inch (1.6 mm) thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof and extending at least 4 inches (100 mm) from pipe onto roof.

1.3 EXECUTION

A. Underlayment Installation
1. General: Comply with underlayment manufacturer’s written installation instructions applicable to products and applications indicated unless more stringent requirements apply.

2. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment nails.
   a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

3. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment nails.
   a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.
   b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.
   c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against sidewalls, curbs, chimneys, and other roof projections.

4. Self-Adhering Sheet Underlayment: Install, wrinkle free, on roof deck. Comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between courses. Roll laps with roller. Cover underlayment within seven days.
   a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
   b. Eaves: Extend from edges of eaves 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   c. Rakes: Extend from edges of rakes 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   d. Valleys: Extend from lowest to highest point 18 inches (455 mm) on each side.
   e. Hips: Extend 18 inches (455 mm) on each side.
   f. Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot, as directed.
   g. Sidewalls: Extend 18 inches (455 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (100 mm).
   h. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (455 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (100 mm).
   i. Roof-Slope Transitions: Extend 18 inches (455 mm) on each roof slope.

5. Metal-Flashed, Open-Valley Underlayment: Install two layers of 36-inch- (914-mm-) wide felt underlayment centered in valley. Stagger end laps between layers at least 72 inches (1830 mm). Lap ends of each layer at least 12 inches (305 mm) in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck with felt underlayment nails.
   a. Lap roof-deck felt underlayment over first layer of valley felt underlayment at least 6 inches (152 mm).

B. Metal Flashing Installation

1. General: Install metal flashings and other sheet metal to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Install metal flashings according to recommendations for wood roofing in NRCA’s "The NRCA Roofing and Waterproofing Manual."
2. Apron Flashings: Extend lower flange over and beyond each side of downslope wood roofing and up the vertical surface.

3. Step Flashings: Install with a head lap of 3 inches (75 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying shingle or shake. Fasten to roof deck only.

4. Cricket OR Backer, as directed. Flashings: Install against the roof-penetrating element, extending concealed flange beneath upslope wood roofing and beyond each side.

5. Open-Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (205 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
   a. Secure hemmed flange edges into metal cleats spaced 12 inches (305 mm) apart and fastened to roof deck.
   b. Adhere 9-inch- (230-mm-) wide strip of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.

6. Rake Drip Edges: Install over underlayment and fasten to roof deck.

7. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.

8. Pipe Flashings: Form flashing around pipe penetrations and wood roofing. Fasten and seal to wood roofing.

C. Roof-Shingle Installation

2. Install drainage mat perpendicular to roof slope in parallel courses, butting edges and ends to form a continuous layer, and fasten to roof deck.

3. Install single OR double, as directed, layer wood-shingle starter course along lowest roof edge. Extend starter course 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over fascia and 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over rake edge.
   a. Offset joints of double-layer starter course a minimum of 1-1/2 inches (38 mm).

4. Install first course of wood shingles directly over starter course and in continuous straight-line courses across roof deck. Install second and succeeding courses of wood shingles in continuous straight-line courses across roof deck. Extend 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over rake edge.
   a. Offset joints between shingles in succeeding courses a minimum of 1-1/2 inches (38 mm). Limit alignment of vertical joints in every third course to not exceed 10 percent of joints.
   b. Space shingles a minimum of 1/4 inch (6 mm) and a maximum of 3/8 inch (10 mm) apart.
   c. Fasten each shingle with two nails OR staples, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shingle and 1-1/2 to 2 inches (38 to 50 mm) above butt line of succeeding course. Drive fasteners flush with top surface of shingles without crushing wood.
   d. Maintain weather exposure of 5 inches (127 mm) for 16-inch- (405-mm-) OR 5-1/2 inches (140 mm) for 18-inch- (455-mm-) OR 7-1/2 inches (190 mm) for 24-inch- (610-mm-), as directed, long shingles.

5. Open Valleys: Cut and fit wood shingles at open valleys, trimming upper concealed corners of shingles. Maintain uniform width of exposed open valley OR Widen exposed portion of open valley 1/8 inch in 12 inches (1:96), as directed, from highest to lowest point.

6. Fancy-Butt Shingles: Install one OR two OR three, as directed, courses of fancy-butt shingles in continuous straight-line courses across roof deck. Center each shingle in succeeding courses between the two shingles below it with 1/8-inch (3-mm) space between shingles.
   a. Maintain weather exposure of 5 inches (127 mm).

7. Ridge Vents: Install continuous ridge vents over wood shingles according to manufacturer's written instructions. Fasten with roofing nails of sufficient length to penetrate roof sheathing.

8. Ridge and Hip, as directed, Units: Install units over wood shingles trimmed at apex. Maintain same exposure dimension of units as roof-shingle exposure. Lap units at ridges to shed water away from direction of prevailing winds. Alternate overlaps of units and fasten with concealed roofing nails of sufficient length to penetrate sheathing.
   a. Install concealed strip of felt underlayment over apex shingles and fasten with felt underlayment nails.
   b. Fasten ridge units to cover ridge vent without obstructing airflow.
D. Roof-Shake Installation
2. Install drainage mat perpendicular to roof slope in parallel courses, butting edges and ends to form a continuous layer, and fasten to roof deck.
3. Install single OR double, as directed, layer wood-shake starter course along lowest roof edge. Extend starter course 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over fascia and 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over rake edge.
   a. Offset joints of double-layer starter course a minimum of 1-1/2 inches (38 mm).
4. Install first course of wood shakes directly over starter course and in continuous straight-line courses across roof deck. Install second and succeeding courses of wood shakes in continuous straight-line courses across roof deck. Extend 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, over rake edge.
   a. Install 18-inch- (455-mm-) wide strip of felt interlayment over top portion of first and each succeeding course. Set bottom edge of felt interlayment at a distance of twice the weather-exposure dimension above the shake butt. Stagger fasten to roof deck with felt underlayment nails.
   b. Offset joints between shakes in succeeding courses a minimum of 1-1/2 inches (38 mm).
   c. Space shakes a minimum of 3/8 inch (10 mm) and a maximum of 5/8 inch (16 mm) apart.
   d. Fasten each shake with two nails OR staples, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shake and 1-1/2 to 2 inches (38 to 50 mm) above butt line of succeeding course. Drive fasteners flush with top surface of shakes without crushing wood.
   e. Maintain weather exposure of 5-1/2 inches (140 mm) for 18-inch- (455-mm-) OR 7-1/2 inches (190 mm) for 18-inch- (455-mm-) OR 7-1/2 inches (190 mm) for 24-inch- (610-mm-) OR 10 inches (255 mm) for 24-inch- (610-mm-), as directed, long shakes.
5. Open Valleys: Cut and fit wood shakes at open valleys, trimming upper concealed corners of shakes. Maintain uniform width of exposed open valley OR Widen exposed portion of open valley 1/8 inch in 12 inches (1:96), as directed, from highest to lowest point.
6. Ridge Vents: Install continuous ridge vents over wood shakes according to manufacturer's written instructions. Fasten with roofing nails of sufficient length to penetrate sheathing.
7. Ridge and Hip, as directed, Units: Install units over wood shakes trimmed at apex. Maintain same exposure dimension of units as roof-shake exposure. Lap units at ridges to shed water away from direction of prevailing winds. Alternate overlaps of units and fasten with concealed roofing nails of sufficient length to penetrate sheathing.
   a. Install concealed strip of felt underlayment over apex shakes and fasten with felt underlayment nails.
   b. Fasten ridge units to cover ridge vent without obstructing airflow.

E. Wall-Shingle Installation, Single Coursed
1. Install wood wall shingles according to manufacturer's written instructions and recommendations in CSSB's "Exterior and Interior Wall Manual."
2. Install drainage mat horizontally, in parallel courses, over surface to receive wood shingles, butting edges and ends to form a continuous layer; fasten to wall sheathing.
3. Install wood shingles, beginning at base of wall, with a double-layer starter course in a continuous straight line. Offset joints of double-layer starter course a minimum of 1-1/2 inches (38 mm).
   a. Extend starter course 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.
4. Install first course of wood shingles over starter course. Install second and succeeding courses of wood shingles. Offset joints between shingles in succeeding courses a minimum of 1-1/2 inches (38 mm).
   a. Install shingles in continuous straight-line courses.
   OR
   b. Install shingle courses with butt lines staggered 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, from true butt line.
   b. Install primed shingles with sides abutting OR Space shingles 1/8 to 1/4 inch (3 to 6 mm) apart, as directed.
c. Fasten each shingle with two concealed nails OR staples driven parallel to butt, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shingle and 1 inch (25 mm) above butt line of succeeding course. For shingles wider than 8 inches (205 mm), add two concealed fasteners, spaced 1 inch (25 mm) apart, to the center of shingle. Drive fasteners flush with top surface of shingles without crushing wood.

d. Maintain weather exposure of 7-1/2 inches (190 mm) for 16-inch- (405-mm-) OR 8-1/2 inches (215 mm) for 18-inch- (455-mm-) OR 11-1/2 inches (290 mm) for 24-inch- (610-mm-), as directed, long shingles.

e. Interior Corner Treatment: Butted against wood stop OR Laced with flashing behind, as directed.

f. Exterior Corner Treatment: Butted against corner boards OR Laced OR Mitered, as directed.

5. Fancy-Butt Shingles: Install fancy-butt shingles where indicated, in continuous straight-line courses along wall. Center each shingle in succeeding courses between the two shingles below it with primed shingles abutting OR 1/8-inch (3-mm) space between shingles, as directed.

   a. Maintain weather exposure of 7-1/2 inches (190 mm).
   b. Interior Corner Treatment: Butted against wood stop.
   c. Exterior Corner Treatment: Butted against corner boards OR Mitered, as directed.

F. Wall-Shingle Installation, Double Coursed

1. Install wood wall shingles in continuous straight-line courses according to manufacturer's written instructions and recommendations in CSSB's "Exterior and Interior Wall Manual."

2. Install drainage mat horizontally, in parallel courses, over surface to receive wood shingles, butting edges and ends to form a continuous layer; fasten to wall sheathing.

3. Install double-layer undercourse of wood shingles beginning at base of wall. Offset joints of each undercourse layer a minimum of 1-1/2 inches (38 mm). Fasten with a single center-and-top nail OR staple driven parallel to butt, as directed.

   a. Extend undercourse 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.
   b. Fasten two layers of lath wood strips at base of undercourse to match thickness of double-layer undercourse. Extend 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.

4. Install succeeding undercourse layers against wood lath strip, as directed. Offset joints between undercourse and outer course a minimum of 1-1/2 inches (38 mm).

   a. Fasten with a single center-and-top nail OR staple driven parallel to butt, as directed.

5. Install single wood lath strip on first and succeeding outer courses to match thickness of undercourse and at height that results in specified outer course weather exposure.

6. Install first and succeeding outer courses of wood shingles directly over undercourses, projecting 1/2 inch (13 mm) below undercourse OR lath strips, as directed. Offset joints between shingles and undercourse a minimum of 1-1/2 inches (38 mm). Offset joints between shingles in succeeding outer courses a minimum of 1-1/2 inches (38 mm).

   a. Install primed outer shingles with sides abutting OR Space outer shingles 1/8 to 1/4 inch (3 to 6 mm) apart, as directed.
   b. Fasten each shingle with two exposed nails OR stapled driven parallel to butt, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shingle and 2 inches (50 mm) above butt line of succeeding course. For outer course shingles wider than 8 inches (205 mm), add two concealed fasteners, spaced 1 inch (25 mm) apart, to the center of shingle. Drive fasteners flush with top surface of shingles without crushing wood.
   c. Maintain weather exposure of 12 inches (305 mm) for 16-inch- (405-mm-) OR 14 inches (355 mm) for 18-inch- (455-mm-) OR 16 inches (405 mm) for 24-inch- (610-mm-), as directed, long shingles.
   d. Interior Corner Treatment: Butted against wood stop OR Laced with flashing behind, as directed.
   e. Exterior Corner Treatment: Butted against corner boards OR Laced OR Mitered, as directed.

G. Wall-Shake Installation, Single Coursed
1. Install wood wall shakes according to manufacturer’s written instructions and recommendations in CSSB’s "Exterior and Interior Wall Manual."
2. Install drainage mat horizontally, in parallel courses, over surface to receive wood shakes, butting edges and ends to form a continuous layer; fasten to wall sheathing.
3. Install wood shakes, beginning at base of wall, with a double-layer starter course in a continuous straight line. Offset joints of double-layer starter course a minimum of 1-1/2 inches (38 mm).
   a. Extend starter course 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.
4. Install first course of wood shakes over starter course. Install second and succeeding course of wood shakes. Offset joints between shakes in succeeding courses a minimum of 1-1/2 inches (38 mm).
   a. Install shakes in continuous straight-line courses.
      OR
      Install shake courses with butt lines staggered 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, from true butt line.
   b. Install primed shakes with sides abutting OR Space shingles 1/8 to 1/4 inch (3 to 6 mm) apart, as directed.
   c. Fasten each shake with two concealed nails OR staples driven parallel to butt, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shake and 1 inch (25 mm) above butt line of succeeding course. For shakes wider than 8 inches (205 mm), add two concealed fasteners, spaced 1 inch (25 mm) apart, to the center of shake. Drive fasteners flush with top surface of shakes without crushing wood.
   d. Maintain weather exposure of 7-1/2 inches (190 mm) for 16-inch- (405-mm-) OR 8-1/2 inches (215 mm) for 18-inch- (455-mm-) OR 11-1/2 inches (290 mm) for 24-inch- (610-mm-), as directed, long shakes.
   e. Interior Corner Treatment: Butted against wood stop OR Laced with flashing behind, as directed.
   f. Exterior Corner Treatment: Butted against corner boards OR Laced OR Mitered, as directed.

H. Wall-Shake Installation, Double Coursed
1. Install wood wall shakes in continuous straight-line courses according to manufacturer’s written instructions and recommendations in CSSB’s "Exterior and Interior Wall Manual."
2. Install drainage mat horizontally, in parallel courses, over surface to receive wood shakes, butting edges and ends to form a continuous layer; fasten to wall sheathing.
3. Install double-layer undercourse of wood shingles beginning at base of wall. Offset joints of each undercourse layer a minimum of 1-1/2 inches (38 mm). Fasten with a single center-and-top nail OR staple driven parallel to butt, as directed.
   a. Extend undercourse 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.
   b. Fasten two layers of lath wood strips at base of undercourse to match thickness of double-layer undercourse. Extend 1 inch (25 mm) OR 1-1/2 inches (38 mm), as directed, below top of foundation wall.
4. Install succeeding undercourse layers against wood lath strip, as directed. Offset joints between undercourse and outer course a minimum of 1-1/2 inches (38 mm).
   a. Fasten with a single center-and-top nail OR staple driven parallel to butt, as directed.
5. Install single wood lath strip on first and succeeding outer courses to match thickness of undercourse and at height that results in specified outer course weather exposure.
6. Install first and succeeding outer courses of wood shakes directly over undercourses, projecting 1/2 inch (13 mm) below undercourse OR lath strips, as directed. Offset joints between shakes and undercourse shingles a minimum of 1-1/2 inches (38 mm). Offset joints between shakes in succeeding outer courses a minimum of 1-1/2 inches (38 mm).
   a. Install primed outer shakes with sides abutting OR Space outer shakes 1/4 to 3/8 inch (6 to 10 mm) apart, as directed.
   b. Fasten each shake with two exposed nails OR staples driven parallel to butt, as directed, spaced 3/4 to 1 inch (19 to 25 mm) from edge of shake and 2 inches (50 mm) above butt line of succeeding course. For shakes wider than 8 inches (205 mm), add two concealed...
fasteners, spaced 1 inch (25 mm) apart, to the center of shake. Drive fasteners flush with top surface of shake without crushing wood.

- Maintain weather exposure of 12 inches (305 mm) for 16-inch-(405-mm-) OR 14 inches (355 mm) for 18-inch-(455-mm-) OR 18 inches (455 mm) for 24-inch-(610-mm-), as directed, long shakes.

- Interior Corner Treatment: Butted against wood stop OR Laced with flashing behind, as directed.

- Exterior Corner Treatment: Butted against corner boards OR Laced OR Mitered, as directed.

I. Wood-Shingle-Clad Panel Installation
   1. Install wood-shingle-clad panels and corner units, as directed, according to manufacturer's written instructions.
   2. Install panels level, plumb, true, and aligned with adjacent materials.
   3. Install panels working from the lowest level to the top of the wall area.

SECTION 07 31 33 00 - COMPOSITE RUBBER SHINGLES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for composite rubber shingles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
2. Furnish and install this Majestic Slate Tile Roof System in strict accordance with specifications and drawings approved by EcoStar.
3. Metal flashing work is not covered in this specification since EcoStar does NOT warrant metal flashing. EcoStar advises that metal flashing and securement of metal should be to industry standards (SMACNA) to prevent the metal from pulling free or buckling. EcoStar also suggests that all flashing metal be copper, stainless steel or an equally long-term material.
4. EcoStar Attic Guard Ridge Ventilation product must be used on those projects that will be using a ridge ventilation system. If a ridge ventilation system is not to be used on the project, another form of ventilation may be used, but will not be covered by any EcoStar warranties. EcoStar advises that a ridge style venting system be utilized to insure the best possible air movement and to provide the best aesthetic appearance to the roofing system.

B. Definitions
1. Roofing Terminology: Refer to ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

C. Submittals
1. Submit an “EcoStar Gold Star Project Survey” to EcoStar Technical Department for approval PRIOR to the job start to enable the Technical Department to approve and assign a job number to the project.
2. The “EcoStar Gold Star Project Survey Form” must be filled out completely and accurately to include any prior deviations approved from this specification, including a roof drawing showing all dimensions, all penetrations, and roof slope.
3. When an EcoStar Gold Star Warranty is desired, EcoStar must be contacted PRIOR to project bid and installation. Information may be required for wind design and slope requirements.
4. Product Data: For each type of product indicated.
5. Samples: For the following products, of sizes indicated.
   a. Composite Rubber Shingle: Full size, of each color, size, texture, and shape.
   b. Ridge Vent System: 12 inches (300 mm) long.
   c. Fasteners: Three fasteners of each type, length, and finish.
   d. Underlayment: 12 inches (300 mm) square.

D. Quality Assurance
1. To qualify for an EcoStar Gold Star Warranty, an authorized EcoStar Gold Star Applicator must install system.
2. There shall be no deviation made from this specification without written approval from EcoStar prior to the start of the roofing project.
3. For an EcoStar Gold Star Warranty, upon completion of the installation, an inspection must be conducted by a Technical Representative of EcoStar to ascertain that the roofing system has been installed according to EcoStar’s most current published specifications and details. This inspection is not intended to be a Final Inspection for the benefit of the Owner, but for the benefit of EcoStar to determine whether a warranty shall be issued.
4. Class C Testing Requirements:
   a. Fire Resistance - UL 790 Test Standard
   b. Class 4 Impact Resistance - UL 2218 Test Standard
   c. 110 mph wind load - PA100-95 Test Standard
d. Wind uplift - 105 lbs / sq ft - UL 1897 Test Standard

5. Class A Testing Requirements:
   a. Fire Resistance - UL 790 Test Standard
   b. Class 4 Impact Resistance - UL 2218 Test Standard

E. Product Delivery, Storage And Handling
   1. Deliver materials in original unopened packages.
   2. Packages shall be labeled with manufacturer’s name, brand name, installation instructions and identification of various items.
   3. All tile materials must be stored between 45° F. and 80° F. If exposed to lower temperatures, restore to 45° F minimum temperature before using.
   4. Store all materials in a dry protected area. Damaged materials must NOT be used. Installed materials found to be damaged shall be replaced at Gold Star Authorized Applicator’s expense.

F. Job Conditions (Cautions And Warnings)
   1. Contact EcoStar Technical Department for procedures when installing a Majestic Slate Tile Roof System during temperatures less than 45° F.
   2. Do not install the Majestic Slate Tile Roof System directly over existing asphalt shingles or existing tile roof systems. All existing roof materials MUST be removed prior to installation of the Majestic Slate Tile System.
   3. Roofing surface must be free of ice, water, or snow prior to and during the roofing project.

G. Warranty
   1. Roofing materials manufacturer will provide the warranty for those materials supplied by the manufacturer when the project is completed by a manufacturer’s authorized applicator and all required materials have been utilized within the roof system.
   2. Only when a manufacturer’s technical representative has inspected and approved the completed installation will a warranty be issued.
   3. The warranty is available for all types of buildings and structures.
   4. The warranty period is expressed on the warranty certificate, which reflects the inclusive dates of coverage.
   5. The warranty does NOT cover the aesthetic appearance of the Majestic Slate - Tiles. Care should be taken by the authorized applicator to ensure that proper blending of the tiles occurs. When improper blending occurs the aesthetic appearance of the roof can be effected negatively. Blending should occur from a minimum of seven bundles from each pallet. It is highly suggested that all material be on site to blend from.
   6. Only products supplied by EcoStar, a Division of Carlisle SynTec Incorporated, are included in the warranty unless otherwise specified and approved in writing by EcoStar, a Division of Carlisle SynTec Incorporated.

1.2 PRODUCTS

A. Manufacturer
   1. All Components of the Majestic Slate - Tile Roof System are to be products manufactured or supplied by EcoStar, a Division of Carlisle SynTec Incorporated, or approved equivalent.

B. Class C Tile Roofing System
   1. Slate Tiles/Shingles: Tiles made of Starloy™, 100% recycled rubber and plastic compound, 12” wide by 18” long with a nominal thickness of 1/4”. Weight shall be determined by the following acceptable tile exposures:
      
      | Tile Exposure | Weight Per Square |
      |---------------|-------------------|
      | 7”            | 241 - 258 lbs     |
      | 6-1/2”        | 259 - 278 lbs     |
      | 6”            | 280 - 300 lbs     |

   a. Color: As selected from manufacturer’s standard colors, unless directed otherwise.
   2. Underlayment
a. AquaGuard - a roofing underlayment recognized for use as an alternative to Type 30 roofing underlayment, consisting of spunbonded polypropylene coated with a layer of U.V. stabilized polypropylene on both sides, meeting requirements of ASTM D2626, referred to as 30 lb and without perforations.

b. Glacier Guard ice and water underlayment - Granular Surface (55 mil), Smooth Surface (40 mil), or Smooth Surface High Temperature (40 mil), a composite membrane consisting of fiberglass reinforced rubberized asphalt laminated to an impermeable polyethylene film layer (Smooth Surface and Smooth Surface High Temperature) or coated with a granular surface providing maximum skid resistance (Granular Surface).

C. Class A Tile Roofing System
   1. Slate Tiles/Shingles: Tiles made of Starloy™, 100% recycled rubber and plastic compound, 12” wide by 18” long with a nominal thickness of 1/4”. Weight shall be determined by the following acceptable tile exposures:
      - 7” 258 - 276 lbs per square
      - 6-1/2” 278 - 294 lbs per square
      - 6” 300 - 321 lbs per square
   a. Color: As selected from manufacturer’s standard colors, unless directed otherwise.

   2. Underlayment
      a. VersaShield - One layer of Elk VersaShield meeting or exceeding the requirements of ASTM D226.
      b. Glacier Guard ice & water underlayment - Granular Surface (55 mil), Smooth Surface (40 mil), or Smooth Surface High Temperature (40 mil), a composite membrane consisting of fiberglass reinforced rubberized asphalt laminated to an impermeable polyethylene film layer (Smooth Surface and Smooth Surface High Temperature) or coated with a granular surface providing maximum skid resistance (Granular Surface).

D. Fasteners
   1. AquaGuard/VersaShield
      a. Roofing nails with one inch (1”) diameter round or square head, plastic or metal, and 3/4” long shank. Metal parts of fastener are to be corrosion resistant.
   2. Tile Fasteners
      a. EcoStar Roofing Nail with a 3/8” diameter head and a minimum of 1-1/2” long shank made from stainless steel. Nails can be supplied either as a hand drive style or in coils for use in pneumatic tools.

1.3 EXECUTION

A. Substrate Criteria
   1. The Building owner or the Owner’s Representative is responsible for providing and determining that the substrate is suitable to receive the Majestic Slate Tile Roof System and the authorized EcoStar Gold Star Applicator should not proceed until all defects have been corrected.
   2. The Majestic Slate Roof System may only be applied over:
      a. Minimum ½” plywood or OSB decking
      b. Minimum 1” tongue and groove wood decking
      c. Approved metal deck systems - for specifics contact roofing materials manufacturer.
   3. Minimum slope of substrate for installation of Majestic Slate Roof System shall be a minimum of 3/12 for 6” exposure installation and a minimum of 6/12 for 7” exposure installation. Contact the EcoStar Technical Department for approval of applications on lower slopes or exceptions to this requirement.

B. Substrate Preparation
   1. The Building Owner or the Owner’s Representative is responsible for ensuring that all wet or damaged substrate has been removed in a re-roofing application.
2. Existing roof material **MUST** be removed and a clean substrate free of foreign material be provided prior to the installation of the Majestic Slate Tile Roof System. Majestic Slate Tiles may **NOT** be installed directly over any existing roof material or system.

C. Installation

1. Flashing and Sheet Metal:
   a. Install sheet metal and flashing metal in all valleys and where required on projections furnish in accordance with Division 07 Section "Sheet Metal Flashing And Trim".
   b. Where required, install metal starter strip at all eaves and roof edges. Furnish metal in accordance with Division 07 Section "Sheet Metal Flashing And Trim".
   c. The roofing materials manufacturer suggests that all metal work be made from copper, stainless steel or an equally long-term material.

2. Underlayment:
   a. AquaGuard:
      1) Apply 41.5" wide sheet over complete deck, lapping the area covered with Glacier Guard ice and water underlayment. Lap end joints 6" and side joints 4" and double through valleys.
      2) Do not leave exposed to weather more than 90 days after beginning of installation without written approval of the Owner.
      3) Do not leave any fastener heads exposed. Nail only in areas to be covered by lapping of underlayment.
   b. VersaShield:
      1) Apply 42" wide sheet over complete deck, covering the entire roof deck **INCLUDING** those areas with Glacier Guard Ice & Water underlayment. Lap end joints 4" and side joints 6".
      2) Lap the VersaShield 6" from both sides over all hips, valleys, and ridges.
      3) Where the roof meets a vertical surface, carry the VersaShield 3" to 4" up the surface.
      4) Do not leave exposed to weather more than 60 days after beginning of installation without written approval of the Owner.
      5) Do not leave any fastener heads exposed. Nail only in areas to be covered by lapping of underlayment.
   c. Glacier Guard Ice and water underlayment:
      1) Lap end joints 6" and side joints 3.5"
      2) Apply continuous 36" wide sheet in valley centered over valley.
      3) Apply rows of 36" wide sheets along all eaves and rakes. Lap end joints 6" and side joints 3.5".
      4) Apply rows of 36" wide sheets along and around all dormers and roof projections. Lap end joints 6" and side joints 3.5".
      5) When applicable install as far as it can be installed on any head walls or vertical walls a minimum of 12".
      6) Do not leave Glacier Guard Granular Surface exposed to weather more than 14 days after beginning of installation. Do not leave Glacier Guard Smooth Surface exposed to weather more than 30 days after beginning of installation. Do not leave Glacier Guard Smooth Surface High Temp exposed to the weather more than 60 days after the beginning of installation.

3. Tile/Shingle Installation
   a. After installing underlayment and before installing the tiles, clean the surface of debris and dirt.
   b. Beginning at the eave, install a layer of tiles gapped a minimum of 3/8" between tiles and any projections, with two roofing fasteners per tile (in location shown on tiles). This layer of tiles will become the starter row. Install another layer of tiles in the same manner as the first with the exception of the second layer having a 1/2 tile offset to the first layer.
   c. Continue installing tiles per the chosen exposure.
   d. Care must be taken to place tiles so color variations are evenly distributed over the entire roof area. Tiles between bundles and pallets **MUST** be shuffled to insure even distribution of color variations. “Patchy” or “Blotching” in appearance is not acceptable and the
applicator will be required to correct. It is recommended that work not begin until all roofing materials have been delivered to the job site.

e. It is the responsibility of the applicator to ensure that all tiles are bent back in a downward curve prior to installation. **Do not install tiles with an upward curve.**

f. Either an open or closed valley design may be used.

1) With an open valley design leave a minimum of 2" on each side of the center of the valley exposed and uncovered by the roof tiles. A V-Style or W-Style Valley metal may be used.

2) With a closed valley design cut the tiles in a straight line to fit no closer than 3/8" against tile of adjoining roof slope.

g. Minimum Fastening - No less than 2 approved fasteners per tile, with a minimum length of 1-1/2", shall be used.

h. **CAUTION:** When using a pneumatic nailer, care shall be taken to ensure that nails are not over driven causing the tiles to curl upward. If tiles have been installed with over-driven nails causing the ends of the tile to curve upward, tiles will never lay flat. Over-driven tiles must be removed and re-nailed properly.

i. Install EcoStar Attic Guard ridge vent system per the manufacturer’s application instructions, and then place the Majestic Slate - Universal Hip/Ridge Tile over the ridge vent. A minimum 2.5” stainless steel, hand-driven EcoStar fastener should be used on a ventilated hip/ridge to fasten the hip/ridge tile to the deck. A minimum 2” stainless steel, hand-driven EcoStar fastener should be used on an unventilated hip/ridge to fasten the hip/ridge tile to the deck. Place fasteners in the location marked on the tile. Majestic Slate - Universal Hip/Ridge Tile must be installed with 6” exposure.

j. Tiles may not be installed if the tiles have been stored in temperatures lower than 45°F. If tiles have been stored in temperatures below 45°F., tiles must be brought back to an ambient material temperature of 45°F. As the temperature rises, tiles will expand beyond the designed installation pattern if the product is installed while cold or frozen.

k. Do not install tiles directly adjacent to each other. A minimum gap of 3/8” must be maintained between installed tiles.

l. After the initial row of tiles has been installed, it is recommended that a chalk line be placed parallel to the roof edge and running perpendicular to the first row of tiles. This chalk line will ensure that the tiles stay true and plumb to the roof edge throughout installation.

m. Care must be taken to minimize foot traffic over completed areas of the roof. Tiles will show mud and dirt and cause appearance problems. The removal of dirt and debris is the responsibility of the applicator.

n. Tiles can be slippery when wet, caution should be exhibited with early morning dew and after rain. The tile manufacturer suggests the use of toe boards and OSHA approved harnesses and safety equipment at all time.

o. Upon completion of the roof system installation, inspect and remove all debris from roof, sweep clean and wash with a mild, non-bleaching detergent.

SECTION 07 32 13 00 - CLAY ROOF TILES

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for clay roof tiles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Clay roof tiles.
      b. Underlayment.
      c. Snow guards.

C. Definitions

D. Submittals
   1. Product Data: For each type of product indicated.
   2. LEED Submittal:
      a. Product Test Reports for Credit SS 7.2: For clay roof tiles, documentation indicating compliance with Solar Reflectance Index requirement.
   3. Samples: For each type of clay roof tile and accessory tile indicated.
   4. Material test reports.
   5. Research/evaluation reports.
   6. Maintenance data.
   7. Warranties: Sample of special warranties.

E. Quality Assurance
   1. Fire-Test-Response Characteristics: Provide clay roof tiles and related roofing materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
      a. Exterior Fire-Test Exposure: Class A OR Class B OR Class C, as directed; UL 790 or ASTM E 108, for application and roof slopes indicated.
   2. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling
   1. Store underlayment rolls on end, on pallets or other raised surfaces. Do not double stack rolls.
      a. Handle, store, and place roofing materials in a manner to avoid significant or permanent damage to roof deck or structural supporting members.
   2. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.

G. Warranty
   1. Special Warranty: Standard form in which manufacturer agrees to repair or replace clay roof tiles that fail in materials within specified warranty period.
      a. Materials-Only Warranty Period: 50 years from date of Final Completion.
1.2 PRODUCTS

A. Clay Roof Tiles

1. Clay Roof Tiles: ASTM C 1167, molded- or extruded-clay roof tile units of shape and configuration indicated, kiln fired to vitrification, and free of surface imperfections. Provide with fastening holes prepunched at factory before firing.
   a. Durability: Grade 1 OR Grade 2 OR Grade 3, as directed.
   b. High-Profile Shape: Type I, Spanish or "S" OR Type I, tapered mission, two piece OR Type I, straight mission, two piece OR Type I, straight barrel mission, two piece OR Type I, Greek, two piece OR Type I, Roman, two piece, as directed.
   c. Low-Profile Shape: Type II, French interlocking.
   d. Flat Shape: Type III, flat shingle OR Type III, flat interlocking, as directed.
      1) Provide clay roof tiles of diminishing widths for circular bays or round towers.
   e. Solar Reflectance Index: Provide clay roof tile with Solar Reflectance Index not less than 29 when calculated according to ASTM E 1980, based on testing of identical products by a qualified testing agency.
   f. Finish and Texture: Matte, smooth OR Matte, striated OR Glazed, smooth, as directed.
   g. Color: Terra cotta OR Brown OR Red OR Blended red OR Buff, as directed.
   h. High OR Low, as directed,-Profile-Shape Accessory Tiles: Ridge, ridge vent, ridge end, hip and hip starter, header course, L-shaped rake edge, roll rake edge, starter, end band, terminal, eave closure, and top fixture, as directed, units, in color matching clay roof tiles.
   i. Flat-Shape Accessory Tiles: Ridge and closed ridge end, hip and hip starter, header course, L-shaped rake edge, starter, end band, and terminal, as directed, units, in color matching clay roof tiles.

B. Accessories

2. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
3. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane OR silicone, as directed,-based joint sealant; Type M OR Type S, as directed, Grade NS, Class 25, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O.
4. Roofing Asphalt: ASTM D 312, Type IV.
5. Cold-Applied Adhesive: Manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with underlayments.
6. Foam Adhesive: Two-component, polyurethane expanding adhesive recommended for application by clay roof tile manufacturer.
   OR
   Mortar: ASTM C 270, Type M, natural color OR with ASTM C 979, pigmented mortar matching the color of clay roof tiles for exposed-to-view mortar, and natural color for concealed-from-view mortar, as directed.
7. Eave Closure: Manufacturer's standard EPDM OR copper OR stainless-steel OR galvanized-steel OR aluminum, mill finish, as directed, eave closure formed to shape of clay roof tile.
8. Wood Nailers, Beveled Cant Strips and Wood Battens: Comply with requirements for pressure-preservative-treated wood in Division 06 Section(s) "Rough Carpentry" OR "Miscellaneous Rough Carpentry", as directed.
9. Mesh Fabric: 18-by-14 (1.1-by-1.4-mm) mesh of PVC-coated, glass-fiber thread.

C. Fasteners

1. Roofing Nails: ASTM F 1667, copper, 0.135-inch- (3.4-mm-) OR aluminum, 0.1055-inch- (2.7-mm-) OR hot-dip galvanized-steel, 0.1055-inch- (2.7-mm-), as directed, diameter shank, sharp-pointed, conventional roofing nails with barbed shanks; minimum 3/8-inch- (10-mm-) diameter head; of sufficient length to penetrate 3/4 inch (19 mm) into wood battens OR solid wood decking OR roof-deck sheathing, as directed.
   a. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
2. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.

3. Wood Batten Nails: ASTM F 1667; common or box, steel wire, flat head, and smooth shank.

4. Wire Ties: Copper OR Brass OR Stainless steel, as directed, 0.083-inch (2.1-mm) minimum diameter.

5. Twisted-Wire-Tie System: Continuously twisted, two-wire unit with loops formed 6 inches (152 mm) apart, minimum 0.1-inch- (2.5-mm-) diameter brass tie wires OR 0.1-inch- (2.5-mm-) diameter copper wire and 0.06-inch- (1.5-mm-) diameter brass tie wires OR 0.083-inch- (2.1-mm-) diameter stainless-steel wire and 0.037-inch- (0.94-mm-) diameter stainless-steel tie wires OR 0.083-inch- (2.1-mm-) diameter galvanized-steel wire and 0.037-inch- (0.94-mm-) diameter galvanized-steel tie wires, as directed, with matching-metal folding clip anchors.

6. Single-Line, Wire-Tie System: Interconnecting eave-to-ridge system, minimum 0.1-inch- (2.5-mm-) diameter brass OR 0.09-inch- (2.3-mm-) diameter galvanized-steel, as directed, wire, preformed to accommodate clay roof tile type and application indicated.

7. Hook Nails: One-piece wind lock and clay roof tile fastener system, minimum 0.1-inch- (2.5-mm-) diameter brass OR 0.09-inch- (2.3-mm-) diameter galvanized-steel, as directed, wire, for direct deck nailing.

8. Tile Locks: Brass OR Copper OR Stainless-steel OR Hot-dip galvanized-steel, as directed, 0.1-inch- (2.5-mm-) diameter wire device designed to secure butt edges of overlaid clay roof tiles.

9. Storm Clips: Brass OR Stainless-steel OR Hot-dip galvanized-steel, as directed, strap-type, 0.04-by-1/2-inch (1.0-by-13-mm), L-shaped retainer clips designed to secure side edges of clay roof tiles. Provide with two fastener holes in base flange.

D. Underlayment Materials
1. Felt Underlayment: ASTM D 226, Type II, asphalt-saturated organic felt, unperforated.

2. Felt Underlayment: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides, unperforated.

4. Self-Adhering Sheet Underlayment, Granular Surfaced: ASTM D 1970, a minimum of 55-mil-(1.4-mm-) thick sheet; glass-fiber-mat-reinforced, SBS-modified asphalt; mineral-granule surfaced; with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

5. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, a minimum of 40-mil-(1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

E. Snow Guards
1. Snow-Guard Pads: Fabricated copper OR cast-bronze OR zinc OR stainless-steel OR aluminum, as directed, units, designed to be installed without penetrating roof tiles, and complete with predrilled holes or hooks for anchoring.

2. Snow-Guard Rails: Units fabricated from metal baseplate anchored to adjustable OR fixed, as directed, bracket and equipped with two OR three, as directed, bars.
   a. Brackets and Baseplate: Aluminum OR Bronze or brass OR Stainless steel, as directed.
   b. Bars: Aluminum, mill finished OR Aluminum, clear anodized OR Stainless steel, mill finished, as directed.

F. Metal Flashing And Trim
1. General: Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Sheet Metal: Copper OR Stainless steel OR Zinc-tin alloy-coated stainless steel OR Zinc-tin alloy-coated steel OR Zinc-tin alloy-coated copper OR Anodized aluminum OR Aluminum, mill finished, as directed.

2. Fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA's "Architectural Sheet Metal Manual."
**07 - Thermal And Moisture Protection**

**Clay Roof Tiles**

**August 2021**

---

- **a. Apron Flashings**: Fabricate with lower flange extending a minimum of 4 inches (100 mm) **OR** 6 inches (152 mm), **as directed**, over and 4 inches (100 mm) beyond each side of downslope tile roofing and 6 inches (152 mm) up the vertical surface.

- **b. Step Flashings**: Fabricate with a head lap of 3 inches (75 mm) and a minimum extension of 4 inches (100 mm) **OR** 5 inches (127 mm), **as directed**, both horizontally and vertically.

- **c. Channel Flashings**: Fabricate with vertical surface extending a minimum of 4 inches (100 mm) **OR** 5 inches (127 mm), **as directed**, above the clay roof tile and 4 inches (100 mm) **OR** 6 inches (152 mm), **as directed**, beneath the tile roofing, with a 1-inch- (25-mm-) high vertical return to form a runoff channel.

- **d. Rake Pan Flashings**: Fabricate with vertical surface extending over fasciae and 6 inches (152 mm) beneath the tile roofing, with a 1-inch- (25-mm-) high vertical return to form a runoff channel.

- **e. Cricket OR Backer, as directed, Flashings**: Fabricate with concealed flange extending a minimum of 18 inches (455 mm) **OR** 24 inches (610 mm), **as directed**, beneath upslope tile roofing, 6 inches (152 mm) beyond each side of chimney **OR** skylight, **as directed**, and 6 inches (152 mm) above the roof plane.

- **f. Closed OR Open, as directed, Valley Flashings**: Fabricate in lengths not exceeding 10 feet (3 m), with 1-inch- (25-mm-) high, inverted-V profile at center of valley and with equal flange widths of 10 inches (255 mm) **OR** 12 inches (305 mm), **as directed**.

- **g. Drip Edges**: Fabricate in lengths not exceeding 10 feet (3 m), with 2-inch (50-mm) roof-deck flange and 1-1/2-inch (38-mm) fascia flange with 3/8-inch (10-mm) drip at lower edge.

3. **Sheet Metal Ridge Vent**: Fabricate from 16-oz./sq. ft.- (0.55-mm-) thick copper sheet, terminating each side in V-shaped external baffles with venting holes producing net-free ventilating area of 2.65 sq. in./ft. (56 sq. cm/m).

4. **Vent-Pipe Flashings**: ASTM B 749, Type L51121, at least 1/16 inch (1.6 mm) thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof and extending at least 4 inches (100 mm) from pipe onto roof.

---

**1.3 EXECUTION**

**A. Underlayment Installation**

1. **General**: Comply with clay roof tile manufacturer's written instructions and recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."

   a. **Cover ridge OR hip, as directed**, wood nailers with underlayment strips.

2. **Single-Layer Felt Underlayment**: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment **OR** roofing, **as directed**, nails.

   a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

3. **Double-Layer Felt Underlayment**: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment **OR** roofing, **as directed**, nails.

   a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof **OR** at locations indicated on Drawings, **as directed**.

   b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.

4. **Double-Layer Felt/Roll Roofing Underlayment**: 

---
a. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.

b. Install roll roofing underlayment, in parallel courses, in same direction as felt underlayment. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm).
   1) Mechanically fasten over felt underlayment.
   2) Adhere to felt underlayment with solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature OR uniform coating of cold-applied adhesive OR uniform coating of asphalt roofing cement, as directed.

c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against chimneys, sidewalks, curbs, and other projections.

5. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.
   a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
   b. Extend self-adhering sheet underlayment over entire roof deck.

OR
Extend self-adhering sheet underlayment over roof deck as follows:
   1) Eaves: Extend from edges of eaves 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   2) Rakes: Extend from edges of rakes 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   3) Valleys: Extend from lowest to highest point 18 inches (455 mm) on each side.
   4) Hips: Extend 18 inches (455 mm) on each side.
   5) Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot, as directed.
   6) Sidewalls: Extend 18 inches (455 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (100 mm).
   7) Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (455 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (100 mm).
   8) Roof-Slope Transitions: Extend 18 inches (455 mm) on each roof slope.

6. Double-Layer Felt/Self-Adhering Sheet Underlayment:
   a. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.
   b. Install self-adhering sheet underlayment, wrinkle free, on felt underlayment. Comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Lap sides not less than 3-1/2 inches (89 mm) in direction to shed water. Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.

7. Metal-Flashed, Open-Valley Underlayment: Install two layers of 36-inch- (914-mm-) wide felt underlayment centered in valley. Stagger end laps between layers at least 72 inches (1830 mm). Lap ends of each layer at least 12 inches (305 mm) in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck with felt underlayment nails.
   a. Lap roof-deck felt underlayment over first layer of valley felt underlayment at least 6 inches (152 mm).

B. Metal Flashing Installation
1. General: Install metal flashings and other sheet metal to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Install metal flashings according to clay roof tile manufacturer's written instructions and recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."
2. Apron Flashings: Extend lower flange over and beyond each side of downslope tile roofing and up the vertical surface.

3. Step Flashings: Install with a head lap of 3 inches (75 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying tile. Fasten to roof deck only.

4. Cricket OR Backer, as directed, Flashings: Install against roof-penetrating elements, extending concealed flange beneath upslope tile roofing and beyond each side.

5. Open-Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (205 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
   a. Secure hemmed flange edges into metal cleats spaced 12 inches (305 mm) apart and fastened to roof deck.
   b. Adhere 9-inch- (230-mm-) wide strips of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.

6. Channel Flashings: Install over underlayment and fasten to roof deck.

7. Rake Pan Flashings: Install over underlayment and fasten to roof deck.

8. Rake Drip Edges: Install over underlayment and fasten to roof deck.

9. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.

10. Pipe Flashings: Form flashing around pipe penetrations and tile roofing. Fasten and seal to tile roofing.
    a. Secure hemmed flange edges into metal cleats spaced 12 inches (305 mm) apart and fastened to roof deck.
    b. Adhere 9-inch- (230-mm-) wide strips of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.

C. Wood Nailers And Battens, as directed
1. Install wood nailers at ridges OR hips OR rakes, as directed, and securely fasten to roof deck.
2. Install beveled wood cant at eaves and securely fasten to roof deck.
3. Install nominal 1-by-2-inch (25-by-50-mm) wood battens horizontally over 1/2-inch- (13-mm-) high, pressure-preservative-treated wood lath strips OR in 48-inch (1200-mm) lengths with ends separated by 1/2 inch (13 mm), as directed, at spacing required by clay roof tile manufacturer, and securely fasten to roof deck.
   a. Install nominal 1-by-2-inch (25-by-50-mm) wood counter battens vertically spaced 24 inches (610 mm) apart and securely fasten to roof deck.

D. Clay Roof Tile Installation
   a. Maintain uniform exposure and coursing of clay roof tiles throughout roof.
   b. Extend tiles 2 inches (50 mm) over eave fasciae.
   c. Nail Fastening: Drive nails to clear the clay roof tile so the tile hangs from the nail and is not drawn up.
      1) Install wire through nail holes of cut tiles that cannot be nailed directly to roof deck, and fasten to nails driven into deck.
   d. Wire-Tie Fastening: Install wire-tie systems and fasten clay roof tiles according to manufacturer's written instructions.
   e. Foam-Adhesive OR Mortar, as directed, Setting: Install clay roof tile according to TRI/FRSA's "Concrete and Clay Roof Tile Installation Manual."
   f. Install storm clips to capture edges of longitudinal sides of clay roof tiles and securely fasten to roof deck.
   g. Install clay roof tile locks to support and lock overlying tile butts to underlying tiles.
   h. Cut and fit clay roof tiles neatly around roof vents, pipes, ventilators, and other projections through roof. Fill voids with mortar.
   i. Install clay roof tiles with color blend approved by the Owner.
2. Flat Shingle Clay Roof Tile Installation:
   a. Maintain 2-inch (50-mm) head lap between succeeding courses of clay roof tiles.
   b. Offset joints by half the clay roof tile width in succeeding courses.
c. Extend clay roof tiles 1 inch (25 mm) over fasciae at rakes.

d. Install ridge tiles in V-ridge OR saddle OR mitered, as directed, configuration with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
   1) Close voids where ridge tiles meet clay roof tiles with ridge closure tiles OR mortar struck with face of ridge cover tiles, as directed.

e. Install hip tiles in V-ridge OR saddle OR mitered, as directed, configuration. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
   1) Fill voids with mortar where hip tiles meet clay roof tiles, and strike mortar flush with face of hip cover tiles.

3. Flat Interlocking Clay Roof Tile Installation:
   a. Provide minimum 3-inch (75-mm) lap between succeeding courses of clay roof tiles.
   b. Offset joints by half the clay roof tile width in succeeding courses.
   c. Install L-shaped rake tiles.
   d. Install ridge tiles in V-ridge OR saddle OR mitered, as directed, configuration with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
      1) Close voids where ridge tiles meet clay roof tiles with ridge closure tiles OR mortar struck with face of ridge cover tiles, as directed.
   e. Install hip tiles in V-ridge OR saddle OR mitered, as directed, configuration. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
      1) Fill voids with mortar where hip tiles meet clay roof tiles, and strike mortar flush with face of hip cover tiles.

4. Low-Profile, Interlocking Clay Roof Tile Installation:
   a. Provide minimum 3-inch (75-mm) lap between succeeding courses of clay roof tiles.
   b. Install L-shaped rake tiles.
   c. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.

5. High-Profile Clay Roof Tile Installation:
   a. Install tile OR sheet metal OR EPDM, as directed, eave closure.
   b. Provide minimum 3-inch (75-mm) lap between succeeding courses of clay roof tiles.
   c. Install L-shaped OR roll, as directed, rake tiles.
   d. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.

6. Open Valleys: Cut clay roof tiles at open valleys to form straight lines. Maintain uniform width of exposed open valley OR Widen exposed portion of open valley 1/8 inch in 12 inches (1:96), as directed, from highest to lowest point.
   a. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
   b. Do not nail tiles to metal flashings.

7. Closed Valleys: Cut clay roof tiles at closed valleys to form straight lines, trimming upper concealed corners of tiles. Maintain uniform gap at centerline of valley of 1/2 to 3/4 inch (13 to 19 mm) OR 3/4 to 1 inch (19 to 25 mm), as directed.
   a. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
   b. Do not nail tiles to metal flashings.

E. Snow-Guard Installation
   1. Snow-Guard Pads: Install rows of snow-guard pads at locations indicated, according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter. Space snow guards apart in each row, offsetting by half this dimension between succeeding rows.
   2. Snow-Guard Rails: Install rows of snow-guard rails at locations indicated, according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter.

F. Adjusting And Cleaning
   1. Remove and replace damaged or broken clay roof tiles.
   2. Remove excess clay roof tiles and debris from Project site.
END OF SECTION 07 32 13 00
SECTION 07 32 16 00 - CONCRETE ROOF TILES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for concrete roof tiles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Concrete roof tiles.
   b. Underlayment.
   c. Snow guards.

C. Definitions

D. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Test Reports for Credit SS 7.2: For concrete roof tiles, documentation indicating compliance with Solar Reflectance Index requirement.
3. Samples: For each type of concrete roof tile and accessory tile indicated.
4. Material test reports.
5. Research/evaluation reports.
6. Maintenance data.
7. Warranties: Sample of special warranties.

E. Quality Assurance
1. Fire-Test-Response Characteristics: Provide concrete roof tiles and related roofing materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
   a. Exterior Fire-Test Exposure: Class A OR Class B OR Class C, as directed; UL 790 or ASTM E 108, for application and roof slopes indicated.
2. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling
1. Store underlayment rolls on end, on pallets or other raised surfaces. Do not double stack rolls.
   a. Handle, store, and place roofing materials in a manner to avoid significant or permanent damage to roof deck or structural supporting members.
2. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.

G. Warranty
1. Special Warranty: Standard form in which manufacturer agrees to repair or replace concrete roof tiles that fail in materials within specified warranty period.
   a. Materials-Only Warranty Period: 50 years from date of Final Completion.
1.2 PRODUCTS

A. Concrete Roof Tiles

1. Concrete Roof Tiles: ASTM C 1492, molded- or extruded-concrete roof tile units of shape and configuration indicated, with integral color, and free of surface imperfections. Provide with fastening holes prepunched at factory.
   a. Weight: Normal OR Medium OR Light, as directed.
   b. High-Profile Shape: Type I, Spanish or “S”.
   c. Medium-Profile Shape: Type II, French interlocking.
   d. Low-Profile Shape: Type III, flat shingle OR Type III, flat interlocking, as directed.
   e. Side Configuration: Interlocking OR Noninterlocking, as directed.
   f. Solar Reflectance Index: Provide concrete roof tiles with Solar Reflectance Index not less than 29 when calculated according to ASTM E 1980, based on testing of identical products by a qualified testing agency.
   g. Colors, Blends, and Patterns: As selected from manufacturer's full range.
   h. Finish and Texture: Matte, smooth OR Matte, striated OR Glazed, smooth, as directed.
   i. Color: Brown OR White OR Red OR Pale red OR Green OR Gray OR Buff, as directed.
   j. High OR Medium, as directed,-Profile Shape Accessory Tiles: Ridge, ridge vent, ridge end, hip and hip starter, header course, L-shaped rake edge, roll rake edge, starter, end band, and terminal, as directed, units, in color matching concrete roof tiles.
   k. Low-Profile Shape Accessory Tiles: Ridge and closed ridge end, hip and hip starter, header course, L-shaped rake edge, starter, end band, and terminal, as directed, units, in color matching concrete roof tiles.

B. Accessories

2. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
3. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane OR silicone, as directed,-based joint sealant; Type M OR Type S, as directed, Grade NS, Class 25, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O.
4. Roofing Asphalt: ASTM D 312, Type IV.
5. Cold-Applied Adhesive: Manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with underlayments.

OR
Mortar: ASTM C 270, Type M, natural color OR with ASTM C 979, pigmented mortar matching the color of concrete roof tiles for exposed-to-view mortar, and natural color for concealed-from-view mortar, as directed.

7. Eave Closure: Manufacturer's standard EPDM OR copper OR stainless-steel OR galvanized-steel OR aluminum, mill finish, as directed, eave closure formed to shape of concrete roof tiles.
8. Ridge Closure: Manufacturer's standard EPDM ridge closure, formed to shape of concrete roof tiles.
9. Wood Nailers, Beveled Cant Strips and Wood Battens: Comply with requirements for pressure-preservative-treated wood in Division 06 Section(s) "Rough Carpentry" OR "Miscellaneous Rough Carpentry", as directed.
10. Mesh Fabric: 18-by-14 (1.1-by-1.4-mm) mesh of PVC-coated, glass-fiber thread.

C. Fasteners

1. Roofing Nails: ASTM F 1667, copper, 0.135-inch- (3.4-mm-) OR aluminum, 0.1055-inch- (2.7-mm-) OR hot-dip galvanized-steel, 0.1055-inch- (2.7-mm-), as directed, diameter shank, sharp-pointed, conventional roofing nails with barbed shanks; minimum 3/8-inch- (10-mm-) diameter head; of sufficient length to penetrate 3/4 inch (19 mm) into wood battens OR solid-wood decking OR roof-deck sheathing, as directed.
   a. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
2. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.
3. Wood Batten Nails: ASTM F 1667; common or box, steel wire, flat head, and smooth shank.
4. Wire Ties: Copper OR Brass OR Stainless steel, as directed, 0.083-inch (2.1-mm) minimum diameter.
5. Twisted-Wire-Tie System: Continuously twisted, two-wire unit with loops formed 6 inches (152 mm) apart, minimum 0.1-inch- (2.5-mm-) diameter brass tie wires OR 0.1-inch- (2.5-mm-) diameter copper wire and 0.06-inch- (1.5-mm-) diameter brass tie wires OR 0.083-inch- (2.1-mm-) diameter stainless-steel wire and 0.037-inch- (0.94-mm-) diameter stainless-steel tie wires OR 0.083-inch- (2.1-mm-) diameter galvanized-steel wire and 0.037-inch- (0.94-mm-) diameter galvanized-steel tie wires, as directed, with matching-metal folding clip anchors.
6. Hook Nails: One-piece wind lock and concrete roof tile fastener system, minimum 0.1-inch- (2.5-mm-) diameter brass OR 0.09-inch- (2.3-mm-) diameter galvanized-steel, as directed, wire, for direct deck nailing.
7. Tile Locks: Brass OR Copper OR Stainless-steel OR Hot-dip galvanized-steel, as directed, 0.1-inch- (2.5-mm-) diameter wire device designed to secure butt edges of overlaid concrete roof tiles.
8. Storm Clips: Brass OR Stainless-steel OR Hot-dip galvanized-steel, as directed, strap-type, 0.04-by-1/2-inch (1.0-by-13-mm), L-shaped retainer clips designed to secure side edges of concrete roof tiles. Provide with two fastener holes in base flange.

D. Underlayment Materials
1. Felt Underlayment: ASTM D 226, Type II, asphalt-saturated organic felt, unperforated.
3. Self-Adhering Sheet Underlayment, Granular Surfaced: ASTM D 1970, a minimum of 55-mil-(1.4-mm-) thick sheet; glass-fiber-mat-reinforced, SBS-modified asphalt; mineral-granule surfaced; with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.
4. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, minimum of 40-mil-(1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment, as directed.

E. Snow Guards
1. Snow-Guard Pads: Fabricated copper OR cast-bronze OR zinc OR stainless-steel OR aluminum, as directed, units, designed to be installed without penetrating roof tiles, and complete with predrilled holes or hooks for anchoring.
2. Snow-Guard Rails: Units fabricated from metal baseplate anchored to adjustable OR fixed, as directed, bracket and equipped with two OR three, as directed, bars.
   a. Brackets and Baseplate: Aluminum OR Bronze or brass OR Stainless steel, as directed.
   b. Bars: Aluminum, mill finished OR Aluminum, clear anodized OR Stainless steel, mill finished, as directed.

F. Metal Flashing And Trim
1. General: Comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
   a. Sheet Metal: Copper OR Stainless steel OR Zinc-tin alloy-coated stainless steel OR Zinc-tin alloy-coated steel OR Zinc-tin alloy-coated copper OR Anodized aluminum OR Aluminum, mill finished, as directed.
2. Apron Flashings: Fabricate with lower flange extending a minimum of 4 inches (100 mm) OR 6 inches (152 mm), as directed, over and 4 inches (100 mm) beyond each side of downslope tile roofing and 6 inches (152 mm) up the vertical surface.
b. Step Flashings: Fabricate with a head lap of 3 inches (75 mm) and a minimum extension of 4 inches (100 mm) OR 5 inches (127 mm), as directed, both horizontally and vertically.

c. Channel Flashings: Fabricate with vertical surface extending a minimum of 4 inches (100 mm) OR 5 inches (127 mm), as directed, above the concrete roof tile and 4 inches (100 mm) OR 6 inches (152 mm), as directed, beneath the roofing, with a 1-inch (25-mm-) high vertical return to form a runoff channel.

d. Rake Pan Flashings: Fabricate with vertical surface extending over fasciae and 6 inches (152 mm) beneath the tile roofing, with a 1-inch (25-mm-) high vertical return to form a runoff channel.

e. Cricket OR Backer, as directed, Flashings: Fabricate with concealed flange extending a minimum of 18 inches (455 mm) OR 24 inches (610 mm), as directed, beneath upslope tile roofing, 6 inches (152 mm) beyond each side of chimney OR skylight, as directed, and 6 inches (152 mm) above the roof plane.

f. Closed OR Open, as directed,-Valley Flashings: Fabricate in lengths not exceeding 10 feet (3 m), with 1-inch (25-mm-) high, inverted-V profile at center of valley and with equal flange widths of 10 inches (255 mm) OR 12 inches (305 mm), as directed.

g. Drip Edges: Fabricate in lengths not exceeding 10 feet (3 m), with 2-inch (50-mm) roof-deck flange and 1-1/2-inch (38-mm) fascia flange with 3/8-inch (10-mm) drip at lower edge.

3. Vent-Pipe Flashings: ASTM B 749, Type L51121, at least 1/16 inch (1.6 mm) thick. Provide lead sleeve sized to slip over and turn down into pipe, soldered to skirt at slope of roof and extending at least 4 inches (100 mm) from pipe onto roof.

1.3 EXECUTION

A. Underlayment Installation

a. Cover ridge OR hip, as directed, wood nailers with underlayment strips.

2. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.

a. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

b. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.

3. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches (485 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.

a. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply over entire roof OR at locations indicated on Drawings, as directed.

b. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction to shed water.

4. Double-Layer Felt/Roll Roofing Underlayment:

a. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.

b. Install roll roofing underlayment, in parallel courses, in same direction as felt underlayment. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm).
1) Mechanically fasten over felt underlayment.
2) Adhere to felt underlayment with solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature OR uniform coating of cold-applied adhesive OR uniform coating of asphalt roofing cement, as directed.

c. Terminate felt underlayment flush OR extended up not less than 4 inches (100 mm), as directed, against chimneys, sidewalls, curbs, and other projections.

5. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated below OR on Drawings, as directed, lapped in direction to shed water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.
   a. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
   b. Extend self-adhering sheet underlayment over entire roof deck.

   OR
   Extend self-adhering sheet underlayment over roof deck as follows:
   1) Eaves: Extend from edges of eaves 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   2) Rakes: Extend from edges of rakes 24 inches (610 mm) OR 36 inches (914 mm), as directed, beyond interior face of exterior wall.
   3) Valleys: Extend from lowest to highest point 18 inches (455 mm) on each side.
   4) Hips: Extend 18 inches (455 mm) on each side.
   5) Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot, as directed.
   6) Sidewalls: Extend 18 inches (455 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (100 mm).
   7) Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (455 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (100 mm).
   8) Roof-Slope Transitions: Extend 18 inches (455 mm) on each roof slope.

6. Double-Layer Felt/Self-Adhering Sheet Underlayment:
   a. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt underlayment OR roofing, as directed, nails.
   b. Install self-adhering sheet underlayment, wrinkle free, on felt underlayment. Comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Lap sides not less than 3-1/2 inches (89 mm) in direction to shed water. Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.

7. Metal-Flash, Open-Valley Underlayment: Install two layers of 36-inch- (914-mm-) wide felt underlayment centered in valley. Stagger end laps between layers at least 72 inches (1830 mm). Lap ends of each layer at least 12 inches (305 mm) in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck with felt underlayment nails.
   a. Lap roof-deck felt underlayment over first layer of valley felt underlayment at least 6 inches (152 mm).

B. Metal Flashing Installation
   1. General: Install metal flashings and other sheet metal to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".
      a. Install metal flashings according to concrete roof tile manufacturer's written instructions and recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."
   2. Apron Flashings: Extend lower flange over and beyond each side of downslope tile roofing and up the vertical surface.
   3. Step Flashings: Install with a head lap of 3 inches (75 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying tile. Fasten to roof deck only.
   4. Cricket OR Backer, as directed, Flashings: Install against roof-penetrating elements, extending concealed flange beneath upslope tile roofing and beyond each side.
5. Open-Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (205 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
   a. Secure hemmed flange edges into metal cleats spaced 12 inches (305 mm) apart and fastened to roof deck.
   b. Adhere 9-inch- (230-mm-) wide strips of self-adhering sheet to metal flanges and to self-adhering sheet underlayment.

6. Channel Flashings: Install over underlayment and fasten to roof deck.

7. Rake Pan Flashings: Install over underlayment and fasten to roof deck.

8. Rake Drip Edges: Install over underlayment and fasten to roof deck.

9. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.

10. Pipe Flashings: Form flashing around pipe penetrations and tile roofing. Fasten and seal to tile roofing.

11. Sheet Metal Ridge Vents: Install centrally, and mechanically fasten to wood ridge. Adhere each side to concrete roof tile with elastomeric sealant.
   a. Install fabric mesh over roof-deck air ventilation gaps to prevent insect entry.

C. Wood Nailers And Battens, as directed

1. Install wood nailers at ridges OR hips OR rakes, as directed, and securely fasten to roof deck.

2. Install beveled wood cant at eaves and securely fasten to roof deck.

3. Install nominal 1-by-2-inch (25-by-50-mm) wood battens horizontally over 1/2-inch- (13-mm-) high, pressure-preservative-treated wood lath strips OR in 48-inch (1200-mm) lengths with ends separated by 1/2 inch (13 mm), as directed, at spacing required by concrete roof tile manufacturer, and securely fasten to roof deck.
   a. Install nominal 1-by-2-inch (25-by-50-mm) wood counter battens vertically spaced 24 inches (610 mm) apart and securely fasten to roof deck.

D. Concrete Roof Tile Installation

   b. Extend tiles 2 inches (50 mm) over eave fasciae.
   c. Nail Fastening: Drive nails to clear the concrete roof tile so the tile hangs from the nail and is not drawn up.
      1) Install wire through nail holes of cut tiles that cannot be nailed directly to roof deck, and fasten to nails driven into deck.
   d. Wire-Tie Fastening: Install wire-tie systems and fasten concrete roof tiles according to manufacturer’s written instructions.
   e. Foam-Adhesive OR Mortar, as directed, Setting: Install concrete roof tiles according to TRI/FRSA’s "Concrete and Clay Roof Tile Installation Manual."
   f. Install storm clips to capture edges of longitudinal sides of concrete roof tiles and securely fasten to roof deck.
   g. Install concrete roof tile locks to support and lock overlying tile butts to underlying tiles.
   h. Cut and fit concrete roof tiles neatly around roof vents, pipes, ventilators, and other projections through roof. Fill voids with mortar.
   i. Install concrete roof tiles with color blend approved by the Owner.

2. Flat Shingle Concrete Roof Tile Installation:
   a. Maintain 2-inch (50-mm) head lap between succeeding courses of concrete roof tiles.
   b. Offset joints by half the concrete roof tile width in succeeding courses.
   c. Extend concrete roof tiles 1 inch (25 mm) over fasciae at rakes.
   d. Install ridge tiles in V-ridge OR saddle OR mitered, as directed, configuration with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
      1) Close voids where ridge tiles meet concrete roof tiles with ridge closure tiles OR mortar struck with face of ridge cover tiles, as directed.
e. Install hip tiles in V-ridge OR saddle OR mitered, as directed, configuration. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
   1) Fill voids with mortar where hip tiles meet concrete roof tiles, and strike mortar flush with face of hip cover tiles.

3. Flat Interlocking Concrete Roof Tile Installation:
   a. Provide minimum 3-inch (75-mm) lap between succeeding courses of concrete roof tiles.
   b. Offset joints by half the concrete roof tile width in succeeding courses.
   c. Install L-shaped rake tiles.
   d. Install ridge tiles in V-ridge OR saddle OR mitered, as directed, configuration with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
   1) Close voids where ridge tiles meet concrete roof tiles with ridge closure tiles OR mortar struck with face of ridge cover tiles, as directed.
   e. Install hip tiles in V-ridge OR saddle OR mitered, as directed, configuration. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.
   1) Fill voids with mortar where hip tiles meet concrete roof tiles, and strike mortar flush with face of hip cover tiles.

4. Low-Profile, Interlocking Concrete Roof Tile Installation:
   a. Provide minimum 3-inch (75-mm) lap between succeeding courses of concrete roof tiles.
   b. Install L-shaped rake tiles.
   c. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.

5. High-Profile Concrete Roof Tile Installation:
   a. Install tile OR sheet metal OR EPDM, as directed, eave closure.
   b. Provide minimum 3-inch (75-mm) lap between succeeding courses of concrete roof tiles.
   c. Install L-shaped OR roll, as directed, rake tiles.
   d. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement OR butyl sealant OR elastomeric sealant, as directed.

6. Open Valleys: Cut concrete roof tiles at open valleys to form straight lines. Maintain uniform width of exposed open valley OR Widen exposed portion of open valley 1/8 inch in 12 inches (1:96), as directed, from highest to lowest point.
   a. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
   b. Do not nail tiles to metal flashings.

7. Closed Valleys: Cut concrete roof tiles at closed valleys to form straight lines, trimming upper concealed corners of tiles. Maintain uniform gap at centerline of valley of 1/2 to 3/4 inch (13 to 19 mm) OR 3/4 to 1 inch (19 to 25 mm), as directed.
   a. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
   b. Do not nail tiles to metal flashings.

E. Snow-Guard Installation
   1. Snow-Guard Pads: Install rows of snow-guard pads at locations indicated, according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter. Space snow guards apart in each row, offsetting by half this dimension between succeeding rows.
   2. Snow-Guard Rails: Install rows of snow-guard rails at locations indicated, according to manufacturer's written installation instructions. Space rows apart horizontally, beginning from gutter.

F. Adjusting And Cleaning
   1. Remove and replace damaged or broken concrete roof tiles.
   2. Remove excess concrete roof tiles and debris from Project site.

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for metal roof panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Exposed-fastener, lap-seam metal roof panels.
   b. Concealed-fastener, lap-seam metal roof panels.
   c. Standing-seam metal roof panels.
   d. Batten-seam metal roof panels.
   e. Horizontal-seam (Bermuda-type) metal roof panels.
   f. Foamed-insulation-core metal roof panels.
   g. Metal soffit panels.

C. Definitions
1. Metal Roof Panel Assembly: Metal roof panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight roofing system.

D. Performance Requirements
1. General Performance: Metal roof panels shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
2. Delegated Design: Design metal roof panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of roof area when tested according to ASTM E 1680 at the following test-pressure difference:
   a. Test-Pressure Difference (for roofs with slopes of 30 degrees or less): Negative 1.57 lbf/sq. ft. (75 Pa).
   b. Test-Pressure Difference (for roofs with slopes steeper than 30 degrees): Positive and negative 1.57 lbf/sq. ft. (75 Pa).
   c. Positive Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. (720 Pa) and the greater of 75 percent of building live load or 50 percent of building design positive wind-pressure difference.
   d. Negative Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. (720 Pa) and the greater of 75 percent of building live load or 50 percent of building design positive wind-uplift-pressure difference.
4. Water Penetration: No water penetration when tested according to ASTM E 1646 at the following test-pressure difference:
   a. Test-Pressure Difference (for roofs with slopes of 30 degrees or less): 2.86 lbf/sq. ft. (137 Pa).
   b. Test-Pressure Difference (for roofs with slopes steeper than 30 degrees): 20 percent of positive design wind pressure, but not less than 6.24 lbf/sq. ft. (300 Pa) and not more than 12.0 lbf/sq. ft. (575 Pa).
   c. Positive Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. (720 Pa) and the greater of 75 percent of building live load or 50 percent of building design positive wind-pressure difference.
   d. Negative Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. (720 Pa) and the greater of 75 percent of building live load or 50 percent of building design positive wind-uplift-pressure difference.
5. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.
6. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
   a. Uplift Rating: UL 30 OR UL 60 OR UL 90, as directed.

7. FMG Listing: Provide metal roof panels and component materials that comply with requirements in FMG 4471 as part of a panel roofing system and that are listed in FMG’s “Approval Guide” for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
   b. Hail Resistance: MH OR SH, as directed.

8. Structural Performance: Provide metal roof panel assemblies capable of withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 1592:
   a. Wind Loads: Determine loads based on the following minimum design wind pressures:
      1) Uniform pressure of 20 lbf/sq. ft. (957 Pa) OR 30 lbf/sq. ft. (1436 Pa), as directed, acting inward or outward.
      OR
      Uniform pressure as indicated on Drawings.
   c. Deflection Limits: Metal roof panel assemblies shall withstand wind and snow loads with vertical deflections no greater than 1/180 OR 1/240, as directed, of the span.

9. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

10. Thermal Performance: Provide insulated metal roof panel assemblies with thermal-resistance value (R-value) indicated when tested according to ASTM C 518.

11. Energy Performance
   a. Provide roof panels with solar reflectance index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
   OR
   Energy Performance: Provide roof panels that are listed on the U.S. Department of Energy's ENERGY STAR Roof Products Qualified Product List for low-slope OR steep-slope, as directed, roof products.
   OR
   Energy Performance: Provide roof panels with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof panels, indicating that panels comply with solar reflectance index requirement.
   b. Product Data for Credit MR 4.1 and Credit MR 4.2, as directed: Indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
      1) Include statement indicating costs for each product having recycled content.
3. Shop Drawings: Show fabrication and installation layouts of metal roof panels; details of edge conditions, side-seam and endlap joints, panel profiles, corners, anchorages, trim, flashings, closures, and accessories; and special details. Distinguish between factory- and field-assembled work.
4. Samples: For each type of exposed finish required.
5. Delegated-Design Submittal: For metal roof panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
a. Snow Retention System Calculations: Include calculation of number and location of snow guards based on snow load, roof slope, panel length and finish, and seam type and spacing.

6. Coordination Drawings: Roof plans, drawn to scale, based on input from installers of the items involved.

7. Manufacturer Certificates: Signed by manufacturer certifying that roof panels comply with energy performance requirements specified in "Performance Requirements" Article.
   a. Submit evidence of meeting performance requirements.

8. Product test reports.

10. Maintenance data.

11. Warranties: Samples of special warranties.

F. Quality Assurance

1. Installer Qualifications: An employer of workers trained and approved by manufacturer.

2. Surface-Burning Characteristics: Provide metal roof panels having insulation core material with the following surface-burning characteristics as determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Flame-Spread Index: 25 or less.
   b. Smoke-Developed Index: 450 or less.

3. Fire-Resistance Ratings: Where indicated, provide metal roof panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

G. Delivery, Storage, And Handling

1. Deliver components, sheets, metal roof panels, and other manufactured items so as not to be damaged or deformed. Package metal roof panels for protection during transportation and handling.

2. Unload, store, and erect metal roof panels in a manner to prevent bending, warping, twisting, and surface damage.

3. Stack metal roof panels on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal roof panels to ensure dryness. Do not store metal roof panels in contact with other materials that might cause staining, denting, or other surface damage.

4. Protect strippable protective covering on metal roof panels from exposure to sunlight and high humidity, except to extent necessary for period of metal roof panel installation.

5. Protect foam-plastic insulation as follows:
   a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
   b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal roof panel assemblies that fail in materials or workmanship within two years from date of Final Completion.

2. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal roof panels that show evidence of deterioration of factory-applied finishes within 10 OR 20, as directed, years from date of Final Completion.

3. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal roof panel assemblies that fail to remain weathertight, including leaks, within five OR 10, as directed, years from date of Final Completion.
4. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within 20 years from date of Final Completion.

1.2 PRODUCTS

A. Panel Materials

1. Metallic-Coated Steel Sheet: Restricted flatness steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
   a. Recycled Content: Provide steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
   b. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
   c. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
   d. Surface: Smooth, flat OR Embossed, as directed, finish.

2. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
   a. Surface: Smooth, flat OR Embossed, as directed, finish.
   b. Exposed Coil-Coated Finish:
1) 2-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2) 3-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

3) 4-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

4) Mica Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

5) Metallic Fluoropolymer: AAMA 620. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

6) FEVE Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

7) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.

8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.097 mm) for topcoat.

3. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
   a. Exposed Finish: Apply the following finish, as specified or indicated on Drawings:
      1) Natural finish.
      2) Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):
      3) Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
         a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
      4) Pre-patinated: ASTM B 882. Copper sheets artificially aged by chemical reaction to convert surface to inorganic crystalline structure with color range and durability of naturally formed patina.

4. Panel Sealants:
   a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
   b. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal roof panels and remain weathertight; and as recommended in writing by metal roof panel manufacturer.

B. Field-Installed Thermal Insulation
1. Polyethylene Vapor Retarders: ASTM D 4397, 6 mils (0.15 mm) thick, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
2. Unfaced, Polyisocyanurate Board Insulation: ASTM C 591, Type II, compressive strength of 35 psi (240 kPa), with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed.

3. Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I, Class 1 aluminum foil OR Type II, Class 1 or 2 felt or glass-fiber mat, Grade 3 OR Type V, oriented-strand-board facing, as directed, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed on unfaced core.

4. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.60-lb/cu. ft. (26-kg/cu. m) minimum density unless otherwise indicated; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively.

5. Molded-Polystyrene Board Insulation: ASTM C 578, Type I, 0.9 lb/cu. ft. (15 kg/cu. m) OR Type II, 1.35 lb/cu. ft. (22 kg/cu. m), as directed, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively.

6. Unfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; and with a nominal density of 3 lb/cu. ft. (48 kg/cu. m).

7. Mineral-Fiber-Blanket Insulation: ASTM C 665, type indicated below; consisting of fibers manufactured from glass, slag wool, or rock wool.
   a. Type I (blankets without membrane covering), passing ASTM E 136 for combustion characteristics.
   b. Type II (blankets with nonreflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
   c. Type III (blankets with reflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).

8. Metal Building Insulation: ASTM C 991, Type I, or NAIMA 202 OR ASTM C 991, Type II, as directed, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (50-mm-) wide, continuous, vapor-tight edge tabs; and with a flame-spread index of 25 or less.
   a. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96, Desiccant Method:
      1) Composition: Polypropylene faced, scrim reinforced, and kraft-paper backing OR Foil faced, scrim reinforced, and kraft-paper backing with vapor-retarder coating OR Polypropylene faced, scrim reinforced, and foil backing OR Vinyl faced, scrim reinforced, and foil backing OR Vinyl faced, scrim reinforced, and polyester backing, as directed.
   b. Insulation Retainer Strips: 0.019-inch- (0.48-mm-) thick, formed, galvanized-steel or PVC retainer clips colored to match insulation facing.
   c. Thermal Spacer Blocks: Fabricated from extruded polystyrene, 1 inch (25 mm) thick.

C. Underlayment Materials
1. Self-Adhering, High-Temperature Sheet: 30 to 40 mils (0.76 to 1.0 mm) thick minimum, consisting of slip-resisting, polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   b. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
2. Felts: ASTM D 226, Type II (No. 30) OR Type I (No. 15), as directed, asphalt-saturated organic felts.

D. Substrate Boards
1. Gypsum Board: Type X, of thickness indicated, with water-resistant-treated core and with water-repellent paper bonded to core's face, back, and long edges. ASTM C 1396/C 1396M.
2. Glass-Mat Gypsum Sheathing Board: ASTM C 1177/C 1177M; Regular, 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed.
3. Perlite Board: ASTM C 728, 1 inch (25 mm) thick.
4. Substrate-Board Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FMG 4470, designed for fastening substrate board to substrate.

E. Miscellaneous Metal Framing
1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized OR ASTM A 653/A 653M, G60 (Z180) hot-dip galvanized, as directed, or coating with equivalent corrosion resistance unless otherwise indicated.
2. Hat-Shaped, Rigid Furring Channels:
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.025 inch (0.64 mm) OR 0.040 inch (1.02 mm), as directed.
   b. Depth: As indicated OR 7/8 inch (22 mm) OR 1-1/2 inches (38 mm), as directed.
3. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.064 inch (1.63 mm), as directed.
   b. Depth: As indicated OR 3/4 inch (19 mm), as directed.
   c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with nominal thickness of 0.040 inch (1.02 mm).
   d. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.57-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.
4. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 7/8 inch (22 mm), and depth required to fit insulation thickness indicated.
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.025 inch (0.64 mm), as directed.
5. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

F. Miscellaneous Materials
1. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal roof panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.
2. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

G. Exposed-Fastener, Lap-Seam Metal Roof Panels
1. General: Provide factory-formed metal roof panels designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
2. Corrugated-Profile, Exposed-Fastener Metal Roof Panels: Formed with alternating curved ribs spaced at 2.67 inches (68 mm) o.c. across width of panel.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by Architect from manufacturer's full range.
Metal Roof Panels

07 - Thermal And Moisture Protection

08 - Vee-Rib-Profile, Exposed-Fastener Metal Roof Panels: Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.

- Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
  2) Color: As selected by Architect from manufacturer's full range.

- Panel Coverage: 21.3 inches (541 mm) OR 29.3 inches (744 mm) OR 34.67 inches (881 mm) OR 37.3 inches (947 mm) OR 42.67 inches (1084 mm) OR 45.3 inches (1151 mm), as directed.

- Panel Height: 0.5 inch (13 mm) OR 0.875 inch (22 mm), as directed.

09 - Tapered-Rib-Profile, Exposed-Fastener Metal Roof Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced between major ribs.

- Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm)
  OR 0.034-inch (0.86-mm)
  OR 0.040-inch (1.02-mm)
  OR 0.052-inch (1.32-mm), as directed, nominal thickness.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
  2) Color: As selected by Architect from manufacturer's full range.

- Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm)
  OR 0.034-inch (0.86-mm)
  OR 0.040-inch (1.02-mm)
  OR 0.052-inch (1.32-mm), as directed, nominal thickness.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
  2) Color: As selected by Architect from manufacturer's full range.

- Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
  2) Color: As selected by Architect from manufacturer's full range.

- Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
  1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

- Material: Copper sheet, 16-oz./sq. ft. weight (0.68-mm thickness)
  OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
  1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

- Panel Coverage: 24 inches (601 mm) OR 36 inches (914 mm), as directed.

- Panel Height: 0.625 inch (16 mm) OR 0.75 inch (19 mm) OR 1.0 inch (25 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

10 - Vee-Rib-Profile, Exposed-Fastener Metal Roof Panels: Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.

- Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm)
  OR 0.034-inch (0.86-mm)
  OR 0.040-inch (1.02-mm)
  OR 0.052-inch (1.32-mm)
  OR 0.064-inch (1.63-mm), as directed, nominal thickness.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
  2) Color: As selected by Architect from manufacturer's full range.

- Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm)
  OR 0.034-inch (0.86-mm)
  OR 0.040-inch (1.02-mm)
  OR 0.052-inch (1.32-mm)
  OR 0.064-inch (1.63-mm), as directed, nominal thickness.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

d. Rib Spacing: 5.3 inches (135 mm) OR 7.2 inches (183 mm) OR 12 inches (305 mm), as directed, o.c.

e. Panel Coverage: 30 inches (762 mm) OR 32 inches (813 mm) OR 36 inches (914 mm) OR 40 inches (1016 mm), as directed.

f. Panel Height: 1.375 inches (35 mm) OR 1.5 inches (38 mm) OR 1.75 inches (44 mm) OR 2.0 inches (51 mm) OR 3.0 inches (76 mm), as directed.

5. Box-Rib-Profile, Exposed-Fastener Metal Roof Panels: Formed with raised, box-shaped ribs that are wider than recesses, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.

   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.

   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.

   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.

   d. Rib Spacing: 2.67 inches (68 mm) OR 4.0 inches (102 mm) OR 5.3 inches (135 mm) OR 6.0 inches (152 mm), as directed, o.c.

   e. Panel Coverage: 24 inches (610 mm) OR 28 inches (711 mm) OR 30 inches (762 mm) OR 32 inches (813 mm) OR 36 inches (914 mm), as directed.

   f. Panel Height: 0.625 inch (16 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 2.0 inches (51 mm), as directed.

6. Deep-Box-Rib-Profile, Exposed-Fastener Metal Roof Panels: Formed with raised, box-shaped ribs that are wider than recesses, evenly spaced across panel width, and with rib/recess sides angled more than 60 degrees.

   a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.

   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   d. Rib Spacing: 12 inches (305 mm), as directed, o.c.

   e. Panel Coverage: 24 inches (610 mm), as directed.

   f. Panel Height: 3 inches (76 mm) OR 4 inches (102 mm), as directed.

H. Concealed-Fastener, Lap-Seam Metal Roof Panels

1. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.

2. Tapered-Rib-Profile, Concealed-Fastener Metal Roof Panels: Formed with raised, trapezoidal major rib at panel edge and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major rib and panel edge.

   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   d. Panel Coverage: 12 inches (305 mm) OR 16 inches (406 mm) OR 18 inches (457 mm), as directed.

   e. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 1.75 inches (44 mm), as directed.

3. Standing-Seam-Profile, Concealed-Fastener Metal Roof Panels: Formed with raised, curved-top, standing-seam-shaped major rib at panel edge and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major rib and panel edge.

   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

      2) Color: As selected by the Owner from manufacturer's full range.
c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

d. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
   1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

e. Panel Coverage: 10 inches (254 mm) OR 12 inches (305 mm) OR 16 inches (406 mm) OR 18 inches (457 mm), as directed.

f. Panel Height: 1.0 inch (25 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

4. Batten-Seam-Profile, Concealed-Fastener Metal Roof Panels: Formed with raised, batten-seam-shaped major rib at panel edge and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major rib and panel edge.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   d. Panel Coverage: 10 inches (254 mm) OR 12 inches (305 mm) OR 14 inches (356 mm) OR 15 inches (381 mm) OR 18 inches (457 mm) OR 24 inches (610 mm) OR 36 inches (914 mm), as directed.
   e. Panel Height: 0.75 inch (19 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.
   f. Batten Width: 1.5 inches (38 mm) OR 2.0 inches (51 mm), as directed.

I. Standing-Seam Metal Roof Panels
   1. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.
      a. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.
      b. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1637.
   2. Vertical-Rib, Snap-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and snapping panels together.
      a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

d. Material: Copper sheet, 20-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.

1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

e. Batten: Same material, finish, and color as roof panels.

f. Clips: Fixed OR Floating to accommodate thermal movement, as directed.

1) Material: 0.028-inch (0.71-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
2) Material: 0.025-inch (0.64-mm) OR 0.062-inch (1.59-mm), as directed, thick, stainless-steel sheet.

g. Panel Coverage: 10 inches (254 mm) OR 12 inches (305 mm) OR 14 inches (356 mm) OR 16 inches (406 mm) OR 18 inches (457 mm) OR 24 inches (610 mm), as directed.

h. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 1.75 inches (44 mm), as directed.

3. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and mechanically seaming panels together.

a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

d. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.

1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.
4. Trapezoidal-Rib, Snap-Joint, Standing-Seam Metal Roof Panels: Formed with raised trapezoidal ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and snapping panels together.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer’s full range.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer’s full range.
   c. Clips: Fixed OR Floating to accommodate thermal movement, as directed.
      1) Material: 0.028-inch- (0.71-mm-) OR 0.064-inch- (1.63-mm-), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
      2) Material: 0.025-inch- (0.64-mm-) OR 0.062-inch- (1.59-mm-), as directed, thick, stainless-steel sheet.
   d. Joint Type: Single folded OR Double folded OR As standard with manufacturer, as directed.
   e. Batten: Same material, finish, and color as roof panels.
   f. Clips: Fixed OR Floating to accommodate thermal movement, as directed.
      1) Material: 0.028-inch- (0.71-mm-) OR 0.064-inch- (1.63-mm-), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
      2) Material: 0.025-inch- (0.64-mm-) OR 0.062-inch- (1.59-mm-), as directed, thick, stainless-steel sheet.
   g. Joint Type: Single folded OR Double folded OR As standard with manufacturer, as directed.
   h. Panel Coverage: 12 inches (305 mm) OR 14 inches (356 mm) OR 16 inches (406 mm) OR 18 inches (457 mm) OR 20 inches (508 mm) OR 24 inches (610 mm), as directed.
   i. Panel Height: 1.5 inches (38 mm) OR 2.0 inches (51 mm) OR 2.5 inches (64 mm), as directed.

5. Trapezoidal-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with raised trapezoidal ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and mechanically seaming panels together.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer’s full range.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer’s full range.
   c. Clips: Fixed OR Floating to accommodate thermal movement, as directed.
      1) Material: 0.028-inch- (0.71-mm-) OR 0.064-inch- (1.63-mm-), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
      2) Material: 0.028-inch- (0.71-mm-) OR 0.064-inch- (1.63-mm-), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
   d. Joint Type: Single folded OR Double folded OR As standard with manufacturer, as directed.
07 - Thermal And Moisture Protection

e. Panel Coverage: 12 inches (305 mm) OR 18 inches (457 mm) OR 24 inches (610 mm), as directed.
f. Panel Height: 2.7 inches (69 mm) OR 3.0 inches (76 mm), as directed.

6. Integral-Standing-Seam Metal Roof Panels: Formed with integral ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and lapping and interconnecting side edges of adjacent panels.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As selected by the Owner from manufacturer's full range.
   d. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
      1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.
   e. Clips: Fixed OR Floating to accommodate thermal movement, as directed.
      1) Material: 0.028-inch- (0.71-mm-) OR 0.064-inch- (1.63-mm-), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
      2) Material: 0.025-inch- (0.64-mm-) OR 0.062-inch- (1.59-mm-), as directed, thick, stainless-steel sheet.

f. Panel Coverage: 12 inches (305 mm) OR 16 inches (406 mm) OR 18 inches (457 mm), as directed.
g. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 2.0 inches (51 mm), as directed.

J. Batten-Seam Metal Roof Panels
   1. General: Provide factory-formed metal roof panel assembly designed to be installed by covering vertical side edges of adjacent panels with battens and mechanically attaching panels to supports using concealed clips. Include battens and accessories required for weathertight installation.
   2. Narrow-Profile, Snap-on-Batten-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for independent installation by mechanically attaching panels to supports using concealed clips located under 1 side of panels and engaging opposite edge of adjacent panels, and installation of 3/8-to-1/2-inch- (10-to-13-mm-) wide, snap-on battens over panel joints.
      a. Panel Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
         1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         2) Color: As selected by the Owner from manufacturer's full range.
      b. Panel Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
3. **Wide-Profile, Snap-on-Batten-Seam Metal Roof Panels:** Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed,** between ribs; designed for independent installation by mechanically attaching panels to supports using concealed clips located between and engaging edges of adjacent panels, and installing snap-on battens over panel joints.

   a. **Panel Material:** Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed,** nominal thickness.
      1) **Exterior Finish:** 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plasticized,** as directed.**
      2) **Color:** As selected by the Owner from manufacturer's full range.
   b. **Panel Material:** Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed,** nominal thickness.
      1) **Exterior Finish:** 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plasticized,** as directed.**
      2) **Color:** As selected by the Owner from manufacturer's full range.
   c. **Panel Material:** Aluminum sheet, 0.024 inch (0.061 mm) **OR** 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed,** thick.
      1) **Exterior Finish:** 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plasticized,** as directed.**
      2) **Color:** As selected by the Owner from manufacturer's full range.
   d. **Panel Material:** Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) **OR** 20-oz./sq. ft. weight (0.68-mm thickness), **as directed.**
      1) **Exterior Finish:** Brushed satin (lacquered) **OR** Mirror polished, **as directed.**
   e. **Batten Material:** Same material, finish, and color as roof panels.
   f. **Clips:** One **OR** Two, **as directed,** piece.
      1) **Material:** 0.028-inch- (0.71-mm-) **OR** 0.064-inch- (1.63-mm-), **as directed,** nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
      2) **Material:** 0.025-inch- (0.64-mm-) **OR** 0.062-inch- (1.59-mm-), **as directed,** thick, stainless-steel sheet.
   g. **Sealant:** Factory applied in top **OR** on each side, **as directed,** of battens.
   h. **Panel Coverage:** 12 inches (305 mm) **OR** 14 inches (356 mm) **OR** 16 inches (406 mm) **OR** 18 inches (457 mm) **OR** 20 inches (508 mm), **as directed.**
   i. **Batten Height:** 1.0 inch (25 mm) **OR** 1.25 inches (32 mm) **OR** 1.5 inches (38 mm) **OR** 1.75 inches (44 mm) **OR** 2.0 inches (51 mm), **as directed.**

4. **Metal Roof Panels**
h. Panel Coverage: 12 inches (305 mm) OR 14 inches (356 mm) OR 16 inches (406 mm) OR 18 inches (457 mm) OR 22 inches (559 mm) OR 24 inches (610 mm), as directed.

i. Batten Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 1.75 inches (44 mm) OR 1.88 inches (48 mm) OR 2.0 inches (51 mm), as directed.

4. Seamed-Batten Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR smooth, flat pan, as directed, between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and installing mechanically seamed battens over panel joints.

a. Panel Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

b. Panel Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

c. Panel Material: Aluminum sheet, 0.024 inch (0.061 mm) OR 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

d. Panel Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
   1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

b. Batten Material: Same material, finish, and color as roof panels.

f. Clips: One OR Two, as directed, piece.
   1) Material: 0.028-inch (0.71-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
   2) Material: 0.025-inch (0.64-mm) OR 0.062-inch (1.59-mm), as directed, thick, stainless-steel sheet.

g. Sealant: Factory applied on each side of clips under battens.

K. Horizontal-Seam (Bermuda-Type) Metal Roof Panels

1. Horizontal-Seam (Bermuda-Type) Metal Roof Panels: Formed with horizontal seam at panel edges and smooth, flat pan; designed to be installed in sequential installation by engaging lower edge of each panel to upper edge of panel below and mechanically attaching panels to supports using concealed clips located under upper edge of panels.

a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer, as directed.
   2) Color: As selected by the Owner from manufacturer's full range.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer, as directed.
2) Color: As selected by the Owner from manufacturer's full range.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) thick.
  1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer, as directed.
  2) Color: As selected by the Owner from manufacturer's full range.

d. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
  1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

e. Clips: One piece.
  1) Material: 0.028-inch- (0.71-mm-) nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
  2) Material: 0.025-inch- (0.64-mm-) thick, stainless-steel sheet.

f. Seal: Factory-applied sealant or vinyl weatherseal in seam.

g. Exposure: 9.5 inches (241 mm) OR 11 inches (279 mm), as directed, nominal.

h. Seam Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

L. Foamed-Insulation-Core Metal Roof Panels
1. General: Provide factory-formed and -assembled metal roof panels fabricated from two sheets of metal with insulation core foamed-in-place during fabrication with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
   a. Panel Performance:
      1) Flatwise Tensile Strength: 30 psi (200 kPa) when tested according to ASTM C 297/C 297M.
      2) Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for 7 days at 140 deg F (60 deg C) and 100 percent relative humidity according to ASTM D 2126.
      3) Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at 200 deg F (93 deg C) according to ASTM D 2126.
      4) Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at minus 20 deg F (29 deg C) according to ASTM D 2126.
      5) Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for 2 million cycles.
      6) Autoclave: No delamination when exposed to 2-psi (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
      7) Fire-Test-Response Characteristics: Class A according to ASTM E 108.
   b. Insulation Core: Modified isocyanurate or polyurethane foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
      1) Closed-Cell Content: 90 percent when tested according to ASTM D 2856.
      2) Density: 2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m) when tested according to ASTM D 1622.
      3) Compressive Strength: Minimum 20 psi (140 kPa) when tested according to ASTM D 1621.
      4) Shear Strength: 26 psi (179 kPa) when tested according to ASTM C 273.

2. Lap-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels: Formed for lapping side edges of adjacent panels and mechanically attaching to supports using exposed fasteners in side laps.
   a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
      1) Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      2) Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      3) Exterior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
a) Color: As selected by the Owner from manufacturer’s full range.

4) Interior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   a) Color: As selected by the Owner from manufacturer’s full range.

b. Batten: Same material, finish, and color as exterior facings of roof panels.

c. Panel Coverage: 24 inches (610 mm) OR 30 inches (762 mm) OR 36 inches (914 mm) OR 39.6 inches (1000 mm) OR 40 inches (1016 mm) OR 44.5 inches (1130 mm), as directed.

d. Panel Thickness: 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 2.0 inches (51 mm) OR 2.5 inches (64 mm) OR 3.0 inches (76 mm) OR 4.0 inches (102 mm) OR 5.0 inches (127 mm) OR 6.0 inches (152 mm), as directed.

3. Standing-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels: Formed with vertical tongue-and-groove ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by interlocking tongue-and-groove panel edges and mechanically attaching panels to supports using concealed clips located between and engaging edges of adjacent panels, and mechanically seaming panels together.
   a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
      1) Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      2) Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      3) Exterior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         a) Color: As selected by the Owner from manufacturer’s full range.
      4) Interior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         a) Color: As selected by the Owner from manufacturer’s full range.

b. Joint Type: Single folded OR Double folded OR As standard with manufacturer, as directed.

c. Panel Coverage: 36 inches (914 mm) OR 42 inches (1067 mm), as directed.

d. Panel Thickness: 2.0 inches (51 mm) OR 2.5 inches (64 mm) OR 3.0 inches (76 mm) OR 4.0 inches (102 mm) OR 5.0 inches (127 mm) OR 6.0 inches (152 mm), as directed.

4. Batten-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels: Formed with vertical or tapered tongue-and-groove ribs at panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between ribs; designed for sequential installation by interlocking tongue-and-groove panel edges and mechanically attaching panels to supports using concealed clips located between and engaging edges of adjacent panels, and installing snap-on battens over panel joints.
   a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
      1) Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) nominal thickness.
      2) Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) nominal thickness.
      3) Exterior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         a) Color: As selected by the Owner from manufacturer’s full range.
      4) Interior Facing Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         a) Color: As selected by the Owner from manufacturer’s full range.

b. Batten: Same material, finish, and color as exterior facings of roof panels.
c. Clips: One piece; 0.064-inch (1.63-mm) OR 0.097-inch (2.50-mm), as directed, nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
d. Panel Coverage: 36 inches (914 mm) OR 39.6 inches (1000 mm), as directed.
e. Panel Thickness: 1.75 inches (44 mm) OR 2.0 inches (51 mm) OR 2.5 inches (64 mm) OR 3.0 inches (76 mm) OR 4.0 inches (102 mm) OR 5.0 inches (127 mm) OR 6.0 inches (152 mm), as directed.

M. Metal Soffit Panels
1. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
2. Metal Soffit Panels: Match profile and material of metal roof panels.
   a. Material: Same material, finish, and color as metal roof panels.
   b. Sealant: Factory applied within interlocking joint.
3. Flush-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with flush joint between panels.
   a. Material: Same material, finish, and color as metal roof panels.
   b. Sealant: Factory applied within interlocking joint.
   c. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.
   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.
   d. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.
   e. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
      1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.
   f. Panel Coverage: 8 inches (203 mm) OR 12 inches (305 mm) OR 16 inches (406 mm) OR 20 inches (508 mm), as directed.
   g. Panel Height: 0.875 inch (22 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 3.0 inches (76 mm), as directed.
   h. Sealant: Factory applied within interlocking joint.
4. Reveal-Joint-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with recessed reveal joint between panels.
   a. Material: Same material, finish, and color as metal roof panels.
b. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.

   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.

   d. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.

   e. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
   1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.

f. Panel Coverage: 8 inches (203 mm) OR 12 inches (305 mm) OR 16 inches (406 mm) OR 20 inches (508 mm), as directed.

g. Panel Height: 0.75 inch (19 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

5. V-Groove-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), flat pan, as directed, between panel edges; with V-groove joint between panels.
   a. Material: Same material, finish, and color as metal roof panels.
   b. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.
   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.
   d. Material: Aluminum sheet, 0.024 inch (0.65 mm) OR 0.032 inch (0.81 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: Match finish and color of metal roof panels OR Match finish and color of metal wall panels OR As selected by the Owner from manufacturer's full range, as directed.

e. Panel Coverage: 6 inches (152 mm) OR 12 inches (305 mm) OR 14 inches (356 mm), as directed.

f. Panel Height: 0.375 inch (10 mm) OR 0.44 inch (11 mm) OR 0.50 inch (13 mm) OR 0.625 inch (16 mm), as directed.

N. Accessories

1. Roof Panel Accessories: Provide components approved by roof panel manufacturer and as required for a complete metal roof panel assembly including trim, copings, fasciae, corner units, ridge closures, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.

a. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal roof panels.

b. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

c. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.

2. Flashing and Trim: Formed from same material as roof panels, prepainted with coil coating, minimum 0.018 inch (0.45 mm) thick. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal roof panels.

3. Gutters: Formed from same material roof panels. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches (900 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match metal roof panels OR roof fascia and rake trim, as directed.

4. Downspouts: Formed from same material as roof panels. Fabricate in 10-foot- (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual". Finish downspouts to match gutters.

5. Roof Curbs: Fabricated from same material as roof panels, minimum 0.048 inch (1.2 mm) thick; with bottom of skirt profiled to match roof panel profiles, and welded top box and integral full-length cricket. Fabricate curb subframing of minimum 0.0598-inch- (1.5-mm-) thick, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads, of size and height indicated. Finish roof curbs to match metal roof panels.

a. Insulate roof curb with 1-inch- (25-mm-) thick, rigid insulation.

O. Snow Guards

1. Snow Guards: Prefabricated, noncorrosive units designed to be installed without penetrating metal roof panels, and complete with predrilled holes, clamps, or hooks for anchoring.

a. Surface-Mounted, Plastic, Stop-Type Snow Guards: Clear OR Integral color, as directed, polycarbonate stops designed for attachment to pan surface of metal roof panels using construction adhesive, silicone or polyurethane sealant, or adhesive tape.

b. Surface-Mounted, Metal, Stop-Type Snow Guards: Cast-aluminum stops designed for attachment to pan surface of metal roof panel using construction adhesive, silicone or polyurethane sealant, or adhesive tape.

c. Surface-Mounted, Copper, Stop-Type Snow Guards: Bronze-alloy stops designed for attachment to pan surface of copper roof panel using solder.

d. Seam-Mounted, Stop-Type Snow Guards: Cast-aluminum OR Malleable-iron OR Clear polycarbonate OR Colored polycarbonate, as directed, stops designed for attachment to vertical ribs of standing-seam metal roof panels with stainless-steel set screws.
e. Seam-Mounted, Bar-Type Snow Guards: Aluminum OR stainless-steel, as directed, rods or bars held in place by stainless-steel clamps attached to vertical ribs of standing-seam metal roof panels.
   1) Aluminum Finish: Mill OR Clear anodized, as directed.
   2) Stainless-Steel Finish: Mill OR No. 2B OR No. 4, as directed.

P. Fabrication
1. Fabricate and finish metal roof panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes and as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
2. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
3. Fabricate metal roof panel side laps with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will seal weathertight and minimize noise from movements within panel assembly.
4. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
   a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
   b. End Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
   c. End Seams for Other Than Aluminum: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seams, form seams, and solder.
   d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
   e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
   f. Fabricate cleats and attachment devices of size and metal thickness recommended by SMACNA's "Architectural Sheet Metal Manual" or by metal roof panel manufacturer for application, but not less than thickness of metal being secured.

Q. Finishes
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION

A. Preparation
1. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
2. Substrate Board: Install substrate boards over roof deck OR sheathing, as directed, on entire roof surface. Attach with substrate-board fasteners.
   a. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   b. Comply with UL OR FMG, as directed, requirements for fire-rated construction.
3. Miscellaneous Framing: Install subpurlins, eave angles, furring, and other miscellaneous roof panel support members and anchorage according to metal roof panel manufacturer's written instructions.
   a. Soffit Framing: Wire tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

B. Underlayment Installation
1. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below OR on Drawings, as directed, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses. Overlay side edges not less than 3-1/2 inches (90 mm). Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.
   a. Roof perimeter for a distance up from eaves of 24 inches (600 mm) OR 36 inches (914 mm), as directed, beyond interior wall line.
   b. Valleys, from lowest point to highest point, for a distance on each side of 18 inches (460 mm), as directed. Overlay ends of sheets not less than 6 inches (150 mm).
   c. Rake edges for a distance of 18 inches (460 mm).
   d. Hips and ridges for a distance on each side of 12 inches (300 mm).
   e. Roof to wall intersections for a distance from wall of 18 inches (460 mm).
   f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of 18 inches (460 mm).
2. Felt Underlayment: Apply at locations indicated below OR on Drawings, as directed, in shingle fashion to shed water, and with lapped joints of not less than 2 inches (50 mm).
   a. Apply over entire roof surface.
   b. Apply on roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 3 inches (75 mm), in shingle fashion to shed water.
3. Apply slip sheet over underlayment before installing metal roof panels.
4. Install flashings to cover underlayment to comply with requirements specified in Division 07 Section "Sheet Metal Flashing And Trim".

C. Thermal Insulation Installation
1. Polyethylene Vapor Retarder: Extend vapor retarder to extremities of areas to be protected from vapor transmission. Repair tears or punctures immediately before concealment by other work.
2. Board Insulation: Extend insulation in thickness indicated to cover entire roof. Comply with installation requirements in Division 07 Section "Thermal Insulation".
   a. Erect insulation and hold in place with Z-shaped furring members spaced 24 inches (610 mm) OR 600 mm, as directed, o.c. Securely attach narrow flanges of furring members to roof deck with screws spaced 24 inches (600 mm) o.c.
3. Blanket Insulation: Install insulation concurrently with metal roof panel installation, in thickness indicated to cover entire roof, according to manufacturer's written instructions and as follows:
   a. Set vapor-retarder-faced units with vapor retarder to warm side OR in location indicated, as directed, of construction unless otherwise indicated. Do not obstruct ventilation spaces.
   b. Tape joints and ruptures in vapor retarder and seal each continuous area of insulation to surrounding construction to ensure airtight installation.
   c. Install blankets straight and true in one-piece lengths with both sets of facing tabs sealed. Comply with the following installation method:
      1) Over-Framing Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing members. Hold in place by panels fastened to secondary framing.
      2) Between-Purlin Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder facing tabs up and over purlin, overlapping adjoining facing of next insulation course maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.
      3) Over-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing members. Install layer of
filler insulation over first layer to fill space formed by roof panel standoffs. Hold in place by panels fastened to standoffs.

4) Two-Layers-between-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder facing tabs up and over purlins, overlapping adjoining facing of next insulation course maintaining continuity of retarder. Install layer of filler insulation over first layer to fill space between purlins formed by thermal spacer blocks. Hold in place with bands and crossbands below insulation.

d. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
e. Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.

D. Metal Roof Panel Installation, General
1. Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.
2. Thermal Movement. Rigidly fasten metal roof panels to structure at one and only one location for each panel. Allow remainder of panel to move freely for thermal expansion and contraction. Predrill panels for fasteners.
   a. Point of Fixity: Fasten each panel along a single line of fixing located at eave OR ridge OR center of panel length OR locations indicated on Drawings, as directed.
   b. Avoid attaching accessories through roof panels in a manner that will inhibit thermal movement.
3. Install metal roof panels as follows:
   a. Commence metal roof panel installation and install minimum of 300 sq. ft. (27.8 sq. m.) in presence of factory-authorized representative.
   b. Field cutting of metal panels by torch is not permitted.
   c. Install panels perpendicular to purlins.
   d. Locate and space fastenings in uniform vertical and horizontal alignment.
   e. Provide metal closures at rake edges OR rake walls, as directed, and each side of ridge OR ridge and hip, as directed, caps.
   f. Flash and seal metal roof panels with weather closures at eaves, rakes, and perimeter of all openings.
   g. Install ridge OR ridge and hip, as directed, caps as metal roof panel work proceeds.
   h. End Splices: Locate panel end splices over, but not attached to, structural supports. Stagger panel end splices to avoid a four-panel splice condition.
   i. Install metal flashing to allow moisture to run over and off metal roof panels.
4. Fasteners:
   a. Steel Roof Panels: Use stainless-steel fasteners for surfaces exposed to the exterior and galvanized-steel fasteners for surfaces exposed to the interior.
   b. Aluminum Roof Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior and aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
   c. Copper Roof Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
5. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
6. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.
   a. Coat back side of roof panels with bituminous coating where roof panels will contact wood, ferrous metal, or cementitious construction.
7. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal roof panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal roof panel manufacturer.
   a. Seal metal roof panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal roof panel manufacturer.
b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

E. Metal Roof Panel Installation

1. Lap-Seam Metal Roof Panels: Fasten metal roof panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
   a. Apply panels and associated items for neat and weather-tight enclosure. Avoid "panel creep" or application not true to line.
   b. Lap ribbed or fluted sheets one full rib corrugation.
   c. Provide metal-backed neoprene or EPDM washers under heads of exposed fasteners bearing on weather side of metal roof panels.
   d. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
   e. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
   f. Provide sealant tape at lapped joints of metal roof panels and between panels and protruding equipment, vents, and accessories.
   g. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps, and on side laps of nesting-type panels; on side laps of corrugated nesting-type, ribbed, or fluted panels; and elsewhere as needed to make panels weatherproof to driving rains.
   h. At panel end splices, nest panels with minimum 6-inch (150-mm) end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.

2. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended by manufacturer.
   a. Install clips to supports with self-tapping fasteners.
   b. Install pressure plates at locations indicated in manufacturer's written installation instructions.
   c. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
   d. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.

3. Batten-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each batten-seam joint at location, spacing, and with fasteners recommended by manufacturer.
   a. Install clips to supports with self-drilling fasteners.
   b. Apply battens to metal roof panel seams, fully engaged to provide weather-tight joints.

4. Horizontal-Seam (Bermuda-Type) Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each horizontal-seam joint at location, spacing, and with fasteners recommended by manufacturer. Start at eave and work upward toward ridge.
   a. Install clips to supports with self-drilling fasteners.

F. Foamed-Insulation-Core Metal Roof Panel Installation

1. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal roof panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.

2. Lap-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
   a. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weather-tight enclosure. Avoid "panel creep" or application not true to line.
   b. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of insulated metal roof panels.
   c. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
   d. Provide sealant tape at lapped joints of insulated metal roof panels and between panels and protruding equipment, vents, and accessories.
e. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weatherproof to driving rains.

f. Apply snap-on battens to insulated metal roof panel seams to conceal fasteners.

3. Standing-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended by manufacturer.
   a. Install clips to supports with self-tapping fasteners.
   b. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so cleat, insulated metal roof panel, and factory-applied side-lap sealant are completely engaged.

4. Batten-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with concealed clips at each batten-seam joint at location, spacing, and with fasteners recommended by manufacturer.
   a. Apply battens to insulated metal roof panel seams, fully engaged to provide weathertight joints.

G. Metal Soffit Panel Installation
1. In addition to complying with requirements in "Metal Roof Panel Installation, General" Article, install metal soffit panels to comply with requirements in this article.
2. Metal Soffit Panels: Provide metal soffit panels full width of soffits. Install panels perpendicular to support framing.
   a. Flash and seal panels with weather closures where metal soffit panels meet walls and at perimeter of all openings.
3. Metal Fascia Panels: Align bottom of panels and fasten with blind rivets, bolts, or self-tapping screws. Flash and seal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

H. Accessory Installation
1. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
   a. Install components required for a complete metal roof panel assembly including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
   b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).
3. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches (914 mm) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
4. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1500 mm) o.c. in between.
   a. Provide elbows at base of downspouts to direct water away from building.
   b. Connect downspouts to underground drainage system indicated.
5. Roof Curbs: Install curbs at locations indicated on Drawings. Install flashing around bases where they meet metal roof panels.

6. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

I. Snow Guard Installation
   1. Stop-Type Snow Guards: Attach snow guards to metal roof panels with adhesive, sealant, or adhesive tape, as recommended by manufacturer. Do not use fasteners that will penetrate metal roof panels.
      a. Provide rows of snow guards, at locations indicated on Drawings, spaced apart, beginning from gutter, with each snow guard centered between panel ribs.

   2. Bar-Type Snow Guards: Attach bar supports to vertical ribs of standing-seam metal roof panels with clamps or set screws. Do not use fasteners that will penetrate metal roof panels.
      a. Provide rows of snow guards, at locations indicated on Drawings, spaced apart, beginning from gutter.

J. Erection Tolerances
   1. Installation Tolerances: Shim and align metal roof panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

K. Field Quality Control
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect metal roof panel installation, including accessories. Report results in writing.
   2. Remove and replace applications of metal roof panels where inspections indicate that they do not comply with specified requirements.
   3. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

L. Cleaning
   1. Remove temporary protective coverings and strippable films, if any, as metal roof panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal roof panel installation, clean finished surfaces as recommended by metal roof panel manufacturer. Maintain in a clean condition during construction.
   2. Replace metal roof panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 41 13 00
SECTION 07 41 13 00a - SHEET METAL ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for sheet metal roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Flat-seam metal roofing, custom fabricated.
   b. Standing-seam metal roofing, custom fabricated OR on-site, roll formed, as directed.
   c. Batten-seam metal roofing, custom fabricated OR on-site, roll formed, as directed.
   d. Horizontal-seam (Bermuda-type) metal roofing, custom fabricated.

C. Performance Requirements
1. General Performance: Sheet metal roofing system including, but not limited to, metal roof panels, cleats, clips, anchors and fasteners, sheet metal flashing integral with sheet metal roofing, fascia panels, trim, battens, as directed, underlayment, and accessories shall comply with requirements indicated without failure due to defective manufacture, fabrication, installation, or other defects in construction. Sheet metal roofing shall remain watertight.
2. Thermal Movements: Provide sheet metal roofing that allows for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
3. Energy Performance: Provide metal roofing with solar reflectance index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.

D. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Product Test Reports for Credit SS 7.2: For roof panels, indicating that panels comply with Solar Reflectance Index requirement.
3. Shop Drawings: Show fabrication and installation layouts of sheet metal roofing, including plans, elevations, expansion joint locations, and keyed details. Distinguish between shop- and field-assembled work.
   a. Include details for forming, joining, and securing sheet metal roofing, including pattern of seams, termination points, fixed points, expansion joints, roof penetrations, edge conditions, special conditions, connections to adjoining work, and details of accessory items.
4. Samples: For each exposed product and for each finish specified.
5. Coordination Drawings: Roof plans drawn to scale with coordinated details for penetrations and roof-mounted items.
6. Portable Roll-Forming Equipment Certificate: Issued by UL for equipment manufacturer’s portable roll-forming equipment capable of producing panels that comply with UL requirements.
7. Product test reports.
8. Maintenance data.

E. Quality Assurance
1. Roll-Formed Sheet Metal Roofing Fabricator Qualifications: Fabricator authorized by portable roll-forming equipment manufacturer to fabricate and install sheet metal roofing units required for this Project, and who maintains current UL certification of its portable roll-forming equipment.

2. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing roofing panels for sheet metal roofing assemblies that comply with UL 580 for Class 30 OR Class 60 OR Class 90, as directed, wind-uplift resistance. Maintain UL certification of portable roll-forming equipment for duration of sheet metal roofing work.

3. Sheet Metal Roofing Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" unless more stringent requirements are specified or shown on Drawings.

4. Copper Roofing Standard: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

5. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling

1. Do not store sheet metal roofing materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal roofing materials away from uncured concrete and masonry.

2. Protect strippable protective covering on sheet metal roofing from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal roofing installation.

G. Warranty

1. Special Warranty: Warranty form at the end of this Section in which Installer agrees to repair or replace components of sheet metal roofing that fail in materials or workmanship within two years from date of Final Completion.

2. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal roofing that shows evidence of deterioration of factory-applied finishes within 20 OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Roofing Sheet Metals

1. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

2. Metallic-Coated Steel Sheet: Restricted flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
   a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
   b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZM50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
   c. Thickness: Nominal 0.022 inch (0.56 mm) OR 0.028 inch (0.71 mm), as directed, unless otherwise indicated.
      1) Batten Caps: Nominal 0.028 inch (0.71 mm) thick.
   d. Surface: Smooth, flat OR Embossed, as directed.
   e. Exposed Coil-Coated Finish:
      1) Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      2) Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      3) Four-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat,
and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

4) Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

5) Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

6) FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

7) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.

8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mils (0.97 mm) for topcoat.

f. Color: As selected from manufacturer's full range.

g. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

3. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required.

a. Thickness: 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, unless otherwise indicated.

1) Batten Caps: 0.050 inch (1.27 mm) thick.

b. As-Milled Finish: Mill OR One-side bright mill OR Standard one-side bright OR Standard two-side bright, as directed, finish.

c. Alclad Finish: Metallurgically bonded surfacing to both sides, forming a composite aluminum sheet with reflective luster.

d. Surface: Smooth, flat OR Embossed, as directed.

e. Factory Prime Coating: Where painting after installation is indicated, pretreat with white or light-colored, factory-applied, baked-on epoxy primer coat; minimum dry film thickness of 0.2 mil (0.005 mm).

f. Exposed Coil-Coated Finish:

1) Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2) Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

3) Four-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

4) Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

5) Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

6) FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

7) Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.

8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.097 mm) for topcoat.

g. Color: As selected from manufacturer's full range.
h. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

4. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper, 16 oz./sq. ft. (0.55 mm thick) OR 20 oz./sq. ft. (0.70 mm thick), as directed, unless otherwise indicated.
   a. Batten Caps: 20 oz./sq. ft. (0.70 mm thick).
   b. Non-Patinated Exposed Finish: Mill
   c. Non-Patinated Exposed, Lacquered Finish: Finish designations for copper alloys comply with the system defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
      1) Brushed Satin (Lacquered): M32-06x (Mechanical Finish: directionally textured, medium satin; with clear organic coating); coating of "Incralac" waterborne OR solvent-borne, as directed, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to a total thickness of 1 mil (0.025 mm).
      2) Mirror Polished (Lacquered): M22-06x (Mechanical Finish: buffed, specular; with clear organic coating); coating of "Incralac" waterborne OR solvent-borne, as directed, air-drying, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to a total thickness of 1 mil (0.025 mm).
   d. Pre-Patinated Copper-Sheet Finish: Dark brown OR Verdigris, as directed, pre-patinated according to ASTM B 882.

5. Zinc-Tin Alloy-Coated Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper, coated on both sides with a zinc-tin alloy (50 percent zinc, 50 percent tin).
   a. Weight (Thickness): 16-oz./sq. ft. (0.55-mm) OR 20-oz./sq. ft. (0.70-mm), as directed, uncoated weight (thickness), with 0.787-mil (0.020-mm) coating thickness applied to each side.
      1) Batten Caps: 20-oz./sq. ft. (0.70-mm) uncoated weight (thickness), with 0.787-mil (0.020-mm) coating thickness applied to each side unless otherwise indicated.

6. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed.
   a. Thickness: 0.016 inch (0.40 mm) OR 0.019 inch (0.48 mm), as directed, unless otherwise indicated.
      1) Batten Caps: 0.019 inch (0.48 mm) thick.
   b. Surface: Smooth, flat OR Embossed, as directed.
   c. Finish: 2D (dull, cold rolled) OR 2B (bright, cold rolled) OR 3 (coarse, polished directional satin) OR 4 (polished directional satin), as directed.
      1) Remove tool and die marks and stretch lines or blend into finish.
      2) Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
      3) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

7. Zinc-Tin Alloy-Coated Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, dead-soft, fully annealed stainless-steel sheet, coated on both sides with a zinc-tin alloy (50 percent zinc, 50 percent tin), with factory-applied gray preweathering.
a. Thickness: 0.015-inch (0.38-mm) OR 0.018-inch (0.46-mm) OR 0.024-inch (0.61-mm), as directed, minimum uncoated thickness, with 0.787-mil (0.020-mm) coating thickness applied to each side.
   1) Batten Caps: 0.018-inch (0.46-mm) minimum uncoated thickness, with 0.787-mil (0.020-mm) coating thickness applied to each side unless otherwise indicated.

8. Zinc-Tin Alloy-Coated Steel Sheet: ASTM A 625/A 625M; single-reduced, black-steel sheet, coated on both sides with a zinc-tin alloy (50 percent zinc, 50 percent tin), with factory-applied shop coat, as directed.
   a. Thickness: 0.012-inch (0.31-mm) OR 0.014-inch (0.36-mm), as directed, uncoated thickness, with 0.787-mil (0.020-mm) coating thickness applied to each side.
   1) Batten Caps: 0.014-inch (0.36-mm) uncoated thickness, with 0.787-mil (0.020-mm) coating thickness applied to each side unless otherwise indicated.

   b. Exposed Coil-Coated Finish: Manufacturer's standard two-coat fluoropolymer complying with performance requirements in AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      1) Color: As selected from manufacturer's full range.

   c. Field-Applied Finish: Manufacturer's standard waterborne acrylic emulsion paint primer and finish coat.
      1) Color: As selected from manufacturer's full range.

9. Zinc Sheet: Zinc, 99 percent pure, alloyed with a maximum of 1 percent copper and titanium; with manufacturer's standard factory-applied, flexible, protective back coating.
   a. Thickness: 0.027 inch (0.70 mm) OR 0.032 inch (0.80 mm), as directed, unless otherwise indicated.
      1) Batten Caps: 0.032 inch (0.80 mm) thick.

   b. Finish: Bright rolled OR Preweathered gray OR Preweathered black, as directed.

    a. Thickness: 0.015 inch (0.38 mm) OR 0.020 inch (0.51 mm), as directed, unless otherwise indicated.
       1) Batten Caps: 0.020 inch (0.51 mm) thick.

    b. Surface: Smooth, flat OR Embossed, as directed.

    c. Finish: Low OR Medium, as directed, matte.

    d. Color Anodic Finish (Light-Interference Phenomenon): Silver OR Gold OR Purple OR Blue OR Match sample OR As selected from manufacturer's full range of colors and color densities, as directed.

B. Underlayment Materials
1. Polyethylene Sheet: 6-mil- (0.15-mm-) thick polyethylene sheet complying with ASTM D 4397.
2. Felts: ASTM D 226, Type II (No. 30) OR Type I (No. 15), as directed, asphalt-saturated organic felts.
3. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils (0.76 to 1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   b. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F (29 deg C).
4. Slip Sheet: Building paper, 3-lb/100 sq. ft. (0.16-kg/sq. m) minimum, rosin sized.

C. Miscellaneous Materials
1. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for a complete roofing system and as recommended by fabricator for sheet metal roofing.
2. Wood Battens: Lumber complying with requirements in Division 05 Section(s) "Maintenance Of Decorative Metal" OR Division 06 Section(s) "Miscellaneous Rough Carpentry", as directed, and treated with exterior-type fire retardant.
3. Snap-On Seams: Provide snap-on seams integrated with panel-edge profile as recommended by portable roll-forming equipment manufacturer to produce sheet metal roofing assemblies that comply with UL 580 for wind-uplift resistance classification specified in “Quality Assurance” Article.

4. Snap-on Batten Caps: Provide batten clips integrated with snap-on caps as recommended by portable roll-forming equipment manufacturer to produce sheet metal roofing assemblies that comply with UL 580 for wind-uplift resistance classification specified in “Quality Assurance” Article.

5. Fasteners: Wood screws, annular-threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.
   a. General:
      1) Exposed Fasteners: Heads matching color of sheet metal roofing using plastic caps or factory-applied coating.
      2) Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
      3) Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
   b. Fasteners for Zinc-Coated OR Aluminum-Zinc Alloy-Coated, as directed, Steel Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
   c. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
   d. Fasteners for Copper OR Zinc-Tin Alloy-Coated Copper, as directed, Sheet: Copper, hardware bronze, or Series 300 stainless steel.
   e. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
   f. Fasteners for Zinc-Tin Alloy-Coated Steel OR Stainless-Steel, as directed, Sheet: Series 300 stainless steel.
   g. Fasteners for Zinc Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
   h. Fasteners for Titanium Sheet: Titanium or Series 300 stainless steel.

6. Solder:
   a. For Zinc-Coated (Galvanized) Steel: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead.
   b. For Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
   c. For Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.
   d. For Zinc-Tin Alloy-Coated Steel OR Stainless Steel OR Copper, as directed: ASTM B 32, 100 percent tin.
   e. For Zinc: ASTM B 32, 40 percent tin and 60 percent lead with low antimony, as recommended by manufacturer.

7. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.

8. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane OR polysulfide OR silicone, as directed, polymer sealant as recommended by portable roll-forming equipment manufacturer for installation indicated, as directed; low modulus; of type, grade, class, and use classifications required to seal joints in sheet metal roofing and remain watertight.

9. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

D. Accessories
1. Sheet Metal Accessories: Provide components required for a complete sheet metal roofing assembly including trim, copings, fasciae, corner units, clips, flashings, sealants, gaskets, fillers, metal closures, closure strips, and similar items. Match material and finish of sheet metal roofing unless otherwise indicated.
a. Provide accessories as recommended by portable roll-forming equipment manufacturer to produce sheet metal roofing assemblies that comply with UL 580 for wind-uplift resistance classification specified in “Quality Assurance” Article.

b. Cleats: For mechanically seaming into joints and formed from the following materials:
   1) Metallic-Coated Steel OR Aluminum, as directed, Roofing: 0.0250-inch- (0.64-mm-)
      as directed, thick stainless steel.
   2) Copper OR Zinc-Tin Alloy-Coated Copper, as directed, Roofing: 16-oz./sq. ft. (0.55-mm), as directed, copper sheet.
   3) Stainless-Steel OR Titanium, as directed, Roofing: 0.0250-inch- (0.64-mm-), as directed, thick stainless steel.
   4) Zinc-Tin Alloy-Coated Stainless-Steel OR Zinc-Tin Alloy-Coated Steel, as directed, Roofing: Manufacturer's preformed cleats or cleats fabricated from manufacturer's thickest flat-stock sheet.
   5) Zinc Roofing: Manufacturer's preformed stainless-steel cleats.

c. Clips: Minimum 0.0625-inch- (1.6-mm-) thick, stainless-steel panel clips designed to withstand negative-load requirements.

d. Backing Plates: Plates at roofing splices, fabricated from material recommended by SMACNA.

e. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible-closure strips; cut or premolded to match sheet metal roofing profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

f. Flashing and Trim: Formed from same material and with same finish as sheet metal roofing, minimum 0.018 inch (0.46 mm) thick.

2. Pipe Flashing: Premolded, EPDM pipe collar with flexible aluminum ring bonded to base.

3. Roof Curbs: Fabricated from same material and finish as sheet metal roofing, minimum thickness matching the sheet metal roofing; with bottom of skirt profiled to match roof panel profiles; with weatherproof top box and integral full-length cricket. Fabricate curb subframing of nominal 0.062-inch- (1.59-mm-) thick, angle-, C-, or Z-shaped galvanized steel or stainless-steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
   a. Insulate curbs with 1-inch- (25-mm-) thick, rigid insulation.
   b. Install wood nailers at tops of curbs.

E. Snow Guards
1. Snow Guards, General: Prefabricated, noncorrosive units designed to be installed without penetrating sheet metal roofing; complete with predrilled holes, clamps, or hooks for anchoring.

2. Surface-Mounted, Plastic, Stop-Type Snow Guards: Clear OR Integral-color, as directed, polycarbonate stops designed for attachment to panel surface of sheet metal roofing using construction adhesive, silicone or polyurethane sealant, or adhesive tape.

3. Surface-Mounted, Metal, Stop-Type Snow Guards: Cast-aluminum stops designed for attachment to panel surface of sheet metal roofing using construction adhesive, silicone or polyurethane sealant, or adhesive tape.

4. Surface-Mounted, Copper, Stop-Type Snow Guards: Bronze-alloy stops designed for attachment to panel surface of copper roofing using solder.

5. Seam-Mounted, Stop-Type Snow Guards: Cast-aluminum OR Malleable-iron OR Clear polycarbonate OR Colored polycarbonate, as directed, stops designed for attachment to vertical ribs of standing-seam sheet metal roofing with stainless-steel set screws.

6. Seam-Mounted, Bar-Type Snow Guards: Rail- or fence-type assembly consisting of aluminum or stainless-steel rods, bars, or pipe held in place by stainless-steel clamps attached to vertical ribs of standing-seam sheet metal roofing.
   a. Aluminum Finish: Mill OR Clear anodized, as directed.
   b. Stainless-Steel Finish: Mill OR Enamel, as directed.

F. Fabrication
1. General: Custom fabricate sheet metal roofing to comply with details shown and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design,
dimensions (panel width and seam height), geometry, metal thickness, and other characteristics of installation indicated. Fabricate sheet metal roofing and accessories at the shop to greatest extent possible.

a. Flat-Seam Roofing: Form flat-seam panels from metal sheets 20 by 28 inches (510 by 710 mm) with 1/2-inch (13-mm) notched and folded edges.

b. Standing-Seam Roofing: Form standing-seam panels with finished seam height of 1 inch (25 mm) OR of 1-1/2 inches (38 mm) OR as indicated, as directed.

c. Batten-Seam Roofing: Form batten-seam panels with sides turned up 2-1/8 inches (54 mm) OR as indicated, as directed, with 1/2-inch (13-mm) flange turned toward center of pan.

d. Horizontal-Seam (Bermuda-Type) Roofing: Form horizontal-seam (Bermuda-type) panels with upper edges turned up and extending above batten 1/2 inch (13 mm).

2. General: Fabricate roll-formed sheet metal roofing panels with UL-certified, portable roll-forming equipment capable of producing roofing panels for sheet metal roofing assemblies that comply with UL 580 for wind-uplift resistance classification specified in "Quality Assurance" Article. Fabricate roll-formed sheet metal according to equipment manufacturer's written instructions and to comply with details shown.

3. Fabrication Tolerances: Fabricate sheet metal roofing that is capable of installation to a tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

4. Fabrication Tolerances: Fabricate sheet metal roofing that is capable of installation to tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

5. Form exposed sheet metal work to fit substrates without excessive oil canning, buckling, and tool marks; true to line and levels indicated; and with exposed edges folded back to form hems.

a. Lay out sheet metal roofing so transverse seams, if required, are made in direction of flow with higher panels overlapping lower panels.

b. Offset transverse seams from each other 12 inches (300 mm) minimum.

c. Fold and cleat eaves and transverse seams in the shop.

d. Form and fabricate sheets, seams, strips, cleats, valleys, ridges, edge treatments, integral flashings, and other components of metal roofing to profiles, patterns, and drainage arrangements shown on Drawings and as required for leakproof construction.

6. Expansion Provisions: Fabricate sheet metal roofing to allow for expansion in running work sufficient to prevent leakage, damage, and deterioration of the Work. Where lapped expansion provisions cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.

7. Sealant Joints: Where movable, nonexpansion-type joints are indicated or required to produce weathertight seams, form metal to provide for proper installation of elastomeric sealant in compliance with SMACNA standards.

8. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by fabricator of sheet metal roofing or manufacturers of the metals in contact.

9. Sheet Metal Accessories: Custom fabricate flashings and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Obtain field measurements for accurate fit before shop fabrication.

a. Form exposed sheet metal accessories without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.

b. Seams:

   1) Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.

   OR

   Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength, as directed.

c. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant.
d. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.

e. Fabricate cleats and attachment devices of sizes as recommended by SMACNA's "Architectural Sheet Metal Manual" for application, but not less than thickness of metal being secured.

10. Do not use graphite pencils to mark metal surfaces.

1.3 EXECUTION

A. Preparation

1. Lay out and nail battens to wood sheathing OR screw battens to wood sheathing OR screw battens to metal deck, as directed, before installation of sheet metal roofing.

   a. Space fasteners not more than 18 inches (457 mm) o.c.

   b. Space fasteners as required by portable roll-forming equipment manufacturer for specified UL classification for wind-uplift resistance.

2. Zinc-Tin Alloy-Coated Steel Roofing: For roofing with 3:12 slopes or less, paint underside of shop-coated, zinc-tin alloy-coated steel, before installation, with zinc-tin alloy-coated steel primer, applied at a dry film thickness of not less than 2.5 mils (0.06 mm). Comply with manufacturer's written instructions. This is in addition to the shop coating.

B. Underlayment Installation

1. Polyethylene Sheet: Install polyethylene sheet on roof sheathing under sheet metal roofing. Use adhesive for anchorage to minimize use of mechanical fasteners under sheet metal roofing. Apply at locations indicated on Drawings, in shingle fashion to shed water, with lapped and taped joints of not less than 2 inches (50 mm).

2. Felt Underlayment: Install felt underlayment on roof sheathing under sheet metal roofing. Use adhesive for temporary anchorage to minimize use of mechanical fasteners under sheet metal roofing. Apply at locations indicated, in shingle fashion to shed water, with lapped joints of not less than 2 inches (50 mm).

   a. Apply from eave to ridge.

   OR

   Apply on roof not covered by self-adhering sheet underlayment. Lap edges of self-adhering sheet underlayment not less than 3 inches (75 mm), in shingle fashion to shed water.

3. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free, on roof sheathing under sheet metal roofing. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply over entire roof OR at locations indicated, as directed, in shingle fashion to shed water, with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps with roller. Cover underlayment within 14 days.

   a. Roof perimeter for a distance up from eaves of 24 inches (600 mm) OR 36 inches (900 mm), as directed, beyond interior wall line.

   b. Valleys, from lowest to highest point, for a distance on each side of 18 inches (460 mm). Overlap ends of sheets not less than 6 inches (150 mm).

   c. Rake edges for a distance of 18 inches (460 mm).

   d. Hips and ridges for a distance on each side of 12 inches (300 mm).

   e. Roof to wall intersections for a distance from wall of 18 inches (460 mm).

   f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of 18 inches (460 mm).

4. Install flashings to cover underlayment to comply with requirements in Division 07 Section "Sheet Metal Flashing And Trim".

5. Apply slip sheet before installing sheet metal roofing.

C. Installation, General
1. **General:** Anchor sheet metal roofing and other components of the Work securely in place, with provisions for thermal and structural movement. Install fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for a complete roofing system and as recommended by fabricator for sheet metal roofing.
   a. Field cutting of sheet metal roofing by torch is not permitted.
   b. Provide metal closures at peaks, rake edges, rake walls, eaves, and each side of ridge and hip caps, as directed.
   c. Flash and seal sheet metal roofing with closure strips at eaves, rakes, and perimeter of all openings. Fasten with self-tapping screws.
   d. Locate and space fastenings in uniform vertical and horizontal alignment. Predrill panels for fasteners.
   e. Install ridge OR ridge and hip, as directed, caps as sheet metal roofing work proceeds.
   f. Locate roofing splices over, but not attached to, structural supports. Stagger roofing splices and end laps to avoid a four-panel lap splice condition. Install backing plates at roofing splices.
   g. Install sealant tape where indicated.
   h. Lap metal flashing over sheet metal roofing to allow moisture to run over and off the material.
   i. Do not use graphite pencils to mark metal surfaces.

2. **Thermal Movement.** Rigidly fasten metal roof panels to structure at only one location for each panel. Allow remainder of panel to move freely for thermal expansion and contraction.
   a. Point of Fixity: Fasten each panel along a single line of fixing located at eave OR ridge OR center of panel length OR locations indicated on Drawings, as directed.
   b. Avoid attaching accessories through roof panels in a manner that will inhibit thermal movement.

3. **Fasteners:** Use fasteners of sizes that will penetrate wood sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws OR metal decking not less than recommended by fastener manufacturer to achieve maximum pull-out resistance, as directed.

4. **Metal Protection:** Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by SMACNA.
   a. Coat back side of uncoated aluminum and stainless-steel sheet metal roofing with bituminous coating where roofing will contact wood, ferrous metal, or cementitious construction.

5. **Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

6. **Fasciae:** Align bottom of sheet metal roofing and fasten with blind rivets, bolts, or self-tapping screws. Flash and seal sheet metal roofing with closure strips where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

D. **Custom-Fabricated Sheet Metal Roofing Installation**
1. Fabricate and install work with lines and corners of exposed units true and accurate. Form exposed faces flat and free of buckles, excessive waves, and avoidable tool marks, considering temper and reflectivity of metal. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant. Fold back sheet metal to form a hem on concealed side of exposed edges unless otherwise indicated.
   a. Install cleats to hold sheet metal panels in position. Attach each cleat with two fasteners to prevent rotation.
   b. Fasten cleats not more than 12 inches (300 mm) o.c. Bend tabs over fastener head.
   c. Provide expansion-type cleats and clips for roof panels that exceed 30 feet (9.1 m) in length.

2. Seal joints as shown and as required for watertight construction. For roofing with 3:12 slopes or less, use cleats at transverse seams.
a. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).

b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

3. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches (38 mm), except reduce pre-tinning where pre-tinned surface would show in completed Work.
   a. Do not solder metallic-coated steel OR aluminum OR titanium sheet.
   b. Do not pre-tin zinc-tin alloy-coated stainless steel OR zinc-tin alloy-coated copper.
   c. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
   e. Copper Roofing: Tin edges of uncoated copper sheets, using solder for copper.

4. Rivets: Rivet joints in uncoated aluminum OR zinc, as directed, where indicated and where necessary for strength.

5. Flat-Seam Roofing: Attach flat-seam metal panels to substrate with cleats, starting at eave and working upward toward ridge. After panels are in place, mallet seams and solder.
   a. Attach roofing panels with cleats spaced not more than 24 inches (610 mm) o.c. Lock and solder panels to base flashing.
   b. Attach edge flashing to face of roof edge with continuous cleat fastened to roof substrate at 12 inches (305 mm) o.c. Lock panels to edge flashing OR apply sealant, as directed.

6. Standing-Seam Roofing: Attach standing-seam metal panels to substrate with cleats, double fastened at 12 inches (305 mm) o.c. Install panels reaching from eave to ridge before moving to adjacent panels. Before panels are interlocked, apply continuous bead of sealant to top of flange of lower panel. Lock standing seams by folding over twice so cleat and panel edges are completely engaged.
   a. Lock each panel to panel below with soldered OR sealed, as directed, transverse seam.
   b. Loose-lock panels at eave edges to continuous cleats and flanges at roof edge at gutters. OR Loose-lock panels at eave edges to continuous edge flashing exposed 24 inches (610 mm) from roof edge. Attach edge flashing to face of roof edge with continuous cleat fastened to roof substrate at 12 inches (305 mm) o.c. Lock panels to edge flashing.
   c. Leave seams upright OR Fold over seams, as directed, after locking at ridges and hips.

7. Batten-Seam Roofing: Attach batten-seam metal panels to substrate with cleats, starting at eave and working upward toward ridge. Hold cleats in place with battens and fold edges of cleats over to hold panels. After panels are in place and before batten cap is installed, apply continuous bead of sealant to top of flanges of each panel. Install batten cap covering batten and panel edges and fold batten cap and panel together so batten cap and panel edges are completely engaged.
   a. Hook each panel to panel below with soldered OR sealed, as directed, transverse seam.
   b. Splay upturned edges of panels away from base of battens to provide expansion capability.
   c. Close batten ends with metal closures. Fold together with panel edges and end of batten cap.
   d. Loose-lock panels at eave edges to continuous cleats and flanges at roof edge at gutters. OR Loose-lock panels at eave edges to continuous edge flashing exposed 24 inches (610 mm) from roof edge. Attach edge flashing to face of roof edge with continuous cleat fastened to roof substrate at 12 inches (305 mm) o.c. Lock panels to edge flashing.

8. Horizontal-Seam (Bermuda-Type) Roofing: Attach horizontal-seam metal panels to substrate with cleats, starting at eave and working upward toward ridge. Attach cleats to battens, spaced at 8 inches (203 mm) o.c. Lock lower edge of each panel to upper edge of panel below, folding
seam over to engage cleat and panel edges. After first fold, mallet seams against batten, leaving joint slightly angled to form drip.

a. Hook end of each panel to adjacent panel with soldered OR sealed, as directed, cross seam.
b. Hook panel at eave edge to continuous cleat.
c. Join ridges and hips with a standing seam and leave seams upright OR fold over seams, as directed, after locking.

9. Field Painting: Paint exposed surfaces of zinc-tin alloy-coated steel with one coat of zinc-tin alloy-coated steel primer and one coat of zinc-tin alloy-coated steel finish coat as soon as possible after installation; apply each coat at a dry film thickness of not less than 2.5 mils (0.06 mm). Comply with manufacturer's written instructions.

E. On-Site, Roll-Formed Sheet Metal Roofing Installation

1. General: Install on-site, roll-formed sheet metal roofing fabricated from UL-certified equipment to comply with equipment manufacturer's written instructions for UL wind-uplift resistance class indicated. Provide sheet metal roofing of full length from eave to ridge unless otherwise restricted by on-site or shipping limitations.

2. Standing-Seam Sheet Metal Roofing: Fasten sheet metal roofing to supports with concealed clips at each standing-seam joint at location, at spacing, and with fasteners recommended by manufacturer of portable roll-forming equipment.
   a. Install clips to substrate with self-tapping fasteners.
   b. Install pressure plates at locations indicated in equipment manufacturer’s written installation instructions.
   c. Before panels are joined, apply continuous bead of sealant to top of flange of lower panel.
   d. Snap-On Seam: Nest standing seams and fasten together by interlocking and completely engaging field-applied sealant.

   OR

   Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so cleat, sheet metal roofing, and field-applied sealant are completely engaged.

3. Batten-Seam Sheet Metal Roofing: Fasten sheet metal roofing to supports with concealed clips at each batten-seam joint at location, at spacing, and with fasteners recommended by manufacturer of portable roll-forming equipment.
   a. Install clips to substrate with self-drilling fasteners.
   b. After panels are in place and before batten cap is installed, apply continuous bead of sealant to top of flange of each panel.
   c. Apply snap-on batten caps to sheet metal roofing seams, fully engaged to provide weathertight joints.

4. Seal joints as shown and as required for watertight construction. For roofing with 3:12 slopes or less, use cleats at transverse seams.
   a. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
   b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

F. Accessory Installation

1. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
   a. Install components required for a complete sheet metal roofing assembly including trim, copings, seam covers, flashings, sealants, gaskets, fillers, metal closures, closure strips, and similar items.
   b. Install accessories integral to sheet metal roofing that are specified in Division 07 Section "Sheet Metal Flashing And Trim" to comply with that Section's requirements.
2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   a. Install flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers.
   b. Install continuous strip of self-adhering underlayment at edge of continuous flashing overlapping self-adhering underlayment, where "continuous seal strip" is indicated in SMACNA's "Architectural Sheet Metal Manual," and where indicated on Drawings.
   c. Install exposed flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
   d. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, and filled with butyl sealant concealed within joints.

3. Pipe Flashing: Form flashing around pipe penetration and sheet metal roofing. Fasten and seal to sheet metal roofing as recommended by SMACNA.

4. Roof Curbs: Install curbs at locations indicated on Drawings. Install flashing around bases where they meet sheet metal roofing.

5. Stop-Type Snow Guards: Attach snow guards to sheet metal roofing with adhesive or adhesive tape, as recommended by manufacturer. Do not use fasteners that will penetrate sheet metal roofing.
   a. Provide rows of snow guards, at locations indicated on Drawings, spaced apart, beginning up from roof edge at gutter, with each snow guard centered between sheet metal roofing ribs, as directed.

6. Bar-Type Snow Guards: Attach bar supports to vertical ribs of standing-seam sheet metal roofing with clamps or set screws. Do not use fasteners that will penetrate sheet metal roofing.
   a. Provide rows of snow guards, at locations indicated on Drawings, spaced apart, beginning up from roof edge at gutter.

G. Erection Tolerances
1. Installation Tolerances: Shim and align sheet metal roofing within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.
   OR
   Installation Tolerances: Shim and align sheet metal roofing within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

H. Cleaning And Protection
1. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
2. Clean and neutralize flux materials. Clean off excess solder.
3. Clean off excess sealants.
4. Remove temporary protective coverings and strippable films as sheet metal roofing is installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal roofing installation, clean finished surfaces as recommended by sheet metal roofing manufacturer. Maintain sheet metal roofing in a clean condition during construction.
5. Replace sheet metal roofing components that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for glazing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
   a. Windows.
   b. Doors.
   c. Glazed curtain walls.
   d. Storefront framing.
   e. Glazed entrances.
   f. Sloped glazing.
   g. Skylights.
   h. Interior borrowed lites.

C. Definitions
1. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
2. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
3. Interspace: Space between lites of an insulating-glass unit.

D. Performance Requirements
1. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
2. Delegated Design: Design glass, including comprehensive engineering analysis according to ASTM E 1300 OR ICC’s 2003 International Building Code, as directed, by a qualified professional engineer, using the following design criteria:
   a. Design Wind Pressures: As indicated on Drawings.
   b. Design Snow Loads: As indicated on Drawings, as directed.
   c. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
   d. Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist each of the following combinations of loads:
      1) Outward design wind pressure minus the weight of the glass. Base design on glass type factors for short-duration load.
      2) Inward design wind pressure plus the weight of the glass plus half of the design snow load. Base design on glass type factors for short-duration load.
3) Half of the inward design wind pressure plus the weight of the glass plus the design snow load. Base design on glass type factors for long-duration load.

e. Glass Type Factors for Wired, Patterned, and Sandblasted Glass:
   1) Short-Duration Glass Type Factor for Wired Glass: 0.5.
   2) Long-Duration Glass Type Factor for Wired Glass: 0.3.
   3) Short-Duration Glass Type Factor for Patterned Glass: 1.0.
   4) Long-Duration Glass Type Factor for Patterned Glass: 0.6.
   5) Short-Duration Glass Type Factor for Sandblasted Glass: 0.5.

f. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.

g. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.

h. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.

i. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
   a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Preconstruction Testing

1. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
   a. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
   b. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
   c. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
   d. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
   e. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

F. Submittals

1. Product Data: For each glass product and glazing material indicated.

2. LEED Submittals:
   a. Product Data for Credit EQ 4.1: For glazing sealants used inside of the weatherproofing system, including printed statement of VOC content.

3. Glass Samples: For each type of glass product other than clear monolithic vision glass OR the following products, as directed; 12 inches (300 mm) square.
   a. Tinted glass.
   b. Patterned glass.
   c. Coated glass.
   d. Wired glass.
   e. Fire-resistive glazing products.
   f. Laminated glass with colored interlayer.
   g. Insulating glass.

4. Glazing Accessory Samples: For gaskets, sealants and colored spacers, in 12-inch (300-mm) lengths. Install sealant Samples between two strips of material representative in color of the adjoining framing system, as directed.

5. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
6. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

7. Qualification Data: For installers, manufacturers of insulating-glass units with sputter-coated, low-e coatings, glass testing agency and sealant testing agency.

8. Product Certificates: For glass and glazing products, from manufacturer.

9. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for tinted glass, coated glass, insulating glass, glazing sealants and glazing gaskets.
   a. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

10. Preconstruction adhesion and compatibility test report.

G. Quality Assurance

1. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved and certified, as directed, by coated-glass manufacturer.

2. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

3. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

4. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

5. Source Limitations for Glass: Obtain ultraclear float glass, tinted float glass, coated float glass, laminated glass and insulating glass from single source from single manufacturer for each glass type.

6. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

7. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

8. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC OR the SGCC or another certification agency acceptable to authorities having jurisdiction OR the manufacturer, as directed. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

9. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F (250 deg C), and the fire-resistance rating in minutes.

10. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

H. Delivery, Storage, And Handling

1. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
2. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

I. Project Conditions
1. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
   a. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

J. Warranty
1. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
   a. Warranty Period: 10 years from date of Final Completion.
2. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
   a. Warranty Period: Five OR 10, as directed, years from date of Final Completion.
3. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
   a. Warranty Period: 10 years from date of Final Completion.

1.2 PRODUCTS

A. Glass Products, General
1. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
   a. Minimum Glass Thickness for Exterior Lites: Not less than 6.0 mm.
   b. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
2. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article, as directed. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article, as directed. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.
3. Windborne-Debris-Impact Resistance: Provide exterior glazing that passes basic OR enhanced, as directed,-protection testing requirements in ASTM E 1996 for Wind Zone 1 OR Wind Zone 2 OR Wind Zone 3 OR Wind Zone 4, as directed, when tested according to ASTM E 1886. Test specimens shall be no smaller in width and length than glazing indicated for use on the Project and shall be installed in same manner as glazing indicated for use on the Project.
   a. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
   b. Small-Missile Test: For glazing located more than 30 feet (9.1 m) above grade.
OR
Large-Missile Test: For all glazing, regardless of height above grade.

4. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
   a. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick OR of thickness indicated, as directed.
   b. For laminated-glass lites, properties are based on products of construction indicated.
   c. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
   d. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
   e. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
   f. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

B. Glass Products

1. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.
2. Ultra-clear Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I, complying with other requirements specified and with visible light transmission not less than 91 percent and solar heat gain coefficient not less than 0.87, as directed.
3. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
   a. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
   b. For uncoated glass, comply with requirements for Condition A.
   c. For coated vision glass, comply with requirements for Condition C (other coated glass).
4. Pyrolytic-Coated, Self-Cleaning, Low-Maintenance Glass: Clear float glass with a coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.
5. Uncoated Tinted Float Glass: Class 2, complying with other requirements specified.
   a. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   b. Visible Light Transmittance: as directed by the Owner.
6. Polished Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 1, Quality-Q6, complying with ANSI Z97.1, Class C.
   a. Mesh: M1 (diamond) OR M2 (square), as directed.
7. Film-Faced Polished Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 1, Quality-Q6 and complying with testing requirements in 16 CFR 1201 for Category II materials.
   a. Mesh: M1 (diamond) OR M2 (square), as directed.
8. Patterned Glass: ASTM C 1036, Type II, Class 1 (clear), Form 3: Quality-Q6, Finish F1 (patterned one side) OR Finish F2 (patterned both sides), as directed, Pattern P1 (linear) OR Pattern P2 (geometric) OR Pattern P3 (random) OR Pattern P4 (special), as directed.
9. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3; Quality-Q6, Finish F1 (patterned one side) OR Finish F2 (patterned both sides), as directed, Pattern P1 (linear) OR Pattern P2 (geometric) OR Pattern P3 (random) OR Pattern P4 (special), as directed.
10. Patterned Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 2, Quality-Q6, Finish F1 (patterned one side) OR Finish F2 (patterned both sides), as directed, Mesh M1 (diamond), Pattern P1 (linear) OR Pattern P2 (geometric) OR Pattern P3 (random) OR Pattern P4 (special), as directed.
   a. Glass: Clear float OR Ultra-clear float OR Tinted float, as directed.
   b. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   c. Ceramic Coating Color and Pattern: As selected from manufacturer's full range.
12. Reflective-Coated Vision Glass: ASTM C 1376, coated by pyrolytic process OR vacuum deposition (sputter-coating) process, as directed, and complying with other requirements specified.
   a. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
   b. Coating Color: Gold OR Pewter OR Silver, as directed.
   c. Glass: Clear float OR Tinted float, as directed.
   d. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   e. Visible Light Transmittance:
   f. Outdoor Visible Reflectance: as directed by the Owner.
   g. Self-Cleaning, Low-Maintenance Coating: Pyrolytic coating on first surface.

13. Ceramic-Coated Spandrel Glass: ASTM C 1048, Condition B, Type I, Quality-Q3, and complying with other requirements specified.
   a. Glass: Clear float OR Ultraclear float OR Tinted float, as directed.
   b. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   c. Ceramic Coating Color: As selected from manufacturer’s full range.

14. Silicone-Coated Spandrel Glass: ASTM C 1048, Condition C, Type I, Quality-Q3, and complying with other requirements specified.
   a. Glass: Clear float OR Ultraclear float OR Tinted float, as directed.
   b. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   c. Silicone Coating Color: As selected from manufacturer’s full range.

15. Reflective-Coated Spandrel Glass: ASTM C 1376, Kind CS; coated by pyrolytic process OR vacuum deposition (sputter-coating) process, as directed, and complying with other requirements specified.
   a. Coating Color: Gold OR Pewter OR Silver, as directed.
   b. Glass: Clear float OR Ultraclear float OR Tinted float, as directed.
   c. Tint Color: Blue OR Blue-green OR Bronze OR Green OR Gray, as directed.
   d. Visible Light Transmittance: as directed by the Owner.
   e. Outdoor Visible Reflectance: as directed by the Owner.

C. Laminated Glass
   1. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
      a. Construction: Laminate glass with polyvinyl butyral interlayer or cast-in-place and cured-transparent-resin interlayer to comply with interlayer manufacturer’s written recommendations.
      b. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
      c. Interlayer Color: Clear unless otherwise indicated.
   2. Windborne-Debris-Impact-Resistant Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, with “Windborne-Debris-Impact Resistance” Paragraph in "Glass Products, General" Article, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
      a. Construction: Laminate glass with one of the following to comply with interlayer manufacturer's written recommendations:
         1) Polyvinyl butyral interlayer.
         2) Polyvinyl butyral interlayers reinforced with polyethylene terephthalate film.
         3) Ionoplast interlayer.
         4) Cast-in-place and cured-transparent-resin interlayer.
      b. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
c. Interlayer Color: Clear unless otherwise indicated.

3. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Laminated-Glass Types" Article.

D. Insulating Glass
1. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
   a. Sealing System: Dual seal, with manufacturer's standard OR polyisobutylene and polysulfide OR polyisobutylene and silicone OR polyisobutylene and hot-melt butyl OR polyisobutylene and polyurethane, as directed, primary and secondary.
   b. Spacer: Manufacturer's standard spacer material and construction OR Aluminum with mill or clear anodic finish OR Aluminum with black, color anodic finish OR Aluminum with bronze, color anodic finish OR Aluminum with powdered metal paint finish in color selected OR Galvanized steel OR Stainless steel OR Polypropylene covered stainless steel in color selected OR Thermally broken aluminum OR Nonmetallic laminate OR Nonmetallic tube, as directed.
   c. Desiccant: Molecular sieve or silica gel, or blend of both.
2. Glass: Comply with applicable requirements in "Glass Products" Article and in "Laminated Glass" Article, as directed, as indicated by designations in "Insulating-Glass Types" Article and in "Insulating-Laminated-Glass Types" Article, as directed.

E. Fire-Protection-Rated Glazing
1. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.
2. Monolithic Ceramic Glazing: Clear, ceramic flat glass; 3/16-inch (5-mm) nominal thickness.
3. Film-Faced Ceramic Glazing: Clear, ceramic flat glass; 3/16-inch (5-mm) nominal thickness; faced on one surface with a clear glazing film; complying with testing requirements in 16 CFR 1201 for Category II materials.
4. Laminated Ceramic Glazing: Laminated glass made from 2 plies of clear, ceramic flat glass; 5/16-inch (8-mm) total nominal thickness; complying with testing requirements in 16 CFR 1201 for Category II materials.
5. Fire-Protection-Rated Tempered Glass: 1/4-inch- (6.4-mm-) OR 3/8-inch- (9.5-mm-) OR 1/2-inch- (12.7-mm-), as directed, thick, fire-protection-rated tempered glass, complying with testing requirements in 16 CFR 1201 for Category II materials.
7. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, clear float glass; with intumescent interlayers; complying with testing requirements in 16 CFR 1201 for Category II materials.
8. Gel-Filled, Double Glazing Units: Double glazing units made from two lites of uncoated, clear, fully tempered float glass; with a perimeter metal spacer separating lites and dual-edge seal enclosing a cavity filled with clear, fully transparent, heat-absorbing gel; complying with testing requirements in 16 CFR 1201 for Category II materials.

F. Glazing Gaskets
1. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:
   b. EPDM complying with ASTM C 864.
   c. Silicone complying with ASTM C 1115.
   d. Thermoplastic polyolefin rubber complying with ASTM C 1115.
2. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM, silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
a. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

3. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

G. Glazing Sealants
1. General:
   a. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
   b. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
   c. VOC Content: For sealants used inside of the weatherproofing system, not more than 250 g/L when calculated according to 40 CFR 59, Subpart D.
   d. Colors of Exposed Glazing Sealants: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

2. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

3. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.

4. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.

5. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.

6. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

H. Glazing Tapes
1. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
   a. AAMA 804.3 tape, where indicated.
   b. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
   c. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
   a. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
   b. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

I. Miscellaneous Glazing Materials
1. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

2. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

3. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

4. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

5. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
6. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

7. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

J. Fabrication Of Glazing Units
1. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
2. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
3. Grind smooth and polish exposed glass edges and corners.

K. Monolithic-Glass Types
1. Glass Type: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Provide safety glazing labeling.
2. Glass Type: Ultraclear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Provide safety glazing labeling.
3. Glass Type: Pyrolytic-coated, self-cleaning, low-maintenance, clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Provide safety glazing labeling.
4. Glass Type: Tinted float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Winter Nighttime U-Factor: as directed by the Owner.
   c. Summer Daytime U-Factor: as directed by the Owner.
   d. Solar Heat Gain Coefficient: as directed by the Owner.
   e. Provide safety glazing labeling.
5. Glass Type: Polished wired glass.
   a. Thickness: 6.0 mm.
   a. Thickness: 4.0 OR 5.0 OR 6.0, as directed, mm.
7. Glass Type: Tempered patterned glass.
   a. Thickness: 4.0 OR 5.0 OR 6.0, as directed, mm.
   b. Provide safety glazing labeling.
8. Glass Type: Patterned wired glass.
   a. Thickness: 6.0 mm.
9. Glass Type: Ceramic-coated vision glass, heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Coating Location: Second surface.
   c. Winter Nighttime U-Factor: as directed by the Owner.
   d. Summer Daytime U-Factor: as directed by the Owner.
   e. Solar Heat Gain Coefficient: as directed by the Owner.
   f. Provide safety glazing labeling.
10. Glass Type: Reflective-coated vision glass, float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
    a. Thickness: 6.0 mm.
    b. Coating Location: First OR Second, as directed, surface.
    c. Winter Nighttime U-Factor: as directed by the Owner.
d. Summer Daytime U-Factor: as directed by the Owner.
e. Solar Heat Gain Coefficient: as directed by the Owner.
f. Provide safety glazing labeling.

11. Glass Type: Ceramic-coated spandrel glass, heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Coating Location: Second surface.
   c. Winter Nighttime U-Factor: as directed by the Owner.
   d. Summer Daytime U-Factor: as directed by the Owner.
   e. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.

12. Glass Type: Silicone-coated spandrel glass, heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Coating Location: Second surface.
   c. Winter Nighttime U-Factor: as directed by the Owner.
   d. Summer Daytime U-Factor: as directed by the Owner.
   e. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.
   f. Factory apply manufacturer's standard opacifier of the following material to coated second surface of lites, with resulting products complying with Specification No. 89-1-6 in GANA's Tempering Division's "Engineering Standards Manual":
      1) Manufacturer's standard opacifier material.
         OR
         Polyester film laminated to glass with solvent-based adhesive.

13. Glass Type: Reflective-coated spandrel glass, heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness: 6.0 mm.
   b. Coating Location: First OR Second, as directed, surface.
   c. Winter Nighttime U-Factor: as directed by the Owner.
   d. Summer Daytime U-Factor: as directed by the Owner.
   e. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.
   f. Factory apply manufacturer's standard opacifier of the following material to coated second surface of lites, with resulting products complying with Specification No. 89-1-6 in GANA's Tempering Division's "Engineering Standards Manual":
      1) Manufacturer's standard opacifier material.
         OR
         Polyester film laminated to glass with solvent-based adhesive.

L. Laminated-Glass Types

1. Glass Type: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass OR ultraclear float glass OR ultraclear heat-strengthened float glass OR ultraclear fully tempered float glass, as directed.
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Provide safety glazing labeling.

2. Glass Type: Antireflective-coated clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass OR ultraclear float glass OR ultraclear heat-strengthened float glass OR ultraclear fully tempered float glass, as directed.
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Visible Reflectance: Less than 2 percent.
   d. Winter Nighttime U-Factor: as directed by the Owner.
   e. Summer Daytime U-Factor: as directed by the Owner.
   f. Solar Heat Gain Coefficient: as directed by the Owner.
   g. Provide safety glazing labeling.
3. Glass Type: Tinted laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed, with outer ply Class 2 (tinted) and inner ply Class 1 (clear).
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Winter Nighttime U-Factor: as directed by the Owner.
   d. Summer Daytime U-Factor: as directed by the Owner.
   e. Solar Heat Gain Coefficient: as directed by the Owner.
   f. Provide safety glazing labeling.

4. Glass Type: Tinted laminated glass with two plies of clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed, and tinted interlayer.
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Interlayer Color: Blue-green OR Bronze light OR Gray, as directed.
   d. Winter Nighttime U-Factor: as directed by the Owner.
   e. Summer Daytime U-Factor: as directed by the Owner.
   f. Solar Heat Gain Coefficient: as directed by the Owner.
   g. Provide safety glazing labeling.

5. Glass Type: Ceramic-coated, laminated vision glass with two plies of heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Coating Location: Second OR Third OR Fourth, as directed, surface.
   d. Winter Nighttime U-Factor: as directed by the Owner.
   e. Summer Daytime U-Factor: as directed by the Owner.
   f. Solar Heat Gain Coefficient: as directed by the Owner.
   g. Provide safety glazing labeling.

6. Glass Type: Reflective-coated, laminated vision glass with two plies of heat-strengthened float glass OR fully tempered float glass, as directed, with inner ply Class 1 (clear).
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   c. Coating Location: First OR Second OR Third, as directed, surface.
   d. Winter Nighttime U-Factor: as directed by the Owner.
   e. Summer Daytime U-Factor: as directed by the Owner.
   f. Solar Heat Gain Coefficient: as directed by the Owner.
   g. Provide safety glazing labeling.

7. Glass Type: Low-e-coated, laminated vision glass with two plies of clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

c. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.

d. Visible Light Transmittance: as directed by the Owner.

e. Winter Nighttime U-Factor: as directed by the Owner.

f. Summer Daytime U-Factor: as directed by the Owner.

i. Solar Heat Gain Coefficient: as directed by the Owner.

k. Provide safety glazing labeling.

8. Glass Type: Reflective-coated, laminated spandrel glass with two plies of heat-strengthened float glass OR fully tempered float glass, as directed, with inner ply Class 1 (clear).

a. Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.

b. Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

C. Coating Location: First OR Second OR Third, as directed, surface.

d. Winter Nighttime U-Factor: as directed by the Owner.

e. Summer Daytime U-Factor: as directed by the Owner.

i. Provide safety glazing labeling.

M. Insulating-Glass Types

1. Glass Type: Clear insulating glass.

a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.

b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.

c. Outdoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass, as directed.

d. Interspace Content: Air OR Argon, as directed.

e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass, as directed.

f. Winter Nighttime U-Factor: as directed by the Owner.

g. Summer Daytime U-Factor: as directed by the Owner.

i. Provide safety glazing labeling.

2. Glass Type: Ultraclear insulating glass.

a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.

b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.

c. Outdoor Lite: Ultraclear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.

d. Interspace Content: Air OR Argon, as directed.

e. Indoor Lite: Ultraclear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.

f. Winter Nighttime U-Factor: as directed by the Owner.

g. Summer Daytime U-Factor: as directed by the Owner.

i. Provide safety glazing labeling.

a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.

b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.

c. Outdoor Lite: Pyrolytic-coated, self-cleaning, low-maintenance, clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.

d. Interspace Content: Air OR Argon, as directed.
e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass, as directed.

f. Winter Nighttime U-Factor: as directed by the Owner.

g. Summer Daytime U-Factor: as directed by the Owner.

h. Provide safety glazing labeling.

4. Glass Type: Low-e-coated, clear insulating glass.
   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
   f. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.
   g. Visible Light Transmittance: as directed by the Owner.
   h. Winter Nighttime U-Factor: as directed by the Owner.
   i. Summer Daytime U-Factor: as directed by the Owner.
   j. Solar Heat Gain Coefficient: as directed by the Owner.
   k. Provide safety glazing labeling.

5. Glass Type: Tinted insulating glass.
   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Tinted float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   f. Winter Nighttime U-Factor: as directed by the Owner.
   g. Summer Daytime U-Factor: as directed by the Owner.
   h. Solar Heat Gain Coefficient: as directed by the Owner.
   i. Provide safety glazing labeling.

   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Tinted float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   f. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.
   g. Visible Light Transmittance: as directed by the Owner.
   h. Winter Nighttime U-Factor: as directed by the Owner.
   i. Summer Daytime U-Factor: as directed by the Owner.
   j. Solar Heat Gain Coefficient: as directed by the Owner.
   k. Provide safety glazing labeling.

7. Glass Type: Ceramic-coated, insulating vision glass.
   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
f. Coating Location: Second OR Third OR Fourth, as directed, surface.
g. Winter Nighttime U-Factor: as directed by the Owner.
h. Summer Daytime U-Factor: as directed by the Owner.
i. Solar Heat Gain Coefficient: as directed by the Owner.
j. Provide safety glazing labeling.

8. Glass Type: Reflective-coated, clear insulating glass.
   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   f. Coating Location: First OR Second OR Third, as directed, surface.
   g. Winter Nighttime U-Factor: as directed by the Owner.
   h. Summer Daytime U-Factor: as directed by the Owner.
   i. Solar Heat Gain Coefficient: as directed by the Owner.
   j. Provide safety glazing labeling.

   a. Overall Unit Thickness: 1 inch (25 mm) OR 5/8 inch (16 mm), as directed.
   b. Thickness of Each Glass Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Tinted float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   f. Coating Location: First OR Second OR Third, as directed, surface.
   g. Winter Nighttime U-Factor: as directed by the Owner.
   h. Summer Daytime U-Factor: as directed by the Owner.
   i. Solar Heat Gain Coefficient: as directed by the Owner.
   j. Provide safety glazing labeling.

10. Glass Type: Ceramic-coated OR Silicone-coated, as directed, insulating spandrel glass.
    a. Overall Unit Thickness: 1 inch (25 mm).
    b. Thickness of Each Glass Lite: 5.0 mm OR 6.0 mm, as directed.
    c. Outdoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
    d. Interspace Content: Air OR Argon, as directed.
    e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
    f. Coating Location: Fourth surface.
    g. Winter Nighttime U-Factor: as directed by the Owner.
    h. Summer Daytime U-Factor: as directed by the Owner.

11. Glass Type: Ceramic-coated OR Silicone-coated, as directed, low-e, insulating spandrel glass.
    a. Overall Unit Thickness: 1 inch (25 mm).
    b. Thickness of Each Glass Lite: 5.0 mm OR 6.0 mm, as directed.
    c. Outdoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
    d. Interspace Content: Air OR Argon, as directed.
    e. Indoor Lite: Float glass OR Heat-strengthened float glass OR Fully tempered float glass OR Ultraclear float glass OR Ultraclear heat-strengthened float glass OR Ultraclear fully tempered float glass, as directed.
    f. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.
    g. Opaque Coating Location: Fourth surface.
h. Winter Nighttime U-Factor: as directed by the Owner.
i. Summer Daytime U-Factor: as directed by the Owner.

12. Glass Type: Ceramic-coated OR Silicone-coated, as directed, tinted, insulating spandrel glass.
   a. Overall Unit Thickness: 1 inch (25 mm).
   b. Thickness of Each Glass Lite: 5.0 mm OR 6.0 mm.
   c. Outdoor Lite: Tinted float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   f. Coating Location: Fourth surface.
   g. Winter Nighttime U-Factor: as directed by the Owner.
   h. Summer Daytime U-Factor: as directed by the Owner.

N. Insulating-Laminated-Glass Types
1. Glass Type: Clear insulating laminated glass.
   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm) OR 3/4 inch (19 mm), as directed.
   b. Thickness of Outdoor Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Heat-strengthened float glass OR Fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
      1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
      2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   f. Winter Nighttime U-Factor: as directed by the Owner.
   g. Summer Daytime U-Factor: as directed by the Owner.
   h. Solar Heat Gain Coefficient: as directed by the Owner.
i. Provide safety glazing labeling.

2. Glass Type: Low-e-coated, clear insulating laminated glass.
   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm) OR 3/4 inch (19 mm), as directed.
   b. Thickness of Outdoor Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Heat-strengthened float glass OR Fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
      1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
      2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.
   f. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.
   g. Visible Light Transmittance: as directed by the Owner.
   h. Winter Nighttime U-Factor: as directed by the Owner.
i. Summer Daytime U-Factor: as directed by the Owner.
j. Solar Heat Gain Coefficient: as directed by the Owner.
k. Provide safety glazing labeling.

3. Glass Type: Tinted, insulating laminated glass.
   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm) OR 3/4 inch (19 mm), as directed.
   b. Thickness of Outdoor Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Tinted heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
   1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
   2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

f. Winter Nighttime U-Factor: as directed by the Owner.

g. Summer Daytime U-Factor: as directed by the Owner.

h. Solar Heat Gain Coefficient: as directed by the Owner.

i. Provide safety glazing labeling.

   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm) OR 3/4 inch (19 mm), as directed.
   b. Thickness of Outdoor Lite: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm, as directed.
   c. Outdoor Lite: Tinted heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
      1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
      2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

f. Low-E Coating: Pyrolytic on second OR Pyrolytic on third OR Sputtered on second OR Sputtered on third OR Pyrolytic or sputtered on second or third, as directed, surface.

g. Visible Light Transmittance: as directed by the Owner.

h. Winter Nighttime U-Factor: as directed by the Owner.

i. Summer Daytime U-Factor: as directed by the Owner.

j. Solar Heat Gain Coefficient: as directed by the Owner.

k. Provide safety glazing labeling.

5. Glass Type: Reflective-coated, clear, insulating laminated glass.

   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm), as directed.
   b. Thickness of Outdoor Lite: 6.0 mm.
   c. Outdoor Lite: Clear heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
      1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
      2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

f. Coating Location: First OR Second OR Third, as directed, surface.

g. Winter Nighttime U-Factor: as directed by the Owner.

h. Summer Daytime U-Factor: as directed by the Owner.

i. Solar Heat Gain Coefficient: as directed by the Owner.

j. Provide safety glazing labeling.

   a. Overall Unit Thickness: 1-3/16 inch (30 mm) OR 1 inch (25 mm), as directed.
   b. Thickness of Outdoor Lite: 6.0 mm.
   c. Outdoor Lite: Tinted heat-strengthened float glass OR fully tempered float glass, as directed.
   d. Interspace Content: Air OR Argon, as directed.
   e. Indoor Lite: Clear laminated glass with two plies of float glass OR heat-strengthened float glass OR fully tempered float glass, as directed.
      1) Thickness of Each Glass Ply: 3.0 mm OR 4.0 mm OR 5.0 mm OR 6.0 mm OR As indicated, as directed.
2) Interlayer Thickness: 0.030 inch (0.76 mm) OR 0.060 inch (1.52 mm) OR 0.090 inch (2.29 mm), as directed.

f. Coating Location: First OR Second OR Third, as directed, surface.

g. Winter Nighttime U-Factor: as directed by the Owner.

h. Summer Daytime U-Factor: as directed by the Owner.

i. Solar Heat Gain Coefficient: as directed by the Owner.

j. Provide safety glazing labeling.

O. Fire-Protection-Rated Glazing Types

1. Glass Type: 20-minute fire-rated glazing without hose-stream test; monolithic ceramic glazing OR film-faced ceramic glazing OR laminated ceramic glazing OR fire-protection-rated tempered glass OR fire-protection-rated laminated glass OR gel-filled, double glazing units, as directed.

   a. Provide safety glazing labeling.

2. Glass Type: 20-minute fire-rated glazing with hose-stream test; monolithic ceramic glazing OR film-faced ceramic glazing OR laminated ceramic glazing OR gel-filled, double glazing units, as directed.

   a. Provide safety glazing labeling.

3. Glass Type: 45-minute OR 60-minute OR 90-minute OR 120-minute, as directed, fire-rated glazing; monolithic ceramic glazing OR film-faced ceramic glazing OR laminated ceramic glazing OR laminated glass with intumescent interlayers OR gel-filled, double glazing units, as directed.

   a. Provide safety glazing labeling.

4. Glass Type: 45-minute OR 60-minute OR 90-minute OR 120-minute, as directed, fire-rated glazing with 450 deg F (250 deg C) temperature rise limitation; laminated glass with intumescent interlayers OR gel-filled, double glazing units, as directed.

   a. Provide safety glazing labeling.

1.3 EXECUTION

A. Examination

1. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

   a. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.

   b. Presence and functioning of weep systems.

   c. Minimum required face and edge clearances.

   d. Effective sealing between joints of glass-framing members.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

1. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

2. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

C. Glazing, General

1. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

2. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

3. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
4. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
5. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
6. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
7. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).
   a. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
   b. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
8. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
9. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
10. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
11. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
12. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

D. Tape Glazing
1. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
2. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
3. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
4. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
5. Do not remove release paper from tape until right before each glazing unit is installed.
6. Apply heel bead of elastomeric sealant.
7. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
8. Apply cap bead of elastomeric sealant over exposed edge of tape.

E. Gasket Glazing (Dry)
1. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
2. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
3. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
4. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to...
produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

5. Install gaskets so they protrude past face of glazing stops.

F. Sealant Glazing (Wet)
1. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
2. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
3. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

G. Lock-Strip Gasket Glazing
1. Comply with ASTM C 716 and gasket manufacturer's written instructions. Provide supplementary wet seal and weep system unless otherwise indicated.

H. Cleaning And Protection
1. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
2. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
3. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
4. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
5. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Final Completion. Wash glass as recommended in writing by glass manufacturer.

SECTION 07 42 93 00 - SIDING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for siding. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Aluminum, Fiber-cement, and Vinyl siding.
   b. Aluminum, Fiber-cement, and Vinyl soffit.

C. Submittals
1. Product Data: For each type of product indicated.
   a. For vinyl siding, include VSI's official certification logo printed on product data.
2. Samples: For siding and soffit including related accessories.
3. Qualification Data: For qualified vinyl siding Installer.
4. Product certificates.
5. Product test reports.
6. Research/evaluation reports
7. Maintenance data.
8. Warranty: Sample of special warranty.

D. Quality Assurance
1. Labeling: Provide fiber-cement siding that is tested and labeled according to ASTM C 1186 by a qualified testing agency acceptable to authorities having jurisdiction.
2. Vinyl Siding Installer Qualifications: A qualified installer who employs a VSI-Certified Installer on Project.
3. Vinyl Siding Certification Program: Provide vinyl siding products that are listed in VSI's list of certified products.
4. Source Limitations: Obtain each type, color, texture, and pattern of siding and soffit, including related accessories, from single source from single manufacturer.
5. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling
1. Store materials in a dry, well-ventilated, weathertight place.

F. Warranty
1. Special Warranty: Standard form in which manufacturer agrees to repair or replace siding and/or soffit that fail(s) in materials or workmanship within 10 OR 25 OR 50, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Aluminum Siding
1. General: Formed and coated aluminum siding complying with AAMA 1402.
2. Horizontal Pattern: 8-inch (203-mm) exposure in plain, single-board OR beaded-edge, single-board OR plain, double-board, 4-inch (102-mm), as directed, style.
3. Horizontal Pattern: 10-inch (254-mm) exposure in plain, OR Dutch-lap, as directed, double, 5-inch (127-mm) board style.
4. Vertical Pattern: 12-inch (300-mm) exposure in board-and-batten, single-board style.
5. Vertical Pattern: 16-inch (400-mm) exposure in V-grooved, triple, 5-1/3-inch (135-mm) board style.
6. Texture: Smooth OR Wood grain, as directed.
7. Nominal Thickness: 0.019 inch (0.5 mm) OR 0.024 inch (0.6 mm), as directed.
8. Insulation: Manufacturer's standard integral insulation panels.
9. Finish: Manufacturer's standard three-coat PVDF OR primer and baked-on acrylic OR primer and baked-on polyester, as directed.
   a. Colors: As selected by the Owner from manufacturer's full range of industry colors.

B. Fiber-Cement Siding
1. General: ASTM C 1186, Type A, Grade II, fiber-cement board, noncombustible when tested according to ASTM E 136; with a flame-spread index of 25 or less when tested according to ASTM E 84.
   a. Horizontal Pattern: Boards 5-1/4 inches (133 mm) OR 6-1/4 to 6-1/2 inches (159 to 165 mm) OR 7-1/4 to 7-1/2 inches (184 to 190 mm) OR 8-1/4 to 8-1/2 inches (210 to 216 mm) OR 9-1/4 to 9-1/2 inches (235 to 241 mm), as directed, wide in plain OR beaded-edge, as directed, style.
   1) Texture: Smooth OR Rough sawn OR Wood grain, as directed.
   b. Vertical Pattern: 48-inch- (1200-mm-) wide sheets with wood-grain texture and grooves 8 inches (203 mm) OR 12 inches (300 mm), as directed, o.c.
   c. Shingle Pattern: 48-inch- (1200-mm-) wide, straight-edge notched OR staggered-edge notched, as directed, sheets with wood-grain texture.
   d. Panel Texture: 48-inch- (1200-mm-) wide sheets with smooth OR stucco OR wood-grain, as directed, texture.
   e. Factory Priming: Manufacturer's standard acrylic primer.

C. Vinyl Siding
2. Horizontal Pattern: 6-1/2- or 7-inch (165- or 178-mm) exposure in beaded-edge, single-board style.
3. Horizontal Pattern: 8-inch (203-mm) exposure in plain, single-board OR double board, 4-inch (102-mm) OR triple board, 2-2/3-inch (68-mm), as directed, style.
4. Horizontal Pattern: 8-inch (203-mm) exposure in Dutch-lap, double, 4-inch (102-mm) board style.
5. Horizontal Pattern: 9-inch (229-mm) exposure in plain, double board, 4-1/2-inch (114-mm) OR triple board, 3-inch (76-mm), as directed, style.
6. Horizontal Pattern: 9-inch (229-mm) exposure in Dutch-lap, double, 4-1/2-inch (114-mm) board style.
7. Horizontal Pattern: 10-inch (254-mm) exposure in plain, OR Dutch-lap, as directed, double, 5-inch (127-mm) board style.
8. Vertical Pattern: 6-inch (152-mm) exposure in V-grooved, single-board style.
9. Vertical Pattern: 8-inch (203-mm) exposure in beaded-edge, double, 4-inch (102-mm) board style.
10. Vertical Pattern: 10-inch (254-mm) exposure in V-grooved, double, 5-inch (127-mm) board style.
11. Vertical Pattern: 12-inch (300-mm) exposure in V-grooved, double board, 6-inch (152-mm) OR triple board, 4-inch (102-mm), as directed, style.
12. Shingle Pattern: 48-inch- (1200-mm-) wide, straight-edge notched OR staggered-edge notched OR half-round edge OR octagon edge, as directed, sheets with wood-grain texture.
13. Texture: Smooth OR Wood grain, as directed.
14. Nominal Thickness: 0.040 inch (1.0 mm) OR 0.044 inch (1.1 mm), as directed.
15. Minimum Profile Depth (Butt Thickness): 1/2 inch (13 mm) OR 5/8 inch (16 mm) OR 3/4 inch (19 mm), as directed.
17. Finish: Wood-grain print with clear protective coating containing not less than 70 percent PVDF.
   a. Colors: As selected by the Owner from manufacturer's full range of industry colors.

D. Aluminum Soffit
2. Pattern: 6-inch (152-mm) exposure in V-grooved, single-board style.
3. Pattern: 10-inch (254-mm) exposure in V-grooved, double, 5-inch (127-mm) board style.
4. Pattern: 12-inch (300-mm) exposure in V-grooved, double, 6-inch (152-mm) board style.
5. Pattern: 16-inch (400-mm) exposure in V-grooved, triple board, 5-1/3-inch (135-mm) OR quadruple board, 4-inch (102-mm), as directed, style.
6. Texture: Smooth OR Wood grain, as directed.
7. Ventilation: Provide perforated OR unperforated, as directed, soffit unless otherwise indicated.
8. Nominal Thickness: 0.019 inch (0.5 mm) OR 0.024 inch (0.6 mm), as directed.
9. Finish: Manufacturer's standard three-coat PVDF OR primer and baked-on acrylic OR primer and baked-on polyester, as directed.
   a. Colors: As selected by the Owner from manufacturer's full range of industry colors OR Match adjacent siding, as directed.

E. Fiber-Cement Soffit
1. General: ASTM C 1186, Type A, Grade II, fiber-cement board, noncombustible when tested according to ASTM E 136; with a flame-spread index of 25 or less when tested according to ASTM E 84.
2. Pattern: 12-inch- (300-mm-) OR 16-inch- (400-mm-) OR 24-inch- (600-mm-), as directed, wide sheets with smooth OR wood-grain, as directed, texture.
3. Ventilation: Provide perforated OR unperforated, as directed, soffit unless otherwise indicated.

F. Vinyl Soffit
2. Pattern: 6-inch (152-mm) exposure in V-grooved, single-board OR beaded-edge, triple board, 2-inch (51-mm), as directed, style.
3. Pattern: 8-inch (203-mm) exposure in V-grooved, double, 4-inch (102-mm) board style.
4. Pattern: 10-inch (254-mm) exposure in V-grooved, double, 5-inch (127-mm) board style.
5. Pattern: 12-inch (300-mm) exposure in V-grooved, double board, 6-inch (152-mm) OR triple board, 4-inch (102-mm), as directed, style.
6. Texture: Smooth OR Wood grain, as directed.
7. Ventilation: Provide perforated OR unperforated, as directed, soffit unless otherwise indicated.
8. Nominal Thickness: 0.035 inch (0.9 mm) OR 0.040 inch (1.0 mm) OR 0.044 inch (1.1 mm), as directed.
9. Minimum Profile Depth: 1/2 inch (13 mm) OR 5/8 inch (16 mm) OR 3/4 inch (19 mm), as directed.
10. Colors: As selected by the Owner from manufacturer's full range of industry colors OR Match adjacent siding, as directed.

G. Accessories
1. Siding Accessories, General: Provide starter strips, edge trim, outside and inside corner caps, and other items as recommended by siding manufacturer for building configuration.
   a. Provide accessories made from same material as OR matching color and texture of, as directed, adjacent siding unless otherwise indicated.
2. Aluminum Accessories: Where aluminum accessories are indicated, provide accessories complying with AAMA 1402.
   a. Texture: Smooth OR Wood grain, as directed.
   b. Nominal Thickness: 0.019 inch (0.5 mm) OR 0.024 inch (0.6 mm), as directed.
   c. Finish: Manufacturer's standard three-coat PVDF OR primer and baked-on acrylic OR primer and baked-on polyester, as directed.
   a. Texture: Smooth OR Wood grain, as directed.
4. Decorative Accessories: Provide the following aluminum OR fiber-cement OR vinyl, as directed, decorative accessories as indicated:
   a. Corner posts with fluted faces, as directed.
   b. Door and window casings with fluted faces, as directed, and corner rosettes, as directed.
   c. Entrance and window head pediments.
d. Pilasters with fluted faces, as directed.
e. Shutters with paneled OR louvered, as directed, faces.
f. Louvers.
g. Lattice.
h. Fasciae.
i. Moldings and trim.

5. Colors for Decorative Accessories: As selected by the Owner from manufacturer’s full range of industry colors OR Match adjacent siding, as directed.

6. Flashing: Provide aluminum OR stainless-steel, as directed, flashing complying with Division 07 Section “Sheet Metal Flashing And Trim” at window and door heads and where indicated.
a. Finish for Aluminum Flashing: Same as aluminum siding OR Siliconized polyester coating, same color as siding OR High-performance organic finish, same color as siding OR Factory-prime coating, as directed.

7. Fasteners:
a. For fastening to wood, use siding nails OR ribbed bugle-head screws, as directed, of sufficient length to penetrate a minimum of 1 inch (25 mm) into substrate.
b. For fastening to metal, use ribbed bugle-head screws of sufficient length to penetrate a minimum of 1/4 inch (6 mm), or three screw-threads, into substrate.
c. For fastening aluminum, use aluminum fasteners. Where fasteners will be exposed to view, use prefinished aluminum fasteners in color to match item being fastened.
d. For fastening fiber cement, use hot-dip galvanized OR stainless-steel, as directed, fasteners.
e. For fastening vinyl, use aluminum OR hot-dip galvanized OR stainless-steel, as directed, fasteners. Where fasteners will be exposed to view, use prefinished aluminum fasteners in color to match item being fastened.

8. Insect Screening for Soffit Vents: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh OR PVC-coated, glass-fiber fabric, 18-by-14 or 18-by-16 (1.4-by-1.8- or 1.4-by-1.6-mm) mesh OR Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, as directed.

9. Continuous Soffit Vents: Aluminum, hat-channel shape, with stamped louvers OR perforations, as directed; 2 inches (51 mm) wide and not less than 96 inches (2438 mm) long.
a. Net-Free Area: 4 sq. in./linear ft. (280 sq. cm/m) OR 6 sq. in./linear ft. (420 sq. cm/m) OR 8 sq. in./linear ft. (560 sq. cm/m), as directed.
b. Finish: Mill finish OR White paint OR Brown paint, as directed.

10. Round Soffit Vents: Stamped aluminum louvered vents, 2 inches (51 mm) OR 2-1/2 inches (64 mm) OR 3 inches (76 mm) OR 4 inches (102 mm), as directed, in diameter, made to be inserted into round holes cut into soffit.
a. Finish: Mill finish OR White paint OR Brown paint, as directed.

1.3 EXECUTION

A. Preparation
1. Clean substrates of projections and substances detrimental to application.

B. Installation
1. General: Comply with siding and soffit manufacturer’s written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
a. Do not install damaged components.
b. Center nails in elongated nailing slots without binding siding to allow for thermal movement.

2. Install aluminum siding and soffit and related accessories according to AAMA 1402.
a. Install fasteners no more than 24 inches (600 mm) o.c.

3. Install fiber-cement siding and soffit and related accessories.
a. Install fasteners no more than 24 inches (600 mm) o.c.

4. Install vinyl siding and soffit and related accessories according to ASTM D 4756.
a. Install fasteners for horizontal vinyl siding no more than 16 inches (400 mm) o.c.
b. Install fasteners for vertical vinyl siding no more than 12 inches (300 mm) o.c.
5. Install joint sealants as specified in Division 07 Section "Joint Sealants" and to produce a weathertight installation.
6. Where aluminum siding will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.

C. Adjusting And Cleaning
1. Remove damaged, improperly installed, or otherwise defective materials and replace with new materials complying with specified requirements.
2. Clean finished surfaces according to manufacturer's written instructions and maintain in a clean condition during construction.

END OF SECTION 07 42 93 00
SECTION 07 46 16 00 - METAL WALL PANELS

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for metal wall panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Exposed-fastener, lap-seam metal wall panels.
   b. Concealed-fastener, lap-seam metal wall panels.
   c. Metal liner panels.
   d. Metal soffit panels.

C. Definition
1. Metal Wall Panel Assembly: Metal wall panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight wall system.

D. Performance Requirements
1. General Performance: Metal wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
2. Delegated Design: Design metal wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at the following test-pressure difference:
4. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
   a. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind.
5. Water Penetration under Dynamic Pressure: No evidence of water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. (300 Pa) (which is equivalent to a 50-mph (80-km/h) wind) and not more than 12 lbf/sq. ft. (575 Pa).
   a. Water Leakage: As defined according to AAMA 501.1.
      OR
   Water Leakage: Uncontrolled water infiltrating the system or appearing on system's normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
6. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 1592:
   a. Wind Loads: Determine loads based on the following minimum design wind pressures:
      1) Uniform pressure of 20 lbf/sq. ft. (957 Pa) OR 30 lbf/sq. ft. (1436 Pa), as directed, acting inward or outward.
      OR
      Uniform pressure as indicated on Drawings.
b. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 OR 1/240, as directed, of the span.

7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory-, shop- and field-assembled work.
3. Samples: For each type of exposed finish required.
4. Delegated-Design Submittal: For metal wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
5. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items.
6. Product Test Reports.
7. Field quality-control reports.
8. Maintenance Data.

F. Quality Assurance
1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
2. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
3. Fire-Resistance Ratings: Where indicated, provide metal wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
2. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
3. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
4. Retain strippable protective covering on metal wall panel for period of metal wall panel installation.
5. Protect foam-plastic insulation as follows:
   a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
   b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
   a. Warranty Period: Two years from date of Final Completion.

2. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   a. Finish Warranty Period:
      1) 20 years from date of Final Completion for fluoropolymer finish.
      2) 10 years from date of Final Completion for siliconized polyester.

1.2 PRODUCTS

A. Panel Materials

1. Metallic-Coated Steel Sheet: Restricted flatness steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
   a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
   b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
   c. Surface: Smooth, flat OR Embossed, as directed, finish.
   d. Exposed Coil-Coated Finish:
      1) 2-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      2) 3-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      3) 4-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      4) Mica Fluoropolymer: AAMA 621. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      5) Metallic Fluoropolymer: AAMA 621. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      6) FEVE Fluoropolymer: AAMA 621. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
      8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.097 mm) for topcoat.
   e. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

2. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
07 - Thermal And Moisture Protection

Metal Wall Panels

August 2021

DASNY, Downstate

a. Surface: Smooth, flat OR Embossed, as directed, finish.

b. Exposed Coil-Coated Finish:
1) 2-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
2) 3-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
3) 4-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
4) Mica Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
5) Metallic Fluoropolymer: AAMA 620. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
6) FEVE Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.97 mm) for topcoat.

c. Exposed Anodized Finish:
1) Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm OR AA-M12C22A31, Class II, 0.010 mm, as directed, or thicker.
2) Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm OR AA-M12C22A32/A34, Class II, 0.010 mm, as directed, or thicker.

d. Concealed Finish: Apply pretreatment and manufacturer’s standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

c. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.

a. Exposed Finish: Apply the following finish, as specified or indicated on Drawings.
1) Natural finish.
2) Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):
   a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
3) Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
   a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
4) Pre-patinated: ASTM B 882. Copper sheets artificially aged by chemical reaction to convert surface to inorganic crystalline structure with color range and durability of naturally-formed patina.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 OR 316, as directed, fully annealed.
   a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   b. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.
      1) Run grain of directional finishes with long dimension of each piece.
      2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
      3) Directional Satin Finish: No. 4.
   c. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

5. Panel Sealants:
   a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
   b. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.

B. Field-Installed Thermal Insulation
1. Unfaced, Polyisocyanurate Board Insulation: ASTM C 591, Type II, compressive strength of 35 psi (241 kPa), with maximum flame-spread index of 75 and smoke-developed index of 450.
2. Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I (foil facing), Class 1 or 2 OR Type II (asphalt felt or glass-fiber mat facing), Class 2 or 3, Grade 3, as directed, with maximum flame-spread index of 75 and smoke-developed index of 450, based on tests performed on unfaced core.
3. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.60-lb/cu. ft. (26-kg/cu. m), with maximum flame-spread index of 75 and smoke-developed index of 450.
4. Molded-Polystyrene Board Insulation: ASTM C 578, Type I, 0.9 lb/cu. ft. (15 kg/cu. m) OR Type II, 1.35 lb/cu. ft. (22 kg/cu. m), as directed, with maximum flame-spread index of 75 and smoke-developed index of 450.
5. Unfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; with maximum flame-spread index of 25 and smoke-developed index of 50, and with a nominal density of 3 lb/cu. ft. (48 kg/cu. m).
6. Mineral-Fiber-Blanket Insulation: ASTM C 665, type indicated below; consisting of fibers manufactured from glass OR slag or rock wool, as directed.
   a. Type I (blankets without membrane covering), passing ASTM E 136 for combustion characteristics.
   b. Type II (blankets with nonreflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
   c. Type III (blankets with reflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
7. Metal Building Insulation: ASTM C 991, Type I; or NAIMA 202 OR ASTM C 991, Type II, as directed, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (50-mm-) wide, continuous, vapor-tight edge tabs; and with a flame-spread index of 25 or less.
   a. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96, Desiccant Method:
   b. Insulation Retainer Strips: 0.019-inch- (0.48-mm-) thick, formed galvanized steel or PVC retainer clips colored to match insulation facing.

C. Miscellaneous Metal Framing
1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized OR ASTM A 653/A 653M, G60 (Z180) hot-
dip galvanized, as directed, or coating with equivalent corrosion resistance unless otherwise indicated.

2. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch (1.63-mm) nominal thickness.

3. Zee Clips: 0.079-inch (2.01-mm) nominal thickness.

4. Base or Sill Angles OR Channels, as directed: 0.079-inch (2.01-mm) nominal thickness.

5. Hat-Shaped, Rigid Furring Channels:
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.025 inch (0.64 mm) OR 0.040 inch (1.02 mm), as directed.
   b. Depth: As indicated OR 7/8 inch (22 mm) OR 1-1/2 inches (38 mm), as directed.

6. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.064 inch (1.63 mm), as directed.
   b. Depth: As indicated OR 3/4 inch (19 mm), as directed.
   c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with 0.040-inch (1.02-mm) nominal thickness.
   d. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.57-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.

7. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 7/8 inch (22 mm), and depth required to fit insulation thickness indicated.
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.025 inch (0.64 mm), as directed.

8. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

D. Miscellaneous Materials
   1. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

E. Exposed-Fastener, Lap-Seam Metal Wall Panels
   1. General: Provide factory-formed metal wall panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
   2. Corrugated-Profile, Exposed-Fastener Metal Wall Panels: Formed with alternating curved ribs spaced at 2.67 inches (68 mm) o.c. across width of panel.
      a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm), as directed, nominal thickness.
         1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
      b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm), as directed, nominal thickness.
         1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
         2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
      c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
         1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

d. Panel Coverage: 21.3 inches (541 mm) OR 29.3 inches (744 mm) OR 34.6 inches (881 mm) OR 37.3 inches (947 mm) OR 42.6 inches (1084 mm) OR 45.3 inches (1151 mm), as directed.

e. Panel Height: 0.5 inch (13 mm) OR 0.875 inch (22 mm), as directed.

3. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs.

a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

d. Major-Rib Spacing: 6 inches (152 mm) OR 8 inches (203 mm) OR 9 inches (229 mm) OR 12 inches (305 mm), as directed, o.c.

e. Panel Coverage: 24 inches (610 mm) OR 36 inches (914 mm), as directed.

f. Panel Height: 0.625 inch (16 mm) OR 0.75 inch (19 mm) OR 1.0 inch (25 mm) OR 1.25 inches (32 mm) OR 1.5 inches (38 mm), as directed.

4. Reverse-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with recessed, trapezoidal major valleys and intermediate stiffening valleys symmetrically spaced OR flat pan, as directed, between major valleys.

a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Major-Rib Spacing: 12 inches (305 mm) o.c.
   d. Panel Coverage: 36 inches (914 mm).
   e. Panel Height: 1.25 inches (32 mm).
5. Vee-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Rib Spacing: 5.3 inches (135 mm) OR 7.2 inches (183 mm) OR 12 inches (305 mm), as directed, o.c.
   e. Panel Coverage: 30 inches (762 mm) OR 32 inches (813 mm) OR 36 inches (914 mm) OR 40 inches (1016 mm), as directed.
   f. Panel Height: 1.375 inches (35 mm) OR 1.5 inches (38 mm) OR 1.75 inches (44 mm) OR 2.0 inches (51 mm) OR 3.0 inches (76 mm), as directed.
6. Box-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Rib Spacing: 2.67 inches (68 mm) OR 4.0 inches (102 mm) OR 5.3 inches (135 mm) OR 6.0 inches (152 mm), as directed, o.c.
   e. Panel Coverage: 24 inches (610 mm) OR 28 inches (711 mm) OR 30 inches (762 mm) OR 32 inches (813 mm) OR 36 inches (914 mm), as directed.
   f. Panel Height: 0.625 inch (16 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 2.0 inches (51 mm), as directed.

7. Deep-Box-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled more than 60 degrees.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm) OR 0.064-inch (1.63-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Rib Spacing: 12 inches (305 mm) o.c.
   e. Panel Coverage: 24 inches (610 mm).
   f. Panel Height: 3.0 inches (76 mm) OR 4.0 inches (102 mm), as directed.

F. Concealed-Fastener, Lap-Seam Metal Wall Panels
   1. General: Provide factory-formed metal wall panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
   2. Flush-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with flush joint between panels.
      a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
         1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

d. Panel Coverage: 12 inches (305 mm), as directed.

e. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

3. Reveal-Joint, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with narrow reveal joint between panels.

a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

d. Panel Coverage: 12 inches (305 mm).

e. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

4. Wide-Reveal-Joint, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and stepped profile between panel edges resulting in wide reveal joint between panels.

a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
   1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
   2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

d. Panel Height: 1.5 inches (38 mm).

e. Panel Coverage: 12 inches (305 mm).

5. V-Groove-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Panel Coverage: 6 inches (152 mm) OR 8 inches (203 mm) OR 12 inches (305 mm), as directed.
   d. Panel Height: 0.625 inch (16 mm) OR 1.25 inches (32 mm), as directed.

6. Tapered-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between major ribs.
   a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Panel Coverage: 12 inches (305 mm) OR 14 inches (356 mm), as directed.
   d. Panel Height: 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

7. Curved-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, curved-side major ribs and flat pan between major ribs; with reveal joint between panels.
a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm), as directed, thick.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
d. Panel Coverage: 12 inches (305 mm).
e. Panel Height: 0.875 inch (22 mm) OR 1.5 inches (38 mm), as directed.

8. Creased-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and center-creased pan between panel edges; with flush joint between panels.

a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
d. Panel Coverage: 12 inches (305 mm).
e. Panel Height: 1.5 inches (38 mm).

9. Creased-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, center-creased, trapezoidal major ribs; with reveal joint between panels.

a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
G. Metal Liner Panels

1. General: Provide factory-formed metal liner panels designed for interior side of metal wall panel assemblies and field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for a complete installation.

2. Flush-Profile Metal Liner Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced along panel edges; with flush joint between panels.

  a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

    1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

    2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

  b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.

    1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

    2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

  c. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.

    1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.

    2) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

  d. Panel Coverage: 12 inches (305 mm) OR 16 inches (406 mm) OR 24 inches (610 mm) OR 36 inches (914 mm), as directed.
e. Panel Height: 1.5 inches (38 mm) OR 2.0 inches (51 mm) OR 3.0 inches (76 mm), as directed.

f. Acoustical Performance: Where sound-absorption requirement is indicated, fabricate interior liner panels with 1/8-inch- (3-mm-) diameter holes uniformly spaced approximately 1000 holes/sq. ft. (10 750 holes/sq. m).
   1) NRC of not less than 0.65 OR 0.85 OR 1.00, as directed, when tested according to ASTM C 423.

H. Metal Soffit Panels
1. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.

2. Metal Soffit Panels: Match profile and material of metal wall panels.
   a. Finish: Match finish and color of metal wall panels OR As indicated on Drawings, as directed.
   b. Sealant: Factory applied within interlocking joint.

3. Flush-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with flush joint between panels.
   a. Material: Same material, finish, and color as metal wall panels.
   b. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   e. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) OR 20-oz./sq. ft. weight (0.68-mm thickness), as directed.
      1) Exterior Finish: Brushed satin (lacquered) OR Mirror polished, as directed.
   f. Panel Coverage: 8 inches (203 mm) OR 12 inches (305 mm) OR 16 inches (406 mm) OR 20 inches (508 mm), as directed.
   g. Panel Height: 0.875 inch (22 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm) OR 3.0 inches (76 mm), as directed.
   h. Sealant: Factory applied within interlocking joint.
4. Reveal-Joint-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with recessed reveal joint between panels.
   a. Material: Same material, finish, and color as metal wall panels.
   b. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm) OR 0.040-inch (1.02-mm) OR 0.052-inch (1.32-mm), as directed, nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Material: Aluminum sheet, 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol OR Clear anodized OR Color anodized, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   e. Panel Coverage: 8 inches (203 mm) OR 12 inches (305 mm) OR 16 inches (406 mm) OR 20 inches (508 mm), as directed.
   f. Panel Height: 0.75 inch (19 mm) OR 1.0 inch (25 mm) OR 1.5 inches (38 mm), as directed.

5. V-Groove-Profile Metal Soffit Panels: Solid OR Perforated, as directed, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced OR flat pan, as directed, between panel edges; with V-groove joint between panels.
   a. Material: Same material, finish, and color as metal wall panels.
   b. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
      2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   d. Material: Aluminum sheet, 0.024 inch (0.65 mm) OR 0.032 inch (0.81 mm), as directed, thick.
      1) Exterior Finish: 2-coat fluoropolymer OR 3-coat fluoropolymer OR 4-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Siliconized polyester OR Plastisol, as directed.
2) Color: Match finish and color of metal wall panels OR As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.
   e. Panel Coverage: 6 inches (152 mm) OR 12 inches (305 mm) OR 14 inches (356 mm), as directed.
   f. Panel Height: 0.375 inch (10 mm) OR 0.44 inch (11 mm) OR 0.50 inch (13 mm) OR 0.625 inch (16 mm), as directed.

I. Accessories
1. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.
   a. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal wall panels.
   b. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
   c. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

J. Fabrication
1. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
   2. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
   3. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
   4. Fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, and that will minimize noise from movements within panel assembly.
   5. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
      a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
      b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
      c. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
      d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
      e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
f. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.

1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

K. General Finish Requirements

1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

3. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION

A. Preparation

1. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754 and metal wall panel manufacturer's written recommendations.

   a. Soffit Framing: Wire-tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

B. Thermal Insulation Installation

1. Board Insulation: Extend insulation in thickness indicated to cover entire wall. Comply with installation requirements in Division 07 Section "Thermal Insulation".

   a. Erect insulation horizontally and hold in place with Z-shaped furring members spaced 24 inches (610 mm) o.c. Attach furring members to substrate with screws spaced 24 inches (610 mm) o.c.

   b. Retain insulation in place by metal clips and straps or integral pockets within panels, spaced at intervals according to insulation manufacturer's instructions. Maintain cavity width between insulation and metal liner panel of dimension indicated.

2. Blanket Insulation: Install insulation concurrently with metal wall panel installation, in thickness indicated to cover entire wall, according to manufacturer's written instructions and as follows:

   a. Set vapor-retarder-faced insulation with vapor-retarder facing building exterior OR building interior OR as indicated on Drawings, as directed. Do not obstruct ventilation spaces, except for firestopping.

   b. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.

   c. Install insulation straight and true in one-piece lengths. Comply with the following installation method:

      1) Over-Framing Installation: Extend insulation over and perpendicular to top flange of framing members.

      d. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with framing to hold insulation in place.

C. Metal Wall Panel Installation

1. General: Install metal wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.

   a. Commence metal wall panel installation and install minimum of 300 sq. ft. (27.8 sq. m.) in presence of factory-authorized representative.
b. Shim or otherwise plumb substrates receiving metal wall panels.

c. Flash and seal metal wall panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.

d. Install screw fasteners in predrilled holes.

e. Locate and space fastenings in uniform vertical and horizontal alignment.

f. Install flashing and trim as metal wall panel work proceeds.

g. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.

h. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as indicated or, if not indicated, as necessary for waterproofing.

i. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.

j. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.

2. Fasteners:

a. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized steel fasteners for surfaces exposed to the interior.

b. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.

c. Copper Wall Panels: Use copper, stainless-steel or hardware-bronze fasteners.

d. Stainless-Steel Wall Panels: Use stainless-steel fasteners.

3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.

4. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.

a. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.

b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

5. Lap-Seam Metal Wall Panels: Fasten metal wall panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.

a. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.

b. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal wall panels.

c. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.

d. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.

e. Provide sealant tape at lapped joints of metal wall panels and between panels and protruding equipment, vents, and accessories.

f. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps; on side laps of nesting-type panels; on side laps of corrugated nesting-type, ribbed, or fluted panels; and elsewhere as needed to make panels weathertight.

g. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.

6. Zee Clips: Provide Zee clips of size indicated or, if not indicated, as required to act as standoff from subgirts for thickness of insulation indicated. Attach to subgirts with fasteners.

7. Metal Liner Panels: Install panels on exterior side of girts with girts exposed to the interior OR interior side of girts with flush appearance on the inside OR girts as indicated on Drawings, as directed.

8. Fire-Rated Metal Wall Panel Assemblies: Install metal liner panels on exterior side of girts, fastening through faces of panels, with girts exposed to the interior. Install subgirts horizontally,
fastened to legs of metal liner panels. Install substrate board as indicated in Division 06 Section "Sheathing", in number of layers required for fire rating, over subgirts, attached with board fasteners. Install second set of subgirts horizontally, fastened through substrate board into first set of subgirts. Install exterior metal wall panels, fastened to second set of subgirts.

a. Comply with UL OR FMG, as directed, requirements for fire-rated construction.

D. Metal Soffit Panel Installation
1. In addition to complying with requirements of "Metal Wall Panel Installation, General" Article, install metal soffit panels to comply with the requirements of this article.
2. Metal Soffit Panels: Provide metal soffit panels full width of soffits. Install panels perpendicular to support framing.
   a. Flash and seal panels with weather closures where metal soffit panels meet walls and at perimeter of all openings.

E. Accessory Installation
1. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
   a. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
   b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (605 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

F. Field Quality Control
1. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports, as directed by the Owner.
2. Water Penetration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 1105 at minimum differential pressure of 20 percent of inward-acting, wind-load design pressure as defined by SEI/ASCE 7, but not less than 6.24 lbf/sq. ft. (300 Pa).
3. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by the Owner.
4. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect and test completed metal wall panel installation, including accessories.
5. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
6. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

G. Cleaning And Protection
1. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
2. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
3. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 46 16 00
SECTION 07 46 16 00a - METAL PLATE WALL PANELS

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for metal plate wall panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section includes metal plate wall panels.

C. Definition
   1. Metal Plate Wall Panel Assembly: Metal plate wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weathertight wall system.

D. Performance Requirements
   1. General Performance: Metal plate wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
   2. Delegated Design: Design metal plate wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at the following test-pressure difference:
      a. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa) which is equivalent to a 25-mph (40-km/h) wind.
   4. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
      a. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind.
   5. Water Penetration under Dynamic Pressure: No evidence of water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. (300 Pa) (which is equivalent to a 50-mph (80-km/h) wind) and not more than 12 lbf/sq. ft. (575 Pa).
      a. Water Leakage: As defined according to AAMA 501.1.
      OR
      Water Leakage: Uncontrolled water infiltrating the system or appearing on system's normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
   6. Structural Performance: Provide metal plate wall panel assemblies capable of withstanding the effects of the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
      a. Wind Loads: Determine loads based on the following minimum design wind pressures:
         1) Uniform pressure of 20 lbf/sq. ft. (957 Pa) OR 30 lbf/sq. ft. (1436 Pa), as directed, acting inward or outward.
         OR
         Uniform pressure as indicated on Drawings.
      b. Deflection Limits: Metal plate wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 OR 1/240, as directed, of the span.
   7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint...
**E. Submittals**
1. **Product Data:** For each type of product indicated.
2. **Shop Drawings:** Show fabrication and installation layouts of metal plate wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish among factory-, shop-, and field-assembled work.
3. **Samples:** For each type of exposed finish required.
4. **Delegated-Design Submittal:** For metal plate wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
5. **Coordination Drawings:** Exterior elevations, drawn to scale and coordinating penetrations and wall-mounted items.
6. **Product Test Reports.**
7. **Field quality-control reports.**
8. **Maintenance Data.**
9. **Warranties:** Sample of special warranties.

**F. Quality Assurance**
1. **Installer Qualifications:** An employer of workers trained and approved by manufacturer.
2. **Testing Agency Qualifications:** Qualified according to ASTM E 329 for testing indicated.
3. **Fire-Resistance Ratings:** Where indicated, provide metal plate wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
4. **Preinstallation Conference:** Conduct conference at Project site.

**G. Delivery, Storage, And Handling**
1. Deliver components, metal plate wall panels, and other manufactured items so as not to be damaged or deformed. Package panels for protection during transportation and handling.
2. Unload, store, and erect metal plate wall panels in a manner to prevent bending, warping, twisting, and surface damage.
3. Stack metal plate wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store panels to ensure dryness, with positive slope for drainage of water. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.
4. Retain strippable protective covering on metal plate wall panel for period of installation.
5. Protect foam-plastic insulation as follows:
   a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
   b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
   c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

**H. Warranty**
1. **Special Warranty:** Manufacturer’s standard form in which manufacturer agrees to repair or replace components of metal plate wall panel assemblies that fail in materials or workmanship within specified warranty period.
   a. **Warranty Period:** Two years from date of Final Completion.
2. **Special Warranty on Panel Finishes:** Manufacturer’s standard form in which manufacturer agrees to repair finish or replace metal plate wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   a. **Finish Warranty Period:**

---

**sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.**

a. **Temperature Change (Range):** 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
1.2 PRODUCTS

A. Panel Materials
2. Copper Plate: ASTM B 152/B 152M, solid copper alloy.
3. Panel Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal plate wall panels and remain weathertight; and as recommended in writing by panel manufacturer.

B. Miscellaneous Metal Framing
1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized OR ASTM A 653/A 653M, G60 (Z180) hot-dip galvanized, as directed, or coating with equivalent corrosion resistance unless otherwise indicated.
2. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch (1.63-mm) nominal thickness.
3. Zee Clips: 0.079-inch (2.01-mm) nominal thickness.
4. Base or Sill Angles OR Channels, as directed: 0.079-inch (2.01-mm) nominal thickness.
5. Hat-Shaped, Rigid Furring Channels:
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.025 inch (0.64 mm) OR 0.040 inch (1.02 mm), as directed.
   b. Depth: As indicated OR 7/8 inch (22 mm) OR 1-1/2 inches (38 mm), as directed.
6. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
   a. Nominal Thickness: As indicated OR As required to meet performance requirements OR 0.064 inch (1.63 mm), as directed.
   b. Depth: As indicated OR 3/4 inch (19 mm), as directed.
   c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with nominal thickness of 0.040 inch (1.02 mm).
   d. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.57-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.
7. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

C. Miscellaneous Materials
1. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and finish indicated.
2. Panel Fasteners: Self-tapping screws; bolts and nuts; self-locking rivets and bolts; end-welded studs; and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

D. Metal Plate Wall Panels
1. Metal Plate Wall Panels: Provide factory-formed, metal plate wall panels fabricated from single sheets of metal formed into profile for installation method indicated. Include attachment system components, panel stiffeners, and accessories required for weathertight system.
   a. Material: Tension-leveled, smooth aluminum sheet, ASTM B 209 (ASTM B 209M), 0.120 inch (3.05 mm) OR 0.125 inch (3.18 mm) OR 0.1875 inch (4.76 mm) OR 0.190 inch (4.82 mm), as directed, thick.
   b. Panel Depth: 2 inches (51 mm) OR As indicated on Drawings, as directed.
c. Exterior Finish: Two-coat fluoropolymer OR Three-coat fluoropolymer OR Four-coat fluoropolymer OR Mica fluoropolymer OR Metallic fluoropolymer OR FEVE fluoropolymer OR Clear anodized OR Color anodized, as directed.
   1) Color: As indicated by manufacturer's designations OR Match samples OR As selected from manufacturer's full range, as directed.

   a. Provide internal drainage system that allows individual panels to be installed and removed without disturbing adjacent panels.
   b. Include manufacturer's standard subgirts, perimeter extrusions, tracks, and drainage channels, panel stiffeners, panel clips and anchor channels, as applicable.
   c. Alignment Pins: Stainless steel.

E. Accessories
1. Metal Plate Wall Panel Accessories: Provide components required for a complete metal plate wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of panels unless otherwise indicated.
2. Flashing and Trim: Same material, finish, and color as adjacent metal plate wall panels, minimum 0.030 inch (0.76 mm) thick unless otherwise indicated.

F. Fabrication
1. General: Fabricate and finish metal plate wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
2. Fabricate metal plate wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
3. Metal Plate Wall Panels: Fabricate panels with panel stiffeners as required to comply with deflection limits. Weld and grind panel corners smooth. Fabricate panels to the following dimensional tolerances:
   a. Length and Width: Plus or minus 0.032 inch (0.81 mm) up to 48 inches (1219 mm); 0.064 inch (1.63 mm) more than 48 inches (1219 mm).
   b. Diagonal: Plus or minus 0.1875 inch (4.76 mm).
   c. Panel Bow: Not more than 0.2 percent of panel width or length up to 0.1875 inch (4.76 mm) maximum.
   d. Thickness: Plus or minus 0.008 inch (0.2 mm).
   e. Squareness: 0.1875-inch (4.76-mm) difference between diagonal measurements.
   f. Camber: 0.032 inch (0.81 mm).
4. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
   a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
   b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
   c. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
   d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
   e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
   f. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal plate wall panel manufacturer.
1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal plate wall panel manufacturer for application, but not less than thickness of metal being secured.

G. General Finish Requirements
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

H. Aluminum Finishes
1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Four-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
4. Mica Fluoropolymer: AAMA 2605. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
5. Metallic Fluoropolymer: AAMA 2605. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
6. FEVE Fluoropolymer: AAMA 2605. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
7. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm OR AA-M12C22A31, Class II, 0.010 mm, as directed, or thicker.
8. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm OR AA-M12C22A32/A34, Class II, 0.010 mm, as directed, or thicker.
9. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

I. Copper-Alloy Finishes
1. Exposed Finish: Mill.
2. Exposed Finish: Finish designations prefixed by CDA comply with the system established by the Copper Development Association for designating copper-alloy finish systems.
   a. Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):
      1) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in 2 coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
   b. Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
1) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in 2 coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

1.3 EXECUTION

A. Preparation
1. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous metal plate wall panel support members and anchorage according to ASTM C 754 and panel manufacturer's written instructions.

B. Metal Plate Wall Panel Installation
1. General: Install metal plate wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   a. Commence metal plate wall panel installation and install minimum of 300 sq. ft. (27.8 sq. m) in presence of factory-authorized representative.
   b. Shim or otherwise plumb substrates receiving metal plate wall panels.
   c. Flash and seal metal plate wall panels with weather closures at perimeter of all openings. Do not begin installation until weather barrier and flashings that will be concealed by panels are installed.
   d. Install flashing and trim as metal plate wall panel work proceeds.
   e. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
   f. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.

2. Fasteners:
   a. Aluminum Plate Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior and aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
   b. Copper Plate Wall Panels: Use copper, stainless-steel, or hardware-bronze fasteners.

3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal plate wall panel manufacturer.

4. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall plate panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by panel manufacturer.
   a. Seal metal plate wall panel end laps with double beads of sealant, full width of panel. Seal side joints where recommended by panel manufacturer.
   b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

5. Attachment System, General: Install attachment system required to support metal plate wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
   a. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.

6. Flange-Attachment Installation: Attach metal plate wall panels, formed with extended perimeter flanges, to supports at locations, spacings, and with fasteners recommended by manufacturer.
   a. Seal horizontal and vertical joints between adjacent panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".
   b. Seal horizontal and vertical joints between adjacent panels with manufacturer's standard gaskets.

7. Clip Installation: Attach panel clips to supports at locations, spacings, and with fasteners recommended by manufacturer. Attach flanges of metal plate wall panels to panel clips with fasteners OR by welding, as directed, as recommended by manufacturer.
a. Seal horizontal and vertical joints between adjacent metal plate wall panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".

b. Seal horizontal and vertical joints between adjacent metal plate wall panels with manufacturer's standard gaskets.

8. Subgirt-and-Spline Installation: Provide manufacturer's standard subgirts and splines that provide support and complete secondary drainage system, draining to the exterior at horizontal joints. Install support system at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by interlocking perimeter extrusions attached to panels with subgirts and splines. Fully engage integral subgirt-and-spline gaskets and leave horizontal and vertical joints with open reveal. Terminate edge of panels flush with perimeter extrusions.

a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.

b. Do not apply sealants to joints unless otherwise indicated on Drawings.

9. Track-Support Installation: Provide manufacturer's standard horizontal tracks and vertical tracks OR drain channels, as directed, that provide support and complete secondary drainage system, draining to the exterior at horizontal joints through drain tube. Install support system at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels to tracks by interlocking panel edges with manufacturer's standard "T" clips.

a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.

b. Seal horizontal and vertical joints between adjacent metal plate wall panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".

10. Rail-Support Installation: Provide manufacturer's standard interlocking rails that provide support and complete secondary drainage system, draining to the exterior at horizontal joints. Install rails at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by overlapping and interlocking support rails with perimeter rails attached to panels. Apply sealant, foam sealant, and tape sealant at locations recommended by manufacturer. Leave horizontal and vertical joints with open reveal.

a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.

b. Install backer plates before installing support rails.

c. Do not apply sealants to joints unless otherwise indicated on Drawings.

11. Rainscreen-Principle Installation: Provide manufacturer's standard pressure-equalized, rainscreen-principle system with vertical channel that provides support and complete secondary drainage system, draining at base of wall. Notch vertical channel to receive support pins. Install vertical channels supported by channel brackets or adjuster angles and at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by engaging horizontal support pins into notches in vertical channels and into flanges of panels. Leave horizontal and vertical joints with open reveal.

a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.

b. Do not apply sealants to joints unless otherwise indicated on Drawings.

C. Accessory Installation

1. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

a. Install components required for a complete metal plate wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.

2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form
hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

D. Erection Tolerances
1. Installation Tolerances: Shim and align metal plate wall panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m), nonaccumulative, on level, plumb, and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

E. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
2. Water Penetration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 1105 at minimum differential pressure of 20 percent of inward-acting, wind-load design pressure as defined by SEI/ASCE 7, but not less than 6.24 lb/sq. ft. (300 Pa).
3. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal plate wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by the Owner.
4. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust completed metal plate wall panel installation, including accessories.
5. Metal plate wall panels will be considered defective if they do not pass tests and inspections.
6. Additional tests and inspections, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.
7. Prepare test and inspection reports.

F. Cleaning
1. Remove temporary protective coverings and strippable films, if any, as metal plate wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal plate wall panel installation, clean finished surfaces as recommended by panel manufacturer. Maintain in a clean condition during construction.
2. After metal plate wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
3. Replace metal plate wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

SECTION 07 51 13 00 - BUILT-UP ASPHALT ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for built-up asphalt roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Built-up asphalt roofing.
   b. Vapor retarder.
   c. Roof insulation.
2. Section includes the installation of insulation strips in ribs of acoustical roof deck. Insulation strips are furnished under Division 5 Section "Steel Deck."

C. Definitions
2. Hot Roofing Asphalt: Roofing asphalt heated to its equiviscous temperature, the temperature at which its viscosity is 125 centipoise for mop-applied roofing asphalt and 75 centipoise for mechanical spreader-applied roofing asphalt, within a range of plus or minus 25 deg F (14 deg C), measured at the mop cart or mechanical spreader immediately before application.

D. Performance Requirements
1. General Performance: Installed built-up roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Built-up roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by built-up roofing manufacturer based on testing and field experience.
3. Roofing System Design: Provide built-up roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
4. FM Approvals Listing: Provide built-up roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a built-up roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120, as directed.
   b. Hail Resistance Rating: MH OR SH, as directed.
5. Energy Performance (for LEED-NC Credit SS 7.2): Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
6. Energy Performance: Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.
7. Energy Performance (for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Test Reports for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For built-up roofing. Include plans, elevations, sections, details, and attachments to other work.
   a. Base flashings and built-up terminations.
   b. Tapered insulation, including slopes.
   c. Crickets, saddles, and tapered edge strips, including slopes.
   d. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
4. Samples: For the following products:
   a. Built-up roofing materials, including base sheet, ply sheet, cap sheet, and flashing sheet, of color specified.
   b. Roof insulation.
   c. 3 lb (1.5 kg) of aggregate surfacing material in gradation and color indicated.
   d. Roof paver, full sized, in each color and texture required.
   e. Walkway pads.
   f. Six insulation fasteners of each type, length, and finish.
5. Qualification Data: For qualified Installer and manufacturer.
6. Manufacturer Certificates: Signed by roofing manufacturer certifying that built-up roofing complies with requirements specified in “Performance Requirements” Article.
   a. Submit evidence of compliance with performance requirements.
7. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of built-up roofing.
8. Research/Evaluation Reports: For components of built-up roofing, from the ICC-ES.
9. Maintenance Data: For built-up roofing to include in maintenance manuals.
10. Warranties: Sample of special warranties.

F. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is UL listed OR FM Approvals approved, as directed, for built-up roofing identical to that used for this Project.
2. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by built-up roofing manufacturer to install manufacturer’s product and that is eligible to receive manufacturer’s special warranty.
3. Source Limitations: Obtain components including roof insulation and fasteners for built-up roofing from same manufacturer as built-up roofing or approved by built-up roofing manufacturer.
4. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical built-up roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
5. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer’s written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed according to manufacturer’s written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer’s standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of built-up roofing that fail in materials or workmanship within specified warranty period.
   a. Special warranty includes built-up roofing membrane, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, and other components of built-up roofing.
   b. Warranty Period: 10 OR 15 OR 20 OR 25 OR 30, as directed, years from date of Final Completion.

2. Special Project Warranty: Submit roofing Installer’s warranty, signed by Installer, covering the Work of this Section, including all components of built-up roofing such as built-up roofing membrane, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, roof pavers, and walkway products, for the following warranty period:
   a. Warranty Period: Two years from date of Final Completion.

1.2 PRODUCTS

A. Built-Up Roofing Manufacturers

B. Base-Sheet Materials
1. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
2. Base Sheet: ASTM D 4601, Type II, SBS-modified, asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.
   a. Weight: 25 lb/100 sq. ft. (1.2 kg/sq. m) OR 40 lb/100 sq. ft. (1.95 kg/sq. m) OR 50 lb/100 sq. ft. (2.4 kg/sq. m) OR 60 lb/100 sq. ft. (3.0 kg/sq. m) OR 75 lb/100 sq. ft. (3.7 kg/sq. m), as directed, minimum.
   OR
   Base Sheet: ASTM D 4601, Type I OR II, as directed, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
   OR
   Base Sheet: ASTM D 4897, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and -coated, glass-fiber base sheet with coarse granular surfacing or embossed venting channels on bottom surface.
   OR
   Base Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

C. Roofing Membrane Plies
1. Ply Sheet: ASTM D 2178, Type IV OR VI, as directed, asphalt-impregnated, glass-fiber felt.
2. Cap Sheet: ASTM D 3909, asphalt-impregnated and -coated, glass-fiber cap sheet, with white coarse mineral-granule top surfacing and fine mineral surfacing on bottom surface.

D. Base Flashing Sheet Materials
1. Backer Sheet: ASTM D 2178, Type IV OR VI, as directed, asphalt-impregnated, glass-fiber felt.
   OR
Backer Sheet: ASTM D 4601, Type I OR II, as directed, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

OR
Backer Sheet: ASTM D 2626, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.

2. Granule-Surfaced Flashing Sheet: ASTM D 6164, Grade G, Type I or II, polyester-reinforced OR ASTM D 6163, Grade G, Type I or II, glass-fiber-reinforced OR ASTM D 6162, Grade G, Type I or II, composite polyester-reinforced and glass-fiber-reinforced, as directed, SBS-modified asphalt sheet; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Color: White OR Gray OR Tan, as directed.

3. Metal-Foil-Surfaced Flashing Sheet: ASTM D 6298, glass-fiber-reinforced, SBS-modified asphalt sheet; metal-foil surfaced; suitable for application method specified, and as follows:
   a. Foil Surfacing: Aluminum OR Copper OR Stainless steel OR Aluminum, fluoropolymer coated finish, of color and gloss selected from manufacturer's full range, as directed.

4. Smooth-Surfaced Flashing Sheet: ASTM D 6222, Grade S, Type I or II, polyester-reinforced OR ASTM D 6223, Grade S, Type I or II, composite polyester-reinforced and glass-fiber-reinforced, as directed, APP-modified asphalt sheet; smooth surfaced; suitable for application method specified.

OR
Granule-Surfaced Flashing Sheet: ASTM D 6222, Grade G, Type I or II, polyester-reinforced OR ASTM D 6223, Grade G, Type I or II, composite polyester-reinforced and glass-fiber-reinforced, as directed, APP-modified asphalt sheet; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Color: White OR Gray OR Tan, as directed.

5. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668, Type I.

E. Asphalt Materials
2. Roofing Asphalt: ASTM D 312, Type III OR IV OR III or IV as recommended by built-up roofing manufacturer for application, as directed.

F. Auxiliary Built-Up Roofing Materials
1. General: Auxiliary materials recommended by roofing manufacturer for intended use and compatible with built-up roofing.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesives: 80 g/L.
      6) Other Adhesives: 250 g/L.
      7) Nonmembrane Roof Sealants: 300 g/L.
      8) Sealant Primers for Nonporous Substrates: 250 g/L.
      9) Sealant Primers for Porous Substrates: 775 g/L.
   2. Cold-Applied Adhesive: Roofing manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with built-up base flashings.
   4. Mastic Sealant: Polyisobutylene, plain or modified bitumen, nonhardening, nonmigrating, nonskinning, and nondrying.
5. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistant provisions in FM Approvals 4470, designed for fastening built-up roofing components to substrate, tested by manufacturer for required pullout strength, and acceptable to roofing manufacturer.

6. Metal Flashing Sheet: Metal flashing sheet is specified in Division 7 Section “Sheet Metal Flashing and Trim.”

7. Aggregate Surfacing: ASTM D 1863, No. 6 or No. 67, clean, dry, opaque, water-worn gravel or crushed stone, free of sharp edges OR crushed slag, free of sharp edges, as directed.

8. Miscellaneous Accessories: Provide miscellaneous accessories recommended by built-up roofing manufacturer.

G. Substrate Boards
1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
   Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
   OR
   Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistant provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

H. Vapor Retarder
1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
      OR
      Adhesive: Manufacturer’s standard lap adhesive, FM Approvals approved for vapor-retarder application.

2. Laminated Sheet: Kraft paper/polyethylene laminate, two layers, reinforced with woven fiberglass yarn, laminated and edge reinforced, with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer’s standard adhesive, as directed.

3. Self-Adhering Sheet Vapor Retarder: ASTM D 1970, minimum of 40-mil- (1.0-mm-) thick, polyethylene film laminated to layer of rubberized asphalt adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold-applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
   OR
   Self-Adhering Sheet Vapor Retarder: 30- to 40-mil- (0.76- to 1.0-mm-) thick, polyethylene film laminated to layer of butyl rubber adhesive; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold-applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

I. Roof Insulation
1. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer’s standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.

3. Molded-Polystyrene Board Insulation: ASTM C 578 Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.
4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
   OR
   Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.
6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface as indicated below by type, and felt or glass-fiber mat facer on the other surface.
   a. Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.
7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.
9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.
11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

J. Insulation Accessories
1. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatible with built-up roofing.
2. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate and acceptable to roofing manufacturer.
3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphaltic, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.
   OR
   Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
   OR
   Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
5. Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
6. Wood Nailer Strips: Comply with requirements in Division 6 Section "Rough Carpentry" OR "Miscellaneous Carpentry", as directed.
   OR
   Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
8. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
Cover Board:  ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.

Cover Board:  ASTM C 1278/C 1278M, cellulose-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

9. Substrate Joint Tape:  6- or 8-inch- (150- or 200-mm-) wide, coated, glass fiber.

K. Coating Materials
1. Roof Coating:  ASTM D 1227, Type II Class 1, mineral-colloid-emulsified, fibered OR 2, chemically emulsified, filled or fibered, as directed, asphalt emulsion, asbestos free.

OR

2. Roof Coating:  ASTM D 1227, Type III, Class 1, mineral-colloid-emulsified OR 2, chemically emulsified, as directed, asphalt emulsion, nonfibered.

OR

3. Roof Coating:  ASTM D 2824, Type I, nonfibered OR III, fibered, asbestos-free, as directed, aluminum-pigmented asphaltic coating.

OR

4. Roof Coating:  Acrylic elastomer emulsion coating, formulated for use on bituminous roof surfaces and complying with ASTM D 6083 OR the following, as directed:
   a. Initial Percent Elongation (Break):  Not less than 60 percent at 0 deg F (-18 deg C) and 200 percent at 73 deg F (23 deg C) when tested according to ASTM D 2370.
   b. Initial Tensile Strength (Maximum Stress):  Not less than 100 psi (1.38 MPa) at 73 deg F (23 deg C) and 200 psi (2.76 MPa) at 0 deg F (-18 deg C) when tested according to ASTM D 2370.
   c. Final Percent Elongation (Break) after Accelerated Weathering 1000 hrs.:  Not less than 40 percent at 0 deg F (-18 deg C) and 100 percent at 73 deg F (23 deg C) when tested according to ASTM D 2370.
   d. Permeance:  Not more than 50 perms when measured according to ASTM D 1653.
   e. Accelerated Weathering 1000 hrs.:  No cracking or checking when tested according to ASTM D 1653.
   f. Color:  White OR Gray OR Buff, as directed.

L. Walkways
1. Walkway Pads:  Mineral-granule-surfaced, reinforced asphaltic composition OR Polymer-modified, reconstituted solid-rubber, surface-textured, as directed, slip-resisting pads, manufactured as a traffic pad for foot traffic and acceptable to roofing manufacturer, 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 3/4 inch (19 mm), as directed, thick, minimum.

2. Walkway Cap Sheet Strips:  ASTM D 6164, Grade G, Type I or II, polyester-reinforced OR ASTM D 6163, Grade G, Type I or II, glass-fiber-reinforced OR ASTM D 6162, Grade G, Type I or II, composite polyester-reinforced and glass-fiber-reinforced, as directed, SBS-modified asphalt sheet; granular surfaced; suitable for application method specified, and as follows:
   a. Granule Color:  White OR Gray OR Tan, as directed.

3. Roof Pavers:  Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size:  24 by 24 inches (600 by 600 mm).  Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Compressive Strength:  7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum; ASTM C 140.
   c. Colors and Textures:  As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
   a. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
   b. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
   c. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section “Steel Decking”.
   d. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.
   e. Verify that minimum concrete drying period recommended by roofing manufacturer has passed.
   f. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
      1) Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if test sample foams or can be easily and cleanly stripped after cooling.
   g. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing manufacturer's written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
3. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
4. Install insulation strips in ribs of acoustical roof decks according to acoustical roof deck manufacturer's written instructions.

C. Substrate Board Installation
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
   OR
   Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to built-up roofing manufacturer's written instructions.

D. Vapor-Retarder Installation
1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape or adhesive, as directed.
   OR
   Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
   OR
   Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
Self-Adhering Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.

**OR**

Built-up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

2. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into built-up roofing.

**E. Insulation Installation**

1. Comply with built-up roofing manufacturer's written instructions for installing roof insulation.

2. Install one lapped base sheet course and mechanically fasten to substrate according to built-up roofing manufacturer's written instructions.

3. Nailer Strips: Mechanically fasten 4-inch nominal- (89-mm actual-) width wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:
   - a. 16 feet (4.88 m) apart for roof slopes greater than 1 inch per 12 inches (1:12) but less than 3 inches per 12 inches (3:12).
   - b. 48 inches (1220 mm) apart for roof slopes greater 3 inches per 12 inches (3:12).

4. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of built-up roofing with vertical surfaces or angle changes greater than 45 degrees.

5. Install tapered insulation under area of roofing to conform to slopes indicated.

6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   - a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

7. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   - a. Where installing composite and noncomposite board insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

8. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

9. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

10. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
    - a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
    - b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
    - c. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
    **OR**
    Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

11. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
    - a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
    - b. If number of fasteners will be based on ASCE/SEI 7's uplift pressure, fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
12. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. If Project is FM Global insured or if FM Approvals requirements are proposed as a performance standard, fasten first layer of insulation according to requirements in FM Approvals’ “RoofNav” for specified Windstorm Resistance Classification.
   b. If number of fasteners will be based on ASCE/SEI 7’s uplift pressure, fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   c. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
      OR
      Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
      OR
      Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

13. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed. Tape joints if required by roofing manufacturer.
   a. Fasten cover boards according to requirements in FM Approvals’ “RoofNav” for specified Windstorm Resistance Classification.
   b. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
   c. Apply hot roofing asphalt to underside and immediately bond cover board to substrate.

F. Built-Up Roofing Installation, General
1. Install roofing membrane according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing."
   a. Install roofing system BU-3 OR 4 OR 5, as directed, N OR I OR C, as directed, -A-A OR S OR M, as directed, according to roof assembly identification matrix and roof assembly layout illustrations in NRCA’s “The NRCA Roofing and Waterproofing Manual” and requirements in this Section.
      OR
      Install roofing membrane according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing" and as follows:
      a. Deck Type: N (nailable) OR I (insulated) OR C (concrete or nonnailable), as directed.
      b. Base Sheet: 1 OR 1, installed over sheathing paper, as directed.
      c. Number of Ply Sheets: 2 OR 3 OR 4, as directed.
      d. Surfacing Type: A (aggregate) OR S (asphalt surfacing or coating) OR M (mineral-granule-surfaced cap sheet), as directed.
         1) Mineral-granule-surfaced cap sheet is in addition to number of ply sheets specified.

2. Start installation of built-up roofing in presence of manufacturer's technical personnel.

3. Where roof slope exceeds 1/2 inch per 12 inches (1:24) OR 3/4 inch per 12 inches (1:18), as directed, install built-up roofing sheets parallel with slope.
   a. Backnail built-up roofing sheets to nailer strips OR substrate, as directed, according to roofing manufacturer's written instructions.

4. Cooperate with testing agencies engaged or required to perform services for installing roofing.

5. Coordinate installation of roofing so insulation and other components of built-up roofing not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
   a. Provide tie-offs at end of each day's work to cover exposed built-up roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.
   b. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing.
c. Remove and discard temporary seals before beginning work on adjoining roofing.

6. Asphalt Heating: Do not raise roofing asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed roofing asphalt manufacturer's recommended temperature limits during roofing asphalt heating. Do not heat roofing asphalt within 25 deg F (14 deg C) of flash point. Discard roofing asphalt maintained at a temperature exceeding finished blowing temperature for more than 4 hours.

OR

Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing manufacturer's written instructions.

7. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging built-up roofing components or adjacent building construction.

G. Roofing Membrane Installation

1. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.

2. Install lapped base sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
   a. Mechanically fasten to substrate.
   OR
   b. Spot- or strip-mop to substrate with hot roofing asphalt.
   OR
   c. Adhere to substrate in a solid mopping of hot roofing asphalt, as directed.

3. Install two OR three OR four, as directed, ply sheets starting at low point of roofing. Align ply sheets without stretching. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane. Shingle in direction to shed water. Extend ply sheets over and terminate beyond cants.
   a. Embed each ply sheet in a solid mopping of hot roofing asphalt applied at rate required by roofing manufacturer, to form a uniform membrane without ply sheets touching.

   a. Embed cap sheet in a solid mopping of hot roofing asphalt applied at rate required by built-up roofing manufacturer.

5. Aggregate Surfacing: Promptly after installing and testing roofing membrane, base flashing, and stripping, flood-coat roof surface with 60 lb/100 sq. ft. (3.0 kg/sq. m) of hot roofing asphalt. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
   a. Aggregate Weight: 400 lb/100 sq. ft. (20 kg/sq. m) OR 300 lb/100 sq. ft. (15 kg/sq. m), as directed.
   b. If aggregate surfacing is delayed, promptly apply glaze coat of hot roofing asphalt at a rate of 10 lb/100 sq. ft. (0.5 kg/sq. m).

6. Glaze-coat roofing membrane surface with hot roofing asphalt applied at a rate of 10 to 15 lb/100 sq. ft. (0.5 to 0.75 kg/sq. m).

H. Flashing And Stripping Installation

1. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to built-up roofing manufacturer's written instructions and as follows:
   a. Prime substrates with asphalt primer if required by built-up roofing manufacturer.
   b. Backer Sheet Application: Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over built-up roofing at cants in a solid mopping of hot roofing asphalt OR cold-applied adhesive, as directed.
   OR
   c. Flashing Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt OR cold-applied adhesive, as directed.

   OR

   Backer Sheet Application: Adhere backer sheet to substrate in a solid mopping of hot roofing asphalt OR cold-applied adhesive, as directed.

   OR

   Flashing Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C). Apply hot roofing asphalt to back of flashing sheet if recommended by roofing manufacturer.
OR
Flashing Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing manufacturer.
OR
Flashing Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing manufacturer.
OR
Flashing Sheet Application: Torch apply flashing sheet to substrate.

2. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above built-up roofing and 4 inches (100 mm) onto field of built-up roofing.

3. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

4. Install stripping, according to roofing manufacturer's written instructions, where metal flanges and edgings are set on built-up roofing.
   a. Flashing-Sheet Stripping: Install flashing-sheet stripping in a continuous coating of asphalt roofing cement or in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C), and extend onto roofing membrane.
   OR
   Flashing-Sheet Stripping: Install flashing-sheet stripping by heat welding and extend onto roofing membrane.
   OR
   Built-up Stripping: Install stripping of not less than two roofing membrane ply sheets, setting each ply in a continuous coating of asphalt roofing cement or in a solid mopping of hot roofing asphalt, and extend onto roofing membrane 4 inches (100 mm) and 6 inches (150 mm), respectively.

5. Roof Drains: Set 30-by-30-inch (760-by-760-mm) metal flashing in bed of asphalt roofing cement on completed built-up roofing. Cover metal flashing with built-up roofing cap-sheet stripping and extend a minimum of 4 inches (100 mm) OR 6 inches (150 mm), as directed, beyond edge of metal flashing onto field of built-up roofing. Clamp built-up roofing, metal flashing, and stripping into roof-drain clamping ring.
   a. Install stripping according to roofing manufacturer's written instructions.

I. Coating Installation
1. Apply coating to built-up roofing and base flashings according to manufacturer's written instructions, by spray, roller, or other suitable application method to provide a dry film thickness of not less than 20 mils (0.5 mm).

J. Walkway Installation
1. Walkway Pads: Install walkway pads using units of size indicated or, if not indicated, of manufacturer's standard size, according to walkway pad manufacturer's written instructions.
   a. Set walkway pads in additional pour coat of hot roofing asphalt after sweeping away loose aggregate surfacing.

2. Walkway Cap Sheet Strips: Install walkway cap sheet strips, approximately 36 inches (900 mm) wide and in lengths not exceeding 10 feet (3 m), leaving a space of 6 inches (150 mm) between strips, over built-up roofing. Adhere in hot roofing asphalt.

3. Roof-Paver Walkways: Install walkway roof pavers according to roofing manufacturer's written instructions in locations indicated, to form walkways. Leave 3 inches (75 mm) of space between adjacent roof pavers.

K. Field Quality Control
1. Testing Agency: Perform roof tests and inspections and to prepare test reports.
2. Test Cuts: Test specimens will be removed to evaluate problems observed during quality-assurance inspections of built-up roofing as follows:
   a. Approximate quantities of components within built-up roofing will be determined according to ASTM D 3617.
b. Test specimens will be examined for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 of ARMA/NRCA’s "Quality Control Guidelines for the Application of Built-up Roofing."

c. Repair areas where test cuts were made according to roofing manufacturer's written instructions.

3. Repair or remove and replace components of built-up roofing where test results or inspections indicate that they do not comply with specified requirements.

a. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

L. Protecting And Cleaning

1. Protect built-up roofing from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and the Owner.

2. Correct deficiencies in or remove built-up roofing that does not comply with requirements, repair substrates, and repair or reinstall roofing to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.

3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

SECTION 07 53 16 00 - EPDM MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for ethylene-propylene-diene-monomer (EPDM) roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Adhered EPDM membrane roofing system.
      b. Mechanically fastened EPDM membrane roofing system.
      c. Loosely laid and ballasted EPDM membrane roofing system.
      d. Vapor retarder.
      e. Roof insulation.
   2. Section includes the installation of acoustical roof deck rib insulation strips furnished under Division 05 Section "Steel Decking".

C. Definitions
   1. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

D. Performance Requirements
   1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
   2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
   3. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
   4. FM Approvals Listing: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals' markings.
      a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120 OR Class 1A-135 OR Class 1A-150 OR Class 1A-165, as directed.
      b. Hail Resistance: MH OR SH, as directed.
   5. Energy Performance (for “cool-roof” performance): Provide roofing system with initial Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency, as directed.
   6. Energy Performance: Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low OR steep, as directed.-slope roof products, as directed.
   7. Energy Performance: Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
   1. Product Data: For each type of product indicated.
   2. LEED Submittals:
a. Product Test Reports for Credit SS 7.2: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirement.
b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
4. Samples: For each product included in the roofing system.
5. Manufacturer Certificate: Signed by roofing manufacturer certifying that membrane roofing system complies with requirements specified in “Performance Requirements” Article.
a. Submit evidence of complying with performance requirements.
6. Research/evaluation reports.
7. Field quality-control reports.
8. Maintenance data.

F. Quality Assurance
1. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer’s product and that is eligible to receive manufacturer's special warranty.
2. Source Limitations: Obtain components for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.
3. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
4. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
5. Preinstallation Roofing Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer’s name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer’s written instructions for handling, storing, and protecting during installation.
4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer’s written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within 10 OR 15 OR 20, as directed, years from date of Final Completion.
1.2 PRODUCTS

A. EPDM Membrane Roofing
1. EPDM: ASTM D 4637, Type I, non-reinforced, OR Type II, scrim or fabric internally reinforced, **as directed**, uniform, flexible EPDM sheet.
   a. Thickness: 45 mils (1.1 mm) OR 60 mils (1.5 mm) OR 75 mils (1.9 mm) OR 90 mils (2.2 mm), **as directed**, nominal.
   b. Exposed Face Color: Black OR White on black, **as directed**.
2. Fabric-Backed EPDM: ASTM D 4637, Type III, non-reinforced, uniform, flexible EPDM sheet, laminated to a nonwoven polyester fabric backing except at selvages.
   a. Composite Thickness: 90 mils (2.3 mm) OR 100 mils (2.5 mm) OR 105 mils (2.7 mm) OR 115 mils (2.9 mm), **as directed**, nominal.
   b. Exposed Face Color: Black OR White on black, **as directed**.

B. Auxiliary Membrane Roofing Materials
1. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesive: 80 g/L.
      6) Single-Ply Roof Membrane Sealants: 450 g/L.
      7) Nonmembrane Roof Sealants: 300 g/L.
      8) Sealant Primers for Nonporous Substrates: 250 g/L.
      9) Sealant Primers for Porous Substrates: 775 g/L.
   10) Other Adhesives and Sealants: 250 g/L.
2. Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, partially cured or cured, according to application.
3. Protection Sheet: Epichlorohydrin or neoprene non-reinforced flexible sheet, 55- to 60-mil- (1.4- to 1.5-mm-) thick, recommended by EPDM manufacturer for resistance to hydrocarbons, non-aromatic solvents, grease, and oil.
4. Bonding Adhesive: Manufacturer's standard, water based, **as directed**.
8. Seaming Material: Single-component, butyl splicing adhesive and splice cleaner OR Manufacturer's standard, synthetic-rubber polymer primer and 3-inch- (75-mm-) wide minimum, butyl splice tape with release film, **as directed**.
9. Lap Sealant: Manufacturer's standard, single-component sealant, colored to match membrane roofing, **as directed**.
10. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
11. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
12. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.
13. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to roofing system manufacturer.

15. Liquid coating, specifically formulated for coating EPDM membrane roofing, as follows:
   a. Type: Acrylic emulsion OR Hypalon, as directed.
   b. Color: White OR Gray OR Tan OR As selected from manufacturer's full range, as directed.

C. Substrate Boards
   1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
      OR Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick.
      OR Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
      OR Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.
   2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate panel to roof deck.

D. Vapor Retarder
   1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
      a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
      b. Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.
   2. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.

E. Roof Insulation
   1. General: Preformed roof insulation boards manufactured or approved by EPDM membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.
   2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.
   3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.
   4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
      a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
      OR Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.
6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
   a. Type IV, cellulosic-fiber-insulation-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.

7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.

8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.

10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

F. Insulation Accessories
1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards, as directed, to substrate, and acceptable to roofing system manufacturer.

3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphalt, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.

4. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

5. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

6. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
   Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

7. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

G. Asphalt Materials
1. Roofing Asphalt: ASTM D 312, Type III or Type IV OR ASTM D 6152, SEBS modified, as directed.

H. Aggregate Ballast (for loosely laid and aggregate-ballasted installations)
1. Aggregate Ballast: Provide aggregate ballast that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation, of the following type and size:
a. Aggregate Type: Smooth, washed, riverbed gravel or other acceptable smooth-faced stone OR Crushed gravel or crushed stone, as directed.
b. Size: ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
    OR
    Size: ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).
    OR
    Size: ASTM D 448, Size 3, ranging in size from 1 to 2 inches (25 to 50 mm).

I. Roof Pavers
1. Lightweight Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:
   a. Size: 8 by 16 inches (200 by 400 mm) OR 12 by 12 inches (300 by 300 mm) OR 12 by 16-1/2 inches (300 by 420 mm) OR 12 by 18 inches (300 by 450 mm), as directed.
   b. Weight: At least 10 lb/sq. ft. (50 kg/sq. m) but not exceeding 18 lb/sq. ft. (90 kg/sq. m).
   c. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer’s full range.

2. Rubber Roof Pavers: Interlocking, lightweight rubber units, 24 by 24 by 2-1/4 inches (600 by 600 by 57 mm), 6 lb/sq. ft. (30 kg/sq. m) specially manufactured for use as roof ballast; with grooved back for four-way drainage, beveled and doweled; and as follows:
   a. Perimeter Securement Strip: Manufacturer’s standard coated steel sheet channel OR aluminum sheet channel OR mill-finish aluminum sheet hold down OR coated aluminum sheet hold down, color as selected, as directed, and fasteners.
   b. Color: Black OR Gray OR Terra cotta, as directed.

3. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed.  Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer’s full range.

J. Walkways
1. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads OR rolls, as directed, approximately 3/16 inch (5 mm) thick, and acceptable to membrane roofing system manufacturer.

2. Walkway Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed.  Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer’s full range.

1.3 EXECUTION

A. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer’s written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

4. Install acoustical roof deck rib insulation strips, specified in Division 05 Section “Steel Decking”, according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

B. Substrate Board
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals’ "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
   OR
   Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

C. Vapor-Retarder Installation
1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape OR adhesive, as directed.
2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
   OR
   Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
3. Built-Up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
4. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

D. Insulation Installation
1. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
2. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
3. Install tapered insulation under area of roofing to conform to slopes indicated.
4. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
5. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

7. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
   a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
   b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   c. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
   **OR**
   Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

8. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   **OR**
   Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.

9. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   **OR**
   Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   b. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   **OR**
   Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
   **OR**
   Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

10. Loosely Laid Insulation: Loosely lay insulation units over substrate.

11. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed.
   a. Fasten cover boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   **OR**
   Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

E. Adhered Membrane Roofing Installation

1. Adhere membrane OR fabric-backed membrane, as directed, roofing over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.

2. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.

3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

4. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.
5. **Hot Roofing Asphalt:** Apply a solid mopping of hot roofing asphalt to substrate at temperature and rate required by manufacturer and install fabric-backed membrane roofing. Do not apply to splice area of membrane roofing.

**OR**

**Fabric-Backed Membrane Adhesive:** Apply to substrate at rate required by manufacturer and install fabric-backed membrane roofing.

6. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeters.

7. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

8. **Adhesive Seam Installation:** Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer’s written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.

   a. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.

9. **Tape Seam Installation:** Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer’s written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.

10. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

11. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

12. Install membrane roofing and auxiliary materials to tie in to existing membrane roofing to maintain weather-tightness of transition and to not void warranty for existing membrane roofing system.

13. Adhere protection sheet over membrane roofing at locations indicated.

**F. Mechanically Fastened Membrane Roofing Installation**

1. Mechanically fasten membrane roofing over area to receive roofing according to roofing system manufacturer’s written instructions. Unroll membrane roofing and allow to relax before installing.

   a. For in-splice attachment, install membrane roofing with long dimension perpendicular to steel roof deck flutes.

2. Start installation of membrane roofing in presence of roofing system manufacturer’s technical personnel.

3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

4. Mechanically fasten or adhere membrane roofing securely at terminations, penetrations, and perimeter of roofing.

5. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

6. **Adhesive Seam Installation:** Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer’s written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.

   a. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.

7. **Tape Seam Installation:** Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer’s written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.

8. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

9. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

10. **In-Splice Attachment:** Secure one edge of membrane roofing using fastening plates or metal battens centered within membrane splice and mechanically fasten membrane roofing to roof deck. Field splice seam.

   **OR**

   **Through-Membrane Attachment:** Secure membrane roofing using fastening plates or metal battens and mechanically fasten membrane roofing to roof deck. Cover battens and fasteners with a continuous cover strip.
11. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition and to not void warranty for existing membrane roofing system.

12. Adhere protection sheet over membrane roofing at locations indicated.

G. Loosely Laid And Ballasted Membrane Roofing Installation

1. Loosely lay membrane roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.
   a. Comply with requirements in SPRI RP-4 for System 1 OR System 2 OR System 3, as directed.
2. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.
3. Accurately align membrane roofing, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Mechanically fasten or adhere perimeter of membrane roofing according to requirements in SPRI RP-4.
   OR
   Mechanically fasten or adhere membrane roofing at corners, perimeters, and transitions according to requirements in SPRI RP-4.
   a. At corners and perimeters, omit aggregate ballast leaving membrane roofing exposed.
   b. At corners and perimeters, adhere a second layer of membrane roofing
5. Apply membrane roofing with side laps shingled with slope of deck where possible.
6. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
   a. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.
7. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
8. Leave seams uncovered until inspected by membrane roofing system manufacturer OR testing agency, as directed.
9. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
10. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
11. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition and to not void warranty for existing membrane roofing system.
12. Adhere protection sheet over membrane roofing at locations indicated.
13. Install protection mat over membrane roofing, overlapping a minimum of 6 inches (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches (300 mm).
14. Aggregate Ballast, as directed: Apply uniformly over membrane roofing at the rate required by membrane roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to membrane roofing system. Lay ballast as membrane roofing is installed, leaving membrane roofing ballasted at the end of the workday.
   a. Ballast Weight: Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m).
      OR
      Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m), at corners and perimeter;
      Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m), elsewhere.
      OR
      Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m).
15. Roof-Paver Ballast: Install lightweight OR heavyweight, as directed, roof-paver ballast according to manufacturer's written instructions.
   OR
   Roof-Paver Ballast: Install rubber roof-paver ballast according to manufacturer's written instructions, in locations indicated.
a. Install perimeter paver edge securement.

OR

Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer's written instructions on roof corners and perimeter.

b. Install Size 4 aggregate ballast elsewhere on roofing at a minimum rate of 10 lb/sq. ft. (50 kg/sq. m).

OR

Install Size 2 aggregate ballast elsewhere on roofing at a minimum rate of 13 lb/sq. ft. (65 kg/sq. m).

H. Base Flashing Installation
1. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
2. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.
3. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
4. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
5. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars, as directed.

I. Coating Installation
1. Apply coatings to membrane roofing OR base flashings, as directed, according to manufacturer's written recommendations, by spray, roller, or other suitable application method.

J. Walkway Installation
1. Flexible Walkways: Install walkway products in locations indicated. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer’s written instructions.
2. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave 3 inches (75 mm) of space between adjacent roof pavers.

K. Field Quality Control
1. Testing Agency: Engage a qualified independent testing agency to perform inspections.
2. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
3. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
4. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

L. Protecting And Cleaning
1. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner.
2. Correct deficiencies in or remove membrane roofing system that does not comply with requirements, repair substrates and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.
3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

SECTION 07 54 19 00 - POLYVINYL-CHLORIDE (PVC) ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for polyvinyl-chloride (PVC) roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Adhered PVC membrane roofing system.
   b. Mechanically fastened PVC membrane roofing system.
   c. Loosely laid and ballasted PVC membrane roofing system.
   d. Vapor retarder.
   e. Roof insulation.
2. Section includes the installation of acoustical roof deck rib insulation strips furnished under Division 05 Section “Steel Decking”.

C. Definitions
1. Roofing Terminology: See ASTM D 1079 and glossary in NRCA’s “The NRCA Roofing and Waterproofing Manual” for definition of terms related to roofing work in this Section.

D. Performance Requirements
1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
3. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
4. FM Approvals Listing, as directed: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals’ ”RoofNav” for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120 OR Class 1A-135 OR Class 1A-150 OR Class 1A-165, as directed.
   b. Hail Resistance: MH OR SH, as directed.
5. Energy Performance: Provide roofing system with initial Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
6. Energy Performance: Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low OR steep, as directed,-slope roof products.
7. Energy Performance(for roofs that must comply with California Energy Commission's CEC-Title 24): Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
a. Product Data for Credit SS 7.2: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.

3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.

4. Samples: For each product included in the roofing system.

5. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of compliance with performance requirements.

6. Research/evaluation reports.

7. Field quality-control reports.

8. Maintenance data.

F. Quality Assurance
1. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

2. Source Limitations: Obtain components for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.

3. Exterior Fire-Test Exposure: ASTM E 108, Class A or Class B or Class C, as directed; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.

4. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

5. Preinstallation Roofing Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

2. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

3. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

4. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within 10 or 15, as directed, years from date of Final Completion.
1.2 PRODUCTS

A. PVC Membrane Roofing

1. PVC Sheet: ASTM D 4434, Type II, Grade I, glass fiber reinforced, felt backed.
   a. Thickness: 48 mils (1.2 mm), minimum OR 60 mils (1.5 mm), nominal OR 72 mils (1.8 mm) OR 80 mils (2.0 mm) OR 96 mils (2.4 mm), as directed.
   b. Exposed Face Color: Gray.

   OR

   PVC Sheet: ASTM D 4434, Type III, fabric reinforced and fabric backed, as directed.
   a. Thickness: 45 mils (1.1 mm), minimum OR 48 mils (1.2 mm) OR 50 mils (1.27 mm) OR 60 mils (1.5 mm), nominal OR 72 mils (1.8 mm) OR 80 mils (2.0 mm) OR 100 mils (2.5 mm), as directed.
   b. Exposed Face Color: White OR Gray, as directed.

   OR

   PVC Sheet: ASTM D 4434, Type IV, fabric reinforced and fabric backed, as directed.
   a. Thickness: 36 mils (0.9 mm), minimum OR 40 mils (1.0 mm), nominal OR 50 mils (1.27 mm) OR 60 mils (1.5 mm), nominal OR 72 mils (1.8 mm) OR 80 mils (2.0 mm) OR 100 mils (2.5 mm), as directed.
   b. Exposed Face Color: White OR Gray, as directed.

B. Auxiliary Membrane Roofing Materials

1. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.
   a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
      1) Plastic Foam Adhesives: 50 g/L.
      2) Gypsum Board and Panel Adhesives: 50 g/L.
      3) Multipurpose Construction Adhesives: 70 g/L.
      4) Fiberglass Adhesives: 80 g/L.
      5) Contact Adhesive: 80 g/L.
      6) Other Adhesives: 250 g/L.
      7) PVC Welding Compounds: 510 g/L.
      8) Adhesive Primer for Plastic: 650 g/L.
      9) Single-Ply Roof Membrane Sealants: 450 g/L.
     10) Nonmembrane Roof Sealants: 300 g/L.
     11) Sealant Primers for Nonporous Substrates: 250 g/L.
     12) Sealant Primers for Porous Substrates: 775 g/L.

2. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet membrane.

3. Bonding Adhesive: Manufacturer's standard, water based, as directed.

4. Slip Sheet: Manufacturer's standard, of thickness required for application.

5. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.

6. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch (25 mm wide by 1.3 mm) thick, prepunched.

7. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

C. Substrate Boards

1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
   OR
Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick.

OR

Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

OR

Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

D. Vapor Retarder

1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
      OR
      Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.

2. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.

E. Roof Insulation

1. General: Preformed roof insulation boards manufactured or approved by PVC membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.

2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.

3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.

4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
      OR
      Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.

5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.

6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
   a. Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.

7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.

8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48), as directed, unless otherwise indicated.

11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

F. Insulation Accessories
1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards, as directed, to substrate, and acceptable to roofing system manufacturer.

3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphalt, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.

4. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

5. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

6. Cover Board: ASTM C 208, Type II, Grade 2, cellulose-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
   Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Cover Board: ASTM C 1278/C 1278M, cellulose-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

7. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

G. Asphalt Materials
1. Roofing Asphalt: ASTM D 312, Type III or Type IV OR ASTM D 6152, SEBS modified, as directed.

H. Aggregate Ballast (for loosely laid and aggregate-ballasted installations)
1. Aggregate Ballast: Provide aggregate ballast that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation, of the following type and size:
   a. Aggregate Type: Smooth, washed, riverbed gravel or other acceptable smooth-faced stone OR Crushed gravel or crushed stone, as directed.
   OR
   Size: ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
   OR
   Size: ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).
   OR
   Size: ASTM D 448, Size 3, ranging in size from 1 to 2 inches (25 to 50 mm).

I. Roof Pavers
1. Lightweight Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:
   a. Size: 8 by 16 inches (200 by 400 mm) OR 12 by 12 inches (300 by 300 mm) OR 12 by 16-1/2 inches (300 by 420 mm) OR 12 by 18 inches (300 by 450 mm), as directed.
b. Weight: At least 10 lb/sq. ft. (50 kg/sq. m) but not exceeding 18 lb/sq. ft. (90 kg/sq. m).
c. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
d. Colors and Textures: As selected from manufacturer's full range.

2. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer's full range.

J. Walkways
1. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads OR rolls, as directed, approximately 3/16 inch (5 mm) thick, and acceptable to membrane roofing system manufacturer.
2. Walkway Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer's full range.

1.3 EXECUTION

A. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
3. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
4. Install acoustical roof deck rib insulation strips, specified in Division 05 Section "Steel Decking", according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

B. Substrate Board
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
   OR
   Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

Polyvinyl-Chloride (PVC) Roofing
07 54 19 00 - 6
DASNY, Downstate
August 2021
C. Vapor-Retarder Installation
1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape OR adhesive, as directed.
2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
   OR
   Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
3. Built-up Vapor Retarder: Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
4. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

D. Insulation Installation
1. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
2. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
3. Install tapered insulation under area of roofing to conform to slopes indicated.
4. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
5. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
7. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
   a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
   b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   c. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
   d. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
8. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   OR
   Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
9. Mechanically Fastened and Adhered Insulation: Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
a. Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   OR
   Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
b. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   OR
   Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
   OR
   Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

10. Loosely Laid Insulation: Loosely lay insulation units over substrate.
11. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed.
   a. Fasten cover boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
   OR
   Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
12. Install slip sheet over insulation OR cover board, as directed, and immediately beneath membrane roofing.

E. Adhered Membrane Roofing Installation
1. Adhere membrane roofing over area to receive roofing and install according to membrane roofing system manufacturer's written instructions.
   a. Install sheet according to ASTM D 5036.
2. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.
5. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roofing.
6. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
7. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
   c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.

F. Mechanically Fastened Membrane Roofing Installation
1. Mechanically fasten membrane roofing over area to receive roofing and install according to roofing system manufacturer's written instructions.
   a. Install sheet according to ASTM D 5082.
   b. For in-splice attachment, install membranes roofing with long dimension perpendicular to steel roof deck flutes.
2. Start installation of membrane roofing in presence of roofing system manufacturer’s technical personnel.
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Mechanically fasten or adhere membrane roofing securely at terminations, penetrations, and perimeter of roofing.
5. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
6. In-Seam Attachment: Secure one edge of PVC sheet using fastening plates or metal battens centered within membrane seam and mechanically fasten PVC sheet to roof deck.
7. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer’s written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
   c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.

G. Loosely Laid And Ballasted Membrane Roofing Installation
1. Loosely lay membrane roofing over area to receive roofing and install according to roofing system manufacturer’s written instructions.
   a. Comply with requirements in SPRI RP-4 for System 1 OR System 2 OR System 3, as directed.
2. Start installation of membrane roofing in presence of roofing system manufacturer’s technical personnel.
3. Accurately align membrane roofing, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Mechanically fasten or adhere perimeter of membrane roofing according to requirements in SPRI RP-4.
   OR
   Mechanically fasten OR adhere, as directed, membrane roofing at corners, perimeters, and transitions according to requirements in SPRI RP-4.
   a. At corners and perimeters, omit aggregate ballast leaving membrane roofing exposed.
   OR
   At corners and perimeters, adhere a second layer of membrane roofing.
5. Apply membrane roofing with side laps shingled with slope of deck where possible.
6. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer’s written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
   c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
7. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
8. Install membrane roofing and auxiliary materials to tie in to existing roofing.
9. Install protection mat over membrane roofing, overlapping a minimum of 6 inches (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches (300 mm).
10. Aggregate Ballast: Apply uniformly over membrane roofing at the rate required by membrane roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to membrane roofing system. Lay ballast as membrane roofing is installed, leaving membrane roofing ballasted at the end of the workday.
   a. Ballast Weight: Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m).
   OR
Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m), at corners and perimeter; Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m), elsewhere.

OR

Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m).

11. Roof-Paver Ballast: Install lightweight OR heavyweight, as directed, roof-paver ballast according to manufacturer's written instructions.

OR

Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer's written instructions on roof corners and perimeter.

a. Install Size 4 aggregate ballast elsewhere on roofing at a minimum rate of 10 lb/sq. ft. (50 kg/sq. m).

OR

Install Size 2 aggregate ballast elsewhere on roofing at a minimum rate of 13 lb/sq. ft. (65 kg/sq. m).

H. Base Flashing Installation

1. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.

2. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.

3. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

4. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.

5. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars, as directed.

I. Walkway Installation

1. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

2. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave 3 inches (75 mm) of space between adjacent roof pavers.

J. Field Quality Control

1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

2. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

3. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.

4. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

K. Protecting And Cleaning

1. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner.

2. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.

3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

SECTION 07 54 23 00 - THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for thermoplastic polyolefin (TPO) roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Adhered TPO membrane roofing system.
   b. Mechanically fastened TPO membrane roofing system.
   c. Loosely laid and ballasted TPO membrane roofing system.
   d. Vapor retarder.
   e. Roof insulation.
2. Section includes the installation of acoustical roof deck rib insulation strips furnished under Division 05 Section “Steel Decking”.

C. Definitions
1. TPO: Thermoplastic polyolefin.
2. Roofing Terminology: See ASTM D 1079 and glossary in NRCA’s “The NRCA Roofing and Waterproofing Manual” for definitions of terms related to roofing work in this Section.

D. Performance Requirements
1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
2. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
3. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
4. FM Approvals Listing, as directed: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals’ “RoofNav” for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals markings.
   a. Fire/Windstorm Classification: Class 1A-60 OR Class 1A-75 OR Class 1A-90 OR Class 1A-105 OR Class 1A-120 OR Class 1A-135 OR Class 1A-150 OR Class 1A-165, as directed.
   b. Hail Resistance: MH OR SH, as directed.
5. Energy Performance: Provide roofing system with initial Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
6. Energy Performance: Provide roofing system that is listed on the DOE’s ENERGY STAR “Roof Products Qualified Product List” for low OR steep, as directed, -slope roof products.
7. Energy Performance (for roofs that must comply with California Energy Commission’s CEC-Title 24): Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Product Data for Credit SS 7.2: For roof materials, indicating that roof materials comply
      with Solar Reflectance Index requirement.
   b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of
      VOC content.
3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and
   attachments to other work.
4. Samples: For each product included in the roofing system.
5. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies
   with requirements specified in “Performance Requirements” Article.
   a. Submit evidence of compliance with performance requirements.
6. Research/evaluation reports.
7. Field quality-control reports.
8. Maintenance data.

F. Quality Assurance
1. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane
   roofing system manufacturer to install manufacturer's product and that is eligible to receive
   manufacturer's special warranty.
2. Source Limitations: Obtain components for membrane roofing system from same manufacturer
   as membrane roofing or approved by membrane roofing manufacturer.
3. Exterior Fire-Test Exposure: ASTM E 108, Class A OR Class B OR Class C, as directed; for
   application and roof slopes indicated, as determined by testing identical membrane roofing
   materials by a qualified testing agency. Materials shall be identified with appropriate markings of
   applicable testing agency.
4. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical
   to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency.
   Identify products with appropriate markings of applicable testing agency.
5. Preinstallation Roofing Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling
1. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with
   manufacturer's name, product brand name and type, date of manufacture, approval or listing
   agency markings, and directions for storing and mixing with other components.
2. Store liquid materials in their original undamaged containers in a clean, dry, protected location
   and within the temperature range required by roofing system manufacturer. Protect stored liquid
   material from direct sunlight.
   a. Discard and legally dispose of liquid material that cannot be applied within its stated shelf
      life.
3. Protect roof insulation materials from physical damage and from deterioration by sunlight,
   moisture, soiling, and other sources. Store in a dry location. Comply with insulation
   manufacturer's written instructions for handling, storing, and protecting during installation.
4. Handle and store roofing materials and place equipment in a manner to avoid permanent
   deflection of deck.

H. Project Conditions
1. Weather Limitations: Proceed with installation only when existing and forecasted weather
   conditions permit roofing system to be installed according to manufacturer's written instructions
   and warranty requirements.

I. Warranty
1. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in
   which manufacturer agrees to repair or replace components of membrane roofing system that fail
   in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.
1.2 PRODUCTS

A. TPO Membrane Roofing
      a. Thickness: 45 mils (1.1 mm) OR 60 mils (1.5 mm), as directed, nominal.
      b. Exposed Face Color: Black OR Gray OR Tan OR White, as directed.

B. Auxiliary Membrane Roofing Materials
   1. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.
      a. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
      b. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
         1) Plastic Foam Adhesives: 50 g/L.
         2) Gypsum Board and Panel Adhesives: 50 g/L.
         3) Multipurpose Construction Adhesives: 70 g/L.
         4) Fiberglass Adhesives: 80 g/L.
         5) Contact Adhesive: 80 g/L.
         6) Other Adhesives: 250 g/L.
         7) Single-Ply Roof Membrane Sealants: 450 g/L.
         8) Nonmembrane Roof Sealants: 300 g/L.
         9) Sealant Primers for Nonporous Substrates: 250 g/L.
         10) Sealant Primers for Porous Substrates: 775 g/L.
   2. Sheet Flashing: Manufacturer's standard unreinforced thermoplastic polyolefin sheet flashing, 55 mils (1.4 mm) thick, minimum, of same color as sheet membrane.
   3. Bonding Adhesive: Manufacturer's standard, water based, as directed.
   4. Slip Sheet: Manufacturer's standard, of thickness required for application.
   5. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
   6. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.
   7. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

C. Substrate Boards
   1. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
      OR
      Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR Type X, 5/8 inch (16 mm), as directed, thick.
      OR
      Substrate Board: ASTM C 1278/C 1278M, cellulose-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.
      OR
      Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) OR 1 inch (25 mm), as directed, thick, seal coated.
   2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

D. Vapor Retarder
1. Polyethylene Film: ASTM D 4397, 6 mils (0.15 mm) thick, minimum, with maximum permeance rating of 0.13 perm (7.5 ng/Pa x s x sq. m).
   a. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
   OR
   Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.
2. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive, as directed.

E. Roof Insulation
1. General: Preformed roof insulation boards manufactured or approved by TPO membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation, as directed.
2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) OR Type X, 1.3-lb/cu. ft. (21-kg/cu. m), as directed, minimum density, square edged.
3. Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density.
4. Composite Molded-Polystyrene Board Insulation: ASTM C 578, Type II, 1.35-lb/cu. ft. (22-kg/cu. m) OR Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) OR Type IX, 1.8-lb/cu. ft. (29-kg/cu. m), as directed, minimum density, with factory-applied facings, as follows:
   a. Facer: ASTM C 208, Type II, Grade 2, cellulose-fiber insulation board, asphalt coated, 1/2 inch (13 mm) thick.
   OR
   Facer: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
5. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 OR Type II, Class I, Grade 3, as directed, felt or glass-fiber mat facer on both major surfaces.
6. Composite Polyisocyanurate Board Insulation: ASTM C 1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
   a. Type IV, cellulose-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick.
   b. Type V, OSB facer, 7/16 inch (11 mm) thick.
   c. Type VII, glass mat faced gypsum board facer, 1/4 inch (6 mm) thick.
7. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulose fibers, binders, and waterproofing agents with top surface seal coated.
8. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulose-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.
9. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
10. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.
11. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

F. Insulation Accessories
1. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.
2. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards, as directed, to substrate, and acceptable to roofing system manufacturer.
3. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphalt, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.
4. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

5. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

6. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.
   OR
   Cover Board: DOC PS 2, Exposure 1, OSB, 7/16 inch (11 mm) thick.
   OR
   Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick, factory primed, as directed.
   OR
   Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), as directed, thick.

7. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

G. Asphalt Materials
   1. Roofing Asphalt: ASTM D 312, Type III or Type IV OR ASTM D 6152, SEBS modified, as directed.

H. Aggregate Ballast (for loosely laid and aggregate-ballasted installations)
   1. Aggregate Ballast: Provide aggregate ballast that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation, of the following type and size:
      a. Aggregate Type: Smooth, washed, riverbed gravel or other acceptable smooth-faced stone OR Crushed gravel or crushed stone, as directed.
      b. Size: ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
         OR
         Size: ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).
         OR
         Size: ASTM D 448, Size 3, ranging in size from 1 to 2 inches (25 to 50 mm).

I. Roof Pavers
   1. Lightweight Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:
      a. Size: 8 by 16 inches (200 by 400 mm) OR 12 by 12 inches (300 by 300 mm) OR 12 by 16-1/2 inches (300 by 420 mm) OR 12 by 18 inches (300 by 450 mm), as directed.
      b. Weight: At least 10 lb/sq. ft. (50 kg/sq. m) but not exceeding 18 lb/sq. ft. (90 kg/sq. m).
      c. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
      d. Colors and Textures: As selected from manufacturer's full range.
   2. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
      a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
      b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
      c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
      d. Colors and Textures: As selected from manufacturer's full range.
J. Walkways
1. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads OR rolls, as directed, approximately 3/16 inch (5 mm) thick, and acceptable to membrane roofing system manufacturer.

2. Walkway Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
   a. Size: 12 by 12 inches (300 by 300 mm) OR 18 by 18 inches (450 by 450 mm) OR 24 by 24 inches (600 by 600 mm), as directed. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
   b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m), as directed.
   c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum.
   d. Colors and Textures: As selected from manufacturer's full range.

1.3 EXECUTION

A. Preparation
1. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
2. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
3. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
4. Install acoustical roof deck rib insulation strips, specified in Division 05 Section "Steel Decking", according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

B. Substrate Board
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
   OR
   Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

C. Vapor-Retarder Installation
1. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
   a. Continuously seal side and end laps with tape OR adhesive, as directed.

2. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to substrate as follows:
   a. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
   OR
   Apply ribbons of hot roofing asphalt at spacing, temperature, and rate recommended by vapor-retarder manufacturer. Seal laps with hot roofing asphalt.
3. **Built-up Vapor Retarder:** Install two glass-fiber felt plies lapping each felt 19 inches (483 mm) over preceding felt. Embed each felt in a solid mopping of hot roofing asphalt. Glaze-coat completed surface with hot roofing asphalt. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.

4. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

D. **Insulation Installation**

1. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

2. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.

3. Install tapered insulation under area of roofing to conform to slopes indicated.

4. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
   a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

5. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

6. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   a. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

7. **Adhered Insulation:** Install each layer of insulation and adhere to substrate as follows:
   a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m) and allow primer to dry.
   b. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
   c. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
   d. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

8. **Mechanically Fastened Insulation:** Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
      OR
      Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.

9. **Mechanically Fastened and Adhered Insulation:** Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   a. Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
      OR
      Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   b. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
      OR
      Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
      OR
      Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
10. Loosely Laid Insulation: Loosely lay insulation units over substrate.
11. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck, as directed.
   a. Fasten cover boards according to requirements in FM Approvals’ “RoofNav” for specified Windstorm Resistance Classification.
   OR
   Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
12. Install slip sheet over insulation OR cover board, as directed, and immediately beneath membrane roofing.

E. Adhered Membrane Roofing Installation
1. Adhere membrane roofing over area to receive roofing and install according to membrane roofing system manufacturer's written instructions.
2. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.
5. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roof.
6. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
7. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
   c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system, as directed.

F. Mechanically Fastened Membrane Roofing Installation
1. Mechanically fasten membrane roofing over area to receive roofing and install according to roofing system manufacturer's written instructions.
   a. For in-splice attachment, install membranes roofing with long dimension perpendicular to steel roof deck flutes.
2. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.
3. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
4. Mechanically fasten or adhere membrane roofing securely at terminations, penetrations, and perimeter of roof.
5. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
6. In-Seam Attachment: Secure one edge of TPO sheet using fastening plates or metal battens centered within membrane seam and mechanically fasten TPO sheet to roof deck.
7. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

8. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

9. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing membrane roofing system.

G. Loosely Laid And Ballasted Membrane Roofing Installation
1. Loosely lay membrane roofing over area to receive roofing and install according to roofing system manufacturer’s written instructions.
   a. Comply with requirements in SPRI RP-4 for System 1 OR System 2 OR System 3, as directed.

2. Start installation of membrane roofing in presence of roofing system manufacturer’s technical personnel.

3. Accurately align membrane roofing, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

4. Mechanically fasten or adhere perimeter of membrane roofing according to requirements in SPRI RP-4.
   OR
   Mechanically fasten OR adhere, as directed, membrane roofing at corners, perimeters, and transitions according to requirements in SPRI RP-4.
   a. At corners and perimeters, omit aggregate ballast leaving membrane roofing exposed.
   OR
   At corners and perimeters, adhere a second layer of membrane roofing.

5. Apply membrane roofing with side laps shingled with slope of deck where possible.

6. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer’s written instructions to ensure a watertight seam installation.
   a. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
   b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
   c. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

7. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

8. Install membrane roofing and auxiliary materials to tie in to existing roofing.

9. Install protection mat over membrane roofing, overlapping a minimum of 6 inches (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches (300 mm).

10. Aggregate Ballast: Apply uniformly over membrane roofing at the rate required by membrane roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to membrane roofing system. Lay ballast as membrane roofing is installed, leaving membrane roofing ballasted at the end of the workday.
    a. Ballast Weight: Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m).
       OR
       Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m), at corners and perimeter; Size 4 aggregate, 10 lb/sq. ft. (50 kg/sq. m), elsewhere.
       OR
       Ballast Weight: Size 2 aggregate, 13 lb/sq. ft. (65 kg/sq. m).

11. Roof-Paver Ballast: Install lightweight OR heavyweight, as directed, roof-paver ballast according to manufacturer’s written instructions.
    OR
    Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer’s written instructions on roof corners and perimeter.
    a. Install Size 4 aggregate ballast elsewhere on roofing at a minimum rate of 10 lb/sq. ft. (50 kg/sq. m).
       OR
       Install Size 2 aggregate ballast elsewhere on roofing at a minimum rate of 13 lb/sq. ft. (65 kg/sq. m).
H. Base Flashing Installation
1. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
2. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.
3. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
4. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
5. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars, as directed.

I. Walkway Installation
1. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.
2. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave 3 inches (75 mm) of space between adjacent roof pavers.

J. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
2. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
3. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
4. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

K. Protecting And Cleaning
1. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Owner.
2. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Final Completion and according to warranty requirements.
3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

SECTION 07 56 00 00 - FLUID-APPLIED PROTECTED MEMBRANE ROOFING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for fluid-applied protected membrane roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Show locations and extent of roofing.
   a. Show locations, extent, and details of roof pavers.
3. Maintenance data.
4. Sample warranties.

C. Quality Assurance
1. Fire-Test-Response Characteristics: Provide hot fluid-applied roofing identical to assemblies tested for fire-test-response characteristics indicated by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Exterior Fire-Test Exposure: Class A; complying with ASTM E 108, for application and slopes indicated.
2. Preinstallation Conference: Conduct conference at Project site.

D. Delivery, Storage, And Handling
1. Deliver materials to Project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
   a. Handle and store roofing materials and place equipment in a manner to avoid significant or permanent damage to deck or structural supporting members.
2. Protect roofing insulation materials from damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location.

E. Project Conditions
1. Environmental Limitations: Apply roofing within the range of ambient and substrate temperatures recommended by roofing system manufacturer. Do not apply roofing to a damp or wet substrate or when temperature is below 0 deg F (minus 18 deg C).
   a. Do not apply roofing in snow, rain, fog, or mist.

F. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace roofing that does not remain watertight and base flashing that does not within 10 OR 15 OR 20, as directed, years from date of Final Completion.
   a. Warranty also includes insulation and roof pavers.

1.2 PRODUCTS

A. Roofing Membrane

B. Base Flashing Sheet Materials
1. Elastomeric Flashing Sheet: 50-mil (1.3-mm) thick, minimum, uncured sheet neoprene with manufacturer's recommended contact adhesives as follows:
   a. Tensile Strength: 1400 psi (9.6 MPa) minimum; ASTM D 412, Die C.
   b. Elongation: 300 percent minimum; ASTM D 412.
   c. Tear Resistance: 125 psi (860 kPa) minimum; ASTM D 624, Die C.
   d. Brittleness: Does not break at minus 30 deg F (16 deg C); ASTM D 2137.

2. SBS-Modified Bituminous Flashing Sheet: ASTM D 6164, Grade G, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet; granular surfaced; suitable for application method specified, white OR gray OR tan, as directed.
   a. Backer Sheet: ASTM D 6164, Grade S, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet; smooth surfaced; suitable for application method specified.

3. APP-Modified Bituminous Flashing Sheet: ASTM D 6222, Grade S, smooth OR Grade G, granular, as directed, surfaced, Type I or Type II, polyester-reinforced, APP-modified asphalt sheet; suitable for application method specified.
   a. Granule Color: White OR Gray OR Tan, as directed.

C. Auxiliary Materials
1. General: Furnish auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.
   a. Furnish liquid-type auxiliary materials that meet VOC limits of authorities having jurisdiction.
3. Elastomeric Sheet: 50-mil (1.3-mm) thick, minimum, uncured sheet neoprene with manufacturer's recommended contact adhesives as follows:
   a. Tensile Strength: 1400 psi (9.6 MPa) minimum; ASTM D 412, Die C.
   b. Elongation: 300 percent minimum; ASTM D 412.
   c. Tear Resistance: 125 psi (860 kPa) minimum; ASTM D 624, Die C.
   d. Brittleness: Does not break at minus 30 deg F (16 deg C); ASTM D 2137.

4. Metal Termination Bars: Manufacturer's standard, predrilled, stainless-steel or aluminum termination bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
6. Protection Course: Manufacturer's standard, 80-to-90-mil (2.0-to-2.3-mm) thick, fiberglass-reinforced rubberized asphalt or modified bituminous sheet.
7. Geotextile Fabric: Woven or nonwoven polypropylene, polyolefin, or polyester geotextile fabric; water permeable and resistant to UV-light degradation; of type and weight recommended by insulation manufacturer for application.
8. Roof-Paver Metal Straps: Securement strapping fabricated from stainless steel, a minimum of 3 inches (75 mm) wide by 0.031 inch (0.8 mm) thick with stainless-steel anchors or other corrosion-resistant, postinstalled expansion anchors approved by insulation manufacturer.

D. Board Insulation
1. Extruded-Polystyrene Board Insulation: ASTM C 578, Type VI, 1.8 lb/cu. ft. (29 kg/cu. m) OR Type VII, 2.2 lb/cu. ft. (35 kg/cu. m), as directed, with two or four edges rabbeted.
2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type VI, 1.8 lb/cu. ft. (29 kg/cu. m) OR Type VII, 2.2 lb/cu. ft. (35 kg/cu. m), as directed, with rabbeted edges and with one side having ribbed drainage channels.

E. Mortar-Faced Board Insulation
1. Mortar-Faced, Extruded-Polystyrene Board Insulation: ASTM C 578, Type VI, 1.8-lb/cu. ft. (29-kg/cu. m) minimum density, with tongue-and-groove edges on long dimension, and latex-modified cement mortar topping, 3/8 inch (9 mm) thick, 4 lb/sq. ft. (19.5 kg/sq. m) OR 15/16 inch (23 mm) thick, 11 lb/sq. ft. (53.7 kg/sq. m), as directed.
   a. Metal Securement System: Perimeter securement flashing and strapping fabricated from stainless steel, a minimum of 0.031 inch (0.8 mm) thick, with stainless-steel anchors or other corrosion-resistant, postinstalled expansion anchors approved by insulation manufacturer.
F. Aggregate Ballast
   1. Aggregate Ballast: Washed, crushed stone or smooth stone that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation; of the following size:
      a. Size:
         1) ASTM D 448, Size 5, ranging in size from 1/2 to 1 inch (13 to 25 mm).
         2) ASTM D 448, Size 4, ranging in size from 3/4 to 1-1/2 inches (19 to 38 mm).
         3) ASTM D 448, Size 2, ranging in size from 1-1/2 to 2-1/2 inches (38 to 63 mm).

G. Roof Pavers
   1. Interlocking Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:
      a. Size: 8 by 16 inches (200 by 400 mm) 12 by 12 inches (300 by 300 mm) 12 by 16-1/2 inches (300 by 420 mm)
      b. Weight: At least 10 lb/sq. ft. (50 kg/sq. m) but not exceeding 18 lb/sq. ft. (90 kg/sq. m).
      c. Compressive Strength: 2500 psi (17 MPa) OR 5000 psi (34 MPa), as directed, minimum.
      d. Colors and Textures: As selected from manufacturer's full range.
   2. Roof Pavers: Heavyweight, hydraulically pressed, concrete units, square edged OR with top edges beveled 3/16 inch (5 mm), as directed, factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
      a. Size: 24 by 24 inches (600 by 600 mm). Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
      b. Weight: 18 lb/sq. ft. (90 kg/sq. m) OR 20 lb/sq. ft. (100 kg/sq. m) OR 22 lb/sq. ft. (110 kg/sq. m) OR 24 lb/sq. ft. (120 kg/sq. m), as directed, minimum.
      c. Compressive Strength: 7500 psi (52 MPa) OR 6500 psi (45 MPa), as directed, minimum; ASTM C 140.
      d. Colors and Textures: As selected from manufacturer's full range.
      e. Paver Supports:
         1) Integral corner pedestals.
         OR
         Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including fixed-height OR adjustable or stackable, as directed, pedestals, shims, and spacer tabs for joint spacing of 1/8 inch (3 mm) OR 3/16 inch (5 mm), as directed.

1.3 EXECUTION

A. Preparation
   1. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for roofing application.
   2. Mask off adjoining surfaces not receiving roofing to prevent spillage from affecting other construction.
   3. Protect roof drains and other deck penetrations to prevent spillage and migration of roofing fluids.
   4. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
   5. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

B. Joints, Cracks, And Terminations
   1. Prepare and treat substrates to receive roofing membrane, including joints and cracks, roof drains, and penetrations, according roofing system manufacturer's written instructions.
      a. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
      b. Adhere strip of elastomeric sheet to substrate in a layer of hot fluid-applied, rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches (150 mm) on each side of
moving joints and cracks or joints and cracks exceeding 1/8 inch (3 mm) thick, and beyond roof drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

c. Embed strip of reinforcing fabric into a layer of hot fluid-applied, rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches (150 mm) on each side of nonmoving joints and cracks not exceeding 1/8 inch (3 mm) thick, and beyond roof drains and penetrations.

1) Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

2. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches (150 mm) on each side of joints and adhere to substrates in a layer of hot fluid-applied, rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

C. Base Flashing Installation

1. Install base flashing at terminations of roofing membrane according to manufacturer's written instructions.

2. Prime substrate with asphalt primer if required by manufacturer.

3. Bond elastomeric flashing sheet in contact adhesive against wall substrate to within 3 inches (75 mm) of deck. Adhere remaining vertical leg and horizontal leg of flashing sheet in a layer of hot fluid-applied, rubberized asphalt.

4. Bond modified bituminous flashing sheet to substrate as follows:

   a. Adhere SBS-modified bituminous backer sheet and flashing sheet to substrate in a layer of hot fluid-applied, rubberized asphalt.

   b. Torch apply APP-modified bituminous flashing sheet to substrate.

   c. Adhere SBS-modified bituminous backer sheet and flashing sheet to substrate in a layer of hot fluid-applied, rubberized asphalt or torch apply APP-modified bituminous flashing sheet to substrate as standard with manufacturer.

5. Extend flashing sheet up walls or parapets a minimum of 8 inches (200 mm) above insulation and 6 inches (150 mm) onto roof deck.

6. Install termination bars and mechanically fasten to top of flashing sheet at terminations and perimeter of roofing.

D. Roofing Membrane Application

1. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.

2. Heat and apply rubberized asphalt according to manufacturer's written instructions.

   a. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.

3. Start application with manufacturer's authorized representative present.

4. Unreinforced Membrane: Apply hot rubberized asphalt to area to receive roofing. Spread hot rubberized asphalt to form a uniform, unreinforced, seamless membrane, 180-mil (4.5-mm) minimum thickness OR 180-mil (4.5-mm) average thickness, but not less than 125 mil (3.2 mm) thick, as directed.

5. Reinforced Membrane: Apply hot fluid-applied, rubberized asphalt to area to receive roofing. Spread a 90-mil- (2.3-mm-) thick layer of hot fluid-applied, rubberized asphalt; embed reinforcing fabric, overlapping sheets 2 inches (50 mm); spread another 125-mil- (3.2-mm-) thick layer of hot fluid-applied, rubberized asphalt to form a uniform, reinforced, seamless membrane, 215 mils (5.5 mm) thick.

6. Apply hot fluid-applied, rubberized asphalt over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.

7. Cover waterproofing with protection course with overlapped joints before membrane is subject to construction traffic.

E. Insulation Installation

1. Loosely lay board insulation units over roofing membrane, with long joints of insulation in continuous straight lines and with end joints staggered between rows. Abut edges and ends between units.
2. Install one or more layers of insulation to achieve required thickness over roofing membrane. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.  
   a. Where overall insulation thickness is 2 inches (50 mm) or more, install required thickness in two or more layers with joints of each succeeding layer staggered over joints of previous layer a minimum of 6 inches (150 mm) in each direction.

3. Install geotextile fabric over insulation, overlapping edges and ends at least 12 inches (300 mm). Do not lap ends of fabric sheets within 72 inches (1800 mm) of roof perimeter. Extend fabric 2 to 3 inches (50 to 75 mm) above ballast at perimeter and penetrations. Apply additional layer of fabric around penetrations to prevent aggregate from getting between penetration and insulation. Do not cover drains or restrict water flow to drains.

F. Ballast Installation

1. To roofed area, apply aggregate ballast uniformly over geotextile fabric at rate required by insulation manufacturer, but not less than the following, carefully spreading aggregate to not damage roofing membrane and base flashings. Install roof-paver ballast according to insulation manufacturer’s written instructions. Apply ballast as insulation is installed, leaving roofing membrane insulated and ballasted at end of workday.

   a. Ballast for Dow’s Standard Design: 15 lb/sq. ft. (75 kg/sq. m), Size 5 aggregate within 102 inches (2600 mm) of roof perimeter and corners and 24 inches (600 mm) of roof penetrations; 10 lb/sq. ft. (50 kg/sq. m), Size 5 aggregate elsewhere. Revise ballast loads for roof perimeter, corners, and penetration loads below to 20 lb/sq. ft. (100 kg/sq. m) for insulation 3 inches (75 mm) or thicker.
      1) Install one row of roof pavers in lieu of aggregate ballast at roof perimeter, corners, and penetrations if combining aggregate ballast with roof pavers.

   b. Ballast for Dow’s Design #1:
      1) 15 lb/sq. ft. (75 kg/sq. m), Size 4 aggregate within 102 inches (2600 mm) of roof perimeter and corners and 24 inches (600 mm) of roof penetrations; 12 lb/sq. ft. (60 kg/sq. m), Size 4 aggregate elsewhere. Revise ballast loads for roof perimeter, corners, and penetration loads below to 20 lb/sq. ft. (100 kg/sq. m) for insulation 3 inches (75 mm) or thicker.
      OR
      12 lb/sq. ft. (60 kg/sq. m), Size 4 aggregate to field of roof; install two rows of roof pavers at roof perimeter, corners, and penetrations according to insulation manufacturer’s written instructions if combining aggregate ballast with roof pavers.
      c. Ballast for Dow’s Design #2:
         1) 15 lb/sq. ft. (75 kg/sq. m), Size 2 aggregate within 102 inches (2600 mm) of roof perimeter and 24 inches (600 mm) of roof penetrations; 13 lb/sq. ft. (65 kg/sq. m), Size 2 aggregate to field of roof; and install three rows of roof pavers at corners of roof according to insulation manufacturer’s written instructions. Mechanically fasten securement strapping to center of first perimeter corner row of roof pavers. Revise ballast loads for roof perimeter, corners, and penetration loads below to 20 lb/sq. ft. (100 kg/sq. m) for insulation 3 inches (75 mm) or thicker.
         OR
         13 lb/sq. ft. (65 kg/sq. m), Size 2 aggregate to field of roof and install three rows of concrete pavers at roof perimeter, corners, and penetrations according to insulation manufacturer’s written instructions if combining aggregate ballast with roof pavers at roof perimeters, corners, and penetrations. Mechanically fasten securement strapping to center of first perimeter and perimeter corner row of roof pavers.
      d. Ballast for Dow’s Design #3:
         1) 15 lb/sq. ft. (75 kg/sq. m), Size 2 aggregate within 24 inches (600 mm) of roof penetrations; 13 lb/sq. ft. (65 kg/sq. m), Size 2 aggregate to field of roof; and install four rows of roof pavers at roof perimeter and corners according to insulation manufacturer’s written instructions. Mechanically fasten securement strapping to center of first two perimeter and perimeter corner rows of roof pavers. Revise ballast loads for roof perimeter, corners, and penetration loads below to 20 lb/sq. ft. (100 kg/sq. m) for insulation 3 inches (75 mm) or thicker.
         2) Walkway Pavers: Install walkways formed from one row OR two rows, as directed, of roof pavers, loosely laid and butted.
G. Roof-Paver Installation
1. Interlocking Roof Pavers: Install interlocking roof pavers over roofed area according to manufacturer's written instructions.
2. Install roof pavers over roofed area according to insulation manufacturer's written instructions.
3. Install roof pavers over roofed area according to insulation manufacturer's written instructions. Mechanically fasten roof-paver metal straps to center of first perimeter and first perimeter corner row of roof pavers.
4. Install roof pavers over roofed area according to insulation manufacturer's written instructions. Mechanically fasten roof-paver metal straps to center of first two perimeters and first two perimeter corner rows of roof pavers.
5. Install roof pavers on pedestals set according to pedestal manufacturer's written instructions.

H. Mortar-Faced Board Insulation Installation
1. Install mortar-faced board insulation loosely laid, according to manufacturer's written instructions, with tongue-and-groove joints nested. Stagger end joints of adjoining rows and abut insulation.
   a. Mechanically fasten metal securement strapping at penetrations and at perimeter edges of mortar-faced board insulation.
   b. Over mortar-faced board insulation, install roof pavers on roof perimeter and corners according to manufacturer's written instructions.
2. Install one row OR two rows, as directed, of 24-inch- (600-mm-) wide roof pavers to roof perimeter, corners, and penetrations according to mortar-faced board insulation manufacturer's written instructions.

I. Cleaning And Protection
1. Protect roofing from damage and wear during remainder of construction period.
2. Protect installed insulation from damage due to UV light, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
3. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

1.4 ROOFING INSTALLER'S WARRANTY
Warranty shall be submitted in the following format:

A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
   1. Owner:
   2. Address:
   3. Building Name/Type:
   4. Address:
   5. Area of Work:
   6. Acceptance Date:
   7. Warranty Period:
   8. Expiration Date:

B. AND WHEREAS Roofing Installer has contracted (either directly with the Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period it will, at its own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
   
   a. lightning;
   b. peak gust wind speeds, as directed by the Owner;
   c. fire;
   d. failure of roofing system substrate, including settlement, excessive deflection, deterioration, decompostion, and cracking wider than 1/8 inch (3 mm);
   e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
   f. vapor condensation on bottom of roofing; and
   g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by the Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by the Owner or by another responsible party so designated.

3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.

4. During Warranty Period, if the Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If the Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void, unless Roofing Installer, before starting said work, shall have notified the Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.

6. the Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.

7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off the Owner from other remedies and resources lawfully available to the Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with the Owner or a subcontract with the Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.

1. Authorized Signature:
2. Name:
3. Title:

END OF SECTION 07 56 00 00
SECTION 07 56 00 00a - COATED FOAMED ROOFING

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for coated foamed roofing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
a. Spray-applied, polyurethane foam insulation.
b. Elastomeric roof coatings.
c. Mineral granules.
d. Aggregate.
e. Walkways.

C. Performance Requirements
1. Watertightness: Provide coated foamed roofing that is watertight and will not permit the passage of water.
2. Material Compatibility: Provide polyurethane foam, elastomeric coatings, and miscellaneous roofing materials that are compatible with one another and able to bond to substrate under conditions of service and application required, as demonstrated by coated foamed roofing manufacturer based on testing and field experience.
3. Roofing System Design: Provide a coated foamed roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to SEI/ASCE 7.
4. FMG Listing: Provide roofing system and component materials that comply with requirements in FMG 4450 for steel roof decks and FMG 4470 for roof covers as part of a foamed roofing system and that are listed in FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.
a. Fire/Windstorm Classification: Class 1A-60 OR 75 OR 90 OR 105 OR 120, as directed.
b. Hail-Resistance Classification: MH OR SH, as directed.
5. Energy Performance: Provide roofing system with Solar Reflectance Index not less than 78 OR 29, as directed, when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.

D. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
a. Product Test Reports for Credit SS 7.2: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirement.
3. Samples: For each exposed product and for each color and texture specified.
4. Research/evaluation reports.
5. Maintenance data.
7. Warranty: Sample of special warranty.

E. Quality Assurance
1. Installer Qualifications: A qualified installer who is approved, authorized, or licensed by roof coating manufacturer for installation of manufacturer's product over polyurethane foam.
a. Engage an installer who participates in and who has fulfilled requirements of the SPFA Accreditation Program for company accreditation and individual applicator accreditation for personnel assigned to work on Project.
2. Source Limitations: Obtain polyurethane foam materials from single source or producer and coating products from single, coated foamed roofing manufacturer.
3. Fire-Test-Response Characteristics: Provide coated foamed roofing systems with the fire-test-response characteristics indicated, as determined by testing identical systems per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
   a. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of 75 and 450, respectively; ASTM E 84.
   b. Exterior Fire-Test Exposure: ASTM E 108; Class A.
   c. Fire-Resistance Ratings: ASTM E 119, determined for coated polyurethane foam roofing as part of a roof assembly.
4. Comply with recommendations in NRCA's "Quality Control Guidelines for the Application of Spray Polyurethane Foam Roofing."

F. Delivery, Storage, And Handling
1. Deliver materials to Project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, shelf life, and directions for storing and mixing with other components.
2. Store materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by manufacturer. Protect stored materials from direct sunlight.
3. Remove and replace material that cannot be applied within its stated shelf life.

G. Warranty
1. Special Warranty: Coated foamed roofing manufacturer's standard form in which manufacturer agrees to repair or replace coated foamed roofing that does not comply with requirements or that does not remain watertight within five OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Polyurethane Foam
1. Polyurethane Foam: Rigid cellular polyurethane, spray applied, produced by the catalyzed chemical reaction of polyisocyanates with polyhydroxyls, with stabilizers, fire retardants, and blowing agents added; and complying with ASTM C 1029, Type III, as certified by a qualified independent testing agency.
   a. In-Place Density: 2.8 to 3.0 lb/cu. ft. (44.9 to 48.1 kg/cu. m); ASTM D 1622.
   b. Surface-Burning Characteristic: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency. 1) Flame-Spread Index: 75 or less.

B. Urethane Coatings
1. Urethane Coatings: Liquid urethane elastomeric coating system, specifically formulated for coating spray polyurethane roofing, of the following composition, coat type, and topcoat color and complying with specified performance and physical requirements.
   a. Base-Coat Composition and Type: One-component OR Two-component, as directed, aromatic urethane.
   b. Topcoat Composition and Type: One-component OR Two-component, as directed, aromatic OR aliphatic, as directed, urethane.
   c. Topcoat Color: White OR Gray OR Tan OR Copper OR Black, as directed.
   d. Topcoat Color at Walkways: White OR Gray OR Tan OR Copper OR Black, as directed.
   e. Tensile Strength: 400 psi (2.8 MPa) per ASTM D 412.
f. Elongation: 300 percent at 75 deg F (24 deg C) per ASTM D 412.
g. Permanent Set at Break: 30 percent maximum per ASTM D 412.
h. Tear Resistance: 100 lbf/inch (17.5 kN/m) per ASTM D 1004.
i. Water Absorption: 3 percent maximum by weight, 168 hours at 75 deg F (24 deg C) per ASTM D 471.
j. Permeance:
   1) Minimum 0.7 perms (40.2 ng/Pa x s x sq. m) at 20 mils (0.5 mm) thick per ASTM E 96.
   OR
   Minimum 5.0 perms (286 ng/Pa x s x sq. m) at 20 mils (0.5 mm) thick per ASTM E 96.

C. Silicone Coatings
1. Silicone Coatings: Liquid silicone elastomeric coating system, complying with ASTM D 6694 and specifically formulated for coating spray polyurethane roofing.
   a. Base-Coat and Topcoat Composition: One-component OR Two-component, as directed, silicone.
   b. Topcoat Color: White OR Gray, as directed.
   c. Topcoat Color at Walkways: White OR Gray, as directed.
   d. Permeance: Minimum 5.0 perms (286 ng/Pa x s x sq. m) at 20 mils (0.5 mm) thick per ASTM E 96.

D. Acrylic Coatings
1. Acrylic Coatings: Liquid acrylic elastomeric emulsion coating system, complying with ASTM D 6083 and specifically formulated for coating spray polyurethane roofing.
   a. Topcoat Color: White OR Gray OR Buff, as directed.
   b. Topcoat Color at Walkways: White OR Gray OR Buff, as directed.
   c. Permeance: Minimum 5.0 perms (286 ng/Pa x s x sq. m) at 20 mils (0.5 mm) thick per ASTM E 96.

E. Substrate Board
1. Thermal Barrier:
   a. Glass-mat, water-resistant gypsum board, ASTM C 1177/C 1177M, 1/4 inch (6 mm) OR 1/2 inch (13 mm) OR 5/8 inch (16 mm), Type X, as directed.
   b. ASTM C 36/C 36M, 5/8-inch (16-mm) gypsum board base, Type X.
2. Recovery Board and Fasteners: As recommended by polyurethane foam manufacturer, and meeting the requirements of Division 07 Section "Preparation For Re-roofing".
3. Thermal-Barrier Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FMG 4470, and designed and sized for fastening thermal barrier to substrate.

F. Auxiliary Materials
1. Primer: Polyurethane foam manufacturer's standard factory-formulated primer.
2. Vapor Retarder: Fluid applied OR Bituminous membrane OR As recommended by coated foamed roofing manufacturer, as directed.
3. Mineral Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 (2.36-mm) sieve and 98 percent of mass retained by No. 40 (0.42-mm) sieve.
   a. Color: Buff white OR Gray OR Green OR Red, as directed.
4. Aggregate: Coarse mineral aggregate, 3/4 inch (19 mm) maximum, ASTM D 1863, No. 7 or No. 67 gradation.
5. Reinforcement: Flexible polyester or fiberglass mat of weight, type, and composition recommended by roof coating manufacturer for embedment in liquid coating.
6. Walkway Pads: Factory formed of nonwoven PVC strands, porous, UV stabilized, of 5/16-inch (8-mm) nominal thickness, and approved by roof coating manufacturer. Provide pad sizes indicated.
   a. Color: Yellow OR Gray OR Blue OR Orange OR Green, as directed.
7. Sealant: ASTM C 920, Class 25, Use NT, Grade NS, Type M, multicomponent urethane OR Type S, one-component, neutral- or acid-curing silicone, as directed, and as recommended by
07 - Thermal And Moisture Protection

Coated foamed roofing manufacturer for substrate and joint conditions and for compatibility with roofing materials.

8. Sheet Flashing and Accessories: Types recommended by coated foamed roofing manufacturer, provided at locations indicated and as recommended by coated foamed roofing manufacturer.

1.3 EXECUTION

A. Substrate Board
1. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
   a. Fasten thermal barrier to top flanges of steel deck according to recommendations in FMG's "Approval Guide" for specified Windstorm Resistance Classification.
   b. Fasten thermal barrier to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to coated foamed roofing manufacturer's written instructions.
   c. Install recovery board according to coated foamed roofing manufacturer's written instructions and the requirements of Division 07 Section "Preparation For Re-roofing". Fasten through existing roofing to roof structure as indicated. Space fasteners for wind-uplift conditions at Project site OR as indicated, as directed.

B. Surface Preparation
1. Clean and prepare substrate according to coated foamed roofing manufacturer's written instructions. Provide clean, dust-free, dew-free, and dry substrate for coated foamed roofing application.
2. Remove grease, oil, form-release agents, curing compounds, and other contaminants from substrate.
3. Prepare substrate for recovering according to Division 07 Section "Preparation For Re-roofing" and to coated foamed roofing manufacturer's written instructions.
4. Cover and mask adjoining surfaces not receiving coated foamed roofing to prevent overspray or spillage affecting other construction. Close off roof drains, removing roof-drain plugs when no work is being done or when rain is forecast.
   a. Remove masking after polyurethane foam application and remask adjoining substrates before coating.
5. Prime substrate if recommended by coated foamed roofing manufacturer.
6. Fill, cover, or tape joints and cracks in substrate that exceed a width of 1/4 inch (6 mm). Remove dust and dirt from joints and cracks before applying polyurethane foam.
7. Install vapor retarder according to coated foamed roofing manufacturer's written instructions.

C. Polyurethane Foam Application
1. General: Mix and apply polyurethane foam according to ASTM D 5469 and coated foamed roofing manufacturer's written instructions.
   a. Fill irregularities and areas of ponding.
   b. Apply the required full thickness of polyurethane foam in any specific area on same day.
   c. Apply only the area of polyurethane foam that can be covered on same day with required base coating.
   d. Apply polyurethane foam to avoid overspray beyond immediate area of work.
2. Apply polyurethane foam in lift thicknesses not less than 1/2 inch (13 mm) and not more than 1-1/2 inches (38 mm).
3. Uniformly apply total thickness of polyurethane foam indicated, but not less than 1 inch (25 mm), to a surface tolerance of plus 1/4 inch (6 mm) and no minus.
4. Apply polyurethane foam to roof penetrations, terminations, and vertical surfaces as indicated. Unless otherwise indicated, extend polyurethane foam at least 4 inches (100 mm) above elevation of adjacent roof field.
5. Surface Finish: Provide finished surface of polyurethane foam within the following range of surface textures as defined by ASTM D 5469:
a. Texture: Smooth to orange peel OR coarse orange peel OR rippling verge of popcorn, as directed.

6. Remove and replace polyurethane foam not complying with minimum surface-texture limitations. Remove defective thickness and prepare and reapply polyurethane foam with acceptable, uniform results.

D. Coating Application
1. Allow polyurethane foam substrate to cure for a minimum of two hours and remove dust, dirt, water, and other contaminants before applying coating.
2. Apply coating system to polyurethane foam, in two or more coats and according to roof coating manufacturer's written instructions, by spray, roller, or other suitable application method.
3. Apply base coat and one or more topcoats to obtain a uniform, seamless membrane free of blisters and pinholes. Apply each coat at right angles to preceding coat, using contrasting colors for successive coats.
   a. Apply base coat on same day as polyurethane foam is applied and allow it to cure.
   b. Apply topcoat(s) after removing dust, dirt, water, and other contaminants from base coat.
   c. Urethane Coating: Apply base coat and topcoat to a minimum dry film thickness recommend by coated foamed roofing manufacturer OR of 25 mils (0.64 mm) OR of 30 mils (0.76 mm) OR of 35 mils (0.89 mm), as directed.
   d. Silicone Coating: Apply base coat and topcoat to a minimum dry film thickness recommend by coated foamed roofing manufacturer OR of 20 mils (0.50 mm) OR of 22 mils (0.56 mm) OR of 26 mils (0.66 mm) OR of 30 mils (0.76 mm), as directed.
   e. Acrylic Coating: Apply base coat and topcoat to a minimum dry film thickness recommend by coated foamed roofing manufacturer OR of 25 mils (0.64 mm) OR of 28 mils (0.71 mm) OR of 32 mils (0.81 mm), as directed.
4. Apply coating system at wall terminations and vertical surfaces to extend beyond polyurethane foam by 4 inches (100 mm), minimum.
5. Mineral Granules: Apply mineral granules over wet topcoat using pressure equipment at the rate of 0.5 lb/sq. ft. (2.45 kg/sq. m). Remove excess granules after topcoat has cured.
6. Sealant: Apply sealant to perimeter and other terminations where indicated or required by coated foamed roofing manufacturer.
7. Walkways: Install roof walkways in pattern and locations indicated. Mask off completed roof coating adjacent to walkways and apply one or two additional topcoats to achieve a minimum dry film thickness recommended by coated foamed roofing manufacturer. Spread mineral granules uniformly at a rate of 0.5 lb/sq. ft. (2.45 kg/sq. m) into final wet coating. Remove masking and excess granules after topcoat has cured.
8. Walkways: Install roof walkways in pattern and locations indicated. Mask off completed roof coating adjacent to walkways and apply one additional topcoat to achieve a minimum dry film thickness recommended by coated foamed roofing manufacturer. Lay reinforcing fabric into wet coating and apply another topcoat, completely filling fabric. Spread mineral granules uniformly at a rate of 0.5 lb/sq. ft. (2.45 kg/sq. m) into final wet coating. Remove masking and excess granules after topcoat has cured.
9. Walkways: Install walkway pads in pattern and locations indicated. Adhere walkway pads to substrate with compatible adhesive according to coated foamed roofing manufacturer's written instructions.
10. Aggregate: Apply aggregate uniformly over coated polyurethane foam at coated foamed roofing manufacturer's recommended rate, but not less than 6 lb/sq. ft. (29 kg/sq. m) and a minimum thickness of 3/4 inch (19 mm). Spread with care to prevent puncturing coating and to minimize damage to substrate foam.

E. Field Quality Control
1. Correct deficiencies in, or remove, foam or coatings that do not comply with requirements; fill and repair substrates and reapply materials.
2. Additional testing, at Contractor's expense, will be performed to determine compliance of corrected Work with requirements.
3. Refill cores, repair slits, and recoat test areas.

F. Repair And Recoating
1. Repair and recoat coated foamed roofing according to ASTM D 6705 and coated foamed roofing manufacturer’s written instructions.

G. Curing, Protecting, And Cleaning
1. Cure coatings according to coated foamed roofing manufacturer’s written instructions, taking care to prevent contamination and damage during application stages and curing. Do not permit traffic on uncured coatings.
2. Protect coated foamed roofing from damage and wear during remainder of construction period.
3. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for common work results for fire suppression. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Piping materials and installation instructions common to most piping systems.
   b. Mechanical sleeve seals.
   c. Sleeves.
   d. Escutcheons.
   e. Grout.
   f. Fire-suppression equipment and piping demolition.
   g. Equipment installation requirements common to equipment sections.
   h. Painting and finishing.
   i. Concrete bases.
   j. Supports and anchorages.

C. Definitions
1. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
2. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
3. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
4. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
5. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
6. The following are industry abbreviations for plastic materials:
   a. CPVC: Chlorinated polyvinyl chloride plastic.
7. The following are industry abbreviations for rubber materials:
   a. EPDM: Ethylene-propylene-diene terpolymer rubber.
   b. NBR: Acrylonitrile-butadiene rubber.

D. Submittals
1. Welding certificates.

E. Quality Assurance
1. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
2. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   a. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
3. Electrical Characteristics for Fire-Suppression Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and
F. Delivery, Storage, And Handling
   1. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
   2. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.2 PRODUCTS

A. Pipe, Tube, And Fittings
   1. Refer to individual Division 28 for pipe, tube, and fitting materials and joining methods.
   2. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

B. Joining Materials
   1. Refer to individual Division 28 for special joining materials not listed below.
   2. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
      a. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
         1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
         2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
      b. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
   3. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
   4. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
   6. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
   7. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

C. Mechanical Sleeve Seals
   1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
      a. Sealing Elements: EPDM OR NBR, as directed, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
      b. Pressure Plates: Plastic OR Carbon steel OR Stainless steel, as directed. Include two for each sealing element.
      c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements. Include one for each sealing element.

D. Sleeves
   1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
   2. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
   3. Cast Iron: Cast or fabricated “wall pipe” equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
4. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.
5. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.
7. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

E. Escutcheons
1. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
2. One-Piece, Deep- Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
3. One-Piece, Cast-Brass Type: With set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
4. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
5. One-Piece, Stamped-Steel Type: With set screw OR spring clips, as directed, and chrome-plated finish.
6. Split-Plate, Stamped-Steel Type: With concealed OR exposed-rivet, as directed, hinge, set screw OR spring clips, as directed, and chrome-plated finish.
7. One-Piece, Floor-Plate Type: Cast-iron floor plate.
8. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

F. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

1.3 EXECUTION

A. Fire-Suppression Demolition
1. Refer to Division 01 Section(s) "Cutting And Patching" AND Division 02 Section(s) "Selective Structure Demolition" for general demolition requirements and procedures.
2. Disconnect, demolish, and remove fire-suppression systems, equipment, and components indicated to be removed.
   a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
   b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
   c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
   d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
   e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Owner.
3. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

B. Piping Systems - Common Requirements
1. Install piping according to the following requirements and Division 28 specifying piping systems.
2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

3. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

6. Install piping to permit valve servicing.

7. Install piping at indicated slopes.

8. Install piping free of sags and bends.

9. Install fittings for changes in direction and branch connections.

10. Install piping to allow application of insulation.

11. Select system components with pressure rating equal to or greater than system operating pressure.

12. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
   a. New Piping:
      1) Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
      2) Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
      3) Insulated Piping: One-piece, stamped-steel type with spring clips.
      4) Bare Piping at Wall and Floor Penetrations in Finished Spaces:
         a) One-piece, cast-brass type with polished chrome-plated finish.
            OR
            One-piece, stamped-steel type.
      5) Bare Piping at Ceiling Penetrations in Finished Spaces:
         a) One-piece OR Split-casting, as directed, cast-brass type with polished chrome-plated finish.
            OR
            One-piece, stamped-steel type OR Split-plate, stamped-steel type with concealed hinge, as directed, and set screw.
      6) Bare Piping in Unfinished Service Spaces:
         a) One-piece, cast-brass type with polished chrome-plated OR rough-brass, as directed, finish.
            OR
            One-piece, stamped-steel type with concealed hinge and spring clips.
      7) Bare Piping in Equipment Rooms:
         a) One-piece, cast-brass type.
            OR
            One-piece, stamped-steel type with set screw OR spring clips, as directed.
   b. Existing Piping: Use the following:
   c. Chrome-Plated Piping: Split-casting, cast-brass type with chrome-plated finish.
   d. Insulated Piping: Split-plate, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and spring clips.
   e. Bare Piping at Wall and Floor Penetrations in Finished Spaces:
      1) Split-casting, cast-brass type with chrome-plated finish.
         OR
         Split-plate, stamped-steel type with concealed hinge and spring clips.
   f. Bare Piping at Ceiling Penetrations in Finished Spaces:
      1) Split-casting, cast-brass type with chrome-plated finish.
         OR
         Split-plate, stamped-steel type with concealed hinge and set screw.
g. Bare Piping in Unfinished Service Spaces:
   1) Split-casting, cast-brass type with polished chrome-plated OR rough-brass, as directed, finish.
   OR
   Split-plate, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and set screw or spring clips.

h. Bare Piping in Equipment Rooms:
   1) Split-casting, cast-brass type.
   OR
   Split-plate, stamped-steel type with set screw or spring clips.

i. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.

13. Sleeves are not required for core-drilled holes.
14. Permanent sleeves are not required for holes formed by removable PE sleeves.
15. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
16. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
   a. Cut sleeves to length for mounting flush with both surfaces.
      1) Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   b. Install sleeves in new walls and slabs as new walls and slabs are constructed.
   c. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
      1) PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
      2) Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum-board partitions.
      3) Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
         a) Seal space outside of sleeve fittings with grout.
   d. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.

17. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   a. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
   b. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
   c. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

18. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   a. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

19. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.

20. Verify final equipment locations for roughing-in.
21. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.
C. Piping Joint Construction
1. Join pipe and fittings according to the following requirements and Division 28 specifying piping systems.
2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
7. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Para. 1.1 “Quality Assurance” Article.
8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
9. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.

D. Painting
1. Painting of fire-suppression systems, equipment, and components is specified in Division 09 Section(s) "Exterior Painting" AND "Interior Painting".
2. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

E. Concrete Bases
1. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   a. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
   b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
   c. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   d. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   e. Install anchor bolts to elevations required for proper attachment to supported equipment.
   f. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   g. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-place Concrete".

F. Erection Of Metal Supports And Anchorages
1. Refer to Division 05 Section "Metal Fabrications" for structural steel.
2. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.
3. Field Welding: Comply with AWS D1.1.
G. Erection Of Wood Supports And Anchorages
   1. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor fire-suppression materials and equipment.
   2. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
   3. Attach to substrates as required to support applied loads.

H. Grouting
   1. Mix and install grout for fire-suppression equipment base bearing surfaces, pump and other equipment base plates, and anchors.
   2. Clean surfaces that will come into contact with grout.
   3. Provide forms as required for placement of grout.
   4. Avoid air entrapment during placement of grout.
   5. Place grout, completely filling equipment bases.
   6. Place grout on concrete bases and provide smooth bearing surface for equipment.
   7. Place grout around anchors.
   8. Cure placed grout.

END OF SECTION 07 63 00 00
SECTION 07 63 00 00a - COMMON WORK RESULTS FOR PLUMBING

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for common work results for plumbing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Piping materials and installation instructions common to most piping systems.
      b. Transition fittings.
      c. Dielectric fittings.
      d. Mechanical sleeve seals.
      e. Sleeves.
      f. Escutcheons.
      g. Grout.
      h. Plumbing demolition.
      i. Equipment installation requirements common to equipment sections.
      j. Painting and finishing.
      k. Concrete bases.
      l. Supports and anchorages.

C. Definitions
   1. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
   2. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
   3. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
   4. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
   5. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
   6. The following are industry abbreviations for plastic materials:
      b. CPVC: Chlorinated polyvinyl chloride plastic.
      c. PE: Polyethylene plastic.
      d. PVC: Polyvinyl chloride plastic.
   7. The following are industry abbreviations for rubber materials:
      a. EPDM: Ethylene-propylene-diene terpolymer rubber.
      b. NBR: Acrylonitrile-butadiene rubber.

D. Submittals
   1. Welding certificates.

E. Quality Assurance
   1. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
   2. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
a. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

3. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

F. Delivery, Storage, And Handling
1. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
2. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.2 PRODUCTS

A. Pipe, Tube, And Fittings
1. Refer to individual Division 14 for pipe, tube, and fitting materials and joining methods.
2. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

B. Joining Materials
1. Refer to individual Division 14 for special joining materials not listed below.
2. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
      1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
   b. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
3. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
4. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
6. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
7. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
8. Solvent Cements for Joining Plastic Piping:
   a. ABS Piping: ASTM D 2235.
   b. CPVC Piping: ASTM F 493.
   c. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
   d. PVC to ABS Piping Transition: ASTM D 3138.
9. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

C. Transition Fittings
1. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
   a. Underground Piping NPS 1-1/2 (DN 40) and Smaller: Manufactured fitting or coupling.
   b. Underground Piping NPS 2 (DN 50) and Larger: AWWA C219, metal sleeve-type coupling.
   c. Aboveground Pressure Piping: Pipe fitting.
2. Plastic-to-Metal Transition Fittings: CPVC OR PVC, as directed, one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

3. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

4. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC OR PVC, as directed, four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.

5. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

D. Dielectric Fittings
1. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
2. Insulating Material: Suitable for system fluid, pressure, and temperature.
3. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
4. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
5. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   a. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.
6. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).
7. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

E. Mechanical Sleeve Seals
1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
   a. Sealing Elements: EPDM OR NBR, as directed, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   b. Pressure Plates: Plastic OR Carbon steel OR Stainless steel, as directed. Include two for each sealing element.
   c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements. Include one for each sealing element.

F. Sleeves
1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
2. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
3. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
4. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.
5. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.
7. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

G. Escutcheons
1. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
2. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

3. One-Piece, Cast-Brass Type: With set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, **as directed**.

4. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, **as directed**.

5. One-Piece, Stamped-Steel Type: With set screw **OR** spring clips, **as directed**, and chrome-plated finish.

6. Split-Plate, Stamped-Steel Type: With concealed **OR** exposed-rivet, **as directed**, hinge, set screw **OR** spring clips, **as directed**, and chrome-plated finish.

7. One-Piece, Floor-Plate Type: Cast-iron floor plate.

8. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

H. Grout

1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

1.3 EXECUTION

A. Plumbing Demolition

1. Refer to Division 01 Section(s) "Cutting And Patching" AND Division 02 Section(s) "Selective Structure Demolition" for general demolition requirements and procedures.

2. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
   a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
   b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
   c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
   d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
   e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Owner.

3. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

B. Piping Systems - Common Requirements

1. Install piping according to the following requirements and Division 14 specifying piping systems.

2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

3. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

6. Install piping to permit valve servicing.
1. Install piping at indicated slopes.
2. Install piping free of sags and bends.
3. Install fittings for changes in direction and branch connections.
4. Install piping to allow application of insulation.
5. Select system components with pressure rating equal to or greater than system operating pressure.
6. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
   a. New Piping:
      1) Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
      2) Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
      3) Insulated Piping: One-piece, stamped-steel type with spring clips.
      4) Bare Piping at Wall and Floor Penetrations in Finished Spaces:
         a) One-piece, cast-brass type with polished chrome-plated finish.
         OR
         b) One-piece, stamped-steel type.
   5) Bare Piping at Ceiling Penetrations in Finished Spaces:
      a) One-piece OR Split-casting, as directed, cast-brass type with polished chrome-plated finish.
      OR
      b) One-piece, stamped-steel type OR Split-plate, stamped-steel type with concealed hinge, as directed, and set screw.
   6) Bare Piping in Unfinished Service Spaces:
      a) One-piece, cast-brass type with polished chrome-plated finish OR rough-brass, as directed, finish.
      OR
      b) One-piece, stamped-steel type with concealed hinge and spring clips, as directed.
      OR
      c) One-piece, stamped-steel type with exposed-rivet, as directed, hinge and set screw OR spring clips, as directed.
   7) Bare Piping in Equipment Rooms:
      a) One-piece, cast-brass type.
      OR
      b) One-piece, stamped-steel type with set screw OR spring clips, as directed.
   8) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
   b. Existing Piping: Use the following:
      1) Chrome-Plated Piping: Split-casting, cast-brass type with chrome-plated finish.
      2) Insulated Piping: Split-plate, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and spring clips.
      3) Bare Piping at Wall and Floor Penetrations in Finished Spaces:
         a) Split-casting, cast-brass type with chrome-plated finish.
         OR
         b) Split-plate, stamped-steel type with concealed hinge and spring clips.
      4) Bare Piping at Ceiling Penetrations in Finished Spaces:
         a) Split-casting, cast-brass type with chrome-plated finish.
         OR
         b) Split-plate, stamped-steel type with concealed hinge and set screw.
      5) Bare Piping in Unfinished Service Spaces:
         a) Split-casting, cast-brass type with polished chrome-plated finish OR rough-brass, as directed, finish.
         OR
         b) Split-plate, stamped-steel type with concealed OPexposed-rivet, as directed, hinge and set screw or spring clips.
      6) Bare Piping in Equipment Rooms:
         a) Split-casting, cast-brass type.
         OR
         b) Split-plate, stamped-steel type with set screw or spring clips.
      7) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.

13. Sleeves are not required for core-drilled holes.
14. Permanent sleeves are not required for holes formed by removable PE sleeves.
15. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
16. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
   a. Cut sleeves to length for mounting flush with both surfaces.
      1) Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   b. Install sleeves in new walls and slabs as new walls and slabs are constructed.
   c. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
      1) PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
      2) Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum-board partitions.
      3) Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
         a) Seal space outside of sleeve fittings with grout.
   d. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
17. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   a. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
   b. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
   c. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
18. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   a. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
19. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.
20. Verify final equipment locations for roughing-in.
21. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

C. Piping Joint Construction
1. Join pipe and fittings according to the following requirements and Division 14 specifying piping systems.
2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
7. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Para. 1.1 "Quality Assurance" Article.
8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
9. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
   c. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   d. PVC Pressure Piping: Join schedule number ASTM D 1785; PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
   e. PVC Nonpressure Piping: Join according to ASTM D 2855.
   f. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D 2855.
12. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   a. Plain-End Pipe and Fittings: Use butt fusion.
   b. Plain-End Pipe and Socket Fittings: Use socket fusion.
13. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

D. Piping Connections
1. Make connections according to the following, unless otherwise indicated:
   a. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
   b. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
   c. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
   d. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

E. Equipment Installation - Common Requirements
1. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
2. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
3. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
4. Install equipment to allow right of way for piping installed at required slope.

F. Painting
1. Painting of plumbing systems, equipment, and components is specified in Division 09 Section(s) "Exterior Painting" AND "Interior Painting".
2. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
G. **Concrete Bases**
   1. **Concrete Bases:** Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
      a. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
      b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
      c. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
      d. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
      e. Install anchor bolts to elevations required for proper attachment to supported equipment.
      f. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
      g. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-place Concrete".

H. **Erection Of Metal Supports And Anchorages**
   1. Refer to Division 05 Section "Metal Fabrications" for structural steel.
   2. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
   3. Field Welding: Comply with AWS D1.1.

I. **Erection Of Wood Supports And Anchorages**
   1. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
   2. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
   3. Attach to substrates as required to support applied loads.

J. **Grouting**
   1. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
   2. Clean surfaces that will come into contact with grout.
   3. Provide forms as required for placement of grout.
   4. Avoid air entrainment during placement of grout.
   5. Place grout, completely filling equipment bases.
   6. Place grout on concrete bases and provide smooth bearing surface for equipment.
   7. Place grout around anchors.
   8. Cure placed grout.

END OF SECTION 07 63 00 00a
SECTION 07 63 00 00b - COMMON WORK RESULTS FOR HVAC

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for common work results for HVAC. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Piping materials and installation instructions common to most piping systems.
   b. Transition fittings.
   c. Dielectric fittings.
   d. Mechanical sleeve seals.
   e. Sleeves.
   f. Escutcheons.
   g. Grout.
   h. HVAC demolition.
   i. Equipment installation requirements common to equipment sections.
   j. Painting and finishing.
   k. Concrete bases.
   l. Supports and anchorages.

C. Definitions
1. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
2. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
3. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
4. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
5. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
6. The following are industry abbreviations for plastic materials:
   a. CPVC: Chlorinated polyvinyl chloride plastic.
   b. PE: Polyethylene plastic.
   c. PVC: Polyvinyl chloride plastic.
7. The following are industry abbreviations for rubber materials:
   a. EPDM: Ethylene-propylene-diene terpolymer rubber.
   b. NBR: Acrylonitrile-butadiene rubber.

D. Submittals
1. Welding certificates.

E. Quality Assurance
1. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel.”
2. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, “Welding and Brazing Qualifications.”
b. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

3. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

F. Delivery, Storage, And Handling
1. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
2. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.2 PRODUCTS

A. Pipe, Tube, And Fittings
1. Refer to individual Division 21 for pipe, tube, and fitting materials and joining methods.
2. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

B. Joining Materials
1. Refer to individual Division 21 for special joining materials not listed below.
2. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   a. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
      1) Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      2) Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
   b. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
3. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
4. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
6. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
7. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
8. Solvent Cements for Joining Plastic Piping:
   a. CPVC Piping: ASTM F 493.
   b. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
9. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

C. Transition Fittings
1. Plastic-to-Metal Transition Fittings: CPVC OR PVC, as directed, one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
2. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
3. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC OR PVC, as directed, four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.

D. Dielectric Fittings
1. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

2. Insulating Material: Suitable for system fluid, pressure, and temperature.

3. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).

4. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

5. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   a. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.

6. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

7. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

E. Mechanical Sleeve Seals

1. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
   a. Sealing Elements: EPDM OR NBR, as directed, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   b. Pressure Plates: Plastic OR Carbon steel OR Stainless steel, as directed. Include two for each sealing element.
   c. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating OR Stainless steel, as directed, of length required to secure pressure plates to sealing elements. Include one for each sealing element.

F. Sleeves

1. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
2. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
3. Cast Iron: Cast or fabricated “wall pipe” equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
4. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with set screws.
5. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.
7. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

G. Escutcheons

1. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
2. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
3. One-Piece, Cast-Brass Type: With set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
4. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
   a. Finish: Polished chrome-plated OR Rough brass OR Polished chrome-plated and rough brass, as directed.
5. One-Piece, Stamped-Steel Type: With set screw OR spring clips, as directed, and chrome-plated finish.
6. Split-Plate, Stamped-Steel Type: With concealed OR exposed-rivet, as directed, hinge, set screw OR spring clips, as directed, and chrome-plated finish.
7. One-Piece, Floor-Plate Type: Cast-iron floor plate.
8. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

H. Grout
1. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   b. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
   c. Packaging: Premixed and factory packaged.

1.3 EXECUTION

A. HVAC Demolition
1. Refer to Division 01 Section(s) “Cutting And Patching” AND Division 02 Section(s) “Selective Structure Demolition” for general demolition requirements and procedures.
2. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.
   a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
   b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
   c. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
   d. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
   e. Equipment to Be Removed: Disconnect and cap services and remove equipment.
   f. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
   g. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Owner.
3. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

B. Piping Systems - Common Requirements
1. Install piping according to the following requirements and Division 21 specifying piping systems.
2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
3. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
6. Install piping to permit valve servicing.
7. Install piping at indicated slopes.
8. Install piping free of sags and bends.
9. Install fittings for changes in direction and branch connections.
10. Install piping to allow application of insulation.
11. Select system components with pressure rating equal to or greater than system operating pressure.
12. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
   a. New Piping:
1) Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
2) Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
3) Insulated Piping: One-piece, stamped-steel type with spring clips.
4) Bare Piping at Wall and Floor Penetrations in Finished Spaces:
   a) One-piece, cast-brass type with polished chrome-plated finish.
      OR
      One-piece, stamped-steel type.
5) Bare Piping at Ceiling Penetrations in Finished Spaces:
   a) One-piece OR Split-casting, as directed, cast-brass type with polished chrome-plated finish.
      OR
      One-piece, stamped-steel type OR Split-plate, stamped-steel type with concealed hinge, as directed, and set screw.
6) Bare Piping in Unfinished Service Spaces:
   a) One-piece, cast-brass type with polished chrome-plated OR rough-brass, as directed, finish.
      OR
      One-piece, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and set screw OR spring clips, as directed.
7) Bare Piping in Equipment Rooms:
   a) One-piece, cast-brass type.
      OR
      One-piece, stamped-steel type with set screw OR spring clips, as directed.
8) Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
   b. Existing Piping: Use the following:
      1) Chrome-Plated Piping: Split-casting, cast-brass type with chrome-plated finish.
      2) Insulated Piping: Split-plate, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and spring clips.
5) Bare Piping at Ceiling Penetrations in Finished Spaces:
   a) Split-casting, cast-brass type with chrome-plated finish.
      OR
      Split-plate, stamped-steel type with concealed hinge and spring clips.
6) Bare Piping in Unfinished Service Spaces:
   a) Split-casting, cast-brass type with polished chrome-plated OR rough-brass, as directed, finish.
      OR
      Split-plate, stamped-steel type with concealed OR exposed-rivet, as directed, hinge and set screw or spring clips.
7) Bare Piping in Equipment Rooms:
   a) Split-casting, cast-brass type.
      OR
      Split-plate, stamped-steel type with set screw or spring clips.
8) Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.
13. Sleeves are not required for core-drilled holes.
14. Permanent sleeves are not required for holes formed by removable PE sleeves.
15. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
16. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
   a. Cut sleeves to length for mounting flush with both surfaces.
1) Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   
   b. Install sleeves in new walls and slabs as new walls and slabs are constructed.
   
   c. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
      
      1) PVC OR Steel, as directed, Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
      2) Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum-board partitions.
      3) Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing And Trim" for flashing.
         a) Seal space outside of sleeve fittings with grout.
      
   d. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.

17. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   
   a. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
   b. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
   c. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

18. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
   
   a. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

19. Fire-BARRIER Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.

20. Verify final equipment locations for roughing-in.

21. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

C. Piping Joint Construction

1. Join pipe and fittings according to the following requirements and Division 21 specifying piping systems.

2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
7. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Para. 1.1 “Quality Assurance” Article.

8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

9. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   b. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   c. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
   d. PVC Nonpressure Piping: Join according to ASTM D 2855.

12. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   a. Plain-End Pipe and Fittings: Use butt fusion.
   b. Plain-End Pipe and Socket Fittings: Use socket fusion.

13. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

D. Piping Connections
1. Make connections according to the following, unless otherwise indicated:
   a. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
   b. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
   c. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
   d. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

E. Equipment Installation - Common Requirements
1. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
2. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
3. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
4. Install equipment to allow right of way for piping installed at required slope.

F. Painting
1. Painting of HVAC systems, equipment, and components is specified in Division 09 Section(s) "Exterior Painting" AND "Interior Painting".
2. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

G. Concrete Bases
1. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   a. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
   b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
   c. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
d. Place and secure anchorage devices. Use supported equipment manufacturer’s setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

e. Install anchor bolts to elevations required for proper attachment to supported equipment.

f. Install anchor bolts according to anchor-bolt manufacturer’s written instructions.

g. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section “Cast-in-place Concrete”.

H. Erection Of Metal Supports And Anchorages
1. Refer to Division 05 Section “Metal Fabrications” for structural steel.
2. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.
3. Field Welding: Comply with AWS D1.1.

I. Erection Of Wood Supports And Anchorages
1. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.
2. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
3. Attach to substrates as required to support applied loads.

J. Grouting
1. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
2. Clean surfaces that will come into contact with grout.
3. Provide forms as required for placement of grout.
4. Avoid air entrapment during placement of grout.
5. Place grout, completely filling equipment bases.
6. Place grout on concrete bases and provide smooth bearing surface for equipment.
7. Place grout around anchors.
8. Cure placed grout.

SECTION 07 71 23 00 - MANUFACTURED ROOF SPECIALTIES

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for manufactured roof specialties. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Copings.
   b. Roof-edge flashings.
   c. Roof-edge drainage systems.
   d. Reglets and counterflashings.

C. Performance Requirements
1. General Performance: Roof specialties shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
2. FM Approvals' Listing (if Project is FM Global insured or if FM Approvals' requirements set a minimum quality standard): Manufacture and install copings and roof-edge flashings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, Class 1-60 OR Class 1-75 OR Class 1-90 OR Class 1-105 OR Class 1-120, as directed. Identify materials with FM Approvals' markings.
3. SPRI Wind Design Standard (if Project is governed by the IBC or if SPRI ES-1 sets a minimum quality standard): Manufacture and install copings and roof-edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressures:
   a. Design Pressure: As indicated on Drawings OR As directed.
4. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Submittals
1. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Shop Drawings: For roof specialties. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work. Include the following:
   a. Details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
   b. Pattern of seams and layout of fasteners, cleats, clips, and other attachments.
   c. Details of termination points and assemblies, including fixed points.
   d. Details of special conditions.
3. Samples: For copings OR roof-edge flashings OR roof-edge drainage systems OR reglets and counterflashings, as directed, made from 12-inch (300-mm) lengths of full-size components including fasteners, cover joints, accessories, and attachments.
4. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for copings and roof-edge flashings.
5. Maintenance Data: For roofing specialties to include in maintenance manuals.

E. Quality Assurance
1. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling
1. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
2. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof specialties installation.

G. Warranty
1. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.
   a. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
      1) Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      2) Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   b. Finish Warranty Period: 20 OR 10, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Exposed Metals
1. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 or H01 temper.
   b. Pre-Patinated Copper-Sheet Finish: Pre-patinated according to ASTM B 882.
2. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
   a. Surface: Smooth, flat OR Embossed, as directed, finish.
   b. Mill Finish: As manufactured.
   c. Exposed Coil-Coated Finishes: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      1) Two-Coat Fluoropolymer: AAMA 620. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
      2) Three-Coat Fluoropolymer: AAMA 620. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
      3) Concealed Surface: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
   d. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
   e. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
3. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:
   a. Exposed High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      1) Two-Coat Fluoropolymer: AAMA 2604 OR AAMA 2605, as directed. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
2) Three-Coat Fluoropolymer: AAMA 2605. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
   b. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
   c. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.

4. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.
5. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation.
   a. Surface: Smooth, flat OR Embossed, as directed, finish.
   b. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
   c. Exposed Coil-Coated Finishes: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1) Two-Coat Fluoropolymer: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
2) Three-Coat Fluoropolymer: AAMA 621. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.

B. Concealed Metals
1. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.
2. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.
3. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.

C. Underlayment Materials
1. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
2. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils (0.76 to 1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   b. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F (29 deg C).
3. Polyethylene Sheet: 6-mil- (0.15-mm-) thick polyethylene sheet complying with ASTM D 4397.
4. Slip Sheet: Building paper, 3-lb/100 sq. ft. (0.16-kg/sq. m) minimum, rosin sized.

D. Miscellaneous Materials
1. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
2. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:
   b. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.
   c. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
   d. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
   e. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
3. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane OR silicone, as directed, polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.
4. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
5. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
7. Solder for Copper: ASTM B 32, lead-free solder OR Grade Sn50, 50 percent tin and 50 percent lead, as directed.

E. Copings
1. Copings: Manufactured coping system consisting of formed-metal coping cap in section lengths not exceeding 12 feet (3.6 m), concealed anchorage; corner units, end cap units, and concealed splice plates with same finish as coping caps.
   a. Coping-Cap Material: Copper, 20 oz./sq. ft. (0.68 mm thick) OR weight (thickness) as required to meet performance requirements, as directed.
      1) Finish: Non-patinated, mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.
      OR
      Coping-Cap Material: Formed OR Extruded, as directed, aluminum, 0.040 inch (1.02 mm) thick OR 0.050 inch (1.27 mm) thick OR 0.063 inch (1.60 mm) thick OR 0.080 inch (2.03 mm) thick OR 0.125 inch (3.18 mm) thick OR thickness as required to meet performance requirements, as directed.
      1) Finish: Mill OR Two-coat fluoropolymer OR Three-coat fluoropolymer OR Clear anodic OR Color anodic, as directed.
      2) Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
      OR
      Coping-Cap Material: Zinc-coated steel, nominal 0.028-inch (0.71-mm) thickness OR 0.034-inch (0.86-mm) thickness OR thickness as required to meet performance requirements, as directed.
      1) Finish: Mill phosphatized for field painting OR Two-coat fluoropolymer OR Three-coat fluoropolymer, as directed.
      2) Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   b. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
   c. Special Fabrications: Radiussed sections OR Arched sections OR Bullnose face leg OR Two-way sloped coping cap, as directed.
   d. Coping-Cap Attachment Method: Snap-on OR Face leg hooked to continuous cleat with back leg fastener exposed, as directed, fabricated from coping-cap material.
   e. Snap-on-Coping Anchor Plates: Concealed, galvanized-steel sheet, 12 inches (300 mm) wide, with integral cleats.
      OR
      Face Leg Cleats: Concealed, continuous galvanized-steel sheet OR stainless steel, as directed.

F. Roof-Edge Flashings
1. Canted Roof-Edge and Fascia OR Fascia and Gravel Stop, as directed: Manufactured, two-piece, roof-edge fascia consisting of snap-on OR compression-clamped, as directed, metal fascia cover in section lengths not exceeding 12 feet (3.6 m) and a continuous formed galvanized-steel sheet cant, 0.028 inch (0.71 mm) thick, minimum, with extended vertical leg terminating in a drip-edge cleat. Provide matching corner units.
   a. Fascia Cover: Fabricated from the following exposed metal:
      1) Formed Aluminum: 0.040 inch (1.02 mm) thick OR 0.050 inch (1.27 mm) thick OR 0.063 inch (1.60 mm) thick OR Thickness as required to meet performance requirements, as directed.
2) Extruded Aluminum: 0.080 inch (2.03 mm) thick OR Thickness as required to meet performance requirements, as directed.
3) Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) thickness OR 0.034-inch (0.86-mm) thickness OR thickness as required to meet performance requirements, as directed.

b. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
c. Splice Plates: Concealed OR Exposed, as directed, of same material, finish, and shape as fascia cover.
d. Special Fabrications: Radianed sections OR Arched sections OR Bullnose fascia cover OR Cornice fascia cover OR Cove fascia cover, as directed.
e. Fascia Accessories: Fascia extenders with continuous hold-down cleats OR Wall cap OR Soffit trim OR Overflow scuppers OR Overflow scuppers with perforated screens OR Spillout scuppers OR Downspout scuppers with integral conductor head and downspout adapters OR Downspout scuppers with integral conductor head and downspout adapters and perforated screens, as directed.

2. Roof-Edge Fascia: Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet (3.6 m) and a continuous formed- or extruded-aluminum anchor bar with integral drip-edge cleat to engage fascia cover. Provide matching corner units.

a. Fascia Cover: Fabricated from the following exposed metal:
   1) Formed Aluminum: 0.032 inch (0.81 mm) thick OR 0.040 inch (1.02 mm) thick OR 0.050 inch (1.27 mm) thick OR 0.063 inch (1.60 mm) thick OR Thickness as required to meet performance requirements, as directed.
   2) Zinc-Coated Steel: Nominal 0.028 inch (0.71 mm) thick OR 0.034 inch (0.86 mm) thick OR Thickness as required to meet performance requirements, as directed.

b. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
c. Splice Plates: Concealed OR Exposed, as directed, of same material, finish, and shape as fascia cover.
d. Special Fabrications: Radianed sections OR Arched sections OR Bullnose fascia cover OR Cornice fascia cover OR Cove fascia cover, as directed.
e. Fascia Accessories: Fascia extenders with continuous hold-down cleats OR Wall cap OR Soffit trim OR Overflow scuppers OR Overflow scuppers with perforated screens OR Spillout scuppers OR Downspout scuppers with integral conductor head and downspout adapters OR Downspout scuppers with integral conductor head and downspout adapters and perforated screens, as directed.

3. One-Piece Gravel Stops: Manufactured, one-piece, metal gravel stop in section lengths not exceeding 12 feet (3.6 m), with a horizontal flange and vertical leg, drain-through, as directed, fascia terminating in a drip edge, as directed, and concealed splice plates of same material, finish, and shape as gravel stop. Provide matching corner units.

a. Fabricate from the following exposed metal:
   1) Copper: 16 oz./sq. ft. (0.55 mm thick) OR Weight (thickness) as required to meet performance requirements, as directed.
   2) Formed Aluminum: 0.032 inch (0.81 mm) thick OR 0.040 inch (1.02 mm) thick OR 0.050 inch (1.27 mm) thick OR 0.063 inch (1.60 mm) thick OR Thickness as required to meet performance requirements, as directed.
   3) Extruded Aluminum: 0.080 inch (2.03 mm) thick OR Thickness as required to meet performance requirements, as directed.
   4) Stainless Steel: 0.025 inch (0.64 mm) thick OR Thickness as required to meet performance requirements, as directed.
   5) Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) thickness OR 0.034-inch (0.86-mm) thickness OR Thickness as required to meet performance requirements, as directed.

b. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
c. Accessories: Fascia extenders with continuous hold-down cleats OR Wall cap OR Soffit trim, as directed.
4. Copper Finish: Non-patinated, mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.
5. Aluminum Finish: Mill OR Two-coat fluoropolymer OR Three-coat fluoropolymer OR Clear anodic OR Color anodic, as directed.
   a. Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
6. Stainless-Steel Finish: No. 2B (bright, cold rolled) OR No. 3 (coarse, polished directional satin) OR No. 4 (bright, polished directional satin), as directed.
7. Zinc-Coated Steel Finish: Mill phosphatized for field painting OR Two-coat fluoropolymer OR Three-coat fluoropolymer, as directed.
   a. Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

G. Roof-Edge Drainage Systems
1. Gutters: Manufactured in uniform section lengths not exceeding 12 feet (3.6 m), with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch (25 mm) above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
   a. Fabricate from the following exposed metal:
      1) Copper: 16 oz./sq. ft. (0.55 mm thick) OR 20 oz./sq. ft. (0.68 mm thick), as directed.
      2) Formed Aluminum: 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm) OR 0.063 inch (1.60 mm), as directed, thick.
      3) Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, thickness.
   b. Gutter Profile: Style A OR Style B OR Style F OR Style G OR Style H OR Style I OR Style K OR Style K highback OR Half-round single bead OR Half-round highback OR Quarter round OR Ogee OR As indicated, as directed, according to SMACNA's "Architectural Sheet Metal Manual."
   c. Embossed Surface: Embossed with design as indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.
   d. Applied Fascia Cover (Concealed Gutter): Exposed, formed copper, 16 oz./sq. ft. (0.55 mm thick) OR aluminum, 0.040 inch (1.02 mm) thick, as directed, with factory-mitered corners, ends, and concealed splice joints.
   e. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
   f. Gutter Supports: Gutter brackets OR Straps OR Spikes and ferrules OR Manufacturer's standard supports as selected by the Owner, as directed, with finish matching the gutters.
   g. Special Fabrications: Radiussed sections.
   h. Gutter Accessories: Continuous screened leaf guard with sheet metal frame OR Continuous hinged leaf guard of solid metal designed to shed leaves OR Continuous snap-in plastic leaf guard OR Bronze wire ball downspout strainer OR Wire ball downspout strainer OR Flat ends OR Bullnose ends for half-round gutter, as directed.
2. Downspouts: Plain round OR Corrugated round OR Plain rectangular OR Corrugated rectangular OR Open-face rectangular, as directed, complete with machine-crimped OR mitered OR smooth-curve, as directed, elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
   a. Copper: 16 oz./sq. ft. (0.55 mm thick).
   b. Formed Aluminum: 0.032 inch (0.81 mm) OR 0.040 inch (1.02 mm) OR 0.050 inch (1.27 mm) OR 0.063 inch (1.60 mm), as directed, thick.
   c. Extruded Aluminum: 0.125 inch (3.18 mm) thick.
   d. Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) OR 0.034-inch (0.86-mm), as directed, thickness.
3. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch (100-mm)-wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scuppers, as directed.
   a. Fabricate from the following exposed metal:
1) Copper: 16 oz./sq. ft. (0.55 mm thick).
2) Formed Aluminum: 0.032 inch (0.81 mm) thick.
3) Stainless Steel: 0.019 inch (0.48 mm) thick.
4) Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) thickness.

4. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout, exterior flange trim, as directed, and built-in overflow, as directed.
   a. Fabricate from the following exposed metal:
      1) Copper: 16 oz./sq. ft. (0.55 mm thick).
      2) Formed Aluminum: 0.032 inch (0.81 mm) thick.
      3) Stainless Steel: 0.016 inch (0.40 mm) thick.
      4) Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) thickness.

5. Splash Pans: Fabricate from the following exposed metal:
   a. Copper: 16 oz./sq. ft. (0.55 mm thick).
   b. Formed Aluminum: 0.040 inch (1.02 mm) thick.
   c. Stainless Steel: 0.019 inch (0.48 mm) thick.
   d. Zinc-Coated Steel: Nominal 0.028-inch (0.71-mm) thickness.

6. Copper Finish: Non-patinated, mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as directed.

7. Aluminum Finish: Mill OR Two-coat fluoropolymer OR Three-coat fluoropolymer OR Clear anodic OR Color anodic, as directed.
   a. Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR As indicated by manufacturer’s designations OR As selected from manufacturer’s full range, as directed.

8. Stainless-Steel Finish: No. 2B (bright, cold rolled, unpolished) OR No. 3 (coarse, polished directional satin) OR No. 4 (bright, polished directional satin), as directed.

9. Zinc-Coated Steel Finish: Mill phosphatized for field painting OR Two-coat fluoropolymer OR Three-coat fluoropolymer, as directed.
   a. Color: As indicated by manufacturer’s designations OR As selected from manufacturer’s full range, as directed.

H. Reglets And Counterflashings
1. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:
   a. Copper: 16 oz./sq. ft. (0.55 mm thick).
   b. Formed Aluminum: 0.024 inch (0.61 mm) OR 0.050 inch (1.27 mm), as directed, thick.
   c. Stainless Steel: 0.019 inch (0.48 mm) OR 0.025 inch (0.64 mm), as directed, thick.
   d. Zinc-Coated Steel: Nominal 0.022-inch (0.56-mm) OR 0.028-inch (0.71-mm), as directed, thickness.
   e. Corners: Factory mitered and soldered OR continuously welded OR mechanically clinched and sealed watertight, as directed.
   f. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
   g. Stucco Type, Embedded: Provide reglets with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
   h. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
   i. Masonry Type, Embedded: Provide reglets with offset top flange for embedment in masonry mortar joint.
   j. Multiuse Type, Embedded: For multiuse embedment in cast-in-place concrete OR masonry mortar joints, as directed.

2. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches (100 mm) and in lengths not exceeding 12 feet (3.6 m) designed to snap into reglets or through-wall-flashing receiver and compress against base flashings with joints lapped, from the following exposed metal:
   a. Copper: 16 oz./sq. ft. (0.55 mm thick).
   b. Formed Aluminum: 0.024 inch (0.61 mm) OR 0.032 inch (0.81 mm), as directed, thick.
3. Accessories:
   a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible
      flashing in reglet where clearance does not permit use of standard metal counterflashing or
      where reglet is provided separate from metal counterflashing.
   b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing
      to prevent wind uplift of counterflashing lower edge.
4. Copper Finish: Non-patinated, mill OR Pre-patinated dark brown OR Pre-patinated verdigris, as
   directed.
5. Aluminum Finish: Mill OR Two-coat fluoropolymer OR Three-coat fluoropolymer OR Clear anodic
   OR Color anodic, as directed.
   a. Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR As indicated by
      manufacturer's designations OR As selected from manufacturer's full range, as directed.
6. Stainless-Steel Finish: No. 2B (bright, cold rolled, unpolished) OR No. 3 (coarse, polished
   directional satin) OR No. 4 (bright, polished directional satin), as directed.
7. Zinc-Coated Steel Finish: Mill phosphatized for field painting OR Two-coat fluoropolymer OR
   Three-coat fluoropolymer, as directed.
   a. Color: As indicated by manufacturer's designations OR As selected from manufacturer's
      full range, as directed.

I. General Finish Requirements
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for
   recommendations for applying and designating finishes.
2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a
   strippable, temporary protective covering before shipping.
3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of
   approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION

A. Examination
1. Examine substrates, areas, and conditions, with Installer present, to verify actual locations,
   dimensions, and other conditions affecting performance of the Work.
2. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
3. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
4. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Underlayment Installation
1. Felt Underlayment: Install with adhesive for temporary anchorage to minimize use of mechanical
   fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not
   less than 2 inches (50 mm).
2. Self-Adhering Sheet Underlayment: Install wrinkle free. Apply primer if required by underlayment
   manufacturer. Comply with temperature restrictions of underlayment manufacturer for
   installation; use primer rather than nails for installing underlayment at low temperatures. Apply in
   shingle fashion to shed water. Overlap edges not less than 3-1/2 inches (90 mm). Roll laps with
   roller. Cover underlayment within 14 days.
3. Polyethylene Sheet: Install with adhesive for temporary anchorage to minimize use of
   mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped
   and taped joints of not less than 2 inches (50 mm).
4. Slip Sheet: Install with tape or adhesive for temporary anchorage to minimize use of mechanical
   fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not
   less than 2 inches (50 mm).
C. Installation, General

1. General: Install roof specialties according to manufacturer’s written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete roof-specialty systems.
   a. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
   b. Provide uniform, neat seams with minimum exposure of solder and sealant.
   c. Install roof specialties to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
   d. Torch cutting of roof specialties is not permitted.
   e. Do not use graphite pencils to mark metal surfaces.

2. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
   a. Coat concealed side of uncoated aluminum and stainless-steel roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
   b. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet OR self-adhering, high-temperature sheet underlayment OR polyethylene sheet, as directed.
   c. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.

   a. Space movement joints at a maximum of 12 feet (3.6 m) with no joints within 18 inches (450 mm) of corners or intersections unless otherwise shown on Drawings.
   b. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

4. Fastener Sizes: Use fasteners of sizes that will penetrate wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws OR substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance, as directed.

5. Seal joints with elastomeric OR butyl, as directed, sealant as required by roofing-specialty manufacturer.

6. Seal joints as required for watertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F (4 deg C).

7. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches (38 mm) except reduce pre-tinning where pre-tinned surface would show in completed Work. Tin edges of uncoated copper sheets using solder for copper. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

D. Coping Installation

1. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

2. Anchor copings to meet performance requirements.
   a. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at 30-inch (760-mm) centers OR 40-inch (1015-mm) centers OR manufacturer’s required spacing that meets performance requirements, as directed.
   b. Interlock face leg drip edge into continuous cleat anchored to substrate at 24-inch (600-mm) centers OR 16-inch (400-mm) centers OR manufacturer’s required spacing that meets performance requirements, as directed. Anchor back leg of coping with screw fasteners and elastomeric washers at 24-inch (600-mm) centers OR 16-inch (400-mm) centers OR manufacturer’s required spacing that meets performance requirements, as directed.

E. Roof-Edge Flashing Installation
1. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.
2. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

F. Roof-Edge Drainage-System Installation
1. General: Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
2. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 12 inches (305 mm) OR 24 inches (610 mm) OR 30 inches (762 mm), as directed, apart. Attach ends with rivets and seal with sealant OR solder, as directed, to make watertight. Slope to downspouts.
   a. Install gutter with expansion joints at locations indicated but not exceeding 50 feet (15.2 m) apart. Install expansion joint caps.
   b. Install continuous leaf guards on gutters with noncorrosive fasteners, removable OR hinged to swing open, as directed, for cleaning gutters.
3. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1500 mm) o.c.
   a. Provide elbows at base of downspout to direct water away from building.
   OR
   Connect downspouts to underground drainage system indicated.
4. Splash Pans: Install where downspouts discharge on low-slope roofs. Set in asphalt roofing cement OR elastomeric sealant, as directed.
5. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
   a. Anchor scupper closure trim flange to exterior wall and seal or solder to scupper.
   b. Loosely lock front edge of scupper with conductor head.
   c. Seal or solder exterior wall scupper flanges into back of conductor head.
6. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch (25 mm) below scupper OR gutter, as directed, discharge.

G. Reglet And Counterflashing Installation
1. General: Coordinate installation of reglets and counterflashings with installation of base flashings.
2. Embedded Reglets: See Division 03 Section "Cast-in-place Concrete" and Division 04 Section "Unit Masonry" for installation of reglets.
3. Surface-Mounted Reglets: Install reglets to receive flashings where flashing without embedded reglets is indicated on Drawings. Install at height so that inserted counterflashings overlap 4 inches (100 mm) over top edge of base flashings.
4. Counterflashings: Insert counterflashings into reglets or other indicated receivers; ensure that counterflashings overlap 4 inches (100 mm) over top edge of base flashings. Lap counterflashing joints a minimum of 4 inches (100 mm) and bed with elastomeric OR butyl, as directed, sealant. Fit counterflashings tightly to base flashings.

H. Cleaning And Protection
1. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
2. Clean and neutralize flux materials. Clean off excess solder and sealants.
3. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.
4. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

SECTION 07 72 13 00 - PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for packaged, outdoor, central-station air-handling units. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:
   a. Direct-expansion cooling.
   b. Heat-pump refrigeration components.
   c. Hot-gas reheat.
   d. Electric-heating coils.
   e. Gas furnace.
   f. Economizer outdoor- and return-air damper section.
   g. Integral, space temperature controls.
   h. Roof curbs.

C. Definitions
1. DDC: Direct-digital controls.
2. ECM: Electrically commutated motor.
3. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. “Outdoor air” is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
4. Outdoor-Air Refrigerant-Coil Fan: The outdoor-air refrigerant-coil fan in RTUs. “Outdoor air” is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
5. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.
6. Supply-Air Fan: The fan providing supply air to conditioned space. “Supply air” is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
7. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. “Supply air” is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
8. VVT: Variable-air volume and temperature.

D. Performance Requirements
1. Delegated Design: Design RTU supports to comply with wind and seismic, as directed, performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
2. Wind-Restraint Performance:
   a. Basic Wind Speed: <Insert value>.
   b. Building Classification Category: I OR II OR III OR IV, as directed.
   c. Minimum 10 lb/sq. ft (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.
3. Seismic Performance: RTUs shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

E. Submittals
1. Product Data: Include manufacturer’s technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.
2. LEED Submittals:
   a. Product Data for Credit EA 4: Documentation required by Credit EA 4 indicating that equipment and refrigerants comply.
   b. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
3. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints, as directed, and for designing vibration isolation bases.
   b. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
   c. Wind- and Seismic-Restraint Details, as directed: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.
5. Manufacturer Wind Loading Qualification Certification: Submit certification that specified equipment will withstand wind forces identified in "Performance Requirements" Article and in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment."
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.
   b. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
   c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
6. Manufacturer Seismic Qualification Certification: Submit certification that RTUs, accessories, and components will withstand seismic forces defined in "Performance Requirements" Article and in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment."
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
7. Field quality-control test reports.
8. Operation and maintenance data.
9. Warranty: Special warranty specified in this Section.

F. Quality Assurance
1. ARI Compliance:
   a. Comply with ARI 210/240 and ARI 340/360 for testing and rating energy efficiencies for RTUs.
   b. Comply with ARI 270 for testing and rating sound performance for RTUs.
2. ASHRAE Compliance:
   a. Comply with ASHRAE 15 for refrigeration system safety.
   b. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
   c. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
3. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
4. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.
5. UL Compliance: Comply with UL 1995.
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

G. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.
   a. Warranty Period for Compressors: Manufacturer's standard, but not less than five OR 10, as directed, years from date of Final Completion.
   b. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than five OR 10 OR 15 OR 20, as directed, years from date of Final Completion.
   c. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than three years from date of Final Completion.
   d. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Final Completion.

1.2 PRODUCTS

A. Casing
1. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.
2. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
   a. Exterior Casing Thickness: 0.052 inch (1.3 mm) OR 0.0626 inch (1.6 mm) OR 0.079 inch (2.0 mm), as directed, thick.
3. Inner Casing Fabrication Requirements:
   a. Inside Casing: Galvanized steel, 0.034 inch (0.86 mm) OR 0.028 inch (0.7 mm), as directed, thick, perforated 40 percent free area, as directed.
4. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
   a. Materials: ASTM C 1071, Type I.
   b. Thickness: 1/2 inch (13 mm) OR 1 inch (25 mm), as directed.
   c. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
   d. Liner Adhesive: Comply with ASTM C 916, Type I.
5. Condensate Drain Pans: Formed sections of galvanized-steel OR stainless-steel, as directed, sheet, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1, as directed.
   a. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
   b. Drain Connections: Threaded nipple both sides of drain pan, as directed.
   c. Pan-Top Surface Coating: Corrosion-resistant compound for galvanized-steel drain pans.
6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Fans
1. Direct-Driven Supply-Air Fans: Double width, forward curved OR backward inclined, as directed, centrifugal; with permanently lubricated, multispeed OR ECM, as directed, motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
   OR
   Belt-Driven Supply-Air Fans: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the casing. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
2. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.
3. Relief-Air Fan: Propeller OR Forward curved OR Backward inclined, as directed, shaft mounted on permanently lubricated motor.
4. Seismic Fabrication Requirements: Fabricate fan section, internal mounting frame and attachment to fans, fan housings, motors, casings, accessories, and other fan section components with reinforcement strong enough to withstand seismic forces defined in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment" when fan-mounted frame and RTU-mounted frame are anchored to building structure.
5. Fan Motor: Comply with requirements in Division 23 Section "Common Motor Requirements For Hvac Equipment".

C. Coils
1. Supply-Air Refrigerant Coil:
   a. Aluminum-plate OR Copper-plate, as directed, fin and seamless internally grooved, as directed, copper tube in steel casing with equalizing-type vertical distributor.
   b. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
   c. Coil Split: Interlaced.
   d. Baked phenolic OR Cathodic epoxy, as directed, coating.
   e. Condensate Drain Pan: Galvanized steel with corrosion-resistant coating OR Stainless steel, as directed, formed with pitch and drain connections complying with ASHRAE 62.1, as directed.
2. Outdoor-Air Refrigerant Coil:
   a. Aluminum-plate OR Copper-plate, as directed, fin and seamless internally grooved, as directed, copper tube in steel casing with equalizing-type vertical distributor.
   b. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
   c. Baked phenolic OR Cathodic epoxy, as directed, coating.
3. Hot-Gas Reheat Refrigerant Coil:
   a. Aluminum-plate OR Copper-plate, as directed, fin and seamless internally grooved, as directed, copper tube in steel casing with equalizing-type vertical distributor.
   b. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
   c. Baked phenolic OR Cathodic epoxy, as directed, coating.
4. Electric-Resistance Heating:
   a. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
   b. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
   c. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
   d. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
      1) Magnetic OR Mercury, as directed, contactors.
      2) Step Controller: Pilot lights and override toggle switch for each step.
      3) SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
      4) Time-delay relay.
      5) Airflow proving switch.

D. Refrigerant Circuit Components
1. Number of Refrigerant Circuits: One OR Two, as directed.
2. Compressor: Hermetic, reciprocating OR Semihermetic, reciprocating OR Hermetic, scroll, as directed, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief, and crankcase heater, as directed.
3. Refrigeration Specialties:
a. Refrigerant: R-407C OR R-410A, as directed.
b. Expansion valve with replaceable thermostatic element.
c. Refrigerant filter/dryer.
e. Automatic-reset low-pressure safety switch.
f. Minimum off-time relay.
g. Automatic-reset compressor motor thermal overload.
h. Brass service valves installed in compressor suction and liquid lines.
i. Low-ambient kit high-pressure sensor.
j. Hot-gas reheat solenoid valve with a replaceable magnetic coil.
k. Hot-gas bypass solenoid valve with a replaceable magnetic coil.
l. Four-way reversing valve with a replaceable magnetic coil, thermostatic expansion valves with bypass check valves, and a suction line accumulator.

E. Air Filtration
1. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
   a. Glass Fiber: Minimum 80 percent arrestance, and MERV 5.
   b. Pleated: Minimum 90 percent arrestance, and MERV 7.

F. Gas Furnace
1. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47 and NFPA 54.
   a. CSA Approval: Designed and certified by and bearing label of CSA.
   a. Fuel: Natural OR Propane, as directed, gas.
   b. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
   c. High-Altitude Model OR Kit, as directed: For Project elevations more than 2000 feet (610 m) above sea level.
4. Venting: Gravity vented with vertical extension, as directed.
   OR
   Power Vent: Integral, motorized centrifugal fan interlocked with gas valve with vertical extension, as directed.
5. Safety Controls:
   a. Gas Control Valve: Single stage OR Two stage OR Modulating, as directed.

G. Dampers
1. Outdoor-Air Damper: Linked damper blades, for 0 to 25 percent outdoor air, with manual OR motorized, as directed, damper filter.
2. Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
   a. Damper Motor: Modulating with adjustable minimum position.
   b. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IESNA 90.1, with bird screen and hood.

H. Electrical Power Connection
1. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit, as directed, and control-circuit transformer with built-in overcurrent protection.

I. Controls
1. Control equipment and sequence of operation are specified in Division 23 Section "Instrumentation And Control For Hvac".
2. Basic Unit Controls:
   a. Control-voltage transformer.
b. Wall-mounted thermostat or sensor with the following features:
   1) Heat-cool-off switch.
   2) Fan on-auto switch.
   3) Fan-speed switch.
   4) Manual OR Automatic, as directed, changeover.
   5) Adjustable deadband.
   6) Concealed OR Exposed, as directed, set point.
   7) Concealed OR Exposed, as directed, indication.
   8) Degree F OR Degree C, as directed, indication.
   9) Unoccupied-period-override push button.
   10) Data entry and access port to input temperature and humidity, as directed, set points, occupied and unoccupied periods, and output room temperature and humidity, as directed, supply-air temperature, operating mode, and status.

c. Wall-mounted humidistat or sensor with the following features:
   1) Concealed OR Exposed, as directed, set point.
   2) Concealed OR Exposed, as directed, indication.

d. Remote Wall OR Unit, as directed, Mounted Annunciator Panel for Each Unit:
   1) Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
   2) DDC controller or programmable timer and interface with HVAC instrumentation and control system.
   3) Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.

3. Electronic OR DDC, as directed, Controller:
   a. Controller shall have volatile-memory backup.
   b. Safety Control Operation:
      1) Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire alarm control panel.
      2) Firestats: Stop fan and close outdoor-air damper if air greater than 130 deg F (54 deg C) enters unit. Provide additional contacts for alarm interface to fire alarm control panel.
      3) Fire Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Division 28 Section(s) “Digital, Addressable Fire-alarm System” OR “Zoned (dc Loop) Fire-alarm System”, as directed.
      4) Low-Discharge Temperature: Stop fan and close outdoor-air damper if supply air temperature is less than 40 deg F (4 deg C).
      5) Defrost Control for Condenser Coil: Pressure differential switch to initiate defrost sequence.
   c. Scheduled Operation: Occupied and unoccupied periods on seven-day OR 365-day, as directed, clock with a minimum of two OR four, as directed, programmable periods per day.
   d. Unoccupied Period:
      1) Heating Setback: 10 deg F (5.6 deg C).
      2) Cooling Setback: System off.
      3) Override Operation: Two hours.
   e. Supply Fan Operation:
      1) Occupied Periods: Run fan continuously.
      2) Unoccupied Periods: Cycle fan to maintain setback temperature.
   f. Refrigerant Circuit Operation:
      1) Occupied Periods: Cycle or stage compressors, and operate hot-gas bypass, as directed, to match compressor output to cooling load to maintain room OR discharge, as directed, temperature and humidity, as directed. Cycle condenser fans to maintain maximum hot-gas pressure. Operate low-ambient control kit to maintain minimum hot-gas pressure.
      2) Unoccupied Periods: Compressors off OR Cycle compressors and condenser fans for heating to maintain setback temperature, as directed.
3) Switch reversing valve for heating or cooling mode on air-to-air heat pump.

g. Hot-Gas Reheat-Coil Operation:
   1) Occupied Periods: Humidistat opens hot-gas valve to provide hot-gas reheat, and cycles compressor.
   2) Unoccupied Periods: Reheat not required.

h. Gas Furnace Operation:
   1) Occupied Periods: Cycle OR Stage OR Modulate, as directed, burner to maintain room OR discharge, as directed, temperature.
   2) Unoccupied Periods: Cycle burner to maintain setback temperature.

i. Electric-Heating-Coil Operation:
   1) Occupied Periods: Cycle OR Stage OR Modulate, as directed, coil to maintain room OR discharge, as directed, temperature.
   2) Unoccupied Periods: Energize coil to maintain setback temperature.
   3) Operate supplemental electric heating coil with compressor for heating with outdoor temperature below 25 deg F (minus 4 deg C).

j. Fixed Minimum Outdoor-Air Damper Operation:
   1) Occupied Periods: Open to 25 percent.
   2) Unoccupied Periods: Close the outdoor-air damper.

k. Economizer Outdoor-Air Damper Operation:
   1) Occupied Periods: Open to 10 OR 25, as directed, percent fixed minimum intake, and maximum 100 percent of the fan capacity to comply with ASHRAE Cycle II. Controller shall permit air-side economizer operation when outdoor air is less than 60 deg F (15 deg C). Use outdoor-air temperature OR mixed-air and outdoor-air temperature OR outdoor-air enthalpy OR mixed-air temperature and select between outdoor-air and return-air enthalpy, as directed, to adjust mixing dampers. Start relief-air fan with end switch on outdoor-air damper, as directed. During economizer cycle operation, lock out cooling.
   2) Unoccupied Periods: Close outdoor-air damper and open return-air damper.
   3) Outdoor-Airflow Monitor: Accuracy maximum plus or minus 5 percent within 15 and 100 percent of total outdoor air. Monitor microprocessor shall adjust for temperature, and output shall range from 2- to 10-V dc OR 4 to 20 mA, as directed.

l. Carbon Dioxide Sensor Operation:
   1) Occupied Periods: Reset minimum outdoor-air ratio down to minimum 10 percent to maintain maximum 1000-ppm concentration.
   2) Unoccupied Periods: Close outdoor-air damper and open return-air damper.

m. VVT Relays:
   1) Provide heating- and cooling-mode changeover relays compatible with VVT terminal control system required in Division 23 Section(s) "Air Terminal Units" AND "Instrumentation And Control For Hvac".

4. Interface Requirements for HVAC Instrumentation and Control System:
   a. Interface relay for scheduled operation.
   b. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
   c. Provide BACnet OR LonWorks, as directed, compatible interface for central HVAC control workstation for the following:
      1) Adjusting set points.
      2) Monitoring supply fan start, stop, and operation.
      3) Inquiring data to include outdoor-air damper position, as directed, supply- and room-air temperature and humidity, as directed.
      4) Monitoring occupied and unoccupied operations.
      5) Monitoring constant and variable motor loads.
      6) Monitoring variable-frequency drive operation.
      7) Monitoring cooling load.
      8) Monitoring economizer cycles.
      9) Monitoring air-distribution static pressure and ventilation air volume.
1. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.
2. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open, as directed.
3. Low-ambient kit using staged OR damper on OR variable-speed, as directed, condenser fans for operation down to 35 deg F (1.7 deg C).
4. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
5. Coil guards of painted, galvanized-steel wire.
6. Hail guards of galvanized steel, painted to match casing.
7. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

K. Roof Curbs
1. Roof curbs with vibration isolators and wind or seismic restraints are specified in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment".

OR
Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
   a. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
      1) Materials: ASTM C 1071, Type I or II.
      2) Thickness: 1 inch (25 mm) OR 1-1/2 inches (38 mm) OR 2 inches (50 mm), as directed.
   b. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
      1) Liner Adhesive: Comply with ASTM C 916, Type I.
      2) Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
      3) Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
      4) Liner Adhesive: Comply with ASTM C 916, Type I.
2. Curb Height: 14 inches (355 mm) OR 24 inches (610 mm) OR 36 inches (910 mm), as directed.
3. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Division 23 Section "Vibration And Seismic Controls For Hvac Piping And Equipment" for wind-load requirements.

1.3 EXECUTION

A. Installation
1. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   a. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger than supported equipment and minimum 6 inches (150 mm) above finished ground elevation.
   b. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   c. Install anchor bolts to elevations required for proper attachment to supported equipment.
   d. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   e. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-place Concrete".
2. Equipment Mounting: Install RTUs on concrete base using elastomeric pads OR elastomeric mounts OR restrained spring isolators, as directed. Comply with requirements for concrete base specified in Division 03 Section “Cast-in-place Concrete”.
   a. Minimum Deflection: 1/4 inch (6 mm) OR 1 inch (25 mm), as directed.
   OR
   Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA’s “Low-Slope Membrane Roofing Construction Details Manual,” Illustration “Raised Curb Detail for Rooftop Air Handling Units and Ducts” OR ARI Guideline B, as directed. Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 07 Section “Roof Accessories”. Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

3. Unit Support: Install unit level on structural curbs OR pilings, as directed. Coordinate wall penetrations and flashing with wall construction. Secure RTUs to structural support with anchor bolts.

4. Install wind and seismic restraints according to manufacturer’s written instructions. Wind and seismically restrained vibration isolation roof-curb rails are specified in Division 23 Section “Vibration And Seismic Controls For Hvac Piping And Equipment”.

B. Connections
1. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.
2. Install piping adjacent to RTUs to allow service and maintenance.
   a. Gas Piping: Comply with applicable requirements in Division 23 Section(s) “Facility Natural-gas Piping” OR “Facility Liquefied-petroleum Gas Piping”, as directed. Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.
3. Duct installation requirements are specified in other Division 21. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
   a. Install ducts to termination at top of roof curb.
   b. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
   c. Connect supply ducts to RTUs with flexible duct connectors specified in Division 23 Section “Air Duct Accessories”.
   d. Install return-air duct continuously through roof structure.
   e. Install normal-weight, 3000-psi (20.7-MPa), compressive strength (28-day) concrete mix inside roof curb, 4 inches (100 mm) thick. Concrete, formwork, and reinforcement are specified in Division 31.

C. Field Quality Control
1. Perform tests and inspections and prepare test reports.
2. Tests and Inspections:
   a. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
   b. Inspect for and remove shipping bolts, blocks, and tie-down straps.
   c. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   d. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Remove and replace malfunctioning units and retest as specified above.

D. Startup Service
1. Engage a factory-authorized service representative to perform startup service.
2. Complete installation and startup checks according to manufacturer’s written instructions and do the following:
   a. Inspect for visible damage to unit casing.
   b. Inspect for visible damage to furnace combustion chamber.
   c. Inspect for visible damage to compressor, coils, and fans.
   d. Inspect internal insulation.
e. Verify that labels are clearly visible.
f. Verify that clearances have been provided for servicing.
g. Verify that controls are connected and operable.
h. Verify that filters are installed.
i. Clean condenser coil and inspect for construction debris.
j. Clean furnace flue and inspect for construction debris.
k. Connect and purge gas line.
l. Remove packing from vibration isolators.
m. Inspect operation of barometric relief dampers.
n. Verify lubrication on fan and motor bearings.
o. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
p. Adjust fan belts to proper alignment and tension.
q. Start unit according to manufacturer's written instructions.
   1) Start refrigeration system.
   2) Do not operate below recommended low-ambient temperature.
   3) Complete startup sheets and attach copy with Contractor's startup report.
r. Inspect and record performance of interlocks and protective devices; verify sequences.
s. Operate unit for an initial period as recommended or required by manufacturer.
t. Perform the following operations for both minimum and maximum firing. Adjust burner for peak efficiency.
   1) Measure gas pressure on manifold.
   2) Inspect operation of power vents.
   3) Measure combustion-air temperature at inlet to combustion chamber.
   4) Measure flue-gas temperature at furnace discharge.
   6) Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.
u. Calibrate thermostats.
v. Adjust and inspect high-temperature limits.
w. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
x. Start refrigeration system and measure and record the following when ambient is a minimum of 15 deg F (8 deg C) above return-air temperature:
   1) Coil leaving-air, dry- and wet-bulb temperatures.
   2) Coil entering-air, dry- and wet-bulb temperatures.
   3) Outdoor-air, dry-bulb temperature.
   4) Outdoor-air-coil, discharge-air, dry-bulb temperature.
y. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
z. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
   1) Supply-air volume.
   2) Return-air volume.
   3) Relief-air volume.
   4) Outdoor-air intake volume.

aa. Simulate maximum cooling demand and inspect the following:
   1) Compressor refrigerant suction and hot-gas pressures.
   2) Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.

bb. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:
   1) High-temperature limit on gas-fired heat exchanger.
   2) Low-temperature safety operation.
   3) Filter high-pressure differential alarm.
   4) Economizer to minimum outdoor-air changeover.
   5) Relief-air fan operation.
   6) Smoke and firestat alarms.
cc. After startup and performance testing and prior to Final Completion, replace existing filters with new filters.

E. Cleaning And Adjusting
1. Occupancy Adjustments: When requested within 12 months of date of Final Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to site during other-than-normal occupancy hours for this purpose.
2. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

F. Demonstration

G. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain RTUs.

END OF SECTION 07 72 13 00
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 07 72 13 00a - INTAKE AND RELIEF VENTILATORS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for intake and relief
      ventilators. Products shall be as follows or as directed by the Owner. Installation procedures
      shall be in accordance with the product manufacturer’s recommendations. Demolition and
      removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Louvered-penthouse ventilators.
      b. Roof hoods.
      c. Goosenecks.

C. Performance Requirements
   1. Delegated Design: Design ventilators, including comprehensive engineering analysis by a
      qualified professional engineer, using structural and seismic performance requirements and
      design criteria indicated.
   2. Structural Performance: Ventilators shall withstand the effects of gravity loads and the following
      loads and stresses within limits and under conditions indicated without permanent deformation of
      ventilator components, noise or metal fatigue caused by ventilator blade rattle or flutter, or
      permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal
      to the face of the building.
      a. Wind Loads: Determine loads based on pressures as indicated on Drawings.
         OR
      Wind Loads: Determine loads based on a uniform pressure of 20 lbf/sq. ft. (960 Pa) OR 30
      lbf/sq. ft. (1440 Pa), as directed, acting inward or outward.
      OR
      Wind Loads: Determine loads based on pressures indicated below:
      1) Corner Zone: Within <Insert distance> of building corners, uniform pressure of
         <Insert design wind pressure>, acting inward, and <Insert design wind
         pressure>, acting outward.
      2) Other Than Corner Zone: Uniform pressure of <Insert design wind pressure>,
         acting inward, and <Insert design wind pressure>, acting outward.
   3. Seismic Performance: Ventilators, including attachments to other construction, shall withstand
      the effects of earthquake motions determined according to ASCE/SEI 7.
      a. The term “withstand” means “the unit will remain in place without separation of any parts
         from the device when subjected to the seismic forces specified and the unit will be fully
         operational after the seismic event.”
   4. Thermal Movements: Allow for thermal movements from ambient and surface temperature
      changes, without buckling, opening of joints, overstressing of components, failure of connections,
      or other detrimental effects.
      a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C),
         material surfaces.
   5. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1.

D. Submittals
   1. Product Data: For each type of product indicated. For louvered-penthouse ventilators specified
      to bear AMCA seal, include printed catalog pages showing specified models with appropriate
      AMCA Certified Ratings Seals.
   2. LEED Submittal:
      a. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with
         ASHRAE 62., Section 5 - “Systems and Equipment.”
3. Shop Drawings: For gravity ventilators. Include plans, elevations, sections, details, ventilator attachments to curbs, and curb attachments to roof structure.
   a. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
4. Samples: For each exposed product and for each color and texture specified.
5. Delegated-Design Submittal: For shop-fabricated ventilators indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   a. Detail fabrication and assembly of shop-fabricated ventilators.
6. Coordination Drawings: Roof framing plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   a. Structural members to which roof curbs and ventilators will be attached.
   b. Sizes and locations of roof openings.
7. Seismic Qualification Certificates: For ventilators, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
8. Welding certificates.

E. Quality Assurance
1. Welding Qualifications: Qualify procedures and personnel according to the following:
   b. AWS D1.3, "Structural Welding Code - Sheet Steel."

F. Coordination
1. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.2 PRODUCTS

A. Materials
1. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5 or T-52.
2. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming or as otherwise recommended by metal producer for required finish.
4. Stainless-Steel Sheet: ASTM A 666, Type 304, with No. 4 OR 6, as directed, finish.
5. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel unless otherwise indicated. Do not use metals that are incompatible with joined materials.
   a. Use types and sizes to suit unit installation conditions.
   b. Use Phillips flat OR hex-head or Phillips pan, as directed, -head screws for exposed fasteners unless otherwise indicated.
6. Post-Installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors made from stainless-steel components, with capability to sustain without failure a load equal to 4 times the loads imposed for concrete, or 6 times the load imposed for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.
1. Factory or shop fabricate gravity ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.

2. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

3. Fabricate units with closely fitted joints and exposed connections accurately located and secured.

4. Fabricate supports, anchorages, and accessories required for complete assembly.

5. Perform shop welding by AWS-certified procedures and personnel.

C. Louvered-Penthouse Ventilators

1. Construction: All-welded assembly with 4-inch (100-mm) OR 6-inch (150-mm), as directed,-deep louvers, mitered corners, and aluminum OR galvanized-steel OR stainless-steel, as directed, sheet roof with mineral-fiber insulation and vapor barrier, as directed.

2. Frame and Blade Material and Nominal Thickness: Extruded aluminum, of thickness required to comply with structural performance requirements, but not less than 0.080 inch (2.0 mm) for frames and 0.080 inch (2.0 mm) OR 0.060 inch (1.5 mm), as directed, for blades with condensate deflectors, as directed.
   a. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
   b. Exterior Corners: Prefabricated corner units with mitered and welded blades OR mitered blades with concealed close-fitting splices, as directed, and with fully recessed OR semirecessed, as directed, mullions at corners.

3. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, of thickness required to comply with structural performance requirements, but not less than 0.052 inch (1.3 mm) for frames and 0.040 inch (1.0 mm) OR 0.052 inch (1.3 mm) OR 0.064 inch (1.6 mm), as directed, for blades with condensate deflectors, as directed.
   a. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
   b. Exterior Corners: Prefabricated corner units with mitered and welded blades OR mitered blades with concealed close-fitting splices, as directed, and with fully recessed OR semirecessed, as directed, mullions at corners.

4. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, of thickness required to comply with structural performance requirements, but not less than 0.050 inch (1.27 mm) OR 0.062 inch (1.57 mm), as directed, with grain running parallel OR perpendicular, as directed, to length of blades and frame members with condensate deflectors, as directed.
   a. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
   b. Exterior Corners: Prefabricated corner units with mitered and welded blades OR mitered blades with concealed close-fitting splices, as directed, and with fully recessed OR semirecessed, as directed, mullions at corners.

5. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailer. Size as required to fit roof opening and ventilator base.
   a. Configuration: Self-flashing without a cant strip, with OR Built-in cant and OR Built-in raised cant and, as directed, mounting flange.
   b. Overall Height: 8 inches (200 mm) OR 9-1/2 inches (240 mm) OR 12 inches (300 mm) OR 16 inches (400 mm) OR 18 inches (450 mm), as directed.

6. Bird Screening: Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire OR Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire OR Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick OR Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire, as directed.
   OR
   Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) OR Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm), as directed, wire.

7. Galvanized-Steel Sheet Finish:
   a. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
b. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.

c. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat and an overall minimum dry film thickness of 2 mils (0.05 mm).

1) Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

8. Accessories:

a. Dampers:
   1) Location: Penthouse neck OR Inside louver face, as directed.
   2) Control: Manual OR Motorized, as directed.

D. Roof Hoods

1. Factory or shop fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figures 5-6 and 5-7.

2. Materials: Galvanized-steel sheet, minimum 0.064-inch- (1.62-mm-) thick base and 0.040-inch- (1.0-mm-) thick hood OR Aluminum sheet, minimum 0.063-inch- (1.6-mm-) thick base and 0.050-inch- (1.27-mm-) thick hood, as directed; suitably reinforced.

3. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailing. Size as required to fit roof opening and ventilator base.

a. Configuration: Self-flashing without a cant strip, with OR Built-in cant and OR Built-in raised cant and, as directed, mounting flange.

b. Overall Height: 8 inches (200 mm) OR 9-1/2 inches (240 mm) OR 12 inches (300 mm) OR 16 inches (400 mm), as directed.

4. Bird Screening: Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire OR Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire OR Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick OR Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire, as directed.

OR

Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) OR Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm), as directed, wire.

5. Galvanized-Steel Sheet Finish:

a. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.

b. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.

c. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat and an overall minimum dry film thickness of 2 mils (0.05 mm).

1) Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

E. Goosenecks

1. Factory or shop fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 5-5; with a minimum of 0.052-inch- (1.3-mm-) thick, galvanized-steel sheet.

2. Roof Curbs: Galvanized-steel sheet; with mitered and welded corners; 1-1/2-inch- (40-mm-) thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch (40-mm) wood nailing. Size as required to fit roof opening and ventilator base.

a. Configuration: Self-flashing without a cant strip, with OR Built-in cant and OR Built-in raised cant and, as directed, mounting flange.

b. Overall Height: 8 inches (200 mm) OR 9-1/2 inches (240 mm) OR 12 inches (300 mm) OR 16 inches (400 mm) OR 18 inches (450 mm), as directed.
3. Bird Screening: Galvanized-steel, 1/2-inch- (12.7-mm-) square mesh, 0.041-inch (1.04-mm) wire OR Aluminum, 1/2-inch- (12.7-mm-) square mesh, 0.063-inch (1.6-mm) wire OR Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick OR Stainless-steel, 1/2-inch- (12.7-mm-) square mesh, 0.047-inch (1.19-mm) wire, as directed. OR Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) OR Stainless-steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm), as directed, wire.

4. Galvanized-Steel Sheet Finish:
   a. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
   b. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.
   c. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat and an overall minimum dry film thickness of 2 mils (0.05 mm).
      1) Color and Gloss: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

1.3 EXECUTION

A. Installation
   1. Install gravity ventilators level, plumb, and at indicated alignment with adjacent work.
   2. Install goosenecks on curb base where throat size exceeds 9 by 9 inches (230 by 230 mm).
   3. Install gravity ventilators with clearances for service and maintenance.
   4. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
   5. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Division 07 Section "Joint Sealants" for sealants applied during installation.
   6. Label gravity ventilators according to requirements specified in Division 23 Section "Identification For Hvac Piping And Equipment".
   7. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
   8. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinshed in the field to the factory, make required alterations, and refinish entire unit or provide new units.

B. Connections
   1. Duct installation and connection requirements are specified in other Division 21. Drawings indicate general arrangement of ducts and duct accessories.

C. Adjusting
   1. Adjust damper linkages for proper damper operation.

END OF SECTION 07 72 13 00a
SECTION 07 72 23 00 - ROOF ACCESSORIES

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for roof accessories. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Roof curbs.
      b. Equipment supports.
      c. Roof hatches.
      d. Dropout-type heat and smoke vents.
      e. Hatch-type heat and smoke vents.
      f. Gravity ventilators.
      g. Roof supports.
      h. Roof walkways.
      i. Preformed flashings.

C. Submittals
   1. Product Data: For each type of roof accessory indicated.
   2. Shop Drawings: Show fabrication and installation details for roof accessories.
   3. Samples: For each type of exposed factory-applied color finish required and for each type of roof accessory indicated, prepared on Samples of size to adequately show color.

D. Quality Assurance
   1. Sheet Metal Standard: Comply with SMACNA’s "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

E. Delivery, Storage, And Handling
   1. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

F. Warranty
   1. Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof accessories that show evidence of deterioration of factory-applied finishes within 20 years from date of Final Completion.

1.2 PRODUCTS

A. Metal Materials
   2. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, AZ50 (AZM150) coated.
   3. Prepainted, Metallic-Coated Steel Sheet: Steel sheet metallic coated by hot-dip process and prepainted by coil-coating process to comply with ASTM A 755/A 755M.
      b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 (Class AZM150) coated.
c. Exposed Finishes: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight.

4. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy and temper recommended by manufacturer for type of use and mill finish. Coil-coat finish as follows:
   a. Factory-Prime Coating: Where painting after installation is indicated, provide pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat; with a minimum dry film thickness of 0.2 mil (0.005 mm).
   b. Clear OR Color, as directed, Anodic Finish: Architectural Class II, complying with AAMA 611.
      1) Color: Light bronze OR Medium bronze OR Dark bronze OR Black OR Champagne, as directed.

   c. Baked-Enamel Finish: Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm), medium gloss.
      1) Color and Gloss: As selected from manufacturer's full range.

   d. High-Performance Organic Finish: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight.
      1) Color and Gloss: As selected from manufacturer's full range.

   e. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard baked-polymer thermosetting powder finish.
      1) Color and Gloss: As selected from manufacturer's full range.

5. Stainless-Steel Shapes or Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304 or Type 316, No. 2D finish.

6. Aluminum Extrusions and Tubes: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use, mill finished.

7. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized to comply with ASTM A 123/A 123M, unless otherwise indicated.

9. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123/A 123M.

10. Galvanized Steel Pipe: ASTM A 53/A 53M.

B. Miscellaneous Materials

1. Acrylic Glazing: ASTM D 4802, thermoformable, monolithic sheet, category as standard with manufacturer, Type UVA (formulated with UV absorber), Finish 1 (smooth or polished).

2. Polycarbonate Glazing: Thermoformable, monolithic polycarbonate sheets manufactured by extrusion process, burglar-resistance rated per UL 972 with an average impact strength of 12 to 16 ft-lbf/in. (640 to 854 J/m) of width when tested according to ASTM D 256, Method A (Izod).

3. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 1, 1 inch (25 mm) thick.

4. Glass-Fiber Board Insulation: ASTM C 726, 1 inch (25 mm) thick.

5. Polyisocyanurate Board Insulation: ASTM C 1289, 1 inch (25 mm) thick.

6. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, complying with AWPA C2; not less than 1-1/2 inches (38 mm) thick.

7. Security Grilles: 3/4-inch- (19-mm-) diameter, ASTM A 1011/A 1011M steel bars spaced 6 inches (150 mm) o.c. in 1 direction and 12 inches (300 mm) o.c. in the other; factory primed.
   a. Factory Finish:
      1) Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
      2) Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately after surface preparation and pretreatment.
      3) Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer; selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system.
indicated, and for capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

8. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

9. Polyethylene Sheet: 6-mil- (0.15-mm-) thick, polyethylene sheet complying with ASTM D 4397.

10. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
   a. Slip Sheet: Rosin-sized paper, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).

11. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.

12. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.

13. Elastomeric Sealant: ASTM C 920, polyurethane OR polysulfide OR silicone, as directed, sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

15. Roofing Cement: ASTM D 4586, nonasbestos, fibrated asphalt cement designed for trowel application or other adhesive compatible with roofing system.

C. Roof Curbs

1. Roof Curbs: Provide metal roof curbs, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported on roof curbs. Fabricate with welded or sealed mechanical corner joints, with integral metal cant, OR stepped integral metal cant raised the thickness of roof insulation, as directed, and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
   a. Load Requirements: As required to satisfy local code requirements.
   b. Material:
      1) Galvanized OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.052 inch (1.32 mm) OR 0.079 inch (2.0 mm), as directed, thick.
      2) Aluminum sheet, 0.090 inch (2.28 mm) thick.
      3) Stainless-steel sheet, 0.078 inch (1.98 mm) thick.
   c. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.
   d. Liner: Same material as curb, of manufacturer's standard thickness and finish.
   e. Factory install wood nailers at tops of curbs.
   f. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
   g. Factory insulate curbs with 1-1/2-inch- (38-mm-) thick, cellulosis-fiber OR glass-fiber, as directed, board insulation.
   h. Curb height may be determined by adding thickness of roof insulation and minimum base flashing height recommended by roofing membrane manufacturer. Fabricate units to minimum height of 12 inches (300 mm), unless otherwise indicated.
   i. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

D. Equipment Supports

1. Equipment Supports: Provide metal equipment supports, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported. Fabricate with welded or sealed mechanical corner joints, with integral metal cant OR stepped integral metal cant raised the thickness of roof insulation, as directed, and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
a. Load Requirements: As required to satisfy local code requirements.
b. Material:
   1) Galvanized OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.052 inch (1.32 mm) OR 0.079 inch (2.0 mm), as directed, thick.
   2) Aluminum sheet, 0.090 inch (2.28 mm) thick.
   3) Stainless-steel sheet, 0.078 inch (1.98 mm) thick.
c. Finish:
   1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
   2) Mill OR Clear anodic OR Color anodic, as directed.
d. Factory-install continuous wood nailers 3-1/2 inches (90 mm) OR 5-1/2 inches (140 mm), as directed, wide at tops of equipment supports.
e. Metal Counterflashing: Manufacturer's standard removable counterflashing, fabricated of same metal and finish as equipment support.
f. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
g. Fabricate units to minimum height of 12 inches (300 mm), unless otherwise indicated.
h. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

E. Roof Hatches
1. Roof Hatches: Fabricate roof hatches with insulated double-wall lids and insulated single-wall OR double-wall, as directed, curb frame with integral deck mounting flange and lid frame counterflashing. Fabricate with welded or mechanically fastened and sealed corner joints. Provide continuous weathertight perimeter gasketing and equip with corrosion-resistant or hot-dip galvanized hardware.
   a. Loads: Fabricate roof hatches to withstand 40-lbf/sq. ft. (1.9-kPa) external and 20-lbf/sq. ft. (0.95-kPa) internal loads.
   b. Type and Size: Single-leaf lid, 30 by 36 inches (750 by 900 mm) OR 30 by 54 inches (750 by 1370 mm) OR 30 by 96 inches (750 by 2440 mm), as directed.
   c. Type and Size: Double-leaf lid, 72 by 96 inches (1830 by 2440 mm).
   d. Curb and Lid Material:
      1) Galvanized OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.079 inch (2.0 mm) thick.
      2) Aluminum sheet, 0.090 inch (2.28 mm) thick.
      3) Stainless-steel sheet, 0.078 inch (1.98 mm) thick.
   e. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.
   f. Insulation: Cellulosic-fiber OR Glass-fiber OR Polyisocyanurate, as directed, board.
   g. Interior Lid Liner: Manufacturer's standard metal liner of same material and finish as outer metal lid.
   h. Exterior Curb Liner: Manufacturer's standard metal liner of same material and finish as metal curb.
   i. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
   j. Fabricate units to minimum height of 12 inches (300 mm), unless otherwise indicated.
   k. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate hatch curbs with height constant OR tapered to match slope to level tops of units, as directed.
   l. Hardware: Galvanized steel OR Stainless-steel, as directed, spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
      1) Provide 2-point latch on covers larger than 84 inches (2130 mm).
      2) Provide remote-control operation.
   m. Ladder Safety Post: Manufacturer's standard ladder safety post. Post to lock in place on full extension. Provide release mechanism to return post to closed position.
   n. Safety Railing System: Manufacturer's standard complete system including rails, clamps, fasteners, safety barrier at railing opening, and all accessories required for a complete installation.
F. Heat And Smoke Vents

1. Dropout-Type Heat and Smoke Vents: Manufacturer's standard gravity-operated, automatic smoke and heat vents with integral double-wall insulated curbs and frame with welded or sealed mechanical corner joints, integral condensation gutter, cap flashing, and heat-sensitive dome glazing that will deform and drop out of vent opening within 5 minutes of exposure to a simulated fire represented by a time-temperature gradient that reaches an air temperature of 500 deg F (260 deg C) within 5 minutes.
   a. Loads: Fabricate heat and smoke vents to withstand a minimum 40-lbf/sq. ft. (1.9-kPa) external live load and 30-lbf/sq. ft. (1.4-kPa) uplift.
      1) Dome glazing shall have a thickness capable of resisting 40-lbf/sq. ft. (1.9-kPa) external and 20-lbf/sq. ft. (0.95-kPa) internal loads.
   b. Regulatory Requirements: Comply with UL 793 and NFPA 204.
   c. Heat and Smoke Vent Compliance: Provide units that have been tested and UL listed OR FMG approved, as directed.
   d. Integral Curb and Framing Material:
      1) Galvanized OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.079 inch (2.0 mm) thick.
      2) Aluminum sheet, 0.090 inch (2.28 mm) thick.
      3) Stainless-steel sheet, 0.078 inch (1.98 mm) thick.
   e. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Finish: Mill OR Clear anodic OR Color anodic, as directed.
   f. Insulation: Cellulosic-fiber OR Glass-fiber OR Polysisocyanurate, as directed, board.
   g. Exterior Curb Liner: Manufacturer's standard metal liner of same material and finish as metal curb.
   h. Fabricate integral curbs to minimum height of 12 inches (300 mm), unless otherwise indicated.
   i. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curbs with height constant OR tapered to match slope to level tops of units, as directed.
   j. Dome Glazing: Single OR Double, as directed, acrylic OR polycarbonate, as directed, glazing.
      1) Single-Dome Color: Colorless, transparent OR White, translucent OR Gray tinted, transparent OR Bronze tinted, transparent, as directed.
      2) Outer Double-Dome Color: Colorless, transparent OR White, translucent OR Gray tinted, transparent OR Bronze tinted, transparent, as directed.
      3) Inner Double-Dome Color: Colorless, transparent OR White, translucent OR Gray tinted, transparent OR Bronze tinted, transparent, as directed.

2. Hatch-Type Heat and Smoke Vents: Manufacturer's standard single-leaf OR double-leaf, as directed, hatch-type heat and smoke vents with integral double-wall insulated curbs and frame, with welded or sealed mechanical corner joints, integral condensation gutter, and cap flashing. Fabricate with insulated double-wall lid, continuous weathertight perimeter lid gaskets, and equip with automatic self-lifting mechanisms. UL-listed fusible links rated at 165 deg F (74 deg C) OR fire-suppression system OR smoke-detection system, as directed, and corrosion-resistant or hot-dip galvanized hardware including hinges, hold-open devices, and independent manual-release devices for inside and outside operation of lids.
   a. Loads: Fabricate heat and smoke vent to withstand a minimum 40-lbf/sq. ft. (1.9-kPa) external live load and 30-lbf/sq. ft. (1.4-kPa) uplift.
      1) When release is actuated, lid shall open against 10-lbf/sq. ft. (0.5-kPa) snow or wind load and lock in position.
   b. Regulatory Requirements: UL 793 and NFPA 204.
   c. Heat and Smoke Vent Compliance: Provide units that have been tested and UL listed OR FMG approved, as directed.
   d. Fire Resistance of Lids: UL Class A rating.
   e. Integral Curb, Framing, and Lid Material:
      1) Galvanized OR Aluminum-zinc alloy-coated, as directed, steel sheet, 0.079 inch (2.0 mm) thick.
      2) Aluminum sheet, 0.090 inch (2.28 mm) thick.
3) Stainless-steel sheet, 0.078 inch (1.98 mm) thick.

f. Finish:
   1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
   2) Mill OR Clear anodic OR Color anodic, as directed.

g. Insulation: Cellulosic-fiber OR Glass-fiber OR Polyisocyanurate, as directed, board.
h. Fabricate integral curbs to minimum height of 12 inches (300 mm), unless otherwise indicated.
i. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curbs with height constant OR tapered to match slope to level tops of units, as directed.

G. Gravity Ventilators
1. Low-Profile, Cylindrical-Style Gravity Ventilators: Manufacturer's standard unit fabricated from the following materials, with manufacturer's standard welded or sealed mechanical joints:
   a. Provide integral base flange, vent cylinder, cylinder bird screen, and rain cap OR hood, as directed.
   b. Dimensions: As indicated.
   c. Style: As indicated.
   d. Bird Screens: Manufacturer's standard mesh with rewireable frame.
   e. Insect Screens: Manufacturer's standard mesh with rewireable frame.
   f. Vent Cylinder, Base Flange, and Rain-Cap OR Hood, as directed Material: Galvanized steel OR Aluminum OR Stainless-steel, as directed, sheet, of manufacturer's standard thickness.
   g. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.

2. Low-Profile, Louvered Penthouse-Style Gravity Ventilators: Manufacturer's standard unit fabricated from the following materials, with manufacturer's standard welded or sealed mechanical joints:
   a. Provide integral frame with base flange, weathertight cap, louver bird screen, and weatherproof sidewall louvers.
   b. Dimensions: As indicated.
   c. Style: As indicated.
   d. Bird Screens: Manufacturer's standard mesh with rewireable frame.
   e. Insect Screens: Manufacturer's standard mesh with rewireable frame.
   f. Integral Frame, Base Flange, Weathertight Cap, and Louver Material: Galvanized steel OR Aluminum OR Stainless-steel, as directed, sheet, of manufacturer's standard thickness.
   g. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.

3. Directional Louvered Pedestal-Style Gravity Ventilators: Manufacturer's standard unit fabricated from the following materials, with manufacturer's standard welded or sealed mechanical joints:
   a. Provide integral weathertight base cap, integral outlet duct, weathertight sidewalls, bird screen, and weatherproof sidewall louver.
   b. Dimensions: As indicated.
   c. Style: As indicated.
   d. Bird Screens: Manufacturer's standard mesh with rewireable frame.
   e. Insect Screens: Manufacturer's standard mesh with rewireable frame.
   f. Weathertight Base Cap, Outlet Duct, Sidewall, and Louver Material: Galvanized steel OR Aluminum OR Stainless-steel, as directed, sheet, of manufacturer's standard thickness.
   g. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.
4. Turbine-Style Gravity Ventilators: Manufacturer's standard unit fabricated from the following materials, with manufacturer's standard welded or sealed mechanical joints:
   a. Provide integral weathertight base cap, outlet duct, and rotating louvered turbine.
   b. Dimensions: As indicated.
   c. Style: As indicated.
   d. Bird Screens: Manufacturer's standard mesh with rewireable frame.
   e. Insect Screens: Manufacturer's standard mesh with rewireable frame.
   f. Weathertight Base Cap, Outlet Duct, and Turbine Material: Galvanized steel OR Aluminum, as directed, sheet, of manufacturer's standard thickness.
   g. Finish:
      1) Prime painted OR Baked enamel OR High-performance organic coating OR Powder coat, as directed.
      2) Mill OR Clear anodic OR Color anodic, as directed.

H. Roof Supports
1. Pipe Roof Supports: Adjustable height, extruded-aluminum tube, urethane insulation filled, 2 inches (50 mm) in diameter, with aluminum base plates and manufacturer's recommended hardware for mounting to structure OR structural roof deck, as directed, and extruded-aluminum carrier assemblies, suitable for quantity of pipe runs and sizes, with EPDM end caps. Include manufacturer's standard hardware for mounting to structure or structural roof deck.
   a. Pipe Support Height: As indicated.
   b. Pipe Roller Assembly: Stainless-steel roller assembly sized for supported pipes with extruded aluminum.
   c. Pipe Support Flashing: Insulated OR Uninsulated, as directed, metal sleeve flashings with integral base flange, and EPDM grommetted top seal and base seals.
      1) Metal: Aluminum sheet, 0.064 inch (1.6 mm) thick OR Copper sheet, 16 oz. (0.55 mm) thick, as directed.
   2. Terrace Lighting Roof Supports: Epoxy-coated hollow structural section steel pipe support, urethane insulation filled, with epoxy-coated steel base plates and manufacturer's recommended hardware for mounting to structure OR structural roof deck, as directed, 14 inches (356 mm) OR 18 inches (457 mm), as directed, high, with galvanized threaded cap.
   a. Lighting Pole Mounting: Stainless-steel lighting pole adapter OR Epoxy-coated steel plate with stainless-steel studs, as directed.
   b. Pipe Support Flashing: Insulated OR Uninsulated, metal sleeve flashings with integral base flange, and EPDM grommetted top seal and base seals.
      1) Metal: Aluminum sheet, 0.064 inch (1.6 mm) thick OR Copper sheet, 16 oz. (0.55 mm) thick, as directed.
   3. Light-Duty Pipe Roof Supports: Extruded-aluminum base assembly and Type 304 stainless-steel roller assembly for pipe sizes indicated, including manufacturer's standard hardware for mounting to structure or structural roof deck.
   4. Duct Roof Supports: 2-inch- (50-mm-) diameter, extruded-aluminum, urethane-insulated supports, including manufacturer's standard hardware for mounting to structure or structural roof deck.

I. Roof Walkways
1. Roof Walkway: Multiple C-shaped-channel formed-metal planks, as follows, with upper surface punched in serrated diamond or rectangular shapes to produce raised slip-resistant surface and drainage holes. Provide support framing, brackets, connectors, nosings, and other accessories and components needed for complete installation. Include step units for changes in elevation.
   a. Plank Width: 4-3/4 inches (121 mm) OR 7 inches (178 mm) OR 9-1/2 inches (241 mm) OR 11-3/4 inches (298 mm) OR 18-3/4 inches (476 mm) OR 24 inches (610 mm) OR As indicated, as directed.
   b. Walkway Width: As indicated.
   c. Channel Depth: 1-1/2 inches (38 mm) OR 2 inches (50 mm) OR 2-1/2 inches (64 mm) OR 3 inches (76 mm) OR As indicated, as directed.
   d. Metal Material: -0.079-inch- (2.0-mm-) thick, hot-dip galvanized steel sheet OR 0.108-inch- (2.8-mm-) thick, hot-dip galvanized steel sheet OR 0.062-inch- (1.6-mm-) thick, stainless-steel sheet OR 0.078-inch- (1.98-mm-) thick, stainless-steel sheet OR 0.080-inch- (2.03-mm-) thick, stainless-steel sheet.
mm-) thick, mill-finished aluminum sheet OR 0.100-inch- (2.5-mm-) thick, mill-finished aluminum sheet, as directed.
e. Provide isolation pads attached to supports so supports are completely isolated from roof membrane surface.

J. Preformed Flashings
1. Exhaust Vent Flashings: Double-wall metal flashing sleeve, urethane insulation filled, with integral deck flange, 12 inches (300 mm) high, with removable metal hood and slotted OR perforated, as directed, metal collar, and as follows:
a. Metal: Aluminum sheet, 0.064 inch (1.6 mm) thick, mill finished OR Copper sheet, 16 oz. (0.55 mm thick), as directed.
b. Diameter: As indicated.
2. Vent Stack Flashing: Metal flashing sleeve, with integral deck flange, uninsulated, and as follows:
a. Metal: Aluminum sheet, 0.064 inch (1.6 mm) thick, mill finished OR Copper sheet, 16 oz. (0.55 mm thick), as directed.
b. Height: As indicated.
c. Diameter: As indicated.

1.3 EXECUTION
A. Installation
1. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.
2. Install roof accessories to fit substrates and to result in watertight performance.
3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
a. Coat concealed side of uncoated aluminum OR stainless-steel, as directed, roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
b. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.
c. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.
4. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
5. Seal joints with elastomeric OR butyl, as directed, sealant as required by manufacturer of roof accessories.

SECTION 07 72 56 00 - RADIANT-HEATING ELECTRIC CABLES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of materials for radiant-heating electric cables. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes electric heating cables for ceiling or floor radiant heating, snow and ice melting on pavement, and freezer-floor frost-heave prevention with the following electric heating cables:
      c. Self-regulating, parallel resistance.

C. Submittals
   1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
      a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
   2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
   3. Field quality-control test reports.
   4. Operation and Maintenance Data.
   5. Warranty: Special warranty specified in this Section.

D. Quality Assurance
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty
   1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Mineral-Insulated, Series-Resistance Heating Cables
   1. Heating Element: Single- or dual-conductor resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
   2. Electrical Insulating Mineral: Magnesium oxide.
   3. Cable Cover: Copper/nickel alloy and high-density polyethylene outer jacket, as directed.

B. Plastic-Insulated, Series-Resistance Heating Cables
   1. Comply with UL 1673.
   2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
   3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. **Cable Cover:** Aluminum braid and silicone or Hylar outer jacket, *as directed*.
5. **Maximum Operating Temperature:** 300 deg F (150 deg C).
6. **Heating Cable Mats:** Factory-fabricated cable and fiberglass or plastic mesh with uniform 1-1/2-inch (38-mm) *OR* 3-inch (76-mm), *as directed*, cable spacing, in 18-inch (457-mm) *OR* 36-inch (914-mm), *as directed*, widths.

### C. Self-Regulating, Parallel-Resistance Heating Cables

1. Comply with UL 1673.
2. **Heating Element:** Pair of parallel No. 16 *OR* 18, *as directed*, AWG, tinned *OR* nickel-coated, *as directed*, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
3. **Electrical Insulating Jacket:** Flame-retardant polyolefin.
4. **Cable Cover:** Tinned-copper *OR* Stainless-steel, *as directed*, braid, and polyolefin outer jacket with UV inhibitor, *as directed*.
5. **Maximum Operating Temperature (Power On):** 150 deg F (65 deg C).
6. **Heating Cable Mats:** Factory-fabricated cable and fiberglass or plastic mesh with uniform 1-1/2-inch (38-mm) *OR* 3-inch (76-mm), *as directed*, cable spacing, in 18-inch (457-mm) *OR* 36-inch (914-mm), *as directed*, widths.
7. **Maximum Operating Temperature:** 300 deg F (150 deg C).

### D. Controls

1. Refer to Division 23 Section(s) "Instrumentation And Control For HVAC" AND "Sequence Of Operations For HVAC Controls".
2. **Wall-Mounting Thermostats for Ceiling and Floor Heating Cables:**
   a. Minimum temperature range from 50 to 90 deg F (10 to 32 deg C).
   b. Manually operated with on-off switch.
3. **Precipitation and Temperature Sensor for Snow Melting on Pavement:**
   b. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to energize the cable as follows:
      1) Temperature Span: 34 to 44 deg F (1 to 7 deg C).
      2) Adjustable Delay Off Span: 30 to 90 minutes.
      3) Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
      4) De-Energize Cables: On detection of a dry surface plus time delay.
   c. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
   d. Minimum 30-A contactor to energize cable or close other contactors.
   e. Precipitation sensor shall be mounted in pavement.
   f. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control system workstation.

### E. Accessories

1. **Cable Installation Accessories:** Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.

### 1.3 EXECUTION

#### A. Applications

1. Install the following types of electric heating cable for the applications described:

B. Installation
1. Install electric heating cable or mats across expansion, construction, and control joints according to manufacturer's written recommendations using cable protection conduit and slack cable to allow movement without damage to cable.
2. Do not energize cables embedded in concrete or plaster until those assemblies are cured.
3. Electric Heating Cable Installation for Ceiling Radiant Heating: Install heating cable with heat-conductive fill materials such as plaster, to ensure direct contact with finished radiant surfaces.
4. Electric Heating Cable Installation for Floor Radiant Heating: Install heating cable with heat-conductive fill materials such as concrete, to ensure direct contact with finished radiant surfaces.
5. Electric Heating Cable Installation for Snow and Ice Melting on Pavement:
   a. Install heating cable with heat-conductive fill materials such as asphalt or concrete, to ensure direct contact with finished radiant surfaces.
   b. Install cables or mats after applying bituminous binder course to lower base; ensure that second bituminous binder course is applied to cables before pouring finish topping.
6. Electric Heating Cable Installation for Freezer-Floor Frost-Heave Prevention: Install electric heating cable below insulation in subsoil.
7. Set field-adjustable switches and circuit-breaker trip ranges.
8. Protect installed heating cables, including nonheating leads, from damage.

C. Connections
1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

D. Field Quality Control
1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
   a. Test cables for electrical continuity and insulation integrity before energizing.
   b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying finished surface on heating cables.
3. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 07 72 56 00
SECTION 07 72 56 00a - HEAT TRACING FOR FIRE-SUPPRESSION PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for heat tracing for fire suppression piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes heat tracing with the following electric heating cables:
   b. Self-regulating, parallel resistance.

C. Submittals
1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
   a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
3. Field quality-control test reports.
4. Operation and Maintenance Data.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Plastic-Insulated, Series-Resistance Heating Cables
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, as directed.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables
1. Heating Element: Pair of parallel No. 16 OR 18, as directed, AWG, tinned OR nickel-coated, as directed, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
2. Electrical Insulating Jacket: Flame-retardant polyolefin.
3. Cable Cover: Tinned-copper OR Stainless-steel, as directed, braid, and polyolefin outer jacket with UV inhibitor, as directed.

C. Controls
1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.

D. Accessories
1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
2. Warning Tape: Continuously printed “Electrical Tracing”; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
   a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
   b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Installation
1. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
2. Install electric heating cables after piping has been tested and before insulation is installed.
3. Install electric heating cables according to IEEE 515.1.
4. Install insulation over piping with electric cables according to Division 21 Section "Fire-suppression Systems Insulation".
5. Install warning tape on piping insulation where piping is equipped with electric heating cables.
7. Protect installed heating cables, including nonheating leads, from damage.

B. Connections
1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control
1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
   a. Test cables for electrical continuity and insulation integrity before energizing.
   b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
3. Remove and replace malfunctioning units and retest as specified above.
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 07 72 56 00b - HEAT TRACING FOR PLUMBING PIPING

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for heat tracing for plumbing piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes plumbing piping heat tracing for freeze prevention, domestic hot-water-temperature maintenance, and snow and ice melting on roofs and in gutters and downspouts with the following electric heating cables:
   b. Self-regulating, parallel resistance.
   c. Constant wattage.

C. Submittals
1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
   a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
3. Field quality-control test reports.
4. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS

A. Plastic-Insulated, Series-Resistance Heating Cables
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, as directed.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables
1. Heating Element: Pair of parallel No. 16 OR 18, as directed, AWG, tinned OR nickel-coated, as directed, stranded copper bus wires embedded in crosslinked conductive polymer core, which
varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.

2. Electrical Insulating Jacket: Flame-retardant polyolefin.
3. Cable Cover: Tinned-copper OR Stainless-steel, as directed, braid, and polyolefin outer jacket with UV inhibitor, as directed.

C. Constant-Wattage Heating Cables
1. Heating Element: Pair of parallel No. 12 AWG, tinned OR nickel-coated, as directed, stranded copper bus wires with single-stranded resistor wire connected between bus wires. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight.
2. Electrical Insulating Jacket: Flame-retardant fluoropolymer.
3. Cable Cover: Tinned-copper OR Stainless-steel, as directed, braid, and polyolefin outer jacket with UV inhibitor, as directed.

D. Controls
1. Pipe-Mounting Thermostats for Freeze Protection:
   a. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
   b. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
   c. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
   d. Corrosion-resistant, waterproof control enclosure.
2. Precipitation and Temperature Sensor for Snow Melting on Roofs and in Gutters:
   a. Microprocessor-based OR Automatic, as directed, control with manual on, automatic, and standby/reset switch.
   b. Precipitation and temperature sensors shall sense the surface conditions of roof and gutters and shall be programmed to energize the cable as follows:
      1) Temperature Span: 34 to 44 deg F (1 to 7 deg C).
      2) Adjustable Delay Off Span: 30 to 90 minutes.
      3) Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
      4) De-Energize Cables: On detection of a dry surface plus time delay.
   c. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
   d. Minimum 30-A contactor to energize cable or close other contactors.
   e. Precipitation sensor shall be freestanding.
   f. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control system workstation.
3. Programmable Timer for Domestic Hot-Water-Temperature Maintenance:
   a. Microprocessor based.
   b. Minimum of four separate schedules.
   c. Minimum 24-hour battery carryover.
   d. On-off-auto switch.
   e. 365-day calendar with 20 programmable holidays.
   f. Relays with contacts to indicate operational status, on or off, and for interface with central HVAC control system workstation.

E. Accessories
1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.

2. Warning Labels: Refer to Division 22 Section "Identification For Plumbing Piping And Equipment".

3. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
   a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
   b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Applications
1. Install the following types of electric heating cable for the applications described:
   a. Snow and Ice Melting on Roofs and in Gutters and Downspouts: Plastic-insulated, series-resistance OR Self-regulating, parallel-resistance OR Constant-wattage, as directed, heating cable.

B. Installation
1. Install electric heating cable across expansion, construction, and control joints according to manufacturer's written recommendations using cable protection conduit and slack cable to allow movement without damage to cable.
2. Electric Heating Cable Installation for Snow and Ice Melting on Roofs and in Gutters and Downspouts: Install on roof and in gutters and downspouts with clips furnished by manufacturer that are compatible with roof, gutters, and downspouts.
3. Electric Heating Cable Installation for Freeze Protection for Piping:
   a. Install electric heating cables after piping has been tested and before insulation is installed.
   b. Install insulation over piping with electric cables according to IEEE 515.1.
   c. Install warning tape on piping insulation where piping is equipped with electric heating cables.
4. Electric Heating Cable Installation for Temperature Maintenance for Domestic Hot Water:
   a. Install electric heating cables after piping has been tested and before insulation is installed.
   b. Install insulation over piping with electric heating cables according to Division 22 Section "Plumbing Insulation".
   c. Install warning tape on piping insulation where piping is equipped with electric heating cables.
5. Set field-adjustable switches and circuit-breaker trip ranges.
6. Protect installed heating cables, including nonheating leads, from damage.

C. Connections
1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

D. Field Quality Control
1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
   a. Test cables for electrical continuity and insulation integrity before energizing.
b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.

2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.

3. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 07 72 56 00b
SECTION 07 72 56 00c - HEAT TRACING FOR HVAC PIPING

1.1 GENERAL
A. Description Of Work
1. This specification covers the furnishing and installation of materials for heat tracing for HVAC piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes heat tracing with the following electric heating cables:
   b. Self-regulating, parallel resistance.

C. Submittals
1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
   a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
3. Field quality-control test reports.
4. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 OR 15, as directed, years from date of Final Completion.

1.2 PRODUCTS
A. Plastic-Insulated, Series-Resistance Heating Cables
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, as directed.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables
1. Heating Element: Pair of parallel No. 16 OR 18 as directed, AWG, tinned OR nickel-coated as directed, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
2. Electrical Insulating Jacket: Flame-retardant polyolefin.
3. Cable Cover: Tinned-copper OR Stainless-steel as directed, braid, and polyolefin outer jacket with UV inhibitor as directed.

C. Controls
1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.

D. Accessories
1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
2. Warning Labels: Refer to Division 23 Section "Identification For Hvac Piping And Equipment".
3. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
   a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
   b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Installation
1. Install electric heating cable across expansion joints according to manufacturer’s written recommendations using slack cable to allow movement without damage to cable.
2. Install electric heating cables after piping has been tested and before insulation is installed.
3. Install electric heating cables according to IEEE 515.1.
4. Install insulation over piping with electric cables according to Division 23 Section "Hvac Insulation".
5. Install warning tape on piping insulation where piping is equipped with electric heating cables.
7. Protect installed heating cables, including nonheating leads, from damage.

B. Connections
1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control
1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
   a. Test cables for electrical continuity and insulation integrity before energizing.
   b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
3. Remove and replace malfunctioning units and retest as specified above.

SECTIONS 07 81 16 00 - SPRAYED FIRE-RESISTIVE MATERIALS

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for sprayed fire-resistant materials. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Concealed SFRM.
      b. Exposed SFRM.
      c. Exposed intumescent mastic fire-resistant coatings.

C. Definitions
   1. SFRM: Sprayed fire-resistant material.
   2. Concealed: Fire-resistant materials applied to surfaces that are concealed from view behind other construction when the Work is completed and have not been defined as exposed, as directed.
   3. Exposed: Fire-resistant materials applied to surfaces that are exposed to view when the Work is completed, that are accessible through suspended ceilings OR that are in elevator shafts and machine rooms OR that are in mechanical rooms OR that are in air-handling plenums OR and that are identified as exposed on Drawings, as directed.

D. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: Show extent of sprayed fire-resistant material for each construction and fire-resistance rating, applicable fire-resistant designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction, and minimum thicknesses.
   3. Product certificates OR test reports, as directed.
   4. Compatibility and adhesion test reports.
   5. Research/evaluation reports.
   6. Field quality-control test and special inspection, as directed, reports.

E. Quality Assurance
   1. Installer Qualifications: A qualified installer approved by SFRM manufacturer to install manufacturer's products. A manufacturer's willingness to sell its SFRM to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.
   2. SFRM Testing: By a qualified testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
      a. SFRMs are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
      b. Testing is performed on specimens of SFRMs that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistant materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.
      c. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.
   3. Compatibility and Adhesion Testing: Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.

b. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with SFRM.

4. Fire-Test-Response Characteristics: Where indicated, provide products identical to those tested for fire resistance per ASTM E 119 by a testing agency acceptable to authorities having jurisdiction.
   a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
   b. Identify products with appropriate markings of applicable testing and inspecting agency.

5. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, “Polarized Light Microscopy.”

F. Delivery, Storage, And Handling
1. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, shelf life if applicable, and fire-resistance ratings applicable to Project.
2. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.
3. Store materials inside, under cover, and aboveground; keep dry until ready for use. Remove from Project site and discard wet or deteriorated materials.

G. Project Conditions
1. Environmental Limitations: Do not apply SFRM when ambient or substrate temperature is 40 deg F (4 deg C) or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
2. Ventilation: Ventilate building spaces during and after application of SFRM. Use natural means or, if they are inadequate, forced-air circulation until fire-resistive material dries thoroughly.

H. Warranty
1. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace SFRMs that fail in materials or workmanship within two years from date of Final Completion.

1.2 PRODUCTS

A. Concealed SFRM
1. Material Composition: Manufacturer's standard product, as follows OR either of the following, as directed:
   a. Concealed Cementitious SFRM: Factory-mixed, dry formulation of gypsum or portland cement binders, additives, and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.
   b. Concealed Sprayed-Fiber Fire-Resistive Material: Factory-mixed, dry formulation of inorganic binders, mineral fibers, fillers, and additives conveyed in a dry state by pneumatic equipment and mixed with water at spray nozzle to form a damp, as-applied product.

2. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
   a. Dry Density: 15 lb/cu. ft. (240 kg/cu. m) for average and individual densities, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
b. Thickness: Minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch (9 mm), per ASTM E 605:
   1) Where the referenced fire-resistance design lists a thickness of 1 inch (25 mm) or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch (6 mm).
   2) Where the referenced fire-resistance design lists a thickness of less than 1 inch (25 mm) but more than 0.375 inch (9 mm), the minimum allowable individual thickness of SFRM is the greater of 0.375 inch (9 mm) or 75 percent of the design thickness.
   3) No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft. (240 kg/cu. m).

c. Bond Strength: 150 lbf/sq. ft. (7.2 kPa) minimum per ASTM E 736 based on laboratory testing of 0.75-inch (19-mm) minimum thickness of SFRM.

d. Compressive Strength: 5.21 lbf/sq. in. (35.9 kPa) minimum per ASTM E 761. Minimum thickness of SFRM tested shall be 0.75 inch (19 mm) and minimum dry density shall be as specified but not less than 15 lb/cu. ft. (240 kg/cu. m).

e. Corrosion Resistance: No evidence of corrosion per ASTM E 937.

f. Deflection: No cracking, spalling, or delamination per ASTM E 759.

g. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.

h. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. (0.270 g/sq. m) in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of SFRM is 0.75 inch (19 mm), maximum dry density is 15 lb/cu. ft. (240 kg/cu. m), test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.

i. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
   1) Flame-Spread Index: 10 or less.
      2) Smoke-Developed Index: 0.

j. Fungal Resistance: No observed growth on specimens per ASTM G 21.

B. Exposed SFRM

1. Material Composition: Manufacturer’s standard product, as follows:
   a. Exposed Cementitious SFRM: Factory-mixed, dry, cement aggregate formulation; or chloride-free formulation of gypsum or portland cement binders, additives, and inorganic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.
   b. Exposed Sprayed-Fiber Fire-Resistive Material: Factory-mixed, dry formulation of inorganic binders, mineral fibers, fillers, and additives conveyed in a dry state by pneumatic equipment and mixed with water at spray nozzle to form a damp, as-applied product.

2. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
   a. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method," but with an average density of not less than 22 lb/cu. ft. (352 kg/cu. m).
   b. Bond Strength: 434 lbf/sq. ft. (21 kPa) minimum per ASTM E 736.
   c. Compressive Strength: 51 lbf/sq. in. (351 kPa) minimum per ASTM E 761.
   d. Bond Strength: 1000 lbf/sq. ft. (48 kPa) minimum per ASTM E 736.
   f. Compressive Strength: 300 lbf/sq. in. (2067 kPa) minimum per ASTM E 761.
   e. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
   h. Deflection: No cracking, spalling, or delamination per ASTM E 759.
   i. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
   j. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. (0.270 g/sq. m) per ASTM E 859.
l. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
   1) Flame-Spread Index: 10 or less.
   2) Smoke-Developed Index: 0.
m. Fungal Resistance: No observed growth on specimens per ASTM G 21.
n. For exterior applications of SFRM, provide formulation listed and labeled by testing and inspecting agency acceptable to authorities having jurisdiction for surfaces exposed to exterior.

C. Exposed Intumescent Mastic Fire-Resistive Coatings
      a. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction and investigated for Interior General OR Conditioned Interior Space, as directed, Purpose by UL.
      b. Non-Water-Based Formulation: Approved by manufacturer and UL or another testing and inspecting agency acceptable to authorities having jurisdiction and investigated for Interior General Purpose by UL OR investigated for Interior General Purpose and Exterior Use by UL OR tested per ASTM E 1529 OR tested per UL 1709, as directed.
      c. Multicomponent system consisting of intumescent base coat and topcoat.

D. Auxiliary Fire-Resistive Materials
   1. General: Provide auxiliary fire-resistive materials that are compatible with SFRM and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
   2. Substrate Primers: For use on each substrate and with each sprayed fire-resistive product, provide primer that complies with one or more of the following requirements:
      b. Primer is identical to those used in assemblies tested for fire-test-response characteristics of SFRM per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
   3. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of SFRM.
   4. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistance designs indicated and fire-resistive material manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive SFRM.
   5. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of SFRM.
   6. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of intumescent mastic coating fire-resistive material. Include pins and attachment.
   7. Sealer for Sprayed-Fiber Fire-Resistive Material: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by manufacturer of sprayed-fiber fire-resistive material.
   8. Topcoat: Type recommended in writing by manufacturer of each SFRM for application over concealed OR exposed, as directed, SFRM.
   9. Cement-Based Topcoat: Factory-mixed, cementitious hardcoat formulation recommended in writing by manufacturer of SFRM for trowel or spray application over concealed OR exposed, as directed, SFRM.
  10. Veneer-Plaster Topcoat: Factory-mixed formulation of a latex-modified, portland cement-based veneer plaster recommended in writing by manufacturer of SFRM for trowel or spray application over concealed OR exposed, as directed, SFRM.
  11. Water-Based Permeable Topcoat: Factory-mixed formulation recommended in writing by manufacturer of SFRM for brush, roller, or spray application over concealed OR exposed, as
**guided.** SFRM. Provide application at a rate of 120 sq. ft./gal. (3 sq. m/L) OR 60 sq. ft./gal. (1.5 sq. m/L) OR 30 sq. ft./gal. (0.75 sq. m/L), **as directed.**

### 1.3 EXECUTION

**A. Preparation**

1. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.
2. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.
3. Prime substrates where recommended in writing by SFRM manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive SFRM.
4. For exposed applications, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of SFRM. Remove minor projections and fill voids that would telegraph through fire-resistant products after application.

**B. Application, General**

1. Comply with fire-resistive material manufacturer’s written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on fire-resistant material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
2. Apply SFRM that is identical to products tested as specified in Part 1.1 “Quality Assurance” Article and substantiated by test reports, with respect to rate of application, accelerator use, sealers, topcoats, tamping, troweling, water overspray, or other materials and procedures affecting test results.
3. Install metal lath and reinforcing fabric, as required, to comply with fire-resistance ratings and fire-resistant material manufacturer’s written recommendations for conditions of exposure and intended use. Securely attach lath and fabric, as required, to substrate in position required for support and reinforcement of fire-resistant material. Use anchorage devices of type recommended in writing by SFRM manufacturer. Attach accessories where indicated or required for secure attachment of lath and fabric, as required, to substrate.
4. Coat substrates with bonding adhesive before applying fire-resistant material where required to achieve fire-resistance rating or as recommended in writing by SFRM manufacturer for material and application indicated.
5. Extend fire-resistant material in full thickness over entire area of each substrate to be protected. Unless otherwise recommended in writing by SFRM manufacturer, install body of fire-resistant covering in a single course.
6. Spray apply fire-resistant materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by SFRM manufacturer.
7. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply SFRM that differs in color from that of encapsulant over which it is applied.
8. Where sealers are used, apply products that are tinted to differentiate them from SFRM over which they are applied.

**C. Application, Concealed SFRM**

1. Apply concealed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if specified in Part 1.2 “Concealed SFRM” Article.
2. Apply water overspray to concealed sprayed-fiber fire-resistant material as required to obtain designated fire-resistance rating and where indicated.
3. Cure concealed SFRM according to product manufacturer’s written recommendations.
4. Apply sealer to concealed SFRM where indicated.
5. Apply topcoat to concealed SFRM where indicated.
D. Application, Exposed SFRM
1. Apply exposed SFRM in thicknesses and densities not less than those required to achieve fire-
resistance ratings designated for each condition, but apply in greater thicknesses and densities if
indicated.
a. For steel beams and bracing, provide a thickness of not less than 1 inch (25 mm).
b. For metal floor or roof decks, provide a thickness of not less than 1/2 inch (13 mm).
2. Provide a uniform finish complying with description indicated for each type of material and
matching the Owner's sample or, if none, finish approved for field-erected mockup.
3. Apply exposed cementitious SFRM to produce the following finish:
a. Spray-textured finish with no further treatment.
b. Even, spray-textured finish, produced by rolling flat surfaces of fire-protected members with
d. Smooth, troweled finish with surface markings eliminated and edges squared.
4. Apply exposed sprayed-fiber fire-resistive material to produce the following finish:
a. Spray-textured finish.
b. Sealer where indicated.
c. Topcoat where indicated.
5. Cure exposed SFRM according to product manufacturer's written recommendations.

E. Application, Exposed Intumescent Mastic Fire-Resistive Coatings
1. Apply exposed intumescent mastic fire-resistive coatings in thicknesses and densities not less
than those required to achieve fire-resistance ratings designated for each condition.
2. Apply intumescent mastic fire-resistive coating as follows:
a. Install reinforcing fabric as required to obtain designated fire-resistance rating and where
indicated.
c. Finish: Even, spray-textured finish produced by lightly rolling flat surfaces of fire-protected
members before fire-resistive material dries, to smooth out surface irregularities and to seal
in surface fibers.

F. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare
test reports.
a. Testing and inspecting agency will interpret tests and state in each report whether tested
work complies with or deviates from requirements.
2. Tests and Inspections: Testing and inspecting of completed applications of SFRM shall take
place in successive stages, in areas of extent and using methods as follows. Do not proceed with
application of SFRM for the next area until test results for previously completed applications of
SFRM show compliance with requirements. Tested values must equal or exceed values
indicated and required for approved fire-resistance design.
a. Thickness for Floor, Roof, and Wall Assemblies: For each 1000-sq. ft. (93-sq. m) area, or
partial area, on each floor, from the average of 4 measurements from a 144-sq. in. (0.093-
sq. m) sample area, with sample width of not less than 6 inches (152 mm) per
ASTM E 605.
b. Thickness for Structural Frame Members: From a sample of 25 percent of structural
members per floor, taking 9 measurements at a single cross section for structural frame
beams or girders, 7 measurements of a single cross section for joists and trusses, and 12
measurements of a single cross section for columns per ASTM E 605.
c. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from
sample size indicated for determining thickness of each type of construction and structural
framing member, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5,
"Displacement Method."
d. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: For each
10,000-sq. ft. (929 sq. m) area, or partial area, on each floor, cohesion and adhesion from
one sample of size indicated for determining thickness of each type of construction and
structural framing member, per ASTM E 736.
1) Field test SFRM that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.

2) If surfaces of structural steel receiving SFRM are primed or otherwise painted for coating materials, perform series of bond tests specified in UL’s “Fire Resistance Directory.” Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. (7.2 kPa) minimum per ASTM E 736.

e. If testing finds applications of SFRM are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.

3. Remove and replace applications of SFRM that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.

4. Apply additional SFRM, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.

G. Cleaning, Protecting, And Repair

1. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

2. Protect SFRM, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at time of Final Completion.

3. Coordinate application of SFRM with other construction to minimize need to cut or remove fire protection. As installation of other construction proceeds, inspect SFRM and patch any damaged or removed areas.

4. Repair or replace work that has not successfully protected steel.

SECTION 07 84 13 16 - THROUGH-PENETRATION FIRESTOP SYSTEMS

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for through-penetration firestop systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes through-penetration firestop systems for penetrations through fire-resistance-rated constructions, including both empty openings and openings containing penetrating items.

C. Performance Requirements
1. General: For penetrations through fire-resistance-rated constructions, including both empty openings and openings containing penetrating items, provide through-penetration firestop systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated.

2. Rated Systems: Provide through-penetration firestop systems with the following ratings determined per ASTM E 814 or UL 1479:
   a. F-Rated Systems: Provide through-penetration firestop systems with F-ratings indicated, but not less than that equaling or exceeding fire-resistance rating of constructions penetrated.
   b. T-Rated Systems: For the following conditions, provide through-penetration firestop systems with T-ratings indicated, as well as F-ratings, where systems protect penetrating items exposed to potential contact with adjacent materials in occupiable floor areas:
      1) Penetrations located outside wall cavities.
      2) Penetrations located outside fire-resistance-rated shaft enclosures.
   c. L-Rated Systems: Where through-penetration firestop systems are indicated in smoke barriers, provide OR Provide, as directed, through-penetration firestop systems with L-ratings indicated OR of not more than, as directed, 3.0 cfm/sq. ft (0.01524cu. m/s x sq. m) at both ambient temperatures and 400 deg F (204 deg C).

3. For through-penetration firestop systems exposed to view, traffic, moisture, and physical damage, provide products that, after curing, do not deteriorate when exposed to these conditions both during and after construction.
   a. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
   b. For floor penetrations with annular spaces exceeding 4 inches (100 mm) in width and exposed to possible loading and traffic, provide firestop systems capable of supporting floor loads involved, either by installing floor plates or by other means.
   c. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

4. For through-penetration firestop systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

D. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: For each through-penetration firestop system, submit documentation, including illustrations, from a qualified testing and inspecting agency, showing each type of construction condition penetrated, relationships to adjoining construction, and type of penetrating item.
a. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular through-penetration firestop condition, submit illustration, with modifications marked, approved by through-penetration firestop system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

E. Quality Assurance
1. Installation Responsibility: Assign installation of through-penetration firestop systems and fire-resistant joint systems in Project to a single qualified installer.
2. Fire-Test-Response Characteristics: Provide through-penetration firestop systems that comply with the following requirements and those specified in Part 1.1 "Performance Requirements" Article:
   a. Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL OR OPL OR ITS, as directed, or another agency performing testing and follow-up inspection services for firestop systems acceptable to authorities having jurisdiction.
   b. Through-penetration firestop systems are identical to those tested per testing standard referenced in "Part 1.1 Performance Requirements" Article. Provide rated systems bearing classification marking of qualified testing and inspecting agency.
3. Coordinate construction of openings and penetrating items to ensure that through-penetration firestop systems are installed according to specified requirements.
4. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until each installation has been examined by the Owner's inspecting agency and building inspector, if required by authorities having jurisdiction.

F. Delivery, Storage, And Handling
1. Deliver through-penetration firestop system products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life if applicable, qualified testing and inspecting agency's classification marking applicable to Project, curing time, and mixing instructions for multicomponent materials.
2. Store and handle materials for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.2 PRODUCTS
A. Firestopping
1. Compatibility: Provide through-penetration firestop systems that are compatible with one another; with the substrates forming openings; and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.
2. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with Part 1.1 "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:
   a. Permanent forming/damming/backing materials, including the following:
      1) Slag-/rock-wool-fiber insulation.
      2) Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
      3) Fire-rated form board.
      4) Fillers for sealants.
   b. Temporary forming materials.
   c. Substrate primers.
   d. Collars.
B. Fill Materials

1. General: Provide through-penetration firestop systems containing the types of fill materials indicated in the Through-Penetration Firestop System Schedule at the end of Part 1.3 by referencing the types of materials described in this Article. Fill materials are those referred to in directories of referenced testing and inspecting agencies as “fill,” “void,” or “cavity” materials.

2. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

3. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.

4. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

5. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.

6. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

8. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

9. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives.

10. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

11. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
   a. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.
   b. Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.
   c. Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.

C. Mixing: For those products requiring mixing before application, comply with through-penetration firestop system manufacturer’s written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

1.3 EXECUTION

A. Through-Penetration Firestop System Installation

1. General: Install through-penetration firestop systems to comply with Part 1.1 “Performance Requirements” Article and with firestop system manufacturer’s written installation instructions and published drawings for products and applications indicated.

2. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
a. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

3. Install fill materials for firestop systems by proven techniques to produce the following results:
   a. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
   b. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   c. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

4. Identification: Identify through-penetration firestop systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of edge of the firestop systems so that labels will be visible to anyone seeking to remove penetrating items or firestop systems. Use mechanical fasteners for metal labels. Include the following information on labels:
   a. The words "Warning - Through-Penetration Firestop System - Do Not Disturb. Notify Building Management of Any Damage."
   b. Contractor's name, address, and phone number.
   c. Through-penetration firestop system designation of applicable testing and inspecting agency.
   d. Date of installation.
   e. Through-penetration firestop system manufacturer's name.
   f. Installer's name.

B. Field Quality Control
1. Inspecting Agency: Engage an independent inspecting agency to inspect through-penetration firestops. Independent inspecting agency shall comply with ASTM E 2174 requirements including those related to qualifications, conducting inspections, and preparing test reports.
2. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements.
3. Proceed with enclosing through-penetration firestop systems with other construction only after inspection reports are issued and firestop installations comply with requirements.

C. Cleaning And Protecting
1. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.
2. Provide final protection and maintain conditions during and after installation that ensure that through-penetration firestop systems are without damage or deterioration at time of Final Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce systems complying with specified requirements.

D. Through-Penetration Firestop System Schedule
1. Choices in the following paragraphs which are contained within brackets shall be as required to satisfy building and local code requirements.
2. Where UL-classified systems are indicated, they refer to alpha-alpha-numeric designations listed in UL's "Fire Resistance Directory" under product Category XHEZ.
3. Where OPL-classified systems are indicated, they refer to alpha-numeric design numbers in OPL's "Directory of Listed Building Products, Materials, & Assemblies."
4. Where ITS-listed systems are indicated, they refer to design numbers listed in ITS's "Directory of Listed Products," "Firestop Systems" Section.
5. Firestop Systems with No Penetrating Items:
   a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [0001-0999].
   b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type G.
c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Silicone sealant.
   3) Intumescent putty.
   4) Mortar.

6. Firestop Systems for Metallic Pipes, Conduit, or Tubing:
   a. UL-Classified Systems: [C-AJ-] [C-BJ-] [C-BK-] [F-A-] [F-B-] [F-C-] [W-J-] [W-K-] [W-L-] <Insert one or more four-digit numbers> [1001-1999].
   b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type A.
   c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Silicone sealant.
   3) Intumescent putty.
   4) Mortar.

7. Firestop Systems for Nonmetallic Pipe, Conduit, or Tubing:
   a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [F-B-] [F-C-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [2001-2999].
   b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type B.
   c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Silicone sealant.
   3) Intumescent putty.
   4) Intumescent wrap strips.
   5) Firestop device.

8. Firestop Systems for Electrical Cables:
   a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [F-B-] [F-C-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [3001-3999].
   b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type D.
   c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Silicone sealant.
   3) Intumescent putty.
   4) Silicone foam.
   5) Pillows/bags.

9. Firestop Systems for Cable Trays:
   a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [F-B-] [F-C-] [W-J-] [W-K-] [W-L-] <Insert one or more four-digit numbers> [4001-4999].
   b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type D.
   c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Intumescent putty.
   3) Silicone foam.
   4) Pillows/bags.
   5) Mortar.

10. Firestop Systems for Insulated Pipes:
    a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [F-C-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [5001-5999].
    b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type C.
c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Intumescent putty.
   3) Silicone foam.
   4) Intumescent wrap strips.

11. Firestop Systems for Miscellaneous Electrical Penetrants:
a. UL-Classified Systems: [C-AJ-] [F-A-] [W-L-] <Insert one or more four-digit numbers> [6001-6999].
b. OPL-Classified Systems: FS <Insert one or more OPL design numbers> [F] [W], Penetrating Item Type E.
c. ITS-Listed Systems: <Insert ITS design number(s).>
d. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Intumescent putty.
   3) Mortar.

12. Firestop Systems for Miscellaneous Mechanical Penetrants:
a. UL-Classified Systems: [C-AJ-] [F-C-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [7001-7999].
b. ITS-Listed Systems: <Insert ITS design number(s).>
c. Type of Fill Materials: One or both of the following:
   1) Latex sealant.
   2) Mortar.

13. Firestop Systems for Groupings of Penetrants:
a. UL-Classified Systems: [C-AJ-] [C-BJ-] [F-A-] [F-C-] [W-J-] [W-L-] <Insert one or more four-digit numbers> [8001-8999].
b. ITS-Listed Systems: <Insert ITS design number(s).>
c. Type of Fill Materials: One or more of the following:
   1) Latex sealant.
   2) Mortar.
   3) Intumescent wrap strips.
   4) Firestop device.
   5) Intumescent composite sheet.
SECTION 07 84 13 16a - FIRE-RESISTIVE JOINT SYSTEMS

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for fire-resistive joint systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes fire-resistive joint systems for the following:
      a. Floor-to-floor joints.
      b. Floor-to-wall joints.
      c. Head-of-wall joints.
      d. Wall-to-wall joints.
      e. Perimeter fire-resistive joint systems consisting of floor-to-wall joints between perimeter edge of fire-resistance-rated floor assemblies and exterior curtain walls.

C. Performance Requirements
   1. General: Provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistive joint systems are installed.
   2. Joint Systems in and between Fire-Resistance-Rated Constructions: Provide systems with assembly ratings equaling or exceeding the fire-resistance ratings of construction that they join, and with movement capabilities and L-ratings indicated as determined by UL 2079.
      a. Load-bearing capabilities as determined by evaluation during the time of test.
   3. Perimeter Fire-Resistive Joint Systems: For joints between edges of fire-resistance-rated floor assemblies and exterior curtain walls, provide systems of type and with ratings indicated below and those indicated in the Fire-Resistive Joint System Schedule at the end of Part 1.3, as determined by IBC Standard OR NFPA 285, as directed, and UL 2079.
      a. UL-Listed, Perimeter Fire-Containment Systems: Integrity ratings equaling or exceeding fire-resistance ratings of floor or floor/ceiling assembly forming one side of joint.
      b. OPL-Listed, Perimeter Fire-Barrier Systems: F-ratings equaling or exceeding fire-resistance ratings of floor or floor/ceiling assembly forming one side of joint.
   4. For fire-resistive systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

D. Submittals
   1. Product Data: For each product indicated.
   2. Shop Drawings: For each fire-resistive joint system.
   3. Qualification Data: For Installer.
   4. Field quality-control test reports.
   6. Research/Evaluation Reports: For each type of fire-resistive joint system.

E. Quality Assurance
   1. Installer Qualifications: A firm that has been approved by FMG according to FMG 4991, "Approval of Firestop Contractors."
   2. Installation Responsibility: Assign installation of through-penetration firestop systems and fireresistive joint systems in Project to a single qualified installer.
   3. Fire-Test-Response Characteristics: Provide fire-resistive joint systems that comply with the following requirements and those specified in Part 1 "Performance Requirements" Article:
a. Fire-resistance tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL OR OPL, as directed, or another agency performing testing and follow-up inspection services for fire-resistive joint systems acceptable to authorities having jurisdiction.

b. Fire-resistive joint systems are identical to those tested per methods indicated in Part 1 “Performance Requirements” Article and comply with the following:
   1) Fire-resistive joint system products bear classification marking of qualified testing and inspecting agency.
   2) Fire-resistive joint systems correspond to those indicated by referencing system designations of the qualified testing and inspecting agency.

4. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

5. Do not cover up fire-resistive joint system installations that will become concealed behind other construction until inspecting agency and building inspector of authorities having jurisdiction have examined each installation.

F. Delivery, Storage, And Handling

1. Deliver fire-resistive joint system products to Project site in original, unopened containers or packages with qualified testing and inspecting agency’s classification marking applicable to Project and with intact and legible manufacturers’ labels identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions for multicomponent materials.

2. Store and handle materials for fire-resistive joint systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.2 PRODUCTS

A. Fire-Resistive Joint Systems

1. Compatibility: Provide fire-resistive joint systems that are compatible with joint substrates, under conditions of service and application, as demonstrated by fire-resistive joint system manufacturer based on testing and field experience.

2. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install fill materials and to comply with Part 1 “Performance Requirements” Article. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing and inspecting agency for systems indicated.

1.3 EXECUTION

A. Installation

1. Install fire-resistive joint systems to comply with Part 1.1 “Performance Requirements” Article and fire-resistive joint system manufacturer’s written installation instructions for products and applications indicated.

2. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

B. Field Quality Control

1. Inspecting Agency: Engage a qualified independent inspecting agency to inspect fire-resistive joint systems and prepare inspection reports.

2. Testing Services: Inspecting of completed installations of fire-resistive joint systems shall take place in successive stages as installation of fire-resistive joint systems proceeds. Do not proceed with installation of joint systems for the next area until inspecting agency determines completed work shows compliance with requirements.

   a. Inspecting agency shall state in each report whether inspected fire-resistive joint systems comply with or deviate from requirements.
3. Remove and replace fire-resistive joint systems where inspections indicate that they do not comply with specified requirements.
4. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and fire-resistive joint systems comply with requirements.

C. Fire-Resistive Joint System Schedule
1. Designation System for Joints in or between Fire-Resistance-Rated Constructions: Alphanumeric systems listed in UL's "Fire Resistance Directory" under Product Category XHBN.
2. Designation System for Joints at the Intersection of Fire-Resistance-Rated Floor or Floor/Ceiling Assembly and an Exterior Curtain-Wall Assembly: Alphanumeric systems listed in UL's "Fire Resistance Directory" under Product Category XHDG or OPL's "Directory of Listed Building Products, Materials, & Assemblies" as perimeter fire-barrier systems, as directed.

END OF SECTION 07 84 13 16a
SECTION 07 84 13 16b - FIRESTOPPING

1.1 DESCRIPTION OF WORK

A. This specification covers the furnishing and installation of materials for firestopping. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 GENERAL

A. System Description
   1. Performance Requirements: Comply with following:
      a. Firestopping: Consist of material or combination of materials to form effective barrier against spread of flame, smoke, and gases, and maintain integrity of fire-resistance rated walls, partitions, floors, and ceiling-floor assemblies at penetrations.
      1) Penetrations: Include annular space around pipes, ducts, chimneys, tubes, conduit, wires, cables, and vents.

B. Submittals
   1. Product Data:
      a. Composition and performance characteristics.
      b. List of FM, UL, or WH classification number of systems installed.
   2. Quality Assurance/Control Submittals:
      a. Test Reports: If not FM, UL, or WH listed, submit certified test results for ASTM E 814 tests by UL, FM, WH, or other accredited independent laboratory demonstrating compliance of firestopping with specified requirements.
      b. Manufacturers installation instructions.

C. Quality Assurance
   1. Regulatory Requirements: Comply with applicable building-code requirements for firestopping.

D. Delivery, Storage, And Handling
   1. Packing, Shipping, Handling, and Unloading: Deliver in original, unopened containers with manufacturer's labels.
      a. Products: FM, UL, or WH labeled and FM, UL, or WHI listed.
   2. Storage and Protection: Store firestopping materials in accordance with manufacturer's recommendations.

1.3 PRODUCTS

A. Fire-Rated Penetration Sealant Systems
   1. Firestopping Materials: Commercially manufactured asbestos-free products complying with following minimum requirements:
      a. Material:
         1) Flame Spread: ASTM E 84 or UL 723, 25 or less.
         2) Smoke Developed Rating: ASTM E 84 or UL 723, 50 or less.
         3) Material: Approved firestopping material as listed in UL 05, FM P7825, or WH Certified Listing.
      b. Material Properties:
         1) Contain no flammable or toxic solvents and have no dangerous or flammable outgassing during the drying or curing of products.
         2) Non-toxic to human beings at all stages of application and during fire conditions.
3) Water-resistant after drying or curing and unaffected by high humidity, condensation, or transient water exposure.

- Devices and systems requiring heat activation to seal opening created by burning or melting of penetrant shall exhibit demonstrated ability to function as required for floors and walls of construction and thickness similar to those to be firestopped.

2. Firestopping System Requirements: Materials from single manufacturer capable of maintaining effective barrier against flame, smoke, and gases in accordance with ASTM E 814 and UL 1479.

- Fire-Resistance Rating: Equal or greater than fire-resistance rating of assembly in which it is being placed.
- F Ratings: Equal to or greater than fire-resistance rating of assembly penetrated.
- T Ratings: Equal to or greater than fire-resistance rating of assembly penetrated at following locations:
  1) Penetrations located outside of wall cavities.
  2) Penetrations located outside of fire-resistive shaft enclosures.
  3) Penetrations located in enclosures with doors required to have temperature-rise rating.
  4) Penetrations with penetrating hems larger than 100 mm (4 inch) diameter nominal pipe or 10 320 sq. mm (16 square inches) in cross-sectional area.
- System: Listed in UL 05, FM 7825, or WH Certified Listing, or tested by approved laboratory in accordance with ASTM E 814.
- System: Suitable for firestopping of penetrations made by steel, glass, plastic, and insulated pipe.
- Penetration by Insulated Pipe: Does not require removal of insulation.

1.4 EXECUTION

A. Examination

1. Verification of Conditions:
   a. Existing Conditions: Examine penetrations before beginning installation.
   b. Do not proceed with installation until conditions are satisfactory.

B. Installation

1. Fire-Rated Penetration Sealant Systems: Install in accordance with UL 05, FM P7825, or WH systems and manufacturers recommendations to maintain required fire-separation rating.
   a. Preparation: Clean surfaces in contact with firestopping materials that may affect proper fitting or required fire rating. Prime if required. Dam void if required.
   b. Penetrations: Completely fill void with sealant materials to smooth surface, flush with adjacent surfaces and in contact with surfaces formed by openings and penetrate items ensuring adhesion. Provide sealant in thickness to achieve required fire rating and smoke barrier.
   c. Firestopping at Voids 100 mm (4 inches) or More in Any Direction: Capable of supporting same load as floor is designed to support or protected by permanent barrier.
   d. Remove any excess sealant from adjacent surfaces.

2. Firestopping: Provide at following locations:
   a. Penetrations of duct, chimney, conduit, tubing, cable, and pipe through floors and through fire-resistance rated walls, partitions, and ceiling-floor assemblies.
   b. Penetrations of vertical shafts such as pipe chases, elevator shafts, and utility chutes.
   c. Gaps at intersection of fire-rated floor stabs and walls.
   d. Gaps at perimeter of fire-rated walls and partitions, such as between top of walls and bottom of floor or roof decks.
   e. Construction joints in fire-rated floors, walls, and partitions.
   f. Other locations where required to maintain fire-resistance rating of the construction.
   g. Other locations as indicated on Drawings (if any).

C. Field Quality Control
1. Inspection: Examine areas to be firestopped prior to concealing or enclosing to ensure proper installation.
   a. Keep areas of firestopping work accessible until inspection by authorities having jurisdiction over work.

SECTION 07 84 56 13 - BOARD FIRE PROTECTION

1.1 GENERAL

A. Description Of Work:
1. This specification covers the furnishing and installation of materials for board fire protection. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Calcium silicate board fire protection.
   b. Mineral-fiber board fire protection.

C. Submittals
1. Product Data: For each type of product indicated.
2. Shop Drawings: Structural framing plans indicating the following:
   a. Locations and types of surface preparations required before applying board fire protection.
   b. Extent of board fire protection for each construction and fire-resistance rating, including the following:
      1) Applicable fire-resistance designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
         a) For steel joist assemblies, include applicable fire-resistance designations, with each steel joist tested with same maximum tensile stress as each steel joist indicated on Drawings OR in a schedule, as directed. Design designations with steel joists tested at lower maximum tensile stress than those indicated are not permitted.
      2) Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.
      3) Treatment of sprayed fire-resistant material after application.
3. Product Certificates: For each type of board fire protection, from manufacturer.
4. Research/Evaluation Reports: For board fire protection.

D. Quality Assurance
1. Source Limitations: Obtain board fire-protection materials from single source from single manufacturer.
2. Fire-Resistance Ratings: Indicated by design designations from UL’s "Fire Resistance Directory" OR UL’s "Fire Resistance Directory" or from the listings of another testing and inspecting agency, as directed, acceptable to authorities having jurisdiction, for board fireproofing serving as direct-applied protection tested per ASTM E 119.

E. Coordination
1. Coordinate installation of board fire protection with other construction specified in other Sections.
   a. Do not install board fire protection on structural members until piping and other construction behind fire-resistant materials have been completed, uninterrupted coverage of fire-resistant materials can be provided, and the need for subsequent cutting and patching of fire-resistant materials has been eliminated.
   b. Do not install enclosing or concealing construction until after board fire protection has been applied and inspected by authorities having jurisdiction.

1.2 PRODUCTS

A. Board Fire Protection
1. Calcium Silicate Board: Rigid board containing no asbestos and consisting primarily of lime, silica, inert fillers, and cellulosic reinforcing fibers; of thickness required to produce fire-resistance rating indicated; with flame-spread and smoke-developed indexes of zero per ASTM E 84; passing ASTM E 136 for combustion characteristics.
   a. Finish: Sanded finish on both sides OR one side, as directed.

2. Mineral-Fiber Board: Unfaced OR Foil-faced OR Fiberglass mat-faced, as directed, rigid board produced by combining slag-wool-/rock-wool fibers with thermosetting resin binders passing ASTM E 136 for combustion characteristics; of thickness required to produce fire-resistance rating indicated.
   a. Maximum Density: 8 lb/cu. ft. (128 kg/cu. m) OR 10 lb/cu. ft. (160 kg/cu. m) OR 12 lb/cu. ft. (192 kg/cu. m), as directed, per ASTM C 612.
   b. Surface-Burning Characteristics: Flame-spread and smoke-developed indexes of 15 OR zero, as directed, and 5 OR zero, as directed, respectively, per ASTM E 84.

B. Accessories
1. Anchorage Accessories: Provide manufacturer's standard board-anchorage components complying with related design of UL or of another testing and inspecting agency acceptable to authorities having jurisdiction.
2. Joint Treatment and Finishing Materials: For exposed calcium silicate board applications, provide joint treatment tape and joint compounds recommended in writing by board manufacturer for finishing surfaces.

1.3 EXECUTION

A. Preparation
1. Remove rust and scale from steel substrates at welded steel stud anchorage locations.

B. Installation
1. Install board fire protection according to manufacturer’s written instructions.
2. Install board fire protection to comply with requirements for layer thicknesses and number, construction of joints and corners, and anchorage methods applicable to fire-resistance-rated assemblies indicated.
3. Finish exposed calcium silicate board to comply with board manufacturer’s written instructions and as follows:
   a. At joints in calcium silicate board, embed tape in joint compound and apply first, fill, and finish coats of joint compounds over tape, fastener heads, and accessories.
   b. Apply a thin, uniform skim coat of joint compound over entire surface.
   c. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects, tool marks, and ridges.

C. Protection
1. Replace or repair board fire protection that has been cut away to facilitate other construction. Maintain complete coverage of full thickness on members and substrates protected by board fire protection.
   a. Provide final protection and maintain conditions in a manner acceptable to Installer, manufacturer, and authorities having jurisdiction to ensure that board fire protection is without damage or deterioration at time of Final Completion.

SECTION 07 91 23 00 - JOINT SEALANTS

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for joint sealants. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Silicone joint sealants.
      b. Urethane joint sealants.
      c. Polysulfide joint sealants.
      d. Latex joint sealants.
      e. Solvent-release-curing joint sealants.
      f. Preformed joint sealants.
      g. Acoustical joint sealants.

C. Preconstruction Testing
   1. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
      a. Use ASTM C 1087 OR manufacturer's standard test method, as directed, to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
      b. Submit not fewer than eight pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
      c. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
      d. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
      e. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.
   2. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
      a. Locate test joints where indicated on Project or, if not indicated, as directed by the Owner.
      b. Conduct field tests for each application indicated below:
         1) Each kind of sealant and joint substrate indicated.
      c. Notify the Owner seven days in advance of dates and times when test joints will be erected.
      d. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
            a) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
         e. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
      f. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with
requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

D. Submittals
1. Product Data: For each joint-sealant product indicated.
2. LEED Submittal:
   a. Product Data for Credit EQ 4.1: For sealants and sealant primers used inside the weatherproofing system, including printed statement of VOC content.
3. Samples: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
4. Joint-Sealant Schedule: Include the following information:
   a. Joint-sealant application, joint location, and designation.
   b. Joint-sealant manufacturer and product name.
   c. Joint-sealant formulation.
   d. Joint-sealant color.
5. Qualification Data: For qualified Installer and testing agency.
6. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
7. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each sealant specified to be validated by SWRI's Sealant Validation Program.
8. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.
9. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
   a. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   b. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
11. Field-Adhesion Test Reports: For each sealant application tested.

E. Quality Assurance
1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
2. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.
   a. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
   b. Test according to SWRI's Sealant Validation Program for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.

F. Project Conditions
1. Do not proceed with installation of joint sealants under the following conditions:
   a. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C, as directed).
   b. When joint substrates are wet.
   c. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
   d. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.
G. Warranty
1. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   a. Warranty Period: Two years from date of Final Completion.
2. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
   a. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
   b. Disintegration of joint substrates from natural causes exceeding design specifications.
   c. Mechanical damage caused by individuals, tools, or other outside agents.
   d. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

1.2 PRODUCTS

A. Materials, General
1. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
2. VOC Content of Interior Sealants: Provide sealants and sealant primers for use inside the weatherproofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Part 59, Subpart D (EPA Method 24):
   a. Architectural Sealants: 250 g/L.
   b. Sealant Primers for Nonporous Substrates: 250 g/L.
   c. Sealant Primers for Porous Substrates: 775 g/L.
3. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
   a. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
4. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
5. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.
6. Colors of Exposed Joint Sealants: As indicated by manufacturer's designations OR As selected from manufacturer's full range, as directed.

B. Silicone Joint Sealants
1. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.
2. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
3. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
4. Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
5. Single-Component, Nonsag, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use T.
7. Multicomponent, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
8. Multicomponent, Pourable, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade P, Class 100/50, for Use T.

9. Mildew-Resistant, Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

10. Mildew-Resistant, Single-Component, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

C. Urethane Joint Sealants

1. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.

2. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.

3. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

4. Single-Component, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

5. Single-Component, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

6. Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.

7. Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.

8. Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.

9. Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.

10. Immersible, Single-Component, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use T.

12. Immersible Multicomponent Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.

13. Immersible Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade P, Class 25, for Use T.

D. Polysulfide Joint Sealants

1. Single-Component, Nonsag, Polysulfide Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

2. Multicomponent, Nonsag, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.

3. Multicomponent, Nonsag, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.

4. Multicomponent, Pourable, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade P, Class 25, for Use T.

5. Immersible, Multicomponent Nonsag, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T and Use I.

E. Latex Joint Sealants

1. Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.

F. Solvent-Release-Curing Joint Sealants

G. Preformed Joint Sealants
1. Preformed Silicone Joint Sealants: Manufacturer’s standard sealant consisting of precured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.

2. Preformed Foam Joint Sealant: Manufacturer’s standard preformed, precompressed, open-cell foam sealant manufactured from urethane foam with minimum density of 10 lb/cu. ft. (160 kg/cu. m) and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths indicated; coated on one side with a pressure-sensitive adhesive and covered with protective wrapping.

H. Acoustical Joint Sealants
1. Acoustical Joint Sealant: Manufacturer’s standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

I. Joint Sealant Backing
1. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
2. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) OR Type O (open-cell material) OR Type B (bicellular material with a surface skin) OR any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, as directed, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
3. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

J. Miscellaneous Materials
1. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
2. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
3. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

1.3 EXECUTION

A. Examination
1. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
1. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer’s written instructions and the following requirements:
   a. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
   b. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing
optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
1) Concrete.
2) Masonry.
3) Unglazed surfaces of ceramic tile.
4) Exterior insulation and finish systems.
c. Remove laitance and form-release agents from concrete.
d. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
1) Metal.
2) Glass.
3) Porcelain enamel.
4) Glazed surfaces of ceramic tile.
2. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer’s written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
3. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

C. Installation Of Joint Sealants
1. General: Comply with joint-sealant manufacturer’s written installation instructions for products and applications indicated, unless more stringent requirements apply.
2. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
3. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
   a. Do not leave gaps between ends of sealant backings.
   b. Do not stretch, twist, puncture, or tear sealant backings.
   c. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
4. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
5. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
   a. Place sealants so they directly contact and fully wet joint substrates.
   b. Completely fill recesses in each joint configuration.
   c. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
6. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
   a. Remove excess sealant from surfaces adjacent to joints.
   b. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
   c. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
   d. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
   e. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.
   1) Use masking tape to protect surfaces adjacent to recessed tooled joints.
7. Installation of Preformed Silicone-Sealant System: Comply with the following requirements:
a. Apply masking tape to each side of joint, outside of area to be covered by sealant system.
b. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone-sealant system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch (10 mm). Hold edge of sealant bead 1/4 inch (6 mm) inside masking tape.
c. Within 10 minutes of sealant application, press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between sealant and both extrusion and substrate.
d. Complete installation of sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

8. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.

9. Acoustical Sealant Installation: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations.

D. Field Quality Control
1. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
   a. Extent of Testing: Test completed and cured sealant joints as follows:
      1) Perform 10 tests for the first 1000 feet (300 m) of joint length for each kind of sealant and joint substrate.
      2) Perform 1 test for each 1000 feet (300 m) of joint length thereafter or 1 test per each floor per elevation.
      1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
   c. Inspect tested joints and report on the following:
      1) Whether sealants filled joint cavities and are free of voids.
      2) Whether sealant dimensions and configurations comply with specified requirements.
      3) Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
   d. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
   e. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

2. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

E. Cleaning
1. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

F. Protection
1. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Final Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

G. Joint-Sealant Schedule
   a. Joint Locations:
      1) Control and expansion joints in brick pavers.
      2) Isolation and contraction joints in cast-in-place concrete slabs.
      3) Joints between plant-precast architectural concrete paving units.
      4) Joints in stone paving units, including steps.
      5) Tile control and expansion joints.
      6) Joints between different materials listed above.
      7) Other joints as indicated.
   b. Silicone Joint Sealant: Single component, nonsag, traffic grade, neutral curing OR Single component, pourable, traffic grade, neutral curing OR Multicomponent, pourable, traffic grade, neutral curing, as directed.
   c. Urethane Joint Sealant: Single component, nonsag, traffic grade OR Single component, pourable, traffic grade OR Multicomponent, nonsag, traffic grade, Class 50 OR Multicomponent, nonsag, traffic grade, Class 25, as directed.
   d. Polysulfide Joint Sealant: Multicomponent, nonsag, traffic grade OR Multicomponent, pourable, traffic grade, as directed.
   e. Preformed Joint Sealant: Preformed foam sealant.
   f. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

2. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces subject to water immersion.
   a. Joint Locations:
      1) Joints in pedestrian plazas.
      2) Joints in swimming pool decks.
      3) Other joints as indicated.
   b. Urethane Joint Sealant: Immersible, single component, nonsag, traffic grade OR Immersible, single component, pourable, traffic grade OR Immersible, multicomponent, nonsag, traffic grade OR Immersible, multicomponent, pourable, traffic grade, as directed.
   c. Polysulfide Joint Sealant: Immersible, multicomponent, nonsag, traffic grade.
   d. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

   a. Joint Locations:
      1) Construction joints in cast-in-place concrete.
      2) Joints between plant-precast architectural concrete units.
      3) Control and expansion joints in unit masonry.
      4) Joints in dimension stone cladding.
      5) Joints in glass unit masonry assemblies.
      6) Joints in exterior insulation and finish systems.
      7) Joints between metal panels.
      8) Joints between different materials listed above.
      9) Perimeter joints between materials listed above and frames of doors, windows and louvers.
      10) Control and expansion joints in ceilings and other overhead surfaces.
      11) Other joints as indicated.
   b. Silicone Joint Sealant: Single component, nonsag, neutral curing, Class 100/50 OR Single component, nonsag, neutral curing, Class 50 OR Single component, nonsag, acid curing OR Multicomponent, nonsag, neutral curing, as directed.
c. Urethane Joint Sealant: Single component, nonsag, Class 100/50 OR Single component, nonsag, Class 50 OR Single component, nonsag, Class 25 OR Multicomponent, nonsag, Class 50 OR Multicomponent, nonsag, Class 25, as directed.
d. Polysulfide Joint Sealant: Single component, nonsag OR Multicomponent, nonsag, as directed.
e. Preformed Joint Sealant: Preformed silicone OR Preformed foam, as directed.
f. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

   a. Joint Locations:
      1) Isolation joints in cast-in-place concrete slabs.
      2) Control and expansion joints in stone flooring.
      3) Control and expansion joints in brick flooring.
      4) Control and expansion joints in tile flooring.
      5) Other joints as indicated.
   b. Silicone Joint Sealant: Single component, nonsag, traffic grade, neutral curing OR Single component, pourable, traffic grade, neutral curing OR Multicomponent, pourable, traffic grade, neutral curing, as directed.
   c. Urethane Joint Sealant: Single component, nonsag, traffic grade OR Single component, pourable, traffic grade OR Multicomponent, nonsag, traffic grade, Class 50 OR Multicomponent, nonsag, traffic grade, Class 25, as directed.
   d. Polysulfide Joint Sealant: Multicomponent, nonsag, traffic grade OR Multicomponent, pourable, traffic grade, as directed.
   e. Preformed Joint Sealant: Preformed foam.
   f. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

   a. Joint Locations:
      1) Control and expansion joints on exposed interior surfaces of exterior walls.
      2) Perimeter joints of exterior openings where indicated.
      3) Tile control and expansion joints.
      4) Vertical joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
      5) Joints on underside of plant-precast structural concrete beams and planks.
      6) Perimeter joints between interior wall surfaces and frames of interior doors, windows and elevator entrances.
      7) Other joints as indicated.
   b. Joint Sealant: Latex OR Acrylic based OR Butyl rubber based, as directed.
   c. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

   a. Joint Sealant Location:
      1) Joints between plumbing fixtures and adjoining walls, floors, and counters.
      2) Tile control and expansion joints where indicated.
      3) Other joints as indicated.
   b. Joint Sealant: Mildew resistant, single component, nonsag, neutral curing, Silicone OR Single component, nonsag, mildew resistant, acid curing, as directed.
   c. Joint-Sealant Color: As indicated by manufacturer's designations OR As selected from manufacturer's full range of colors, as directed.

   a. Joint Location:
      1) Acoustical joints where indicated.
      2) Other joints as indicated.
   c. Joint-Sealant Color: As selected from manufacturer's full range.

SECTION 07 95 13 13 - ARCHITECTURAL JOINT SYSTEMS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for architectural joint systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
2. See Division 03 Section "Cast-in-place Concrete" for cast-in architectural-joint-system frames furnished, but not installed, in this Section.

B. Definitions
1. Maximum Joint Width: Widest linear gap a joint system tolerates and in which it performs its designed function without damaging its functional capabilities.
2. Minimum Joint Width: Narrowest linear gap a joint system tolerates and in which it performs its designed function without damaging its functional capabilities.
3. Movement Capability: Value obtained from the difference between widest and narrowest widths of a joint opening typically expressed in numerical values (mm or inches) or a percentage (plus or minus) of nominal value of joint width.
4. Nominal Joint Width: The width of the linear opening specified in practice and in which the joint system is installed.

C. Submittals
1. Shop Drawings: Provide placement drawings, including line diagrams and details, and a tabular schedule of architectural joint systems.

D. Quality Assurance
1. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board’s "Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG)" and ICC A117.1.
2. Fire-Test-Response Characteristics: Where indicated, provide architectural joint system and fire-barrier assemblies identical to those of assemblies tested for fire resistance per UL 2079 or ASTM E 1966 by a testing and inspecting agency acceptable to authorities having jurisdiction.
   a. Hose Stream Test: Wall-to-wall and wall-to-ceiling assemblies shall be subjected to hose stream testing.

1.2 PRODUCTS

A. Materials
   a. Apply manufacturer’s standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
   b. Mill Finish.
   c. Clear Anodic Finish: Class II, clear anodic coating OR Class I, clear anodic coating, as directed, complying with AAMA 611.
   d. Color Anodic Finish: Class II, color anodic coating OR Class I, color anodic coating, as directed, complying with AAMA 611.
   e. High-Performance Organic Finish (Two-Coat Fluoropolymer): Comply with AAMA 2604 and with coating and resin manufacturers' written instructions.
2. Stainless Steel: ASTM A 666, Type 304 for plates, sheet, and strips.
5. Moisture Barrier: PVC, minimum 30 mils thick or EPDM, minimum 45 mils thick or Santoprene, as directed.
6. Elastomeric Seals: Preformed elastomeric membranes or extrusions to be installed in metal frames.
7. Compression Seals: ASTM E 1612; preformed rectangular elastomeric extrusions having internal baffle system and designed to function under compression.
8. Strip Seals: ASTM E 1783; preformed elastomeric membrane or tubular extrusions having an internal baffle system and secured in or over a joint by a metal locking rail.
9. Cellular Foam Seals: Extruded, compressible foam designed to function under compression.
10. Elastomeric Concrete: Modified epoxy or polyurethane extended into a prepackaged aggregate blend, specifically designed for bonding to concrete substrates.
11. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required rating period.
12. Accessories: Manufacturer's standard anchors, fasteners, and other accessories as required for complete installations.

B. Architectural Joint Systems, General
1. General: Provide joint systems of design indicated.
   a. Furnish in longest practicable lengths to minimize splicing. Install with hairline mitered corners where joint changes direction.
   b. Include factory-fabricated closure materials and transition pieces to provide continuous joint systems.
2. Design architectural joint systems for the following size and movement characteristics:
   a. Nominal Joint Width: As indicated on Drawings or as scheduled, as directed.
   b. Movement Capability: Plus or minus 25 percent or plus or minus 50 percent or plus or minus 100 percent or as indicated on Drawings or as scheduled, as directed.
   c. Type of Movement: As indicated on Drawings or as scheduled or Thermal or Seismic or Wind sway, as directed.

C. Architectural Joint Systems For Building Interiors
1. Floor-to-Floor and Floor-to-Wall Joint Systems:
   a. Type: Cover plate or Center plate or Glide plate or Hidden sightline or Pan or Surface mounted, as directed.
      1) Exposed Metal: Aluminum or Stainless steel or Bronze or Brass, as directed.
         a) Finish: Manufacturer's standard finish or Mill or Class I, clear anodic or Class II, clear anodic or No. 2B or No. 4, as directed.
         b) Color: As selected from manufacturer's full range.
   b. Type: Elastomeric or Dual elastomeric, as directed, seal.
      1) Exposed Metal: Aluminum or Stainless steel or Bronze or Brass, as directed.
         a) Finish: Manufacturer's standard finish or Mill or Class I, clear anodic or Class II, clear anodic or No. 2B or No. 4, as directed.
         b) Color: As selected from manufacturer's full range.
   c. Cover-Plate Design:
      1) Plain or Serrated or Abrasive filled, as directed.
      2) Recessed to accept field-applied finish materials.
         a) Recess Depth: To accommodate adjacent flooring.
   d. Attachment Method: Mechanical anchors or Cast in, as directed.
   e. Load Capacity: Standard or Heavy or Extra heavy, as directed, duty.
   g. Moisture Barrier: Manufacturer's standard.
2. Wall-to-Wall and Wall Corner Joint Systems:
   a. Type: Vertical cover plate or Glide plate or Hidden sightline or Snap-on cover or Clip-in cover, as directed.
      1) Exposed Metal: Aluminum or Stainless steel or Bronze or Brass, as directed.
07 - Thermal And Moisture Protection

Architectural Joint Systems

DASNY, Downstate

a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR No. 2B OR No. 4, as directed.
b) Color: As selected from manufacturer's full range.
b. Type: Elastomeric seal OR Dual elastomeric seal OR Accordion, as directed.
   1) Exposed Metal: Aluminum OR Stainless steel OR Bronze OR Brass, as directed.
      a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR No. 2B OR No. 4, as directed.
      b) Color: As selected from manufacturer's full range.
   2) Seal Material: Santoprene OR PVC, as directed.
      a) Color: As selected from manufacturer's full range.
c. Type: Flat seal.
   1) Seal Material: Santoprene.
      a) Color: As selected from manufacturer's full range.
e. Moisture Barrier: Manufacturer's standard.

3. Wall-to-Ceiling and Ceiling-to-Ceiling Joint Systems:
   a. Type: Cover plate OR Glide plate OR Snap-on cover OR Clip-in cover, as directed.
      1) Exposed Metal: Aluminum OR Stainless steel OR Bronze OR Brass, as directed.
         a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR High-performance organic OR No. 2B OR No. 4, as directed.
         b) Color: As selected from full range of industry colors and color densities.
   b. Type: Elastomeric seal OR Dual elastomeric seal OR Accordion, as directed.
      1) Exposed Metal: Aluminum OR Stainless steel OR Bronze OR Brass, as directed.
         a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR High-performance organic OR No. 2B OR No. 4, as directed.
         b) Seal Material: Santoprene OR PVC, as directed.
         c) Color: As selected from manufacturer's full range.
c. Type: Flat seal.
   1) Seal Material: Santoprene.
      a) Color: As selected from manufacturer's full range.
e. Moisture Barrier: Manufacturer's standard.

D. Architectural Joint Systems For Building Exteriors

1. Architectural Joint Systems for Exterior Walls and Soffits:
   a. Type: Vertical cover plate.
      1) Exposed Metal: Aluminum OR Stainless steel, as directed.
         a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR High-performance organic OR No. 2B OR No. 4, as directed.
         b) Color: As selected from full range of industry colors and color densities.
   b. Type: Flat seal.
      1) Seal Material: Santoprene.
         a) Color: As selected from manufacturer's full range.
   2) Secondary Seal: Manufacturer's standard extruded-elastomeric seal designed to prevent water and moisture infiltration.
   b. Type: Flat seal.
      1) Seal Material: Santoprene.
      a) Color: As selected from manufacturer's full range.
   3) Pantograph Mechanism: Manufacturer's standard nylon pantographic wind-load support mechanism with stainless-steel fasteners.
   c. Type: Preformed cellular foam.
      1) Foam Material: Manufacturer's standard OR Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer OR Polyurethane, as directed.
         a) Color: As selected from manufacturer's full range.

E. Architectural Joint Systems For Open-Air Structures

August 2021

Architectural Joint Systems

DASNY, Downstate
1. Slab-to-Slab Joint Systems for Parking Structures OR Plaza Decks OR Stadiums, as directed:
   a. Type: Metal plate.
      1) Exposed Metal: Aluminum OR Stainless steel, as directed.
         a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR High-performance organic OR No. 2B OR No. 4, as directed.
         b) Color: As selected from full range of industry colors and color densities.
   b. Type: Sealant T-joint OR Rubber pad OR Compression seal OR Strip seal OR Winged seal OR Epoxy-bonded seal OR Split-slab membrane, as directed.
      1) Seal Material: Santoprene OR Neoprene OR Silicone OR EPDM OR PVC OR Manufacturer's standard, as directed.
         a) Color: As selected from manufacturer's full range.
      c. Attachment Method: Mechanical anchors OR Cast in OR Elastomeric concrete header OR Compressed, epoxy adhered OR Compressed, lubricant adhesive adhered, as directed.
      d. Load Capacity: Heavy OR Extra heavy, as directed, duty.
      e. Fire-Resistance Rating: Match adjacent construction.

2. Slab-to-Wall Joint Systems for Parking Structures OR Plaza Decks OR Stadiums, as directed:
   a. Type: Metal plate.
      1) Exposed Metal: Aluminum OR Stainless steel, as directed.
         a) Finish: Manufacturer's standard finish OR Mill OR Class I, clear anodic OR Class II, clear anodic OR Class I, color anodic OR Class II, color anodic OR High-performance organic OR No. 2B OR No. 4, as directed.
         b) Color: As selected from full range of industry colors and color densities.
   b. Type: Sealant T-joint OR Rubber pad OR Compression seal OR Strip seal OR Winged seal OR Epoxy-bonded seal OR Split-slab membrane, as directed.
      1) Seal Material: Santoprene OR Neoprene OR Silicone OR EPDM OR PVC OR Manufacturer's standard, as directed.
         a) Color: As selected from manufacturer's full range.
      c. Attachment Method: Mechanical anchors OR Cast in OR Elastomeric concrete header OR Compressed, epoxy adhered OR Compressed, lubricant adhesive adhered, as directed.
      d. Load Capacity: Heavy OR Extra heavy, as directed, duty.
      e. Fire-Resistance Rating: Match adjacent construction.

3. Wall-to-Wall Joint Systems for Parking Structures OR Plaza Decks OR Stadiums, as directed:
   a. Type: Compression seal.
      1) Seal Material: Santoprene OR Neoprene OR Silicone OR EPDM OR PVC OR Manufacturer's standard, as directed.
         a) Color: As selected from manufacturer's full range.
   b. Type: Preformed cellular foam.
      1) Foam Material: Manufacturer's standard OR Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer OR Polyurethane, as directed.
         a) Color: As selected from manufacturer's full range.
   c. Attachment Method: Mechanical anchors OR Cast in OR Compressed, epoxy adhered OR Compressed, lubricant adhesive adhered, as directed.

F. Finishes
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable.

1.3 EXECUTION

A. Installation
1. Comply with manufacturer’s written instructions for storing, handling, and installing architectural joint assemblies and materials unless more stringent requirements are indicated.

2. Metal Frames: Perform cutting, drilling, and fitting required to install joint systems.
   a. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
   b. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
   c. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
   d. Locate in continuous contact with adjacent surfaces.
   e. Support underside of frames continuously to prevent vertical deflection when in service.
   f. Locate anchors at interval recommended by manufacturer, but not less than 3 inches (75 mm) from each end and not more than 24 inches (600 mm) o.c.

3. Seals in Metal Frames: Install elastomeric seals in frames to comply with manufacturer’s written instructions. Install with minimum number of end joints.
   a. Provide in continuous lengths for straight sections.
   b. Seal transitions according to manufacturer’s written instructions.

4. Compression Seals: Apply adhesive or lubricant adhesive as recommended by manufacturer to both frame interfaces OR sides of slabs, as directed, before installing compression seals.

5. Foam Seals: Install with adhesive recommended by manufacturer.

6. Epoxy-Bonded Seals: Pressurize seal for time period and to pressure recommended by manufacturer. Do not overpressurize.

7. Terminate exposed ends of joint assemblies with field- or factory-fabricated termination devices.

8. Fire-Resistance-Rated Assemblies: Coordinate so complete assemblies comply with assembly performance requirements.
   a. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

9. Water Barrier: Provide water barrier at exterior joints and where called for on Drawings.

B. Protection

1. Do not remove protective covering until finish work in adjacent areas is complete.

2. Protect the installation from damage by work of other Sections.
SECTION 07 95 13 16 - ROOF EXPANSION ASSEMBLIES

1.1 GENERAL

A. Description Of Work:
   1. This specification covers the furnishing and installation of materials for roof expansion assemblies. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Metal-flanged, bellows-type roof expansion assemblies.
      b. Aluminum roof expansion assemblies.
      c. Seismic roof expansion assemblies.

C. Performance Requirements
   1. General: Provide roof expansion assemblies that, when installed, remain watertight within movement limitations specified by manufacturer.

D. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: Include plans, elevations, sections, details, joints, splices, locations of joints and splices, intersections, transitions, fittings, and attachments to other work. Where joint assemblies change planes, provide isometric drawings depicting how components interconnect to achieve continuity.
   3. Samples: For each type of exposed factory-applied finish required, prepared on Samples of size to adequately show color.
   4. Research/Evaluation Reports: For roof expansion assemblies.
   5. Warranties: Special warranties specified in this Section.

E. Quality Assurance
   1. Fire-Test-Response Characteristics: Provide fire-barrier assemblies with fire-test-response characteristics not less than that of adjacent construction, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Assemblies shall be capable of anticipated movement while maintaining fire rating. Identify assemblies with appropriate markings of applicable testing and inspecting agency.
      a. Fire-Resistance Ratings: UL 2079 OR ASTM E 119, as directed.

F. Warranty
   1. Warranty: Manufacturer’s standard form in which manufacturer and Installer agree to repair or replace roof expansion assemblies that leak, deteriorate in excess of rates specified in manufacturer’s published product literature, or otherwise fail to perform within Two years from date of Final Completion.
   2. Warranty on Painted Finishes: Manufacturer’s standard form in which manufacturer agrees to repair or replace components that show evidence of deterioration of factory-applied fluoropolymer finishes within 20 years from date of Final Completion.

1.2 PRODUCTS

A. Metals
1. **Galvanized Steel Sheet:** ASTM A 653/A 653M, hot-dip zinc-coating designation G90 (Z275), stretcher-leveled standard of flatness and either commercial or forming steel, minimum 0.019 inch (0.5 mm) thick.

2. **Stainless-Steel Sheet:** ASTM A 666, Type 304, stretcher-leveled standard of flatness, minimum 0.015 inch (0.4 mm) thick.

3. **Copper Sheet:** ASTM B 370, Temper H00 (cold rolled) unless Temper 060 is required for forming, minimum 16 oz./sq. ft. (0.55 mm thick).

4. **Sheet Aluminum:** ASTM B 209 (ASTM B 209M); Alloy 3003-H14, 5052-H32, or 6061-T6; minimum 0.032 inch (0.8 mm) thick.

5. **Extruded Aluminum:** ASTM B 221 (ASTM B 221M), Alloy 6063-T5 or 6063-T52, minimum 0.040 inch (1.0 mm) thick.

6. **Aluminum Finishes:**
   a. **Mill Finish:** AA-M10 (Mechanical Finish: as fabricated; no other applied finish unless buffing is required to removed scratches, welding, or grinding produced in fabrication process).
   b. **Class II, Clear Anodic Finish:** AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
   c. **Class I, Clear Anodic Finish:** AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
   d. **Class II, Color Anodic Finish:** AA-M12C22A32/A34 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, integrally colored or electrolytically deposited color coating 0.010 mm or thicker).
   e. **Class I, Color Anodic Finish:** AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
   1) **Color:** As selected from manufacturer’s full range.
   f. **High-Performance Organic Finish (2-Coat Fluoropolymer):** AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer’s standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2604 and with coating and resin manufacturers’ written instructions.
   1) **Color and Gloss:** As selected from manufacturer’s full range.

---

**B. Miscellaneous Materials**

1. **Roof Cement:** ASTM D 4586, Type II.
2. **Elastomeric Sealant:** ASTM C 920, elastomeric polyurethane OR polysulfide OR silicone, as directed, polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and to remain watertight.
3. **Mineral-Fiber Blanket:** ASTM C 665.
4. **Flexible Cellular Sponge or Expanded Rubber:** ASTM D 1056.
5. **Silicone Extrusions:** Classified according to ASTM D 2000, UV stabilized, and do not propagate flame.
6. **Fasteners:** Manufacturer’s recommended fasteners, suitable for application and designed to withstand design loads.
   a. **Exposed Penetrating Fasteners:** Gasketed screws with hex washer heads matching color of sheet metal.

---

**C. Fire Barriers**

1. **Fire Barriers:** Devices complying with requirements specified in Part 1.1 “Quality Assurance” Article for fire-test-response characteristics and designed for dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399. Provide roof expansion assemblies with manufacturer’s continuous, standard, flexible fire-barrier seals in back.
of joint system at locations indicated to provide fire-resistance rating not less than rating of adjacent construction.

D. Bellows-Type Roof Expansion Assemblies

1. Metal-Flanged, Bellows-Type Roof Expansion Assemblies: Provide manufacturer's standard assemblies of sizes and types indicated, with prefabricated units for corner and joint intersections and horizontal and vertical transitions including those to other building expansion joints, splicing units, adhesives, coatings, and other components as recommended by roof expansion assembly manufacturer for complete installation. Fabricate assemblies specifically for roof-to-roof OR roof-to-wall OR curb-to-curb OR curb-to-wall, as directed, applications.

2. Provide assemblies consisting of exposed polymeric sheet over foam bellows, securely anchored at both edges to 3- to 4-inch- (76- to 100-mm-) wide sheet metal nailing flanges, either flat or angle formed to fit cant or curbs as required. Insulate bellows with closed-cell, flexible rubber or plastic foam not less than 5/16 inch (8 mm) thick; adhere bellows to underside of polymeric sheet.

a. Polymeric Sheet: Manufacturer's standard OR Neoprene, 60 mils (1.5 mm) thick OR EPDM, 60 mils (1.5 mm) thick, black OR EPDM, 60 mils (1.5 mm) thick, white OR Reinforced chlorinated polyethylene, 30 mils (0.8 mm) thick OR Chlorosulfonated polyethylene, 36 mils (0.9 mm) thick OR Glass-reinforced PVC, 40 to 50 mils (1.0 to 1.3 mm) thick, as directed.

b. Metal Flanges: Zinc-coated (galvanized) steel, minimum 0.019 inch (0.5 mm) thick OR Copper, minimum 16 oz./sq. ft. (0.55 mm thick) OR Stainless steel, minimum 0.015 inch (0.4 mm) thick OR Sheet aluminum, minimum 0.032 inch (0.8 mm) thick, mill finish, as directed.

1) Mortar Flanges: Where flanges will be embedded in concrete or mortar, provide manufacturer's standard perforated-metal mortar flanges.

c. Moisture Barrier: Manufacturer's standard, flexible, continuous, polymeric moisture barrier looped under roof expansion assemblies at locations indicated. Fill space with blanket-type, mineral-fiber insulation.

d. Fire Barrier: Provide manufacturer's standard fire barrier.

E. Aluminum Roof Expansion Assemblies

1. Aluminum Roof Expansion Assemblies: Provide assemblies consisting of aluminum base members with sloped cants and provisions for anchoring and sealing to roofing membrane or flashing in a waterproof-sealed joint. Provide free-to-move, extruded-aluminum cover plate anchored against displacement and waterproofed by integral seals. Provide prefabricated units for corner and joint intersections and horizontal and vertical transitions, including those to other building expansion joints, splicing units, adhesives, coatings, and other components as recommended by roof expansion assembly manufacturer for complete installation. Fabricate assemblies specifically for curb-to-curb OR wall, as directed, applications.

a. Base Frame Members: Extruded aluminum with mill OR anodic OR high-performance organic, as directed, finish.

b. Extruded-Aluminum Covers: Minimum 0.080 inch (2.03 mm) OR 0.125 inch (3 mm), as directed, thick, with mill OR clear anodic OR color anodic OR high-performance organic, as directed, finish.

c. Formed-Aluminum Covers: Minimum 0.078 inch (2 mm) thick, with mill OR clear anodic OR color anodic OR high-performance organic, as directed, finish.

d. Moisture Barrier:

1) Semiconcealed, captive, polymeric sheet bellows unit of neoprene, EPDM, reinforced chlorinated polyethylene, or PVC, not less than 30 mils (0.8 mm) thick.

2) Semiconcealed, captive gaskets at both curb members, of neoprene, EPDM, or PVC, with spring-loaded mechanism to maintain positive pressure between gaskets and curb cap.

e. Fire Barrier: Provide manufacturer's standard fire barrier.

F. Seismic Roof Expansion Assemblies

1. General: Provide manufacturer's assemblies designed to accommodate seismic movement. Provide prefabricated units for corner and joint intersections and horizontal and vertical transitions including those to other building expansion joints, splicing units, inner seals, adhesives, coatings,
and other components as recommended by roof expansion assembly manufacturer for complete installation. Fabricate assemblies specifically for roof-to-roof OR roof-to-wall OR curb-mounted, as directed, applications.

2. Extruded Seals: Two continuous, single-layered elastomeric profiles made of a vinyl inner seal and silicone OR neoprene OR Santoprene, as directed, outer seal, both seals retained in a pair of compatible extruded-aluminum frames.
   a. Exterior Seal Color: As selected from manufacturer's full range.

3. Aluminum Roof Expansion Assemblies: Assemblies consisting of pairs of aluminum curb units with sloped cants and provisions for anchoring and sealing to roofing membrane or flashing in a waterproof-sealed joint. Provide free-to-move, extruded-aluminum curb cap anchored against displacement and waterproofed by integral seals, with interior of expansion joint filled with blanket-type mineral-fiber insulation.
   a. Base Frame Members: Extruded aluminum with mill OR clear anodic OR color anodic OR high-performance organic, as directed, finish.
   b. Extruded-Aluminum Covers: Minimum 0.080 inch (2.03 mm) OR 0.125 inch (3 mm), as directed, thick, with mill OR clear anodic OR color anodic OR high-performance organic, as directed, finish.
   c. Formed-Aluminum Covers: Minimum 0.078 inch (2 mm) thick, with mill OR clear anodic OR color anodic OR high-performance organic, as directed, finish.
   d. Moisture Barrier:
      1) Semiconcealed, captive, polymeric sheet bellows unit of neoprene, EPDM, reinforced chlorinated polyethylene, or PVC, not less than 30 mils (0.8 mm) thick.
      2) Semiconcealed, captive gaskets at both curb members, of neoprene, EPDM, or PVC, with spring-loaded mechanism to maintain positive pressure between gaskets and curb cap.
   e. Fire Barrier: Provide manufacturer's standard fire barrier.

1.3 EXECUTION

A. Installation
   1. Comply with manufacturer's written instructions for handling and installing roof expansion assemblies and materials unless more stringent requirements are indicated.
   2. Coordinate installation of roof expansion assembly materials and associated work so complete assemblies comply with assembly performance requirements.
   3. Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of roof expansion assembly, including transitions and end joints.
   4. Extend roof expansion assemblies over curbs, parapets, cornices, gutters, valleys, fasciae, and other elements in the construction profile, with factory-fabricated intersections and transitions to provide continuous, uninterrupted, waterproof roof expansion assemblies.
      a. Install factory-fabricated transitions between roof expansion assemblies and building architectural joint systems, specified in Division 07 Section "Expansion Control", to provide continuous, uninterrupted, watertight construction.
   5. Splice roof expansion assemblies with materials provided by roof expansion assembly manufacturer for this purpose, according to manufacturer's written instructions, to provide continuous, uninterrupted, waterproof roof expansion assemblies.
   6. Provide uniform profile of roof expansion assembly throughout length of each installation; do not stretch polymeric sheets.
   7. Install mineral-fiber blanket insulation to fill joint space within joint and moisture barrier.
   8. Bed anchorage flanges in cement or sealant recommended by manufacturer and securely nail to curbs and cant strips as recommended by manufacturer but not less than 6 inches (150 mm) o.c.
   9. Anchor roof expansion assemblies complying with manufacturer's written instructions.
   10. Embed flanges not less than 4 inches (100 mm) in bituminous membranes, with hot bitumen or roof cement. Cover with stripping material and install according to requirements in roofing section.
   11. On single-ply roofing, install roof expansion assemblies complying with manufacturer's written instructions. Anchor to cants or curbs and seal to membrane with sealant compatible with roofing
membrane and roof expansion assembly. Cover flanges with stripping or flashing and install according to requirements in roofing section.

B. Protection
   1. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensures that roof expansion assemblies are without damage or deterioration at time of Final Completion.

SECTION 08 01 51 00 - WOOD WINDOWS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of material for wood windows. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes fixed and operable wood-framed windows of the following type:
      a. Unfinished.
      b. Aluminum clad.
      c. Vinyl clad.

C. Definitions
   1. Performance class designations according to AAMA/WDMA 101/I.S.2/NAFS:
      a. AW: Architectural.
      b. HC: Heavy Commercial.
      c. C: Commercial.
      d. LC: Light Commercial.
      e. R: Residential.
   2. Performance grade number according to AAMA/WDMA 101/I.S.2/NAFS:
      a. Design pressure number in pounds force per square foot (pascals) used to determine the structural test pressure and water test pressure.
   3. Structural Test Pressure: For uniform load structural test, is equivalent to 150 percent of the design pressure.
   4. Minimum Test Size: Smallest size permitted for performance class (gateway test size). Products must be tested at minimum test size or at a size larger than minimum test size to comply with requirements for performance class.

D. Performance Requirements
   1. General: Provide wood windows capable of complying with performance requirements indicated, based on testing manufacturer’s windows that are representative of those specified, and that are of test size required by AAMA/WDMA 101/I.S.2/NAFS.
   2. Structural Performance: Provide wood windows capable of withstanding the effects of the following loads based on testing units representative of those indicated for Project that pass AAMA/WDMA 101/I.S.2/NAFS, Uniform Load Structural Test:
      a. Design Wind Loads: Determine design wind loads applicable to Project from basic wind speed indicated in miles per hour (meters per second) at 33 feet (10 m) above grade, according to ASCE 7, Section 6.5, "Method 2-Analytical Procedure," based on mean roof heights above grade indicated on Drawings.
         1) Basic Wind Speed: 85 mph (38 m/s) OR 90 mph (40 m/s), as directed.
         2) Importance Factor: I OR II OR III OR IV, as directed.
         3) Exposure Category: A OR B OR C OR D, as directed.
      b. Deflection: Design glass framing system to limit lateral deflections of glass edges to less than 1/175 of glass-edge length or 3/4 inch (19 mm), whichever is less, at design pressure based on testing performed according to AAMA/WDMA 101/I.S.2/NAFS, Uniform Load Deflection Test or structural computations.
      3. Windborne-Debris Resistance: Provide glazed windows capable of resisting impact from windborne debris, based on the pass/fail criteria as determined from testing glazed windows identical to those specified, according to ASTM E 1886 and testing information in ASTM E 1996 OR AAMA 506, as directed, and requirements of authorities having jurisdiction.
E. Submittals
1. Product Data: For each type of wood window indicated.
2. LEED Submittal:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood windows comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for each certified wood product.
3. Shop Drawings: Include plans, elevations, sections, details, hardware, attachments to other work, operational clearances, installation details.
4. Samples: For each exposed finish.
5. Product Schedule: Use same designations indicated on Drawings.
6. Product test reports.
7. Maintenance data.

F. Quality Assurance
1. Installer: A qualified installer, approved by manufacturer to install manufacturer's products.
2. Manufacturer Qualifications: A qualified manufacturer who is certified for chain of custody by an FSC-accredited certification body.
3. Forest Certification: Provide windows made with not less than 70 percent of wood products OR all wood products, as directed, obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
   a. Provide AAMA-certified OR WDMA-certified, as directed, wood windows with an attached label.
5. Glazing Publications: Comply with published recommendations of glass manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated.

G. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace wood windows that fail in materials or workmanship within specified warranty period.
   a. Warranty Period:
      1) Window: Two OR Three, as directed, years from date of Final Completion.
      2) Glazing: Five OR 10, as directed, years from date of Final Completion.
      3) Metal Finish: Five years from date of Final Completion.

1.2 PRODUCTS

A. Materials
1. Wood: Clear ponderosa pine or another suitable fine-grained lumber; kiln dried to a moisture content of 6 to 12 percent at time of fabrication; free of visible finger joints, blue stain, knots, pitch pockets, and surface checks larger than 1/32 inch (0.8 mm) deep by 2 inches (51 mm) wide; water-repellent preservative treated.
2. Aluminum Extrusions and Rolled Aluminum for Cladding: Manufacturer's standard formed sheet or extruded-aluminum cladding, mechanically bonded to exterior exposed wood members. Provide aluminum alloy and temper recommended by wood window manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength, and not less than 16,000-psi (110-MPa) minimum yield strength.
   a. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   b. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
c. Baked-Enamel Finish for Extrusions and Sheet: Manufacturer's standard baked enamel complying with AAMA 2603 and paint manufacturer's written specifications for cleaning, conversion coating, and painting.
   1) Color: White OR Bronze OR Brown OR Beige OR Gray OR Green OR As selected from manufacturer's full range OR Custom color as selected, as directed.

d. High-Performance Organic Finish for Extrusions and Sheet: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1) Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2604.
      a) Color and Gloss: As selected from manufacturer's full range OR Custom color as selected, as directed.

e. Baked-Enamel Finish for Coil: Manufacturer's standard baked enamel complying with AAMA 620 and paint manufacturer's written specifications for cleaning, conversion coating, and painting.
   1) Color: White OR Bronze OR Brown OR Beige OR Gray OR Green OR As selected from manufacturer's full range OR Custom color as selected, as directed.

3. Vinyl for Cladding: Consisting of a rigid PVC sheath, made from PVC complying with ASTM D 4726, not less than 35-mil (0.9-mm) average thickness, in permanent, integral color, white OR bronze OR tan, as directed, finish, mechanically bonded to exterior wood sash and frame members.

4. Wood Trim and Glazing Stops: Material and finish to match frame members.

5. Clad Trim and Glazing Stops: Hollow extrusions OR Roll-formed sheet material OR Clad-wood material, as directed, and finish to match clad frame members.

6. Fasteners: Aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturer to be noncorrosive and compatible with wood window members, cladding, trim, hardware, anchors, and other components.
   a. Exposed Fasteners: Unless unavoidable for applying hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.

7. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

8. Reinforcing Members: Aluminum, or nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

9. Compression-Type Weather Stripping: Provide compressible weather stripping designed for permanently resilient sealing under bumper or wiper action and for complete concealment when wood window is closed.
   a. Weather-Stripping Material:
      1) Elastomeric cellular preformed gaskets complying with ASTM C 509.
      2) Dense elastomeric gaskets complying with ASTM C 864.
      3) Manufacturer's standard system and materials complying with AAMA/WDMA 101/ I.S.2/NAFS.

   a. Weather Seals: Provide weather stripping with integral barrier fin or fins of semirigid, polypropylene sheet or polypropylene-coated material. Comply with AAMA 701/702.

B. Window

1. Window Type: Casement OR Double hung OR Fixed OR Horizontal sliding OR Projected awning OR Single hung OR Bay OR Bow OR Specialty product OR As indicated on Drawings OR As indicated in a schedule, as directed.
2. **AAMA/WDMA Performance Requirements:** Provide wood windows of performance indicated that comply with AAMA/WDMA 101/I.S.2/NAFS unless more stringent performance requirements are indicated.
   a. Performance Class and Grade: R15 OR 20 OR 25, as directed.
   b. Performance Class and Grade: LC25 OR 30 OR 35, as directed.
   c. Performance Class and Grade: C30 OR 35 OR 40, as directed.
   d. Performance Class and Grade: HC40 OR 45 OR 50, as directed.
   e. Performance Class and Grade: AW40 OR 45 OR 50, as directed.
   f. Performance Class and Grade: As indicated.
3. **Condensation-Resistance Factor (CRF):** Provide wood windows tested for thermal performance according to AAMA 1503, showing a CRF of 45 OR 52, as directed.
4. **Thermal Transmittance:** Provide wood windows with a whole-window, U-factor maximum indicated at 15-mph (24-km/h) exterior wind velocity and winter condition temperatures when tested according to AAMA 1503 OR ASTM E 1423 OR NFRC 100, as directed.
   a. U-Factor: 0.35 Btu/sq. ft. x h x deg F (2.0 W/sq. m x K) OR 0.40 Btu/sq. ft. x h x deg F (2.3 W/sq. m x K) OR 0.43 Btu/sq. ft. x h x deg F (2.5 W/sq. m x K) OR 0.60 Btu/sq. ft. x h x deg F (3.4 W/sq. m x K), as directed, or less.
5. **Solar Heat-Gain Coefficient (SHGC):** Provide wood windows with a whole-window SHGC maximum of 0.40 OR 0.50 OR 0.55, as directed, determined according to NFRC 200 procedures.
6. **Sound Transmission Class (STC):** Provide glazed windows rated for not less than 26 OR 30 OR 35, as directed, STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
7. **Air Infiltration:** Maximum rate not more than indicated when tested according to AAMA/WDMA 101/I.S.2/NAFS, Air Infiltration Test.
   a. Maximum Rate:
      1) 0.3 cfm/sq. ft. (5 cu. m/h x sq. m) of area at an inward test pressure of 1.57 lbf/sq. ft. (75 Pa) which is equivalent to 25-mph (40-km/h) wind speed and is typically used to test R, C, and LC performance classes.
      2) 0.3 cfm/sq. ft. (5 cu. m/h x sq. m) of area at an inward test pressure of 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind speed and is typically used to test HC and AW performance classes.
   b. **Water Resistance:** No water leakage as defined in AAMA/WDMA referenced test methods at a water test pressure equaling that indicated, when tested according to AAMA/WDMA 101/I.S.2/NAFS, Water Resistance Test.
   c. **Test Pressure:**
      1) 15 percent of positive design pressure, but not less than 2.86 lbf/sq. ft. (140 Pa) or more than 15 lbf/sq. ft. (720 Pa).
      2) 20 percent of positive design pressure, but not more than 15 lbf/sq. ft. (720 Pa).
8. **Forced-Entry Resistance:** Comply with Performance Grade 10 OR 20 OR 30 OR 40, as directed, requirements when tested according to ASTM F 588.
9. **Life-Cycle Testing:** Test according to AAMA 910 and comply with AAMA/WDMA 101/I.S.2/NAFS.
10. **Operating Force and Auxiliary (Durability) Tests:** Comply with AAMA/WDMA 101/I.S.2/NAFS for operating window types indicated.

C. **Glazing**
1. **Glass and Glazing Materials:** Refer to Division 08 Section “Glazing” for glass units and glazing requirements applicable to glazed wood window units.
2. **Glass:** Clear, insulating-glass units OR Clear, insulating-glass units, with low-E coating pyrolytic on second surface or sputtered on second or third surface, OR Clear, insulating-glass units, argon gas filled, with low-E coating pyrolytic on second surface or sputtered on second or third surface, as directed, complying with Division 08 Section “Glazing”.
3. **Glazing System:** Manufacturer’s standard factory-glazing system that produces weathertight seal OR Manufacturer’s standard factory-glazing system that produces weathertight seal and complies with requirements for windborne-debris resistance OR Manufacturer’s standard factory-glazing system as indicated in Division 08 Section “Glazing”, as directed.
4. Dual-Glazing System for Venetian Blinds: Manufacturer's standard dual-glazing system with 2 lites of clear float glass, complying with ASTM C 1036, Type I, Quality q3, glazed independently into the sash and separated by a minimum dead-air space of 1-1/2 inches (38 mm).

5. Triple-Glazing System for Venetian Blinds: Manufacturer's standard insulated glass of type specified, combined with an auxiliary lite of clear float glass, complying with ASTM C 1036, Type I, Quality q3, retained in a separate glazing channel or frame and separated from insulated-glass unit by a minimum dead-air space of 1-1/2 inches (38 mm).

D. Hardware
1. General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion-resistant material compatible with wood and aluminum cladding, as directed; designed to smoothly operate, tightly close, and securely lock wood windows, and sized to accommodate sash or ventilator weight and dimensions. Do not use aluminum in frictional contact with other metals. Where exposed, provide solid bronze OR extruded, cast, or wrought aluminum OR die-cast zinc with special coating finish OR nonmagnetic stainless steel, as directed.

2. Counterbalancing Mechanism: Comply with AAMA 902.
   a. Sash-Balance Type: Concealed, tape-spring OR spiral-tube OR spring-loaded, block-and-tackle, as directed, type, of size and capacity to hold sash stationary at any open position.

3. Sill Cap/Track: Extruded-aluminum track with natural anodized finish OR Rigid PVC or other weather-resistant plastic track with manufacturer's standard integral color, as directed, of thickness, dimensions, and profile indicated; designed to comply with performance requirements indicated and to drain to the exterior.

4. Locks and Latches: Designed to allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. Provide custodial locks, as directed.

5. Roller Assemblies: Low-friction design.

6. Push-Bar Operators: Provide telescoping-type, push-bar operator designed to open and close ventilators with fixed screens.

7. Gear-Type Rotary Operators: Comply with AAMA 901 when tested according to ASTM E 405, Method A.
   a. Operation Function: All ventilators move simultaneously and securely close at both jambs without using additional manually controlled locking devices.

8. Four- or Six-Bar Friction Hinges: Comply with AAMA 904.
   a. Locking mechanism and handles for manual operation.
   b. Friction Shoes: Provide friction shoes of nylon or other nonabrasive, nonstaining, noncorrosive, durable material.

9. Limit Devices: Provide concealed friction adjustor, adjustable stay bar OR concealed support arms with adjustable, limited, hold-open, as directed, limit devices designed to restrict sash or ventilator opening.
   a. Safety Devices: Limit clear opening to 4 inches (100 mm) OR 6 inches (150 mm), as directed, for ventilation; with custodial key release.

10. Pole Operators: Tubular-shaped anodized aluminum; with rubber-capped lower end and standard push-pull hook at top to match hardware design; of sufficient length to operate window without reaching more than 60 inches (1500 mm) above floor; 1 pole operator and pole hanger per room that has operable windows more than 72 inches (1800 mm) above floor.

E. Insect Screens
1. General: Design windows and hardware to accommodate screens in a tight-fitting, removable arrangement, with a minimum of exposed fasteners and latches. Fabricate insect screens to fully integrate with window frame. Locate screens on inside OR outside, as directed, of window and provide for each operable exterior sash or ventilator.

2. Aluminum Insect Screen Frames: Manufacturer's standard aluminum alloy complying with SMA 1004. Fabricate frames with mitered or copped joints or corner extrusions, concealed fasteners, adjustable rollers, as directed, and removable PVC spline/anchor concealing edge of frame.
08 - Openings

Wood Windows  
August 2021  
DASNY, Downstate

a. Aluminum Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet with minimum wall thickness as required for class indicated.
b. Finish:
   1) Anodized aluminum OR Baked-on organic coating, as directed, in manufacturer's standard color OR in color selected from manufacturer's full range, as directed. OR Manufacturer's standard.
3. Glass-Fiber Mesh Fabric: 18-by-14 (1.1-by-1.4-mm) or 18-by-16 (1.0-by-1.1-mm) OR 20-by-20 (0.85-by-0.85-mm) or 20-by-30 (0.85-by-0.42-mm), as directed, mesh of PVC-coated, glass-fiber threads; woven and fused to form a fabric mesh resistant to corrosion, shrinkage, stretch, impact damage, and weather deterioration; in the following color. Comply with ASTM D 3656.
   a. Mesh Color: Charcoal gray OR Silver gray OR Aquamarine, as directed.
4. Aluminum Wire Fabric: 18-by-16 (1.1-by-1.3-mm) mesh of 0.011-inch- (0.28-mm-) diameter, coated aluminum wire.
   a. Wire-Fabric Finish: Natural bright OR Charcoal gray OR Black, as directed.
5. Wickets: Provide sliding OR hinged, as directed, wickets, framed and trimmed for a tight fit and for durability during handling.

F. Accessories
1. Dividers (False Muntins): Provide dividers in designs indicated for each sash lite, one per sash, removable from the exposed surface of interior lite of the sash OR two per sash, removable from the exposed surfaces of interior and exterior lites of the sash, as directed, and one permanently located between glazing lites in the airspace, as directed.
   a. Material: Extruded, rigid PVC OR Prefinished wood, as directed.
   b. Design: Rectangular OR Diamond, as directed.
   c. Color: White OR Bronze, as directed.
2. Storm Panels: Provide removable auxiliary glazing panels of clear float glass for each fixed and operating sash of window units. Glass shall comply with ASTM C 1036, Type I, Quality q3. Provide glass of thickness required to comply with requirements in Division 08 Section "Glazing". Frame, preglaze, and attach storm windows to the sash according to manufacturer's published standards. Omit storm panels on sash glazed with insulating glass, as directed.
3. Integral Louver Blinds: Provide remotely operated horizontal louver blinds in the space between two panes of glass. Construct blinds of aluminum slats, approximately 1 inch (25 mm) wide, with polyester fiber cords, equipped for tilting, raising, and lowering by standard operating hardware located on inside face of sash.

G. Fabrication
1. Fabricate wood windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
2. Fabricate wood windows that are reglazable without dismantling sash or ventilator framing.
3. Weather Stripping: Provide full-perimeter weather stripping for each operable sash and ventilator, unless otherwise indicated.
   a. Double-Hung Windows: Provide weather stripping only at horizontal rails of operable sash.
4. Factory machine windows for openings and for hardware that is not surface applied.
5. Mullions: Provide mullions and cover plates as shown, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design loads of window units.
6. Factory-Glazed Fabrication: Except for light sizes in excess of 100 united inches (2500 mm width plus length), glaze wood windows in the factory where practical and possible for applications indicated. Comply with requirements in Division 08 Section "Glazing" and with AAMA/WDMA 101/I.S.2/NAFS.
7. Glazing Stops: Provide nailed or snap-on glazing stops coordinated with Division 08 Section "Glazing" and glazing system indicated. Provide glazing stops to match sash and ventilator frames.
8. **Bow OR Bay, as directed.** Windows: Provide wood windows in configuration indicated. Provide window frames, fixed and operating sash, operating hardware, and other trim and components necessary for a complete, secure, and weathertight installation, including the following:
   a. Angled mullion posts with interior and exterior trim.
   b. Angled interior and exterior extension and trim.
   c. Clear pine head and seat boards.
   d. Top and bottom plywood platforms.
   e. Exterior head and sill casings and trim.
   f. Support brackets.

9. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation. Allow for scribing, trimming, and fitting at Project site.

H. **Wood Finishes**

1. **Factory-Primed Windows:** Provide manufacturer’s standard factory-prime coat complying with WDMA T.M. 11 on exposed exterior OR interior OR exterior and interior, as directed, wood surfaces.

2. **Factory-Finished Windows:** Provide manufacturer’s standard factory finish complying with WDMA T.M. 12. Apply finish to exposed exterior and interior wood surfaces.
   a. Color: White OR Brown OR Gray OR As selected from manufacturer's full range, as directed.

1.3 **EXECUTION**

A. **Installation**

1. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing windows, hardware, accessories, and other components.

2. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction.

3. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.

4. Separate aluminum and other corroding surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

B. **Adjusting, Cleaning, And Protection**

1. Adjust operating sashes and ventilators, screens, hardware, and accessories for a tight fit at contact points and weather stripping for smooth operation and weathertight closure. Lubricate hardware and moving parts.

2. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.

3. Clean factory-glazed glass immediately after installing windows. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels, and clean surfaces.

4. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

5. Protect window surfaces from contact with contaminating substances resulting from construction operations. In addition, monitor window surfaces adjacent to and below exterior concrete and masonry surfaces during construction for presence of dirt, scum, alkaline deposits, stains, or other contaminants. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written recommendations.

SECTION 08 05 13 00 - STEEL DOORS AND FRAMES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of material for steel doors and frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Standard hollow metal doors and frames.
      b. Custom hollow metal doors and frames.

C. Definitions
   1. Minimum Thickness: Minimum thickness of base metal without coatings.
   2. Standard Hollow Metal Work: Hollow metal work fabricated according to ANSI/SDI A250.8.
   3. Custom Hollow Metal Work: Hollow metal work fabricated according to ANSI/NAAMM-HMMA 861.

D. Submittals
   1. Product Data: For each type of product indicated.
   2. Shop Drawings: Include elevations, door edge details, frame profiles, metal thicknesses, preparations for hardware, and other details.
   3. Samples for Verification: For each type of exposed finish required.
   4. Schedule: Prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings.
   5. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.
   6. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of hollow metal door and frame assembly.

E. Quality Assurance
   1. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure OR as close to neutral pressure as possible, as directed, according to NFPA 252 OR IBC Standard 716.5, as directed, or UL 10B OR UL 10C, as directed.
      a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
      b. Temperature-Rise Limit: Where indicated OR At vertical exit enclosures and exit passageways, as directed, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
   2. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9 OR IBC Standard 716.5, as directed. Label each individual glazed lite.
   3. Smoke-Control Door Assemblies: Comply with NFPA 105 or UL 1784 OR IBC Standard 716.5, as directed.

F. Delivery, Storage, And Handling
   1. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
a. Provide additional protection to prevent damage to finish of factory-finished units.
2. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
3. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch- (102-mm-) high wood blocking. Do not store in a manner that traps excess humidity.
a. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

1.2 PRODUCTS

A. Materials
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
2. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum A40 (ZF120) OR G60 (Z180) or A60 (ZF180), as directed, metallic coating.
a. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
5. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.
6. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow metal frames of type indicated.
7. Grout: ASTM C 476, except with a maximum slump of 4 inches (102 mm), as measured according to ASTM C 143/C 143M.
8. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool with 6- to 12-lb/cu. ft. (96- to 192-kg/cu. m) density; with maximum flame-spread and smoke-development indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.
9. Glazing: Comply with requirements in Division 08 Section "Glazing".
10. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat.

B. Standard Hollow Metal Doors
1. General: Provide doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8.
a. Design: Flush panel OR Embossed panel OR As indicated, as directed.
b. Core Construction: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core.
  1) Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.
  2) Thermal-Rated (Insulated) Doors: Where indicated, provide doors fabricated with thermal-resistance value (R-value) of not less than 4.0 deg F x h x sq. ft./Btu (0.704 K x sq. m/W) OR 6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W) OR 12.3 deg F x h x sq. ft./Btu (2.166 K x sq. m/W), as directed, when tested according to ASTM C 1363.
     a) Locations: Exterior doors and interior doors where indicated, as directed.
c. Vertical Edges for Single-Acting Doors: Beveled edge OR Square edge OR Manufacturer's standard, as directed.
  1) Beveled Edge: 1/8 inch in 2 inches (3 mm in 50 mm).
d. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-inch (54-mm) radius.
e. Top and Bottom Edges: Closed with flush or inverted 0.042-inch- (1.0-mm-) thick, end closures or channels of same material as face sheets.

2. Exterior Doors: Face sheets fabricated from metallic-coated steel sheet. Provide doors complying with ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
   a. Level 1 and Physical Performance Level C (Standard Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.
      1) Width: 1-3/4 inches (44.5 mm) OR 1-3/8 inches (34.9 mm) OR as indicated on Drawings, as directed.
   b. Level 2 and Physical Performance Level B (Heavy Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.
   c. Level 3 and Physical Performance Level A (Extra Heavy Duty), Model 1 (Full Flush) OR Model 2 (Seamless) OR Model 3 (Stile and Rail), as directed.
   d. Level 4 and Physical Performance Level A (Maximum Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.

3. Interior Doors: Face sheets fabricated from cold-rolled steel sheet unless metallic-coated sheet is indicated. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
   a. Level 1 and Physical Performance Level C (Standard Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.
      1) Width: 1-3/4 inches (44.5 mm) OR 1-3/8 inches (34.9 mm) OR as indicated on Drawings, as directed.
   b. Level 2 and Physical Performance Level B (Heavy Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.
   c. Level 3 and Physical Performance Level A (Extra Heavy Duty), Model 1 (Full Flush) OR Model 2 (Seamless) OR Model 3 (Stile and Rail), as directed.
   d. Level 4 and Physical Performance Level A (Maximum Duty), Model 1 (Full Flush) OR Model 2 (Seamless), as directed.

4. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

5. Fabricate concealed stiffeners and hardware reinforcement from either cold- or hot-rolled steel sheet.

C. Standard Hollow Metal Frames
1. General: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.
   a. Fabricate frames with mitered or coped corners.
   b. Fabricate frames as knocked down OR face welded OR full profile welded, as directed, unless otherwise indicated.
   c. Frames for Level 1 Steel Doors: 0.042-inch- (1.0-mm-) thick steel sheet.
   d. Frames for Level 2 Steel Doors: 0.053-inch- (1.3-mm-) thick steel sheet.
   e. Frames for Level 3 Steel Doors: 0.053-inch- (1.3-mm-) thick steel sheet.
   f. Frames for Level 4 Steel Doors: 0.067-inch- (1.7-mm-) thick steel sheet.
   g. Frames for Wood Doors: 0.042-inch- (1.0-mm-) OR 0.053-inch- (1.3-mm-) OR 0.067-inch- (1.7-mm-), as directed, thick steel sheet.
3. Interior Frames: Fabricated from cold-rolled steel sheet unless metallic-coated sheet is indicated.
   a. Fabricate frames with mitered or coped corners.
   b. Fabricate frames as knocked down OR face welded OR full profile welded, as directed, unless otherwise indicated.
   c. Fabricate knocked-down, drywall slip-on frames for in-place gypsum board partitions, as directed.
   d. Frames for Level 1 Steel Doors: 0.042-inch- (1.0-mm-) thick steel sheet.
   e. Frames for Level 2 Steel Doors: 0.053-inch- (1.3-mm-) thick steel sheet.
   f. Frames for Level 3 Steel Doors: 0.053-inch- (1.3-mm-) thick steel sheet.
   g. Frames for Level 4 Steel Doors: 0.067-inch- (1.7-mm-) thick steel sheet.
   h. Frames for Wood Doors: 0.042-inch- (1.0-mm-) OR 0.053-inch- (1.3-mm-) OR 0.067-inch- (1.7-mm-), as directed, thick steel sheet.
i. Frames for Borrowed Lights: 0.042-inch- (1.0-mm-) thick steel sheet OR 0.053-inch- (1.3-mm-) thick steel sheet OR 0.067-inch- (1.7-mm-) thick steel sheet OR Same as adjacent door frame, as directed.

D. Custom Hollow Metal Doors

1. General: Provide doors not less than 1-3/4 inches (44.5 mm) thick, of seamless hollow construction unless otherwise indicated. Construct doors with smooth surfaces without visible joints or seams on exposed faces. Comply with ANSI/NAAMM-HMMA 861.

2. Exterior Door Face Sheets: Fabricated from metallic-coated steel sheet, minimum 0.053 inch (1.3 mm) thick.

3. Interior Door Face Sheets: Fabricated from cold-rolled steel sheet unless metallic-coated sheet is indicated, minimum 0.042 inch (1.0 mm) thick.

4. Core Construction: Provide thermal-resistance-rated cores for exterior doors and interior doors where indicated, as directed.
   a. Steel-Stiffened Core: 0.026-inch- (0.7-mm-) thick, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches (152 mm) apart, spot welded to face sheets a maximum of 5 inches (127 mm) o.c. Spaces filled between stiffeners with glass- or mineral-fiber insulation.
      1) Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.
      2) Thermal-Rated (Insulated) Doors: Where indicated, provide doors fabricated with thermal-resistance value (R-value) of not less than 4.0 deg F x h x sq. ft./Btu (0.704 K x sq. m/W) OR 6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W), as directed, when tested according to ASTM C 1363.

5. Vertical Edges for Single-Acting Doors: Beveled 1/8 inch in 2 inches (3 mm in 50 mm).

6. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-inch (54-mm) radius.

7. Top and Bottom Channels: Closed with continuous channels, minimum 0.053 inch (1.3 mm) thick, of same material as face sheets and spot welded to both face sheets.

8. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 861 with reinforcing plates from same material as door face sheets.

E. Custom Hollow Metal Frames

   a. Door Frames for Openings 48 Inches (1219 mm) Wide or Less: Fabricated from 0.053-inch- (1.3-mm-) thick steel sheet.
   b. Door Frames for Openings More Than 48 Inches (1219 mm) Wide: Fabricated from 0.067-inch- (1.7-mm-) thick steel sheet.
   c. Sidelight and Transom Frames: Fabricated from same thickness material as adjacent door frame.
   d. Borrowed-Light Frames: Fabricated from 0.053-inch- (1.3-mm-) thick steel sheet.

3. Interior Frames: Fabricated from cold-rolled steel sheet unless metallic-coated sheet is indicated.

4. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 861 with reinforcing plates from same material as frame.

5. Head Reinforcement: Provide minimum 0.093-inch- (2.3-mm-) thick, steel channel or angle stiffener for opening widths more than 48 inches (1219 mm).

F. Frame Anchors

1. Jamb Anchors:
   a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042 inch (1.0 mm) thick, with corrugated or perforated straps not less than 2 inches (50 mm) wide by 10 inches (250 mm) long; or wire anchors not less than 0.177 inch (4.5 mm) thick.
b. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch (1.0 mm) thick.
c. Compression Type for Drywall Slip-on Frames: Adjustable compression anchors.
d. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- (9.5-mm-) diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

2. Floor Anchors: Formed from same material as frames, not less than 0.042 inch (1.0 mm) thick, and as follows:
a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
b. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch (50-mm) height adjustment. Terminate bottom of frames at finish floor surface.

G. Hollow Metal Panels
1. Provide hollow metal panels of same materials, construction, and finish as specified for adjoining hollow metal work.

H. Stops And Moldings
1. Moldings for Glazed Lites in Doors: Minimum 0.032 inch (0.8 mm) thick, fabricated from same material as door face sheet in which they are installed.
2. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch (16 mm) high unless otherwise indicated.
3. Loose Stops for Glazed Lites in Frames: Minimum 0.032 inch (0.8 mm) thick, fabricated from same material as frames in which they are installed.
4. Terminated Stops: Where indicated on interior door frames, terminate stops 6 inches (152 mm) above finish floor with a 45-degree OR 90-degree, as directed, angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.

I. Louvers
1. Provide louvers for interior doors, where indicated, that comply with SDI 111C, with blades or baffles formed of 0.020-inch- (0.5-mm-) thick, cold-rolled steel sheet set into 0.032-inch- (0.8-mm-) thick steel frame.
   a. Sightproof Louver: Stationary louvers constructed with inverted V-shaped or Y-shaped blades.
   b. Lightproof Louver: Stationary louvers constructed with baffles to prevent light from passing from one side to the other, any angle.
   c. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same testing and inspecting agency that established fire-resistance rating of door assembly.

J. Accessories
1. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
2. Ceiling Struts: Minimum 1/4-inch-thick by 1-inch- (6.4-mm-thick by 25.4-mm-) wide steel.
3. Grout Guards: Formed from same material as frames, not less than 0.016 inch (0.4 mm) thick.

K. Fabrication
1. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
2. Tolerances: Fabricate hollow metal work to tolerances indicated in SDI 117 OR ANSI/NAAMM-HMMA 861, as directed.
3. Hollow Metal Doors:
   a. Exterior Doors: Provide weep-hole openings in bottom of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
   b. Glazed Lites: Factory cut openings in doors.
c. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch (19 mm) beyond edge of door on which astragal is mounted.

4. Hollow Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
   a. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.
   b. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
   c. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
   d. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
   e. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
   f. Jamb Anchors: Provide number and spacing of anchors as follows:
      1) Masonry Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:
         a) Two anchors per jamb up to 60 inches (1524 mm) high.
         b) Three anchors per jamb from 60 to 90 inches (1524 to 2286 mm) high.
         c) Four anchors per jamb from 90 to 120 inches (2286 to 3048 mm) high.
         d) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches (610 mm) or fraction thereof above 120 inches (3048 mm) high.
      2) Stud-Wall Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:
         a) Three anchors per jamb up to 60 inches (1524 mm) high.
         b) Four anchors per jamb from 60 to 90 inches (1524 to 2286 mm) high.
         c) Five anchors per jamb from 90 to 96 inches (2286 to 2438 mm) high.
         d) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches (610 mm) or fraction thereof above 96 inches (2438 mm) high.
         e) Two anchors per head for frames above 42 inches (1066 mm) wide and mounted in metal-stud partitions.
      3) Compression Type: Not less than two anchors in each jamb.
      4) Postinstalled Expansion Type: Locate anchors not more than 6 inches (152 mm) from top and bottom of frame. Space anchors not more than 26 inches (660 mm) o.c.
   g. Door Silencers: Except on weather-stripped doors, drill stops to receive door silencers as follows. Keep holes clear during construction.
      1) Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
      2) Double-Door Frames: Drill stop in head jamb to receive two door silencers.
   h. Fabricate concealed stiffeners, edge channels, and hardware reinforcement from either cold- or hot-rolled steel sheet.
   i. Hardware Preparation: Factory prepare hollow metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section “Door Hardware”.
      a. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8 OR ANSI/NAAMM-HMMA 861.
      b. Reinforce doors and frames to receive nontemplated, mortised and surface-mounted door hardware.
      c. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
      d. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26.
7. **Stops and Moldings:** Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
   a. **Single Glazed Lites:** Provide fixed stops and moldings welded on secure side of hollow metal work.
   b. **Multiple Glazed Lites:** Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
   c. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
   d. Provide loose stops and moldings on inside of hollow metal work.
   e. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

L. **Steel Finishes**
1. **Prime Finish:** Apply manufacturer's standard primer immediately after cleaning and pretreating.
   a. **Shop Primer:** Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
2. **Factory-Applied Paint Finish:** Manufacturer's standard, complying with ANSI/SDI A250.3 for performance and acceptance criteria.
   a. **Color and Gloss:** As indicated by manufacturer's designations OR Match sample OR As selected from manufacturer's full range, as directed.

1.3 **EXECUTION**
A. **Installation**
1. **General:** Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
2. **Hollow Metal Frames:** Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 OR HMMA 840, as directed.
   a. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
      1) At fire-protection-rated openings, install frames according to NFPA 80.
      2) Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
      3) Install frames with removable glazing stops located on secure side of opening.
      4) Install door silencers in frames before grouting.
      5) Remove temporary braces necessary for installation only after frames have been properly set and secured.
      6) Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
      7) Field apply bituminous coating to backs of frames that are filled with grout containing antifreezing agents.
   b. **Floor Anchors:** Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
      1) Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
   c. **Metal-Stud Partitions:** Solidly pack mineral-fiber insulation behind frames.
   d. **Masonry Walls:** Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
   e. **Concrete Walls:** Solidly fill space between frames and concrete with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
f. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

g. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

h. Ceiling Struts: Extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction. Provide adjustable wedged or bolted anchorage to frame jamb members.

i. Installation Tolerances: Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
   1) Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2) Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
   3) Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4) Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs at floor.

3. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
   a. Non-Fire-Rated Standard Steel Doors:
      1) Jambs and Head: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      2) Between Edges of Pairs of Doors: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      3) Between Bottom of Door and Top of Threshold: Maximum 3/8 inch (9.5 mm).
      4) Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch (19 mm).
   b. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
   c. Smoke-Control Doors: Install doors according to NFPA 105 OR IBC Standard 716.5, as directed.

4. Glazing: Comply with installation requirements in Division 08 Section “Glazing” and with hollow metal manufacturer’s written instructions.
   a. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (50 mm) o.c. from each corner.

B. Adjusting And Cleaning
   1. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.
   2. Remove grout and other bonding material from hollow metal work immediately after installation.
   3. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
   4. Metallic-Coated Surfaces: Clean abraded areas and repair with galvanizing repair paint according to manufacturer’s written instructions.

END OF SECTION 08 05 13 00
SECTION 08 05 13 00a - WOOD DOORS

1.1 DESCRIPTION OF WORK

A. This specification covers the furnishing and installation of materials for wood doors. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 GENERAL

A. Definitions

1. Supply-and-Delivery-Only Contract: Includes supply and delivery to site FOB destination. Freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by the Owner.

2. Supply-and-Install Contract: Includes supply, delivery to site FOB destination, freight prepaid, unloading and handling at site, and installation.

B. System Description

1. Door Assemblies: Include doors, frames, and hardware.
   a. Provide with fire rating as indicated or specified.

2. Security Entry Door System (Assembly) Performance Requirements:

C. Submittals

1. Shop Drawings:
   a. Indicate location, size, elevation, details of construction, marks used to identify doors, location and extent of hardware blocking, fire rating, factory preparation requirements for each door type. Drawings shall include catalog cuts or descriptive data for weatherstripping and thresholds to be used.

2. Quality Assurance/Control Submittals:
   a. Test Reports: Results of testing by accredited independent laboratory demonstrating compliance of door systems with specified performance requirements.
      1) Indicate that tests were performed in accordance with standard referenced.
   b. Certificates: Manufacturer's written certification that door systems meet or exceed specified requirements.
   c. Manufacturer's installation instructions.

3. Closeout Submittals:
   a. Operation and maintenance data.
   b. Special warranty.

D. Quality Assurance

1. Regulatory Requirements: Comply with following:
   a. Fire-Rated Label: Determined using ASTM E 152, and bear label of UL or other recognized fire-rating program acceptable to authorities having jurisdiction.
      1) If any door or frame scheduled to be fire-rated cannot qualify for appropriate labeling because of its design, hardware, or any other reason, advise the Owner prior to submission of bids.
   b. Accessibility: (Required for accessible units only, including main building entrances.)
         a) Uniform Federal Accessibility Standards (UFAS).
      2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations (24 CFR Part 8).
      3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).

2. Mock-ups: Install one mock-up of each type of door system, including doors, frames, hardware, thresholds, and accessories.
   a. Location: As directed.
   b. Approved Mock-up: Standard for rest of work, and may remain part of completed project.

E. Delivery, Storage, And Handling
1. Packing, Shipping, Handling, and Unloading: Pack materials at manufacturing plant to prevent damage during shipping.
   a. Delivery: Do not deliver doors to building until it is entirely enclosed, drywall and concrete work is completed, and humidity in building has reached average relative humidity of locality.
   b. Storage: Stack doors flat and off floor in manner to prevent warping or twisting, and to provide ventilation. Do not drag doors across one another.
   c. Protection: Protect doors during transit, storage, and handling to prevent damage, soiling, and deterioration, and from extremes in temperature and humidity. Comply with “On-site Care” recommendations of NWWDA Care and Finishing of Wood Doors, and with manufacturer’s recommendations.

2. Acceptance at Site: Inspect door systems upon delivery. Replace damaged or defective materials before installation.

F. Project Conditions
1. Field Measurements: Field measure openings for door systems before start of fabrication.

G. Scheduling And Sequencing
1. Scheduling and Completion: Comply with requirements of Detailed Scope of Work.

H. Warranty
1. Special Warranty:
      1) Include coverage of hardware.
      2) Cover warping (bow, cup, or twist), photographing of construction below face veneers, tolerance limitations of NWWDA I.S. 1-A.
      3) Cover delamination.
      4) Glazing not included.
      5) Defects resulting from vandalism not included.
   b. Heavy-Duty Closet Doors Warranty: Provide manufacturer’s five-year written warranty covering materials and installation for bifold closet doors.
   c. For Supply-and-Delivery-Only Contract:
      1) Contractor: Agrees to supply and deliver to the Owner, free of charge, any required replacement parts that can be readily installed by the Owner without special tools.
      2) Contractor: Agrees to supply and deliver to the Owner, free of charge, complete replacement door, when defective part or parts cannot be installed without use of special tools.
   d. For Supply-and-Install Contract: Contractor: Agrees to supply and install, free of charge, any required replacement parts or complete replacement door.

1.3 PRODUCTS

A. Door Frames
   a. Applied stops are permitted, unless otherwise indicated.
2. Steel Frames:
b. Steel Frames and/or Adapter Frames: Minimum of 18 gage (1.07 mm) galvanized bonderized steel, pre-drilled and reinforced for hinges as required.
   1) Shape of Frame: Generally L-shaped.

c. Heavy-Duty Door Frames: 16 gage (1.35 mm) minimum thickness.
   1) When required, provide B-Label, 1-1/2 hour fire rating.

d. Security Door Frames: Comply with SDI 100, minimum of 14 gage (1.70 mm) galvanized bonderized steel, pre-drilled and reinforced for hinges as required.
   1) When required, provide B-Label, 1-1/2 hour fire rating.
   2) Comply with Performance Requirements in this Section.

e. Preparation for Hardware: Machine and reinforce frames for attachment of hardware, including mortising, drilling, and tapping for hinges and mortised hardware.

f. Frame Anchors: Provide jamb anchors as suitable for wall conditions and floor anchors, minimum 18 gage.
   1) Provide welded type frames with temporary spreader bars.

B. Interior Wood Swinging Doors
1. Standard Products: Doors shall be of type, size, and design indicated, and shall be standard products of manufacturers regularly engaged in manufacture of wood doors.
   a. Marking: Each door shall bear stamp, brand, or other identifying mark indicating quality and construction of door. Identifying mark or separate certification shall include identification of standard on which construction of door is based, and identity of manufacturing plant.

2. Interior Wood Doors: NWWDA I.S. 1-A.
   a. Thickness: 44.4 mm (1-3/4 inch) unless otherwise indicated or scheduled.
   b. Adhesives: NWWDA I.S. 1-A, Type II.
   c. Prefitting: Provide doors prefitted or unfitted at option of Contractor.
   d. Faces, stiles, and rails bonded to cores.

3. Core Construction:
   a. Solid Core Door NWWDA Construction Type: One of following (as specified):
      1) PC-5 or PC-7 (5- or 7-ply) with particleboard core, bonded.
         a) Stiles: Full core thickness and minimum 34 mm (1-3/8 inch) face width.
      2) SLC-5 or SLC-7 (5- or 7-ply) provide with glued wood-block core, bonded.
         a) Stiles: Full core thickness and minimum 19 mm (3/4 inch) face width.
      3) Stiles and Rails: Top and bottom rails for particleboard and wood-block core doors shall have minimum 29 mm (1-1/8 inch) face width by full core thickness.
   b. Hollow-Core Doors: NWWDA IHC (Institutional Hollow Core) or SHC (Standard Hollow Core), as specified.
      1) Provide with heavy-duty wood stiles, rails, lock blocks and other reinforcement inside core as required to allow for secure screw attachment of hardware.
      2) Hinge Stile: Minimum 25 mm (1 inch) minimum thick.
   c. Stile Edge Bands: Mill option specie.
      1) No visible finger-joints acceptable in stile edge bands.
      2) When used, locate finger-joints under hardware.
   d. Fire-Rated Door NWWDA Construction Type: As required for fire rating indicated or scheduled.
      1) Provide with heavy duty wood stiles, rails, lock blocks, and other reinforcement inside core as required to allow for secure screw attachment of hardware including closers and exit devices.
      a) Reinforcement Blocking: In compliance with manufacturer's labeling requirements.
      2) Provide factory prefitting and premachining as required for fire-rated labels.
      3) Means of Egress Fire Doors: Provide doors with maximum 232 degrees C (450 degree F) temperature rise rating in 30 minutes of fire exposure.
   e. Wood Stiles, Rails, Lock Blocks, and Other Reinforcement: Wood:
      1) Rail Blocks: Not less than 125 mm (5 inches) wide by full core thickness.
      2) Split Resistance: NWWDA TM-5, average of ten test samples shall be not less than 225 load kilograms (500 load pounds).
3) **Direct Screw Withdrawal:** NWWDA TM-10, average of ten test samples shall be not less than 315 load kilograms (700 load pounds) when tested for direct screw withdrawal using steel, fully threaded wood screw.

4) **Cycle/Swing:** NWWDA TM-7. 200,000 cycles with no loose hinge screws or other visible signs of failure.

f. **Under Cutting:** Preserve full bottom rail.

4) **Face Panels:**
   a. Painted Finish: NWWDA I.S. 1-A, minimum 3 mm (1/8 inch) thick hardboard.
   b. Plastic Laminate Finish: NEMA LD 3, high pressure decorative laminate, Grade GP50, 1.3 mm (0.050 inch) thick.
      1) **Faces:** Adhesively apply over minimum 3 mm (1/8 inch) thick hardboard.
      2) **Edges:** Adhesively apply plastic laminate matching face panels.
      3) **Color and Pattern:** As selected.

C. **Hardware**
   1. General: Comply with ANSI/BHMA A156.1 and applicable accessibility regulatory requirements and perform functions for which it was intended.
   2. Butts and Hinges: ANSI/BHMA A156.1, as scheduled.
      a. Install non-rising pins (NRP) on out-swing residential unit entry doors.
      c. Security Door: Comply with Performance Requirements in this Section.
   3. **Fire-Rated Door Hardware:** Comply with NFPA 80.
      a. Exit Doors: Comply with NFPA 101 (Life Safety Code) for exit doors, as well as other requirements specified.
         1) In Lieu of UL Labeling and Listing: Test reports from nationally recognized testing agency showing that hardware has been tested in accordance with UL test methods and conforms to NFPA requirements.
      c. Install minimum latch throw as specified on label of individual door.
      d. Provide hardware listed by UL, except where heavier materials, larger sizes, or higher grades are specified.
      e. Closers: ANSI/BHMA A156.4.
   4. Lock Sets and Passage Sets: As scheduled. Comply with following standards:
      b. Dead Bolt: ANSI/BHMA A156.5.
      c. Mortise Locks and Latches: ANSI/BHMA A156.13, Grade 1 or Security Grade, single or multiple throw.
      d. Interconnected Deadlock and Passage Set: ANSI/BHMA A156.12, Grade 2.
      e. Cylindrical Lock: Grade 2 cylindrical deadbolt lock/passage set combination.
      f. Security Door Locksets: ANSI/BHMA A156.13 Security Grade or UL 437 Key locks.
         1) Comply with Performance Requirements in this Section.
      g. Keys: Provide two keys for each lock provided. Provide master keying and keying alike on any locks as directed at no additional charge.
      h. Locks: Provide with interchangeable cores.
   5. Door Viewers: ANSI/BHMA A156.16.

D. **Factory Fitting And Machining**
   1. **Doors:** Prefit, bevel, mortise, and machine doors at factory in accordance with NWWDA I.S. 1-A.
      a. Comply with hardware schedules and door frame Shop Drawings with hardware templates to ensure proper fit of doors and hardware.
         1) Take accurate field measurements of hardware mortises in metal frames to verify dimensions and alignment before proceeding with machining in factory.
      b. Machine doors for hardware requiring cutting of doors.
      c. Fit doors to frame bevel lock edge of doors (1/8 inch) for each (2 inches) of door thickness.
      d. Finish all surfaces, including both faces, top and bottom and edges of doors smooth to touch.
2. Edge Sealing: Seal wood end grain exposed at edges and cutouts of doors against moisture penetration prior to shipment.
   a. Sealer: Two coats of spar varnish or other sealer recommended by door manufacturer.
3. Tolerances: Comply with NWWDA tolerance requirements for prefitting.

E. Door Assemblies
1. Prehung Swinging Doors: Prehung door with matching wood frame complete with hinges, lockset or passage set, and other hardware, as indicated or specified.
2. Fire-Rated Doors and Frames: NFPA 80 and bear identifying label of UL or nationally recognized testing agency qualified to perform certification programs indicating that units conform to requirements for class indicated.
   a. Labels: Metal with raised or incised markings.
   b. Hardware: As required to maintain fire rating and receive label.
3. Security Entry Frames and Doors:
   a. Comply with Performance Requirements in this Section.
   b. Fire Rating: When required, provide B-Label, 1-1/2 hour fire rating.

F. Closet Doors
1. Heavy-Duty Bifold Closet Doors: Particleboard bifold doors, prime painted, factory premachined, complete with manufacturer's standard hardware to provide complete operating bifold doors.
   a. Panels: 721 kg/ cubic m (45 PCF) industrial-grade particle board, 19.1 mm (3/4 inch) thick.
      1) Long Edges: Plasticized.
      2) Room Side: Filled and prime painted.
      3) Closet Side: Prime painted.
      4) Exposed Surfaces Finish: Painted or plastic laminate as indicated or scheduled.
   b. Track: No. 6063-T6 extruded aluminum, 20.5 mm (13/16 inch) by 32 mm (1-1/4 inch).
      1) Track Guides: Delrin.
   c. Hardware: Factory-applied to doors and track.
      1) Pivot and Mounting Hardware: 14 gage cold-rolled steel, carbonized for strength and durability.
      2) Top Pivot and Guide Pins: 75 mm (3 inch) removable compensating pins.
      3) Toggle Pivot: Ensure doors remain in place.
      4) Spring Enclosure: Provide positive closing with little effort and keep doors closed.
      5) Bottom Pivot: Carry weight of door, floor-mounted, and designed for vertical and horizontal adjustment.
      6) Panel Brackets: Wrap-around feature to eliminate unnecessary stress on screws.
      7) Panels: Hinged together with continuous piano hinges inserted into routed grooves and secured with tempered pins.
      8) Pulls: As selected from manufacturer's standards.
   d. Doors: Comply with accessibility requirements (as specified).
2. Standard Bifold Closet Doors: Provide complete manufacturer's standard hardware, including tracks, hinges, guides, and pulls to provide complete operating bifold doors.
   a. Hollow-Core Doors: NWWDA I.S. 1-A and NWWDA IHC (Institutional Hollow Core).
      1) Provide with heavy-duty wood stiles, rails, lock blocks and other reinforcement inside core as required to allow for secure screw attachment of hardware.
   b. Doors: 34.9 mm (1-3/8 inch) thick unless otherwise indicated.
   c. Surface-Mounted Pulls: As selected from manufacturer standards.
3. Standard Sliding Closet Doors: Provide complete manufacturer's standard hardware, including tracks, guides, and pulls to provide complete operating sliding doors.
   a. Hollow-Core Doors: NWWDA I.S. 1-A and NWWDA IHC (Institutional Hollow Core).
      1) Provide with heavy-duty wood stiles, rails, lock blocks and other reinforcement inside core as required to allow for secure screw attachment of hardware.
   b. Doors: 34.9 mm (1-3/8 inch) thick unless otherwise indicated.
   c. Recessed Pulls: As selected from manufacturer standards.
4. Standard Closet Door Face Panels:
   a. Painted Finish: NWWDA I.S. 1-A, minimum 3 mm (1/8 inch) thick hardboard.
   b. Plastic Laminate Finish: NEMA LD 3, high-pressure decorative laminate, Grade GP50, 1.3 mm (0.050 inch) thick.
1) Faces: Adhesively apply over minimum 3 mm (1/8 inch) thick hardboard.
2) Edges: Adhesively apply plastic laminate matching face panels.
3) Color and Pattern: As selected.

G. Finishes
1. Painted Wood Finish: One of following as indicated or scheduled:
      1) Color: As selected.
   b. Field Finish: Factory primed for field paint under Division 9 Section “Painting.”
2. Painted Steel Finish: Clean and free from serious surface blemishes.
   a. Exposed Surfaces: ASTM A 591 electrolytic zinc-coated steel, Class A.
   c. Finish Coat: One of following as specified or scheduled:
      1) Factory Finish: Electrostatically factory applied baked-on enamel finish.
         a) Color: As selected from manufacturer’s list of colors.
      2) Field Finish: Factory-primed for field paint under Division 9 Section “Painting.”

1.4 EXECUTION

A. Examination
1. Site Verification of Conditions:
   a. Existing Conditions: Examine openings before beginning installation.
   b. Field Measurements: Verify field measurements are as indicated on Shop Drawings.
   c. Before installation of doors, verify that frames are proper size, location, type, and swing characteristics for door, and are installed with plumb jambs and level heads as required for proper installation of doors.
   d. Reject doors with defects.
   e. Do not proceed with installation until conditions are satisfactory.

B. Preparation
1. Protection: Protect adjacent elements from damage and disfiguration in accordance with Detailed Scope of Work.
   a. Contractor: Responsible for damage to buildings and any other facilities or property caused by construction operations.
   b. Repair or replace damaged elements in accordance with Detailed Scope of Work.
2. Existing Doors: Remove existing doors and debris from site in accordance with Detailed Scope of Work.
3. Preparation: Prepare existing openings in accordance with ASTM E 737, manufacturer’s recommendations, and approved Shop Drawings.
4. Wood Door Preparation:
   a. Conditioning: Condition wood doors to average humidity in installation area prior to hanging.
   b. Prefitting: Prefit wood doors to frames and machine for hardware to whatever extent not previously worked at factory as required for proper fit and uniform clearance at each edge.
   c. Sealing: Before installation of hardware on wood doors, brush apply sealer to all job site cut or planed surfaces.

C. Door Frame Installation
1. Door Frames: Install in accordance with ASTM E 737, manufacturer’s recommendations, and approved Shop Drawings.
   a. Set frames accurately in accordance with details, straight and free of twist with head level, jambs plumb, and without distortion. Rigidly anchor to walls and partitions and securely brace until surrounding work is completed.
2. Wood Frames: Set plumb and square, and rigidly anchor In place using finish type nails. Provide double wedge blocking near top, bottom, and midpoint of each jamb.
3. Steel Frames: Comply with SDI 105:
a. Fire-Rated Openings: Place frames and provide clearances in accordance with NFPA 80 and GA 253.

b. Field Welds: Make welds full length of joints. Remove splatter, and grind exposed welds to match adjacent surfaces. Provide the Owner with ample notice to review welds before finish operations begin.

c. Wherever possible, leave spreader bars in place until frames are securely anchored.

D. Wood Door Installation

1. General: Install doors in accordance with NWWDA I.S. 1-A, ASTM E 737, manufacturer's recommendations, and approved Shop Drawings.

   a. Install doors and frames securely, straight, plumb, and level without distortion.

2. Wood Doors: Install wood doors in accordance with manufacturers recommendations.

   a. Prefit Doors: Fit to frames for uniform clearance at each edge.

   b. Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted with fire-rated doors.

   c. Hanging: After sizing doors, fit and machine for hardware as scheduled.

      1) Hang doors to be free of binding, with hardware functioning properly.

   d. Clearances for Nonfire-Rated Doors:

      1) Jamb: 3 mm (1/8 inch), 3 mm (1/8 inch) bevel in 50 mm (2 inches).

      2) Head: 3 mm (1/8 inch).

      3) Bottom at Decorative Floor Finish or Covering: 13 mm (1/2 inch).

      4) Bottom at Threshold: 6 mm (1/4 inch) between bottom of door and top of threshold.

   e. Clearances for Fire Rated Doors: Comply with NFPA 80 and local code.

      1) Bevel fire-rated doors 3 mm in 50 mm (1/8 inch in 2 inches) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

   f. Seal cut surfaces after fitting and machining as specified above.

3. Fire-Rated Doors:

   b. Factory-Applied Labels: Remain intact where installed. Do not trim labeled hinge stile edge and top edge of door.

      1) Do not paint over labels.

   c. Clearances for Fire-Rated Doors: Comply with NFPA 80 and local code.

      1) Lockstile Edge and Bottom Edge: May be trimmed only to extent recommended by door manufacturer.

      2) Bevel fire-rated doors 3 mm in 50 mm (1/8 inch in 2 inches) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

   d. Seal cut surfaces after fitting and machining as specified above.

E. Hardware Installation

1. General: Install hardware in accordance with SDI 109, DHI recommended locations, and manufacturers recommendations.

2. Fastening: Furnish items of hardware with attachment screws, bolts, nuts, etc., as required to attach hardware to type of material involved and with finish to match adjacent hardware.

   a. Make attachments to metal by template machine screws.

   b. Through-bolt hardware such as door closers, forearm shoes of closers, holding devices, and panic hardware mounted on doors or panels.

   c. Attach hardware to masonry or concrete with expansion bolts or similar drilled anchors to develop full strength of attached device. Set expansion anchors in solid masonry, not mortar joints.

3. Accessories:

   a. Smoke Seals and Sound-stripping: Run full height of both jambs and full width of head.

   b. Thresholds: Run full width of opening. Install thresholds with continuous threshold anchors cast into slab and set in sealant.
1. Prehung Wood Doors in Frames with Hardware: Install in accordance with manufacturer's recommendations.
2. Bifold Closet Doors with Hardware: Install in accordance with manufacturers recommendations.
3. Sliding Closet Doors with Hardware: Install in accordance with manufacturer's recommendations.

G. Adjusting And Cleaning
1. Adjusting: At completion of job, check, adjust. and lubricate hardware as required, and leave doors and hardware in proper operating condition.
   a. Operation: Rehang or replace doors which do not swing or operate freely.
2. Cleaning: Comply with requirements of Detailed Scope of Work.
   a. Clean doors after installation to remove foreign matter and surface blemishes.
   b. Scratched or Abraded Painted Surfaces: Touch-up with primer and enamel paint compatible with factory finish.

H. Protection
1. Installed Work: Protect doors from damage after installation, as recommended by door manufacturer, to ensure that doors will be without damage or deterioration at project completion.
2. Replacement: Refinish or replace doors damaged during installation.
   a. Causes for Rejection of Wood Doors: Include warp, chips, scratches, or gouges of veneer, and finish defects.

END OF SECTION 08 05 13 00a
SECTION 08 05 13 00b - FLUSH WOOD DOORS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for flush wood doors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Solid-core doors and transom panels with wood-veneer, medium-density-overlay, hardboard or MDF, and plastic-laminate faces.
   b. Hollow-core doors with wood-veneer, hardboard or MDF, and plastic-laminate faces.
   c. Shop priming and Factory finishing flush wood doors.
   d. Factory fitting flush wood doors to frames and factory machining for hardware.

C. Submittals
1. Product Data: For each type of door indicated. Include factory-finishing specifications.
2. LEED Submittals:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that flush wood doors comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. 1) Include statement indicating costs for each certified wood product.
   b. Product Data for Credit EQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.
3. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
   a. Indicate dimensions and locations of mortises and holes for hardware.
   b. Indicate dimensions and locations of cutouts.
   c. Indicate requirements for veneer matching.
   d. Indicate doors to be factory finished and finish requirements.
   e. Indicate fire-protection ratings for fire-rated doors.
4. Samples: For plastic-laminate door faces and factory-finished doors.

D. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
3. Forest Certification: Provide doors made with cores OR veneers OR not less than 70 percent of wood products OR all wood products, as directed, obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
4. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure OR as close to neutral pressure as possible, as directed, according to NFPA 252 OR IBC Standard 716.5 OR UL 10B OR UL 10C, as directed.
   a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
b. Temperature-Rise Limit: Where indicated OR At vertical exit enclosures and exit passageways, as directed, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.

5. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling
1. Comply with requirements of referenced standard and manufacturer’s written instructions.
2. Package doors individually in plastic bags or cardboard cartons OR cardboard cartons and wrap bundles of doors in plastic sheeting, as directed.
3. Mark each door on bottom OR top and bottom, as directed, rail with opening number used on Shop Drawings.

F. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
   a. Warranty Period for Solid-Core Exterior Doors: Two OR Five, as directed, years from date of Final Completion.
   c. Warranty Period for Hollow-Core Interior Doors: One OR Two, as directed, year(s) from date of Final Completion.

1.2 PRODUCTS

A. Door Construction, General
1. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.
2. WDMA I.S.1-A Performance Grade:
   a. Heavy Duty unless otherwise indicated.
   b. Extra Heavy Duty: Classrooms, public toilets, janitor's closets, assembly spaces, exits, patient rooms, and where indicated.
   c. Standard Duty: Closets (not including janitor's closets), private toilets, and where indicated.
3. Particleboard-Core Doors:
   a. Particleboard:
      1) ANSI A208.1, Grade LD-1 OR Grade LD-2, as directed, made with binder containing no urea-formaldehyde resin, as directed.
      OR Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
   b. Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.
   c. Provide doors with glued-wood-stave OR structural-composite-lumber, as directed, cores instead of particleboard cores for doors indicated to receive exit devices.
4. Structural-Composite-Lumber-Core Doors:
      1) Screw Withdrawal, Face: 700 lbf (3100 N).
      2) Screw Withdrawal, Edge: 400 lbf (1780 N).
5. Fire-Protection-Rated Doors: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
   a. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
   b. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals, as directed. Comply with specified requirements for exposed edges.
OR
Pairs: Provide formed-steel edges and astragals with intumescent seals, **as directed.**
1) Finish steel edges and astragals with baked enamel same color as doors, **as directed.**
OR
Finish steel edges and astragals to match door hardware (locksets or exit devices).

6. Mineral-Core Doors:
   a. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
   b. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
   c. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

7. Hollow-Core Doors:
   a. Construction: Institutional OR Standard, **as directed,** hollow core.

B. Veneered-Faced Doors For Transparent Finish
1. Exterior Solid-Core Doors:
   a. Grade: Premium, with Grade AA faces OR Premium, with Grade A faces OR Custom (Grade A faces) OR Economy (Grade B faces), **as directed.**
   b. Species: Anigre OR Select white ash OR Figured select white ash OR Select white birch OR Cherry OR Select red gum OR Figured select red gum OR Select white maple OR Red oak OR Persimmon OR Sapele OR Sycamore OR Walnut OR White oak OR Ucuuba (Virola Duckei) OR Cupiuba (Guapia glabra), **as directed.**
   c. Cut: Rotary cut OR Plain sliced (flat sliced) OR Quarter sliced OR Rift cut, **as directed.**
   d. Match between Veneer Leaves: Book OR Slip OR Pleasing, **as directed,** match.
   e. Assembly of Veneer Leaves on Door Faces: Center-balance OR Balance OR Running, **as directed,** match.
   f. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions, **as directed.**
   g. Exposed Vertical OR Vertical and Top, **as directed,** Edges: Same species as faces or a compatible species OR Same species as faces OR Applied wood-veneer edges of same species as faces and covering edges of faces OR Applied wood edges of same species as faces and covering edges of crossbands, **as directed.**
   h. Core: Particleboard OR Glued wood stave OR Structural composite lumber, **as directed.**
   i. Construction: Five OR Five or seven, **as directed,** plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, **as directed.**
   j. Adhesives: Type I per WDMA TM-6.
   2. Interior Solid-Core Doors:
      a. Grade: Premium, with Grade AA faces OR Premium, with Grade A faces OR Custom (Grade A faces) OR Economy (Grade B faces), **as directed.**
      b. Species: Anigre OR Select white ash OR Figured select white ash OR Select white birch OR Cherry OR Select red gum OR Figured select red gum OR Select white maple OR Red oak OR Persimmon OR Sapele OR Sycamore OR Walnut OR White oak OR Ucuuba (Virola Duckei) OR Cupiuba (Guapia glabra), **as directed.**
      c. Cut: Rotary cut OR Plain sliced (flat sliced) OR Quarter sliced OR Rift cut, **as directed.**
      d. Match between Veneer Leaves: Book OR Slip OR Pleasing, **as directed,** match.
      e. Assembly of Veneer Leaves on Door Faces: Center-balance OR Balance OR Running, **as directed,** match.
      f. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions, **as directed.**
      g. Room Match:
         1) Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by 10 feet (3 m) OR 20 feet (6 m), **as directed,** or more.
OR

Provide door faces of compatible color and grain within each separate room or area of building.

h. Transom Match: Continuous match OR End match OR As indicated, as directed.

i. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in Division 06 Section(s) "Interior Architectural Woodwork" OR "Wood Paneling", as directed.

j. Exposed Vertical OR Vertical and Top, as directed, Edges: Same species as faces or a compatible species OR Same species as faces OR Applied wood-veneer edges of same species as faces and covering edges of faces OR Applied wood edges of same species as faces and covering edges of crossbands, as directed.

k. Core: Particleboard OR Glued wood stave OR Nonglued wood stave OR Structural composite lumber, as directed.

l. Construction:
   1) Five OR Five or seven, as directed, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, as directed.
   OR
   Seven plies, either bonded or nonbonded construction.

3. Interior Hollow-Core Doors:
   a. Grade: Premium, with Grade AA faces OR Premium, with Grade A faces OR Custom (Grade A faces) OR Economy (Grade B faces), as directed.
   b. Species: Anigre OR Select white ash OR Figured select white ash OR Select white birch OR Cherry OR Select red gum OR Figured select red gum OR Select white maple OR Red oak OR Persimmon OR Sapele OR Sycamore OR Walnut OR White oak OR Ucuuba (Virola Duckei) OR Cupiuba (Goupia glabra), as directed.
   c. Cut: Rotary cut OR Plain sliced (flat sliced) OR Quarter sliced OR Rift cut, as directed.
   d. Match between Veneer Leaves: Book OR Slip OR Pleasing, as directed, match.
   e. Assembly of Veneer Leaves on Door Faces: Center-balance OR Balance OR Running, as directed, match.
   f. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions, as directed.
   g. Exposed Vertical OR Vertical and Top, as directed, Edges: Same species as faces or a compatible species OR Same species as faces OR Applied wood-veneer edges of same species as faces and covering edges of faces OR Applied wood edges of same species as faces and covering edges of crossbands, as directed.
   h. Construction: Seven plies.

C. Doors For Opaque Finish
1. Exterior Solid-Core Doors:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. Faces: Medium-density overlay OR Any closed-grain hardwood of mill option, as directed.
      1) Apply medium-density overlay to standard-thickness, closed-grain, hardwood face veneers OR directly to high-density hardboard crossbands, as directed.
   c. Exposed Vertical OR Vertical and Top, as directed, Edges: Any closed-grain hardwood.
   d. Core: Particleboard OR Glued wood stave OR Structural composite lumber, as directed.
   e. Construction: Five OR Five or seven, as directed, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, as directed.
   f. Adhesives: Type I per WDMA TM-6.

2. Interior Solid-Core Doors:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. Faces: Medium-density overlay OR Any closed-grain hardwood of mill option OR Hardboard or MDF, as directed.
      1) Apply medium-density overlay to standard-thickness, closed-grain, hardwood face veneers OR directly to high-density hardboard crossbands, as directed.
2) Hardboard Faces: AHA A135.4, Class 1 (tempered) or Class 2 (standard).
3) MDF Faces: ANSI A208.2, Grade 150 or 160.
c. Exposed Vertical OR Vertical and Top, as directed, Edges: Any closed-grain hardwood.
d. Core: Particleboard OR Glued wood stave OR Nonglued wood stave OR Structural composite lumber, as directed.
e. Construction:
   1) Three OR Five OR Five or seven, as directed, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, as directed.
   OR
   Three OR Seven, as directed, plies, either bonded or nonbonded construction.

3. Interior Hollow-Core Doors:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. Faces: Medium-density overlay OR Any closed-grain hardwood of mill option OR Hardboard or MDF, as directed.
      1) Hardboard Faces: AHA A135.4, Class 1 (tempered) or Class 2 (standard).
      2) MDF Faces: ANSI A208.2, Grade 150 or 160.
   c. Exposed Vertical OR Vertical and Top, as directed, Edges: Any closed-grain hardwood.
   d. Construction: Three OR Seven, as directed, plies.

D. Plastic-Laminate-Faced Doors
1. Interior Solid-Core Doors:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, Grade HGS OR Grade HSH, as directed.
   c. Colors, Patterns, and Finishes: As indicated OR As selected from laminate manufacturer's full range of products, as directed.
   d. Exposed Vertical OR Vertical and Top, as directed, Edges: Hardwood edges for staining to match faces OR Hardwood edges for painting OR Plastic laminate that matches faces, applied before faces OR Impact-resistant polymer edging, applied after faces, as directed.
      1) Polymer Edging Color: Beige OR Brown OR Same color as faces, as directed.
   e. Core: Particleboard OR Glued wood stave OR Structural composite lumber, as directed.
   f. Construction:
      1) Three plies. Stiles and rails are bonded to core, then entire unit abrasive planed before faces are applied. Faces are bonded to core using a hot press, as directed.
      OR
      Five plies. Stiles and rails are bonded to core, then entire unit abrasive planed before faces and crossbands are applied. Faces are bonded to core using a hot press, as directed.

2. Interior Hollow-Core Doors:
   a. Grade: Premium OR Custom OR Economy, as directed.
   b. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, Grade HGS OR Grade HSH, as directed.
   c. Colors, Patterns, and Finishes: As indicated OR As selected from laminate manufacturer's full range of products, as directed.
   d. Exposed Vertical OR Vertical and Top, as directed, Edges: Hardwood edges for staining to match faces OR Hardwood edges for painting OR Plastic laminate that matches faces, applied before faces OR Impact-resistant polymer edging, applied after faces, as directed.
      1) Polymer Edging Color: Beige OR Brown OR Same color as faces, as directed.
   e. Construction: Plastic-laminate faces glued directly to core.

E. Louvers And Light Frames
1. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.
   a. Wood Species: Same species as door faces OR Species compatible with door faces OR Any closed-grain hardwood, as directed.

2. Metal Louvers:
   a. Blade Type: Vision-proof, inverted V OR Vision-proof, inverted Y OR Darkroom-type, double inverted V, as directed.
b. Metal and Finish:
   1) Hot-dip galvanized steel, 0.040 inch (1.0 mm) thick, factory primed for paint finish
      OR with baked-enamel- or powder-coated finish, as directed.
      OR
      Extruded aluminum with Class II, clear anodic finish, AA-M12C22A31.
      OR
      Extruded aluminum with light bronze OR medium bronze OR dark bronze OR black,
      as directed, Class II, color anodic finish, AA-M12C22A32/A34.

3. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and
   labeled for use in doors with fire-protection rating of 1-1/2 hours and less.
   a. Metal and Finish: Hot-dip galvanized steel, 0.040 inch (1.0 mm) thick, factory primed for
      paint finish OR with baked-enamel- or powder-coated finish, as directed.

4. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads
   as follows unless otherwise indicated.
   a. Wood Species: Same species as door faces OR Species compatible with door faces OR
      Any closed-grain hardwood, as directed.
   b. Profile: Flush rectangular beads OR Recessed tapered beads OR Recessed tapered
      beads with exposed banding OR Lipped tapered beads OR Manufacturer's standard
      shape, as directed.
   c. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal
      glazing clips approved for such use.

5. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-
   veneered noncombustible beads matching veneer species of door faces and approved for use in
   doors of fire-protection rating indicated. Include concealed metal glazing clips where required for
   opening size and fire-protection rating indicated.

6. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of
   0.048-inch- (1.2-mm-) thick, cold-rolled steel sheet; factory primed for paint finish OR with baked-
   enamel- or powder-coated finish, as directed; and approved for use in doors of fire-protection
   rating indicated.

F. Fabrication
1. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of
   referenced quality standard for fitting unless otherwise indicated.
   a. Comply with requirements in NFPA 80 for fire-rated doors.
2. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with
   DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W
   series standards, and hardware templates.
   a. Coordinate with hardware mortises in metal frames to verify dimensions and alignment
      before factory machining.
   b. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs
      of fire-rated doors.
3. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces,
   and finish as specified for associated doors. Finish bottom edges of transoms and top edges of
   rabbeted doors same as door stiles.
   a. Fabricate door and transom panels with full-width, solid-lumber, rabbeted, as directed,
      meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of
      metal door frames.
4. Openings: Cut and trim openings through doors in factory.
   a. Light Openings: Trim openings with moldings of material and profile indicated.
   b. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with
      applicable requirements in Division 08 Section "Glazing".
   c. Louvers: Factory install louvers in prepared openings.
5. Exterior Doors: Factory treat exterior doors with water repellent after fabrication has been
   completed but before shop priming OR factory finishing, as directed.
   a. Flash top of outswinging doors (with manufacturer's standard metal flashing).

G. Shop Priming
1. Doors for Opaque Finish: Shop prime doors with one coat of wood primer specified in Division 09 Section(s) "Exterior Painting" OR "Interior Painting", as directed. Seal all four edges, edges of cutouts, and mortises with primer.

2. Doors for Transparent Finish: Shop prime doors with stain (if required), other required pretreatments, and first coat of finish as specified in Division 09 Section(s) "Exterior Painting" OR "Interior Painting" OR "Staining And Transparent Finishing", as directed. Seal all four edges, edges of cutouts, and mortises with first coat of finish.

H. Factory Finishing
1. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
   a. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on bottom OR top and bottom, as directed, edges, edges of cutouts, and mortises.

2. Finish doors at factory.
   OR
   Finish doors at factory that are indicated to receive transparent finish. Field finish doors indicated to receive opaque finish.
   OR
   Finish doors at factory where indicated in schedules or on Drawings as factory finished.

3. Transparent Finish:
   a. Grade: Premium OR Custom, as directed.
   b. Finish:
      1) AWI conversion varnish OR catalyzed polyurethane, as directed, system.
      OR
      WDMA TR-4 conversion varnish OR TR-6 catalyzed polyurethane, as directed.
      OR
      WI System 4 clear conversion varnish OR 5 catalyzed polyurethane OR 8 UV-curable coating, as directed.
   c. Staining: Match sample OR As selected from manufacturer's full range OR None required, as directed.
   d. Effect: Open-grain finish OR Filled finish OR Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores, as directed.
   e. Sheen: Satin OR Semigloss, as directed.

4. Opaque Finish:
   a. Grade: Premium OR Custom, as directed.
   b. Finish:
      1) AWI conversion varnish OR catalyzed polyurethane, as directed, system.
      OR
      WDMA OP-4 conversion varnish OR OP-6 catalyzed polyurethane, as directed.
      OR
      WI System 4 conversion varnish OR 5 catalyzed polyurethane OR 8 UV-curable coating, as directed.
   c. Color: Match sample OR As selected from manufacturer's full range, as directed.
   d. Sheen: Satin OR Semigloss OR Gloss, as directed.

1.3 EXECUTION

A. Installation
1. Hardware: For installation, see Division 08 Section "Door Hardware".
2. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
   a. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
3. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
a. Clearances: Provide 1/8 inch (3.2 mm) at heads, jambs, and between pairs of doors. Provide 1/8 inch (3.2 mm) from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch (6.4 mm) from bottom of door to top of threshold unless otherwise indicated.
   1) Comply with NFPA 80 for fire-rated doors.

b. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.

c. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

4. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

5. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

B. Adjusting

1. Operation: Rehang or replace doors that do not swing or operate freely.

2. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

SECTION 08 11 73 00 - SLIDING METAL FIRE DOORS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for sliding metal fire doors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. This Section includes the following:
   a. Single-leaf, power-operated and manually operated sliding door with or without pass door.
   b. Biparting, power-operated and manually operated sliding door with or without pass door.
   c. Multiple-leaf, power-operated and manually operated sliding door with or without pass door.

C. Performance Requirements
1. Structural Performance: Provide horizontal sliding doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:
   a. Wind Load: Uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa), unless required otherwise by the location of the work, acting inward or outward.

D. Submittals
1. Product Data: For each type of product indicated.
   a. Fire-Rated Doors: Include description of fire-release system including testing and resetting instructions.
2. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
3. Product Certificates: For sliding metal fire doors, signed by product manufacturer.
4. Oversize Construction Certification: For door assemblies required to be fire rated and that exceed size limitations of labeled assemblies, signed by authorized representative of testing agency.
5. Operation and Maintenance Data: For sliding metal fire doors to include in emergency, operation, and maintenance manuals.

E. Quality Assurance
1. Fire-Rated Sliding Door Assemblies: Provide assemblies complying with NFPA 80 that are identical to door assemblies tested for fire-test-response characteristics according to NFPA 252 or UL 10B, and that are listed and labeled for fire ratings indicated by UL, FMG, ITS, or another testing agency acceptable to authorities having jurisdiction.
   a. Test Pressure: Test at as close to neutral pressure as possible.
   b. Oversize Fire-Rated Sliding Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that doors comply with all standard construction requirements of tested and labeled fire-rated door assemblies except for size.
   c. Provide units with labels showing 250 deg F (139 deg C) OR 450 deg F (250 deg C) OR 650 deg F (361 deg C), as directed, temperature-rise ratings.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
1.2 PRODUCTS

A. Materials
1. Cold-Rolled Steel Sheets: ASTM A 1008/A 1008M, Commercial Steel (CS), or Drawing Steel (DS), Type B, exposed, matte finish.
2. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B, with A60 (ZF180) OR A90 (ZF275), as directed, zinc-iron-alloy (galvannealed) coating or G90 (Z275) OR G60 (Z180), as directed, zinc coating; restricted flatness.
3. Stainless-Steel Sheets: ASTM A 240/A 240M, Type 304 OR 316, as directed; stretcher-leveled standard of flatness; No. 4 satin OR 6 dull, as directed, finish.
4. Hardware and Fasteners: Manufacturer’s standard units OR Hot-dip galvanize per ASTM A 153/A 153M where items are used on galvanized steel exterior doors OR Stainless steel OR Stainless steel where indicated, as directed.

B. Sliding Metal Fire Doors
1. Overhead-Supported Doors: Provide composite OR hollow-metal OR tubular-frame, as directed, type construction fire door assemblies with wall-mounted overhead track support and the following fire-protection rating and panel facing sheet material and thickness:
2. Bottom-Support Doors: Provide bottom-support, tubular-frame-type construction fire door assemblies with floor track, top guides, and the following fire-protection rating, temperature-rise rating, and face sheet material and thickness:
   a. Fire-Protection Rating: 4 hours OR 3 hours OR 1-1/2 hours OR 3/4 hour OR As indicated, as directed.
   b. Panel Facing:
      1) Steel: 0.033-inch (0.8-mm) OR 0.043-inch (1.1-mm) OR 0.053-inch (1.35-mm) OR 0.067-inch (1.7-mm), as directed, minimum thickness.
      2) Metallic-Coated Steel: 0.040-inch (1.0-mm) OR 0.052-inch (1.3-mm) OR 0.064-inch (1.6-mm) OR 0.079-inch (2.0-mm), as directed, nominal thickness.
      3) Stainless Steel: 0.038-inch (0.96-mm) OR 0.050-inch (1.3-mm) OR 0.062-inch (1.57-mm) OR 0.078-inch (1.98-mm), as directed, nominal thickness.
3. Operating Hardware: Manufacturer’s standard, labeled, automatic-closing-type, sliding fire door assemblies complete with track, adjustable roller guides, binders, floor stops, cables, sheaves, counterweights, and fusible links. Furnish necessary hangers, fittings, and fasteners required for attaching hardware to door and for door sliding operation, including latch or handle for manual operation. Provide hot-dip galvanized steel OR electrogalvanized steel OR factory-prime-painted steel OR stainless-steel, as directed, hardware.
4. Weight Boxes: 0.064-inch (1.6-mm-) thick, metallic-coated steel counterweight boxes or guards; size as required for counterweights and clearance.
5. Crush Plates: 3/16-inch-thick by 6-inch-wide (4.8-mm-thick by 150-mm-wide), continuous steel plates on hollow concrete masonry walls.
6. Track Hood: Formed, metallic-coated steel sheet OR stainless-steel, as directed; size as required for clearance and to protect tracks on exterior installations.
7. Weather Stripping: UL-classified, brush-style weather stripping with attachments for mounting at head, jambs, and bottom surface of door.
8. Motorized Operator: UL-approved, high-starting torque, reversing motor and adjustable speed operator with thermal-overload protection. Include fusible-link release to disengage operator and to allow door to close automatically.
   a. Design operator for current characteristics of electrical service supplied. Provide UL-listed, 1/2-hp, 208- to 230-V ac, single-phase OR 208-V ac, 3-phase OR 220-V ac, 3-phase OR 480-V ac, 3-phase, as directed, 60-cycle motor with NEMA 250, Type 1 enclosure and 24-V ac, secondary control voltage.
   b. Equip door for completely automatic operation with clutch, speed reducer, brake, limit switches, electric reverse edge, brackets, bolts, and release for manual operation. Control equipment includes two pull cords OR two 3-button control stations with push buttons labeled “OPEN,” “CLOSE,” and “STOP” OR two motion detectors OR two loop detectors OR two photoelectric obstruction detectors OR time delay for closing, as directed, and electric interlock for pass door.
9. Interconnecting Device: Device for connecting fusible links for doors on both sides of wall.

10. Door Release Devices: Electromagnetic release devices compatible with smoke detectors or building's fire alarm system.

11. Fire Detection: Provide early warning, photoelectric smoke detectors or ionization detectors to be coupled to electromagnetic door release devices.

12. Pass Door: UL-listed swing door and frame.

13. Pass Door Hardware: Factory installed with one and one-half pairs of mortise spring hinges OR butt hinges and closer, as directed, and mortise latchset OR mortise lock OR exit device OR panic device, as directed.
   a. Provide hardware complying with Division 08 Section "Door Hardware".

14. Vision Panels: Factory fabricated in door with integral removable glass stops. Provide UL-approved, wired glass panels or other fire-resistive glazing product acceptable to authorities having jurisdiction; do not exceed area allowed for door rating.

C. Fabrication

1. Composite-Type Doors: Fabricate in modular panels. Bond face materials to both sides of core and reinforce perimeter with minimum 0.043-inch- (1.1-mm-) thick, internal steel channel. Encase panel edges with minimum 0.067-inch- (1.7-mm-) thick, steel channel. Back joints in face sheets with minimum 0.043-inch- (1.1-mm-) thick, steel H column. Connect panels with H column and cover plate. Attach armor edges and astragals to doors.

2. Hollow-Metal Doors: Bond face materials to both sides of core and reinforce perimeter with minimum 0.043-inch- (1.1-mm-) thick, internal steel channel. Back joints in face sheets with minimum 0.043-inch- (1.1-mm-) thick, steel H column. Weld and fill joints and grind exposed welds smooth. Attach armor edges and astragals to doors.

3. Tubular-Frame Doors: Fabricate perimeter frame and internal stiffeners of minimum 0.043-inch- (1.1-mm-) thick steel tubes. Miter corner joints in frame and weld frame and stiffener joints. Locate joints in face sheets over stiffeners. Weld and fill joints and grind exposed welds smooth. Attach armor edges and astragals to doors.

4. Core Construction: Provide core materials complying with fire-protection-rating and temperature-rise requirements.
   a. Resin-impregnated honeycomb.
   b. Mineral-fiber board.
   c. Urethane.
   d. Fiberglass.
   e. Calcium silicate.
   f. Inorganic mineral.
   g. Manufacturer's standard.

D. Steel Finishes

1. General: Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2. Preparation for Shop Priming: After galvanizing, thoroughly clean metal of grease, dirt, oil, flux, and other foreign matter, and treat with metallic-phosphate pretreatment.

3. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of sliding metal fire doors:
   a. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
   b. Interiors (SSPC Zone 1A): SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

4. Prime Finish: Immediately after cleaning and pretreating, apply manufacturer's standard rust-inhibiting primer on OR zinc-rich primer on metallic-coated, as directed, steel doors for field painting.

5. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
   a. Color and Gloss: As selected from manufacturer's full range.
1.3 EXECUTION

A. Installation
1. Install sliding metal fire doors according to NFPA 80 and manufacturer’s written instructions for type of door operation indicated and fire-protection rating required.
   a. Interface fire-detection devices with building’s fire alarm system.
2. Drill necessary holes cleanly, with no broken areas or spalls, for installation of fasteners in concrete or masonry. Remove and replace damaged masonry as directed.

B. Adjusting And Cleaning
1. Operate sliding metal fire doors on completion of installation to ensure satisfactory operation. Check moving parts for proper alignment and lubrication. Make adjustments for smooth, easy operation.
   a. Test door closing when activated by detector or alarm-connected, fire-release system. Reset door-closing mechanism after successful test.
2. Clean surfaces and refinish abraded or damaged surfaces to match factory finish.

END OF SECTION 08 11 73 00
SECTION 08 12 13 13 - STAINLESS STEEL DOORS AND FRAMES

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of stainless steel doors and frames. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Stainless-steel, hollow-metal doors and panels.
   b. Stainless-steel, hollow-metal frames.

C. Submittals
1. Product Data: For each type of product indicated. Include construction details, material descriptions, core descriptions, fire-resistance rating, temperature-rise ratings, and finishes.
2. Shop Drawings: Include the following:
   a. Elevations of each door design.
   b. Details of doors, including vertical and horizontal edge details and metal thicknesses.
   c. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   d. Locations of reinforcement and preparations for hardware.
   e. Details of each different wall opening condition.
   f. Details of anchorages, joints, field splices, and connections.
   g. Details of accessories.
   h. Details of moldings, removable stops, and glazing.
   i. Details of conduit and preparations for power, signal, and control systems.
3. Samples:
   a. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches (75 by 125 mm).
   b. Doors: Include section of vertical-edge, top, and bottom construction; core construction; glazing; and hinge and other applied hardware reinforcement.
   c. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.
4. Schedule: Provide a schedule of stainless-steel, hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with a door hardware schedule.
5. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.
6. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of stainless-steel, hollow-metal door and frame assembly.

D. Quality Assurance
1. Source Limitations: Obtain stainless-steel, hollow-metal work from single source from single manufacturer.
2. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
   a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
   b. Temperature-Rise Limit: Where indicated OR At vertical exit enclosures and exit passageways, as directed, provide doors that have a maximum transmitted temperature
end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.

3. Smoke- and Draft-Control Door Assemblies: Where indicated OR At corridors, smoke barriers, and smoke partitions, as directed, provide assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
   a. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at the tested pressure differential of 0.3-inch wg (75 Pa) of water.

4. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies that are listed and labeled, by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9. Label each individual glazed lite. Install in compliance with NFPA 80.

5. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling
1. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
2. Shipping Spreaders: Deliver welded frames with two removable spreader bars across bottom of frames, tack welded or mechanically attached to jambs and mullions.
3. Store doors and frames under cover at Project site. Place units in a vertical position with heads up, spaced by blocking, on minimum 4-inch- (100-mm-) high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber.
   a. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

F. Project Conditions
1. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

G. Coordination
1. Coordinate installation of anchorages for stainless-steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.2 PRODUCTS

A. Stainless-Steel Doors
1. Description: Stainless-steel doors, not less than 1-3/4 inches (44 mm) thick, of seamed OR seamless, as directed, hollow-metal construction. Construct doors with smooth, flush surfaces without visible joints or seams on faces.
   a. Face Sheets: Fabricate from 0.050-inch- (1.27-mm-) OR 0.062-inch- (1.59-mm-) OR 0.078-inch- (1.98-mm-), as directed, thick, stainless-steel sheet.
   b. Core Construction: Fabricate doors with core indicated.
      1) Welded Steel-Stiffened Core: 0.031-inch- (0.79-mm-) thick, stainless-steel OR 0.030-inch- (0.76-mm-) nominal thickness uncoated steel OR 0.034-inch- (0.86-mm-) nominal thickness metallic-coated steel, as directed, vertical stiffeners extending full-door height, spaced not more than 6 inches (152 mm) apart, spot welded to face sheets a maximum of 5 inches (127 mm) o.c. Fill spaces between stiffeners with mineral-fiber insulation.
      2) Laminated Core: Honeycomb of resin-impregnated kraft paper with maximum 1-inch (25.4-mm) cells or foam-plastic insulation fastened to face sheets with waterproof adhesive.
         a) Foam-Plastic Insulated Doors: Thermal-resistance value (R-value) of not less than 4.0 deg F x h x sq. ft./Btu (0.704 K x sq. m/W) OR 6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W) OR 12.3 deg F x h x sq. ft./Btu (2.166 K x sq. m/W), as directed, when tested according to ASTM C 1363.
i. Locations: Exterior doors and interior doors, where indicated.

3) Laminated Steel-Stiffened Core: 0.031-inch- (0.79-mm-) thick, stainless-steel OR 0.030-inch- (0.76-mm-) nominal thickness uncoated steel OR 0.034-inch- (0.86-mm-) nominal thickness metallic-coated steel, as directed, vertical stiffeners extending full-door height, spaced not more than 6 inches (152 mm) apart, fastened to face sheets with waterproof adhesive. Fill spaces between stiffeners with mineral-fiber insulation.

4) Fire-Rated Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

c. Vertical Edges for Single-Acting Doors: Beveled 1/8 inch in 2 inches (3 mm in 50 mm).

d. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-inch (54-mm) radius.

e. Moldings for Glazed Lites in Doors: 0.038-inch- (0.95-mm-) thick stainless steel.

f. Loose Stops for Glazed Lites in Doors: 0.038-inch- (0.95-mm-) thick stainless steel.

4) Fire-Rated Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

h. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 866 with reinforcing plates from stainless OR uncoated OR metallic-coated, as directed, steel.

i. Electrical Hardware Enclosures: Provide enclosures and junction boxes within doors for electrically operated door hardware, interconnected with UL-approved, 1/2-inch- (12.7-mm-) diameter conduit and connectors.

1) Where indicated for installation of wiring, provide access plates to junction boxes, fabricate from same material and thickness as face sheet and fasten with at least four security fasteners spaced not more than 6 inches (152 mm) o.c.

3. Materials:

a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, Type 304 OR Type 316 OR Type 317LMN OR 904L, as directed.

b. Steel Sheet: ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, Commercial Steel (CS), Type B.

c. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

d. Foam-Plastic Insulation: Manufacturer's standard polystyrene OR urethane, as directed, board insulation with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within door.

e. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

4. Stainless-Steel Finishes:

a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1) Run grain of directional finishes with long dimension of each piece.

2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

3) Directional Satin Finish: No. 4.

4) Dull Satin Finish: No. 6.

5) Mirrorlike Reflective, Nondirectional Polish: No. 8.

c. Bright, Cold-Rolled, Unpolished Finish: No. 2B. Factory primed for field finish, as directed.

B. Stainless-Steel Panels

1. Provide stainless-steel panels of same construction, materials, and finish as specified for adjoining stainless-steel doors.
C. Stainless-Steel Frames

1. Description: Fabricate stainless-steel frames of construction indicated, with faces of corners mitered and contact edges closed tight.
   a. Door Frames: Machine mitered, faces only welded OR Saw mitered and full (continuously) welded OR Machine mitered and full welded OR Knock down OR Slip on OR As indicated, as directed.
      1) Weld frames according to HMMA 820.
   b. Sidelight, Transom and Borrowed-Light Frames: Machine mitered, faces only welded OR Saw mitered and full (continuously) welded OR Machine mitered and full welded, as directed.
   c. Door Frames for Openings 48 Inches (1219 mm) Wide or Less: Fabricate from 0.062-inch- (1.59-mm-) OR 0.078-inch- (1.98-mm-) OR 0.109-inch- (2.78-mm-), as directed, thick, stainless-steel sheet.
   d. Door Frames for Openings More Than 48 Inches (1219 mm) Wide: Fabricate from 0.078-inch- (1.98-mm-) OR 0.109-inch- (2.78-mm-), as directed, thick, stainless-steel sheet.
   e. Borrowed-Light Frames: Fabricate from 0.062-inch- (1.59-mm-) OR 0.078-inch- (1.98-mm-) OR 0.109-inch- (2.78-mm-), as directed, thick, stainless-steel sheet.
   f. Sidelight and Transom Frames: Fabricate from stainless-steel sheet of same thickness as adjacent door frame.
   g. Glazing and Panel Stops: Formed integral with stainless-steel frames, minimum 5/8 inch (16 mm) high, unless otherwise indicated.
   h. Loose Stops for Glazed Lites and Panels: 0.038-inch- (0.95-mm-) thick stainless steel.
   i. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 866 with reinforcing plates from stainless OR uncoated OR metallic-coated, as directed, steel.
   j. Head Reinforcement: 0.109-inch- (2.78-mm-) thick, stainless-steel channel or angle stiffener for openings widths more than 48 inches (1219 mm).
   k. Jamb Anchors:
      1) Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.062-inch- (1.59-mm-) thick stainless steel OR 0.060-inch- (1.52-mm-) nominal thickness uncoated steel OR 0.064-inch- (1.63-mm-) nominal thickness metallic-coated steel, as directed, with corrugated or perforated straps not less than 2 inches (50 mm) wide by 10 inches (250 mm) long; or wire anchors not less than 0.156 inch (4.0 mm) thick.
      2) Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.050-inch- (1.27-mm-) thick stainless steel OR 0.048-inch- (1.21-mm-) nominal thickness uncoated steel OR 0.052-inch- (1.32-mm-) nominal thickness metallic-coated steel, as directed.
      3) Compression Type for Slip-on Frames: Fabricate adjustable compression anchors from stainless OR uncoated OR metallic-coated, as directed, steel.
      4) Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- (9.5-mm-) diameter, stainless-steel OR uncoated steel OR metallic-coated steel, as directed, bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
   l. Floor Anchors: Not less than 0.078-inch- (1.98-mm-) thick stainless steel OR 0.075-inch- (1.90-mm-) nominal thickness uncoated steel OR 0.079-inch- (2.01-mm-) nominal thickness metallic-coated steel, as directed, and as follows:
      1) Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
      2) Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch (50-mm) height adjustment. Terminate bottom of frames at finish floor surface.
   m. Ceiling Struts: Minimum 3/8-inch-thick by 2-inch- (9.5-mm-thick by 50-mm-) wide from stainless OR uncoated OR metallic-coated, as directed, steel.
   n. Plaster Guards: Not less than 0.019-inch- (0.48-mm-) thick stainless steel OR 0.018-inch- (0.46-mm-) nominal thickness uncoated steel OR 0.022-inch- (0.56-mm-) nominal thickness metallic-coated steel, as directed.

3. Materials:
a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, Type 304 OR Type 316 OR Type 317LMN OR 904L, as directed.
b. Steel Sheet: ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, Commercial Steel (CS), Type B.
c. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
d. Frame Anchors: Stainless-steel sheet. Same type as door face.
   OR
   Frame Anchors: Steel sheet OR Metallic-coated steel sheet, as directed, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
e. Inserts, Bolts, and Anchor Fasteners: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2 (ASTM F 738M and ASTM F 836M, Alloy Group 1 or 4) for bolts and nuts.
   OR
   Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

4. Finishes:
   a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
      1) Run grain of directional finishes with long dimension of each piece.
      2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
      3) Directional Satin Finish: No. 4.
      4) Dull Satin Finish: No. 6.
      5) Mirrorlike Reflective, Nondirectional Polish: No. 8.
   c. Bright, Cold-Rolled, Unpolished Finish: No. 2B. Factory primed for field finish, as directed.

D. Accessories
   1. Glazing: Comply with requirements in Division 08 Section “Glazing”.
   2. Grout: Comply with ASTM C 476, with a slump of not more than 4 inches (102 mm) as measured according to ASTM C 143/C 143M.
   3. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

E. Fabrication
   1. Stainless-Steel Door Fabrication: Stainless-steel doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
      a. Seamed Edge Construction: Both vertical door edges joined by visible, continuous interlocking seam (lock seam) full height of door.
         OR
         Seamed Edge Construction: Both vertical door edges joined by visible seam that is projection, spot, or tack welded on inside edges of door at minimum 6 inches (152 mm) o.c.
      b. Seamless Edge Construction: Door face sheets joined at vertical edges by continuous weld extending full height of door; with edges ground and polished, providing smooth, flush surfaces with no visible seams.
      c. Exterior Doors: Close top edges flush and seal joints against water penetration. Provide weep-hole openings in bottom of exterior doors to permit moisture to escape.
      d. Stops and Moldings: Factory cut openings in doors. Provide stops and moldings around glazed lites. Form corners of stops and moldings with butted or mitered hairline joints.
         1) Glazed Lites: Provide fixed stops and moldings welded on secure side of door.
2) Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

e. Hardware Preparation: Factory prepare stainless-steel doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Division 8 Section "Door Hardware".

1) Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.

f. Locate hardware as indicated, or if not indicated, according to HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."

g. Tolerances: Fabricate doors to tolerances indicated in ANSI/NAAMM-HMMA 866.

2. Stainless-Steel Frame Fabrication: Fabricate stainless-steel frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

a. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.

b. Mullions, Rails and Transom Bars: Provide closed tubular members with no visible face seams or joints. Fasten members at crossings and to jambs by butt welding according to joint designs in HMMA 820.

1) Provide false head member to receive lower ceiling where frames extend to finish ceilings of different heights.

c. Provide countersunk, flat-, or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

d. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.

e. Jamb Anchors: Provide number and spacing of anchors as follows:

1) Masonry Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:

   a) Two anchors per jamb up to 60 inches (1524 mm) in height.
   b) Three anchors per jamb from 60 to 90 inches (1524 to 2286 mm) in height.
   c) Four anchors per jamb from 90 to 96 inches (2286 to 2438 mm) in height.
   d) Four anchors per jamb plus one additional anchor per jamb for each 24 inches (610 mm) or fraction thereof more than 96 inches (2438 mm) in height.

2) Stud-Wall Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:

   a) Three anchors per jamb up to 60 inches (1524 mm) in height.
   b) Four anchors per jamb from 60 to 90 inches (1524 to 2286 mm) in height.
   c) Five anchors per jamb from 90 to 96 inches (2286 to 2438 mm) in height.
   d) Five anchors per jamb plus one additional anchor per jamb for each 24 inches (610 mm) or fraction thereof more than 96 inches (2438 mm) in height.
   e) Two anchors per head for frames more than 42 inches (1066 mm) wide and mounted in metal-stud partitions.

3) Compression Type: Not less than two anchors in each jamb.

4) Postinstalled Expansion Type: Locate anchors not more than 6 inches (152 mm) from top and bottom of frame. Space anchors not more than 26 inches (660 mm) o.c.

f. Head Reinforcement: For frames more than 48 inches (1219 mm) wide, provide continuous head reinforcement for full width of opening, welded to back of frame at head.

g. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Provide plastic plugs to keep holes clear during construction.

1) Single-Door Frames: Drill stop in strike jamb to receive three door silencers.

2) Double-Door Frames: Drill stop in head jamb to receive two door silencers.
h. Stops and Moldings: Provide stops and moldings around glazed lites and solid panels where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
   1) Single Glazed Lites: Provide fixed stops and moldings welded on secure side of door or frame.
   2) Multiple Glazed Lites: Provide fixed and removable stops and moldings such that each lite is capable of being removed independently.
   3) Coordinate rabbet width between fixed and removable stops with type of glazing or panel and type of installation indicated.
   4) Terminated Stops: Where indicated for interior door frames, terminate stops 6 inches (152 mm) above finish floor with a 45 or 90-degree angle cut, and close open end of stop with stainless-steel sheet closure. Cover opening in extension of frame with welded-stainless-steel filler plate, with welds ground smooth and flush with frame.

i. Hardware Preparation: Factory prepare stainless-steel frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware (scheduled By Describing Products)".
   1) Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
   2) Locate hardware as indicated, or if not indicated, according to HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."

j. Plaster Guards: Weld guards to frame at back of hardware mortises and mounting holes in frames to be grouted.

k. Tolerances: Fabricate frames to tolerances indicated in ANSI/NAAMM-HMMA 866.

1.3 EXECUTION

A. Examination
   1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stainless-steel doors and frames.
   2. Examine roughing-in for embedded and built-in anchors to verify actual locations of stainless-steel, door-frame connections before frame installation.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation
   1. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
   2. Prior to installation and with installation spreaders in place, adjust and securely brace stainless-steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
      a. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
      b. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
      c. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
      d. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a perpendicular line from head to floor.
   3. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

C. Installation
   1. General: Install stainless-steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with ANSI/NAAMM-HMMA 866 and manufacturer's written instructions.
   2. Stainless-Steel Frames: Install stainless-steel frames of size and profile indicated.
a. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
   1) At fire-protection-rated openings, install frames according to NFPA 80.
   2) Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
   3) Install frames with removable glazing stops located on secure side of opening.
   4) Install door silencers in frames before grouting.
   5) Remove temporary braces necessary for installation only after frames have been properly set and secured.
   6) Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
   7) Apply corrosion-resistant coating to backs of grout-filled frames.

b. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with postinstalled expansion anchors.
   1) Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors, if so indicated and approved on Shop Drawings.

d. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

e. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

f. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.

g. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.

h. Installation Tolerances: Adjust stainless-steel frames for squareness, alignment, twist, and plumb to the following tolerances:
   1) Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2) Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
   3) Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4) Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs at floor.

3. Stainless-Steel Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
   a. Non-Fire-Rated Doors:
      1) Jambs and Head: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      2) Between Edges of Pairs of Doors: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      3) Between Bottom of Door and Top of Threshold: Maximum 3/8 inch (9.5 mm).
      4) Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch (19 mm).
   b. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
   c. Smoke-Control Doors: Install doors according to NFPA 105.

4. Glazing: Install glazing in sidelights, transoms, and borrowed lights to comply with installation requirements in Division 08 Section "Glazing".
   a. Secure stops with countersunk, flat-, or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c., and not more than 2 inches (50 mm) o.c. from each corner.
D. Adjusting And Cleaning

1. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work including stainless-steel doors or frames that are warped, bowed, or otherwise unacceptable.

2. Clean grout and other bonding material off stainless-steel doors and frames immediately after installation.

3. Stainless-Steel Touchup: Immediately after erection, smooth any abraded areas of stainless steel and polish to match undamaged finish.

SECTION 08 14 16 00 - STILE AND RAIL WOOD DOORS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for stile and rail wood doors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Exterior stile and rail wood doors and sidelites.
   b. Interior stile and rail wood doors.
   c. Interior fire-rated, stile and rail wood doors.
   d. Interior fire-rated, wood door and sidelite frames.
   e. Priming and Finishing stile and rail wood doors.
   f. Fitting stile and rail wood doors to frames and machining for hardware.
   g. Prehanging doors in frames.

C. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittals:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood used for stile and rail wood doors complies with forest certification requirements.
      1) Include statement indicating costs for each certified wood product.
   b. Product Data for Credit EQ 4.4: For adhesives and composite wood materials, documentation indicating that products contain no urea formaldehyde.
3. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and other pertinent data.
4. Samples: Representing typical range of color and grain for each species of veneer and solid lumber required. Finish Sample with same materials proposed for factory-finished doors.

D. Quality Assurance
1. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
2. Forest Certification: Provide doors made with veneers OR all wood products, as directed, obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
3. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure OR as close to neutral pressure as possible, as directed, according to NFPA 252 OR IBC Standard 716.5 OR UL 10B OR UL 10C, as directed.
   a. Temperature-Rise Limit: Where indicated OR At vertical exit enclosures and exit passageways, as directed, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
4. Safety Glass: Provide products complying with testing requirements in 16 CFR 1201, for Category II materials, unless those of Category I are expressly indicated and permitted.

E. Delivery, Storage, And Handling
1. Comply with manufacturer’s written instructions and requirements of quality standard referenced in Part 1.2.
2. Package doors individually in opaque plastic bags or cardboard cartons.
3. Mark each door on top and bottom edge with opening number used on Shop Drawings.

F. Warranty
1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship, or have warped (bow, cup, or twist) more than 1/4 inch (6.4 mm) in a 42-by-84-inch (1067-by-2134-mm) section.
   a. Warranty shall be in effect during the following period of time from date of Final Completion:
      1) Exterior Doors: None OR One year OR Two years OR Five years, as directed.
      2) Interior Doors: One year OR Five years OR Life of installation, as directed.
      3) Insulated OR Insulating Leaded, as directed, Glass Vision Panels: Three OR Five, as directed, years.

1.2 PRODUCTS

A. Materials
1. General: Use only materials that comply with referenced standards and other requirements specified.
   a. Assemble exterior doors and sidelites, including components, with wet-use adhesives complying with ASTM D 5572 for finger joints and with ASTM D 5751 for joints other than finger joints.
   b. Assemble interior doors, frames, and sidelites, including components, with either dry-use or wet-use adhesives complying with ASTM D 5572 for finger joints and with ASTM D 5751 for joints other than finger joints.

2. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea-formaldehyde resins.

3. Panel Products: Any of the following:
   a. Particleboard made from wood particles, with binder containing no urea-formaldehyde resin, complying with ANSI A208.1, Grade M-2. OR Particleboard made from straw, complying with ANSI A208.1, Grade M-2, except for density.
   b. Medium-density fiberboard made from wood fiber, with binder containing no urea-formaldehyde resin, complying with ANSI A208.2, Grade 130.
   c. Hardboard, complying with AHA A135.4.
   d. Veneer core plywood, made with adhesive containing no urea-formaldehyde resin.

B. Exterior Stile And Rail Wood Doors
   a. Finish and Grade: Transparent and Premium or Select OR Opaque and Standard, as directed.
   b. Wood Species: Idaho white, lodgepole, ponderosa, or sugar pine OR Manufacturer's standard softwood species and cut, as directed.
   c. Stile and Rail Construction: Edge-glued solid lumber OR veneered, structural composite lumber OR veneered edge- and end-glued lumber, as directed.
   d. Panel Construction: Edge-glued solid lumber OR veneered panel product, as directed.
   e. Raised-Panel Thickness: Manufacturer's standard, but not less than that required by WDMA I.S.6 for design group indicated OR As indicated, as directed.
   f. Molding Profile (Sticking): Manufacturer's standard OR As selected from manufacturer's full range, as directed.
   g. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick OR laminated glass made from two lites of 3.0-mm-thick annealed glass OR insulating-glass units made from two lites of 3.0-mm-thick, fully tempered glass with 1/4-inch (6.4-mm) interspace, as directed, complying with Division 08 Section "Glazing".
h. WDMA Design Group: 1-3/4 Front Entrance Doors (Exterior) OR 1-3/4 Thermal (Insulated-Glass) Doors (Exterior) OR 8'-0" High Doors OR Side Lights OR 1-3/4 and 1-3/8 Entrance Doors (Exterior) OR Combination Doors OR Screen Doors, as directed.

i. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6 and grade specified. Include panel design number if applicable.

i. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6 and grade specified. Include panel design number if applicable.

a. Panel Designs: Indicated by Drawings. Do not modify intended aesthetic effects, as judged solely by the Owner, except with the Owner's approval. If modifications are proposed, submit comprehensive explanatory data to the Owner for review.

b. Grade: Premium OR Custom, as directed.

c. Finish: Transparent OR Opaque, as directed.

d. Wood Species and Cut for Transparent Finish: Idaho white, lodgepole, ponderosa, or sugar pine, plain sawed/sliced OR Douglas fir or western hemlock, quarter sawed/sliced (vertical grain) OR Red oak, quarter sawed/sliced stiles and rails, plain sawed/sliced panels OR Species indicated in schedule, plain sawed/sliced, as directed.

e. Door Construction for Transparent Finish:
   1) Stile and Rail Construction:
      a) Clear lumber; may be edge glued for width. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
      OR
      Veneered, structural composite lumber or veneered, edge- and end-glued clear lumber, as directed. Select veneers for similarity of grain and color, and arrange for optimum match between adjacent pieces. Use veneers not less than 1/16 inch (1.6 mm) thick, as directed.

   2) Raised-Panel Construction:
      a) Clear lumber; edge glued for width. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
      OR
      Edge-glued, clear lumber; glued to both sides of a wood-based panel product. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
      OR
      Veneered, wood-based panel product with mitered, raised rims made from matching clear lumber.
      OR
      Veneered, shaped, wood-based panel product with veneer conforming to raised-panel shape.

f. Door Construction for Opaque Finish:
   1) Stile and Rail Construction: Clear softwood; may be edge glued for width and finger jointed.
   OR
   Stile and Rail Construction: Veneered, structural composite lumber or veneered edge- and end-glued lumber, as directed.

   2) Raised-Panel Construction: Clear softwood lumber; edge glued for width.
   OR
   Raised-Panel Construction: Veneered, wood-based panel product.

g. Stile and Rail Widths: As indicated OR Manufacturer's standard, but not less than the following, as directed:
   1) Stiles, Top and Intermediate Rails: 5-3/8 inches (137 mm).
   2) Bottom Rails: 11-3/8 inches (289 mm).

h. Raised-Panel Thickness: As indicated OR 1-3/4 inches (44 mm) OR 1-3/8 inches (35 mm)
   OR Manufacturer's standard, but not less than 1-1/8 inches (29 mm), as directed.

i. Molding Profile (Sticking): Bead and cove OR Ogee OR Ovalo OR Recessed bevel OR
   Recessed square OR Manufacturer's standard OR As selected from manufacturer's full range, as directed.
j. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick OR laminated glass made from two lites of 3.0-mm-thick annealed glass OR insulating-glass units made from two lites of 3.0-mm-thick, fully tempered glass with 1/4-inch (6.4-mm) interspace, as directed, complying with Division 08 Section "Glazing".

k. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.

OR

Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.

l. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6A and grade specified.

C. Interior Stile And Rail Wood Doors

1. Interior Stile and Rail Wood Doors: Stock interior doors complying with WDMA I.S.6, "Industry Standard for Wood Stile and Rail Doors," and with other requirements specified.
   a. Finish and Grade: Transparent and Premium or Select OR Opaque and Standard, as directed.
   b. Wood Species: Idaho white, lodgepole, ponderosa, or sugar pine OR Douglas fir or western hemlock, vertical sawed/sliced OR Red oak, quarter sawed/sliced OR Manufacturer's standard softwood species and cut, as directed.
   c. Stile and Rail Construction: Edge-glued solid lumber OR veneered, structural composite lumber OR veneered edge- and end-glued lumber, as directed.
   d. Raised-Panel Construction: Edge-glued solid lumber OR Veneered panel product OR shaped, medium-density fiberboard, as directed.
   e. Flat-Panel Construction: Veneered panel product OR hardboard or medium-density fiberboard, as directed.
   f. Raised-Panel Thickness: Manufacturer's standard, but not less than that required by WDMA I.S.6 for design group indicated OR As indicated, as directed.
   g. Flat-Panel Thickness: Manufacturer's standard, but not less than that required by WDMA I.S.6 for design group indicated OR As indicated, as directed.
   h. Molding Profile (Sticking): Manufacturer's standard OR As selected from manufacturer's full range, as directed.
   i. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick OR laminated glass made from two lites of 3.0-mm-thick annealed glass, as directed, complying with Division 08 Section "Glazing".
   j. WDMA Design Group: 1-3/8 Interior Panel Doors OR French Doors OR 8'-0" High Doors OR Bifold Doors, as directed.
   k. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6 and grade specified. Include panel design number if applicable.

   a. Panel Designs: Indicated by Drawings. Do not modify intended aesthetic effects, as judged solely by the Owner, except with the Owner's approval. If modifications are proposed, submit comprehensive explanatory data to the Owner for review.
   b. Grade: Premium OR Custom, as directed.
   c. Finish: Transparent OR Opaque, as directed.
   d. Wood Species and Cut for Transparent Finish: Idaho white, lodgepole, ponderosa, or sugar pine, plain sawed/sliced OR Douglas fir or western hemlock, quarter sawed/sliced (vertical grain) OR Red oak, quarter sawed/sliced stiles and rails, plain sawed/sliced panels OR Species indicated in schedule, plain sawed/sliced, as directed.
   e. Door Construction for Transparent Finish:
      1) Stile and Rail Construction: Clear lumber; may be edge glued for width. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
      OR
Stile and Rail Construction: Veneered, structural composite lumber OR veneered, edge- and end-glued clear lumber, as directed. Select veneers for similarity of grain and color, and arrange for optimum match between adjacent pieces. Use veneers not less than 1/16 inch (1.6 mm) thick, as directed.

2) Raised-Panel Construction: Clear lumber; edge glued for width. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
   OR
   Raised-Panel Construction: Edge-glued, clear lumber; glued to both sides of a wood-based panel product. Select lumber for similarity of grain and color, and arrange for optimum match between adjacent pieces.
   OR
   Raised-Panel Construction: Veneered, wood-based panel product with mitered, raised rims made from matching clear lumber.
   OR
   Raised-Panel Construction: Veneered, shaped, wood-based panel product with veneer conforming to raised-panel shape.

3) Flat-Panel Construction: Veneered, wood-based panel product.

f. Door Construction for Opaque Finish:
   1) Stile and Rail Construction: Clear softwood; may be edge glued for width and finger jointed.
      OR
      Stile and Rail Construction: Veneered, structural composite lumber OR veneered edge- and end-glued lumber, as directed.
   2) Raised-Panel Construction: Clear softwood lumber; edge glued for width.
      OR
      Raised-Panel Construction: Shaped, medium-density fiberboard.
   3) Flat-Panel Construction: Veneered, wood-based panel product OR Medium-density fiberboard, as directed.

g. Stile and Rail Widths: As indicated OR Manufacturer's standard, but not less than the following, as directed:
   1) Stiles, Top and Intermediate Rails: 4-1/2 inches (114 mm).
   2) Bottom Rails: 9 inches (229 mm).

h. Raised-Panel Thickness: As indicated OR 1-3/4 inches (44 mm) OR 1-3/8 inches (35 mm)
   OR Manufacturer's standard, but not less than 1-1/8 inches (29 mm) OR Manufacturer's standard, but not less than 3/4 inch (19 mm), as directed.

i. Flat-Panel Thickness: As indicated OR 1/2 inch (13 mm) OR 3/8 inch (10 mm) OR 1/4 inch (6.4 mm), as directed.

j. Molding Profile (Sticking): Bead and cove OR Ogee OR Ovalo OR Recessed bevel OR Recessed square OR Manufacturer's standard OR As selected from manufacturer's full range, as directed.

k. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick OR laminated glass made from two lites of 3.0-mm-thick annealed glass, as directed, complying with Division 08 Section "Glazing".

l. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
   OR
   Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.

m. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6A and grade specified.

   a. Panel Designs: Indicated by Drawings. Do not modify intended aesthetic effects, as judged solely by the Owner, except with the Owner's approval. If modifications are proposed, submit comprehensive explanatory data to the Owner for review.
b. Grade: Premium OR Custom, as directed.
c. Finish: Transparent OR Opaque, as directed.
d. Wood Species and Cut for Transparent Finish: Idaho white, lodgepole, ponderosa, or sugar pine, plain sawed/sliced OR Douglas fir or western hemlock, quarter sawed/sliced (vertical grain) OR Red oak, quarter sawed/sliced stiles and rails, plain sawed/sliced panels OR Species indicated in schedule, plain sawed/sliced, as directed.
e. Door Construction for Transparent Finish: 1-3/4-inch- (44-mm-) thick stiles and rails and veneered flat panels not less than 5/8 inch (16 mm) thick OR raised panels not less than 1-1/8 inches (29 mm) thick, as directed.
   1) Stile and Rail Construction: Veneered, structural composite lumber OR veneered, edge- and end-glued clear lumber, as directed. Select veneers for similarity of grain and color, and arrange for optimum match between adjacent pieces. Use veneers not less than 1/16 inch (1.6 mm) thick, as directed.
   2) Raised-Panel Construction: Veneered, shaped, wood-based panel product with veneer conforming to raised-panel shape.
   3) Flat-Panel Construction: Veneered, wood-based panel product.
   f. Door Construction for Opaque Finish: 1-3/4-inch- (44-mm-) thick stiles and rails and veneered flat panels not less than 5/8 inch (16 mm) thick OR raised panels not less than 1-1/8 inches (29 mm) thick, as directed.
   1) Stile and Rail Construction: Veneered, structural composite lumber OR veneered edge- and end-glued lumber, as directed.
   2) Raised-Panel Construction: Shaped, medium-density fiberboard.
   3) Flat-Panel Construction: Veneered, wood-based panel product OR Medium-density fiberboard, as directed.
   g. Stile and Rail Widths: As indicated OR Manufacturer's standard, but not less than the following, as directed:
      1) Stiles, Top and Intermediate Rails: 4-1/2 inches (114 mm).
      2) Bottom Rails: 9 inches (229 mm).
   h. Molding Profile (Sticking): Bead and cove OR Ogee OR Ovalo OR Recessed bevel OR Recessed square OR Manufacturer's standard OR As selected from manufacturer's full range, as directed.
   i. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
      OR
      Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.
   j. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6A and grade specified.
   a. Panel Designs: Indicate by Drawings. Do not modify intended aesthetic effects, as judged solely by the Owner, except with the Owner's approval. If modifications are proposed, submit comprehensive explanatory data to the Owner for review.
   b. Grade: Premium OR Custom, as directed.
   c. Finish: Transparent OR Opaque, as directed.
   d. Wood Species and Cut for Transparent Finish: Idaho white, lodgepole, ponderosa, or sugar pine, plain sawed/sliced OR Douglas fir or western hemlock, quarter sawed/sliced (vertical grain) OR Red oak, quarter sawed/sliced stiles and rails, plain sawed/sliced panels OR Species indicated in schedule, plain sawed/sliced, as directed.
   e. Interior Fire-Rated Door Construction: 1-3/4-inch- (44-mm-) thick, edged and veneered mineral-core stiles and rails and 1-1/8-inch- (29-mm-) thick, veneered mineral-core raised panels.
   f. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
1) Screw-Holding Capability:  550 lbf (2440 N) OR 475 lbf (2110 N) OR 400 lbf (1780 N), as directed, per NWWDA T.M.-10.

g. Stile and Rail Widths:  As indicated OR Manufacturer's standard, but not less than the following, as directed:
   1) Stiles, Top and Intermediate Rails:  4-1/2 inches (114 mm).
   2) Bottom Rails:  9 inches (229 mm).

h. Molding Profile (Sticking):  Bead and cove OR Ogee OR Ovalo OR Recessed bevel OR Recessed square OR Manufacturer's standard OR As selected from manufacturer's full range, as directed.

i. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.

   OR

   Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.

D. Interior Fire-Rated Wood Door Frames
1. Interior Fire-Rated Wood Door Frames:  Frames, complete with casings OR sidelite frames and casings, as directed, fabricated from solid fire retardant-treated wood or from veneered fire-retardant particleboard, fire-retardant medium density fiberboard, or mineral board.

2. Species:  Red oak OR White oak OR White maple OR Cherry, as directed.

E. Stile And Rail Wood Door Fabrication
1. Fabricate stile and rail wood doors in sizes indicated for field fitting.

2. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels unless otherwise indicated:
   a. Clearances:  Provide 1/8 inch (3 mm) at heads, jambs, and between pairs of doors. Provide 1/2 inch (13 mm) from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide not more than 3/8 inch (10 mm) from bottom of door to top of threshold.
      1) Comply with NFPA 80 for fire-rated doors.
   b. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.
   c. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) on lock edge; trim stiles and rails only to extent permitted by labeling agency.

3. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W Series standards, and hardware templates.

4. Glazed Openings:  Trim openings indicated for glazing with solid wood moldings, with one side removable. Miter wood moldings at corner joints.

   OR

   Glazed Openings:  Glaze doors at factory with glass of type and thickness indicated, complying with Division 08 Section "Glazing". Install glass using manufacturer's standard elastomeric glazing sealant complying with ASTM C 920. Secure glass in place with removable wood moldings. Miter wood moldings at corner joints.

5. Transom and Side Panels:  Fabricate panels to match adjoining doors in materials, finish, and quality of construction.

7. Prehung Doors:  Provide stile and rail doors as prehung units including doors, frames, weather stripping, as directed, and hardware.
   a. Provide wood door frames, other than fire-rated wood door frames, that comply with Division 06 Section(s) "Interior Finish Carpentry" OR "Interior Architectural Woodwork", as directed.
   b. Provide hardware, including weather stripping and thresholds, that complies with Division 08 Section "Door Hardware".

F. Shop Priming
1. Doors for Opaque Finish: Shop prime doors with one coat of wood primer specified in Division 09 Section(s) "Exterior Painting" OR "Interior Painting", as directed. Seal all four edges, edges of cutouts, and mortises with primer.

2. Doors for Transparent Finish: Shop prime doors with stain (if required), other required pretreatments, and first coat of finish as specified in Division 09 Section "Staining And Transparent Finishing". Seal all four edges, edges of cutouts, and mortises with first coat of finish.

G. Finishing

1. Finish wood doors at factory OR woodworking shop, as directed.

OR
Finish wood doors at factory OR woodworking shop, as directed, that are indicated to receive transparent finish. Wood doors that are indicated to receive opaque finish may be field finished.

OR
Finish wood doors at factory OR woodworking shop, as directed, where indicated in schedules or on Drawings. Wood doors that are not indicated to be factory OR shop, as directed, finished may be field finished.

2. For doors indicated to be factory OR shop, as directed, finished, comply with AWI's "Architectural Woodwork Quality Standards," OR WI's "Manual of Millwork," OR WDMA I.S.6A, "Industry Standard for Architectural Stile and Rail Doors," as directed, and with other requirements specified.

a. Finish faces and all four edges of doors, including mortises and cutouts. Stains and fillers may be omitted on bottom OR top and bottom, as directed, edges, edges of cutouts, and mortises.

3. Transparent Finish:

a. Grade: Premium OR Custom, as directed.

b. Finish: AWI conversion varnish OR AWI catalyzed polyurethane, as directed, system.

OR
Finish: WDMA TR-4 conversion varnish OR WDMA TR-6 catalyzed polyurethane, as directed.

OR
Finish: WI System 4 clear conversion varnish OR WI System 5 catalyzed polyurethane OR WI System 8 UV-curable coating, as directed.

c. Staining: Match sample OR As selected from manufacturer's full range OR None required, as directed.

d. Effect: Open-grain finish OR Filled finish OR Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores, as directed.

e. Sheen: Satin OR Semigloss, as directed.

4. Opaque Finish:

a. Grade: Premium OR Custom, as directed.

b. Finish: AWI conversion varnish OR AWI catalyzed polyurethane, as directed, system.

OR
Finish: WDMA OP-4 conversion varnish OR WDMA OP-6 catalyzed polyurethane, as directed.

OR
Finish: WI System 4 conversion varnish OR WI System 5 catalyzed polyurethane OR WI System 8 UV-curable coating, as directed.

c. Color: Match sample OR As selected from manufacturer's full range, as directed.

d. Sheen: Satin OR Semigloss OR Gloss, as directed.

1.3 EXECUTION

A. Installation

1. Install fire-rated wood door frames level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.

a. Countersink fasteners, fill surface flush, and sand smooth.

2. Hardware: For installation, see Division 08 Section "Door Hardware".
   a. Provide WI-Certified Compliance Certificate for Installation.
   b. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.

4. Field-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted with fire-rated doors. Machine doors for hardware. Seal cut surfaces after fitting and machining.
   a. Clearances: Provide 1/8 inch (3 mm) at heads, jambs, and between pairs of doors. Provide 1/8 inch (3 mm) OR 1/4 inch (6 mm) OR 3/8 inch (10 mm) OR 1/2 inch (13 mm), as directed, from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide 1/4 inch (6 mm) OR 3/8 inch (10 mm), as directed, from bottom of door to top of threshold.
      1) Comply with NFPA 80 for fire-rated doors.
   b. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.
   c. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) on lock edge; trim stiles and rails only to extent permitted by labeling agency.

5. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
6. Factory-Finished OR Shop-Finished, as directed, Doors: Restore finish before installation if fitting or machining is required at Project site.

B. Adjusting
1. Operation: Rehang or replace doors that do not swing or operate freely.
2. Finished Doors: Replace doors that are damaged or do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

SECTION 08 16 13 00 - STEEL ENTRY DOORS

1.1 DESCRIPTION OF WORK

A. This specification covers the furnishing and installation of materials for steel entry doors. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 GENERAL

A. Definitions
1. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by the Owner.

B. System Description
1. Door Assemblies: Include doors, frames, and hardware
   a. Provide with fire rating as indicated or specified.
   b. Door and Frame Assemblies: Comply with dimensional requirements of SDI 100.
   c. Exterior Doors: Sealed, weatherstripped and provided with thresholds.
2. Insulated Entry Door System (Assembly) Performance Requirements:
   a. Mechanical Properties: Comply with ANSI/SDI A151.1, Level C (250,000 cycles).
   b. Air Infiltration: ANSI/ISDSI 101 and ASTM E 283, not exceed 0.029 cu m/s/mm (0.20 CFM/foot) of crack length at test pressure of 75 Pa (1.57 PSF).
   c. Water Resistance: ANSI/ISDSI 104 and ASTM E 331, no leakage at test pressure of 75 Pa (1.57 PSF).
   d. Thermal Performance: ANSI/ISDSI 107, minimum acceptance criteria as defined in standard except U-Value of 1.42 W/sq. m C (0.25 BTU/HR/SF degree F).
3. Hollow Core Heavy Duty System (Assembly) Performance Requirements:
   a. Mechanical Properties: Comply with ANSI/SDI A151.1, Level B (500,000 cycles).
   b. Air Infiltration: SDI 116 and ASTM E 283, not exceed 0.072 cu m/s/mm (0.50 CFM/foot) of crack length at test pressure of 75 Pa (1.57 PSF).
   c. Water Resistance: ASTM E 331, no leakage at test pressure of 75 Pa (1.57 PSF).
4. Insulated Heavy Duty Door System (Assembly) Performance Requirements:
   a. Mechanical Properties: Comply with ANSI/SDI A151.1, Level B (500,000 cycles).
   b. Air Infiltration: ANSI/ISDSI 101/ASTM E 283, not exceed 0.029 cu m/s/mm (0.20 CFM/foot) of crack length at test pressure of 75 Pa (1.57 PSF).
   c. Water Resistance: ANSI/ISDSI 104 and ASTM E 331, no leakage at test pressure of 75 Pa (1.57 PSF).
   d. Thermal Performance: ANSI/ISDSI 107, minimum acceptance criteria as defined in standard except U-Value of 1.42 W/sq. m C (0.25 BTU/HR/SF degree F) is required.
5. Security Door System (Assembly) Performance Requirements:
   a. Mechanical Properties: Comply with ANSI/SDI A151.1, Level A (1,000,000 cycles).
   b. Air Infiltration: SDI 116 and ASTM E 283, not exceed 0.72 cu m/s/mm (0.50 CFM/foot) of crack length at test pressure of 75 Pa (1.57 PSF).
   c. Water Resistance: ASTM E 331, no leakage at test pressure of 75 Pa (1.57 PSF).
   d. Forced Entry: ASTM F 476, Grade 40.

C. Submittals
1. Product Data.
2. **Shop Drawings:**
   a. Include details showing recommendations for installation of doors. Include size of fasteners, spacing, minimum penetration of fasteners into load-bearing material and maximum clearance between frame and rough opening.
3. **Samples:** Submit full set of finish color samples for color selection.
   a. For Supply and Deliver Only Contract: Submit one full size sample of each type of steel entry door with specified finish for acceptance.
4. **Quality Assurance/Control Submittals:**
   a. Test Reports: Results of testing by accredited independent laboratory demonstrating compliance of door systems with specified performance requirements.
      1) Indicate that tests were performed in accordance with standard referenced.
      2) Weak Link Testing. Submit reports for each model door in its weakest condition in order to quality superior variations of same model.
   b. Certificates: Manufacturer's written certification that door systems meet or exceed specified requirements.
   c. Manufacturer's installation instructions.
5. **Closeout Submittals:**
   a. Operation and maintenance data.
   b. Special warranty.

D. **Quality Assurance**
1. **Regulatory Requirements:** Comply with following:
   a. Fire Rated Label: Determined using ASTM E 152 and bear label of UL or other recognized fire rating program.
   c. Accessibility:
      a) Uniform Federal Accessibility Standards (UFAS).
      2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
      3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).
   2. **Certifications:**
      a. Door Systems: Meet or exceed performance requirements and other requirements specified and be labeled under HUD accepted Materials Releases.
      b. Some Material Releases (MR) do not include all of performance requirements specified. Therefore, additional testing, certification may be required for submission with HUD Material Releases.
      1) Material Releases are part of HUD Technical Suitability of Building Products Program. Contact: Department of Housing and Urban Development, Manufactured Housing and Construction Standards, 451 7th Street, SW, Washington, D.C. 20410-8000.
   3. **Mock-ups:** Install one mock-up of each type of entry door system including doors, frames, hardware, weatherstripping, thresholds, and accessories.
      a. Location: As directed.
      b. Approved Mock-up: Standard for rest of work.
      c. Approved Mock-up: May remain part of completed project.

E. **Delivery, Storage, And Handling**
1. **Packing, Shipping, Handling, and Unloading:** Pack materials at manufacturing plant to prevent damage during shipping.
2. **Acceptance at Site:** Inspect door systems upon delivery. Replace damaged or defective materials before installation.

F. **Project Conditions**
1. Field Measurements: Field measure openings for door systems before start of fabrication.

G. Scheduling And Sequencing
1. Scheduling and Completion: Comply with requirements of Detailed Scope of Work.

H. Warranty
1. Special Warranty: Provide one year written warranty covering materials and installation for steel entry doors.
   a. Warranty: Include coverage of hardware.
      1) Glazing not included.
      2) Defects resulting from vandalism not included.
   b. For Supply and Delivery Only Contract:
      1) Contractor: Agrees to supply and deliver to the Owner, free of charge, any required replacement parts that can be readily installed by the Owner without special tools.
      2) Contractor: Agrees to supply and deliver free of charge, complete replacement door, when defective part or parts cannot be installed without use of special tools.
   c. For Supply and Install Contract:
      1) Contractor: Agrees to supply and install, free of charge, any required replacement parts or complete replacement door.

1.3 PRODUCTS

A. Doors
1. Doors: Consist of two steel face sheets, wood or steel stiles and rails with full support lock reinforcement.
   a. Thickness: Nominal 44.4 mm (1-3/4 inch)
   b. Steel Face: Minimum of 24 gage (0.57 mm) galvanized and bonderized steel.
   c. Wood Stiles and Rails: Kiln dried clear Ponderosa Pine, Douglas Fir, or equal.
   d. Embossed Designs: Emboss 24 gage (0.57 mm) doors and 18 gage (1.07 mm) doors to achieve scheduled or indicated designs.
2. Hollow Core Heavy Duty Doors: Fabricated of 18 gage (1.07 mm) minimum steel face sheets, stiles, top and bottom closures.
   a. Comply with Performance Requirements in this Section.
   b. Fire Rating: When required, provide B Label, 1-1/2 hour fire rating.
3. Insulated Heavy Duty Doors: Fabricated of 18 gage (1.07 mm) minimum steel face sheets, stiles, top and bottom closures.
   a. Comply with Performance Requirements in this Section.
   b. Fire Rating: When required, provide B Label, 1-1/2 hour fire rating.
4. Security Doors: Comply with SDI 100, Models 1, 1A, 2, or 2A, minimum 16 gage (1.35 mm) steel face sheets.
   a. Comply with Performance Requirements in this Section.
   b. Fire Rating: When required, provide B Label, 1-1/2 hour fire rating.
5. Hardware Preparation:
   a. Door System: Facilitate installation of standard cylindrical and/or full mortise locks with multiple point throw if specified.
   b. 24 gage (0.57 mm) Doors: Prepare to receive three 102 mm (4 inch) full mortise or bun hinges flush with edge of door.
   c. 18 Gage (1.07 mm) and Heavier Doors: Prepare to receive three 114 mm (4-1/2 inch) full mortise or butt hinges flush with edge of door.
6. Insulated Doors: Solid foam core of polyurethane, or polystyrene.
   a. Core: Fully adhere to steel face sheets, stiles, rails and lock block and completely fill void.

B. Frames
2. Steel Frames and/or Adapter Frames: Minimum of 18 gage (1.07 mm) galvanized bonderized steel, pre-drilled and reinforced for hinges as required.
   a. Shape of Frame: Generally L-shaped.
3. Hollow Core Heavy Duty Door Frames: Fabricated of 16 gage (1.35 mm) minimum thickness.
   a. When required, provide B Label, 1-1/2 hour fire rating.
4. Insulated Heavy Duty Door Frames: Fabricated of 16 gage (1.35 mm) minimum thickness.
   a. When required, provide B Label, 1-1/2 hour fire rating.
5. Security Door Frames: Comply with SDI 100, minimum of 14 gage (1.70 mm) galvanized
   bonderized steel, pre-drilled and reinforced for hinges as required.
   a. When required, provide B Label, 1-1/2 hour fire rating.
   b. Comply with Performance Requirements in this Section.
6. Frames: Weatherstripped at head, jambs and threshold.

C. Hardware
1. General: Comply with ANSI/BHMA A156.1 and applicable accessibility regulatory requirements
   and perform functions for which it was intended.
2. Butts and Hinges: ANSI/BHMA A156.1, as scheduled.
   a. Install non-rising pins (NRP) on out-swing doors.
   c. Security Door Comply with Performance Requirements in this Section.
3. Fire Rate Doors Hardware: Comply with NFPA 80.
   a. Exit Doors: Comply with NFPA 101 (Life Safety Code) for exit doors, as well as other
      requirements specified.
      1) In Lieu of UL Labeling and Listing: Test reports from nationally recognized testing
         agency showing that hardware has been tested in accordance with UL test methods
         and conforms to NFPA requirements.
   c. Install minimum latch throw as specified on label of individual door.
   d. Provide hardware listed by UL, except where heavier materials, larger sizes or higher
      grades are specified.
   e. Closers: ANSI/BHMA A156.4.
4. Lock Sets: As scheduled. Comply with following standards:
   b. Dead Bolt: ANSI/BHMA A 55.5.
   c. Mortise Locks and Latches: ANSI/BHMA A156.13, Grade 1 or Security Grade, single or
      multiple throw.
   d. Interconnected Deadlock and Passage Set: ANSI/BHMA A156.12, Grade 2.
   e. Cylindrical Lock: Grade 2, cylindrical deadbolt lock/passage set combination.
   f. Security Door Locksets: ANSI/BHMA A156.13 Security Grade or UL 437 Key locks.
      1) Comply with Performance Requirements in this Section.
   g. Keys: Provide two keys for each lock provided. Provide master keying and keying alike on
      any locks as directed at no additional charge.
   h. Locks: Provide with interchangeable cores.
5. Door Viewers: ANSI/BHMA A156.16.

D. Accessories
   a. Glass: ASTM C 1036, Type 1, Class 1, Glazing B Quality.
      1) Fire Rated Doors: ASTM C 1036, Type 11, Class 1, Glazing Quality, wired glass.
   b. Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type 1, Class 1, Glazing B Quality.
   c. Plastic: Extruded polycarbonate clear sheets, minimum 3 mm (0.118 inch) thick with
      following characteristics:
      2) Elongation/Modulus of Elasticity: ASTM D 638, 110 percent maximum/340,000 PSI.
      3) Heat Deflection: ASTM D 648, 132.2 degrees C (270 degrees F) at 264 PSI.
      4) Abrasion Resistance: Coated on both surfaces to produce abrasion resistance of 3-
         19 percent maximum hazy increase for 500 revolutions of CS-1 OF wheel per ASTM
         D 1044.
   d. Insulating Glass Units: HUD UM 82 and ASTM E 774, Class C.
      1) Provide insulating glass units in insulated doors and insulated heavy duty doors.
e. Glass Thickness: In accordance with AAMA 1002.10 Appendix, minimum 5 mm (3/16 inch).
   1) Design Wind Pressures: Determined in accordance with applicable codes and regulations.

f. Glass: Labeled to show name of manufacturer and type.

2. Joint Sealants:
   a. Exterior Joint Sealant: AAMA 800, Type 808.3 Exterior Perimeter Sealing Compound.
   b. Back-up Material: Standard preformed and pre-compressed foam material, round rod or semi-circular type, permanently elastic, mildew resistant, nonmigratory, nonstaining, and compatible with joint substrates and with sealant.
      1) Materials impregnated with oil, solvents, or bituminous materials not allowed.
      2) Provide type as recommended by sealant manufacturer for particular installation.
      3) Material: Neoprene, butyl, polyurethane, vinyl, or polyethylene rod.

3. Weatherstripping and Thresholds: Comply with FS 00-A-200-9D, Alloy 6063-T-5; ASTM D 2287, Grade as required; MIL-S-6855, Class 11, Grade 40 (Solid neoprene); and MIL-R-6130C, Type 11, Grade C (Sponge neoprene).
   a. Weatherstripping for Doors and Frames: Adjustable types with replaceable contact stops.
      Types are listed below:
      1) Type A1 (for bottom of door with threshold greater than 6 mm (1/4 inch)): Solid neoprene or vinyl strips mounted in extruded aluminum retainers.
      2) Type B (for bottom of door with thresholds less than 6 mm (1/4 inch) in height): Curved vinyl strips with extruded aluminum retainers.
      3) Type C (for door frame heads and jambs): Extruded aluminum retainer with extruded solid vinyl insert.
      4) Type D1 (for door frame heads and jambs): Closed cell sponge neoprene or vinyl strip with leveled edge mounted in extruded aluminum retainer.
   b. Rain Drips: Extruded aluminum with sufficient projection.
   c. Fasteners: Cad plated steel, brass plated steel, black oxide plated steel, or stainless steel.
      1) Threshold to Concrete: Provide lead expansion shields.
      2) Exposed Finish: Match finish of weatherstrip.

E. Finishes
1. Entry Door System: Clean and free from serious surface blemishes.
   a. Exposed Surfaces: ASTM A 525 hot dipped galvanized, minimum A40 (or G60) Electrolytic Class B coating weight.
   b. Primer: Factory final finished including primer meeting performance requirements of ANSI A224.1.
   c. Finish Coat: One of the following as specified or scheduled:
      1) Factory Finished: Electrostatically factory applied baked on enamel finish.
      a) Color: As selected from manufacturers’ list of colors.
      2) Field painted under Division 9 Section “Painting.”

F. Source Quality Control
1. Testing: Performed by accredited independent testing laboratory.
2. Shop Tests:
      2) Doors with Glass Lites: Mechanical test not required.
   c. Thermal Performance Tests: Perform on heaviest gage frame and leaf with largest area of glass. Retest variation in thermal design aspects of door such as different insulation, type of thermal break, or type of frame.
   d. Test Sample Size for Door System: Minimum 914 mm (36 inches) by 1 727 mm (68 inches), complete with hardware and subframe.
1.4 EXECUTION

A. Examination
1. Site Verification of Conditions:
   a. Field Measurements: Verify field measurements are as indicated on Shop Drawings.
   b. Existing Conditions: Examine openings before beginning installation.
   c. Do not proceed with installation until conditions are satisfactory.

B. Preparation
1. Protection: Protect adjacent elements from damage and disfiguration in accordance with Detailed Scope of Work.
   a. Contractor: Responsible for damage to grounds, plantings, buildings and any other facilities or property caused by construction operations.
   b. Adequately enclose and protect against weather any interior space where installation is incomplete at end of working day.
   c. Repair or replace damaged elements in accordance with Detailed Scope of Work.
2. Existing Entry Doors: Remove existing entry doors and debris from site in accordance with Detailed Scope of Work.
3. Prepare existing openings in accordance with ANSI/ISDSI 102, SDI 105, ASTM E 737, manufacturer's recommendations, and approved Shop Drawings.

C. Installation
1. General: Install in accordance with ANSI/ISDSI 102, SDI 105, ASTM E 737, manufacturer's recommendations, and approved Shop Drawings.
   a. Install doors and frames securely, water tight, straight, plumb and level without distortion.
2. Weatherstripping and Thresholds: Accurately cut, fit, align, and secure to maintain weatherproof seal without hampering operation of door.
   a. Rain Drips: Install on door heads which are not protected by canopy or soffit.
   b. Secure thresholds to concrete with stainless screws or equal and lead expansion shields.
   c. Blocking: Provide as necessary to secure hardware. Prime cut wood surfaces with wood sealer before weatherstripping is installed.
3. Joint Sealants: Apply in accordance with manufacturers recommendations.
   a. Surfaces to be Sealed: Clean, dry and free of any foreign matter that would degrade adhesion. Remove existing caulking and joint sealants from areas to receive new joint sealant.
   b. Prime cleaned surfaces in accordance with sealant manufacturer’s recommendations.
   c. Protect surfaces adjacent to joints by masking tape before applying sealant. Remove tape upon finishing sealing work.
   d. Seal door frames and thresholds where joining other materials on exterior and interior with joint sealant to accomplish weather-tight installation.
   e. Maximum Width of Sealed Joint: 13 mm (1/2 inch).

D. Adjusting And Cleaning
1. Adjusting: At completion of job, check, adjust, and lubricate hardware as required and leave doors and hardware in proper operating condition.
2. Cleaning: Comply with requirements of Detailed Scope of Work.
   a. Clean doors, after installation is completed, to remove foreign matter and surface blemishes.
   b. Scratched or Abraded Surfaces: Touch-up with rust inhibitor primer and enamel paint compatible with factory finish.

E. Protection
1. Installed Work: Protect doors from damage after installation.

END OF SECTION 08 16 13 00
SECTION 08 16 13 00a - FIBERGLASS REINFORCED PLASTIC (FRP) DOORS AND FRAMES

1.1 GENERAL

A. Description of Work

1. This specification covers the furnishing and installation of materials for fiberglass reinforced plastic (FRP) doors and frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
   a. Fire Rated Fiberglass reinforced Plastic (FRP) Doors certified by Intertek Testing Services for Warnock-Hersey in 45, 60 and 90-minute ratings, meeting all specifications of UL 10(c) fire door test standards. Category A and B.
      1) Category A doors are labeled for compliance with IBC Standard (Positive Pressure) and do not require the application of an additional edge sealing system.
      2) Category B doors are labeled to require the installation of a listed edge sealing system to meet the requirements of IBC Standard (Positive Pressure). This seal must be installed per the manufacturer's instructions and may be factory or field applied.
      3) Category B constructed doors, if requested and with certain restrictions, may be provided with an UL 10 (b) label (Negative Pressure) and at a later date can be upgraded to a UL 10 (c) category B label (Positive Pressure) with the application of a listed seal system.
   b. Fire Rated Fiberglass Resin Transfer Molded Door Frames certified by Intertek Testing Services for Warnock-Hersey in 45, 60 and 90-minute ratings, meeting all specifications of UL 10(c) fire door test standards, Category C.
   c. Fire Rated Fiberglass reinforced Plastic (FRP) Doors and Fiberglass Resin Transfer Molded Door Frames certified by Intertek Testing Services for Warnock-Hersey in 20, 45, 60 and 90-minute ratings, meeting all specifications of UL 10(b) fire door test standards.

C. Quality Assurance

1. Manufacturer Qualifications: A company specialized in the manufacture of fiberglass reinforced plastic (FRP) doors and frames as specified herein with a minimum of 25 years documented experience and with a record of successful in-service performance for the applications as required for this project.

2. Installer Qualifications: An experienced installer who has completed fire rated fiberglass door and frame installations similar in material, design, and extent to those indicated and whose work has resulted in construction with a record of successful in-service performance.

3. Source Limitations: Obtain fiberglass reinforced plastic doors and frames through one source fabricated from a single manufacturer, including fire rated fiberglass frames.

4. Source Limitations: Hardware and accessories for all FRP doors as specified in Division 08 Section “Door Hardware” should be provided and installed by the fiberglass door and frame manufacturer.

5. Source Limitations: Glass for windows in doors shall be furnished and installed by door and frame manufacturer in accordance with related section, Division 08 Section “Glazing”.

D. Submittals

1. Product technical data including:
   a. Acknowledgment that products submitted meet requirements of standards referenced
   b. Manufacturer shall provide certificate of compliance with current local and federal regulations as it applies to the manufacturing process.
   c. Manufacturer's installation instructions.
   d. Schedule of doors and frames indicating the specific reference numbers as used on drawings, door type, frame type, size, handing and applicable hardware.
e. Details of core and edge construction. Include factory-construction specifications.
f. Certification of manufacturer's qualifications.

2. Submittal drawings for customer approval shall be submitted prior to manufacture and will include
   the following information and formatting:
   a. Summary door schedule indicating the specific reference numbers as used on owner’s
      drawings, with columns noting door type, frame type, size, handing, accessories and
      hardware.
   b. A drawing depicting front and rear door elevations showing hardware with bill of material
      for each door.
   c. Drawing showing dimensional location of each hardware item and size of each door.
   d. Individual part drawing and specifications for each hardware item and FRP part or product.
   e. Construction and mounting detail for each frame type.

3. Samples:
   a. Provide one 21 x 18 inch completely assembled (hinged) door and frame corner section,
      with faces and edges representing typical color and finish. One edge should be exposed
      for view of interior door and frame composition.

4. Operation and Maintenance Manuals:
   a. Include recommended methods and frequency for maintaining optimum condition of
      fiberglass doors and frames under anticipated traffic and use conditions.
   b. Include one set of final as built drawings with the same requirements as mentioned above.
   c. Include certificate of warranty for door and frame listing specific door registration numbers.
   d. Include hardware data sheets and hardware manufacturer's warranties.

E. Delivery, Storage, And Handling
1. Each door and frame should be delivered individually crated for protection from damage in
   cardboard containers, clearly marked with project information, door location, specific reference
   number as shown on drawings, and shipping information. Each crate should contain all fasteners
   necessary for installation as well as complete installation instructions.
2. Doors should be stored in the original container out of inclement weather for protection against
   the elements.
3. Handle doors pursuant to the manufacturer's recommendations as posted on outside of crate.

F. Warranty
1. Warranty all fiberglass doors and frames for a period of 25 years against failure due to corrosion.
   Additionally, warranty all fiberglass doors and frames on materials and workmanship for a period
   of 10 years, including warp, separation or delamination, and expansion of the core.

1.2 PRODUCTS

A. Acceptable Manufacturers: Subject to compliance with the Contract Documents, the following
   manufacturers are acceptable:
   1. Chem-Pruf Door Co., Ltd., P.O. Box 4560, Brownsville, Texas 78523 Phone: 1-800-444-6924,
      Fax: 956-544-7943, Website: www.chem-pruf.com
   2. Substitutions may be considered, provided manufacturer can comply with the specifications as
      written herein. Requests for substitution must be submitted in writing no less than 10 days prior
      to bid date.

B. FRP Doors
   1. Fire rated Fiberglass reinforced Plastic (FRP) Doors certified by Intertek Testing Services for
      Warnock-Hersey in 20, 45, 60 and 90 minute ratings meeting all specifications of UL 10(c) and
      UL 10(b) fire door test standards.
   2. Doors shall be made of fiberglass reinforced plastic (FRP) using chemically proven fire retardant
      resins resistant to contaminants typically found in the environment for which these specifications
      are written. Doors shall be 1-3/4 inch thick and of flush construction, having no seams or cracks.
All doors up to 4'-0 x 8'-0 shall have equal diagonal measurements with a maximum tolerance of +/−1/32 inch.

3. Door Plates shall be molded in one continuous piece, starting with a 25-mil gelcoat of the color specified, integrally molded with at least two layers of 1.5 ounce per square foot fiberglass. This will yield a plate ratio of 30/70 glass to resin.

4. Stiles and Rails Core shall be banded with firestop per factory drawings.

5. Core material shall be fire resistant mineral core placed within band structure allowing no voids within.

6. Finish of door and frame shall be identical in color and texture. At time of manufacture, 25 mil of resinrich gelcoat must be integrally molded into both the door and frame. Secondary painting to achieve color is not acceptable.

7. Window openings shall be provided for at time of manufacture and shall be completely sealed so that the interior of the door is not exposed to the environment. Window kits shall be fire rated per U.L. for rating of opening and function.

C. Frames

1. Frames shall be fiberglass and manufactured using the resin transfer method in closed rigid molds to assure uniformity in color and size. Beginning with a minimum 25-mil gel coat and a minimum of two layers continuous strand fiberglass mat saturated with fire retardant resin, the frame will be of one-piece construction with molded stop. All frame profiles shall have a core of firestop and mineral core. Frames must be fiberglass. Frames of dissimilar materials, such as metal or stainless steel will not be accepted.

2. Finish of frame shall be identical in color and texture to the door. 25-mil resin rich gel coat will be integrally molded into the frame at time of manufacture. Secondary painting to achieve color is not acceptable.

3. Jamb/Header connection shall be coped by CNC for tight fit.

4. Internal Reinforcement shall be continuous within the structure to allow for mounting of specified hardware.

5. Mortises for hardware shall be accurately machined by CNC to hold dimensions in all three axis.

6. Hinge pockets shall be accurately machined by CNC to facilitate heavy-duty hinges at all hinge locations, using spacers when standard weight hinges are used.

D. Hardware

1. See Division 08 Section “Door Hardware”.

2. Due to the special nature of the material in this section, all related hardware as specified must be furnished and installed by the door and frame manufacturer.

1.3 EXECUTION

A. Installation Conditions

1. Verification of Conditions
   a. Openings are correctly prepared to receive doors and frames.
   b. Openings are correct size and depth in accordance with shop drawings or submittals.

2. Installer’s Examination
   a. Have the installer examine conditions under which construction activities of this section are to be performed and submit a written report if conditions are unacceptable.
   b. Transmit two copies of the installer’s report to the architect within 24 hours of receipt.
   c. Beginning construction activities of this section before unacceptable conditions have been corrected is prohibited.

B. Installation

1. Install door-opening assemblies in accordance with shop drawings and manufacturer’s printed installation instructions, using installation methods and materials specified in installation instructions.

2. Field alteration of doors or frames to accommodate field conditions is strictly prohibited.
3. Site tolerances: Maintain plumb and level tolerance specified in manufacturers printed installation instructions.
4. Fire labeled doors and frames must be installed in strict accordance with manufacturer's instructions and the latest revision of NFPA 80.
5. UL 10 (c) Category B doors require field-applied seal per manufacture’s instructions.

C. Adjusting
1. Adjust doors in accordance with door manufacturer’s maintenance instructions to swing open and shut without binding and to remain in place at any angle without being moved by gravitational influence.
2. Adjust door hardware to operate correctly in accordance with hardware manufacturer’s maintenance instructions.

D. Cleaning
1. Clean surfaces of door opening assemblies and exposed door hardware in accordance with respective manufacturer’s maintenance instructions.

E. Protection Of Installed Products
1. Protect door opening assemblies and door hardware from damage by subsequent construction activities until final inspection.

SECTION 08 31 13 00 - ACCESS DOORS AND FRAMES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of material for access doors and frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. This Section includes the following:
      a. Access doors and frames for walls and ceilings.
      b. Floor access doors and frames.

C. Submittals
   1. Product Data: For each type of access door and frame indicated.
   2. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   3. Samples: For each door face material in specified finish.
   4. Schedule: Types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

D. Quality Assurance
   1. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
      a. NFPA 252 or UL 10B for vertical access doors and frames.
      b. ASTM E 119 or UL 263 for horizontal access doors and frames.

1.2 PRODUCTS

A. Steel Materials
   1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
      a. ASTM A 123/A 123M, for galvanizing steel and iron products.
      b. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
   2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.
      a. ASTM A 123/A 123M, for galvanizing steel and iron products
      b. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
   3. Steel Sheet: Uncoated or electrolytic zinc-coated, ASTM A 591/A 591M with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.
   4. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS) with A60 (ZF180) zinc-iron-alloy (galvannealed) coating or G60 (Z180) mill-phosphatized zinc coating.
   5. Steel Finishes: Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
      a. Surface Preparation for Steel Sheet: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
      b. Surface Preparation for Metallic-Coated Steel Sheet: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds,
mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A 780.

c. Factory-Primed Finish: Apply shop primer immediately after cleaning and pretreating.

d. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).

e. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.

6. Drywall Beads: Edge trim formed from 0.0299-inch (0.76-mm) zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board.

7. Plaster Beads: Casing bead formed from 0.0299-inch (0.76-mm) zinc-coated steel sheet with flange formed out of expanded metal lath and in size to suit thickness of plaster.

B. Stainless-Steel Materials
1. Rolled-Stainless-Steel Floor Plate: ASTM A 793, manufacturer's standard finish.
2. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304 OR 316 OR Type 317LMN OR 904L, as directed. Remove tool and die marks and stretch lines or blend into finish.
   a. Finish: Directional Satin Finish, No. 4 OR Manufacturer's standard, as directed.

C. Aluminum Materials
1. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T6, mill finish.
   b. Anodic Finish: Class II, clear anodic coating complying with AAMA 611 OR Class I, clear anodic coating complying with AAMA 611, as directed.
   c. Baked-Enamel Finish: Manufacturer's standard.

D. Access Doors And Frames For Walls And Ceilings
1. Flush Access Doors and Frames with Exposed Trim: Fabricated from steel OR metallic-coated steel OR stainless-steel, as directed, sheet.
   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal, set flush with exposed face flange of frame.
   c. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with 1-inch- (25-mm-) OR 1-1/4-inch- (32-mm-), as directed, wide, surface-mounted trim.
   d. Hinges: Spring-loaded, concealed-pin type OR Continuous piano, as directed.
   e. Latch: Cam latch OR Slam latch OR Self-latching bolt, as directed, operated by screwdriver OR knurled knob OR hex head wrench OR pinned hex head wrench OR spanner head wrench OR flush key OR ring turn, as directed, with interior release.
   f. Lock: Cylinder OR Mortise cylinder, as directed.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

2. Flush Access Doors and Trimless Frames: Fabricated from steel OR metallic-coated steel OR stainless-steel, as directed, sheet.
   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal, set flush with surrounding finish surfaces.
   c. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with drywall OR plaster, as directed, bead flange.
   d. Hinges: Spring-loaded, concealed-pin type OR Continuous piano, as directed.
e. Latch: Cam latch OR Slam latch OR Self-latching bolt, as directed, operated by screwdriver OR knurled knob OR hex head wrench OR pinned hex head wrench OR spanner head wrench OR flush key OR ring turn, as directed, with interior release.

f. Lock: Cylinder OR Mortise cylinder, as directed.
   1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

3. Recessed Access Doors and Trimless Frames: Fabricated from steel OR metallic-coated steel OR stainless-steel, as directed, sheet.
   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal in the form of a pan recessed 5/8 inch (16 mm) OR 1 inch (25 mm), as directed, for gypsum board OR plaster OR acoustical tile, as directed, infill.
   c. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with drywall bead for gypsum board surfaces OR with plaster bead for plaster surfaces OR designed for insertion into acoustical tile ceiling, as directed.
   d. Hinges: Spring-loaded, concealed-pin type OR Concealed pivoting rod hinge, as directed.
   e. Latch: Cam latch OR Slam latch OR Self-latching bolt, as directed, operated by screwdriver OR knurled knob OR hex head wrench OR pinned hex head wrench OR spanner head wrench OR flush key OR ring turn, as directed, with interior release.
   f. Lock: Cylinder OR Mortise cylinder, as directed.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.080-inch- (2.0-mm-), as directed, thick aluminum sheet.
   c. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick extruded aluminum with 1-1/4-inch- (32-mm-) wide rolled flange.
   d. Hinges: Concealed continuous aluminum.
   e. Latch: Screwdriver-operated cam latch.

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.018-inch- (0.45-mm-) thick steel sheet.
   c. Frame: Minimum 0.045-inch- (1.1-mm-) thick extruded aluminum with 1-1/4-inch- (32-mm-) wide rolled flange.
   d. Hinges: Continuous piano.
   e. Latch: Screwdriver-operated cam latch.

6. Plastic Flush Access Doors and Frames with Exposed Trim: Fabricated from 1/8-inch- (3.2-mm-) thick high-impact plastic with UV stabilizer.
   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Flush to frame with rounded corners.
   c. Frame: 1 piece, 3/4 inch (19 mm) deep.
   d. Latch: Snap latch.
   e. Finish: White with textured exposed surfaces.

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.040-inch- (1.0-mm-) thick, metallic-coated steel sheet; flush panel construction with manufacturer's standard 2-inch- (50-mm-) thick fiberglass insulation.
   c. Frame: Minimum 0.060-inch- (1.5-mm-) thick extruded aluminum.
   d. Hinges: Continuous piano, zinc plated.
   e. Lock: Dual-action handles with key lock.

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
b. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.

c. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.

d. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 inch (0.9 mm), as directed.

e. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with 1-inch- (25-mm-), as directed, wide, surface-mounted trim.

f. Hinges: Concealed-pin type OR Continuous piano, as directed.

g. Automatic Closer: Spring type.

h. Latch: Self-latching device operated by knurled knob OR flush key OR ring turn, as directed, with interior release.

i. Lock: Self-latching device with cylinder OR mortise cylinder, as directed, lock.

1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.

b. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.

c. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.

d. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 inch (0.9 mm), as directed.

e. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with drywall OR plaster, as directed, bead.

f. Hinges: Concealed-pin type OR Continuous piano, as directed.

g. Automatic Closer: Spring type.

h. Latch: Self-latching device operated by knurled knob OR flush key OR ring turn, as directed, with interior release.

i. Lock: Self-latching device with cylinder OR mortise cylinder, as directed, lock.

1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

a. Locations: Wall surfaces.

b. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.

c. Door: Minimum 0.105-inch- (2.7-mm-) thick sheet metal, flush construction.

d. Frame: Minimum 0.060-inch- (1.5-mm-), as directed, thick sheet metal with 1-inch- (25-mm-) OR 1-1/4-inch- (32-mm-), as directed, wide, surface-mounted trim.

f. Hinges: Concealed-pin type OR Continuous piano, as directed.

g. Automatic Closer: Spring type.

h. Latch: Self-latching device operated by knurled knob OR flush key OR ring turn, as directed, with interior release.

i. Lock: Self-latching device with cylinder OR mortise cylinder, as directed, lock.

1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.

b. Door: Minimum 0.105-inch- (2.7-mm-) thick sheet metal, flush construction.

c. Frame: Minimum 0.105-inch- (2.7-mm-) thick sheet metal with 1-inch- (25-mm-) OR 1-1/4-inch- (32-mm-), as directed, wide, surface-mounted trim.

d. Hinges: Concealed continuous piano.

e. Lock: Detention.

1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware",
   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.105-inch- (2.7-mm-) thick sheet metal, flush construction.
   c. Frame: Minimum 0.105-inch- (2.7-mm-) thick sheet metal with drywall OR plaster, as directed, bead.
   d. Hinges: Concealed continuous piano.
   e. Lock: Detention.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.135-inch- (3.4-mm-) thick sheet metal, flush construction.
   d. Hinges: Heavy-duty steel welded to door and frame.
   e. Lock: Heavy-duty, detention deadbolt.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

   a. Locations: Wall OR Ceiling OR Wall and ceiling, as directed, surfaces.
   b. Door: Minimum 0.180-inch- (4.55-mm-) thick sheet metal, flush construction.
   d. Hinges: Heavy-duty steel welded to door and frame.
   e. Lock: Heavy-duty detention deadbolt.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

   a. Locations: Wall surfaces.
   b. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.
   c. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.
   d. Door: Flush panel with a core of 2-inch- (50-mm-) thick, mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.075 inch (1.9 mm).
   e. Frame: Minimum 0.060-inch- (1.5-mm-) thick sheet metal with 1-inch- (25-mm-), as directed, wide, surface-mounted trim.
   f. Hinges: Concealed-pin type OR Continuous piano, as directed.
   g. Automatic Closer: Spring type.
   h. Lock: Self-latching device with detention lock.
      1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

   a. Locations: Wall surfaces.
   b. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.
   c. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.
   d. Door: Flush panel with a core of 2-inch- (50-mm-) thick, mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.075 inch (1.9 mm).
   e. Frame: Minimum 0.060-inch- (1.5-mm-) thick sheet metal with drywall OR plaster, as directed, bead.
   f. Hinges: Concealed-pin type OR Continuous piano, as directed.
   g. Automatic Closer: Spring type.
   h. Lock: Self-latching device with detention lock.
1) Lock Preparation: Prepare door panel to accept cylinder specified in Division 08 Section "Door Hardware".

E. Floor Access Doors And Frames

1. Floor Doors, General: Equip each door with adjustable counterbalancing springs, heavy-duty hold-open arm that automatically locks door open at 90 degrees, release handle with red vinyl grip that allows for one-handed closure, and recessed lift handle.

2. Aluminum Floor Door: Single OR Double, as directed, leaf opening. Extruded-aluminum angle frame with 1/4-inch- (6.4-mm-) thick, diamond-pattern, aluminum tread plate door; nonwatertight; loading capacity to support 150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live load OR 300-lbf/sq. ft. (14.4-kN/sq. m) pedestrian live load OR AASHTO H20 concentrated wheel load, without impact, as directed.

3. Watertight Aluminum Floor Door: Single OR Double, as directed, leaf opening. Extruded-aluminum gutter frame with NPS 1-1/2 (DN 40) drainage coupling and 1/4-inch- (6.4-mm-) thick, diamond-pattern, aluminum tread plate door; watertight; loading capacity to support 150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live load OR 300-lbf/sq. ft. (14.4-kN/sq. m) pedestrian live load OR AASHTO H20 concentrated wheel load, without impact, as directed.

4. Steel Angle-Frame Floor Door: Single OR Double, as directed, leaf opening. Prime-painted structural OR Galvanized structural OR Stainless, as directed, steel frame with 3/16- or 1/4-inch- (4.8- or 6.4-mm-) OR 3/16-inch- (4.8-mm-) OR 1/4-inch- (6.4-mm-), as directed, thick, diamond-pattern, prime-painted structural OR galvanized structural OR stainless, as directed, steel tread plate door; nonwatertight; loading capacity to support 150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live load OR 300-lbf/sq. ft. (14.4-kN/sq. m) pedestrian live OR AASHTO H20 concentrated wheel, as directed, load.
   a. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.
   b. Finish painted in yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE."

5. Watertight Steel Gutter-Frame Floor Door: Single OR Double, as directed, leaf opening. Prime-painted structural OR Galvanized structural OR Stainless, as directed, steel channel frame forming gutter with NPS 1-1/2 (DN 40) drainage coupling and 3/16- or 1/4-inch- (4.8- or 6.4-mm-) OR 3/16-inch- (4.8-mm-) OR 1/4-inch- (6.4-mm-), as directed, thick, diamond-pattern, prime-painted structural OR galvanized structural OR stainless, as directed, steel tread plate door; watertight; loading capacity to support 150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live OR AASHTO H20 concentrated wheel load, as directed, load.
   a. Fire-Resistance Rating: Not less than that indicated OR that of adjacent construction OR 45 minutes OR 1 hour OR 1-1/2 hours OR 2 hours OR 3 hours, as directed.
   b. Finish painted in yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE."

6. Hardware: Provide the following:
   a. Hinges: Heavy-duty, zinc-coated steel OR aluminum OR stainless-steel OR brass, as directed, butt hinges with stainless-steel pins.
   b. Latch: Stainless-steel slam latch.
   c. Lock: Staple for a padlock OR Recessed hasp OR Keyed deadlock bolt OR Hasp and staple, as directed.
   d. Hardware Material: Manufacturer's standard OR Stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners, as directed.

7. Insulation: Fiberglass OR Urethane, as directed, with liner pan.

8. Safety Accessories: Safety chains OR net OR railing, as directed.

F. Fabrication

1. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

2. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
3. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.

4. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling.

5. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
   a. For cylinder lock, furnish two keys per lock and key all locks alike.
   b. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.

6. Extruded Aluminum: After fabrication, apply manufacturer’s standard protective coating on aluminum that will come in contact with concrete.

1.3 EXECUTION

A. Installation
   1. Comply with manufacturer's written instructions for installing access doors and frames.
   2. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
   3. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

B. Adjusting And Cleaning
   1. Adjust doors and hardware after installation for proper operation.
   2. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 13 00
SECTION 08 33 16 00 - OVERHEAD COILING GRILLES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material for overhead coiling grilles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Open-curtain overhead coiling grilles.
   b. Closed-curtain overhead coiling grilles.

C. Performance Requirements
1. Delegated Design: Design overhead coiling grilles, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
2. Seismic Performance: Overhead coiling grilles shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
   b. Seismic Component Importance Factor: 1.5 OR 1.0, as directed.
3. Operation Cycles: Provide overhead coiling grille components and operators capable of operating for not less than number of cycles indicated for each grille. One operation cycle is complete when a grille is opened from the closed position to the fully open position and returned to the closed position.

D. Submittals
1. Product Data: For each type and size of overhead coiling grille and accessory. Include the following:
   a. Construction details, material descriptions, dimensions of individual components, profiles for curtain components, and finishes.
   b. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
2. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer’s product data. Include plans, elevations, sections, details, and attachments to other work.
   a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   b. Wiring Diagrams: For power, signal, and control wiring.
3. Samples: For each type of exposed finish required, prepared on Samples of size indicated below.
   a. Open-Curtain Grille: 18-inch- (457-mm-) square assembly with full-size components consisting of rods, spacers, and links as required to illustrate each assembly, including glazed inserts, as directed.
   b. Closed-Curtain Grille: 18-inch- (457-mm-) square assembly with full-size components consisting of ribs and infill as required to illustrate each assembly.
   c. Bottom Bar: 6 inches (150 mm) long with sensor edge, as directed.
   d. Guides: 6 inches (150 mm) long.
   e. Mounting Frame: 6 inches (150 mm) long.
   f. Brackets: 6 inches (150 mm) square.
   g. Hood: 6 inches (150 mm) square.
4. Delegated-Design Submittal: For overhead coiling grilles indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   a. Detail fabrication and assembly of seismic restraints.
   b. Summary of forces and loads on walls and jambs.
5. Qualification Data: For qualified Installer.
6. Seismic Qualification Certificates: For overhead coiling grilles, accessories, and components, from manufacturer.
7. Maintenance Data: For overhead coiling grilles to include in maintenance manuals.

E. Quality Assurance
1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
2. Source Limitations: Obtain overhead coiling grilles from single source from single manufacturer.
   a. Obtain operators and controls from overhead coiling grille manufacturer.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.2 PRODUCTS

A. Grille Curtain Materials And Construction
1. Open-Curtain Grilles: Fabricate metal grille curtain as an open network of horizontal rods, spaced at regular intervals, that are interconnected with vertical links, which are formed and spaced as indicated and are free to rotate on the rods.
   a. Aluminum Grille Curtain: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
   b. Stainless-Steel Grille Curtain: ASTM A 666, Type 300 series.
   d. Glazing Insert: Manufacturer's standard glazing of clear polycarbonate sheet secured by the curtain links.
2. Closed-Curtain Grilles: Fabricate curtain as a series of horizontal double-C ribs, spaced at regular intervals, that alternate with continuous horizontal infill panels secured by the ribs.
   a. Aluminum Horizontal Ribs: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
   b. Glass Panels: Uncoated, clear, heat-treated, fully tempered float glass; complying with ASTM C 1048, Condition A, Type I, Class I, Quality q3, Kind FT; manufacturer's standard panel dimensions and thickness.
   c. Plastic Panels: Fire-retardant polycarbonate sheet manufactured by the extrusion process; UV resistant; manufacturer's standard panel dimensions and thickness.
   d. Aluminum Panels: ASTM B 209 (ASTM B 209M), alloy and temper standard with manufacturer for type of use and finish indicated; manufacturer's standard panel dimensions and thickness; finished to match ribs.
      1) Perforations: Manufacturer's standard pinholes.
3. Endlocks: Continuous end links, chains, or other devices at ends of rods; locking and retaining grille curtain in guides against excessive pressures, maintaining grille curtain alignment, and preventing lateral movement.
4. Bottom Bar: Manufacturer's standard continuous channel or tubular shape, finished to match grille.
   a. Astragal: Equip each grille bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
   b. Provide motor-operated grilles with combination bottom astragal and sensor edge.
5. Grille Curtain Jamb Guides: Manufacturer's standard shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise; with removable stops on guides to prevent overtravel of curtain.

B. Hoods And Accessories
1. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
   a. Galvanized Steel: Nominal 0.028-inch (0.71-mm) thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653/A 653M.
   b. Stainless Steel: 0.025-inch (0.64-mm) thick stainless-steel sheet, Type 304, complying with ASTM A 666.
   c. Aluminum: 0.040-inch (1.02-mm) thick aluminum sheet complying with ASTM B 209 (ASTM B 209M), of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
2. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling, unless otherwise indicated.
3. Mounting Frame: Manufacturer's standard mounting frame designed to support grille; factory fabricated from ASTM A 36/A 36M structural-steel tubes or shapes, hot-dip galvanized per ASTM A 123/A 123M; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.
4. Push/Pull Handles: Equip each push-up-operated or emergency-operated grille with lifting handles on each side of grille, finished to match grille.
   a. Provide pull-down straps or pole hooks for grilles more than 84 inches (2130 mm) high.

C. Locking Devices
1. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
2. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
   a. Lock Cylinders: Provide cylinders specified in Division 08 Section “Door Hardware” OR standard with manufacturer, as directed, and keyed to building keying system, as directed.
   b. Keys: Two OR Three, as directed, for each cylinder.
3. Chain Lock Keeper: Suitable for padlock.
4. Safety Interlock Switch: Equip power-operated grilles with safety interlock switch to disengage power supply when grille is locked.

D. Counterbalancing Mechanism
1. General: Counterbalance grilles by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
2. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of parts and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
3. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
4. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
5. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.
E. Manual Grille Operators
1. Equip grille with manufacturer's recommended manual grille operator unless another type of grille operator is indicated.
2. Push-up Grille Operation: Design counterbalance mechanism so required lift or pull for grille operation does not exceed 25 lbf (111 N).
3. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 25 lbf (111 N) OR 30 lbf (133 N), as directed, force for grille operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
4. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than 25 lbf (111 N) OR 30 lbf (133 N), as directed, force to turn crank. Fabricate gearbox to be oil tight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

F. Electric Grille Operators
1. General: Electric grille operator assembly of size and capacity recommended and provided by grille manufacturer for grille and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories required for proper operation.
   a. Comply with NFPA 70.
   b. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24 V, ac or dc.
2. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each grille.
3. Grille Operator Location(s): Operator location indicated for each grille.
   a. Top-of-Hood Mounted: Operator is mounted to the right or left grille head plate with the operator on top of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
   b. Front-of-Hood Mounted: Operator is mounted to the right or left grille head plate with the operator on coil side of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
   c. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of grille and connected to grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
   d. Bench Mounted: Operator is mounted to the right or left grille head plate and connected to the grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
   e. Through-Wall Mounted: Operator is mounted on other side of wall from coil-side of grille.
4. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 11 Section "Common Motor Requirements For Equipment" unless otherwise indicated.
   a. Electrical Characteristics:
      1) Phase: Single phase OR Polyphase, as directed.
      2) Volts: 115 OR 208 OR 230 OR 460, as directed, V.
      3) Hertz: 60.
   b. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
   c. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate grille in either direction from any position, at a speed not less than 8 in./sec. (203 mm/s) and not more than 12 in./sec. (305 mm/s), without exceeding nameplate ratings or service factor.
   d. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
   e. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
5. Limit Switches: Equip each motorized grille with adjustable switches interlocked with motor controls and set to automatically stop grille at fully opened and fully closed positions.

   a. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in grille opening without contact between grille and obstruction.
      1) Self-Monitoring Type: Designed to interface with grille operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, grille closes only with sustained pressure on close button.
   b. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
      1) Self-Monitoring Type: Four-wire configured device designed to interface with grille operator control circuit to detect damage to or disconnection of sensing device.

   a. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
   b. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type; NEMA ICS 6, Type 4 enclosure, key operated.

9. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

10. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

12. Emergency-Egress Release: Flush, wall-mounted handle mechanism, for ADA-ABA-compliant egress feature, not dependent on electric power. The release allows an unlocked grille to partially open without affecting limit switches to permit passage, and it automatically resets motor drive upon return of handle to original position.

13. Self-Opening Mechanism: Automatic release mechanism triggered by smoke detector, OR emergency push-button station, as directed, fire alarm or power failure. When activated, the grille self opens by means of a fail-safe operator to the fully open position without the need of power operation or battery backup systems. When the alarm is cleared OR emergency push-button is reset, and the alarm is cleared, as directed, and power is restored, the grille will operate normally.

G. Open-Curtain Grille Assembly
1. Open-Curtain Grille: Overhead coiling grille with a curtain having a network of horizontal rods that interconnect with vertical links.
2. Operation Cycles: Not less than 10,000 OR 20,000 OR 50,000 OR 100,000, as directed.
   a. Include tamperproof cycle counter.
3. Grille Curtain Material: Aluminum OR Stainless steel OR Galvanized steel, as directed.
   a. Space rods at approximately 1-1/2 inches (38 mm) OR 2 inches (51 mm) OR 3 inches (76 mm), as directed, o.c.
   b. Space links approximately 3 inches (76 mm) OR 6 inches (152 mm) OR 9 inches (228 mm), as directed, apart in a straight in-line OR brick (staggered), as directed, pattern.
   c. Glazing Inserts: Manufacturer's standard.
   d. Spacers: Metal tubes matching curtain material OR PVC, as directed.
4. Curtain Jamb Guides: Aluminum OR Stainless steel OR Galvanized steel, as directed, with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-
to-metal contact and to minimize operational noise. Provide removable post(s) and jamb guides where shown on Drawings, as directed.

5. Hood: Match curtain material and finish OR Aluminum OR Stainless steel OR Galvanized steel, as directed.
   a. Shape: Round OR Square OR As shown on Drawings, as directed.
   b. Mounting: Face of wall OR Between jambs OR On mounting frame OR As shown on Drawings, as directed.

6. Locking Devices: Equip grille with slide bolt for padlock OR locking device assembly, as directed, and chain lock keeper, as directed.
   a. Locking Device Assembly: Single-jamb side OR Cremone type, both jamb sides, as directed, locking bars, operable from inside with thumb turn OR outside with cylinder OR outside only, with cylinder OR inside and outside with cylinders, as directed.

7. Manual Grille Operator: Push-up operation OR Chain-hoist operator OR Manufacturer’s standard crank operator OR Awning-crank operator OR Wall-crank operator, as directed.
   a. Provide operator with through-wall shaft operation.
   b. Provide operator with manufacturer’s standard removable operating arm.

8. Electric Grille Operator:
   a. Usage Classification: Heavy duty, 60 to 90 cycles per hour OR Standard duty, up to 60 cycles per hour OR Medium duty, up to 15 cycles per hour OR Light duty, up to 10 cycles per hour, as directed.
   b. Operator Location: Top of hood OR Front of hood OR Wall OR Bench OR Through wall OR As shown on Drawings, as directed.
   c. Motor Exposure: Interior OR Exterior, wet, and humid, as directed.
   d. Emergency Manual Operation: Push-up OR Chain OR Crank, as directed, type.
   e. Obstruction-Detection Device: Automatic photoelectric sensor OR electric sensor edge on bottom bar OR pneumatic sensor edge on bottom bar, as directed; self-monitoring type, as directed.
      1) Sensor Edge Bulb Color: Black OR As selected from manufacturer’s full range, as directed.
   f. Remote-Control Station: Interior OR Exterior OR Where shown on Drawings, as directed.
   g. Other Equipment: Audible and visual signals OR Emergency-egress release OR Self-opening mechanism, as directed.

9. Grille Finish:
   a. Aluminum Finish: Mill OR Clear anodized OR Light bronze anodized OR Medium bronze anodized OR Dark bronze anodized OR Black anodized OR Anodized color matching sample OR Anodized color as selected from full range of industry colors and color densities, as directed.
   b. Baked-Enamel or Powder-Coated Finish: Color as indicated by manufacturer's designations OR Color matching sample OR Color as selected from manufacturer's full range, as directed.
   c. Factory Prime Finish: Manufacturer’s standard color.
   d. Stainless-Steel Finish: No. 2B (bright, cold rolled) OR No. 4 (polished directional satin), as directed.
   e. PVC Spacers: Color as indicated by manufacturer's designations OR Color as selected from manufacturer's full range, as directed.

H. Closed-Curtain Grille Assembly
   1. Closed-Curtain Grille: Overhead coiling grille with a curtain having a series of horizontal ribs alternating with continuous horizontal infill panels secured by the ribs.
   2. Operation Cycles: Not less than 10,000 OR 20,000 OR 50,000 OR 100,000, as directed.
      a. Include tamperproof cycle counter.
   3. Grille Curtain Material: Aluminum ribs with continuous inserts indicated.
      a. Space ribs at approximately 3 inches (76 mm), as directed, o.c.
      b. Inserts: Glass panels.
      c. Inserts: Clear, transparent OR Translucent, as directed, plastic panels.
      d. Inserts: Solid OR Perforated, as directed, aluminum panels.
4. Curtain Jamb Guides: Aluminum with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. Provide removable post(s) and jamb guides where shown on Drawings, as directed.

5. Hood: Match curtain material and finish OR Aluminum OR Stainless steel OR Galvanized steel, as directed.
   a. Shape: Round OR Square OR As shown on Drawings, as directed.
   b. Mounting: Face of wall OR Between jambs OR On mounting frame OR As shown on Drawings, as directed.

6. Locking Devices: Equip grille with slide bolt for padlock OR locking device assembly, as directed, and chain lock keeper, as directed.
   a. Locking Device Assembly: Single-jamb side OR Cremone type, both jamb sides, as directed, locking bars, operable from inside with thumbturn OR outside with cylinder OR outside only, with cylinder OR inside and outside with cylinders, as directed.

   a. Provide operator with through-wall shaft operation.
   b. Provide operator with manufacturer's standard removable operating arm.

8. Electric Grille Operator:
   a. Usage Classification: Heavy duty, 60 to 90 cycles per hour OR Standard duty, up to 60 cycles per hour OR Medium duty, up to 15 cycles per hour OR Light duty, up to 10 cycles per hour, as directed.
   b. Operator Location: Top of hood OR Front of hood OR Wall OR Bench OR Through wall OR As shown on Drawings, as directed.
   c. Motor Exposure: Interior OR Exterior, wet, and humid, as directed.
   d. Emergency Manual Operation: Push-up OR Chain OR Crank, as directed, type.
   e. Obstruction-Detection Device: Automatic photoelectric sensor OR electric sensor edge on bottom bar OR pneumatic sensor edge on bottom bar, as directed; self-monitoring type, as directed.
      1) Sensor Edge Bulb Color: Black OR As selected from manufacturer's full range, as directed.
   f. Remote-Control Station: Interior OR Exterior OR Where shown on Drawings, as directed.
   g. Other Equipment: Audible and visual signals OR Emergency-egress release OR Self-opening mechanism, as directed.

9. Grille Finish:
   a. Aluminum Finish: Mill OR Clear anodized OR Light bronze anodized OR Medium bronze anodized OR Dark bronze anodized OR Black anodized OR Anodized color matching sample OR Anodized color as selected from full range of industry colors and color densities, as directed.
   b. Baked-Enamel or Powder-Coated Finish: Color as indicated by manufacturer's designations OR Color matching sample OR Color as selected from manufacturer's full range, as directed.
   c. Factory Prime Finish: Manufacturer's standard color.
   d. Stainless-Steel Finish: No. 2B (bright, cold rolled) OR No. 4 (polished directional satin), as directed.

II. General Finish Requirements
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

J. Aluminum Finishes
2. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm OR AA-M12C22A31, Class II, 0.010 mm, as directed, or thicker.
3. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm OR AA-M12C22A32/A34, Class II, 0.010 mm, as directed, or thicker.

K. Steel And Galvanized-Steel Finishes
   1. Factory Prime Finish: Manufacturer’s standard primer, compatible with field-applied finish. Comply with coating manufacturer’s written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
   2. Baked-Enamel or Powder-Coat Finish: Manufacturer’s standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer’s written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

L. Stainless-Steel Finishes
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
      a. Run grain of directional finishes with long dimension of each piece.
      b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
      c. Directional Satin Finish: No. 4.
   3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

1.3 EXECUTION

A. Examination
   1. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
   2. Examine locations of electrical connections.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Installation
   1. Install overhead coiling grilles and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer’s written instructions and as specified.
   2. Install overhead coiling grilles, hoods, and operators at the mounting locations indicated for each grille.
   3. Accessibility: Install overhead coiling grilles, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

C. Startup Service
   1. Engage a factory-authorized service representative to perform startup service.
      a. Perform installation and startup checks according to manufacturer’s written instructions.
      b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
      c. Test grille opening when activated by detector, fire-alarm system, emergency-egress release, or self-opening mechanism as required. Reset grille-opening mechanism after successful test.

D. Adjusting
   1. Adjust hardware and moving parts to function smoothly so that grilles operate easily, free of warp, twist, or distortion.
   2. Lubricate bearings and sliding parts as recommended by manufacturer.

E. Demonstration
   1. Train Owner’s maintenance personnel to adjust, operate, and maintain overhead coiling grilles.
END OF SECTION 08 33 16 00
SECTION 08 33 23 11 - OVERHEAD COILING DOORS

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of material for overhead coiling doors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
   1. Section Includes:
      a. Service doors with integral pass doors.
      b. Insulated service doors with integral pass doors.
      c. Counter doors.
      d. Fire-rated service doors with integral pass doors.
      e. Fire-rated, insulated service doors with integral pass doors.
      f. Fire-rated counter doors.

C. Performance Requirements
   1. Delegated Design: Design overhead coiling doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   2. Structural Performance, Exterior Doors: Exterior overhead coiling doors shall withstand the wind loads, the effects of gravity loads, and loads and stresses within limits and under conditions indicated according to SEI/ASCE 7.
      a. Wind Loads: As indicated on Drawings OR Uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa), acting inward and outward, as directed.
         1) Basic Wind Speed: 85 mph (38 m/s) OR 90 mph (40 m/s) OR 100 mph (44 m/s) OR 110 mph (49 m/s), as directed.
         2) Importance Factor: <Insert factor>.
         3) Exposure Category: A OR B OR C OR D, as directed.
      b. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
   3. Operability under Wind Load: Design overhead coiling doors to remain operable under design OR uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa), as directed, wind load, acting inward and outward.
      a. Large Missile Test: For overhead coiling doors located within 30 feet (9.144 m) of grade.
      b. Small Missile Test: For overhead coiling doors located more than 30 feet (9.144 m) above grade.
   5. Seismic Performance: Overhead coiling doors shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   6. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

D. Submittals
   1. Product Data: For each type and size of overhead coiling door and accessory.
   2. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer’s product data. Include plans, elevations, sections, details, and attachments to other work.
a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
b. Show locations of replaceable fusible links.
c. Wiring Diagrams: For power, signal, and control wiring.

3. Samples: For each exposed product and for each color and texture specified.

4. Delegated-Design Submittal: For overhead coiling doors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

5. Qualification Data: For qualified Installer.

6. Seismic Qualification Certificates: For overhead coiling doors, accessories, and components, from manufacturer.

7. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.

8. Maintenance Data.

E. Quality Assurance

1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.

2. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 OR IBC Standard 716.5 OR UL 10B, as directed.

   a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

   b. Temperature-Rise Limit: Where indicated OR At vertical exit enclosures and exit passageways, as directed, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.

   c. Smoke Control: Where indicated OR In corridors and smoke barriers, as directed, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to IBC Standard 716.5 OR UL 1784, as directed; with maximum air-leakage rate of 3.0 cfm/sq. ft. (0.01524 cu. m/s x sq. m) of door opening at 0.10 inch wg (24.9 Pa) for both ambient and elevated temperature tests.

3. Sound-Control Doors: Assemblies that have been fabricated and tested to control the passage of sound and have minimum certified STC rating according to ASTM E 413.

4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

5. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines OR ICC/ANSI A117.1, as directed.

1.2 PRODUCTS

A. Door Curtain Materials And Construction

1. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

   a. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 (Z275) zinc coating; nominal sheet thickness (coated) of 0.028 inch (0.71 mm) and as required to meet requirements.

   b. Stainless-Steel Door Curtain Slats: ASTM A 666, Type 304; sheet thickness of 0.025 inch (0.64 mm) and as required to meet requirements.
c. **Aluminum Door Curtain Slats:** ASTM B 209 (ASTM B 209M) sheet or ASTM B 221 (ASTM B 221M) extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch (1.27 mm) and as required to meet requirements.

d. **Vision-Panel Glazing:** Manufacturer’s standard clear glazing, fabricated from transparent acrylic sheet or fire-protection rated glass as required for type of door; set in glazing channel secured to curtain slats.

e. **Insulation:** Fill slats for insulated doors with manufacturer’s standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within slat faces.

f. **Metal Interior Curtain-Slat Facing:** Match metal of exterior curtain-slat face.

g. **Plastic Interior Curtain-Slat Facing:** Extruded PVC plastic with maximum flame-spread index of 25 OR 75 OR 200, as directed, and smoke-developed index of 450, according to ASTM E 84.

h. **Gasket Seal:** Provide insulated slats with manufacturer’s standard interior-to-exterior thermal break or with continuous gaskets between slats.

2. **Endlocks and Windlocks for Service Doors:** Malleable-iron casings galvanized after fabrication, secured to curtain slats with galvanized rivets or high-strength nylon. Provide locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

3. **Endlocks for Counter Doors:** Manufacturer’s standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

4. **Bottom Bar for Service Doors:** Consisting of two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch (38 by 38 by 3 mm) thick; fabricated from manufacturer’s standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.

5. **Bottom Bar for Counter Doors:** Manufacturer’s standard continuous channel or tubular shape, fabricated from manufacturer’s standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.

6. **Astragal for Interior Doors:** Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.

7. **Curtain Jamb Guides:** Manufacturer’s standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

a. **Removable Posts and Jamb Guides for Counter Doors:** Manufacturer’s standard.

8. **Pass Door(s):** Door and frame assembly constructed integrally with the coiling-door assembly and bearing the same fire rating. Complying with egress and accessibility requirements of authorities having jurisdiction.

a. **Door Frame and Integral Jamb Guide:** Fabricate of angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading.

b. **Hinged Frame:** Hinged pass door and frame that swings out of the way, as a unit, to allow use of the full coiling-door opening width. One jamb of the pass-door frame is hinged and the other jamb includes a guide for the lower, narrower part of the coiling-door curtain.

c. **Rigid Frame:** Rigid pass door and frame that are built into the rigid, lower part of the door curtain and that raise with the curtain.

d. **Locking Hardware:**

   1) **Lockset OR Exit Hardware:** As specified in Division 08 Section “Door Hardware” OR As selected from manufacturer’s full range, as directed.

   2) **Lock Cylinders:** Provide cylinders specified in Division 08 Section “Door Hardware” OR standard with manufacturer, as directed, and keyed to building keying system, as directed.

   3) **Keys:** Two OR Three, as directed, for each cylinder.

e. **Thresholds:** Equip pass doors with integral thresholds that comply with egress and accessibility requirements of authorities having jurisdiction.
1. **General:** Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
   a. **Galvanized Steel:** Nominal 0.028-inch- (0.71-mm-) thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653/A 653M.
   b. **Stainless Steel:** 0.025-inch- (0.64-mm-) thick stainless-steel sheet, Type 304, complying with ASTM A 666.
   c. **Aluminum:** 0.040-inch- (1.02-mm-) thick aluminum sheet complying with ASTM B 209 (ASTM B 209M), of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
   d. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
   e. **Exterior-Mounted Doors:** Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.

C. **Counter Doors**
1. **Integral Frame, Hood, and Fascia for Counter Door:** Welded sheet metal assembly of the following sheet metal:
   a. **Galvanized Steel:** Nominal 0.064-inch- (1.63-mm-) thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653/A 653M.
   b. **Stainless Steel:** 0.062-inch- (1.59-mm-) thick stainless-steel sheet, Type 304, complying with ASTM A 666.
2. **Integral Metal Sill for Counter Door:** Fabricate sills as integral part of frame assembly of Type 304 stainless steel in manufacturer's standard thickness with No. 4 finish.
3. **Fire-Rated, Laminate Counter:** Fire-door manufacturer's high-pressure decorative laminate-covered countertop, UL or ITS tested and labeled for 1-1/2-hour fire rating for approved use with fire-door assembly.

D. **Locking Devices**
1. **Slide Bolt:** Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
2. **Locking Device Assembly:** Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
   a. **Lock Cylinders:** Provide cylinders specified in Division 08 Section "Door Hardware" OR standard with manufacturer, as directed, and keyed to building keying system, as directed.
   b. **Keys:** Provide Two OR Three, as directed, for each cylinder.
3. **Chain Lock Keeper:** Suitable for padlock.
4. **Safety Interlock Switch:** Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

E. **Curtain Accessories**
1. **Smoke Seals:** Equip each fire-rated door with smoke-seal perimeter gaskets for smoke and draft control as required for door listing and labeling by a qualified testing agency.
2. **Weatherseals:** Equip each exterior door with weather-stripping gaskets fitted to entire perimeter of door for a weathertight installation, unless otherwise indicated.
   a. At door head, use 1/8-inch- (3-mm-) thick, replaceable, continuous sheet secured to inside of hood.
   b. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch- (3-mm-) thick seals of flexible vinyl, rubber, or neoprene.
3. **Push/Pull Handles:** Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
   a. Provide pull-down straps or pole hooks for doors more than 84 inches (2130 mm) high.
4. **Automatic-Closing Device for Fire-Rated Doors:** Equip each fire-rated door with an automatic-closing device that is inoperative during normal door operations and that has a governor unit.
complying with NFPA 80 and an easily tested and reset release mechanism designed to be
activated by the following:
  a. Replaceable fusible links with temperature rise and melting point of 165 deg F (74 deg C)
     interconnected and mounted on both sides of door opening.
  b. Manufacturer's standard UL-labeled smoke detector and door-holder-release devices.
  c. Manufacturer's standard UL-labeled heat detector and door-holder-release devices.
  d. Building fire-detection and -alarm systems and manufacturer's standard door-holder-
     release devices.

F. Counterbalancing Mechanism
   1. General: Counterbalance doors by means of manufacturer's standard mechanism with
      an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a
      spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-
      lubricating graphite bearings for rotating members.
   2. Counterbalance Barre: Fabricate spring barrel of manufacturer's standard hot-formed, structural-
      quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support
      rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft.
      (2.5 mm/m) of span under full load.
   3. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size
      springs to counterbalance weight of curtain, with uniform adjustment accessible from outside
      barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
   4. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel,
      sized to hold fixed spring ends and carry torsional load.
   5. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

G. Manual Door Operators
   1. Equip door with manufacturer's recommended manual door operator unless another type of door
      operator is indicated.
   2. Push-up Door Operation: Design counterbalance mechanism so required lift or pull for door
      operation does not exceed 25 lbf (111 N).
   3. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard,
      and gear-reduction unit with a maximum 25 lbf (111 N) OR 30 lbf (133 N), as directed, force for
      door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
   4. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-
      reduction unit, of type indicated. Size gears to require not more than 25 lbf (111 N) OR 30 lbf
      (133 N), as directed, force to turn crank. Fabricate gearbox to be oil tight and to completely
      enclose operating mechanism. Provide manufacturer's standard crank-locking device.

H. Electric Door Operators
   1. General: Electric door operator assembly of size and capacity recommended and provided by
      door manufacturer for door and operation-cycles requirement specified, with electric motor and
      factory-rewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch,
      remote-control stations, control devices, integral gearing for locking door, and accessories
      required for proper operation.
      a. Comply with NFPA 70.
      b. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6,
         with NFPA 70 Class 2 control circuit, maximum 24 V, ac or dc.
   2. Usage Classification: Electric operator and components capable of operating for not less than
      number of cycles per hour indicated for each door.
   3. Door Operator Location(s): Operator location indicated for each door.
      a. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the
         operator on top of the door-hood assembly and connected to the door drive shaft with drive
         chain and sprockets. Headroom is required for this type of mounting.
      b. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the
         operator on coil side of the door-hood assembly and connected to the door drive shaft with
         drive chain and sprockets. Front clearance is required for this type of mounting.
      c. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door
         and connected to door drive shaft with drive chain and sprockets. Side room is required for
this type of mounting. Wall mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.

d. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.

e. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.

4. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 11 Section “Common Motor Requirements For Equipment”, unless otherwise indicated.

a. Electrical Characteristics:
   1) Phase: Single phase OR Polyphase, as directed.
   2) Volts: 115 OR 208 OR 230 OR 460, as directed, V.
   3) Hertz: 60.

b. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.

c. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. (203 mm/s) and not more than 12 in./sec. (305 mm/s), without exceeding nameplate ratings or service factor.

d. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.

e. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

5. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

6. Obstruction Detection Device: Equip motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel. For fire-rated doors, activation delays closing.

a. Photoelectric Sensor: Manufacturer’s standard system designed to detect an obstruction in door opening without contact between door and obstruction.
   1) Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.

b. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
   1) Self-Monitoring Type: Four-wire configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.

a. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.

b. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.

9. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

10. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

12. Radio-Control System: Consisting of the following:
   a. Three-channel universal coaxial receiver to open, close, and stop door; one OR two, as directed, per operator.
   b. Multifunction remote control.
   c. Remote-antenna mounting kit.

I. Door Assembly
1. Service OR Insulated Service OR Counter, as directed, Door: Overhead coiling door formed with curtain of interlocking metal slats.
2. Operation Cycles: Not less than 10,000 OR 20,000 OR 50,000 OR 100,000, as directed.
   a. Include tamperproof cycle counter.
4. Curtain R-Value: 4.5 deg F x h x sq. ft./Btu (0.792 K x sq. m/W) OR 5.0 deg F x h x sq. ft./Btu (0.881 K x sq. m/W) OR 6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W), as directed.
5. Door Curtain Material: Galvanized steel OR Stainless steel OR Aluminum, as directed.
6. Door Curtain Slats: Curved OR Flat, as directed, profile slats of 1-1/4-inch (32-mm) OR 1-1/2-inch (38-mm) OR 1-7/8-inch (48-mm) OR 2-5/8-inch (67-mm) OR 3-1/4-inch (83-mm), as directed, center-to-center height.
   a. Perforated Slats: Approximately 1/16-inch (1.6-mm) pinholes OR 3/32-inch (2.4-mm) pinholes OR 7/8-inch- (22-mm-) wide by 3/8-inch- (10-mm-) high slots, as directed.
   b. Fenestrated Slats: Approximately 3- by 5/8-inch (76- by 16-mm) OR 4- by 5/8-inch (102-by 16-mm) OR 10- by 1-5/8-inch (254- by 41-mm), as directed, openings spaced approximately 1-1/2 inches (38 mm) apart and beginning 12 inches (305 mm) from jamb guides.
   c. Vision Panels: Approximately 10- by 1-5/8-inch (254- by 41-mm) openings spaced approximately 2 inches (51 mm) apart and beginning 12 inches (305 mm) from end guides; in two OR three, as directed, rows of slats at height indicated on Drawings; installed with insulated, as directed, vision-panel glazing.
   d. Insulated-Slat Interior Facing: Metal OR Plastic, as directed.
7. Curtain Jamb Guides: Galvanized steel OR Stainless steel OR Aluminum, as directed, with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. Provide removable post(s) and jamb guides where shown on Drawings.
8. Pass Door(s): Hinged OR Rigid, as directed, frame with lockset OR exit hardware, as directed.
9. Hood: Match curtain material and finish OR Galvanized steel OR Stainless steel OR Aluminum, as directed.
   a. Shape: Round OR Square OR As shown on Drawings, as directed.
   b. Mounting: Face of wall OR Between jambs OR As shown on Drawings, as directed.
10. Integral Frame, Hood, and Fascia for Counter Door: Galvanized steel OR Stainless steel, as directed.
   a. Mounting: Face of wall OR Between jambs OR As shown on Drawings, as directed.
11. Sill Configuration for Counter Door: No sill OR Integral metal sill, as directed.
12. Locking Devices: Equip door with slide bolt for padlock OR locking device assembly, as directed, and chain lock keeper, as directed.
   a. Locking Device Assembly: Single-jamb side OR Cremone type, both jamb sides, as directed, locking bars, operable from inside with thumb turn OR outside with cylinder OR outside only, with cylinder OR inside and outside with cylinders, as directed.
   a. Provide operator with through-wall shaft operation.
   b. Provide operator with manufacturer's standard removable operating arm.
14. Electric Door Operator:
   a. Usage Classification: Heavy duty, 60 to 90 cycles per hour OR Standard duty, up to 60 cycles per hour OR Medium duty, up to 15 cycles per hour OR Light duty, up to 10 cycles per hour, as directed.
   b. Operator Location: Top of hood OR Front of hood OR Wall OR Bench OR Through wall OR As shown on Drawings, as directed.
   c. Motor Exposure: Interior OR Exterior, wet, and humid, as directed.
d. Emergency Manual Operation: Push-up OR Chain OR Crank, as directed, type.

e. Obstruction-Detection Device: Automatic photoelectric sensor OR electric sensor edge on bottom bar OR pneumatic sensor edge on bottom bar, as directed; self-monitoring type, as directed.

1) Sensor Edge Bulb Color: Black OR As selected from manufacturer's full range, as directed.

f. Remote-Control Station: Interior OR Exterior OR Where shown on Drawings, as directed.

g. Other Equipment: Audible and visual signals OR Radio-control system, as directed.

15. Door Finish:

a. Aluminum Finish: Mill OR Clear anodized OR Light bronze anodized OR Medium bronze anodized OR Dark bronze anodized OR Black anodized OR Anodized color matching sample OR Anodized color as selected from manufacturer's full range, as directed.

b. Baked-Enamel or Powder-Coated Finish: Color as indicated by manufacturer's designations OR Color matching sample OR Color as selected from manufacturer's full range, as directed.

c. Factory Prime Finish: Manufacturer's standard color.

d. Stainless-Steel Finish: No. 2B (bright, cold rolled) OR No. 4 (polished directional satin), as directed.

e. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face OR PVC plastic, as directed.

J. Fire-Rated Door Assembly

1. Fire-Rated Service OR Insulated Service OR Counter, as directed, Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.

2. Operation Cycles: Not less than 10,000 OR 20,000 OR 50,000 OR 100,000, as directed.

a. Include tamperproof cycle counter.

3. Fire Rating: 3/4 hour OR 1 hour OR 1-1/2 hours OR 3 hours OR 4 hours, as directed, with temperature-rise limit, as directed, and with smoke control, as directed.

4. STC Rating: 27.

5. Curtain R-Value: 4.5 deg F x h x sq. ft./Btu (0.792 K x sq. m/W) OR 5.0 deg F x h x sq. ft./Btu (0.881 K x sq. m/W) OR 6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W), as directed.

6. Door Curtain Material: Galvanized steel OR Stainless steel, as directed.

7. Door Curtain Slats: Curved OR Flat, as directed, profile slats of 1-1/4-inch (32-mm) OR 1-1/2-inch (38-mm) OR 1-7/8-inch (48-mm) OR 2-5/8-inch (67-mm) OR 3-1/4-inch (83-mm), as directed, center-to-center height.

a. Vision Panels: Approximately 10- by 1-5/8-inch (254- by 41-mm) openings spaced approximately 2 inches (51 mm) apart and beginning 12 inches (305 mm) from end guides; in two OR three, as directed, rows of slats at height indicated on Drawings; installed with fire-rated vision-panel glazing.

b. Insulated-Slat Interior Facing: Metal.

8. Curtain Jamb Guides: Galvanized steel OR Stainless steel, as directed, with exposed finish matching curtain slats.

9. Pass Door(s): Hinged OR Rigid, as directed, frame with lockset OR exit hardware, as directed.

10. Hood: Match curtain material and finish OR Galvanized steel OR Stainless steel, as directed.

a. Shape: Round OR Square OR As shown on Drawings, as directed.

b. Mounting: Face of wall OR Between jambs OR As shown on Drawings, as directed.

11. Integral Frame, Hood, and Fascia for Counter Door: Galvanized steel OR Stainless steel, as directed.

a. Mounting: Face of wall OR Between jambs OR As shown on Drawings, as directed.

12. Sill Configuration for Fire-Rated Counter Door: No sill OR Integral metal sill OR Fire-rated, laminate counter, as directed.

a. High-Pressure Decorative Laminate: Match color, pattern, and finish as indicated by manufacturer's designations OR of sample OR as selected from manufacturer's full range, as directed.

13. Locking Devices: Equip door with slide bolt for padlock OR locking device assembly, as directed, and chain lock keeper, as directed.
a. Locking Device Assembly: Single-jamb side OR Cremone type, both jamb sides, as directed, locking bars, operable from inside with thumbturn OR outside with cylinder OR outside only, with cylinder OR inside and outside with cylinders, as directed.

   a. Provide operator with through-wall shaft operation.
   b. Provide operator with manufacturer's standard removable operating arm.

15. Electric Door Operator:
   a. Usage Classification: Heavy duty, 60 to 90 cycles per hour OR Standard duty, up to 60 cycles per hour OR Medium duty, up to 15 cycles per hour OR Light duty, up to 10 cycles per hour, as directed.
   b. Operator Location: Top of hood OR Front of hood OR Wall OR Bench OR Through wall OR As shown on Drawings, as directed.
   c. Motor Exposure: Interior OR Exterior, wet, and humid, as directed.
   d. Emergency Manual Operation: Push-up OR Chain OR Crank, as directed, type.
   e. Obstruction Detection Device: Automatic photoelectric sensor OR electric sensor edge on bottom bar OR pneumatic sensor edge on bottom bar, as directed; self-monitoring type, as directed.
      1) Sensor Edge Bulb Color: Black OR As selected from manufacturer's full range, as directed.
   f. Remote-Control Station: Interior OR Exterior OR Where shown on Drawings, as directed.
   g. Other Equipment: Audible and visual signals OR Radio-control system, as directed.

16. Door Finish:
   a. Baked-Enamel or Powder-Coated Finish: Color as indicated by manufacturer's designations OR Color matching sample OR Color as selected from manufacturer's full range, as directed.
   b. Factory Prime Finish: Manufacturer's standard color.
   c. Stainless-Steel Finish: No. 2B (bright, cold rolled) OR No. 4 (polished directional satin), as directed.
   d. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

K. General Finish Requirements
   1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

L. Aluminum Finishes
   2. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm OR AA-M12C22A31, Class II, 0.010 mm, as directed, or thicker.
   3. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm OR AA-M12C22A32/A34, Class II, 0.010 mm, as directed, or thicker.

M. Steel And Galvanized-Steel Finishes
   1. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
   2. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

N. Stainless-Steel Finishes
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
c. Directional Satin Finish: No. 4.

3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

1.3 EXECUTION

A. Installation
1. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
2. Install overhead coiling doors, hoods, and operators at the mounting locations indicated for each door.
3. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
4. Fire-Rated Doors: Install according to NFPA 80.
5. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.

B. Startup Service
1. Engage a factory-authorized service representative to perform startup service.
   a. Perform installation and startup checks according to manufacturer's written instructions.
   b. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   c. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

C. Adjusting
1. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
2. Lubricate bearings and sliding parts as recommended by manufacturer.
3. Adjust seals to provide weathertight fit around entire perimeter.

SECTION 08 33 36 00 - SIDE COILING GRILLES

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing and installation of material for side coiling grilles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Performance Requirements
   1. Operation-Cycle Requirements: Provide side coiling grille components and operators capable of operating for not less than 10,000 OR 20,000, as directed, cycles and for 10 cycles per day.

C. Submittals
   1. Product Data: For each type and size of side coiling grille and accessory.
   2. Shop Drawings: Include plans, elevations, sections, details, and attachment to other work.
   3. Samples: For each exposed finish.

D. Quality Assurance
   1. Installer Qualifications: Manufacturer’s authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
   2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100.

1.2 PRODUCTS

A. Grille Curtain Materials And Construction
   1. Grille Curtain: Network of 1/4-inch- (6-mm-) OR 5/16-inch- (8-mm-), as directed, minimum diameter horizontal rods, or rods covered with tube spacers. Interconnect rods by vertical links approximately 5/8 inch (16 mm) wide and rotating on rods.
      a. Space rods at approximately 1-1/2 inches (38 mm) o.c.
      b. Space links approximately 3 inches (76 mm) apart in a straight in-line OR staggered, as directed, pattern.
      d. Stainless-Steel Grille Curtain: ASTM A 666, Type 300 series.
      e. Aluminum Grille Curtain: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
   2. Top Track: Extruded aluminum channel mechanically attached to a support angle with provisions for take-up bolts to compensate for a maximum deflection of 1/2-inch.
   3. Bottom Track: Manufacturer’s standard, finished to match grille.
   4. Coil Box: Entirely enclose coiled grille, operating mechanism, supporting disk and the drum around which the grille will coil.
   5. Power Operated Grille: Safety interlock switch to disengage power supply when grille is locked.
   7. Electric Grille Operator: Manufacturer's standard type, size, and capacity for grille and operation-cycle requirements specified, with electric motor and factory-rewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories. Comply with NFPA 70.
      a. Disconnect Device: Hand-operated for automatically engaging chain and sprocket operator and releasing brake for emergency manual operation while disconnecting motor, without affecting timing of limit switch. Mount to be accessible from floor level.
interlock device to automatically prevent motor from operating when emergency operator is engaged.
b. Grille-Operator Type: Wall- or bracket-mounted unit with electric motor, gear-reduction drive, and chain and sprocket secondary drive.
8. Electric Motors: High-starting torque, reversible, continuous-duty, polyphase, Class A insulated, electric motors complying with NEMA MG 1; with overload protection; sized to start, accelerate, and operate grille in either direction from any position, at not less than 2/3 fps (0.2 m/s) and not more than 1 fps (0.3 m/s), without exceeding nameplate ratings or service factor. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
a. Open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
b. Totally enclosed, nonventilated or fan-cooled motor, fitted with plugged drain, and controller with NEMA ICS 6, Type 4 enclosure where indicated.
9. Remote-Control Station: Momentary-contact OR Sustained-pressure, as directed, three-button control station; fully guarded, weatherproof (if for exterior location), key operated.
11. Provide electric operators with ADA-compliant audible alarm and visual indicator lights.

B. Finishes
1. Aluminum Anodic Finish: Mill finish OR Class II, clear anodic coating complying with AAMA 611, as directed.
2. Galvanized Steel Finish: Manufacturer's standard primer OR Powder-coat finish, as directed.
a. Color and Gloss: As selected from manufacturer's full range.
b. Painting is specified in Division 09 Section(s) "Interior Painting" OR "Staining And Transparent Finishing".
3. Stainless-Steel Finish: Bright, cold-rolled, unpolished finish: No. 2B finish OR Bright, directional polish: No. 4 finish, as directed.

1.3 EXECUTION

A. Installation
1. General: Install side coiling grilles and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports.
2. Lubricate bearings and sliding parts; adjust grilles to operate easily, free of warp, twist, or distortion.

SECTION 08 34 49 13 - RADIATION PROTECTION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for radiation protection. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary
1. Section Includes:
   a. Lead sheet, strip, and plate.
   b. Lead bricks.
   c. Lead glass.
   d. Lead glazing plastic.
   e. Lead-lined building materials and products including the following:
      1) Concrete masonry units.
      2) Gypsum lath.
      3) Gypsum base for gypsum veneer plaster and board.
      4) Steel hollow-metal doors and door frames.
      5) Wood doors.
      6) Observation-window frames.
      7) Modular shielding partitions.
      8) Film transfer cabinets.
      9) Neutron-shielding doors, frames, and hardware.
   f. Informational signs.

C. Definitions
1. Lead Equivalence: The thickness of lead that provides the same attenuation (reduction of radiation passing through) as the material in question under the specified conditions.
   a. Lead equivalence specified for materials used in diagnostic x-ray rooms is as measured at 100 kV unless otherwise indicated.

D. Performance Requirements
1. Provide materials and workmanship, including joints and fasteners, that maintain continuity of radiation protection at all points and in all directions equivalent to materials specified in thicknesses and locations indicated.
   a. Materials, thicknesses, and configurations indicated are based on radiation protection design prepared by Owner’s radiation health physicist. This design is available to Contractor on request.
2. Lead-Lined Assemblies: Unless otherwise indicated, provide lead thickness in doors, door frames, window frames, penetration shielding, joint strips, film transfer cabinets, and other items located in lead-lined assemblies not less than that indicated for assemblies in which they are installed.
3. Lead Glazing: Unless otherwise indicated, provide lead equivalence not less than that indicated for assembly in which glazing is installed.

E. Submittals
1. Product Data: For each type of product indicated.
2. LEED Submittal:
   a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood veneer on doors complies with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
      1) Include statement indicating costs for certified wood veneer doors.
3. Shop Drawings: Show layout of radiation-protected areas. Indicate lead thickness or lead equivalence of components. Show components and installation conditions not fully dimensioned or detailed in product data.
   a. Show ducts, pipes, conduit, and other objects that penetrate radiation protection; include details of penetrations.
   b. Show details of neutron-shielding doors and frames, including anchorage to and coordination with other work. Show locations of electrical conduit and boxes for connecting door operators, door operator switches, and door interlock switches.
      1) Wiring Diagrams: For power, signal, and control wiring.

4. Samples: For each exposed product and for each color and texture specified.

5. Field quality-control reports.

6. Operation and maintenance data.

7. Warranty: Sample of special warranty.

F. Quality Assurance
1. Forest Certification: Provide wood veneers for doors produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

2. Fire-Rated and Smoke-Control, as applicable, Door and Frame Assemblies: Comply with Division 08 Section(s) "Hollow Metal Doors And Frames" OR "Flush Wood Doors", as applicable.

3. Glazing: Comply with requirements in Division 08 Section "Glazing".

4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

5. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling
1. Lead-Lined Gypsum Panels: Neatly stack panels flat to prevent deformation.

2. Lead-Lined Steel Doors and Frames: Comply with requirements in Division 08 Section "Hollow Metal Doors And Frames" for delivery, storage, and handling.
   OR
   Lead-Lined Steel Doors and Frames: Deliver doors and frames cardboard wrapped or crated to provide protection during delivery and storage. Inspect for damage on delivery. Minor damage may be repaired provided the refinished repair matches new work and is approved by the Owner; otherwise, remove and replace damaged items as directed.

3. Lead-Lined Wood Doors: Comply with requirements in Division 08 Section "Flush Wood Doors" for delivery, storage, and handling.
   OR
   Lead-Lined Wood Doors: Comply with manufacturer’s written instructions and requirements in WDMA I.S.1-A.

4. Package doors individually in plastic bags or cardboard cartons OR cardboard cartons and wrap bundles of doors in plastic sheeting, as directed.

5. Mark each door on bottom OR top and bottom, as directed, rail with opening number used on Shop Drawings.

H. Warranty
1. Comply with requirements in Division 08 Section "Flush Wood Doors".

1.2 PRODUCTS

A. Materials

2. Lead Bricks: Interlocking cast- or extruded-lead bricks made from pig lead, complying with ASTM B 29 with 1/2 percent antimony added, with tongues and grooves on adjoining edges.
3. Borated Polyethylene: Manufactured specifically for neutron shielding and containing not less than 5 percent boron.

4. Lead Glass: Lead-barium, polished float glass containing not less than 60 percent heavy metal oxides, including not less than 48 percent lead oxide by weight.
   a. Safety Glass: Fully tempered OR Laminated, as directed, float glass.
      1) Outer Lite: Clear float glass; thickness as indicated OR as directed.
      2) Interlayer: Clear polyvinyl butyral or cured resin of manufacturer’s standard thickness indicated with a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after laminating glass lites and installation.
      3) Inner Lite: Lead-barium, polished float glass; thickness as indicated OR as directed.

5. Lead Glazing Plastic: Transparent acrylic sheet impregnated with an organolead compound and containing 30 percent lead by weight.

6. Lead-Lined Concrete Masonry Units: Fabricated from two solid concrete units, complying with ASTM C 90 or ASTM C 129, separated vertically by a single sheet of lead permanently bonded or anchored between the two halves. Size lead sheets to provide a 1-inch (25-mm) overlap with adjacent units or provide supplemental lead to ensure uninterrupted protection.
   a. Provide special shapes as needed to maintain bond without cutting units.
   b. Provide lead wool for filling voids or joints.

7. Masonry Mortar: Comply with Division 04 Section "Unit Masonry".
   a. Limit cementitious materials to portland cement and hydrated lime, as directed.

8. Grout: ASTM C 476, with a slump of 8 to 11 inches (200 to 280 mm) as measured according to ASTM C 143/C 143M.
   a. For grouting frames of neutron-shielding doors, use coarse grout made from aggregate having a density not less than that used for concrete walls in which frames are installed.
   b. For wood, provide lead-headed nails for fastening lead-lined gypsum lath, accessories, and trim to wood members.

9. Lead-Lined Gypsum Lath: 3/8-inch- (9.5-mm-) OR 1/2-inch- (12.7-mm-), as directed, thick gypsum lath complying with Division 09 Section "Gypsum Plastering" with a single sheet of lead, 1 inch (25 mm) longer and wider than lath, laminated to the back of lath so lead extends 1 inch (25 mm) beyond one side and one end.
   a. For metal or wood furring and framing, provide 5/8-inch- (16-mm-) diameter lead disks or 5/8-by-1-1/4-inch (16-by-32-mm) lead tabs for covering screw heads.
   b. For wood, provide lead-headed nails for fastening lead-lined gypsum lath, accessories, and trim to wood members.

10. Lead-Lined Gypsum Base for Gypsum Veneer Plaster OR Board, as directed: 1/2-inch- (12.7-mm-) OR 5/8-inch- (16-mm-), as directed, thick gypsum board complying with Division 09 Section(s) "Gypsum Veneer Plastering" OR "Gypsum Board", as directed, of width and length required for support spacing and to prevent cracking during handling, and with a single sheet of lead laminated to the back of the board.
    a. Provide lead sheet lining the full width and length of board OR of board and length necessary to extend from floor to 84 inches (2133 mm) above floor OR of board and height as indicated on Drawings, as directed.
    b. Provide 3-inch- (75-mm-) wide lead strips for wrapping metal stud flanges.
    c. Provide 2-inch- (50-mm-) wide lead strips for backing joints.
    d. Provide 5/16-inch (8-mm) OR 5/8-inch (16-mm), as directed, lead disks for covering screw heads.
    e. Provide lead-headed nails for fastening gypsum board, accessories, and trim to wood members.

11. Accessories and Fasteners: Provide manufacturer’s standard fasteners and accessories as required for installation, maintaining same lead equivalence as rest of system.

B. Lead-Lined Steel Hollow-Metal Doors

1. General: Steel doors complying with ANSI/NAAMM-HMMA 861, except with a single continuous sheet of lead of thickness not less than that required for partition in which door is installed OR as
indicated on Drawings, as directed, and extending from top to bottom and edge to edge, installed either between back-to-back stiffeners or between stiffeners and stop face of door.

a. Line inverted channels at top and bottom of doors with lead sheet of same thickness used in door and close with filler channels to provide flush top and bottom edges.

b. Shield cutouts for locksets with lead sheet of same thickness used in door. Lap lining of cutouts with door lining 1 inch (25 mm).

c. Prepare doors to receive observation windows OR louvers OR windows and louvers, as directed; cut and trim openings through doors in factory. Provide removable stops for glazed openings.

d. Provide lead-lined astragals for pairs of doors.

e. Factory fit doors to suit frame-opening sizes indicated with 1/16-inch (1.5-mm) clearance at heads and jambs and minimum clearance at bottom.

f. Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating OR factory-applied paint, as directed.

1) Color and Gloss: As selected from manufacturer's full range.

2. Lead Door Louvers: Provide louvers with 20 OR 30, as directed, percent free area, of sizes and types indicated. Fabricate from formed-lead sheet or lead extrusions of not less than lead thickness required for door in which louver is installed. Fabricate louvers to be lightproof with fixed maze-type blades that maintain required lead equivalence at all points and in all directions. Factory fit and assemble louvers in doors before shipping to Project site.

C. Lead-Lined Steel Hollow-Metal Door Frames

1. General: Steel door frames complying with ANSI/NAAMM-HMMA 861, except 0.0667 inch (1.7 mm) thick, and lined with lead sheet of thickness not less than that required for doors and walls where frames are used.

a. Provide additional reinforcements and internal supports to adequately carry the weight of lead-lined doors. Install reinforcements and supports before installing lead lining.

b. Form lead sheet to match frame contour, continuous in each jamb and across the head, lapping the stops. Form lead shields around areas prepared to receive hardware. Fabricate lead lining wide enough to maintain an effective lap with lead of adjacent shielding.

c. Finish: Apply manufacturer’s standard primer immediately after cleaning and pretreating OR factory-applied paint, as directed.

1) Color and Gloss: As selected from manufacturer's full range.

D. Lead-Lined Wood Doors

1. General: Flush solid-core wood doors with lead lining, thickness not less than that required for partition in which door is installed OR as indicated on Drawings, as directed.

a. Door Construction: Veneer face, five OR seven, as directed, ply, bonded mineral OR particleboard OR structural composite lumber OR glued-wood-stave, as directed, core.

b. Lead Lining: One or more continuous sheets of lead extending from top to bottom and edge to edge, constructed either in the core or between the core and faces, at manufacturer's option.

OR

Lead Lining: One continuous sheet of lead extending from top to bottom and edge to edge, constructed in the core. Assemble lead lining and core with poured lead fasteners or steel bolts. Space fasteners not more than 1-1/2 inches (38 mm) from door edge and about 8 inches (200 mm) o.c. Countersink bolt heads and cover with lead.

c. Comply with Division 08 Section "Flush Wood Doors" for grade, faces, veneer matching, fabrication, finishing, and other requirements unless otherwise indicated.

e. Grade: Premium OR Custom OR Economy, as directed.
f. Face Veneer Species and Cut:  White oak, rift cut OR Red oak, plain sliced OR White birch, plain sliced OR White birch, rotary cut OR Match wood doors that are not lead lined, as directed.
   1) Veneer Matching:  Slip OR Book, as directed, and running OR balance, as directed, match.
   2) Factory finish with stain and, as directed, transparent catalyzed lacquer or conversion varnish.

   g. Faces:  Any closed-grain hardwood of mill option, for opaque finish.

   h. Faces:  Plastic laminate complying with NEMA LD 3, Grade HGS.

   1) Color, Patterns, and Finishes:  As selected from manufacturer's full range.

   i. Shield cutouts for locksets with lead sheet of same thickness used in door.  Lap lining of cutouts with door lining.

   j. Prepare doors to receive observation windows OR louvers OR observation windows and louvers, as directed; cut and trim openings through doors in factory.  Provide removable wood stops for glazed openings.

   k. Provide lead-lined astragals for pairs of doors.

   l. Factory fit doors to suit frame openings indicated with 1/16-inch (1.5-mm) clearance at heads and jambs and minimum clearance at bottom.  Factory machine doors for hardware not surface applied.

2. Lead Door Louvers:  Provide louvers with 20 OR 30, as directed, percent free area, of sizes and types indicated.  Fabricate from formed-lead sheet or lead extrusions of not less than lead thickness required for door in which louver is installed.  Fabricate louvers to be lightproof with fixed maze-type blades that maintain required lead equivalence at all points and in all directions.  Factory fit and assemble louvers in doors before shipping to Project site.

E. Lead-Lined Observation-Window Frames

1. General:  Fabricate from 0.043-inch- (1.1-mm-) thick, formed-steel sheet or 0.064-inch- (1.6-mm-) thick aluminum extrusions with mitered corners, welded or bolted with concealed fasteners.

   a. Line with lead sheet formed to match frame contour, continuous in each jamb and across head and sill, lapping the stops, and fabricated wide enough to maintain an effective lap with lead of adjoining assemblies.

   b. Construct so lead lining overlaps glazing material perimeter by at least 3/8 inch (9.5 mm) and provide removable stops.

   c. Form sill with an opening for sound transmission.  Offset sound passage to make opening lightproof and to maintain required lead equivalence at all points and in all directions.

F. Lead-Lined Modular Shielding Partitions

1. General:  Partial-height modular partitions assembled from factory-finished standard components consisting of lead-lined enameled-steel framing members, lead-lined opaque panels, lead glazing plastic vision panels, and hardware necessary for assembly and for securing to other construction.  Fabricate opaque panels from honeycomb-core metal panels with polyurethane paint finish.

   a. Lead Equivalence for Opaque Panels:  1.5 mm.

   b. Lead Equivalence for Framing Members:  1.5 mm.

   c. Lead Equivalence for Vision Panels:  1.5 OR 1.0 OR 0.8 OR 0.5, as directed, mm.

G. Lead-Lined Film Transfer Cabinets

1. General:  Factory-fabricated, double-wall construction, of 0.0428-inch- (1.1-mm-) thick, cold-rolled, stretcher-leveled, commercial-quality steel sheet free of scale, buckle, pits, and other defects.  Line entire interior and doors with lead sheet thickness not less than that required for partition in which cabinet is installed OR as indicated on Drawings, as directed.

   a. Configuration and Size:  Two-compartment, four-door type with compartments 8 inches wide by 19 inches high by 18-3/4 inches deep (203 mm wide by 483 mm high by 476 mm deep) OR 10-1/4 inches wide by 21 inches high by 20 inches deep (260 mm wide by 533 mm high by 508 mm deep), as directed, inside.

   OR Configuration and Size:  As indicated on Drawings OR as directed.
b. Provide an integral flange with lead lining extending beyond rough opening at least 3/4 inch (19 mm).
c. Provide a sound passage in cabinet frame. Offset sound passage to make opening lightproof and to maintain required lead equivalence at all points and in all directions.
d. Doors: Mount doors on full-height, concealed-leaf hinges. Label doors to one compartment "EXPOSED" and to other "UNEXPOSED." Provide a manual interlocking device to prevent doors on opposite sides of compartments from being opened at same time.
e. Exterior Finish: Baked-on gray enamel primer.
f. Cabinet Interior: Provide each compartment with a black rubber floor. Finish interior of doors, sides, and top in a nonreflective black finish.
g. Trim: Provide face flange or separate trim on each side of wall.
h. Hardware: Provide bright, polished, chrome-plated brass hardware.
i. Rough-in Frame: Provide adjustable telescoping rough-in frame fabricated from 0.064-inch- (1.6-mm-) thick, zinc-coated steel. Design frame to allow adjustment for wall thicknesses from approximately 4 to 8 inches (100 to 200 mm).
j. Support Brackets: Provide two support brackets for each cabinet. Provide brackets manufactured from 1-inch (25-mm) OD, 0.065-inch (1.65-mm) wall thickness, anodized aluminum or stainless-steel tubing with satin finish. Provide with fixed- or swivel-type mounting flanges on both ends.

OR
Support Brackets: Provide two triangular support brackets for each cabinet. Brackets shall be manufactured from 0.0428-inch- (1.1-mm-) thick steel sheet with flanges for fastening to wall and to cabinet. Finish with baked-on primer.

H. Neutron-Shielding Doors And Frames
1. General: Steel plate doors lined with lead and borated polyethylene and hung from structural-steel door frames.
a. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
b. Door Construction: Fabricate from 1/4-inch- (6-mm-) thick steel plate faces, reinforced at hinge locations, and 1/2-inch- (13-mm-) thick, steel flat-bar edges fully welded together. Continuously weld exposed joints and finish smooth, matching adjacent surfaces.
   1) Apply filler to interior of door faces to provide smooth, even surfaces for applying lead and polyethylene. Bond lead to interior of door face with permanent adhesive.
   2) Install lead in one piece and polyethylene in single or multiple sheets, all full height and width of door interior.
c. Door Frame Construction: Fabricate from 1/4-inch- (6-mm-) thick steel plate to dimensions indicated, fully welded together. Continuously weld exposed joints and finish smooth, matching adjacent surfaces.
   1) Fabricate frames with depth equal to thickness of shielding wall in which door is installed. Rabbet frame to receive door and to provide a 4-inch (100-mm) overlap between door edges and remaining frame depth. Make frame faces 4 inches (100 mm) wide with 3/4-inch- (19-mm-) deep backbends.
   2) Reinforce frames and drill and tap as needed to accept finish hardware.
   3) Provide steel strap anchors using 1/8-by-2-inch- (3-by-50-mm-) wide straps of length required for a minimum 8-inch (200-mm) embedment. Weld anchors to frame members not more than 8 inches (200 mm) from both bottom and top of jambs and from ends of head, and space anchors not more than 24 inches (600 mm) apart.
   4) Provide channel-shaped sill fabricated from 1/4-inch- (6-mm-) thick steel plate lined with lead. Make sill 1-1/2 inches (38 mm) deep by same width as jambs and weld to door jambs.
d. Shop-Primed Finish: Prepare ferrous-metal surfaces to comply with SSPC-SP 3 (Power Tool Cleaning) and apply an alkyd primer complying with MPI#79.
   1) Stripe paint corners, crevices, bolts, welds, and sharp edges.
e. Hardware: Provide the following hardware for each door:
   1) Hinges: BHMA A156.1, Type A8391; weld- or bolt-on type at manufacturer's option; sized for door weight; two or three per door at manufacturer's option.
2) Pulls: BHMA A156.6, Type J401, two per door.
3) Operator: Power-opening and spring- or power-closing unit; with automatic hold-
   open; complying with BHMA A156.10; sized for door weight and width; and
   adjustable for opening, closing, and checking speeds. Unit shall have an
   emergency release to allow door to be opened manually and a disconnect switch to
   prevent power operation when door is in emergency-release mode.
4) Controls: Provide two wall-mounted, recessed, push-plate switches for opening
   door and one push-button switch for closing door. Provide motion or presence
   sensors to detect persons or objects in path of door and, if these are detected, to
   stop and reverse action of door operator.
   f. Door Interlock Switch: Provide electric switch in frame jamb to prevent operation of
      radiation therapy equipment when door is open and to shut off power to equipment if door
      is opened while equipment is in use.
   1) Provide rough box for installing switch, fabricated from 1/4-inch- (6-mm-) thick steel
      plate welded to frame and lined on all sides with 1/4-inch- (6-mm-) thick lead plate.

I. Informational Signs
1. Informational Signs, General: Fabricate signs by engraving lettering in high-pressure-laminate
   engraving stock with contrasting face and core. Machine engrave copy using high-speed cutters
   mechanically positioned by master templates for accurately formed letters, numbers, and
   symbols.
   a. Color: As selected from manufacturer's full range of colors.
   b. Provide copy indicated or as directed. Provide signs of sufficient size to contain required
      information.
   c. Indicate lead equivalence in millimeters and heights of radiation protection in inches
      (millimeters).
2. Rooms Where the Level of Protection Is Uniform Throughout: Provide one sign for each room
   indicating lead equivalence of partitions, ceilings, floors, doors, and other portions of radiation
   protection enclosure. Indicate height of radiation protection above floor or indicate that partitions
   are radiation protected to full height.
3. Rooms Where the Level of Protection Is Not Uniform Throughout: Provide one sign for each
   room with different lead equivalences in different locations. Indicate, in tabular form, lead
   equivalence of each wall, partition, ceiling, floor, door, and window. Indicate height of radiation
   protection above floor or indicate that partitions are radiation protected to full height. Indicate
   where lead equivalence changes or is not continuous.
4. Rooms Where Some Partitions Are without Radiation Protection: Provide one sign for each
   partition that contains radiation protection and indicate its lead equivalence. Indicate height of
   radiation protection above floor or indicate that partitions are radiation protected to full height.
5. Rooms Where Only the Door Has Radiation Protection: Provide one sign for each door indicating
   its lead equivalence.

J. Door And Door Frame Fabrication
1. Hardware Preparation: Factory prepare doors and frames to receive templated mortised
   hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door
   Hardware Schedule and templates furnished as specified in Division 08 Section “Door Hardware”.

1.3 EXECUTION

A. Installation Of Lead Sheets In Concrete Floor Slabs
1. Apply a coat of asphalt mastic or paint to concrete surfaces before installing lead sheet.
2. Before installing floor lead sheet, place lead strips not less than 7 inches (175 mm) wide under
   the base of vertical wall protection. Extend lead strips approximately 3 inches (75 mm) into the
   shielded room area.
3. Lead Sheet, 1/8 Inch (3 mm) Thick or Less: Install in a single layer with a 2-inch (50-mm)
   minimum lap at joints.
4. Lead Sheet More Than 1/8 Inch (3 mm) Thick: Install in two or more layers with a 2-inch (50-mm) minimum lap at joints, or in a single layer with joints butted and covered with a 4-inch- (100-mm-) wide lead strip of same thickness.
5. Extend lead sheet at least 12 inches (300 mm) beyond radiation protection in walls of room.
   OR
   In floor slabs above shielded rooms where lead sheet is indicated, extend lead sheet at least 12 inches (300 mm) beyond radiation protection in walls of room below.
6. At door openings, extend lead sheet at least 12 inches (300 mm) beyond radiation protection in walls and at least 12 inches (300 mm) beyond door opening on both sides except where lead-lined thresholds are provided.
7. After installation, apply a coat OR two coats, as directed, of asphalt coating on top surface of lead sheet and protect from damage until concrete topping is placed.

B. Installation Of Lead Bricks
1. Remove projections from concrete surfaces to receive lead bricks and apply one layer of asphalt felt to prevent contact between lead bricks and concrete.
   a. At recesses in concrete floors to receive lead bricks, turn up asphalt felt at perimeter of recess.
2. Install lead bricks to dimensions indicated, tightly fitted together, with joints offset in succeeding courses. Cut bricks neatly at joints with adjacent materials for a snug fit, with edges straight and true and at right angles.
   a. Calk joints between lead bricks and support framing with lead wool.
   b. Install lead strips as indicated at joints between lead bricks and support framing.
   c. Secure lead bricks to walls as indicated with steel flat bars fastened with steel lag bolts driven into lead plugs.
3. After installation, apply a coat of asphalt coating on surfaces of lead bricks that will receive concrete.

C. Installation Of Lead-Lined Concrete Masonry Units
1. Lay units in running bond, using methods recommended in writing by concrete masonry unit manufacturer.
2. Cut units, as needed, without disturbing bond between lead and concrete, and without reducing required lapping margin or shielding qualities.
3. Blocks Designed to Have Lead Laps at Joints: Lay units with tight lead laps without soldering or burning.
4. Blocks Designed to Have Lead Bars in Joints: Lay units with lead bars, of thickness not less than that required in block, in each horizontal and vertical joint. Position bars directly adjacent to lead lining with bars overlapping lead lining at least twice the thickness of lead lining, but not less than 1/2 inch (13 mm).
5. Mortar Joints: Lay units with 1/2-inch (13-mm) solidly filled mortar joints. Keep lead laps free of intervening mortar. Cut joints flush with face of units.
6. Wraparound Metal Frames: Extend units into frame openings with lead lining projecting into rabbets of frames to effectively lap with lead frames or frame linings at least 1 inch (25 mm).
7. Pipe and Conduit Chases: Where pipe and conduit chases occur within blocks, faces can be removed from one side to permit installation. Where necessary to remove lead lining for pipe and conduit installation, install continuous lead sheet and overlap adjoining lead protection at least 1 inch (25 mm). Fill voids around pipe and conduit chases with mortar, finished flush with face of partition. Do not locate pipe and conduit chases directly opposite each other in same partition.

D. Installation Of Lead-Lined Gypsum Lath
1. Install lath with long edges at right angles to supports with lead lining facing supports. Place end joints over supports and stagger joints in alternate courses. Overlap lead extensions on adjacent lath to provide an effective lead lap.
   a. Install so joints in walls do not align with adjacent ceiling joints.
2. Fastening to Metal and Wood Supports: Use screws spaced as recommended in writing by gypsum lath manufacturer. Drive screws through lead tabs and fold tabs over screw heads or apply lead disks over screw heads.
a. Fasten accessories and trim to supports with screws, using lead tabs or lead disks as specified above for fastening lath.

3. Fastening to Wood Supports: Use lead-headed nails spaced as recommended in writing by gypsum lath manufacturer. Drill pilot holes to prevent deforming nails or distorting lath. Set nail heads flush with lath surface.
   a. Fasten accessories and trim to supports with lead-headed nails as specified above for fastening lath.

4. Openings: Extend lead-lined gypsum lath into frames of openings, lapping lead lining with lead frames or frame linings at least 1 inch (25 mm). Arrange lath around openings so neither horizontal nor vertical joints occur at corners of openings.

5. Control and Expansion Joints: Install lead strip on face of framing, extending across joint, and lap with lead lining of lath.

E. Installation Of Lead-Lined Gypsum Base For Gypsum Veneer Plaster OR Board, as directed
1. Install with long edge parallel to supports and lead lining facing supports. Provide blocking at end joints. Install using construction adhesive and supplementary fasteners.

2. Fastening to Metal Supports: Use steel drill screws spaced as recommended in writing by gypsum board manufacturer. Install lead strips covering face of framing and wrap around flange to cover points of screws.
   a. Where possible, install lead-lined gypsum board before installing gypsum board on other side of partition, and do not fold lead strips back over inside of flange until after lead-lined gypsum board is applied.
   b. Apply lead disks recessed flush with surface of board over heads of screws securing trim.

3. Fastening to Metal and Wood Supports: Use steel drill screws spaced as recommended in writing by gypsum board manufacturer. Apply lead disks over screw heads and recess flush with surface of board.
   a. Install lead strips, 1-1/2 inches (38 mm) wide minimum and same thickness as lead lining, to face of supports and blocking where joints occur. Secure lead strips with construction adhesive. Provide shims at intermediate supports.
   b. Apply lead disks recessed flush with surface of board over heads of screws securing trim.

4. Fastening to Wood Supports: Use lead-headed nails spaced as recommended in writing by gypsum board manufacturer. Drill pilot holes to prevent deforming nails or distorting board. Drive nail heads slightly below exposed surface.
   a. Install lead strips, 1-1/2 inches (38 mm) wide minimum and same thickness as lead lining, to face of supports and blocking where joints occur. Secure lead strips with construction adhesive. Provide shims at intermediate supports.
   b. Fasten accessories and trim to wood supports with lead-headed nails as specified above for fastening gypsum board.

5. Two-Layer System: Apply a facing sheet of gypsum board vertically over base sheet using laminating adhesive recommended in writing by gypsum board manufacturer. Offset joints in finish layer from joints in base layer and fasten at top and bottom of sheet to support finish panel until adhesive has set.
   a. Locate fasteners above ceiling or behind wall base and cover fasteners with lead disks recessed flush with surface of board.

6. Openings: Extend lead-lined gypsum board into frames of openings, lapping lead lining with lead frames or frame linings at least 1 inch (25 mm). Arrange board around openings so neither horizontal nor vertical joints occur at corners of openings.

7. Install control and expansion joints where indicated, with appropriate trim accessories. Install lead strip on face of framing, extending across joint, and lap with lead lining of gypsum board.

F. Installation Of Lead-Lined Doors And Door Frames
1. Install lead-lined steel doors and door frames according to Division 08 Section "Hollow Metal Doors And Frames".
   a. Apply a coat of asphalt mastic or paint to lead lining in door frames where lead will come in contact with masonry or grout.

2. Install lead-lined wood doors according to Division 08 Section "Flush Wood Doors".

3. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with door manufacturer's written instructions.
4. Frames: Comply with HMMA 840 unless otherwise indicated. Except for frames located in existing walls or partitions, place frames before constructing walls. Set frames accurately in position, plumb, and brace securely until permanent anchors are set.
   a. Provide three anchors per jamb, located adjacent to hinge on hinge jamb and at corresponding heights on strike jamb.
   b. In masonry construction, use wire or T-strap anchors and apply a coat of asphalt mastic or paint to lead lining where lead will come in contact with masonry or grout.
   c. In metal stud construction, use wall anchors attached to studs with screws.
   d. In wood stud construction, use strap anchors attached to studs with screws.
5. If frames are factory-lined, lap lead lining of frames over lining in walls at least 1 inch (25 mm).
6. Lead Lining of Frames: Line inside of frames with lead of thickness not less than that required in doors and walls where frames are used. Form lead to match frame contour, continuous in each jamb and across the head, lapping the stops. Form lead shields around areas prepared to receive hardware. Lap lining over lining in walls at least 1 inch (25 mm).
7. Install doors in frames level and plumb, aligned with frames and with uniform clearance at each edge.
8. Line astragals with lead sheet.
9. Hardware: Line covers, escutcheons, and plates to provide effective shielding at cutouts and penetrations of frames and doors. See Division 08 Section "Door Hardware" for other installation requirements.
10. Touch up damaged finishes with compatible coating after sanding smooth.
11. Operation: Rehang or replace doors that do not swing or operate freely. Check and readjust operating hardware items, leaving doors and frames undamaged and in proper operating condition.

G. Installation Of Lead-Lined Observation Windows
1. Install observation windows according to manufacturer's written installation instructions.
   a. Apply a coat of asphalt mastic or paint to lead lining in frames where lead will come in contact with masonry or grout.
2. Install windows level, plumb, square, true to line, and anchored securely in place to structural support.
3. Install leaded side of frame on radiation side of wall. Lap lead lining of frames over lining in walls at least 1 inch (25 mm).
4. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with manufacturer's written instructions.

H. Installation Of Lead-Lined Modular Shielding Partitions
1. Install partitions after finishes are complete in spaces where partitions are located. Install according to manufacturer's written instructions and Shop Drawings.
2. Cut and remove wall base where modular shielding partitions meet other walls so partition will fit tightly to wall.
3. Secure partition framing to floor with 1/4-inch (6-mm) expansion anchors 16 inches (400 mm) o.c. and fasten to walls and ceilings as indicated. Brace partitions with tie rods fastened to walls or ceilings as indicated.

I. Installation Of Penetrating Items
1. At penetrations of lead linings, provide lead shields to maintain continuity of protection.
2. Provide lead linings, sleeves, shields, and other protection in thickness not less than that required in assembly being penetrated.
3. Secure shields at penetrations using adhesive or wire ties but not penetrating fasteners unless indicated on Drawings.
4. Film Transfer Cabinets: Where film transfer cabinets occur in lead-lined partitions, line wall flange with lead sheet of same thickness as required for partition where it is located.
5. Outlet Boxes and Conduit: Cover or line with lead sheet lapped over adjacent lead lining at least 1 inch (25 mm). Wrap conduit with lead sheet for a distance of not less than 10 inches (250 mm) from box.
6. Duct Openings: Unless otherwise indicated, line or wrap ducts with lead sheet for distance from partition/ceiling equal to three times the largest opening dimension. Lap lead sheet with adjacent lead lining at least 1 inch (25 mm).

7. Piping: Unless otherwise indicated, wrap piping with lead sheet for a distance of not less than 10 inches (250 mm) from point of penetration.

J. Installation Of Neutron-Shielding Doors And Frames
1. Install frames in concrete forms before concrete is placed. Adjust frames as needed so they are square and within 1/16 inch (1.5 mm) of plumb. Secure frames to forms and brace to resist forces resulting from concrete placement.
2. Install frames in concrete openings and adjust as needed so they are square and within 1/16 inch (1.5 mm) of plumb. Secure frames to concrete and brace to resist forces resulting from weight and movement of shielding door. Grout frames, consolidating grout to solidly fill spaces between frame and opening.
3. Install doors in frames and install door operators, door controls, interlock switches, and other components according to manufacturer's written instructions and Shop Drawings.
4. Touch up damaged primer with compatible coating after sanding smooth.
5. Operation: Rehang or replace doors that do not swing or operate freely. Check and readjust operators and controls for opening, closing, latching, and back-checking speeds and for open- and closed-door positions.

K. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections after radiology equipment has been installed and placed in operating condition.
2. Correct deficiencies in or remove and replace radiation protection that inspection reports indicate does not comply with specified requirements.

L. Protection
1. Lock radiation-protected rooms once doors and locks are installed and limit access to only those persons performing work in the rooms.

END OF SECTION 08 34 49 13
SECTION 08 34 53 00 - SECURITY WINDOW SCREENS AND DOORS

DESCRIPTION OF WORK

This specification covers the furnishing and installation of materials for security window screens and doors. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer’s recommendations. Demolition and removal of materials shall be as required to support the work.

GENERAL

Definitions
1. Type of Screens (Frames and Screening): Light, Medium, and Heavy Types: As defined by and comply with requirements of ANSI/SMA 6001.
2. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by Owner.

System Description
3. Performance Requirements: Comply with following:
   a. Screens: Comply with ANSI/SMA 6001 performance requirements for Type specified or scheduled.
      1) Sag Test Described in ANSI/SMA 6001 Paragraph 4.2.4.2: Applicable to vertical or side hinged operable window screens only.
   b. Operable Screens: Tested with emergency egress locking system:
      1) Screens: Meet or exceed ANSI/SMA 6001 performance requirements for Type specified or scheduled.
   c. Security Screen Insert for Storm Doors: Completely assembled screen of 914 mm (36 inches) by 1 524 mm (60 inches) size with necessary braces:
      1) Impact Test: Meet or exceed ANSI/SMA 6001 Paragraph 4.2.4.1 performance requirements for Heavy Type.
   d. Security Screen Doors: Completely assembled screen door measuring at least 914 mm (36 inches) wide by 2 032 mm (80 inches) high with necessary braces and hardware:
      1) Impact Test: Meet or exceed performance requirements of ANSI/SMA 6001 Paragraph 4.2.4.1 for Heavy Type.
      2) Sag Test: Meet or exceed ANSI/AAMA 1102.7 Sag Test.

Submittals
4. Product Data
5. Shop Drawings: Include standard details showing recommendations for installation. Include size of fasteners, maximum dimensions from each end, center-to-center spacing on all four sides, minimum penetration of fasteners into loading material, and maximum clearance between frame and rough opening.
6. Samples: Submit full set of samples of finish colors for color selection.
   a. For Supply and Deliver Only Contract: Submit one full size sample of each type of security window screen and screen door with specified finish for acceptance.
7. Quality Assurance/Control Submittals:
   a. Certificates: Manufacturers written certification that security window screens and door screens meet or exceed ANSI/SMA 6001 and other specified requirements.
   b. Manufacturer’s installation instructions.
8. Closeout Submittals:
   a. Operation and maintenance data.
   b. Special warranty.

Quality Assurance
9. Regulatory Requirements:
   a. Egress Requirements: Comply with applicable codes and regulations.
   b. Provide emergency egress, single point locking release, and bit key lock fire entry from exterior as and where required by applicable codes and regulations.
   c. Accessibility:
         a) Uniform Federal Accessibility Standards (UFAS).
      2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
      3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).

10. Certifications: Comply with ANSI Z34.2.

11. Mock-ups: For Supply and Install Contract: Install one full size mock-up of each type of security window screen and screen door with specified finish for acceptance.
   a. Locations: As directed.
   b. Approved Mock-ups: Standard for rest of work.
   c. Approved Mock-ups: May remain part of completed project.

Delivery, Storage, And Handling

12. Packing, Shipping, Handling, and Unloading: Pack materials at manufacturing plant to prevent damage during shipping.
   a. Screens: Label attached signifying compliance with ANSI/SMA 6001 performance requirements.

13. Acceptance at Site: Inspect screens upon delivery. Replace damaged or defective materials before installation.

14. Storage and Protection: Store screens in manner to protect from weather and other damage.

Project Conditions

15. Field Measurements: Field measure openings for screens before start of fabrication.

Scheduling And Sequencing

16. Scheduling and Completion: Comply with requirements of Detailed Scope of Work.

Warranty

17. Special Warranty: Provide one year written covering materials and installation for security window screens and screen doors.
   a. Warranty: Include coverage of inserts, hardware, and latches.
      1) Screening not included.
      2) Defects resulting from vandalism not included.
   b. For Supply and Delivery Only Contract:
      1) Contractor: Agrees to supply and deliver to Owner, free of charge, any required replacement parts that can be readily installed by Owner without special tools.
      2) Contractor: Agrees to supply and deliver free of charge, complete replacement security window screen or screen door, when defective part or parts cannot be installed without use of special tools.
   c. For Supply and Install Contract:
      1) Contractor: Agrees to supply and install, free of charge, any required replacement parts or complete replacement screen.

PRODUCTS

Security Window Screens And Screen Doors

18. General: Manufactured of commercially accepted materials, free from blemishes, dents, and scratches or any other defects, which are visible when viewed at distance of 1 800 mm (6 ft), or which might otherwise affect their serviceability or appearance.
a. Screens: Type(s) and size(s) indicated, specified, or scheduled with necessary hardware, anchors, and equipment.
b. Screens: Label attached signifying compliance with ANSI/SMA 6001 requirements.

19. Framing and Cross Brace Members: Made of material which will provide sufficient strength to meet performance requirements of ANSI/SMA 6001, Types as specified or scheduled.
   a. Thickness: Thickness necessary to provide durability and meet performance requirements.
   b. Material: Steel or aluminum as specified or scheduled complying with applicable Federal Specification or ASTM tests and specifications for chemical, physical or mechanical properties.
   c. Light Type: Mechanical comers acceptable.
   d. Medium and Heavy Type: Provide continuously face welded corner joints.

20. Screening: ANSI/SMA 6001 Section 4.3.1, type 304 stainless steel (carbon steel not allowed), Types as specified and scheduled.
   a. Light Type: Minimum 16 by 16 mesh, 0.46 mm (0.018 inch) diameter.
   b. Medium Type: Minimum 12 by 12 mesh, 0.58 mm (0.023 inch) diameter.
   c. Heavy Type: Minimum 12 by 12 mesh, 0.71 mm (0.028 inch) diameter with tensile (high tensile) strength of 1.43 kg per lineal mm width (800 pounds per linear inch width).
   d. Certification: Provide certificate of compliance with specified requirements.
   e. Assembly: Assembled in secure manner to perform as specified to assure neat construction.
      1) Welding or Brazing Flux: Completely removed immediately upon completion of welding or brazing operation.
   f. Window Screens: Include warning label indicating that screen will not stop child from falling out of window in accordance with SMA 7001.

21. Operable Screens: Frame, or frame and subframe assembly, as required, scribe angles (where required), hinged main frame as required, screening, egress locking system from interior, and concealed hinges.
   a. Screening: Type as specified or scheduled.
   b. Main and Subframes: Steel or extruded aluminum as specified or scheduled and shall conceal locking mechanism from exterior, Type as specified or scheduled.
   c. Operable Screens: May be mounted with vertically or horizontally positioned hinge as indicated.
   d. Operating Hardware: Releasable from interior but properly guarded to prevent access from exterior when window is open.

22. Fixed Screens:
   a. Fixed Frame: Steel or extruded aluminum as specified or scheduled.
   b. Screening: Type as specified or scheduled.

23. Storm Door Screen Inserts: Main frame for application to existing storm door.
   a. Frames: Steel or extruded aluminum as specified or scheduled.
   b. Screening: ANSI/SMA 6001 Heavy Type.

   a. Doors Frames: Steel or extruded aluminum as specified or scheduled, ANSI/SMA 6001 Heavy Type.
   b. Screening: ANSI/SMA 6001 Heavy Type.

Aluminum Security Screen Doors

25. Aluminum Screen Doors: Type(s) and size(s) indicated, specified, or scheduled manufactured and provided with prehung aluminum frame line (Z-bar) to fit entrance door apertures requiring frame sizes of 762 mm (30 inches) to 940 mm (37 inches) in width and 2 007 mm (79 inches) to 2 134 mm (84 inches) in height.
   a. Doors: Sized to fit existing openings.

26. Materials:
   a. Master Frame and Mullions: ANSI/SMA 3001, extruded aluminum and minimum 151 kPa (22,000 PSI) tensile strength.
   b. Kick Plate: Embossed or Corrugated Aluminum: Minimum 1.27 mm (0.50 inch) embossed or corrugated thickness, fabricated of minimum 1.02 mm (0.040 inch) thick material.
c. Screening: Secure by use of aluminum spline integrally mounted and secured with fasteners.

27. Bottom of Door: Provide bottom expander door sweep of non-hardening rubber or extruded vinyl plastic, adjustable to 15.8 mm (5/8 inch).
   a. Bottom Expander: Minimum 1.4 mm (0.055 inch) wall thickness.

28. Door Master Frame Construction: Mitered joint construction and joined at corners by welding or mechanical joints.
   a. Frame Members: Minimum 60 mm (2-3/8 inch) width across flat surface and minimum 31 mm (1-1/4 inch) thickness.
   b. Wall Thickness: Minimum 1.57 mm (0.062 inch).
   c. Mitered Corner Joint Construction: Inert gas tungsten arc or heliarc welding to provide screen doors to comply with performance requirements.
      1) Weld: Penetrate on both exterior and interior sides of joint.
      2) Dress weld beads and flat surfaces (edge surfaces not included) to smooth flush surface within satin finish.
      3) Minimum Width of Weld: 9.5 mm (3/8 inch) prior to dressing.
      4) Minimum Penetration of Weld Build-up: Minimum of 2.4 mm (3/32 inch).
   d. Mechanical Corner Joints: Screw boss or gusset construction using screw fasteners standard to manufacturer to provide screen doors to comply with performance requirements.
   e. Master Frame Dimensions: Manufacturing tolerance of plus/minus 4.8 mm (1/8 inch).
   f. Extrusion Tolerances: In accordance with Aluminum Extruded Products Division of Aluminum Association standards.

29. Mullion Bars: Hollow extruded shape designed to permit being used as kick panel mullion or as upper mullion.
   a. Mullion Bars: Minimum 50 mm (2 inch) width across flat surface and minimum 31 mm (1-1/4 inch) thickness.
   b. Wall Thickness: Minimum 1.57 mm (0.062 inch).
   c. Mullions: Accurately machined to fit frame and joined to side stiles by inert gas tungsten arc or heliarc welding or by mechanical clip designed for compatibility.
   d. Dress weld beads down to make smooth flush surface.
   e. Provide main frame and mullion bar with 4.8 mm (3/16 inch) deep grooves to accommodate kick plate.
   f. Utilize weather resisting cement utilized to provide maximum strength and rigidity.

30. Head and Side Z-bars: Designed to receive weatherstripping.
   b. Head Section: Formed to function as drip cap.
   c. Frame Liner: Z-bar of extruded aluminum, minimum 1.57 mm (0.062 inch) wall thickness.
   d. Weatherstripping: Wool pile or vinyl.

31. Each Door: Three hinges attached to pre-punched Z-bar.
   a. Hinges: Full or 1/2 surface hinges, with three bronze oilite bushings per hinge.

Steel Security Screen Doors

32. Steel Screen Doors: Type(s) and size(s) indicated, specified, or scheduled manufactured of steel and provided with pre-hung aluminum frame liner (Z-bar) to fit entrance door apertures requiring frame sizes of 762 mm (30 inches) to 940 mm (37 inches) in width and 2 007 mm (79 inches) to 2 134 mm (84 inches) in height.

33. Materials:
   a. Master Frame: Not be less than 22 gage (0.85 mm) roll formed steel, or 16 gage (1.6 mm) tubular steel as applicable to hem specified.
   b. Kick Plate: At least 18 gage (1.3 mm) embossed galvanized panel for roll formed frame or 16 gage (1.6 mm) flat galvanized steel sheet for tubular steel frame.
   c. Screen Insert:
      1) Screening: Secured with fasteners.
      2) Screen Frame: Roll formed or tubular lock seam type formed from not less than 25 gage (0.53 mm) hot dipped galvanized steel or extruded aluminum.
   d. Door Sweep Spline: Polyvinyl chloride (PVC) or equal material
e. Frame Liner (Z-bar): Extruded aluminum, 6063 J5.
f. Weatherstripping: Wool pile, or vinyl.

34. Construction:
a. Master Frame: Roll Formed tubular lock-seam construction formed from 22 gage (0.85 mm) hot dipped galvanized steel.
   1) Corners: Either mitered or butt-jointed and rigidly fastened together by brazing or welding. Insert steel gussets at corners of mitered or butt-jointed screen doors when edge brazing is used.
   2) Welded tubular galvanized steel of 16 gage (1.6 mm) wall thickness is not required to use corner blocks or gussets.
b. Transom Rail (mullion): Accurately machined or fit frame and rigidly welded to side of stiles.
   1) Kick Plate: Rigidly retained in place by steel or aluminum spline, or form fitted.
c. Adjustable Expander Installed at bottom of each screen door to receive vinyl sweep.
   1) Adjustment Limit: At least 7.9 mm (5/16 inch).
   2) Vinyl Door Sweep: Installed in entire length of expander.
d. Frame Liner (Z-bar): Track to receive weather stripping and necessary installation holes.
   1) Head Section of Frame Liner Formed to function as drip cap.

35. Dimensions:
a. Widths across Master Frames:
   1) For Roll Form Door: Minimum 70 mm (2-3/4 inches).
   2) For Tubular Doors: Minimum 51 mm (2 inches) with 23.7 mm (15/16 inch) minimum thickness.
b. Mullion Bar: Following minimum widths across:
   1) Roll Form Door: 48 mm (1-7/8 inches).
   2) Tubular Door: 23.7 mm (15/16 inch). Frame Liner: Not less than 27 mm (1-1/16 inch) return offset on outside face for side flange width for bearing against door buck. Wall Thickness of Frame Liner: Minimum 1.57 mm (0.062 inch). Screen Door: Supported adequate reinforcing ribs.
c. Master Frame Dimensions: Manufacturing tolerance of plus or minus 4.8 mm (1/8 inch).

36. Hinges: Install one of following hinge types on each frame liner and screen door:
a. At least four concealed 304 stainless steel hinges on bronze oilite bearings, each minimum 75 mm (3 inches) long.
b. At least three surface-mounted (H) type galvanized steel hinges.

Accessories

37. Hardware: Designed to afford ease of operation, perform functions for which it is intended, and securely attached to screen.
a. Materials: Stainless steel, aluminum, or made corrosion resistant by plating.
   1) Material: Compatible with frame material.
   2) Stainless Steel: Alloys of 302, and 304.
   3) Aluminum: Extrusions from commercially produced 6063-T5 alloy.
   4) Cadmium or Zinc Plated Steel: ASTM B 633 or ASTM B 766.
   5) Plastic parts not allowed.
b. Fasteners: Stainless, cadmium plated, or zinc-plated steel screws, nuts, washers, bolts, and other miscellaneous fastening devices and hardware.
c. Hinges: Concealed from exterior, with compression guards, and of sufficient strength to comply with performance requirements of ANSI/SMA 6001.
d. Locking System: Non-corrosive materials permitting emergency egress and of sufficient strength to comply with performance requirements of ANSI/SMA 6001.
   1) Provide single point release as and where required by applicable codes and regulations.
   2) Provide bit key lock fire entry from exterior if required by applicable codes and regulations.
   3) Locking Hardware: Remain completely concealed from exterior viewing and tampering with lock bolts positively locked when in thrown position, so that they cannot be operated from direct pressure on bolts.
38. Security Screen Door Hardware: Include latch with exterior handle, interior locking mechanism with anti-lockout feature, adjustable heavy duty door closer, necessary screws, and hurricane chain with spring.

39. Window Screens: Include warning label that screen will not stop child from failing out of window in accordance with SMA 7001.

40. Anchors: Non-magnetic stainless steel or other non-corrosive material compatible with screen.
   a. Anchors Exposed when Screen is Closed and Locked: Non-removable security type.

Finishes
41. Screens: Factory applied baked on enamel or polyester powder coat finish.
   a. Exposed Surfaces: Clean and free from serious surface blemishes.
   b. Dress and finish exposed welded joints.
   c. Color: As selected from manufacturers standard colors.

Source Quality Control
42. Testing: Performed by accredited independent testing laboratory.

EXECUTION

Examination
43. Site Verification of Conditions:
   a. Field Measurements: Verify field measurements are as indicated on Shop Drawings.
